The Force Feed system of lubrication is employed in the King motor. The body of Gargoyle Mobiloil "A" insures a sufficient supply of oil to all reciprocating parts without flooding the cylinders. If a lighter oil were employed, the quantity of oil forced out of the bearings would be excessive, with the result that large quantities of oil would be thrown to the cylinders and work into the combustion chambers, resulting in excessive

—smoking at exhaust
—carbon deposits
—consumption of oil.

"Gives Best Results"

KING MOTOR CAR COMPANY

Builders of King Cars — Detroit, U.S.A.

July 10th, 1916.

Vacuum Oil Company,
61 Broadway,
New York City.

Dear Sirs:-

In our Car Owners Service Test of an Eight Cylinder King Car at Sheepshead Bay Motor Speedway on June 29th, Gargoyle Mobiloil "A" was used for cylinder lubricating. We believe that much of the success of the test was due to the high lubricating efficiency of Gargoyle Mobiloils.

The car maintained an average of 1172.76 miles per gallon of oil during the entire test and this despite the fact that at the end of the 4000th mile the oil was drained from the crankcase and new oil poured in. The lubricating efficiency of the oil had been but little impaired and we believe that had it been left in the consumption of oil would have been much less.

We have no hesitancy in recommending Gargoyle Mobiloil "A" for use in the King motor. It gives the best results.

Yours very truly,
KING MOTOR CAR COMPANY
L. E. Jones
Assistant Chief Engineer

Because Gargoyle Mobiloil "A" is of the highest lubricating efficiency and of the correct body, its use in the King test resulted in—

1 The greatest horse power efficiency.
2 The smoothest operation.
3 No repair trouble.
4 Minimum consumption of fuel.
5 Minimum consumption of lubricating oil.

At the end of the test the motor was found to be in perfect condition, ready to make the run all over again.

Gargoyle Mobiloils Best For Your Motor, Too

The manufacturers of the King "Eight" are convinced that no other lubricant gives such good results in that motor as Gargoyle Mobiloil "A."

It is important that your car be correctly lubricated in order that it shall give you the maximum of service.

If your car is a King, Gargoyle Mobiloil "A" will give you correct lubrication. If your car is of some other make the grade of Gargoyle Mobiloils specified by the Chart of Recommendations (on display at your dealer's) will insure you correct lubrication.

The Vacuum Oil Company's Chart of Recommendations specifies the correct lubricants for the motor, transmission and differential of every car.

10,850 MILES KING WITHOUT A STO

KING
EIGHT CYLINDER

10,850 MILES
Without Stopping the Motor

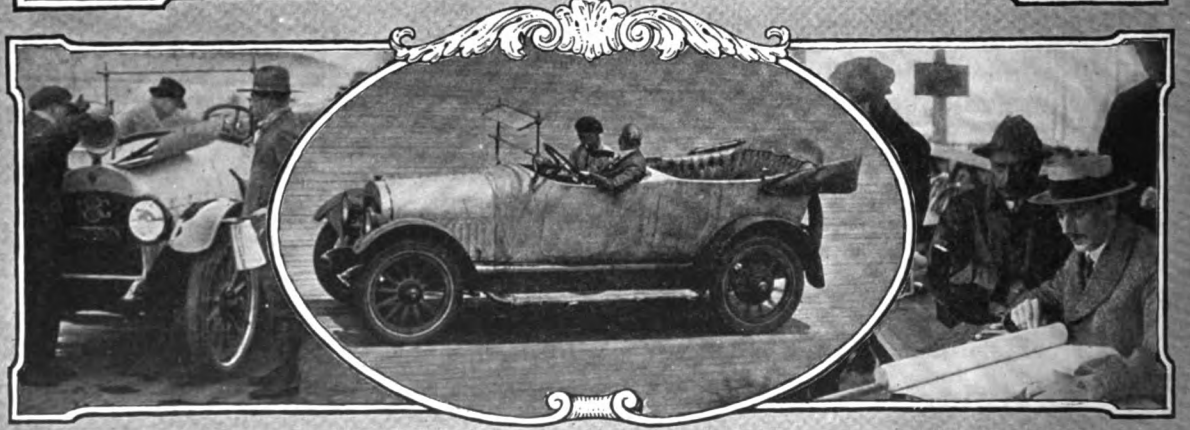
A KING "Eight" registered STOCK car made this unparalleled record in a Car Owners' Service Test conducted under OFFICIAL A. A. A. sanction and supervision.

The trial was made at the Sheepshead Bay Speedway beginning at 12:14 P. M. June 15th and finishing at 12:14 P. M. June 29th.

For two weeks the sturdy KING ran day and night through rain, fog and boiling sun, without requiring a single replacement or adjustment.

10,850 miles equals about two years' service in an owner's hands, yet in this entire mileage the car was stopped (with the motor running) for a total of but 15 hrs. 25 min. 41 sec. On this basis the test demonstrated that a KING "Eight" requires only *nine minutes per week* of an owner's attention for *all* service—Gasoline, oil, water, tires, battery, etc.

And most astounding of all, the KING made this 10,850 miles with a total *labor* expense of considerably *less than ten dollars.*



During the entire 10,850 miles a weight equal to five passengers was carried and the car maintained an average speed of 34 miles per hour, excluding stops.

An examination made after the test proved the car to be in perfect running condition and ready for another trial of the same or greater length.

This great King Achievement tops off the series of remarkable road tests recently conducted on the Pacific and Atlantic seaboards and makes a record for this pioneer "Eight" which to prospective car purchasers can mean nothing less than ABSOLUTE SATISFACTION IN PERFORMANCE, SERVICE and OPERATION ECONOMY.

FEDDERS RADIATORS

WHEN we began making Radiators—19 years ago—we adopted our policy of "Quality First."

Knowing this to be our policy, and knowing our ability to live up to it, some of the leading car manufacturers have used FEDDERS RADIATORS from the very beginning.

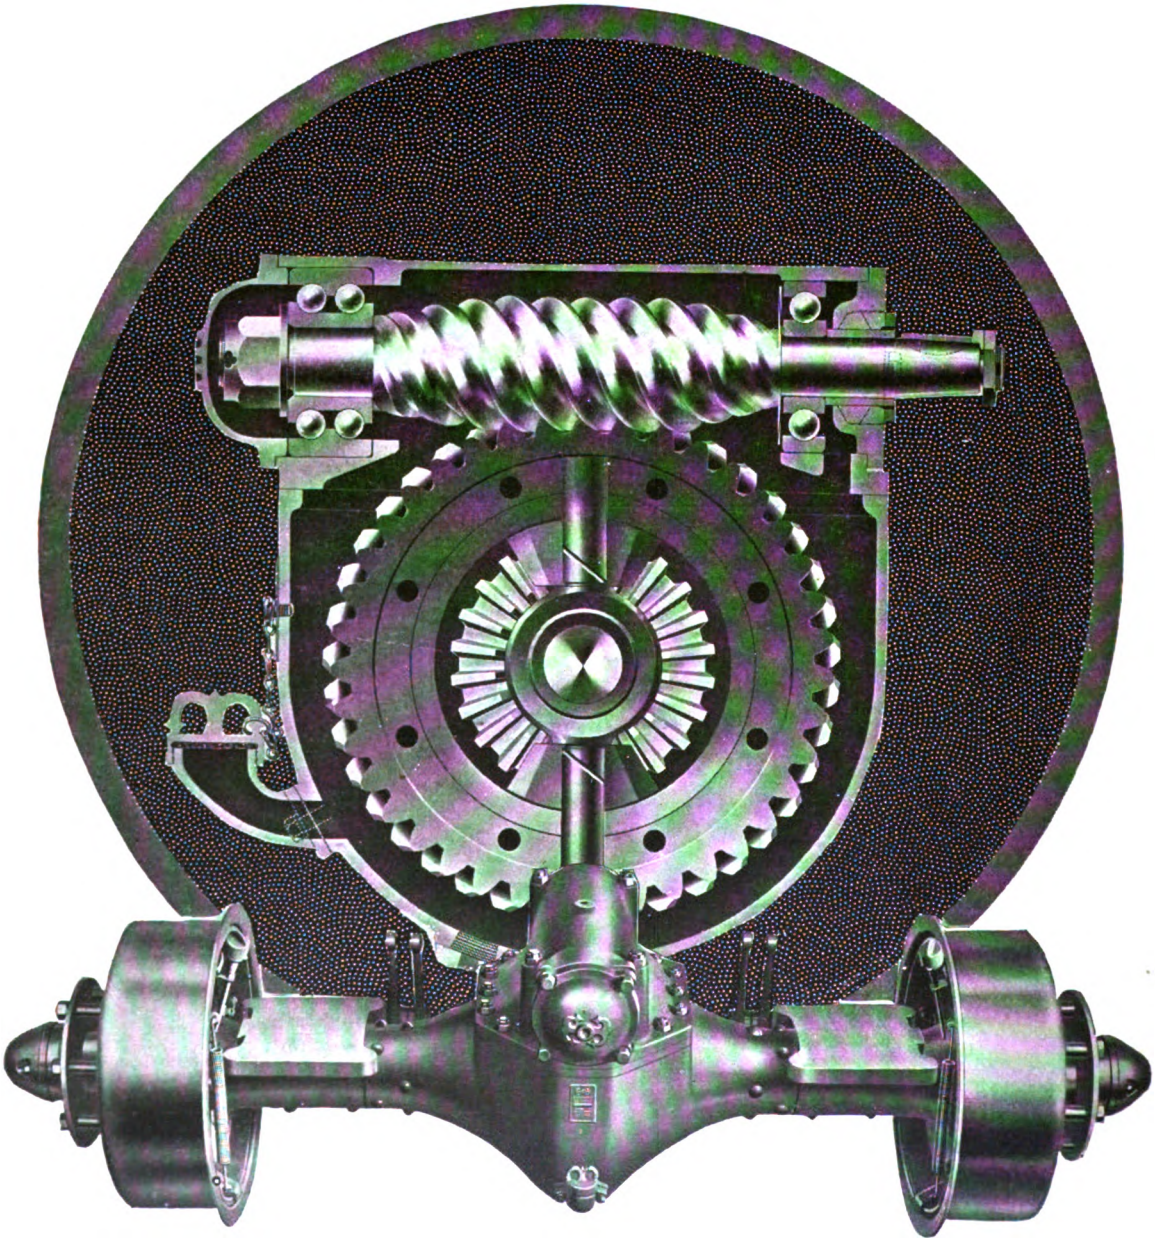
Since then we have continuously added new customers and enlarged our output, but our policy remains unchanged, and our first patrons are still our patrons, after 19 years.

And numbered among them—and among the others who have since become believers in Fedders Quality and users of Fedders Radiators—are the makers of America's finest motor trucks and pleasure cars.

Aside from the dominance of Fedders radiators in all ordinary branches of Motor usefulness, we are happy in being able to point to recent demonstrations of their proficiency in the racing field, under conditions calling for every good quality in superlative degree.

First and second places in the Astor Cup Race were won by Stutz cars, equipped with Fedders stock radiators. Both cars broke the world's record, making over 102 miles an hour for 350 miles.

First in the Metropolitan Trophy Race at Sheepshead, May 13th, was captured by a Fedders equipped Maxwell, driven by Rickenbacher, who averaged better than 96 miles an hour for 150 miles.



And so it goes—

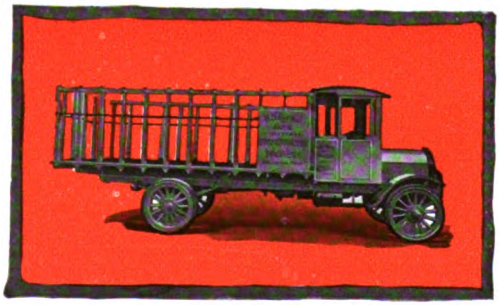
Worm Drive Truck Field

Illustrated herewith are three Sheldon equipped worm gear driven trucks, manufactured by H. E. Wilcox Motor Co. of Minneapolis.



WILCOX TRUX

are all Sheldon worm driven from the three-quarter up to the three and a half ton sizes, and they embody all the features of Sheldon design and construction.

Early estimates of the dominancy of worm gear as a type of final drive are more than being borne out—and it is certain that more than half of all the trucks produced in 1916 will be worm gear driven.

This represents most of the output of 93 of the leading manufacturers of motor trucks in this country and is conclusive evidence of the all around superiority of the worm as a type of final drive.

We are taking on the best dealers in every locality for the

FOSTER OWL LIGHT

We are furnishing these dealers with what has proven to be absolutely the best selling acessory of its kind on the market.

We are making these dealers a proposition which is fair, square, and which insures profits with a minimum expenditure of time and sales energy. Any dealer who can handle a quality product at a quantity price should be able to sell hundreds of Foster Owl Lights right in his locality.

The Owl Light has a world of exclusive selling points. It is unquestionably the greatest little searchlight ever built. In workmanship, material and performance, it has never been equaled. In neatness, compactness and beauty of line it stands today the searchlight in most popular demand by American and foreign motorists.

SOLD ON 10 DAY—MONEY BACK TRIAL

The patented Foster Universal Swivel, an exclusive Owl feature, is alone worth the price of the light complete. It is the *one* positive action searchlight swivel which cannot loosen, rattle, slip, nor bind. It holds the Owl Light indefinitely in any position you put it.

Another Owl selling point that is swamping dealers with orders is the unique reflector construction which makes the Owl Light much more powerful than considerably larger searchlights.

The Owl Light is sold on ten days' trial—money back if not satisfactory. At home and abroad it is invariably the first choice of the motorist owning a high price car. Some idea of Owl Light superiority is to be gained from the fact that the French Army is using Owl Lights at the front.

Put a Foster Owl Light on your demonstrator or wire one up and put it in your sales window and watch the business start coming.

Let us send illustrated booklets describing fifty different uses for the Owl Light. Hand these out to your customers and they will create sales for you.

NOW ONLY $5

Better Than Ever

Get Your Part of Thirty Million

CONSERVATIVE estimates place 30,000,000 as the number of automobile lamps to be bought this year. Now that practically all cars are electrically lighted, the day-by-day and year-by-year demand for new lamps to replace those burned out is bound to increase as fast as the number of cars increases. The astute dealer who makes *his* store the headquarters for lamp renewals reaps constantly growing profits.

Small Stock Moreover the initial investment is so small that anyone can put on his counter the lamp assortment with enough selected sizes and types of lamps to supply all needs. Reordering to keep this stock complete is so simple as to be almost automatic.

Easy Terms With our little booklet as a guide, any clerk can instantly supply the right lamp for any car—the name and year of the car being the only information needed. Another helpful sales aid is the lamp chest, in which the car owner can carry a set of six spare lamps for his car. With this chest, it's easy to sell six lamps at once, as the lamps are specially selected to fit the customer's car.

Write Now No matter how many or few auto accessories you may have handled, write us for full particulars. If you think you can also handle flashlight lamps to advantage, write also for complete information on the flashlight Assortment, another lamp renewal proposition as full of profit possibilities as the auto lamp assortment. The sooner you get your assortment of lamps the quicker you'll be prepared to take advantage of your share of the big fall renewal business.

Now a STROMBERG Carburetor For FORDS

and 4/10 Miles on a Gal. of Gas

ALL official *Ford* economy records smashed! 37 4/10 miles on one gallon of gasoline—37 4/10 miles under difficult conditions full of stops and starts. And the *NEW STROMBERG* Carburetor for *FORDS* did it in an economy test made at Chicago, April 1st, which was officially observed by F. E. Edwards, a representative of the A. A. A.

The car was a regular Model T 1915 Ford, carrying three persons and weighing a total of 2170 lbs. In a speed test with the same adjustment, it was accelerated to 43 miles per hour.

After several years of experimenting, we have perfected a Carburetor which overcomes completely all old-time difficulties—a Carburetor which will positively astonish you with its economy and power, flexibility and acceleration, simplicity and reliability.

No More Difficulty in Starting—this new Stromberg is constructed so that you can start your Ford easily, even in the coldest weather.

The price is only $18 with all necessary attachments. Interesting proposition for dealers. Write today.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

Up-to-Minute Cars

John W. Bate's efficiency serves Mitchell dealers in many ways. Here is one.

At the Shows last winter we exhibited an up-to-date model called "*The* Six of '16."

After the Shows—about April 15th—we brought out a newer model, and called it the Mid-Year Mitchell. That model embodied 73 new conceptions—ideas and touches—suggested by other Show models.

So, for the spring selling season we had all the best features which have yet come out. We had all the best ideas in design and equipment combined in a single car. We had then a more up-to-date model than any 1917 model we've seen.

Still More Additions

Since that Mid-Year model came out we have kept it right up to the minute. Quite a number of new things have been added. One is the slant windshield and the lower top. Another, leather hand pads on the doors.

All the time we are watching for new ideas. So the Mitchell is always the newest among the new-model cars.

The 26 Extras

In addition, the Mitchell has 26 features which other cars omit. Such things as a power tire pump, ball-bearing steering gear, reversible headlights, an extra-cost carburetor, an engine primer at the driver's hand, a locked compartment, a light in the tonneau, etc.

These make the Mitchell the most complete car that's sold.

They give to the Mitchell many extra attractions. They give to the dealer appealing talking points.

Our Banner Month

July will be the banner month in our history. That is the time when most cars find a slackening demand. Ours is constantly increasing. It has trebled since last July.

That is partly due to our remarkable advertising. We are spending $500,000 on this Mid-Year model only.

In unoccupied territories we want to hear from dealers who seek and deserve an alliance. It will be a wise move for such dealers.

U. S.

BALL BEARINGS

Only Quality Bearings

Particular stress is laid upon the fact that in the new and modern U. S. Ball Bearing plant, shown below, only bearings of quality are produced.

In manufacturing organizations of any kind, or type, where both quality products and cheap products are produced, there is always danger of cheap labor, or cheap material, or cheap methods occasionally becoming mixed with the quality products.

To safeguard against such contingency, the U. S. Ball Bearing Manufacturing Company confines its efforts entirely to the highest quality bearings possible of manufacture.

DENBY

TRUCKS

FOR TRAIL OR PAVEMENT

1-ton (with open express body) $1020

Specifications:

Wheelbase: 119 inches.

Load Space: 96 x 46 inches.

Horsepower: 27 on brake test.

Drive: Denby internal gear.

Wheels: Square-spoke artillery type.

Tires: 34 x 4½ pneumatic; solid optional.

Carburetor: Zenith.

Ignition: High-tension magneto.

Other Models:

1½-ton $1,575
2-ton 1,790
2½-ton 2,090

Descriptive literature of any Denby model, or of special body or wheelbase modifications, will be mailed on request.

THIS 1-ton Denby is not merely a "good roads truck." Some of its best work is being done over mountain trails, or in suburban localities where the roads are very poor.

There is plentiful power to take the truck and its load anywhere. But Denby design has taken care of the two factors of fuel consumption and tire mileage in a way that results in astonishingly low maintenance expense.

We believe that no other truck will equal Denby performance in these respects. Why not let your local Denby man test this belief in your own business, and let results tell the story?

NOTE—In the Panama-California Exposition Commercial Car Endurance Contest, held in July, the Denby made the only perfect score in the 1½-ton class.

The distance was 142 miles, with many steep hills—including the famous Torrey Pine Hill. The Denby climbed this on intermediate, and averaged 13.11 miles per gallon of distillate for the run, carrying its full load.

$595

THE Maxwell price of $595.00 was announced July 1st.

We felt that the public would at once show its appreciation of this exceptional automobile value.

But we were not prepared for the veritable storm of enthusiasm with which our action was greeted.

From thousands of cities, towns and hamlets the country over, came letters and telegrams from prospective buyers and automobile dealers.

Our sales department reports an unprecedented demand for Maxwell Cars. Our distributors everywhere foresee a volume of business heretofore without parallel in their entire experience.

All this makes us very happy. We have striven to build a motor car of character, and of unusual value—a motor car that we could be proud to endorse with our name and reputation.

Having accomplished this, our aim was to offer such a car at a price that could only be made possible by scientific manufacturing, standardization and a great volume of business.

We take this means of thanking the public for the generous recognition given our ideals, our product and the Maxwell Institution.

Roadster, $580; Touring Car, $595; Cabriolet, $865; Town Car, $915; Sedan, $985.
All prices f. o. b. Detroit. All cars completely equipped, including electric starter and lights.

The Enger Twin-Unit Twelve

Pull the Little Lever, Your Twelve is a Six—Push the Little Lever, Your Six is a Twelve

35 Miles on a Gallon of Gas

Here is the trick that is turning things upside down in the automobile world—the most marvelous automobile improvement yet invented.

Simply move a little lever on the steering column and your Twelve becomes a Six—or your Six becomes a Twelve.

For quick get-away, for slow driving in crowded streets, for surplus power over bad roads and hills, use your Twelve.

For normal driving turn the little lever on the steering column and six cylinders will "cut out" while the remaining six will give you the most economical, smoothest riding car you have ever been in—a car that will take you 35 miles on a gallon of gas.

This Enger invention has upset all calculations.

Twelves are no longer merely the height of luxury—they are also the extreme limit of economy. Nothing so efficient—nothing so saving.

Never has a car stirred up such enthusiasm. Never was a car such an instantaneous success.

For no other car at anywhere near the price even approaches such attainments in either luxury or economy—none at any price combines them.

A Wonderful Dealer Opportunity

The Enger Twin-Unit Twelve has revolutionized driving. It has created a demand for Enger cars—and the dealer who handles the Enger car is in the limelight from now on.

Dealers in all parts of the country are already feeling the popular demand for this marvelous car.

Other dealers, sensing its tremendous popularity, are getting in on the ground floor.

There are many places still open for dealers who are awake to the opportunities the Enger offers as a money making proposition.

Write or wire us at once—and if you are the right man you can tie up with the 1917 Enger with its marvelous motor.

Write for Booklet "The Story of a Gallon of Gasoline."

WILL YOURS BE THE NEXT ?

Many thousands of Ford cars are stolen annually and never recovered. Will yours be next ?

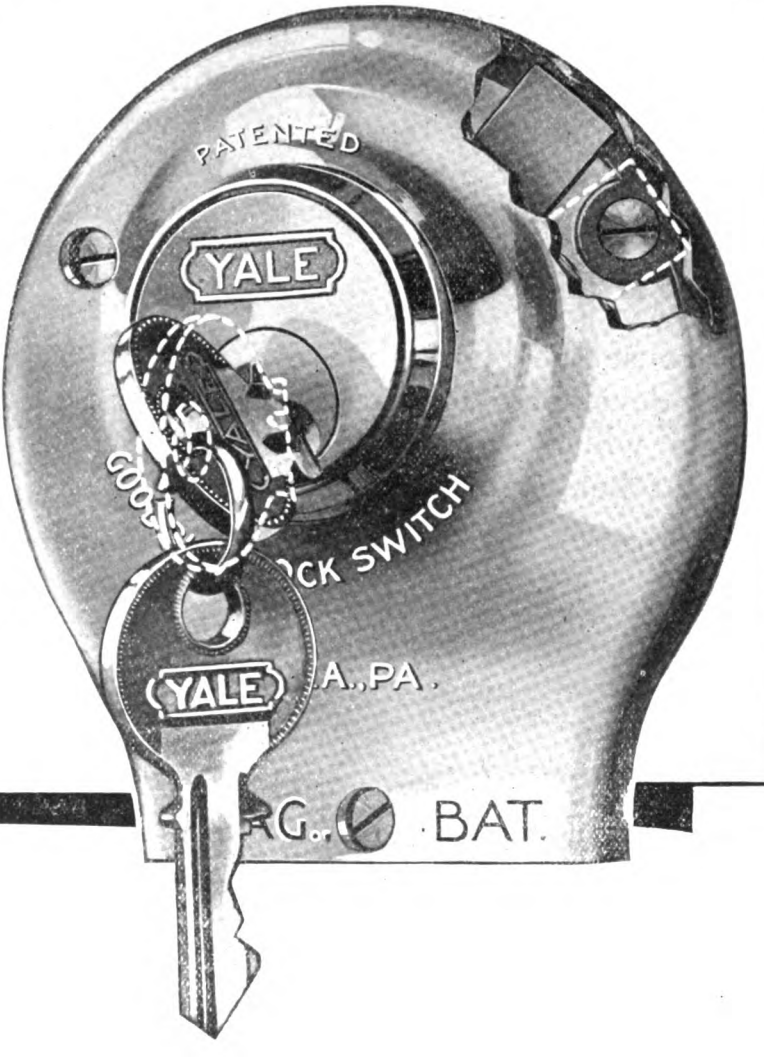
Or will this chap find it locked against him by an unpickable, unremovable switch lock?

For three dollars and twenty-five cents you can protect your car against theft. Once installed you will have the satisfaction of knowing that your car is safe *at all times;* safe from the thief who steals for profit and safe from the thief who steals for the sake of a joy ride.

GOODRICH AUTO SWITCH

with Yale Lock **FOR FORDS**

Formerly B. M. Switch Lock



—takes the place of the regular Ford Ignition switch—its screws fit the screw holes already in the metal coil box. It takes but a moment to install it.

—has an unpickable Yale Lock which none but YOUR key can operate.

—is a Switch that when locked in "Off" position cannot be removed because the screws which hold it to the metal coil box are then concealed and protected by metal shutters thrown over them by the same turn of the key that locks the switch.

You never forget to lock your car for the key that turns off the switch is also the key that locks the lock. Duplicate keys furnished with each Switch lock.

No other means of protecting your car is quite so sure quite so convenient or handy to operate, or quite so reasonable in price. Many thousands in use everywhere.

The Mark of Superior Motor Car Service

When the Traffic Whistle Blows

Some day you may happen to see a Hupmobile held up by a traffic policeman, along with two or three multi-cylinder cars.

Watch what happens when the whistle blows.

See which car gets away first.

It will be the Hupmobile, nine times out of ten, if its driver is fully alive to the abilities of his motor.

Why is this?

Because the Hupmobile has been developed to give the results which you may have thought belong only to multi-cylinder cars.

For example, the Hupmobile goes from a stand to 25 miles an hour in 10 seconds, if you wish.

Remarkably quick pick-up, you will admit.

In a jam of cars, it slows down—on high gear—to a crawl, and it accelerates—on high gear—without jerking or bucking.

Hupmobile dealers are selling this four against the "multis" everywhere by the simple expedient of putting it over the hurdles in any demonstration stunt the buyer wants.

But remember that these are not mere demonstrating tricks.

They make up Hupmobile performance, the same the car gives in ordinary, every-day use—the behavior that is setting the performance-standard for many a good car.

Write us about your territory.

"The Skyline of All the Fords I Ever Rode in Before Last Week Was Like a Pen Sketch of a Mountain Range—

Not Much Like the Even Tenor of Their Ways Once Equipped With W & C Double Arm Shock Absorbers"—*Gilbert Southwick.*

The Original W & C Shock Absorbers

$10 Per Set of Four

Double Arm Shock Absorber For Fords

The Last Shock Absorber You Will Need To Buy

"Ever since I was a kid in knee pants, somebody's been trying to sell me shock absorbers that make Fords run like high-priced cars—and all I ever got out of any of them before last week was a different kind of back-ache for each and every experience.

"That's why one night when I found myself trying to get out of Chicago by the South—which is the same as saying over zero in roads—in a Ford, I'd have taken a train rather than do it.

"I just got braced for the first hole—the way I always had before—when we eased over it like velvet. For the next 10 minutes we had from one to three wheels in dug-outs all the time, and we never once got a bing from a spring that had done its best and failed.

"There were W & C Shock Absorbers on that Ford—cantilever spring suspension, like big cars—and I'm here to say they worked.

"The next morning I went over the same piece of road in a 7-passenger car with a lot of cylinders and a name the youngsters know before their A B C's. We made a little better time, of course—but what I started out to say was: for easy, rolling, comfort the big car had nothing on our W & C equipped Ford."—Gilbert Southwick.

Convince yourself of the easy riding qualities of W & C Shock Absorbers by equipping your Ford today. Your experience will be the same as that of Mr. Southwick.

DEALERS: We grant exclusive territory to thoroughly high-grade dealers. Write or wire today.

"The High Price Of Gasoline

Doesn't seem to bother car owners, But they do howl for QUICK SERVICE"

A Wayne Curb Pump—In front of your Store. s a big welcome "sign" that says:

"Here's the place to get clean gasoline—get it QUICK—and know exactly how much you are getting with every turn of the crank."

STOP AND FILL UP!

And it is perfectly remarkable how fast this message has traveled throughout the motoring world—so much so that thousands of car owners willingly sail past every other make of pump till they can spot one with the Wayne trademark on it.

This applies to the whole Wayne line, but especially to the big impressive

WAYNE MONARCH
5-GALLON CURB PUMP,

the fastest pump in the world.

Delivers 5 gallons in 15 seconds—20 gallons a minute—and a Big Clock Dial shows the buyer exactly how much gas is going into his tank.

NO BACKWARD STROKES

Only pump that requires no backward strokes and no lost motion. Twelve *forward* strokes on low gear pump five gallons and three more *forward* strokes on high gear, return the plunger for the next five gallons.

Send for our circulars.

Little Giant Spiral Fluted Taper Reamer Sets

The Spiral Fluted is the Only Smooth-Cutting Reamer

We have discontinued manufacturing straight-fluted reamers, because of the superiority of the spiral flute.

The left hand spiral flute gives a shearing cut, reducing the strain on the cutting edge. The reamer has a double support in the hole, which steadies it in action regardless of faults or defects in the metal.

Our Reamer Sets Are Complete with Bit Brace or Straight Shanks.

These sets contain all the sizes generally used in automobile repair work.

No. 705—5 sizes.
No. 709—9 sizes.

Spiral Fluted Taper Reamer Sets for Automobile Kits

Put up in substantial leather rolls, or wooden cases. Send today for our bulletin, "Tools for the Automobile," showing automobile tap and die sets and other indispensable tools for the garage and repair shops.

We are the largest manufacturers of screw-cutting tools and solve screw-cutting problems for automobile manufacturers.

THE NEW PROCESS DIFFERENTIAL

Gives Positive Traction and Requires No Change in Housing or Bearing Layout

Send for a New Process Differential and put it into your testing car. Drive it through mud, slush, snow, sand and over wet asphalt and you will find a steady straight forward pull that keeps the car moving ahead **with all wheels in line.**

You will find the compensation perfect in turning corners and on straightaway you will **not** have the wheel spinning, sidesway and skidding that always accompany an ordinary geared differential.

Our extensive plant permits us to meet the quantity requirements of any builder, and we stand ready to back this Gearless Differential with every reasonable performance guarantee.

Safety, confidence and comfort of owners in your cars demand that you start your investigations soon.

Licensed under patents of the
Gearless Differential Company of Detroit, Mich.

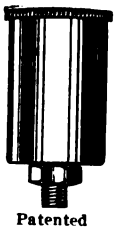
The above illustration shows where leakage occurs, resulting in reduced power and excessive gasoline consumption. Motor Graphite does away with this waste.

Motor Graphite *Stops* the *Leaks*



Thoroughly experienced mechanics have long been familiar with the superior lubricating properties of dry flake graphite. They know it will withstand a greater heat than any known lubricant that has yet been produced. And its soft, velvety texture builds up smooth-running surfaces wherever it is used. Motor engineers have never questioned its superiority over ordinary lubricants. But the question has been: "How can we get it into the cylinders?"

The Auto Graphite Lubricator

(Retails for $6)

solves this problem and to such a perfect state of satisfaction that motor-car owners will lose money without it. Introducing the graphite into the cylinders through this device reduces friction, gives a good seal to the piston-rings and valves and stops all leaks. This brings better compression and a resultant saving in gasoline. The Auto Graphite Lubricator is easily and quickly attached to the intake manifold and is extremely economical because it requires only 25 cents worth of graphite for every 1000 miles.

Representatives Wanted—We want live, energetic hustling, capable representatives in every community. This wonderfully economical device fills a long-felt want and is instantly recognized as a real motor economy. Your sales will be plentiful, your profits liberal and you will be backed up by hearty sales-pulling cooperation. Write for full particulars—but act quickly.

The Graphite Lubricator Company
328 Diamond Street, Pittsburgh, Pa.

STEVENS & CO. NEW YORK

PUMP CONNECTIONS

To illustrate the completeness of every one of the many lines carried by Stevens & Co., we show below a few of the leaders in our line of Pump Connections. We are headquarters on these parts, and dealers and jobbers find in the Stevens line all of the most substantial and **popular** pump connections to answer their every requirement.

Our Acorn Pump Connection

is easily pushed on over valve and makes instant air tight connection. Fits any valve.

Price, 15c.

Our Acorn Rubbers

by test, give 10 times **the** service of ordinary pump **connection** rubber. Superiority due to red rubber cores. **We** use RED RUBBER CORES, vulcanized by a special process. The most durable rubbers you can buy.

Price per doz., 25c

Our Holdfast Pump Connection

is the best connection for garagemen and car owners. Cannot blow off with highest pressure, and it can be instantly attached or removed.

Price, 25c.

Our Ideal Pump Connection

is an indestructible high quality connection. Cannot wear out, nothing to replace, just as convenient as "slip on" style.

Price, 20c.

Our Perfection Coupling

fits outside of Schrader Valves, and is largely used by pump manufacturers. Fits 3-16 in. hose. Made (No. 1) with steel head and heavy brass stem, or (No. 2) brass head and stem, with valve.

Price, 10c.

Our Evertite Automatic Air Valve

overcomes the greatest objection to prevailing types of air chucks by using, instead of cone-shaped washer, a **flat, round rubber disc** that lasts for months and can be replaced easily by cutting gasket from old inner tube.

Price, $1.00

STEVENS & CO., 375 BROADWAY NEW YORK

STEVENS & CO. accept it as a duty to have in reserve for your requirements pump hose, connections, rubbers, cup leathers, etc.—items not important in original sales but vital in repairs and replacements. We consider it good business to keep all lines complete. Quality is the Keyword of all.

THE MANLEY "EVERY WAY" ENGINE STAND

supports the motor perfectly, while allowing the workman to reach every portion of it with ease and accuracy.

The "Every Way" can be adjusted to every position in a circle—100 positions if desired—but the three most convenient are the Horizontal Position for working on valve mechanism and generally around the engine; the 45-degree Position (shown in cut) for cleaning carbon, grinding in valves, etc.; and the Inverted Position for taking up crankshaft, connecting rod, bearings, etc.

In each position the engine is locked rigidly by two side braces. The "Every Way" supports the engine solidly. It will never become shaky, and should last a lifetime without repairs.

For the Factory motor assembly department no other stand has been brought out that can be compared to the "Every Way" for efficiency and convenience.

The United Engine & Mfg. Co.

Tire Repair and Vulcanizing Service

In these days of high tire prices, the tire repair business is getting bigger and better than ever, as motorists learn the method of true tire economy. Why not cash in on this opportunity? Put in a Haywood Tire Repair Plant. Link up with a nationally advertised tire repair service. Six years of Haywood's advertising has standardized the Haywood method.

The Sign of the Man and Machine

—is the connecting link between the tire repair man and the automobile owner. It chains the established trade of hundreds of customers to your business. It connects your shop with a national tire repair service—a standardized service—a service that motorists know absolutely to be economical, practical and efficient.

The Haywood System

—is scientific—a true system of conservation of tires—a system that saves motorists thousands of dollars on tire bills. It means repairs that are lasting—vulcanizing that holds—repairs that are solid as the original tire itself, insurance to motorists of no regrets on the road.

Haywood's Tire Repairing and Vulcanizing Plants

The Haywood Plants are complete, all in one unit—are easily operated—no experience necessary. Here is your opportunity to make big money—to add hundreds of dollars in profits a year to your business. Occupies only a small part of your shop—can stand right out in the open where your customers can see it—a constant reminder to keep their tires repaired. Your shop equipped with a Haywood Plant is the motorist's logical haven for tire repairing. It completes your service—a service that customers like—a service that brings and holds business at big net profits.

Write for New Catalog

Use a letter, or post card or simply send the coupon below. This brings the big book of facts—tells all about tires and how to repair them—shows outfits in use—gives proof of successes—shows how we co-operate with plenty of advertising and plenty of help—how you link up with a national service. Book gives complete details. Write today. Don't delay.

Is Your Car Top Heavy?

Why buy a light weight car burdened with a heavy top?

A low weight center means safer, easier riding. Unnecessary top weight means waste—increased vibration and side sway.

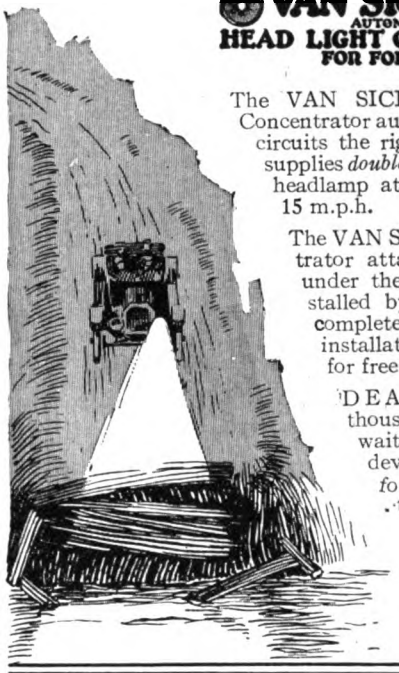
You pay for every additional pound with gasolene, oil, tires and general wear.

At the best the most efficient top material can only be a waterproof layer supported by cloth—the lighter, the better—but strong enough to stand the strain when up, and flexible enough to fold without cracking.

Extra layers of cloth and combiners only add weight, diminish flexibility and increase the possibilities of cracking in folding. Mohair tops absorb pounds of water during a storm and accumulate dust when dry.

DU PONT FABRIKOID
RAYNTITE
SINGLE TEXTURE TOP MATERIAL

is ideal for the modern one-man top. It is made of a single thickness of light, strong cloth coated with a flexible, waterproof compound that sheds water like a duck's back. It can be easily washed, always looks well and because it is chemically inert will not oxidize nor disintegrate. *Guaranteed one year* against leaking but built to last the life of your car. Any top maker can replace your old dusty or leaky top with Rayntite.



Du Pont Fabrikoid Rayntite will duplicate the remarkable success of Du Pont Fabrikoid Motor Quality—The Standardized Automobile Upholstery—used on 60% of 1916's entire output.

Write for samples and booklets and latest list of cars equipped with this modern top material.

Du Pont Fabrikoid Co.
Wilmington, Del.
Works at Newburgh, N. Y.
Canadian Office and Factory, Toronto

FORD OWNERS

Where is the Best Garage in Town?

This is the first question that every motorist asks when visiting a new town. Can it be said of your garage? Service is the thing that the motorist is looking for. You want the business. Don't cut prices. Don't spend money on expensive service plans, which increase your cost of operation out of proportion to the amount of business brought in. Furnish your customers AIR FREE FROM OIL. They know that it means increased tire mileage, less repairs, less tire expense and saves them many dollars up-keep every year. By putting in a Curtis Air Compressor you offer your customers a big inducement to come to your place of business.

—HANG OUT THIS SIGN—

CURTIS AIR--FREE FROM OIL

The Curtis Compressor has controlled splash oiling system. It cannot flood the cylinder with more oil than it needs or can use. We have manufactured air compressors for over 25 years. We have had the experience. We are specialists in this line. We can furnish you with 5 different sizes or 125 combinations of styles and arrangements of outfits.

Your jobber very likely handles the Curtis Compressor. Ask him, but insist on a Curtis. If he does not handle the Curtis, send in the coupon below.

You have to have an air compressor anyway. An investment in the Curtis puts you in a position to give better service without additional cost, and helps make yours the best garage in town.

Curtis Pneu. Mchy. Co.

1546 Keinlen Avenue **ST. LOUIS**

"Forbes" System

Patent Pending

A LONGER CHASSIS
A STRONGER CHASSIS
A BETTER CHASSIS

results from applying the "Forbes" system to Ford cars, lengthening the chassis for commercial purposes without reducing the simplicity and efficiency of the original construction.

The "Forbes" system is an addition to, not an alteration of the chassis. Each side of the Frame is trussed throughout its entire length, brackets for ends of truss rods clamp to frame, making unnecessary any additional holes in frame.

We use only the highest grade material obtainable and positively guarantee results.

We have a very interesting proposition for distributors. Send for it today.

WALTER J. FORBES 243 COLUMBUS AVE. BOSTON, MASS.

$16 Is Enough
to Pay for Streamline
Equipment for Your Ford Car

There's nothing wrong with the body that comes on your Ford car.

No need to throw it away and buy a new one, at half the price of the entire car. $16 is a moderate investment you can afford to make for the—

For All Ford Cars

Detroit Streamline Hood and Scroll Type

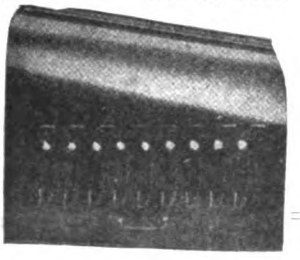
Radiator Shell

—that brings your car up to date in appearance. To spend more is unnecessary, and out of proportion to the value of your car.

DETROIT Equipment is **for all Ford cars**—not just cowl dash models. Built of substantial sheet steel, with concealed, waterproof hinges. Finished in black enamel that lasts.

Ask your dealer, or write us for free illustrated literature telling how to keep your Ford car in style, with DETROIT Streamline Equipment.

SPECIAL DEALERS' PROPOSITION



The Harry Svensgaard Sales Corporation
124 Jefferson Ave., W. Detroit, Mich.

FACTORY IONIA, MICH.

Warehouse. Windsor, Ont., for Canadain deliveries.

We will protect users and dealers against infringement suit.

HERE IS SOMETHING NEW!
They've Been Looking For It

A handy, compact motor car lavatory. It measures 11" in length and 3½" in diameter. It contains a sanitary, antiseptic washing fluid, and a roll of absorbent paper towels. *No water is needed.*

Practical—Convenient—Necessary

HAND-I-WASH COMBINATION

is the niftiest accessory you can offer your patrons. A little of the fluid poured on the hands will remove oil, dirt and grease, then there's a towel to finish with and the man who's repaired a tire or fixed his power plant is as clean as though he had a wash room at his disposal. It

DOES A CLEAN JOB

in a few minutes and saves steering wheel and clothes from getting muck covered. Enables the tourist to arrive at his destination as clean as when he left his house.

Hand-I-Wash is a fast seller. Unlike cleaning pastes, it supplies its own water. Everybody wants it.

List Price Complete, $1.
Refillers containing fluid and towel roll, 50c.

Liberal discount to the trade.
Send for our offer.

THE AMERICAN BALL-BEARING CO.

Pioneer Axle Builders of America CLEVELAND, OHIO

Today biggest accessory seller—LOW'S 5 MINUTE VULCANIZER
GENUINE—PATENTED—GUARANTEED.

Produces quick, permanent patches on inner tubes. Carry with you and use on road if necessary. Takes just 5 minutes. No cement, gasoline, acid, blaze, electricity or steam. No danger from fire. Cannot burn the tube or overcure. Works as well in the wind. Patch is even more secure and permanent than a steam vulcanized patch. Strengthens the tube. Heat is applied directly to the patch and does not extend to the tube itself. Exactly the right amount of heat with each patch to vulcanize in 5 minutes. Cost of patches negligible, only 8½ cents each. No automobile owner can afford to be without it, whether he desires to do his own vulcanizing or not. One of the greatest inventions in the motor world. Your repair shop uses them.

Shipping weight, 20 oz.; patches 8 oz. per dozen. This process is patented. Beware of infringements and imitations. Guaranteed.

RETAIL PRICES

Vulcanizer, complete with 1 doz. patches $1.50
Extra Patches for same, with heating unit, per doz. . . . 1.00

The Universal Automobile Record Book

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.

The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

All Records Broken —for Price—for Quality

Recent purchases of stock of defunct automobile companies make it possible for us to sell repair parts and accessories at low prices and in many cases below the actual cost of manufacture. We have in our main plant and adjacent warehouses over two million repair and service parts for many different makes of cars. From our large stock we can fill practically any need. Our parts are of the high quality and our prices the lowest.

Here are Some of the Bargains

The Mondex

Shock Preventer and Absorber

The Mondex Shock Preventer is a series of inclined planes of high carbon steel against smooth rolled high brass riding upon each other on the wedge principle, expanding and contracting disks of firm but resilient rubber. The rubber cushion rapidly increases in resistance the further it is compressed, so that a heavy shock meets with much resistance and a light shock with little resistance.

Change as you will, from good roads to bad, the Mondex automatically performs its function. Your car will run along smoothly, giving perfect comfort to the occupants. The bounce and jolt will be gone.

Price, Set of 4, $12.00

Fittings to attach shock absorbers to car	$12.00 per set extra.
Remy L. C. Tube Coils and Switches	$6.00
Jacox Left Hand Drive Steering Gears, with 10" wheel	10.00

TOPS

KRIT

Special Offer No. 4

A TROUBLE PROOF CLUTCH

We are offering a specially designed clutch which we positively know will forever eliminate all clutch troubles. It has extra strength discs and a clutch spring that will positively hold the clutch under all conditions.

The regular list price for this clutch is $24.00.

However, as we desire every Krit owner to be able to take advantage of this big improvement at once, we are making a special price for a short time only of **$16.20**

Be sure to order all repair parts for all Krit models direct from the factory. They will be shipped on a few hours' notice. We carry no stock of Krit parts elsewhere.

Service Parts For All Cars

Rather a broad insertion, isn't it? Let us prove the statement. We are located in Detroit, the center of the automobile industry, and during our long life have built up a service department which is the largest and most efficient in the world. The owner of any make of Orphan car need not want for any part of any car, for we have bought over one hundred defunct companies. We carry practically everything to put your car in perfect running condition, from the smallest screw to the complete car. Below is a partial list of "Orphan" Cars for which we supply service:

Stop the Spring Breakage
It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING."

Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

Waiting ON Customers
and
Waiting FOR Customers

is often no more than the difference between handling the fast selling Dutch Brand Line that repeats and handling an inferior line which doesn't.

You take no chances when you order standard Dutch Brand Products. Ask your jobber.

DUTCH BRAND

Auto Patching Cement—A big seller. For extra heavy patching. Quick, dry. Most dependable for tube patching. Patches stick and stay stuck.

Vulcanizing Cement—Meets with a ready demand for shop use and use with small hand vulcanizing outfits. Cures quickly and effectively.

Rubber-Seal—Permanently repairs large cuts and gashes in outer casings. Rim-Coat insures quick and easy tire changes.

"2-in-1" Tread Filler. A Liquid Rubber—Quickly fills small cuts and bruises in outer casings. Keeps out fabric-rotting oil and water. Requires no cement. Dries hard and resilient.

Tire Talc—A staple toolbox necessity. Always meets with a ready demand. Extra smooth.

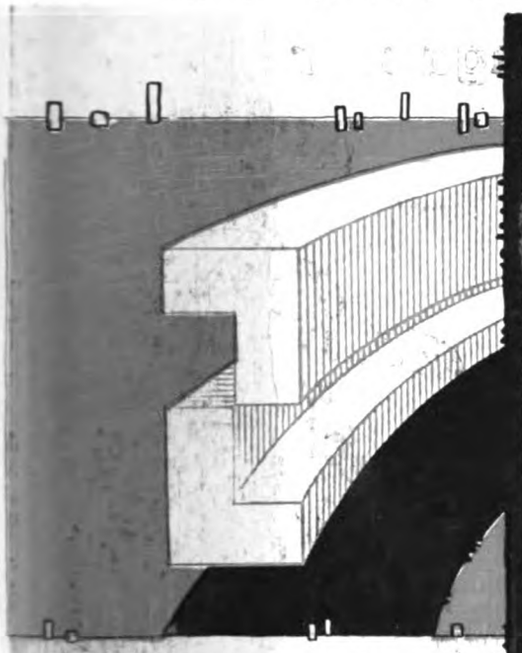
Friction Tape—A tape which will not powder. Unexcelled for insulating purposes, temporary tire repairs, etc.

Radiator-Seal Compound—Quickly repairs damaged or leaky radiators. A necessity in every toolbox. A touring necessity. A DUTCH BRAND leader that is meeting with tremendous demand.

Gasket Shellac—A positive liquid shellac sticker—always ready for use. Cements and makes leak-proof spark plug gaskets and all other gaskets.

Engine Paint—For painting motors and radiators, keeping them neat and clean. Not affected by heat. Supplied in black and gray.

Black-the-Brass—For beautifying lamps, radiators and trimmings. Produces a hard, smooth, dead black finish over brass or where nickel has worn off.



Other DUTCH BRAND Products are:
Tire-Brite, Rim Coat, Carbo-Cide, Valve Grinding Compound, Auto Top & Cushion Coating, Varni-Brite.

DEALERS—Send for illustrated catalog and order a stock from your jobber.

You Can't Afford Cheap Piston Rings

The exclusive LEAK-PROOF *angle-to-angle interlocking construction.*

TO put cheap piston rings in a motor is the poorest form of economy. What little is saved in price is lost many times over in wasted fuel and oil and scored cylinders.

The piston rings that invariably prove cheapest in the end are the Original and Genuine McQuay-Norris LEAK-PROOF Piston Rings.

In LEAK-PROOF you get the most perfect type of piston ring made. A special metal perfected for LEAK-PROOF Rings exclusively—strong, tough, enduringly elastic. A patented design, mechanically correct in every essential—giving the ring firm and equal bearing with light tension. Careful, accurate manufacture that works to hairbreadth measurements—insuring close fit.

For the LEAK-PROOF price you get good, strong compression, power a-plenty, little or no carbon trouble and lengthened gasoline and oil mileage.

BE CAREFUL. When you order LEAK-PROOF Rings, be sure you get them. Look for the name LEAK-PROOF stamped on every ring. Insist on seeing it. Examine the ring; make sure it is made of two sections equal in size, fitting around one another angle-to-angle. That's the exclusive LEAK-PROOF design—vitally necessary to true LEAK-PROOF service.

Send for FREE booklet:—"To Have and to Hold Power"—the standard handbook on gas engine compression. It tells what LEAK-PROOF efficiency means. Write Department K.

For Discriminating Buyers of Protection—
The "J-M" Fire Extinguisher

Every safety feature in your car is provided to guard against emergencies. That's why each must be the best and most modern of its kind.

There's the same reason for discrimination in buying a fire extinguisher as in selecting lights, horns, tire-chains, or brake linings—the need for the utmost in safety. This is a demand fully met by the "J-M"—the most efficient fire extinguisher of the one-quart type, "the last word in Safety First."

A few quick strokes create sufficient air pressure to discharge contents at the opening of the nozzle—an invaluable feature in tight corners. Where space permits, however, it may be discharged by pumping, like other types. This two-way method of operation is an *exclusive* "J-M" feature.

Effective for all incipient fires, whether from gasoline, grease, oil, or electrical arcs; liquid is harmless to skin, fabric or machinery. Strongly built, handsomely finished in brass or nickel and retails at $8.00, bracket included.

Entitles car owners to 15% reduction in automobile insurance.

Tested, approved, and labelled by the Underwriters' Laboratories, Inc., and listed as an approved fire appliance by the National Board of Fire Underwriters.

"J-M" Liquid for recharging is sold in sealed cans bearing the J-M trade mark. The only liquid guaranteed for use in the "J-M" Fire Extinguisher, non-corrosive and non-deteriorating. Order from your dealer.

TO THE TRADE

"J-M" Fire Extinguishers are sold under generous discounts, rigidly maintained and uniform regardless of size of order. For the right jobbers and dealers we have an interesting proposition—a square, profitable, and profit-protecting trade policy which you should know about. Ask the nearest J-M Branch.

Automobile Springs Are Designed to Meet the Requirements of a Maximum Load

Thus it is that a seven-passenger car rides best with seven passengers and a five-passenger best with five. When the load is less than capacity, the car, lacking the weight necessary to hold it down and steady it, "kicks up," even though the road be smooth.

Yet how seldom either of these two kinds of car carries a full load!

Again, many a roadster, of but two-passenger capacity, has seven or five-passenger chassis and springs and is bound to "kick up" and bounce because its load is always too light to hold it down and steady it.

In these and other instances the

*Hartford SHOCK ABSORBER

affords the requisite control over spring action to prevent the "kick up," to keep the wheels from bouncing, to so materially improve the riding qualities of a car that those who ride in it are impressed by the fact that the HARTFORD is the one shock absorber that **really**

Makes Every Road a Boulevard

Whether you ride light or heavy and wherever you ride, comfort will attend you if your car is Hartford-equipped.

Try a set thoroughly. Satisfaction or money back.

EDWARD V. HARTFORD, Inc.

Heretofore Known as Hartford Suspension Co.

FISK POLICY

THE BUSINESS which eagerly wants to give a man a square deal always wins, because its very growth rests on the thing every man demands ***—a fair show.***

It was in November, 1898, that The Fisk Rubber Company began to make pneumatic tires. From the very first the company held an ideal towards which it has always steadfastly moved—to build a product that would give the utmost satisfaction to the user and to see that the user got that satisfaction.

An output that has doubled every year for five years is the proof of this policy.

This policy touches YOU as a Dealer in all your dealings with FISK through The Fisk Rubber Company of N. Y.

The wonderful Fisk Branch System, now comprising more than 125 Branches, is the outgrowth of this policy. It places near you a fully equipped unit of The Fisk Rubber Company itself, so you can get, with the shortest possible delay, anything The Fisk Rubber Company makes that your customer wants.

It helps you to do business quickly and profitably.

The Fisk Rubber Company wants every man who buys anything from it to be sure he has had a square deal.

If interested, Write to Dept. 23 for the Fisk Dealer Plan

Within the Law

The roads are full of perils waiting to call the unsuspecting automobilist to court, which is a most inconvenient occurrence, because it breaks in so much on one's plans.

The man who speeds with premeditation knows the chance he is taking and is willing to run it gamely, but the man who speeds and doesn't know it not only loses that thrill which comes with the knowledge of breaking the law, but is also fined as much as if he did.

Keep within the law by equipping your car with a

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

We say Corbin-Brown advisedly, because if you carry a speedometer equipment it is well to carry the best. In this matter accuracy is the first consideration, not approximate accuracy, but absolute unerring accuracy. And because of its special construction and numerous exclusive features the Corbin-Brown is qualified to give you this sort of a record as no other speedometer on the market is. In all seasons, under any condition, what the Corbin-Brown says can be believed. And remember, it is a durable, practical instrument, built for the roads.

A Fivefold Increase in Overland Business for Dayton, Ohio

The Overland dealer in Dayton, Ohio, sold 250 Overlands in 1912.

Each succeeding order showed an increase.

And during the year ending June 30th, 1916, Dayton shipments totaled almost 1400 cars.

More than a fivefold increase in business in four short years—and more than a fivefold increase in profits.

Overland popularity will build business for *any live dealer*

MOTOR WORLD
for
DEALERS, JOBBERS AND GARAGEMEN

Vol. XLVIII New York, U. S. A., Wednesday, August 9, 1916 No. 6

Those Little Devils!

Old fairy tales tell of little devils that pull at one's clothes, dig holes in the path and cover them with brush, and perform all sorts of mean tricks. The motor business is just full of little devils and the meanest are "long trades."

THE STORY OF

DOLLARS LOST

by the Implement Dealer—Who Sleeps—While the Car Dealer and Garageman is Awake to the Big Opportunity That Lies in

TRACTOR ACCESSORIES

HOW IT IS DONE

Time: To-day.

Characters: Implement dealer. Tractor owner.

Enter tractor owner through wide-open doors. Side-stepping plows, spring-tooth harrows, disks and hay rakes, he approaches small desk at rear of store.

Implement man seated behind desk, large cigar in his mouth and feet on desk.

Implement dealer—removing feet and cigar: "Good morning; anything I can do for you?"

Tractor owner: "Yes, I want a couple of spark plugs and some terminals."

Implement dealer: "We don't stock those things, friend. Sorry. Might try the gar-age couple doors down street, though. They generally have them gimcracks."

Exit Tractor owner.

Curtain.

By Stanley P. McMinn
(Motor World Staff Representative with the Tractor Circuit)

THEN the Implement Dealer rocks himself back on the hind legs of his chair and says to himself: "Humph, wonder if I'm going to get any of that trade?"

Now, doesn't that sound altogether too ridiculous for words? It's hard to believe, isn't it?

But it is true—every word of it is Gospel truth. You, gentle reader—as the story books say—you go into any implement dealer's in Texas or Kansas or Missouri, and, I dare say, in any other State where tractors are sold, and you will hear exactly the same thing. You will hear the loud snores of the implement dealer as he sleeps peacefully on and on in spite of the ear-splitting din that is being made by the farm tractor wherever earth is turned.

Implement Dealer Asleep

As far as the implement dealer is concerned, he is absolutely dead to the world when it comes to stocking farm tractor accessories, let alone *selling* them.

Now let us follow Mr. Tractor Owner into the garage "couple of doors down street."

THIS is the third of a series of stories on the National Farm Tractor Demonstrations written by one of Motor World's staff men, who is on the field. Others will appear in following issues, analyzing conditions, describing the demonstrations and pointing out the probable future.

Has the garageman any spark plugs? He has. Has he ⅞ long? He has. Does he sell the Tractor Owner three? He does. And does he also sell Mr. Tractor Owner terminals for his high-tension cables? He does.

And does he get hard, cold cash for them? He does.

Let us analyze this situation: Why does the Tractor Owner find it necessary to go to the garageman for his accessories? Why has the garageman got those accessories to sell him?

Why Is He Asleep?

The answer to the first question is simple and already has been given, to wit: the garageman is awake—the implement dealer is asleep. But hold on, that brings up another question: "Why is the implement dealer asleep?"

No One to Wake Him

He is asleep because no one has ever thought to wake him up. It has taken the implement trade years and years to wake up to the fact that the business they are doing can be done on a cash basis. The automobile taught the implement dealer that. Here was farmer Jones driving into town in his old spring wagon and giving the automobile dealer real money—not promises—for a motor car. And the next minute here was farmer Jones driving his new car around to the implement dealer and buying a new plow or a binder or a harrow and giving him, *not* real money, *but* promises.

The implement dealer simply sat up for a minute, looked over the shiny new car, and said, "Hell, there ain't no such animal. I've been dealing with farmer Jones for nigh onto 30 year and he never paid cash yet for anything, and I don't believe he paid cash for the car."

But one or two of those implement dealers were not satisfied to disbelieve themselves. They investigated. They

Digitized by Google

The demonstration last week at St. Louis was under conditions similar to those existing in Dallas and Hutchinson. The iron horses proved their worth to interested farmers and dealers

found out that farmer Jones really had paid cash for the car—that he couldn't get the car any other way. And you'd better believe that the awakening was a rude one. Why even the automobile dealers are selling plows for cash now—but, as Kipling says, that is another story.

But to get back to accessories:

Some few—very few—jobbers of motor car accessories have seen the light and are urging that their dealers make a play for the tractor accessory business. But their number is woefully small—and yet it is tremendous as compared with the number of farm implement jobbers who have even seen the possibilities of this trade.

Implement Jobbers Snore, Too

During the past 3 weeks I have talked with implement jobbers in Dallas, in Oklahoma City, in Wichita, one of the biggest jobbing centers for farm tools; in Kansas City, and in St. Louis.

Not a single one is ready to supply the demand for tractor accessories. Some of them admit that they have "thought about it," but none has gone any further than thinking.

And the most startling feature of the whole matter is that these same implement jobbers are frank to admit that unless the implement dealer does wake up and prepare to give the tractor owner what he wants in the way of accessories, he (the implement dealer) is going to lose the tractor business.

Lack of Standardization

The implement jobber, so far as I have been able to ascertain, has only one excuse to offer for failing to stock tractor accessories and pass them along to his dealers.

"Lack of standardization," he says, almost in a whisper. "We're looking around, feeling around, and just as soon as we find out what is wanted we are going in on it. But now? No, it's too soon yet."

"Spark plugs are standard," I said, "and so are grease cups and tools and——"

"Well, I guess we'll wait a while yet," he answers, and starts to dictate a letter.

In the Meantime—

In the meantime what is going on in the tractor accessory field? Who is going to get this plum? Assuredly the implement dealer won't get it if he waits for the implement jobber to prod him into wakefulness. The garageman will get a certain amount of it; and the manufacturer of the tractor will get the lion's share.

The reason for this is that the man who purchases a tractor has been trained to go to the manufacturer of the tractor, or to one of the manufacturer's branch houses, for everything he wants from a spare wheel to a spark plug. It may mean a whole lot to farmer Jones to have a spark plug to-day—right now—but his mind does not work along these channels. His training makes him write the tractor manufacturer for the plug and in the course of a few days or a week, maybe, the plug comes along. That is, one plug will come along, because farmer Jones only ordered one plug.

If farmer Jones had happened to be in town and had happened to go to his garage for gasoline and had happened to remember that he needed a spark plug for his tractor, the garageman might have sold him one—provided farmer Jones had up and asked right out for it, like that.

Trade for the Asking

Would the garageman have asked farmer Jones: "How's the new tractor working to-day? Need some spark plugs?" He might. He might, because he has a germ of merchandising in him. But the implement dealer would not, because *he* has been trained to wait until a farmer asks for something before he attempts to sell it. *The urge of cash on delivery is not behind the implement dealer.* If he sells the plugs he knows they will jolly well go on the farmer's account, and maybe they will be paid for this fall, and maybe they won't be paid for until next fall. So he is kind of shy in asking the farmer to buy anything.

And then, again, the garageman may not have asked farmer Jones if he needed any plugs. I say, he may not have asked him. And I greatly fear that many garagemen are not asking this all-important question. I have called on dozens of

Here Are

some accessories the tractor owner needs and all of which the car dealer and garagemen can sell him:

Asbestos packing	*Ignition switches*
Babbitt metal	*Ignition terminals*
Battery connectors	*Ignition wire*
Battery testers	*Lamps*
Bearings	*Magnetos*
Bearing bronze	*Nuts and bolts*
Brake lining	*Oil cans*
Carbureters	*Oil cups*

Digitized by Google

garagemen in the Southwest and with but very few exceptions they admit that they do not *try* to sell tractor accessories to the farmer. What they do is wait until the farmer comes in and asks for what he wants. It is no credit to the garageman that he is able to give the farmer what he wants.

In nine cases out of the proverbial ten, the garageman has right on his shelves exactly what the tractor owner wants.

Has the Stuff, But—

And still he is not making a great enough attempt to connect with the tractor owner. Does he ask the tractor owner if he needs plugs or wire or fan belting or grease cups or oil or tools or carbureter or magneto when he comes in? No!

Does he send out a neat circular letter occasionally to tractor owning farmers in his vicinity, drawing attention to his stock of accessories and tools? No!

Does he advertise that he is prepared to fill the needs of tractor men? No!

What does he do to get this tractor business? Nothing!

All he does is to have the goods on his shelves. And it is only because he doesn't do any of these things that the farmer is continuing to go right back to the tractor manufacturer or the manufacturer's branch for the things that he ought to get from the garageman or the accessory store. He knows he can't get accessories from the implement dealer, for hasn't the implement dealer told him this time and again?

Where Do the Jobbers Stand?

Now, then, where do the accessory jobbers stand in this muddle? "Ah!" you say; "here is the man who ought to be on his toes, pushing this business; here is a man with vision, with imagination; here is a man who sees thousands of tractors going into the territory controlled by his dealers and who is urging his travelers to pass along the good word, to prod the garageman and the supply store into a realization of this golden opportunity."

But is he all of these things? Sometimes, and then, again, sometimes not. As a matter of cold fact, few accessory jobbers really have this gift of imagination. Few of them have visualized this opportunity.

"Just a minute," you say. "Is this a golden opportunity? How many millions of dollars' worth of accessories will these tractor owners use, anyway, and are we not making a lot of noise over what is really a piker's business?"

It is true that the tractor owners of the United States will not buy many million dollars' worth of accessories this year, nor, perhaps, next year. But that, after all, is beside the issue, for we are not manufacturing new things for the tractor; we are not stocking up with a new line of accessories. *What we are trying to do is to increase our sales of the standard, staple articles that are already on our shelves.* That's the point.

Six Magnetos in a Week

Here's a case in point: One accessory jobber in Kansas City told me last week that in 1 week he had shipped out six standard Bosch magnetos for replacement on tractors. Here's another: A piston ring manufacturer informs me that since the first of the year he has increased his sales of tractor size rings 500 per cent, and all of this business was for replacements. Another told me that within a few weeks he had sold several standard carbureters for replacement on tractors. These are all actual occurrences. Another big jobber in Kansas City tells me that in 1 day three of his garagemen customers came to him to get accessories for use on tractors. The jobber took these off his shelves and the dealer took the profit.

And yet this jobber—one of the most successful in Kansas City—has not attempted yet to make a drive for this business.

I said to him: "If all your travelers were instructed to point out to your garageman and supply house customers the possibilities of selling accessories for tractors and to urge them to make a play for this business, would it help sales any?"

"Undoubtedly it would," he answered.

This One Is Awake

Another jobber, close by, states that his travelers have been instructed almost exactly along these lines. And another will this fall have a special section in his catalog devoted exclusively to accessories for the tractor. And these will be accessories that are for any car on the market as well. Get that!

And why not? From the radiator clear back to the transmission gearing, the average tractor is like the average motor car. The cylinders may be lying on their sides, but they still use one spark plug in each. And there is more ignition wiring on the average tractor than there ever was on a motor car. In some few cases it may be necessary to have special sizes of accessories, such, for example, as grease cups, but these cases are few and far between.

Mostly Replacement Business

As I have already pointed out in a previous article, there is not a great deal of replacement in the tractor field because of breakage. Tractors are big and heavy and are built to stand the gaff, and they do not often go bad because of breakage. But they do wear out, and some of them wear out at a rate that is astonishing when you think of a pleasure car and not at all astonishing when you think of the work they must do and the conditions under which they must do that work.

Just as one case in point, piston rings might be mentioned. These are vital to the operation of the tractor. Yet more than one tractor maker has told me that where no air cleaner is used and the dust is bad, as it frequently is, a set of rings will be worn down knife-edge thin in 6 weeks.

Will the tractor owner go to the tractor maker for a new set of rings, or will he go to his garageman or his supply house for them?

He prefers to go to the garageman, because he can get them more quickly. And he will go to the garageman or the supply house if he knows he can get them there.

It is up to the garageman and the supply house to let him know it.

Tractor Makers Still Getting Dealers

Demonstrations That Preceded St. Louis Have Been Seed That Develops into Distributing Contracts

By Stanley P. McMinn

ST. LOUIS, Aug. 4—With fifty-four tractors plowing Missouri soil, the third of the series of eight National Tractor Demonstrations was formally opened here on Tuesday morning in much the same manner as those at Dallas and Hutchinson. Tractor manufacturers and dealers, however, are not as optimistic regarding results to be obtained as they were at the two previous demonstrations. In this respect, however, it is pertinent to point out that these great tractor shows are far different from motor car shows. Contracts seldom are signed on the spot, and for this reason it must necessarily be some time before the real good that has been done can be checked up.

For example, the Moline Plow Co. has but recently closed up some fifteen dealers as a result of the Hutchinson demonstration last week. And every one of these was for from three to twenty-five machines. Again, the C. O. D. Tractor Co. has just closed with the Western Farm Tractor & Supply Co. for the entire State of Kansas. The Wallis Tractor Co. has signed up with Piffer Bros., Denver, to handle the State of Colorado as a distributer. This company took an initial order of 100 machines and will pay cash for them.

Cash Is the Feature

This cash proposition, by the way, is rapidly becoming the feature of the

Digitized by Google

demonstrations. The newer companies in the tractor field, those that center all their activities upon the production of tractors and make no other farm implements, are invariably making contracts which call for cash on delivery. And even the old-line implement manufacturers are now coming around to this way of doing business. Some have been conducting business in this way during only the past year and others are taking the step now for the first time. They reason rightly that if the farmer is willing and anxious to pay cash for his automobile, and if the newer member of the tractor family can extract cash from the distributer and the ultimate owner, there is no reason why they, too, should not do so.

Another significant feature is that the tendency for the tractor manufacturer to favor the motor car dealer and the garageman as a dealer is growing more marked as the demonstrations progress. Furthermore, few companies are making contracts unless the dealer actually purchases a machine. Only a short time ago all this was different. Tractor makers were glad to give a slice of territory to almost anyone who was willing to sign a contract and agree to talk tractor to a farmer who might saunter in and inquire. Now, however, the tractor manufacturer expects the dealer to buy a tractor, to display it in his place of business and *to go out after the tractor business.*

This, in brief, seems the real reason why the tractor maker prefers the automobile man to the implement man when the automobile man shows any spitzerinktum at all. The motor car dealer always has a demonstrator. And he always is going out after the business. His method is in vivid contrast to that of the implement dealer, who, though he may have a stock of implements on his floor, *remains in the store and waits for the farmer to come and buy.*

Ousting the Implement Dealer

The implement dealer still is the principal factor in the distribution of farm tractors, but if these national demonstrations furnish a light that does not fail, the motor car dealer and the garageman will soon oust him from his position.

But what about the State of Missouri in particular? The foregoing statements apply with perhaps greatest force right here. Missouri is not what may be termed a great agricultural State—that is, judging by Minnesota and Iowa and the Dakotas, and even Texas and Kansas. Here we have no great areas to be broken, such as there are in Texas, for example. Nor do we have the extreme climatic conditions that make the Texas farmer's life a burden and kill off his horseflesh.

Missouri is essentially a State of moderately small farms. All told, according to the latest available figures, there are some 277,244 separate farms in the State. The average size per farm has been computed to be about 125 acres, and the average value per farm is in the neighborhood of $7,400.

Small Tractor Is Needed

It is peculiarly a condition in Missouri that a great many of these farms are just slightly too large for one man to work, yet they are not sufficiently profitable to warrant the employment of help. It is expected that the small tractor will be of inestimable value because of these conditions and because it will then permit one man to work his farm, to get better crops from it and larger profits. Whether he will get larger crops is problematical. Statistics do not show that a man who purchases a tractor gets larger crops from his land, though they do show that when a man purchases a tractor he generally increases his land holdings. But figures almost invariably show that the tractor improves the quality of the yield and so increases the farmer's profit.

Another important bearing which the tractor will have in Missouri, because of what you may term the uneconomic size of farms in general, is that it will permit the work on these farms to be done at just the proper time. Where a man has a farm that is slightly too large for him to handle himself, or is, perhaps, just about as large as he can handle, weather conditions often will make it necessary for him to delay putting in his crops at the proper time. Some of the crop will be too early for the normal market and some of it will be too late. The result often is a dead loss of several hundred dollars. The tractor will save this, because all the work can be done at the proper time.

For the most part, Missouri is rolling, and in some places quite hilly, and for this reason and for the reasons cited above it is particularly suitable for the use of the small and moderate-sized tractors—machines pulling two, three and four bottoms. On the larger farms in the northern part of the State there is a ready market for the larger sizes of machines, though the market is necessarily limited.

Corn Is the Big Crop

Corn is the big crop in Missouri, with blue grass second and stock raising third. This year it is estimated the State will market about 200,000,000 bushels of corn. This week there has been heavy rain through the corn belt and it has come at the proper time. In a great many cases corn has been put in late and rain at this time will insure a nearly normal crop.

The demonstration here has not been as well attended as have previous demonstrations, but there are several reasons for this. The first is that most farmers are busy at this time getting their corn in. This was put in late and now is being

Let the Prospect's Mind Work for You

By Ray W. Sherman

"LOOK at these two ads, Reilly," said Tommy Trumbull, the junior salesman, as he held up two pages from the Dealers' National Weekly (Illustration No. 1).

"Look good, don't they?" was the Sennett dealer's comment.

"Yes, they do look good," agreed Tommy, "but there seems to be a lot more spizz in this Overland ad than there is in the Signal ad."

"H'm," mused Reilly. "There is a difference, isn't there?"

"Yes; what is it? There seems to be an underlying principle of some kind. What is it?"

An Underlying Principle

Reilly scanned the two ads—and assembled his thoughts. "Just this," he said, "and it applies to selling, advertising, everyday life, and all our human activities. The Overland ad steps right into the reader's mind with its story and the minute he sees it it appeals to him. The Signal ad doesn't. It may tell just as much, but it is more difficult to get it.

"You see," Reilly continued, "it's like this: You and I have thoughts—all the time. On any subject pertaining to ourselves we have thought a great deal, and whenever we think upon that subject our thoughts are in much the same group, along much the same line.

Illustration No. 1

"Take these two ads, the Overland and the Signal. They are an appeal to the man who is a prospective buyer of a truck. Each advertiser wants to influence the prospect.

"Now—on the subject of delivery wagons, such as the Overland, the prospect has been thinking such thoughts as these: He has been thinking over his delivery problem, and right now hot weather becomes a part of that problem. Whenever he thinks over his delivery problem, he realizes that because the weather is so hot, he is having trouble with his horses and he is delivering a smaller amount of goods with a greater amount of effort.

"Along comes this Overland ad, and the minute he looks at it he is struck by the fact that the ad says the very thing he has been thinking. In other words, the ad is a part of the thoughts he is having regarding his delivery problem. He has thought for weeks perhaps about this delivery problem and has wondered if it could not be solved in some way, and this Overland ad picks his thoughts up at that point and carries him through to the conclusion, which is that the Overland can solve his problem for him.

Cash In On His Thoughts

"All the thoughts the prospect ever has had are taken advantage of by the man who wrote the Overland ad. He takes all the deliberations and study of the prospect through all the weeks and months that have gone before, brings them right down to a peak like the bottom of a funnel, and says 'Overland.'

"Handling the Overland story in this manner makes it exceedingly easy for the prospect to understand; making it difficult for him to understand is illustrated by the Signal ad. The set-up in the Signal and the Overland ads are somewhat similar. Each contains a picture at the top and the headline with the leading thought, after which comes the story of what the vehicle can do.

"But look at the difference in the way the ads begin: The Signal ad begins by saying, 'On the job,' and continues by saying that nothing stronger can be said about any truck. This ad is aimed at contractors and builders who have a need for a heavy vehicle, but the 'On the job' does not fit in with the thoughts of these men on the subject.

"They have thought a great deal on their transportation problems and probably they have been thinking how hot weather affects the horses, how they can't carry such big loads, how they have to dump the wagons by hand, and a whole lot of other things of a similar nature. If the contractor buys a truck he most assuredly wants it to be on the job, but that does not fit in with his thoughts as does the Overland ad.

Fits Prospect's Mind

"One ad gets right over on the prospect's side of the fence and uses almost the very words that the prospect has been thinking, whereas, the prospect must take the words in the Signal ad and by a quite laborious process of reasoning apply them to his business. All of this laborious mental process is eliminated in the Overland type of ad."

Having begun on the subject of ads, Reilly began to turn the leaves of several papers and produced two more, each one advertising brake lining.

Illustration No. 1

Digitized by Google

Illustration No. 3

Illustration No. 2

"Take these two brake-lining ads," he continued. "The one by the Raybestos company begins talking to dealers in conspicuous type in words that appeal to them. Every dealer in hilly country has had thoughts regarding the difficulty of performance on hills, and this brake-lining ad talks to him in terms that are impossible not to understand. The dealer has been thinking in terms of hills and the ad begins to talk in terms of hills.

"The Garco ad begins by talking about the quality of its product and its safety, but in order for the dealer to get this story he must begin with thoughts of quality and safety and by his own mental processes bring the ad around and apply it to hilly country and performances on hills. It does not fit in with thoughts that he has had on this subject. Furthermore, the ad is somewhat congested with type and there is nothing that stands out except a policeman, who seems to be shouting, 'Solidly Woven!'

Illustration No. 3

"And here are three more. The G. M. C. truck ad says, 'Make Your Haulage Heatproof!' but that line must be translated by the man who reads it. It is true that he doesn't have to go to a great deal of trouble to translate, but it comes far from having the simplicity that is contained in the beginning of the Overland ad. The story in the G. M. C. ad is much better than the headline, because it talks in plain, every-day English and expresses thoughts that the business man has had.

"This Duplex ad begins by saying, 'The truck of earning efficiency,' but this does not mean much until it is translated, and in order to translate it the man who reads it must perform a mental task, and the ad which requires its reader to perform a mental task is not the most easily grasped. 'Earning Efficiency' is a catchy term, but it is not one that is quickly grasped by the reader. He must stop to think before he can hitch it up to himself and to his business, and it is these himself-and-his-business reasons that lead him into buying the truck.

Picture Tells the Story

"The Studebaker ad is excellent, because it also takes advantage of existing and preceding thoughts on the part of the reader. It is aimed at the dealer. The dealer may have been handling a heavy truck, or perhaps a light truck, of which there was only one model. He may have wondered if there were not a line in which there was variety, and the picture in the Studebaker ad brings up these thoughts again and at the same time gives him the answer. He gets it all at one look. He also sees the numbers, and without there being any other words interposed jumps right down to the names and prices of the cars.

"Whenever you write a sales letter, Tommy, or write an ad or begin a sales story to a prospect, you should always first get over on his side of the question and endeavor to discover what his thoughts have been on the subject. If the man has, by his reasoning, brought himself to the point where he is practically ready to buy a car, and if our car meets his requirements, there is need for very little sales work. All that remains to be done is place the finishing stone on the pyramid of mental processes that he himself has built. You take advantage of the work that the prospect himself has done."

When I Hire a Salesman

By Hugh Chalmers

I CONSIDER THESE POINTS

1. *The question that I put down as No. 1 on this list is—Can he give a surety company bond? You can dodge this question all you like and make excuse for certain men who cannot give this kind of a bond, but in 99 cases out of 100 there is something wrong with a man who can't give a surety company bond.*

2. *The next thing, has he a reason or an excuse for leaving his last employer? Can he give his last employer as well as his previous employers as references?*

3. *Did he work as a boy, or was he brought up in complete idleness until he was of age?*

Did he learn to overcome obstacles in his youth, or did he begin to tackle the problems of the world as a full grown man?

4. *The next thing, of course, is a perfectly obvious one and may seem like a foolish one, but are his habits good? I don't mean by this is he 100 per cent good, but is he a decent sort of fellow?*

Does he over-indulge in things which he should not?

Would he impress you favorably if he were trying to sell you something instead of applying for a job.

5. *Has he saved any money? If not, why not?*

6. *Can he get to the point quickly, or is he one of those fellows who takes a circuitous route?*

7. *Can he answer objections quickly? Try him out by asking him to tell you three reasons why he thinks he can sell your goods, and in this way test him on his ability to think quickly and to give logical answers to questions when put to him quickly.*

8. *Is he quick-tempered? A little hard to determine this, but as a rule quick-tempered men do not make the best salesmen, because every man weakens himself in the eyes of another when he loses his temper.*

9. *Is his voice pleasing or rasping? A silly question, you may think, but one of great importance to the man who is seeking an opportunity to sell your goods.*

10. *Has he respect for the opinions of others?*

11. *Do his voice and manner impress you as carrying conviction when he makes a point?*

12. *Has he got enthusiasm in his nature? Does he state a thing enthusiastically and is he positive in his statements?*

13. *Can he listen as well as talk? In other words, has he terminal facilities? Does he know when to stop talking? If you don't know what "terminal facilities" mean, ask a railroad man. Men, as well as railroads, require terminal facilities.*

14. *Is he easily discouraged when told he can't have the job or that you don't think he can sell the goods?*

15. *Is he willing to undergo a course of training before he begins to sell goods, or does he think he knows enough about salesmanship to sell anything?*

This story is an address delivered by Hugh Chalmers, president of the Chalmers Motor Co., Detroit, before the World's Salesmanship Congress in Detroit recently. It was one of the most valuable contributions to that aggregation of DEFINITE information upon which the Congress hopes to build the Science of Salesmanship. The address follows:

MOST of us who have things to sell have managed somehow or other to sell these things, but few of us have ever reduced the selling part of our business to the scientific basis that we have the manufacturing or merchandising ends of our business.

We have gone too long on the theory that salesmen were born and not made; that there was no known method of determining whether a man could sell goods or not. We have regarded the whole proposition too much as a game of chance and have selected men at random, principally because they looked to us to be pretty decent sort of fellows and were not marked in any personal way that would affect them in approaching other people.

However, all sensible executives nowadays realize that the matter of selecting salesmen is not wholly a matter of taking a chance. We know that there are more or less definite set rules that can be followed in the employment of salesmen. We realize that we can measure men to some extent as we measure materials; of course not to the mathematical accuracy that we can measure materials, but we do know that we can size up men with reasonable exactness before we employ them.

I have no quarrel with any of the men who have made the teaching of salesmanship a business. I believe that many of them have done a vast amount of good. My only complaint against some of them has been that they have held the subject of salesmanship up in the clouds too much; that they have led people to believe that salesmanship was a thing apart from other things in life and was a thing that had mystery and difficulty about it, and that a man had to have a certain natural aptitude for this kind of teaching before he could be taught to sell goods.

The main reason, I believe, why selling is considered an extremely difficult proposition, is because we are dealing with the intangible. The one great essential needed in selling goods, of course, is brain power in the salesman, and yet the brain in a human being is something that we rarely ever see, and if we do, we see it when it is too late for it to be of use any longer to the person who had it.

It is a fault of the human family that we always fear the thing which we do not see or do not understand. We have

Digitized by Google

become accustomed to dealing in the concrete so much that we seem to lose our sense of proportion in measuring our opinion of things that we do not see.

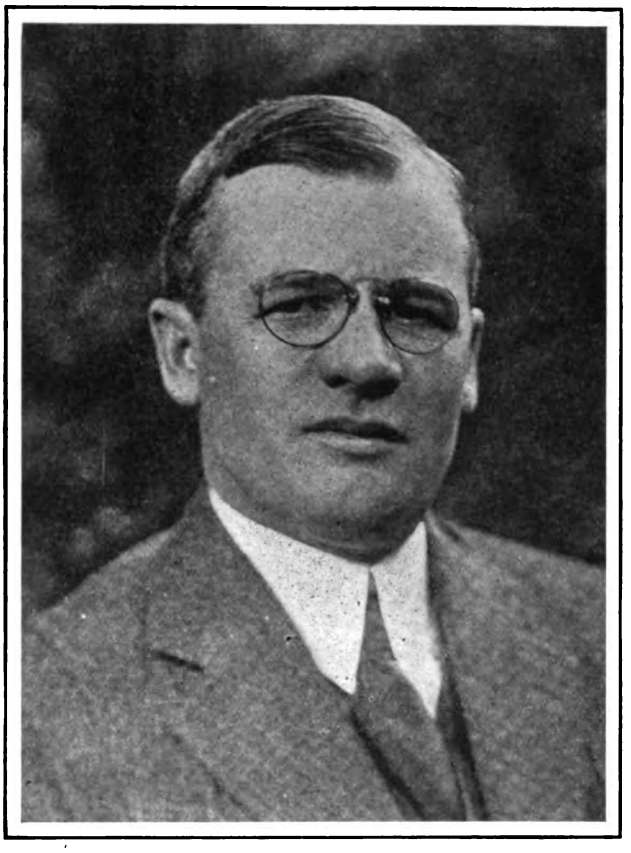
I have been connected with the manufacturing of goods nearly all of my business lifetime, and it took me some time to realize the difference between manufacturing and selling. It finally dawned upon me that the real difference was that in manufacturing you are dealing with tangible things, which you can control almost completely, while in selling you are dealing largely with intangible things, which are very hard to control.

If, for example, you wanted to make water glasses: If you had a model—and of course you can get a model—you could make a million glasses just like one model. Yes, you could make ten million or one hundred million of them, depending wholly upon the size of the factory you wanted to build, the amount of money you wanted to put into equipment, the amount of material you wanted to buy and the number of men you wanted to employ.

The making of these water glasses is a fixed proposition, controlled wholly by yourself, but the number that you make depends entirely upon the number you can sell, and this number is not controlled by yourself, because when we cross the line between manufacturing and selling we pass from the thing which we do control—the number which we can make—to the thing we do not control—the number we can sell. This is what I mean by saying that we deal with concrete things in manufacturing against intangible things in selling.

I believe, however, that we have reached the point now where some of us at least believe that we can exercise a reasonable control in the selection of the men necessary to market our goods, just as we can in the men employed in the making of our goods.

As I said before, I think the first essential thing to do is to take this subject out of the clouds. Let's get it down to earth, where we can debate about it and make a decision about it just as we can about any concrete or tangible thing.



After all, the one great question in the selling of goods is the employment of salesmen. As a matter of fact, you can say in one sentence the one controlling thing about all business, namely—the selection of the right men.

I believe we can formulate some definite plan or a set of rules which can be used successfully by all concerned in the employment of salesmen.

One of the very first things to set down as a rule is that no man should be employed on the first interview. I believe that it is necessary to see a man at least two or three times before you can size him up properly. It is only human for a man applying for a position to put his best foot forward just as it is human for a fellow to put his best foot forward in courting the young lady he wants to be his wife. He naturally wants to make a good impression and he is not entirely natural under these circumstances. If you see a man two or three times—or even five or six times—you are able to size him up in a way that you could not do in one interview.

Then, again, I believe it is a good idea to have more than one man see a man before he is employed. I know some concerns use the method of having a man see two or three of their men, and then these men get together and compare their impressions.

While this is a slower process of employing men and takes more time, yet it has been my experience that time taken at the beginning in the employment of a man is time well spent, because changes are always costly to any concern.

HUGH CHALMERS

Began his career 29 years ago, at the age of 14, as office boy for the National Cash Register Co. and in 13 years became vice-president and general manager. He held this position until he entered the motor car industry in 1907; now president of the Chalmers Motor Co., a $7,000,000 corporation

Another rule I think is that no man should be employed who cannot be as easily fired as he was hired. This refers particularly to the employment of your relatives, your wife's relatives or the sons of friends. It is easy to hire these people, but sometimes almighty hard to fire them!

Personally, I have never taken a great deal of stock in the man who on the first interview pulled out a number of letters of recommendation, because it has been my experience that men who have the greatest number of letters of recommendation usually need the greatest number.

In this matter of giving letters of recommendation, I believe that most business men are more or less moral cowards. When we dismiss a man from our service we don't tell him the truth, because we dislike to hurt his feelings. We adopt the course of least resistance, and we let him down as easy as we can by telling him that business is falling off or we are cutting down expenses, or some other excuse, when we know full well in our own hearts that we are letting the man go because he is incompetent. Then we cap the climax by offering to give him a letter to the whole world, because these letters usually begin with "To Whom It May Concern"—and we give this man a clean certificate for character and ability for the balance of his days. *If we were only more truthful when we discharge a man and would not write untrue statements in letters of recommendation, there would be greater efficiency in the business world to-day.*

I do not believe that as a rule it pays to employ unsuccessful men; men who have not succeeded in their previous occupations. There are, of course, some few exceptions to this rule, but why bother with exceptions? Someone may say that you may be doing a man a great injustice by not giving him another chance even if he has been unsuccessful. I don't think so, because every concern is not willing to adopt such a rule as this, so that the fellow you do not employ because he has been unsuccessful has plenty of chances left to get a job with the men who make no such rule.

I would like to see this Congress in some definite way, either through a committee for the purpose or to be done in this Convention, work out some plan which will be the composite judgment of the Convention on some rules to follow

Digitized by Google

in the employment of salesmen. I will give briefly some of the things I have tried to find out in talking with men before employing them as salesmen:

The day has gone by when a man can wholly rely upon his general ability as a salesman to sell anything. I don't care who the salesman is, a course of training in the thing which he has to sell will put him 1 year ahead in his ability to sell the goods.

I am a great believer in the systematic and careful training of men. I have no patience with the man who says you can't talk to any two men alike, because this is simply his way of saying his methods are better than any other.

While it is true that in selling goods you don't talk to any two or three men in exactly the same way, yet you must have as a foundation for your salesmanship the same general fund of knowledge for one man as you would have for another.

I believe that any article to be sold can be shown and demonstrated to everybody in about the same way. For the same reason that if I should ask one of you men how much 11 × 9 amounted to, you would not go over the entire multiplication table to tell me, but you certainly would have to know the multiplication table before you could tell me. That is my theory of the training of men. They don't go over all they know in answering any specific question, but they have to have a great general fund of knowledge about the thing they sell to intelligently answer any question that may be asked of them.

It is not my purpose in this talk to go into the matter of training schools to any extent, because I know that there are others on the program who are going to do this, but I cannot help saying these few words on this subject because I consider it second only to the selection of salesmen.

It has been my experience, and probably yours, too, that the railroads, hotels, restaurants, taxicab drivers and others charge just as much for incompetent or untrained salesmen as they do for those who are efficient and well trained. If you put a man on the road or put a man behind the counter, it costs you just about as much whether he knows or does not know his business.

This being the case, I cannot understand why so many people are willing to put up with incompetency and with mediocrity when the establishment of a training school and the proper teaching of all their salespeople would bring about an immediate improvement in ther business.

And, gentlemen, the very first thing I would teach in any school would be the necessity for courtesy. The great prevailing fault among American salesmen and saleswomen is the fault of discourtesy. Deny it if you wish, but a thorough test will convince you of its existence. Allow me to lay stress upon this for a moment, because it is so important in all branches of business and in the walks of life. Courtesy costs nothing and yet it pays bigger dividends to the man or woman who possesses it than any other requisite they have.

I sincerely hope that every one of us attending this meeting will get some real practical benefit from it, and that we will be able to go away from here with many new ideas and many more sensible ideas on this subject of "SALESMANSHIP" than we ever possessed before, but whatever benefits we receive will depend upon our doing these things and not merely talking about them. In other words, it is not what we hear at this Convention that will count—it is what we will take home with us, remember, and use!

Knapp Wins Chandler Prize

ST. LOUIS, Aug. 7—Louis Knapp of the Lewis Automobile Co. has won a prize of $100 for selling the most Chandler cars during July. The prize was offered by J. P. Perry Lewis, president of the company, who wanted to see if July business, often dull in St. Louis, could not be kept up to the standard of spring months. Six salesmen participated in the contest. Knapp sold six cars.

Thirty-two Pike's Peak Entries

DENVER, Aug. 5—At 5 o'clock this afternoon, seven hours before the official closing time for entering cars in the first annual Pike's Peak hill-climb next Friday and Saturday, Aug. 11 and 12, there were thirty-two cars entered to compete for the $1,200 Penrose trophy and the $4,800 in cash prizes offered by the Pike's Peak Auto Highway Company, owner of this famous cloudland race course. The entries represent twenty makes of cars, all specials, and the list of drivers includes names known throughout the motoring world.

Ford Made 533,921 in 1916

DETROIT, Aug. 7—The Ford Motor Co. made 533,921 Fords during its 1916 fiscal year, which ended July 31. The daily average production was 1816 cars for 294 actual working days, or nearly 800 more cars per day than during the 1915 season.

St. Louis Hupp and Velie Dealers See New Cars

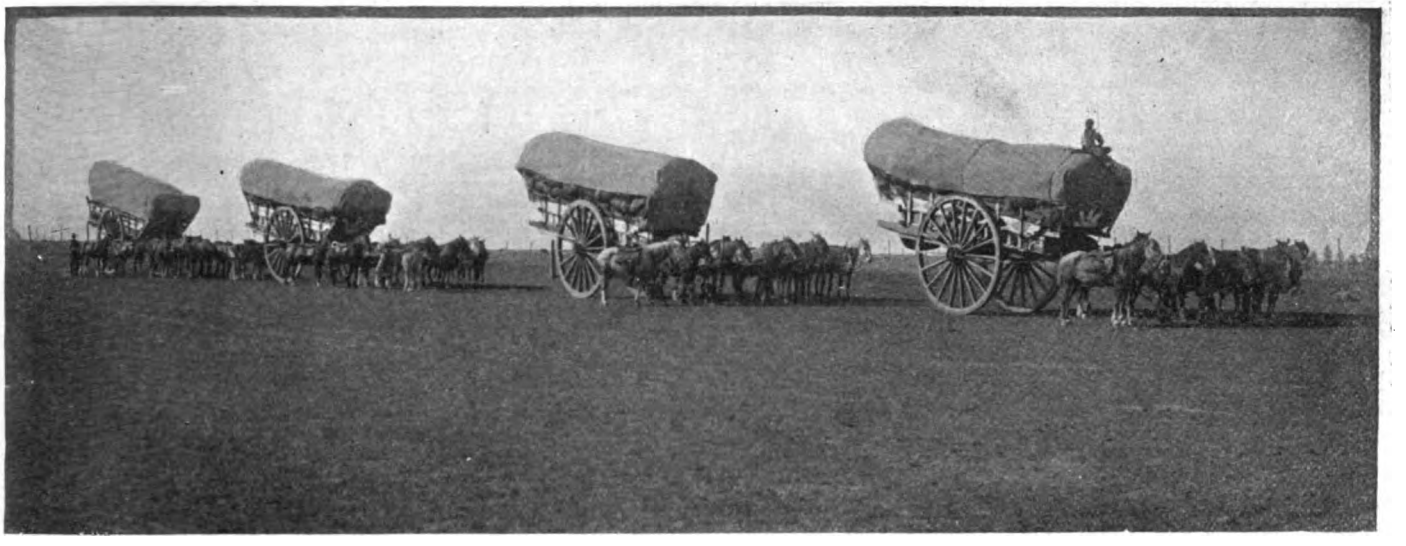
ST. LOUIS, Aug. 7—One hundred Hupmobile dealers met in St. Louis Wednesday for an all-day study of the Hupmobiles at the warerooms of the Weber Implement & Automobile Co., Hupmobile distributers in this district. Experts went over the machines for the dealers, noting changes and answering the scores of questions that the dealers brought up.

At a dinner in the evening at Cafferata's outdoor dining room, Lee Anderson, commercial manager of the Hupp Motor Car Co., told the dealers that the four-cylinder car was ideal and that the Hupp company would continue building them.

He also told of the Hupmobile that will soon start from Washington to visit every State capital and every city in the country of more than 50,000 people.

George Weber, head of the local distributing company, presided at the dinner, and Camden Case, attorney, and R. E. Lee, secretary, of the Automobile Manufacturers' and Dealers' Association of St. Louis, were the other speakers. All visitors got a glimpse of the tractor show during their stay in St. Louis.

The annual dinner and get-together meeting of the Velie dealers was held Wednesday at the warerooms of the Velie Automobile Co., 3021-23 Locust Street. President H. L. Schnure presided and was assisted by J. B. Howard, Missouri sales representative; S. R. Jones, Illinois sales representative, and W. L. Hausman, office manager. The plans for the next year were gone over fully with the dealers and a luncheon at the City Club followed. After that a visit was made to the tractor show.



Stromberg Refinancing Completed

CHICAGO, Aug. 8—Plans for the financial expansion of the Stromberg company were completed last week in New York. As reported 2 weeks ago, the Stromberg Motor Devices Co., Chicago, with a capital of $50,000, has been taken over by the Stromberg Carbureter Co. of America, recently incorporated in New York at $5,000,000. The directors of the new company are: Charles A. Brown, Charles W. Stiger and William L. O'Neill of Chicago, H. E. Gunnison, C. L. Saylor and Allan A. Ryan of New York, and Harry E. Stutz of Indianapolis. Stiger, president of the old company, becomes president of the new one. The officers remain as before, except that Ryan replaces Carleson as treasurer. There will be no change in the policies of the company. The factory capacity is being doubled.

King Dealer in High-Gear Test

DETROIT, Aug. 5—A King eight has just finished a high-gear trip from Providence, R. I., to Detroit and back, the total distance covered being 1800 miles. This performance was made by A. F. Justin, the Providence dealer, and a party of five. The shifting lever was removed and the gears sealed in high, the car being a stock job.

Huge farm carts such as these have necessitated highways wide enough for three motor roads. From 20 to 30 horses are used to draw these vehicles.

Argentine Has Taken the U. S. A. Car and It Needs U. S. A. Salesmanship

By David Beecroft

THIS story is the second of a series on South America by David Beecroft, managing editor of Motor World, who spent ten weeks on the southern continent, investigating the possibilities there for American cars. The U. S. A. car has broken through the barriers of the Argentine and the great need now is for the men and methods of the U. S. A. Other stories will follow. All the photographs shown were taken by Mr. Beecroft.

BUENOS AIRES, ARGENTINA, June 30—Last week we told of the financial crisis in Argentina in 1911 and how the sale of expensive European cars stopped short at that time and has not as yet got started again.

This brings us to the new factor that has entered in the Argentine business, namely, the sale of the lower priced American cars.

Eighteen months ago the South American representatives of the different American motor car factories, who came here to get agencies, could not get the Argentine dealers interested in our cars. The dealer had no use for the American car, because several of our makers had shipped many hundreds of obsolete models to this market with the hope of selling them for new machines.

The U. S. A.'s Black Eye

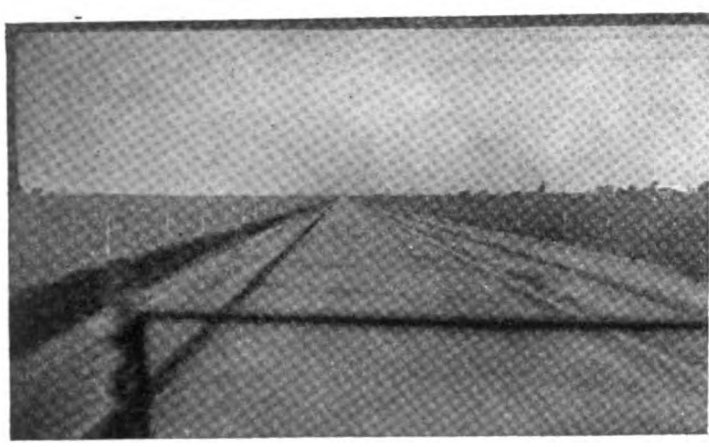
Three or four companies have a reputation for having done this, and it gave a black eye to nearly all of the American business. The cars failed to make good and they did not have the body style to compare with the luxurious European jobs. As a result there was nothing doing among the American cars excepting for the efforts of certain companies that had been in the market here for 5 or 6 years and some as long as 14 years.

Then Came the Change

But a year ago a change came about. Ford had invaded the Argentine in real earnest just after the war started 2 years ago. It took a year for the movement to get under way, and just about a year ago now the Ford business suddenly jumped to over three times what it had previously been. Sales in Argentina, Chile and Uruguay suddenly jumped from around 100 cars a month to over 300. The figure ran perilously close to 400 a month, and this average has been holding up and increasing steadily ever since.

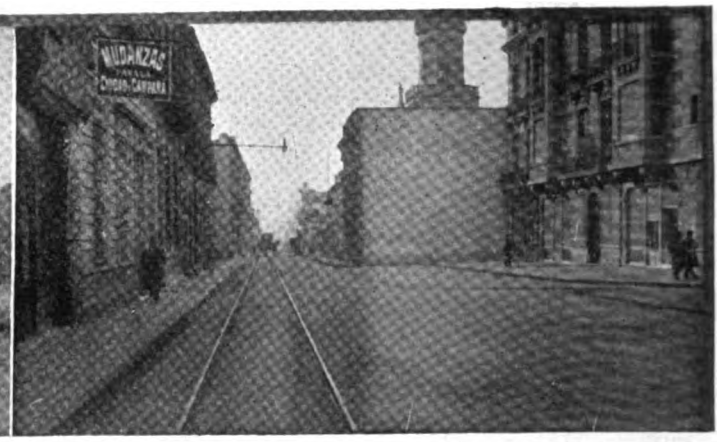
This Ford business has not all been in Buenos Aires, but in other parts of the Argentine Republic, which in area is about the same as all of the United States east of the Mississippi River.

Selling Many Fords



There are many cities in the country where Ford is selling in big quantities, and the car has taken hold in this country just as it has in the United States. Ford was barely under way before a few others of our makers began to show interest. Overland has been established here for years, but has not done that business which the status of the home company warrants. Studebaker last fall started building up a very complete selling organization, and is now selling cars here and in several other cities along the same selling lines as used in the United States. It is true that several other countries are doing the same.

The Old-timer Is Thinking



The American tire makers have all gotten well under way; Goodrich has been here for several years, Goodyear got into full swing a few months ago, and Fisk is now in the market. United States has just opened its branch here, Firestone has established itself, and some of the other makers have followed in the wake of our car sales during the last few months.

This new enterprise has set the old motor car dealer here to thinking. He thought motor car sales were dead. The

Digitized by Google

Between Buenos Aires and La Plata is a long stretch of hard stone road, as straight as an arrow, ideal for motoring.

Buenos Aires is widening her streets. Buildings erected after a certain date must stand back a certain distance from the street.

financial crisis had told him that, and he thought the war had sealed the proposition. But unexpectedly he has found the cheaper American cars selling in increasing quantities and he has seen dealers in such cities as Rosario, Cordoba, Bahia Blanca and many other places making good money. This has turned his attention suddenly to our cars, *and to-day there is a real scramble in this city for American agencies. There never was such a scramble before. It is a mighty unexpected turn in motor affairs here.*

During the present month and May there have been many representatives of American cars here establishing agencies. Dodge Bros. placed an agency here a few weeks ago. It had established its agent in Montevideo, Uruguay, a few weeks earlier, and the dealer there has already sold twenty-five cars.

Cadillac Here for 14 Years

The Maxwell representative has been opening agencies within the last few weeks. The Jeffery representative recently closed agencies in Brazil and Uruguay and now has his business moving in those countries and in Chile and Argentina, having been nearly 2 years on the job. Chevrolet got its first cars here only a few weeks ago, and now has a big showroom and hopes to carry on a big business.

Cadillac has been here for 14 years; and although it has had a conservative business for many years, sales have jumped very much in the last year and now the Cadillac is selling in the best society circles here. Hupmobile, Chalmers, Hudson, Scripps-Booth, Buick, Oakland and many other American names are familiar here.

It was the selling of our cheap cars to the farmers that caused this recent boom in American car stock. The dealers here never took the farmer trade seriously. There were few roads in the country in 1911 and there are not many more to-dav. The expensive European cars were sold for city use and not for muddy farm roads. True, a few of these fine cars got into "the camp," as they call the country districts here, but their numbers were few.

The American Salesman

Over a year ago the sale of American cars in the country, or camp, had taken real hold. The rich farmer owning over 100,000 acres of land—and there are plenty of them here—never believed before that any car would stand up in the camp, and when the cheap American product was demonstrated to him he nearly lost his mental balance. First he was so skeptical he would not get into the car. *Finally he was persuaded to take a seat, and then the hustling salesman started on a 6-hr. demonstration and did not give the prospect any chance of getting out of the car until he had driven him over all of the worst roads in the district and until he had proven that the cheap American car had the goods in it and actually could go.* As months passed by the farmer was convinced that these cars would also endure. He did not believe it at the start; but time convinced him, and he finally BECAME A BOOSTER FOR OUR CARS.

And so we are in that booster stage now. Argentina has been given its object lesson and it *now remains to fill the country with cars as has been done west of the Mississippi River.*

An Epoch in Argentina

Thus the present time is really an epoch in motor car business in Argentina. The country stands on the threshold of an entirely new business and it is quite natural that those dealers who have been carrying salesrooms filled with dead stock for four of five years are naturally vitally interested in this new movement which gives promise of putting them back on their feet again so far as the motor car business is concerned.

It has surprised them to see the farmer buy cars in quantities and it has surprised them further to see them buy in war times. But the war has really made this possible because the price of wheat and corn and cattle, sheep, pigs and horses rose with the war, and the farmers found plenty of money coming their way. This extra money has with many gone into the motor car.

Rivals Bounteous Iowa

The possibility of selling cars here to farmers is about the same as in the United States. The number here is not so great. Argentina is a great farming and grazing country. The land is level, more so than our own Mississippi valley. The soil is as rich as, if not richer than, the soil of Illinois or Iowa, and the farming possibilities are very great. There is one difference here as compared with the United States. Here the farms are very large, one land-owner perhaps having 300,000 acres of land. He cannot farm it all, and so rents it out in parcels to a couple of hundred or so small farmers. These small farmers generally work it for 3 or 4 years, raising wheat and corn and then getting it into alfalfa. This done, the land is turned over for grazing and the small farmer moves to some other place, where this same work program is repeated.

These small farmers are not wealthy; they cannot be compared with our farmers who own 160 acres of land and have a nice home, nice market garden, an orchard, a few flowers and comfortable outbuildings for stock and machinery. Here the small farmer lives in a mud hut and has another small mud hut or so for storehouse and other uses. He has no garden, he has no orchard, he has no lawns, the mud hut standing perhaps in the middle of a wheat field, with only a little square marked off by a wire fence. There is nothing attractive in the place. These mud huts dot that part of the country that has been settled.

Digitized by Google

Such people are not generally considered wealthy enough to buy motor cars, although there are some who are doing so. The motor car sale to-day is generally with the wealthy owner who reckons his land in square leagues rather than in acres. These big farmers are well able to buy motor cars. *They are very wealthy.* They have homes larger than any seen in the farming districts in the United States. Many of them have homes for the winter in Buenos Aires, and these are among the finest residences in the city.

Farmers Live in Town

Imagine, if you can, that some farmer out in Illinois lives in the finest house along Lake Shore Drive, Chicago, or on our finest residential avenues in Minneapolis, Kansas City, St. Louis, Denver or Los Angeles. That is the situation here.

In the winters before the war many of them spent 3 or 4 months each year in Europe. Paris was their Mecca. They had their cars for the city, but never thought they could use them on the farms.

These farmers—they call them Estancieros (Es-tan-see-air-os) — are good money spenders. They have the finest stock on their farms that can be purchased. They have ambitions as stock-raisers. They have ambitions as horse-breeders, and naturally will be a good market for the sale of motor cars. It is with these people that the great sale of American motor cars has to be made in this country. It is with these that our cars are now selling.

Employ U. S. A. Sales Methods

In selling cars the same business methods that are employed in Omaha have to be used here. It is a case of adopting American selling methods, *and the dealer who first gets established and carries on his business along such lines will surely make much money here.* There is a huge territory; and while the population is only 8,000,000, it is sure to grow very rapidly after the war is over. During the war immigration has practically ceased; in fact, emigration has started, many Argentines leaving for Europe to take part in the war.

Buenos Aires alone is a city of 1,800,000. This is larger than Philadelphia and not much smaller than Chicago. It is a wealthy, modern city. Many of the streets are narrow, as in all Spanish cities, but for ten years a street-widening program has been under way and to-day scores of streets are as wide as Michigan Avenue, Chicago. The streets to-day are little bar to the use of motor cars.

Bad Roads a Handicap

Sales in the country may be slow for some time because of the lack of roads. In Argentina the road problem is perhaps a little farther back than it was in many of our own States in the Mississippi valley 5 or 6 years ago. There are literally no roads. The motorist in Buenos Aires hardly ever thinks of driving anywhere outside the confines of his city. The touring spirit has not yet touched him. There are only three roads, in the modern sense of the word, that he can use.

There is a seaport called La Plata, 65 miles from here. Many of the steamers leave from this port. The Armour and the Swift packing houses are located there. A few years ago the Touring Club of Argentina built a dirt motor road. It is built right in the middle of the old road. Imagine such a thing in Iowa or Wisconsin; but it is possible here because many of the wagon roads are as wide as a field.

Carts with Twenty to Thirty Horses

Here the farm carts are sometimes drawn by twenty to thirty horses, and half of these are hitched side by side. It takes some road width for such a team, and if two of them should meet you need a good deal more. The touring club got permission to build such a road and put a fence on each side of it, so that now there are really three roads abreast, the middle one for motor cars and the two outside roads for horse wagons, that on one side for traffic in one direction and that on the other side for traffic in the other direction. This road is as good as a road across Iowa. The soil is black loam, but by keeping the surface smooth much of the water runs off.

There is another road between Buenos Aires and La Plata, and that is a new stone road that was started many years ago and is just completed. It is one of the finest roads in South America. I do not think there is anything in the United States to campare with it. The road runs nearly as straight as an arrow over the pampas, which is as level as the floor. In soft places the right of way is graded like a railroad, and when you get a side glimpse of the highway from a quarter of a mile away you think it is some four-track railroad. The surface is of square stone blocks with flat tops, making a surface as smooth as a brick road. On each side is a stone curb, just as on an asphalt city street. There are literally scores of fine cement and steel bridges, and at every farmer's gate is an elaborate cylindrical culvert neatly faced with brick and looking as prim as a new hat.

This road will prove fine for motor trucks, and already some trucks are making daily schedules over it. There is one other road leading out of the city for 35 miles to a summer resort on the river, where there are much boating and other sports. But that ends the Argentine road scheme around Buenos Aires.

In the Hardware Store

Customer: Have you Rainbow packing?

Clerk: We have not, but we have Sunshine soap.

Can't Motor Very Far

You cannot motor from Buenos Aires to Rosario, 190 miles inland, the second largest city in the country, with a population of 150,000. To get a concept of it, think of Chicago car owners not being able to motor to South Bend, to Milwaukee, or even to Rockford, Ill. The other roads are generally trails, the same as we had in the Western States years ago. You know what they are like. They have never been graded; they are without ditches. In wet weather there are many places that should have culverts; in fact, they are very primitive roads.

Argentina has to be introduced to a very strenuous road-building program before the sale of cars will jump to the figure it should. This will not be a difficult task, because already the daily papers have taken up road-building talk and the road-education movement has started.

Sell these farmers some cars and they will soon see that roads are built. They will do the same as we did west of the Mississippi. There the motor car built the road. If we had waited for roads before selling cars we would still be waiting. The enterprising dealer in Argentina must be ready to put his shoulder to the wheel and do something to push the good-roads movement along. On it will depend the future development of his business.

Roads CAN Be Built

But the roads can be built. The soil is the same as in Illinois or Iowa, and what the King drag and the road scraper have done for our roads can be done for the Argentine roads. A representative of certain large American road-building machinery firms has been in this city for nearly a year conducting a propaganda for better roads. He is writing articles for the papers and is circulating all the farmers with good-roads literature. His efforts are already bearing fruit and road-building machinery is beginning to move, even though slowly.

Do It This Way—

···QUERIES ANSWERED···

IS A CASH BUSINESS DESIRABLE?

Editor Motor World:

Recently I went to Cleveland and spent 2 days with Mr. Wills in the Euclid Square Garage. I was so favorably impressed with the cash method of conducting their business that on my return to Washington I recommended the adoption of the same business policy.

The introduction of a cash business in a garage in this city is radical, and we feel that it may be crucial in its effects on our business. A great majority of garages conducted in this city are not profitable, and apparently one of the chief elements causing this fact is the extension of indiscriminate credit and the accompanying overhead charges due thereto.

I would appreciate your advising me, from your extensive knowledge of garage conditions throughout the country and your familiarity with the method of conducting the many places you have visited, whether any other places than the Euclid Square Garage have adopted such a system; whether they have found it possible to successfully conduct their businesses on such a basis, and whether you are familiar with any enterprises that have found it necessary to change from such a basis to the customary credit basis to succeed.

Our executive committee is heartily in favor of adopting the cash basis at the outset. As, however, it embodies the adoption of a revolutionary idea and the education of the car owners in this community to the advantages afforded, I would like to secure as much information on this subject as possible.—D. E. H., Washington, D. C.

Only One Garage

The Euclid Square Garage, the largest in Cleveland if not in the country, is the only one we know of conducting a strictly cash business. There are some others, however, that insist upon cash for their repair work and, since it is just possible that you would like to write to these concerns, we will give you their names. We understand that C. P. Rockwell, 640 Commonwealth Avenue, distributer of the Jeffery, does a strictly cash business, and we are almost certain also that the Henshaw Motor Co., 915 Boylston Street, Boston, does likewise.

We realize, of course, that the reasons that some dealers find it advisable to conduct their repair businesses on a cash basis might not hold when it came to running a garage according to the same plan, and their experience in this one department might not aid you to decide whether it would be advisable for you to extend the plan to your whole business.

There is no need in recounting the advantages of the cash system; but we would like to give you the opinion of probably the foremost garageman in New York City, who takes the opposite stand. He is William Haradon, president of the state dealers' organization and one of the most progressive and active men in the business. He is one of the very few garagemen in New York who are not paying commissions to chauffeurs. In view of all this, his opinion is of particular interest. It should be remembered, however, that he deals only with the very best people in the city and that his trade is very much above the average. Probably for this reason he has less trouble collecting his accounts than the average garageman would have.

He thinks that the average owner would object to going to the trouble of paying for each purchase as it was made, but the question is whether it is really any more trouble to hand out the cash than it is to stop to sign the sales slip.

One of the main feature of the cash system is that it eliminates all chances for error and misunderstanding, as each contract is completed and ended for all time as soon as the cash is paid, which is not the case by many weeks in the credit system. He states, however, since he requires the chauffeur or the owner to sign for every purchase there is no chance for error or dispute, as these slips may always be brought into evidence. He is right on this point, assuming, of course, that the slips are made out carefully and none is lost.

He also favors the credit system because it gives him a complete record of each customer. At the end of the month he knows which customers are the most profitable and those upon which he is losing money. Of course, there is no reason why such a record could not be kept with the cash system; but the point he makes is that since this record is necessary, the extra expense of running the credit system is not an objection after all.

The obvious advantage in knowing just what the customer purchases each month is that it enables you to use more intensive sales methods on those who are not purchasing as much as you think they should, or rather those who are purchasing things on the outside.

Local Condition a Factor

But there is an added advantage which applies particularly to cities like New York, but which might not be of importance elsewhere. It is a fact that New York garagemen do not, as a rule, make a profit on their receipts from storage, high as these rates are, but their profit is obtained entirely from the sale of gasoline and oil and some accessories. For this reason they are forced to charge a higher price for gasoline and oil than the filling stations. If the garage happens to be crowded with cars it is common practice for the manager to go over his books and pick out those owners who are operating small cars which do not consume much gasoline or who are buying their gasoline elsewhere, and request them to leave so that he may have an opportunity to replace them with more profit-

A Business Without a Bill Head

WHAT DO YOU THINK OF RUNNING A BUSINESS ON A CASH BASIS? IMAGINE A BUSINESS WITHOUT BAD DEBTS TO MEET, WITH NO ACCOUNTS RECEIVABLE, WITH CHANCES FOR CLERICAL ERRORS AND CONSEQUENT DISPUTES ELIMINATED, WITH A MINIMUM AMOUNT OF BOOKKEEPING—A BUSINESS WITHOUT A BILL HEAD. THE BIGGEST GARAGE IN CLEVELAND, IF NOT IN THE COUNTRY, IS OPERATED ON THIS BASIS, AND OWNERS STORING THEIR CARS THERE ARE ENTHUSIASTIC ABOUT IT. NEEDLESS TO ADD THAT THE MANAGEMENT OF THIS GARAGE THINKS LIKEWISE. READ THE LETTER AND REPLY ON THIS PAGE AND GIVE US YOUR VIEWS PRO AND CON.

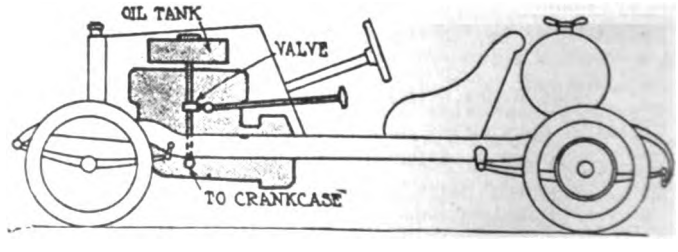

Fig. 1—Extra oil is fed to the motor from a tank mounted above. Flow is by gravity

Digitized by Google

able customers. This is one reason why some sort of a record of the customers' purchases is essential, at least in the best garages in the city. But, of course, this might be checked up even with a cash system. It is doubtful, however, whether this situation will be found in Baltimore or in many other cities.

Haradon also says that owners prefer to pay their bills by the month, and that it is simpler for them to keep track of the cost of their cars than it would be if they paid out a dollar now and then. Of course, if this is a matter that owners really appreciate it would be simple enough to save the sales slips month by month and forward these to the owners. It could readily be done with the cash system and little extra work would be required.

MODEL 19 BUICK RACER

Editor Motor World:

As I am a reader of Motor World, I would like to get information in regards to making a speeder.

I have a Model 19 Buick which I plan to race with and would like to know where I can get a racing camshaft and also the settings for the best results.

Would it be necessary to get new gears for the rear axle? My gearing is now 3 1/5 to 1.—Fred Bonneau, Manteno, Mich.

The car should first be thoroughly overhauled. All parts should be well lubricated, and free. A coasting test will usually indicate if any part of the driving mechanism is binding. The springs should be taken apart and lubricated with graphite and grease. If possible, shock absorbers should be fitted to all springs, as they tend to make the car steadier at high speeds. To lessen the rebound the springs should be bound with tire tape or heavy cord.

Wind resistance is a big factor in speed work. Hence you must remove such parts as the mud guards, running boards, and splash plates. Much may be gained by placing the tank on the rear, lowering the seat, and dropping the steering gear. If you desire, a stream-line cowl and body might be made up of sheet metal. Pictures of any of the popular racing cars would give you ideas for this change.

Patent piston rings, and aluminum alloy pistons give the engine greater speed. If you decide not to use the alloy pistons, you should at least make the weights of the pistons equal, by filing metal from the inside. The connecting rod weights should be made the same in a similar manner. This balancing does not give the motor more speed, but it permits it to run at a high speed with less vibration and wear.

The oil consumption increases greatly with the speed, and it is difficult to keep an adequate supply in the crankcase. A method sometimes used is to fasten an auxiliary oil tank by brackets over the motor, Fig. 1, and to have an outlet pipe running from it to the breather tube of the engine. A stop-cock, operated from the driver's seat regulates the flow of oil to the base, and the supply must be kept much above normal.

We have been unable to find any one who can supply you with a racing camshaft. The timing for speed is largely a matter of trial, and one method is to set the timing gears ahead a tooth at a time, until a road trial shows the best possible setting.

A better method is the following but it requires time to get the setting right: The cams on your engine are fastened to the camshaft by setscrews, set into shaft. Remove the cams from this shaft, and have a new shaft made, like the old one, but not countersunk for setscrews. Place the cams on the new shaft, and temporarily set them so that the exhaust opens 50 deg. before bottom dead center, and the intake closes 50 deg. after bottom dead center. If this adjustment is satisfactory, the points under the screws may be countersunk with a drill, and the setting made permanent. Otherwise, the cams must be shifted until a satisfactory setting is obtained.

A change in the rear axle gears is not advisable unless you find the increased power of the engine, and the reduced resistance of the car merit the change. If with the present gears, the car does not run fast enough, and yet seems to have reserve power, a change in the ratio would be advisable.

BUICK B-25 DELCO SYSTEM

Editor Motor World:

We would like you to give us a complete wiring diagram of the Delco system used on the 1914 B-25 four-cylinder Buick. Either send us the diagram direct or publish it in your next issue of Motor World. We have been taking your magazine for the past 2 years, and find it very valuable and interesting.—E. P. Evans, Evans Bros., Pascagoula, Miss.

Fig. 2 shows this diagram.

We would advise you to send to the maker of the Delco system, the Dayton Engineering Laboratories Co., Dayton, Ohio, asking for a Delco instruction book on this car. The Delco company issues complete books on all its systems, and every repairman should have a complete set. This book may be obtained for the asking.

HARD TO OBLITERATE SCRATCHES

Editor Motor World:

I have had considerable trouble with covering scratches on a new car unless I have the entire car painted, and I understand there is a preparation to cover scratches even though they are through to the metal.—W. C. Teats, City Garage & Supply House.

There is no compound that will cover scratches which are right down to the metal. Body polish will aid in obliterating marks on the finish, particularly if these imperfections are in the varnish alone, as the polish forms a new gloss over the surface; but you can readily understand that no polish can obliterate deep cracks or scratches. Obviously the only remedy is to fill these cracks up with material similar to that which was removed from them; and merely to put in any kind of a polish or compound, particularly if it is not of exactly the same color, will do little good. In other words, filling the crack with anything except the correct pigment or paint will not make a very successful repair, inasmuch as the filling compound will readily be detected because of its difference in color; unless, as already pointed out, the scratch is merely in the varnish, which is ordinarily colorless.

TREATMENT FOR ALUMINUM

It is a little recognized fact that aluminum-cast housings are constantly throwing off small metallic flakes into the oil or grease. These particles are carried into the working parts, increasing the wear and decreasing the life of the lubricant. This may be prevented for all time if the interior of the case be cleaned with gasoline and given a heavy coat of shellac.

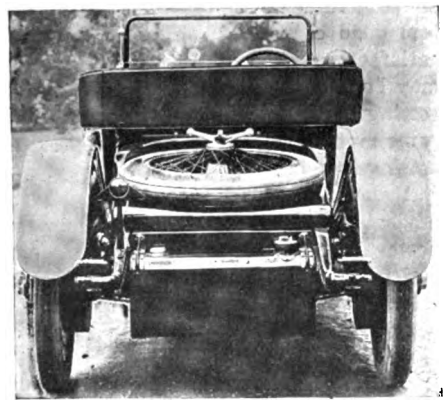
New Stutz Roadster Has Rear Deck

Wheelbase 130 inches—Wire Wheels on All Models—Better Carbureter—Longer Springs—More Room

Upper—Touring car with wire wheels as standard. Left—Runabout with new deck

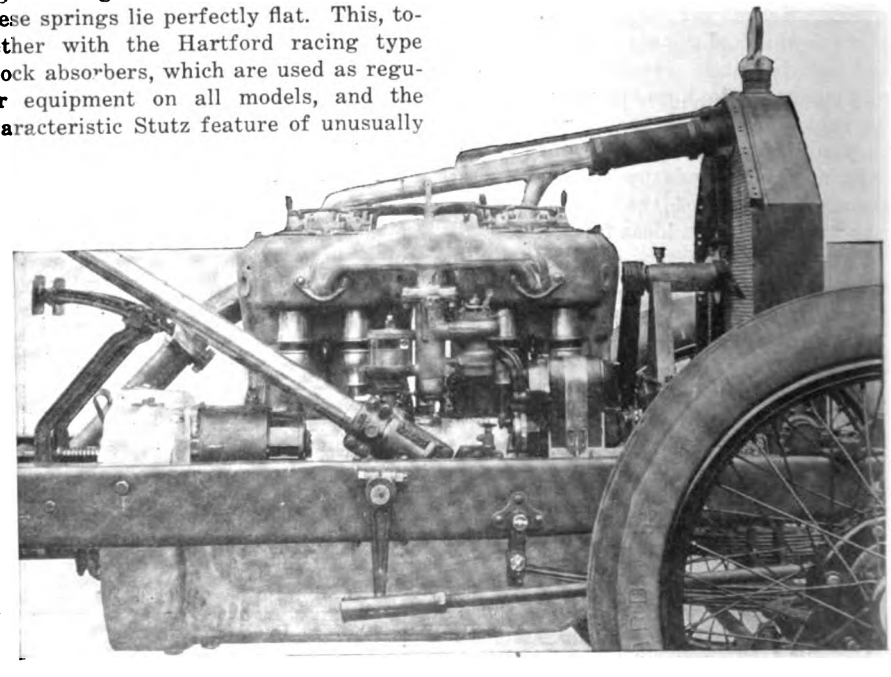


IMPROVED carbureter to take care of the present low grade of fuel, longer rear springs and a new frame construction to improve riding qualities, increased roominess in the bodies and an entirely new roadster are the differences in the new Stutz cars which stand out most prominently over the former models.

A standard wheelbase of 130 in. has been adopted for all models which will consist of Bulldog specials, coming in both four- and six-passenger bodies and the new roadster. The price of $2,550 for the Bulldog is the same as on the previous model, while the new roadster price, which is $2,275, is an increase over the previous model, justified by longer wheelbase and a great number of refinements.

The only change in the power plant is in the location of the carbureter and manifold and the new facilities for heating the gases. The new manifold has a water jacket of unusual capacity, which is connected over the top of the motor by a short pipe directly to the water-exit pipe which leads to the radiator. Not satisfied with this method of heating alone, the Stutz designers have installed a flexible hot-air tube from a stove on the exhaust manifold which leads between the two cylinder blocks to the air intake in the carbureter. This construction not only permits the entrance of heated air into the mixing chambers of the Stromberg, but also eliminates the chance of condensation of the gases by their passing through a hot manifold before entering the motor.

The frame has been increased in size. The side bar is now 5 in. deep, with a 3½-in. width in the center gusset plates which are integral with the side bar. The rear of the frame is now extended to form a spring hanger by the use of U-shaped forgings instead of the goosenecks previously used.



An alteration in the chassis design which not only makes a much easier riding car but permits a straight-line drive through the double universal joints is the increase in length of the rear springs from 50 to 56 in. and so changing the design that when the car is loaded these springs lie perfectly flat. This, together with the Hartford racing type shock absorbers, which are used as regular equipment on all models, and the characteristic Stutz feature of unusually low center of gravity in the body and seating of passengers, makes the new car

The rear of the new roadster is quite different from the former model, which had a big tank and trunk in place of the rear deck

The New Stutzer

Price—	Stutz
Touring .....6-pass.—	$2,550
" .....4-pass.—	$2,550

by far the most comfortable riding proposition which this factory has yet produced.

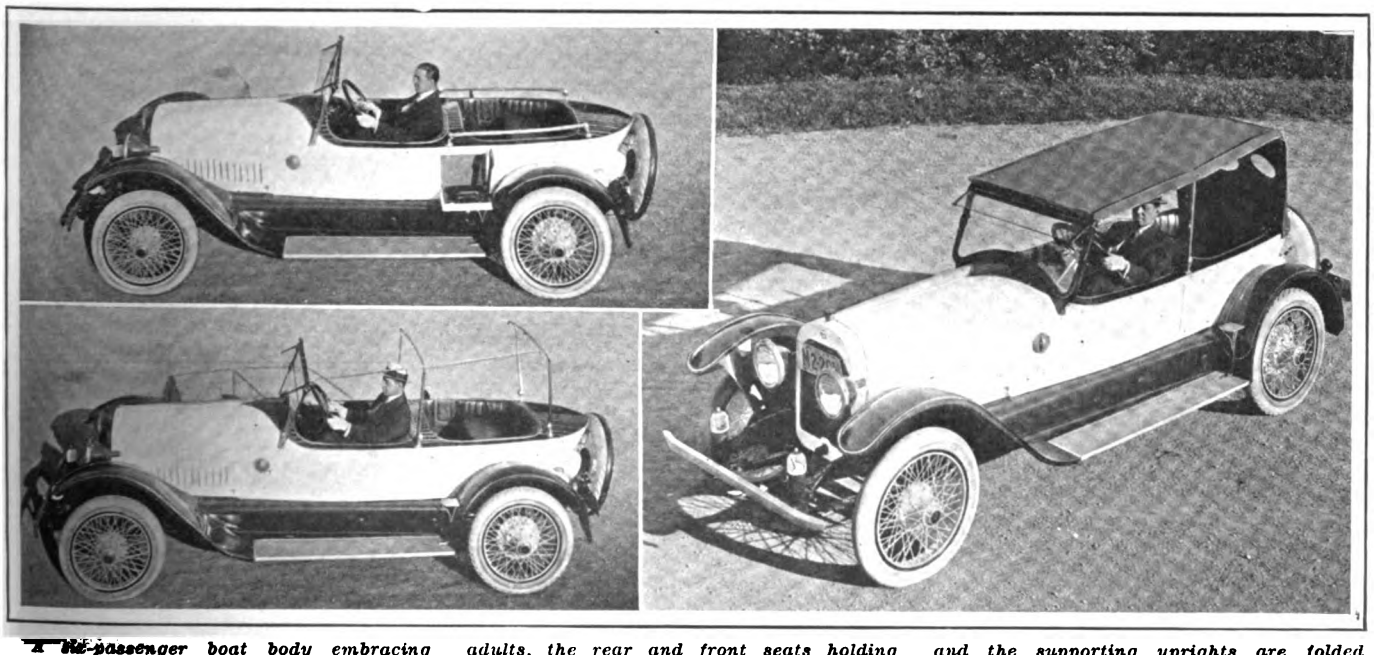
In speaking of the new Stutz bodies, of course the brand-new roadster is the most interesting because of its newness. The body is placed on the standard 130-in. wheelbase, whereas all previous Stutz roadsters were on a 120-in. wheelbase. In the place of the combination oil and gas tank and traveling trunk evident on the old roadster, the new car has a modified turtle-back rear with a depression, circular in form, for carrying an extra wire wheel and tire. The wire-wheel carrier provides a very substantial support; in fact, the wheel is fitted onto lugs much as it is when it is in place on the axle.

There is a carrying space in the rear of this body, directly in front of the spare wheel space and behind the seat, which is large enough to hold two or three suitcases. Entrance to the compartment is gained through a large door on the top, which is locked by a key on both sides.

The body length of the touring car has been increased 4 in. and the width 1 in. The increase is all taken up in the rear compartment, so that ample leg room is provided both for the passengers in the auxiliary seats and in the rear seats. The bodies of the four-passenger and the six-passenger are identical, except that in the latter folding auxiliary seats are substituted for the cowl cabinet and thermos bottles, which in the four-passenger are carried as regular equipment.

The motor is a four-cylinder, pair-cast, T-head design, 4¾ x 5½ in., with three bearing crankshaft and camshafts. The

A stronger frame is a feature of the new chassis. The gearbox is a unit with the rear axle



leather-faced cone clutch and the characteristic Stutz rear axle gearset which has been used by this company since its inception are unchanged. In the matter of shifting gears, however, there is an alteration in that the shifting lever positions are reversed to what they were on previous models. With the former construction the high-gear position was on the inside and toward the driver. This position was slightly inconvenient inasmuch as the lever was in the way of the driver's leg. The change has been made, as stated above, by reversing the shifting positions so that now the lever when in high is against the body and out of the way. A padlock for locking the shifting lever in neutral has been added.

Returning to the motor, as in previous models, the camshafts operate roller-type pushrods and the valves, which are tungsten steel, 2¼ in. in the clear, have the mechanism inclosed by individual housings. The camshaft is by helical gearing. Lubrication is by force feed through a hollow crankshaft, carburetion by a Stromberg, and ignition by Bosch double-distributor magneto, with a Remy system taking care of starting and lighting.

Upholstering on all new models is either brilliant-finished, long-grain, hand-buffed black leather or dark brown Spanish hand-buffed leather. The fenders are now slightly crowned, which adds to the appearance of the assembly. Battleship-gray and Mercedes-red are the new standard colors. Stutz has departed from the use of wood wheels altogether and will furnish Houk wire wheel in one size, 34 x 4½, one extra wheel going as regular equipment without additional cost. In tires an option of either Goodrich Silvertown cord or Goodyear cord is offered.

Accessories include a Boyce Moto-meter, windshield spotlight and double-bulb lamps, with the small bulb out of focus to comply with dimmer ordinances.

Special Body on Mitchell Chassis

A six-passenger boat body embracing many novel features has been built by the Mitchell Motors Co., Inc., New York. The body is finished in white enamel with green upholstery and running gear, and is equipped with Houk wire wheels.

The normal capacity of the car is four adults, the rear and front seats holding two each. Concealed seats in the side of the body may be let down over the running boards and a small folding seat in the forward compartment comfortably provide for two more grown-ups and a child.

The top is concealed when not in use, and the supporting uprights are folded down on the side of the tonneau, where they have much the appearance of the deck rails on a launch. The top may be raised or lowered in a few moments and is equipped with side curtains for stormy weather.

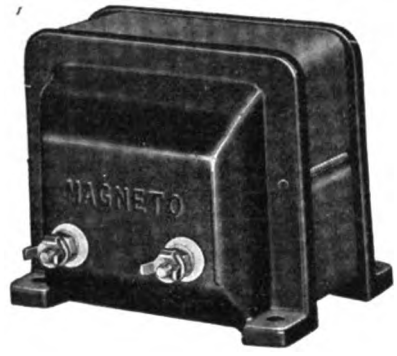
Accessories & Supplies

HEADLIGHT REGULATOR FOR FORD

General Electric Co., Fort Wayne, Ind. PRICE, $3.65; dealers, $2.75.

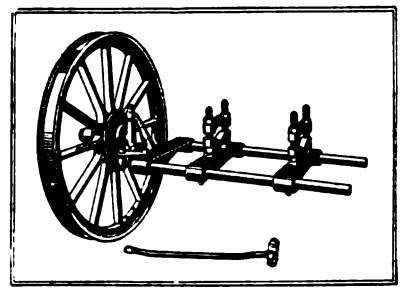
The Wayne light is a small transformer designed to steady the headlight illumination of Ford cars. The current passes from the magneto through the transformer to the lamps, which are wired in multiple. Such wiring prevents the possibility of both lamps going out, as is the case with the usual series winding. It is claimed that the transformer furnishes a steady light at all speeds above 10 m.p.h. The installation is simple, it being only necessary to substitute 6-volt lamps in place of 9-volt lamps, attach the present headlight wire to one of the magneto terminals of the transformer and ground the other transformer terminal to the frame. A pair of wires, each connected to a lamp, extend to the two lamp terminals of the transformer. The Wayne light may be placed on the dash, under the hood or floor boards, or wherever it is most convenient.

COMET DASH AND TROUBLE LAMP



Auto Specialty Co., Galesburg, Ill. PRICE, $5, complete.

A combination dash and trouble light. As a dash light it fits into a socket on the instrument board and has the appearance of an ordinary dash lamp. If light is wanted at any part of the car it is only necessary to grasp the socket and carry it where desired. Ten feet of lamp cord is carried on an automatic rewind within a neat case underneath the hood. This rewind is spring-operated and carries the lamp back to its place on the dash. Installation may be made on any car.



JOHNSON'S BLACK-LAC

S. C. Johnson & Son, Racine, Wis. PRICES: Quarts, $1.10; pints, 65 cents; half-pints, 40 cents. Dealers, 33 1 3 per cent; jobbers, 50 per cent.

An all-service dressing, made by the manufacturers of Johnson's prepared wax, for touching up automobile parts. It is a liquid, applied with a brush, and is said to dry in 15 min. One coat is said to give a rich black finish to tops, leather cushions, side curtains, tire covers and trucks; or it may be used for blackening fenders, rims, running boards, radiators, guards, lamps and all worn metal parts. The product can be used without injurious effect on the finest leather; in fact, it is claimed to act as a preservative and not to come off on the hands or clothing.

The Waynelite transformer steadies the Ford headlights

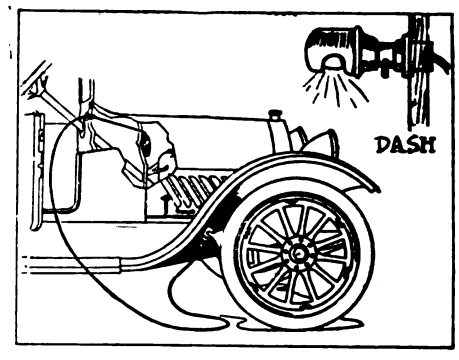
The Compo Crutch will fit any car, either on the front or rear axle, and is readily applied

THE COMPO CRUTCH

The Gearless Differential Co., Detroit, Mich. PRICE, complete with wheel for 3½-in. tire (tire and tube not included), $30.

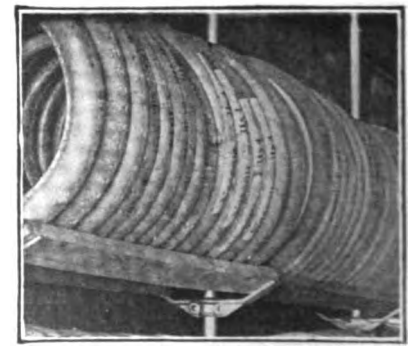
Brings home any car having wheel, axle or spindle broken. An artillery-type wheel carrying a 3½-in. tire is fastened through an axle to a strong steel frame. The axle of the disabled car is jacked up and the frame clamped onto it. In the case of a front wheel, a steering arm is supplied that may be attached to the tie-rod of the steering gear and the car may be brought home under its own power. The attachment is practically the same for a rear wheel, except that the steering arm of the crutch is replaced by a link coupling which holds the wheel in a straight line. The device may be attached to any make of car by an inexperienced person, it is said. Compactness in transit is secured by detaching the wheel from the frame, it only being necessary to remove one bolt. The weight is 63 lb.

KEROSENE VAPORIZER



C. W. Lundy, Malad, Idaho.

A device claimed to enable the motor to run on kerosene, alcohol or even crude oil. Furthermore, the claim is made that the vaporizer will increase the gasoline mileage very nearly 50 per cent, and that carbon deposits are practically eliminated. The device takes the place of the intake manifold and utilizes the entire exhaust for heating the gases. Gas from the carbureter passes through small tubes within a barrel. These tubes are very thin and, surrounded by the heat from the exhaust, are almost instantly heated to a temperature at which, the maker claims, kerosene or even heavier oils readily vaporize.

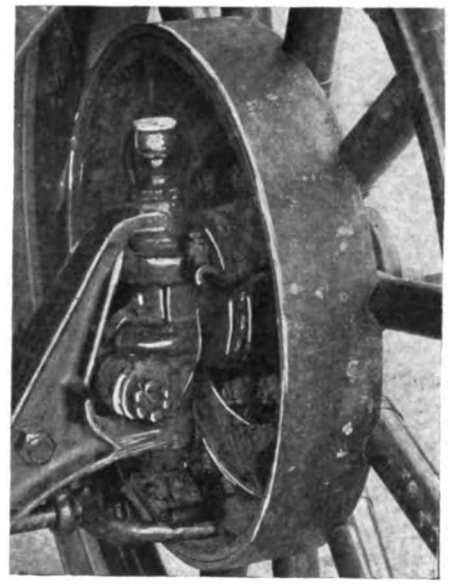


ELGIN TIRE RACK BRACKETS

Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa. PRICE, $9 per dozen.

Brackets enabling the dealer to build his own tire racks. Upright standards of 1½-in. pipe are erected at about 6-ft. intervals and the brackets are clamped onto the pipes. Planks are then screwed onto the brackets, making the racks continuous. In a 480-tire installation, 110 ft. of 1½-in. pipe and thirty-three brackets were used. The complete fixture cost less than $35. One dozen brackets are sufficient for a 150-casing rack.

The Comet dash and trouble lamp combined



Elgin tire rack brackets enable the dealer to construct his own tire racks

Digitized by Google

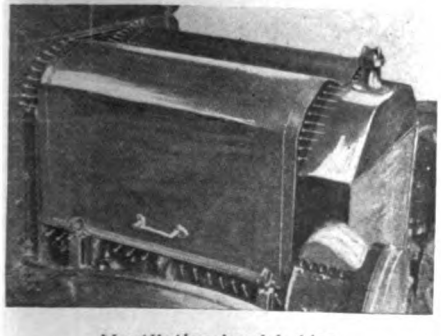
MORTON FRONT WHEEL BRAKES

Morton Brake Co., 45 South Tenth Street, Minneapolis.

A front wheel braking system for most makes of cars. No alterations to the car are required in the installation, and the brakes are said not to interfere with the proper operation of any part of the car. The brakes are of the expanding type, and so connected that the braking effort is applied to all four wheels at once. Quickness in stopping and prevention of side sliding or skidding are the advantages claimed for these brakes.

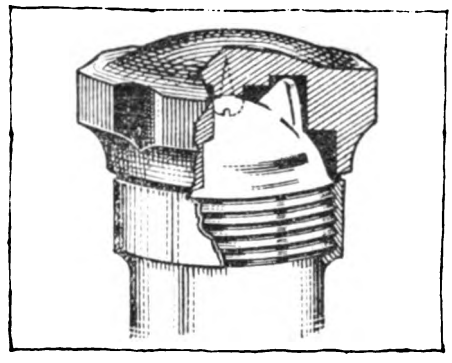
The Morton front-wheel brakes are of the expanding type, and connected with the rear-wheel braking system

VENTILATING HOOD HOLDER



The V Air Valve & Mfg. Co., Denver. PRICE, $4.50 per set of four.

Permits the free circulation of air beneath the hood. These holders are substituted for the standard clamps and allow the hood to be clamped in an elevated position. The forced draft, caused by the motion of the car, passes over the motor and escapes at the rear. The running temperature of the engine is lowered and the peformance is bettered, it is claimed. In cool weather the hood may be locked in the closed position.

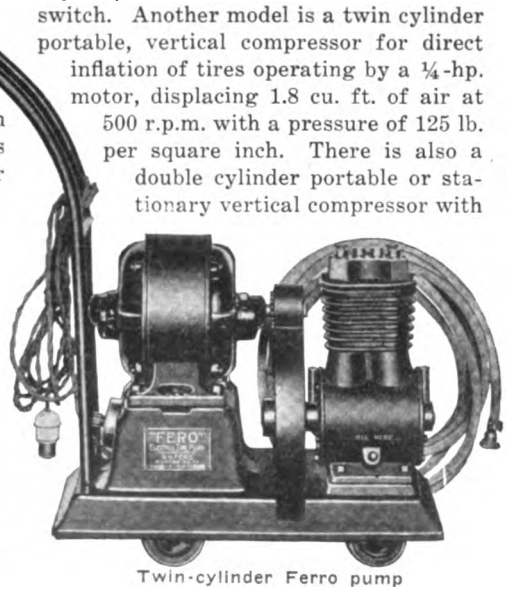


SAFETY SPARK SET FOR FORD

Witherspoon Jeffords, Florence, S. C. PRICE, $4, complete.

An automatic safety set for use on Ford cars. With the device attached the spark is automatically retarded while the engine is being cranked, thereby preventing back kicking and possible injury to the operator if he has neglected to retard the spark before cranking. The safety spark set also prevents the spark lever advancing from vibration while the engine is being cranked. To apply the device to a Ford, remove the commutator case from the engine in the usual manner and fasten a spark set to it with a single set-screw. It is only necessary to drill one hole to make the installation. A ratchet design to work in conjunction with the regulating lever on the spark set is inserted in place of the ordinary ratchet. When the spark lever is improperly set, the lever locks in a notch in the ratchet, and when the motor is turned one-half a revolution, this lever releases, causing the spark to retard.

Ventilating hood holder



Bridges radiator cap top

FERRO ELECTRIC AIR PUMPS

B. M. Ferro, Wilkinsburg, Pa.

A complete line of electrically-operated air pumps is produced. The line includes a single cylinder, horizontal, stationary compressor driven by a ¼ hp. motor to meet the requirements of garages housing not more than twenty cars. It is used in connection with an air tank of 20-gal. capacity, together with an automatic switch. Another model is a twin cylinder portable, vertical compressor for direct inflation of tires operating by a ¼-hp. motor, displacing 1.8 cu. ft. of air at 500 r.p.m. with a pressure of 125 lb. per square inch. There is also a double cylinder portable or stationary vertical compressor with a 1/3-hp. motor for direct inflation of tires or for use in connection with an air tank, and a heavy duty double cylinder vertical compressor with a ¾-hp. motor suitable for operation in connection with an air tank. This model will start the pump against a tank pressure of 125 lb. and compress to 175 lb. or 200 lb. tank pressure, the latter being automatically controlled. Westinghouse motor equipment, alternating current or direct current, as required, is used. The Westinghouse alternating and direct current motor is used exclusively with these compressors.

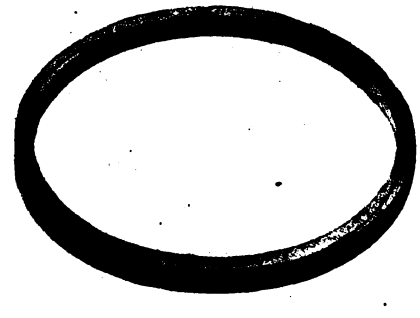
Twin-cylinder Ferro pump

FORD RADIATOR CAP TOP

C. E. Bridges, 4537 North Whipple Street, Chicago. PRICE, 25 cents; dealers, 12½ cents.

A composition cap top, fastened to the top of the Ford radiator cap. After drilling a small hole in the top of the Ford cap the composition cap is secured by means of a screw. A fiber washer is placed under the head of the screw to prevent the escape of steam. This cap top is a non-conductor of heat and improves the appearance of the car.

FORD ACCELERATOR



W. H. Thomas Co., Spencer, Iowa. PRICE, $2.50.

Permits the throttle of the Ford to be operated by the foot. All parts are of soft steel, and the control is direct from the pedal to the throttle. The hand throttle is in no way affected, and the installation may be made very readily, it is said. A foot rest is supplied that makes possible steady driving over rough roads.

HI-COMP PISTON RINGS

Continental Piston Ring Co., Memphis, Tenn. PRICE, all sizes to 5½ in., $1.65 each.

Two eccentric interlocking rings are combined to form a single concentric ring. The rings are made from soft gray iron and ground together. It is not necessary to take the rings apart, as they expand sufficiently to fit over the piston. The design of the ring is said to give an equal expansive power on all parts of the cylinder, even though worn out of round. Two rings are required per piston.

Hi-comp piston ring

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 798) WIRE BEADING FORMER

The appearance of tool boxes and bodies may be greatly improved by fitting brass strips or beading over the corners and joints. Similar beading is often required in body repair work. It is not an easy matter, however, to hold such a strip while bending it to fit a curved edge. A forming vise may be constructed in the manner shown and, though holding the beading securely while being bent, permits a ready change of position in forming or removal for fitting. The lower locking strip is adjustable and will accommodate all ordinary-sized beading. —Packard Motor Car Co., Boston.

(No. 799) SHAFT STRAIGHTENING

A shaft, such as a bent rear axle or driveshaft, may readily be straightened by the aid of the device shown. The ends of the pipe are placed on steel V-blocks and pressure applied to the bend by the clamp screw shown. This clamp closely resembles the common pipe vise, except that the lower jaws are replaced by an opening for the shaft, and is bolted to the bench. The shaft to be straightened is passed through this opening and a V-block placed under each end. The upper clamp is thrown back until the highest point of bend is determined, either by the aid of a piece of chalk or a Bath indicator and turning the shaft. The clamp is then locked down and pressure applied to the high point of the shaft by turning the clamp screw. All bends may be removed by repeated applications of pressure, the indicator determining each time where the pressure should be applied.—Packard Motor Car Co., Boston.

(No. 800) REPLACING GUIDES

The valve guides of T- or L-head motors may be driven from the cylinder casting from above. The fitting of new guides must be done with more care, however, as a slight distortion of the guide will cause the valve to stick. The puller illustrated is ideal for this work, as it applies a steady, even pull to the guide in a manner that cannot spring it out of shape. An old cylinder cap is drilled and tapped to carry the threaded rod, which may be made on the lathe in a few minutes.—Packard Motor Car Co., Boston.

(No. 801) FLANGE PULLER

A puller of the common type is poorly adapted to removing flanges at the best and often cannot be used at all. Where the volume of work warrants, the puller illustrated is very efficient. A plate, having holes mating with holes in the flange to be removed, is secured through a swivel joint to a threaded rod. The U-bar is made of heavy iron, and the upright is a short length of iron pipe. In use, the plate is fastened to the flange to be removed by two bolts, and the legs of the U-bar braced at some convenient point. By screwing down the nut, an even strain is applied to the flange, removing it with little opportunity for injury.—Packard Motor Car Co., Boston.

(No. 802) ROD WRENCH

Bent or twisted connecting-rods may be straightened with the aid of the proper wrench. Although an extra large adjustable wrench is often used, a special solid wrench is advisable for this purpose. The wrench shown is made from heavy bar steel, filed to a close fit on the connecting-rod, and case hardened. The offset jaw is used in removing bends, and the other for removing twists in the connecting-rod. A suitable means of testing the alignment of the bearings should be used in connection with the wrench.—Packard Motor Car Co., Boston.

(No. 803) SPRING CLIP TONG

Spring clips may be sprung into place and driven home much more readily by the use of suitable bending tongs. The device is made from ¼-in. round rod, bent in the manner shown. A powerful leverage may be applied to the free side of the clip, forcing it into alignment with the hole in the strap, and a single blow with a hammer forces the clip into place.—Packard Motor Car Co., Boston.

(No. 804) QUICK-ACTION JACK

A quick-acting jack, to be used in conjunction with auxiliary jacks, is illustrated. The jack consists of a steel upright, riveted together and supporting a long lever arm. One side of this lever is hooked to give a firm hold on the wheel hub, the other being fitted with a long handle made up of 2-in. pipe. The auxiliary jacks are made up from cast-iron, and are slipped beneath the axle after the car has been raised with the lever jack. These auxiliary jacks offer a ready support for cars left in dead storage and may be cast in any foundry at a very low cost.—Packard Motor Car Co., Boston.

(No. 805) TAP WRENCH

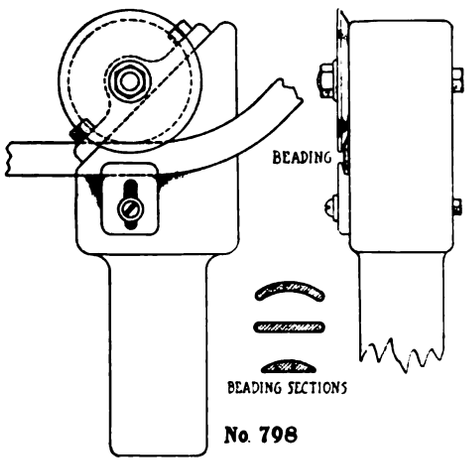
The tap wrench shown herewith, in addition to having openings for several sized taps, possesses the advantage of being able to grip the tap firmly in its jaws. A minimum of time is used in fitting the tap into the wrench and an over- or under-sized tap cap be held with equal ease.—Packard Motor Car Co., Boston.

(No. 806) TRANSMISSION SUPPORT

Rear axle transmission housings, when removed from the axle, may be conveniently held by a ¼-in. plate in the manner shown, and when clamped in a vise leave all parts of the transmission accessible. The material in the plate is removed to within ½ in. of the bolt hole line, and the holes are drilled to match the holes in the housing. Two or three bolts are sufficient to hold the transmission to the plate.—Packard Motor Car Co., Boston.

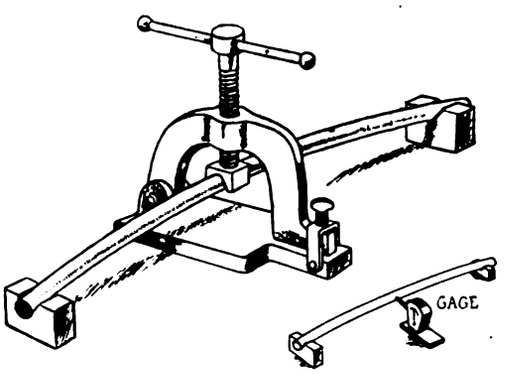
(No. 807) WRIST-PIN BORING JIG

A piston may be securely held and the wrist-pin bearing accurately bored by the use of a proper jig, which may be made in the manner shown. The piston is clamped in the V-block by a steel strap, adjusted to the proper position by the screw at the end, and then securely locked by the strap. The rear of the jig casting is threaded to fit the headstock of a lathe, and after drilling a small hole the bearing is finished with an inside lathe tool.—Twentieth Century Garage, Boston.



(No. 808) CLUTCH BEARING PULLER

Although designed for removing the clutch bearing from the Packard, a puller of this type has many features recommending it to general repairshop work. The construction is simple and sturdy, and the puller may be used in removing gears, collars and steering wheels.—Packard Motor Car Co., Boston.



(No. 809) PUNCH O. K. SYSTEM

Many repairshop systems require the foreman to sign the work-card on the completion of the job. Time is often lost in locating a pencil, and the signature resulting is not permanent. The use of a conductor's punch for this purpose has many advantages—it is quick, distinct and cannot be forged.

Broken Tractor Promises

THE National Farm Tractor demonstrations which have been held in Dallas, Tex.; Hutchinson, Kan., and St. Louis, Mo., have not been wholly satisfying either to the farmers who went to see them or to the motor car dealers and garagemen who went to them seeking first-hand knowledge of what a tractor can do.

The demonstrations had been widely heralded as being COMPLETE, as being intended to show all of the manifold operations that can be done with a tractor on the farm.

But that promise has been badly broken. There have been no public demonstrations of tractors working on plowed ground except in isolated cases, and there have been no demonstrations of what the tractor can do in the way of belt work—running ensilage machines, feed cutters and wood saws, threshers, cream separators, etc.

What Else Will It Do?

These are some of the things both the farmer and the prospective dealer want to know. Nearly everyone knows that a tractor will plow; but there are very few who know whether the tractor that is seen successfully pulling three or four plow bottoms to-day on hard soil will go out immediately after and pull a harrow or a seed drill, or a roller, over the freshly plowed land.

Similarly, there is no doubt but that the tractor which has sufficient power to propel itself over the ground and pull three or four plows will have power to run some of the various pieces of farm machinery with which the farm is stocked.

But Just WHAT Will It Do?

The farmer is from Missouri—and so is the dealer and the garageman who is contemplating taking on the agency for a tractor.

The tractor manufacturer may console himself with the thought that those who visited the demonstrations were not greatly interested in these other duties of the farm tractor, but he is wrong if he does so. No right-minded person seeking the agency for a new pleasure car would ever take the word of the manufacturer for the hill-climbing ability of the car or for its easy riding qualities. He wants to know all about the machine. And so it is with the farm tractor.

Hot on the Dealer's Trail

These demonstrations were put on for the purpose of increasing the sale of tractors largely by the establishment of new dealers. Some few retail sales were made, but all the manufacturers who exhibited were hot on the trail of the new dealer.

But they did not show the prospective dealer ALL the machine would do. They showed him that the machine will plow, and let it go at that except in one or two instances. There was nothing but the manufacturer's word for the ability of the tractor to work on plowed ground and to put its belt pulley to some useful purpose.

One expected these demonstrations to be a complete exhibition of the farm tractor to reduce man labor and animal labor on the farm. But one was sadly disappointed—except in the work that can be done with plows.

Nothing But Tractors Exhibited

Probably the reason why some of these manifold belt uses of the tractor were not demonstrated was because manufacturers of such implements as use power were not invited to exhibit at the demonstrations. But some of the tractor makers had disk harrows, tooth harrows, seed drills and one even had a manure spreader on the ground.

There seems no real reason why a manufacturer really anxious to demonstrate the all-around ability of his tractor should not do so—and it is all-around ability that the motor car man and the garageman went there to see. He has got to see these things to rivet his allegiance to the tractor and the longer he is delayed in seeing them the longer will he delay in assisting the tractor manufacturer by signing a contract with him.

ANGLES OF THE LAW

By George F. Kaiser

That "League" Again

Editor Motor World:

I have a client who, in May, 1910, signed an application for membership buying privileges in the "International Automobile League" of Buffalo, N. Y., agreeing to pay $10 per year for this membership. This client has never used this service and has tried to resign, and they are now, I am informed, making demand on her for this membership privilege for 5 years.

I spoke to Mr. Jerome P. Parker, an automobile dealer in Memphis, who informs me that he thought that he had read in your paper an article referring to the prosecution and conviction of the head of this concern for fraud. He isn't sure that it was this company, but is sure that the article he had in mind referred to a company engaged in a similar business, and thought that you would be able to tell me fully what sort of people the International Automobile League was, and whether or not they were doing a legitimate business.

I will very much appreciate any information or suggestion you will give me on this subject.

Yours very truly,
(Signed) H. H. Barker.

Memphis, Tenn.

It is just a short time ago that I was consulted by a person who had joined this association some time ago. He had paid dues for 2 years, and a few months before his membership expired advised them that he wished to resign. Five or six months after that time he received a statement for 5 cents, which they claimed was due on his last order. A year and a half after paying the 5 cents he received another bill for dues and a letter which claimed that, as he was in arrears in the sum of 5 cents when he attempted to resign, his resignation was not properly made.

I advised this man to disregard all further notices which he might receive and to sit back and wait for suit to be started against him, if the association felt so disposed. It is not likely that he will hear anything further from the association, however, as the president and two of its representatives were indicted in Uniontown, Pa., on charges of conspiracy and of obtaining money under false pretences some time ago, it appearing on investigation that the league had no contracts with manufacturers of standard supplies and accessories. In the "Ohio Motorist," Mr. Richard H. Lee, chairman of the A. A. A. Legislative Board and president of the Cleveland Automobile Club, stated:

ASK

THERE are many things that come up in the course of a week's business on which the opinion of an attorney is valuable and interesting. There is one on this page. Have you one you would like discussed?

Owing to the great number of individuals throughout the United States who have at one time or another contributed to the International Automobile League, Inc., of Buffalo, N. Y., considerable interest will be displayed in developments at St. John, New Brunswick, Canada, where two agents of the International, named Harold Cottrell and Roy Grey, are under arrest charged with receiving money under false pretences.

The attorney general upon opening court moved to have the prisoners, who were represented by counsel, immediately enter pleas of guilty. They were not prosecuted on the other ten counts charged against them. The judge suspended the passing of any sentence and let the prisoners go on a recognizance of $1,000 each and warned them that they must refrain from acting as agents of the International Automobile League.

The attorney general stated that he felt justified in taking this course in suspending the sentence, in view of the fact that the public welfare would be sufficiently served by preventing the operation of the International Automobile League of Buffalo in this territory; that although the prisoners had made improper and untrue representations, they were to a certain extent victims of the system pursued by the parent company at Buffalo for the purpose of getting money from the public without intention to give an honest return for it.

This association is sending out a slip with its bills, citing the case of Boston Club vs. Potter, 98 N. E., page 614, which was decided in the Supreme Judicial Court of Massachusetts, Suffolk County, on May 23, 1912. This case held that, in order for a member of a club to resign so as to relieve himself from liability for dues, he must comply with the provisions of the by-laws relating to resignations; that the by-laws of a club constitute a contract between the members of the corporation, and that where they could permit members who have paid up all their dues to resign, a member in arrears cannot resign and be relieved from further liability as such; and, further, that a member cannot terminate his liability by failure to pay dues, though the club may drop him under its by-laws.

You will note the facts in this case are different from those in case of the league. See a story elsewhere in Motor World this week.

Don't Do This

If a dealer keeps an open continuous running account with a customer and recovers judgment for less than the full amount, he cannot thereafter recover judgment for the balance, according to the St. Louis Court of Appeals.

A dealer was engaged in selling automobiles and automobile parts, accessories and supplies, and conducted a repairshop.

An account was opened with a customer for various items, consisting of repairs, parts, accessories, gasoline, oil, etc. The dealer claimed that although the sum of $396.35 had been paid, this constituted only a small part of the account.

When suit was instituted for the balance, however, the court held that by accepting the smaller amount the dealer had waived its claim for the balance and could not recover any more on the bill; having recovered once on the account, it forfeited its rights to a further recovery. —Pepper vs. St. Louis, 187 S. W., page 109.

This Is Fraud

Where the owner of a motor car, after selling it, keeps it in a public garage and continues to use it under its old license plate, an attempted sale is fraudulent and void, although the purchaser pays for the storage, according to the decision of the Supreme Court of Colorado in a recent case.

It was further held that a creditor of the owner might levy and seize the car in a case of this kind, notwithstanding the supposed sale, as the Colorado statutes provides:

Every sale made by a vendor of goods and chattels in his possession or under his control, and every assignment of goods and chattels, unless the same be accompanied by an immediate delivery and be followed by an actual and continued change of possession of the things sold or assigned, shall be presumed to be fraudulent and void, as against the creditors of the vendor, or the creditors of the person making such assignment, or subsequent purchasers in good faith, and this presumption shall be conclusive.

STAR VENTILATORS

Fig. 1

Merchant & Evans Co., Philadelphia.

A pipe ventilator located above the ridge or slope of the roof. The warm air, rising, passes through the ventilator, carrying with it the fumes of burning oil and gasoline. Ventilators are constructed to give from one to fifteen changes of air in any given area. Four types of ventilators are produced, the New Standard Star Ventilator, the New Fire-Retarding Star Ventilator, the Skylight Star Ventilator and the Fire-Retarding Star Ventilator. The fire-retarding ventilator has a disk damper, controlled with a chain and a fusible link. In event of fire the link melts and the damper drops closed by the force of gravity, cutting off the draft. The skylight ventilator distributes light through a section made up of heavy wired glass. Each ventilator is designed for the building it is to occupy.

PLAN FOR REMODELING GARAGE 45 x 90

Fig. 2

Editor Motor World:

I am going to occupy building Aug. 1 as a garage and shop. What suggestions can you offer to make this place of the most value to my customers and myself in the matter of economy of space and with the minimum of help?

What system of accounting will be best for my use—garage, accessories, repair? Would thank you very much if you will give me sample sheets of forms, such as stock record, shop ticket, etc.

Will the attached form be simple enough, or have you something better? —E. D. Green, Victoria, Tex.

We have made some changes in the present lay-out, although in general it is the same, Fig. 2.

In the first place, we have brought the width of the accessory store and office out to the edge of the entrance door. To have this room any narrower than this is a waste of space, as the extra area can be used for no other purpose.

A shop 40 ft. deep is too deep. But from your sketch we believe that probably the depth is not about 40 ft., as you estimate, but less. Thirty feet should be sufficient.

Cars should be stored on each side of the central aisle.

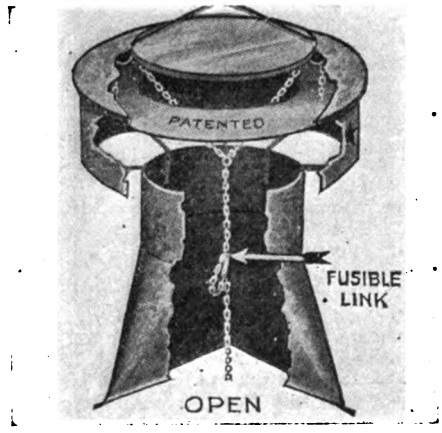

Fig. 1. Merchant & Evans Star ventilator

Regarding your accessory card, which is really an inventory card, would say that we have one which is better and will cost you less. If you have the cards printed specially you will find that the expense will be considerable. Our cards are made in two sizes and sell as follows:

Subscribers	
4 x 6 in., 100 lots or more.....	$ 0.85
4 x 6 in., 1000 lots or more.....	8.00
5 x 8 in., 100 lots or more.....	1.00
5 x 8 in., 1000 lots or more.....	9.50

Non-subscribers	
4 x 6 in., 100 lots or more.....	$ 1.00
4 x 6 in., 1000 lots or more.....	9.50
5 x 8 in., 100 lots or more.....	1.25
5 x 8 in., 1000 lots or more.....	12.00

We believe that the most satisfactory accounting system for you is that developed by us. This system is the result of many months of investigation and careful study, and it has been installed in several hundred garages and every one of them has found it very satisfactory.

You will probably need a stockroom for your accessories in addition to the space in the office. In order to save space you might have this room from a hanging platform or balcony, or you might place it between the wash-rack and the shop. This latter will be a particularly good location if you have sufficient shop equipment to require a tool room. Thus tools and accessory stock, as well as spare parts, may be combined into the one room, which is exceedingly convenient to the shop and convenient enough to the store also.

DURABLE AND QUICK-DRYING CONCRETE PATCHES

One of the objections sometimes raised against the use of concrete-finished floors in garages is the difficulty and cost of successfully repairing places that become worn or damaged. For best results it is usually considered necessary to cut down the worn place at least 1½ in. into the unbroken concrete, undercut the edges, clean out the dust and loose particles thoroughly, wash with a thin cement grout, fill in with a paste grout, and finally float to a level surface a mortar of cement and crushed stone or gravel. The patch must then be kept moist for at least a week or 10 days, keeping all traffic off in the meantime.

Mr. W. P. Anderson, president of the Ferro Concrete Construction Co., states that his company often uses a method of patching concrete floors which is much cheaper and requires far less time than the method commonly used. His method requires the use of a mastic material made from asbestos fiber and rubber gum. This mixture is applied with a trowel after thoroughly cleaning the damaged surface. Very little cutting of the old concrete is necessary, other than to break off loose particles. The gum can be worked to a feather edge so that it will readily join with the undamaged

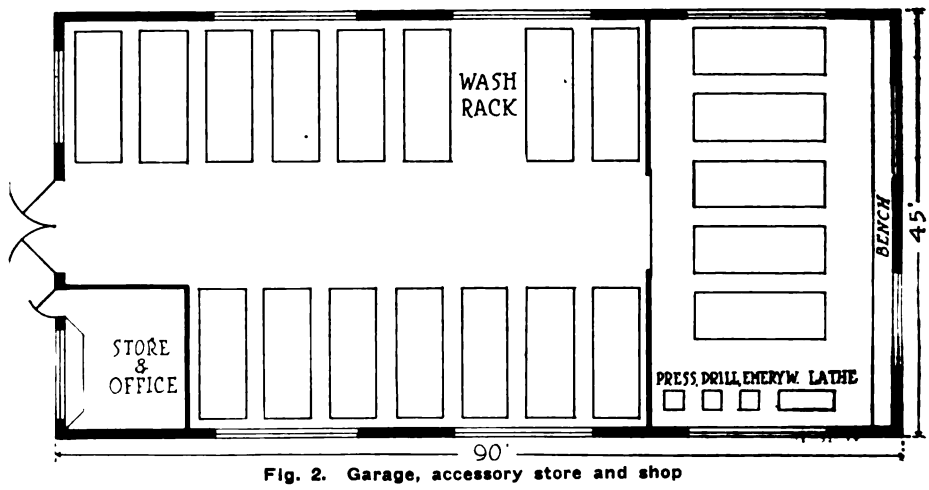

Fig. 2. Garage, accessory store and shop

Digitized by Google

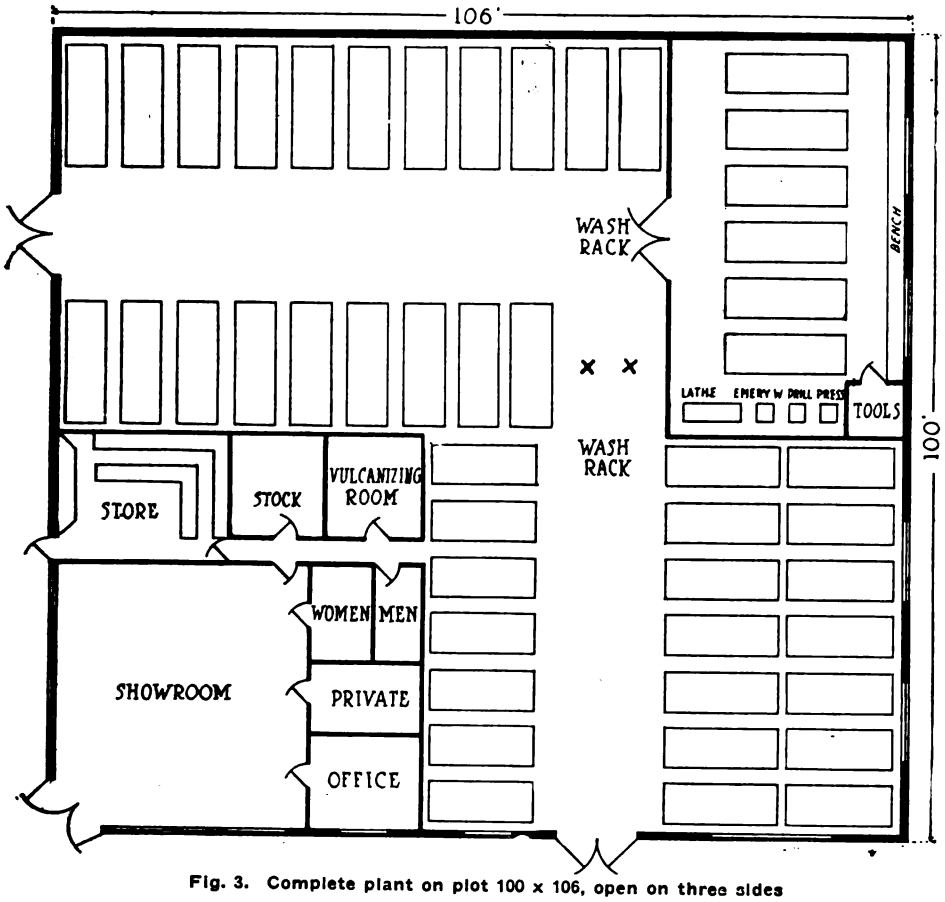

Fig. 3. Complete plant on plot 100 x 106, open on three sides

concrete surface and eliminate the undercutting required with the old style of patch.

A patch of this sort can be opened to foot traffic within a few hours and to heavier traffic within a day. It is thus possible to repair a much-used portion of a garage floor overnight. The cost varies with the size of the patch, but will amount to about 18 cents per square foot. The patch looks well and wears well, sometimes better than would the regular concrete patch.

ONE-STORY COMPLETE BUILDING 100 x 106

Figs. 3 and 4

Editor Motor World:

Will you kindly give me plans for a modern garage building to be constructed on sitt located as per diagram inclosed. The building is to be one story without basement, as we intend to use municipal heat.

We sell cars and accessories and also do a general garage business, storage being an important part.

Would like showroom for two cars, accessory room, shop for six cars, washrack, vulcanizing department, office, stock room, ladies' waiting room and toilets. Thanking you in advance for this information, I am.—Subscriber.

Possibly the showroom, Fig. 3, is slightly larger than you expected, but you should bear in mind that it is poor policy to crowd cars which are displayed for sale.

You say that you want an accessory room. Whether you meant a store by this or not, we are not sure. However, we have provided a store for you. Inasmuch as you are on the main street, you will probably have considerable accessory trade, and the store is therefore desirable just as much as it would be for the grocer, the butcher, or any other merchant.

The wash-racks are placed directly in the aisle. This will not be an objection, as most of your washing is undoubtedly done at night, when there is little or no traffic in the garage.

The aisles between the two parts of the garage ordinarily will be connected, but at night, when the garage is crowded, the cars can be placed in the spaces indicated with the crosses.

We wish to compliment you on the completeness of your letter. Every detail that could be of any possible use in laying out a plan was given. The idea of drawing a rough plan of the surrounding territory is one that other readers might do well to copy.

BOWLING ALLEY AND OFFICES ADD TO REVENUE

Seven hundred dollars per year is a small amount to pay for the rental of 10,000 sq. ft. of floor space for garage purposes, yet this is actually what it costs the Adirondack Garage Co., Hudson Falls, N. Y. This company owns its building, but by renting out parts of it for various purposes sufficient revenue is obtained to reduce the estimated rental of the remaining space to the figure stated.

The building is a three-story and basement structure, 42 x 150 ft., with a bowling alley in the basement, part of the second floor devoted to offices, and the top floor to a roller skating rink and dance hall.

The total income per year is as follows:

Four bowling alleys.....	$400
Three offices	500
Roller rink	800
	$1,700

The building cost about $40,000 and its rental is estimated at $2,500, so that the residue which the garage company must charge itself amounts to the difference between this and $1,700, or $800.

The bowling alleys occupy a space 26 x 122, the remaining space on the side being used for storage of old parts, scrap and bulky stock. Furnace and coal bin are in a separate room at the end, 28 x 42.

The first floor is devoted entirely to the garage business, and the second floor is used for repair work and storage of stock, except for a strip across the front of the building, which contains the three offices.

The entire top floor is used for roller skating, dancing, basket ball games, etc. The floor is approximately 100 x 42 ft. Dressing rooms for men and women and a coat checking room are provided.

Have Surveyed Spanish Trail

DALLAS, TEX., Aug. 7—Field Engineer Harry Locke of the Old Spanish Trail Association, has just completed surveying the route from California to Florida. He is now in Dallas compiling maps for the forthcoming official guide books of this highway. The Dallas Automobile Club will furnish the guide books to its members and tourists.

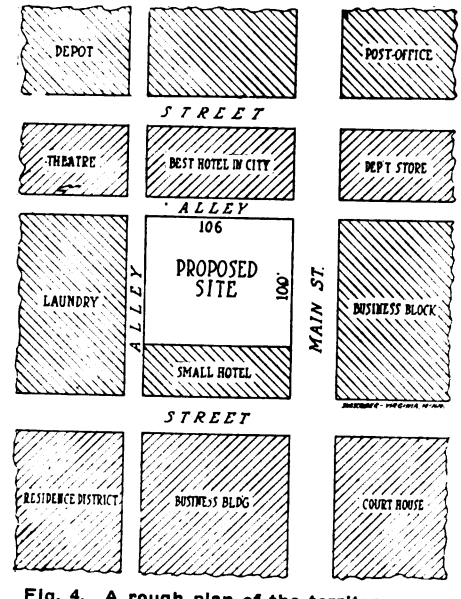

Fig. 4. A rough plan of the territory surrounding the garage is a great aid in determining the best way to lay the building out

The RETAIL NEWS

MIDDLE WEST

The Tranton Motor Sales Co., Cleveland, has taken the agency for the Peugeot, which is represented in the United States by the Peugeot Import Co. of New York.

The Aperson-Cleveland Co., Cleveland, Aperson dealer, has also taken the agency for the Empire in northern Ohio.

The Grasser Motor Co., Detroit, distributor of the Hupmobile, has taken possession of its new store at 1299-1305 Woodward Avenue.

The Peterson-Keyes Auto Co., Indianapolis, has apointed B. W. Habel sales manager. Habel has been connected with the Maxwell Motor Sales Corp. for the last three years, first serving in the capacity of special sales representative and for the last year and a half as district sales manager, with headquarters at Indianapolis.

The Cincinnati Chevrolet Motor Co., Cincinnati, has been incorporated at $5,000, to deal in motor cars, by C. H. Horn, W. B. Stewart, I. L. Nichol, L. L. Evans and Paul J. Bickel.

The Dillonvale Garage Co., Dillonvale, Ohio, has been incorporated at $1,000, to operate a garage, by Ray C. Hess, R. F. Riggs, Louis Sommers, Homer J. Findley and Charles Nassiff.

R. R. Kuehn and **A. C. Price,** South Bend, Ind., have taken the agency of the Cadillac since the promotion of G. H. Grieger, formerly manager in South Bend, to the Indianapolis branch.

Claude Huff, South Bend, Ind., has purchased the garage of James Hatch, Niles, Mich., and has taken possession.

The South Bend Auto Sheet Metal Works, South Bend, Ind., has been opened for business on East Washington Avenue. M. Lewis is the owner and manager of the plant, which will specialize in the manufacture and repair of radiators, fenders, gas tanks, lamps and bodies.

Abbott distributers recently appointed are: J. B. Maxwell, Philadelphia; Maykel Auto Co., Worcester, Mass.; C. S. Bateham, Norwalk, Ohio; Charles Weaver, Irwin, Pa.; L. A. Colton, Geneva, N. Y.; S. L. Foster, Taunton, Mass.; R. M. Howard, Burlington, Vt.

The Lenardson Garage, Britton, Mich., has been leased by Bert Vanes of Detroit.

The Morrice Garage, Fowlerville, Mich., has been opened to the public by McCreary & Tuttle.

The Beelby-Neureither Motor Sales Co., Grand Rapids, Mich., distributer of the Chevrolet, has awarded the contract for its new $20,000 garage, to be located on Island Street, S. E.

Frank Nebel and **William Hunter,** Mount Clemens, Mich., have leased from Charles Burkhardt the property at 40 Pearl Street, where they will conduct a vulcanizing shop. A complete line of accessories will be carried.

David C. Beggs and **John D. Karns,** Columbus, Ohio, have purchased the State Street Coliseum, where many fistic events have been held, and will remodel it into a modern garage.

The Central Garage, Ontonagon, Mich., has been opened by R. J. Barbera. Besides doing repairing and vulcanizing, a line of Ford accessories is carried.

The Opera House Motor Sales & Garage Co., Pontiac, Mich., recently organized, has leased the old opera house on South Saginaw Street, which has been remodeled and is now ready for occupancy. The stockholders are A. F. Newberry, Charles W. Shaw and Louis E. Shaw.

Ralph Hayden, P. R. Coster and **W. H. Orr,** Holland, Mich., have formed a company and purchased the garage on Seventh Street and the Ford agency from Fred Jackson. Hayden will assume active management of the business for the new company. Jackson will retire from the garage business, but he will continue in the automobile business.

The Alsop Motor Co., Richmond, Va., will hereafter handle the Chalmers line in forty-five counties of Virginia.

The Knuteen Motor Truck Co., Cleveland, has been incorporated at $50,000, to deal in motor trucks, by Otto Fr. Knuteen, George E. Hoffman, E. L. Kratzer, B. M. A. Little and A. L. Winsper.

The Duttenhofer-Weibel Co., Cincinnati, has been incorporated at $10,000, to deal in automobile supplies of all kinds, by Barton H. Weibel, Clifford G. Duttenhofer, Frank H. Kirchner, Val Duttenhofer, Jr., and David F. Schorr.

The Dobyns Motor Car Co., Hilliards, Ohio, has been incorporated at $25,000, to deal in automobiles, by LeRoy Dobyns, Arlington C. Harvey, E. V. Mahaffey, M. C. Campbell and S. E. Smith.

The Cleveland-Chevrolet Motor Co., Cleveland, has been incorporated at $5,000, to deal in motor cars, by I. L. Evans, Paul J. Bickel, W. B. Stewart, Rose Cone and I. L. Nichols.

Thomas Perry, St. Augustine, Ill., has had plans drawn for a new garage and sales agency on the north side of the public square.

F. E. Avery & Son, Columbus, Ohio, central Ohio Jeffery dealers, have opened a branch at the Standard Motor Co., Marion, Ohio, managed by Frank L. Vincent.

The Abbott-Grandy Motor Sales Co., Toledo, Ohio, is the name of a new concern formed by A. M. Abbott and C. B. Grandy to handle the Dixie Flyer in northern Ohio.

The Harris-Llewilyn Rubber Co., Columbus, Ohio, suffered a heavy loss because of fire recently. Within 6 hr. after the fire new quarters were secured at 186 East Gay Street and a new stock of tires and tubes arrived the following morning.

Cooke & Co., Columbus, Ohio, accessory dealers, will soon move into new quarters at 168 North Fourth Street.

H. F. Witker, Toledo, Ohio, who has been connected with accessory houses in Toledo, has become associated with the Paige-Toledo Co., Paige and Marmon dealer.

The Clifton Garage, Ottawa, Ill., formerly operated by Matthew Roseele, was sold by the creditors to G. M. Petty, owner of the Standard Garage on West Madison Street. The Clifton Garage, which is located on Columbus Street, will be operated by Petty independent of his other business.

B. J. Holkenbrink, Jacksonville, Ill., has opened a garage at 216 North Main Street, which will be devoted to repair work, specializing in batteries, vulcanizing and welding. Accessories will be carried, and in addition the owner will operate a motor livery.

Gale T. Willis, Jackson, Mich., Haynes distributer for Jackson and Washtenaw counties, has added the Maxwell for Jackson County. His present headquarters are at the Orpheum Garage.

The Mount Clemens Garage & Motor Sales Co., Mount Clemens, Mich., has secured the agency for the Milburn electric.

R. T. Sprague, Fowlerville, Mich., will build a brick garage 66 x 120.

The L. & M. Auto Co., Cleveland, has been incorporated at $10,000 by L. Lamden, Louis Jacobson, A. Gordon, Joseph N. Ackerman and Joseph M. Bernstein.

The Cleveland Tire & Rubber Co., Cleveland, has been incorporated at $10,000, to deal in tires, by E. P. Schloaser, W. C. Kelley, M. L. Harrington, P. C. Jacobs and E. H. Rooke.

The Cleveland Standard Motor Co., Cleveland, has been incorporated at $30,000, to deal in motor cars and accessories, by George W. Clarke, William M. Clarke, W. B. Stewart, Paul J. Bickel and W. C. Merrick.

The Used Motor Car Co., Cleveland, has been incorporated at $20,000, to deal in automobiles, by R. D. Neale, M. S. Foster, Charles H. Olds, S. W. Sangster and Frank J. Merrick.

The Burd-Ring Sales Co., 813 Grand Avenue, Milwaukee, has appointed Arthur W. Mierow manager of service for Milwaukee and Wisconsin.

Ray C. Chidester, manager of the Milwaukee branch of the Packard Motor Car Co. of Chicago, has been appointed a member of the executive committee of Milwaukee sales managers to organize a Milwaukee salesmanship club.

Harry Ewing, Hartford, Wis., who opened a garage on West Sumner Street some time ago, has closed out the business and has become associated with the new Knickerbocker Garage Co., Hartford.

The Flach-Schneeberg Co., 764 Thirty-second Street, Milwaukee, operating a garage and machine shop, has filed a voluntary petition in bankruptcy. Liabilities are scheduled at $3,173 and assets at $6,396.

The Algoma Motor Car Co., Algoma, Wis., has taken occupancy of its new $10,000 garage at Fourth and Fremont Streets. Berl F. Rider is owner.

The Suburban Garage Co., 26 State Street, Wauwatosa, Wis., has broken ground for a two-story shop addition 20 x 40 and a full second story to the present garage 55 x 144. The improvements will cost $10,000. Warren Bros. are the owners.

The Wisconsin State Rubber Co., 213 Second Street, Milwaukee, has moved to new and larger quarters at 181 Fourth Street. The concern handles the Mohawk, Capitol and Packard pneumatics and Mots cushion tires.

John Hagenbuch of Cook & Hagenbuch, Three Rivers, Mich., has taken the agency for the Briscoe.

A. J. Kraft, Utica, Mich., is now conducting the garage formerly operated by W. C. Wert, who has retired from the garage business.

James Evans, Madison, Wis., will build a garage and repairshop 66 x 198, two stories and basement, at Henry and Dayton Streets.

Otto Meister, Black Earth, Wis., is building a 30 x 50-ft. addition to his garage, to be used for a repairshop. The shop will be operated by O. A. Tupper.

H. C. Biddison, 1516 Williamson Street, Milwaukee, manufacturing oiling devices and conducting a repairshop, is erecting a new machine shop at Rogers and Williamson Streets. It will be of brick, 44 x 60, one story and basement.

Thomas Eagen, Stanley, Wis., has awarded contracts for a garage and repairshop 40 x 66, adjoining the H. F. Brick Garage.

The Hugh Agner Automobile Co., Burlington, Wis., has revised plans for its new fireproof garage, making it one story instead of two stories, but with foundations for two. The high price of steel induced the change.

H. M. Younglove and **A. E. Schultz,** Wautoma, Wis., have formed a partnership, under the style of Younglove & Schultz, to operate a garage and repairshop and handle the Overland and Ford.

F. J. Rogers, Crandon, Wis., has opened a garage and repairshop in the Muller Building, with Edward Jencks as manager.

Clyde Mayhew of the Studebaker Garage, Platteville, Wis., has taken the agency for the Hupmobile.

Digitized by Google

The Oconto Garage, Oconto, Wis., owned by Sophus Nelson, Green Bay, Wis., has been purchased by Hugo Lingelbach, agent for the Overland and Jeffery. Harry Lievan of the Four Wheel Drive Auto Co., Clintonville, Wis., has joined Lingelbach as mechanical superintendent.

The Duplex Tire Co., 219 Pearl Street, La Crosse, Wis., has sold its business to the Natenshon Co., which recently purchased the building. The business will be continued under the new ownership.

The Lake Mills Auto Co., Lake Mills, Wis., is now controlled by Lloyd Cook, who has purchased the interest of his partner, G. H. Bruns.

The New London Motor Co., New London, Wis., is the new style of the Maxwell Motor Co.

Mayes & Perkins, Alma, Mich., has opened a repairshop at the rear of the State Savings Bank Building.

The Overland Wisconsin Co., 510-516 Broadway, Milwaukee, state agent for the Overland, is building a large one-story steel and concrete warehouse covering one-fourth of a block, adjoining its three-story salesroom, storage and service station building at Broadway and Biddle Streets.

Roy Bertrand, Neosho, Wis., has retired from the Neosho Garage to become manager of the W. G. Menzel garage, Fond du Lac, Wis.

The Otto Motor Co., Seymour, Wis., has passed into the ownership of C. A. Van Vuren, who purchased the interest of Charles Otto.

William Glassow, Jr., of the Howard Garage, Neillsville, Wis., is a new Maxwell agent in northern Wisconsin.

W. A. Behnke, Washburn, Wis., has opened a garage and repairshop in the new garage building just erected adjacent to the Northern State Bank Building at Washburn.

The Davis-Southern Co., Fort Worth, Tex., has secured the distributing agency in northern Texas for the Scripps-Booth, with headquarters in both Fort Worth and Dallas.

F. M. Backus, Howell, Mich., has bought an interest in the Howell Garage.

James McClure, Calumet, Mich., has become distributer for the Buick.

The Main Garage, Midland, Mich., has been sold to George Benner and Morley Blackhurst.

Murray & Co., Gaylord, Mich., have taken possession of their new garage on Main Street.

EAST

Shubel A. Foster, Hartford, Conn., has severed his connection with the White Motors Co., 45 Gold Street, and has joined the Britton Co., 121 Allyn Street, as sales manager of the Stearns Knight department. He succeeds Hamilton W. Jones, who recently resigned from the Britton Co. to join Milton J. Budlong in New York City.

James H. Whaley, Hartford, Conn., for the past five years with the Buick organization as cashier and salesman, has severed his connection with the Hartford Buick Co. to go into business for himself. He has plans for a one-story brick service station and repairshop on Wethersfield Avenue, 200 x 50. Work will start within a few days. There is to be a salesroom, machine shop and repairshop. Another department will be devoted to used cars.

T. F. Russell, Springfield, Mass., has taken the agency for the Redden Truck Maker.

Warren Locke, Worcester, Mass., owner of the Palace Garage, has started enlarging his place and the Worcester Taxicab Co. has leased quarters there.

The Metz Co., Worcester, Mass., will move into its new building shortly.

The Drenco Machine & Garage Corporations, New York City, which heretofore has occupied nearly all of the garage building between Broadway and Seventh Avenue below West Fiftieth Street, has taken over the remainder, consisting of the Peugeot salesrooms. The company plans to sell a foreign car in the salesrooms and also display there the specialties it handles, including the Master carbureter, Kenair air spring and others. "Drenco" is made from the names of the proprietors, Driscoll, Renn and Coon.

The Chalmers Agency in Hartford, Conn., has passed from F. L. Caulkins of Middletown, who maintained a branch in Hartford under the name of the Chalmers Auto Agency, to the A. C. Hine Co., Oakland and Krebs truck distributer. The Hine Co. is to control Hartford, Litchfield, Tolland, Windham, Middlesex and New London counties and will also sell in Meriden, which is in New Haven County. Caulkins will continue to represent the Chalmers in Middlesex County. John W. Kemp, manager of the Chalmers Auto Agency, has joined the sales force of the Hine Co. and will be connected with the Chalmers department.

Robert R. Ashwell, Hartford, Conn., has been appointed service representative of the Prest-O-Lite storage battery.

Edward S. Clark, Hartford, Conn., Paige distributer, has leased nearly all of the new Fuller Storage Battery Co. building at 331 Church Street. Part of the first floor will be used for a car salesroom, the whole of the second and third floors for a repair department and service station. Removal from the old location, 183 Allyn Street, will be in a few days.

The Packard Motor Car Co., 317 North Broad Street, Philadelphia, has purchased a number of dwellings on Wood and Pearl Streets, on the site of which it will erect a large addition.

The Lance Motor Co., Reading, Pa., has moved from 126 Penn Street to 136 Beach Street, where its three-story garage is located.

The Oakland Motor Co., 227 North Broad Street, Philadelphia has purchased the property at 918 North Broad Street and will erect a new sales and service building on the site.

The Standard Supply & Equipment Co., Thirteenth and Cherry Streets, Philadelphia, has leased the building now being erected at 249-53 North Jupiter Street for ten years.

T. S. Johnson, Philadelphia branch manager of the Oakland Motor Co., has resigned and opened offices in the Abbott Building as eastern distributer of the Monroe.

Emanuel Weil, Philadelphia, is erecting a one-story brick garage, 140 x 108, on Atlantic Street between Nineteenth and Twentieth Streets.

The Davis Mfg. Co., Los Angeles, is the latest automobile machine shop to enter the field in southern California. The new concern is to be located at 1238-44 South Flower Street and when the installation is completed, it is to be the finest machine shop in the State. In addition to doing general machine work, making parts for any automobile and doing heavy truck work, the company is to manufacture complete, the Standard truck attachment. Leo Linkogel is to be mechanical superintendent of the plant and Roy Martin, who for the past nineteen years has been with the W. J. Burt Motor Car Co., Los Angeles, is to be estimator.

COAST

W. J. McCulley, Los Angeles, Cal., has been placed in charge of the Los Angeles branch of the Jewett Car Co., Newark, Ohio. The branch is located at 432-34 West Pico Street.

The Sunset Battery and Ignition Works, Los Angeles, has opened a U. S. L. service station at 924 South Los Angeles Street, just one door south of the Master Carburetor Company's branch.

L. E. Crowe, Los Angeles, distributer of the Allen, has moved from Eleventh and Olive Streets to 1053-55 South Olive Street.

E. E. Bradley, Fresno, Cal., is to occupy a new garage being built at Locust and Center Streets.

Lynn C. Buxton, Los Angeles, has taken over the store just east of his garage at Pico and Olive Streets and is using the new location for a used-car department.

The Bell-Wyman Implement Co., North Yakima, Wash., has taken the agency for the Chalmers.

The Little & Kennedy Co., Tacoma, Wash., has opened a retail supply and accessory store at 739-45 Broadway.

C. R. Reeves, Tacoma, Wash., has been named dealer for the Wright truck attachment.

H. Katterhagen, Uniontown, Wash., has purchased the business of Swen Swenson and has signed a contract to handle the Hudson.

Tenth Avenue Garage, Seattle, Wash., will be remodeled. A modern machine shop is included in the plans.

Fred L. Ward, Los Angeles, has leased a brick store building at Hill and Ninth Streets and will open a tire store.

The Al. G. Faulkner Co., Los Angeles, Marmon dealer, is to occupy a two-story brick and stone building at Figuroa and Seventeenth Streets, now under construction. The building will be ready for occupancy Oct. 1.

The Sunset Accessory Co., Los Angeles, Cal., has opened up at 433 South Flower Street.

The Olson Fender & Body Works, Los Angeles, has opened a well-equipped plant at 443 South Flower Street.

Glenn Phillips, Los Angeles, plans to move into larger quarters, having outgrown his quarters at 443 South Figuroa Street.

The Apperson Motor Car Co., Los Angeles, has opened a used-car department and garage at 1130-32 South Olive Street.

"Bob" Weaver, Los Angeles, has been placed in charge of the wholesale business of the Oldsmobile Co. of California, with headquarters in Los Angeles.

Valois & McFarlan, Los Angeles, have opened a garage at 315-17 West Twelfth Street, in the building recently vacated by the Electric Equipment Co.

The G. J. Bennett Tire & Rubber Co., Los Angeles, has moved from 1102 South Broadway to Broadway and Tenth Street.

The Studebaker Corp. of America, Los Angeles branch, inaugurated a day and night sales force July 24, with the salesmen working in shifts.

C. A. Page, Los Angeles, has moved from 1234 South Olive Street to 439-41 South Flower.

The Firestone Tire & Rubber Co., Los Angeles branch, is to have 40,000 ft. of floor when a new three-story building is completed at a cost of $125,000.

The Curlew Motor Co., Curlew, Wash., has opened a new garage. It is the only service station for 31 miles. J. H. Benson and C. P. Boerner, owners of the garage, have also secured the Maxwell agency.

Wright & Wright, Los Angeles, have purchased the garage business of the Motor Service Co.; 811-13 South Spring Street, continuing the business under the former name.

George H. Yohraus, Los Angeles, has purchased the garage business of J. Korenag at 4319 Stephenson Avenue.

Howard Goddard, Los Angeles, has opened a garage and repairshop on East Twelfth Street, near San Pedro.

A. Greenfield, Los Angeles, has opened a large salvage establishment at 1028-30 South Main Street.

L. W. Evarts, Los Angeles, has purchased the Echo Garage, 1553 Sunset Boulevard, from Howard H. Wilson.

Digitized by Google

SOUTH

G. R. Hardy, Louisville, Ky., is the new general manager of the Southern Motors Co., distributer of the Packard, Hudson, Dodge Bros. and Detroit electric. Hardy has for the past 7 years been president and treasurer of the Rock Falls Mfg. Co., Sterling, Ill., and succeeds G. S. Loomis, who recently resigned to become connected with the Packard-Missouri Co.

SOUTHWEST

The St. Louis Top Co., St. Louis, has doubled its first floor space by moving offices and sample rooms to 3025 Olive Street, a room 30 x 100, adjoining the old quarters, and has installed an elevator in the shop.

The Chevrolet Motor Co. of St. Louis, Inc., has opened new uptown showrooms. The building fronts on five streets, this being made possible because of the roadway cut-off from Olive Street to Lindell Boulevard, a traffic expedient. The streets are Olive, Lindell, Locust, Channing and Leonard. J. D. Cathey is uptown manager.

Moomaw's Garage, Joplin, Mo., formerly the B. B. Garage, is now in its new location at 824 Joplin Street.

Hahn Bros., Coffeyville, Kan., have secured the agency for the Overland; they will erect a new building.

W. H. Reynolds, Sedalia, Mo., Chalmers, Briscoe and Franklin dealer, has opened a repairshop and accessory store.

Earl Park, Harrisonville, Mo., will soon open the Patrick Garage, with the Overland. He formerly was at Freeman.

Charles Smith, Independence, Kan., is now sole owner of the Overland agency, Carl Benson having retired.

Briggs & Son, Memphis, Mo., have purchased the interest of J. Milo Chasteen in the Overland Memphis Co.

Louis Ingennousz, Sumner, Mo., has bought the Sumner Garage.

Scott & Jaeger Garage, Clarksville, Mo., Dodge Bros. dealer, has opened a repair and accessory department.

S. Carpenter, Jr., Oswego, Kan., has purchased the Scott & Hollingsworth Garage and will move to a new location.

John Turnbull, Jr., Maple Hill, Kan., has secured the agency for the Overland.

The Buick agency, Manhattan, Kan., will occupy new quarters Dec. 1 in a building now being erected.

W. Cheal, Robinson, Kan., manager of the Robinson Garage, is now operating his repair department in an addition recently completed.

Frank Hoover, Marion, Kan., has taken charge of a garage recently leased by Henry Sallee.

Lloyd Lumpee and **Paul Spurlock,** Versailles, Mo., have opened the Electric Garage.

George H. Davis, Mexico, Mo., has purchased the Draper Bros. Garage and will enlarge it, equipping for repair work.

Samuel Lorantos, Lexington, Mo., recently lost his garage by fire.

The Sands Garage, Kirksville, Mo., has opened for business.

Otto Kistler, El Dorado, Kan., has purchased the interest of his partner, Harry Smith, in the Maxwell Garage.

Stewart Munsinger, Howard, Kan., has purchased the interest of his partner, Jesse Cole, in the Howard Motor Co.

Thomas and **George Woolwine,** Pratt, Kan., have purchased the J. W. Farmer Garage.

Mays Bros., Atchison, Kan., have leased a building which will be remodeled as a garage.

B. O. Howard, Texhoma, Okla., has bought the interest of his partner, J. C. Jennings, in the Lone Star Garage.

Travelute & Son, Marysville, Kan., are remodeling a building for garage purposes.

Rainey & Ross, Stanberry, Mo., have bought the interest of W. S. Summers in the Stanberry Machine & Garage Co.

E. H. Beetler and **J. V. Gray,** Marceline, Mo., will soon open a garage and repairshop.

W. E. Hunsaker and **L. F. Comer,** Olean, Mo., have bought an undertaking business and will establish a garage and motor livery in connection.

Loren Shinn, Vandalia, Mo., has purchased the interest of George Kaylor in the Kaylor & Saxe Garage.

Jolly & Son, Stafford, Kan., have succeeded Jolly & Maupin, Maupin retiring from the business.

George DeBilbiss and **R. R. King,** Everest, Kan., have bought the garage of the Bichlemeir Auto Co. and changed the name to the Scenic Route Garage.

D. G. Roth, Moundridge, Kan., has bought the interest of his partner, C. C. Kaegi, in the Meridian Road Garage. Ted Roth, brother of D. G., is now interested in the company.

John McClure, El Dorado, Kan., proprietor of the McClure Garage, has leased quarters, where he will establish a service station, salesroom and battery charging plant, retaining his present garage for storage and repairs.

The Overland-Irwin Co., Hannibal, Mo., has been organized, capital $20,000, to handle the Overland and Willys-Knight and accessories in northeast Missouri. Stockholders are Leaton Irwin, F. R. Lusk, M. E. Lusk, Jr., Albert Wilber, C. H. Wood and A. B. Grubb of Quincy, Ill.; L. G Wilhelm, Ethel Wilhelm and Fenton B. Morris of Hannibal. Incorporation is now under way. Headquarters will be temporarily in quarters of the Hannibal-Overland company, which the new company succeeds. Mr. Wilhelm has been for two years distributer here for the Overland. The Quincy stockholders are interested with Irwin in the Irwin-Overland company of that city.

H. B. Bell, Dodge City, Kan., Chalmers dealer, has secured also the Oakland.

The Howard & Murphy Motor Car Co., Kansas City, Mo., is opening a branch in Hutchinson, Kan., in a new garage at 110 Sherman Street. J. J. Murphy will be manager, and George Martin field agent. The firm is distributer for the Hupmobile.

The Butler Motor Co., Kansas City, distributer of the Dodge Bros. Car, 1523-25 Grand Avenue, is opening a service station at Fifteenth and Harrison Streets.

Miles and **Allen Shores,** Richmond, Mo., Oakland dealers, have secured the agency for the Maxwell.

Edgar Rash, Thayer, Mo., has secured the agency for the Overland. Headquarters will be the Oil Belt Garage, in which Rash is interested.

NORTHWEST

The Standard Oil Co., St. Paul, will erect a $1,500 filling station of brick on Grand Avenue between St. Albans and Grotto Streets.

The Reilly-Herz Co., Inc., 827 Hennepin Avenue, Minneapolis, has secured the Elgin for Minnesota and the Dakotas, also the western half of Wisconsin.

The Martin Motor Sales Co., 723 Third Avenue S., Minneapolis, has taken the agency for the Enger.

L. F. Powell, Marshall, Minn., will build a garage and Ford salesroom.

Louis Dreilbeibis, Butte, Mont., is building an $8,000 garage on Main Street.

J. A. Reuter, Garrison, N. D., is erecting a garage.

The Winona Motor Co., Winona, Minn., will erect a two-story garage at Third and Johnson Streets.

A. E. Gessner, Penn, N. D., has been given the Elcar agency.

The Hillsboro Auto Co., Hillsboro, N. D., has taken the Dort agency.

The South Side Auto Co., New Ulm, Minn., has taken the Overland agency.

Peterson & Johnson, Virginia, Minn., Turnquist Block, have moved to their new garage, 111 North Mesaba Avenue.

F. E. Hutton, Egan, S. D., has opened a new cement garage, 50 x 100.

J. L. Holub, Preston, Minn., has rented the Munkel Garage.

Wreisner Bros., Dassel, Minn., will begin an addition to their garage, 20 x 60, Sept. 1.

C. E. Rossmon and **A. C. Rasmusson,** Thief River Falls, Minn., are contemplating a $10,000 garage on Main Avenue N.

R. E. Anderson, Mankato, Minn., is erecting a garage on Front Street, 44 x 150. He has taken the Ford agency.

G. H. Young, La Moure, N. D., has bought the Studebaker and Maxwell contracts from his father, John Young.

The Denby Motor Truck Co., Detroit, has opened a branch house in Des Moines at 1213-14-15 West Locust Street.

The Times Square Automobile Co. has opened an accessory house at North and Locust Streets, Des Moines.

Martin & Carter, Lenox, Iowa, has sold out to Charles Sturm and Charles Preston. The new firm continues to handle the Buick and Studebaker.

A. D. Kinder and **R. A. Carpenter,** Meservey, Iowa, are now conducting separate garages, but will combine forces and open for business together in a new building now being erected for them on Main Street.

The Henricksen Motor Co., Ringsted, Iowa, has sold its garage to P. W. Petersen, who comes from the farm to enter the motor car business.

E. D. Rockufeler, Rinard, Iowa, has opened a new garage and repairshop.

Thode & Shallau, Blairstown, Iowa, will build a modern fireproof garage.

The Stewart Products Service Station, Des Moines, Iowa, has moved into a new building at 1443 Locust Street.

The Schultz Auto Co., Blairstown, Iowa, has established a new garage in the Charles Haubold Building.

The Smith Motor Co., Davenport, Iowa, has established an agency for the Chalmers in the old Standard Theater Building, which is being remodeled.

The Madrid Auto Co., Madrid, Iowa, has added the Buick to its business.

H. V. Adamsen, Lake City, Iowa, has joined W. A. Van Eps in the motor car business.

The Jones Auto Co., Madrid, Iowa, has added the Dodge Bros.

Albert Schumann, Correctionville, Iowa, has sold his garage business to Herman and Walter Lahann.

William Stevenson, Popejoy, Iowa, will open a new garage.

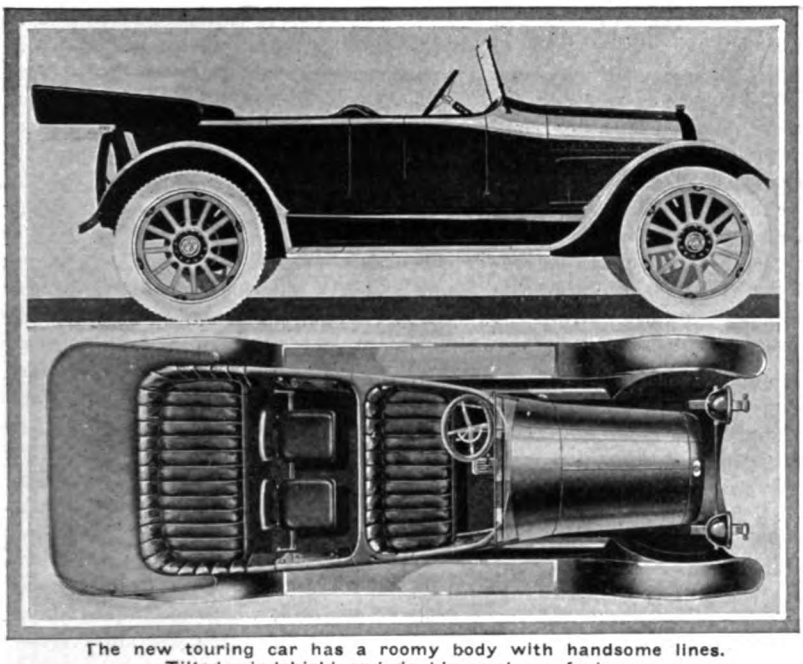
Mulder & Myerhoff, George, Iowa, has sold its garage business to Frank Roth and Sudenga Bros.

A. W. Heinrich, Newhall, Iowa, lost his garage and repairshop in a fire which caused him a total loss of $9,000, partially insured.

E. W. Buchan, Grundy Center, Iowa, has sold his garage and repairshop to F. E. Wernz and H. B. Kahler.

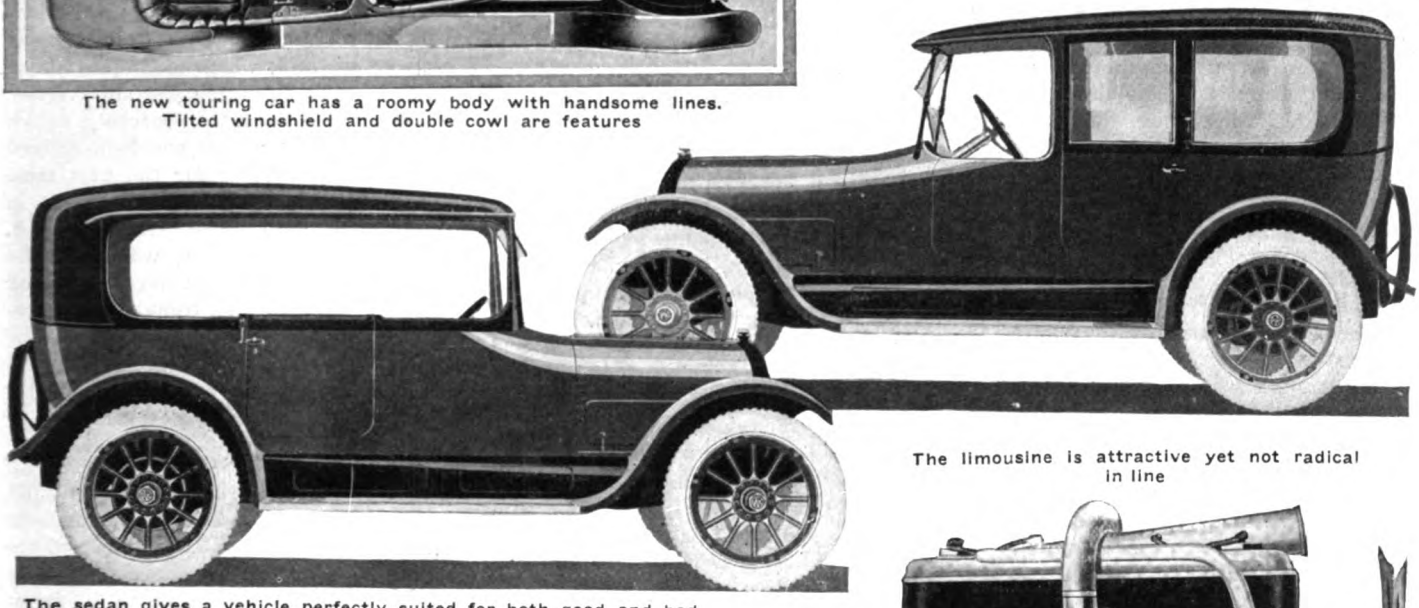
H. C. Frank, Sumner, Iowa, is building a new garage of steel, cement and pressed brick.

Samuel Onerem, Thor, Iowa, has sold his interest in the Pederson-Onerem business to his brother, Jacob Onerem.



S. J. Culver, Pomeroy, Iowa, is building a new brick garage.

W. A. Wehrman, Luzerne, Iowa, will build a new garage.

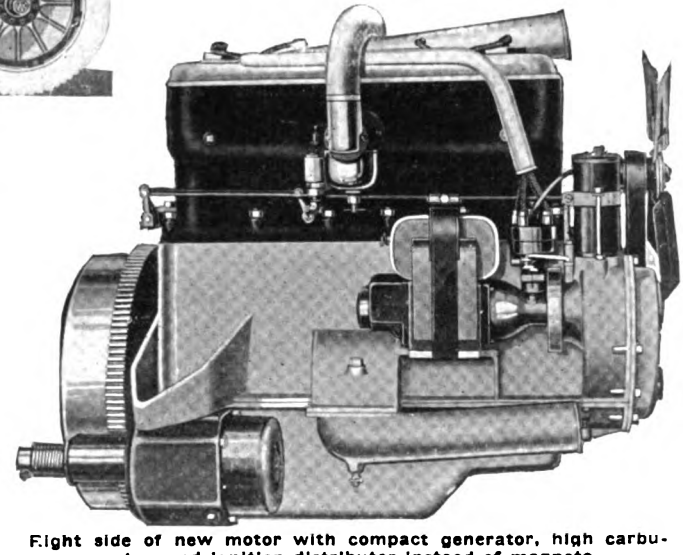


Satre Brothers, Stanhope, Iowa, have secured the agency for the Overland.

Digitized by Google

Body Beauty Marks New Line of Willys-Knights

The new touring car has a roomy body with handsome lines. Tilted windshield and double cowl are features



The limousine is attractive yet not radical in line

The sedan gives a vehicle perfectly suited for both good and bad weather

THE new Willys-Knight four is the most comfortable car ever turned out of the Willys-Overland factory in Toledo. It is a seven-passenger car with most modern lines and fittings; it has an improved system of cantilever spring suspension, an entirely new rear axle and a new gearset in combination with the axle. As a result of all these improvements the price has been increased to $1,285 for the touring car, an advance of $160. There is a seven-passenger touring sedan of the Springfield pattern, with a permanent top and glass windows which remove completely, and a seven-passenger limousine.

WILLYS-KNIGHT FOUR

Price—	
Touring, seven-passenger	$1,285
Limousine	1,950
Sedan	1,950
Make of motor	Own
Number of cylinders	Four
Shape	Knight
How cast	Block
Bore	4 1/8
Stroke	4 1/2
S. A. E. horsepower	27.2
Ignition	Connecticut
Carbureter	Tillotson
Engine starter	Auto-Lite
Lighting system	Auto-Lite
Clutch	Cone
Gearset	3-speed
Wheelbase	120
Front tires	34 x 4 1/2
Type rear axle	Full-floating

Right side of new motor with compact generator, high carbureter, and ignition distributor instead of magneto

Great care is taken with the finish, which is maintained at a quality in keeping with the fine lines of the bodies. It is becoming almost platitudinous to describe a 1917 car as having a custom-built aspect, but this is really the best way to sum up the external points of the new Willys-Knight group of models.

The engine, 4⅛ x 4½ in., is the same as the 1916 series except for the ignition, which is now the Connecticut battery system instead of the magneto. The electrical equipment is now all Auto-Lite except the actual distributor; the generator, which is very little larger than a magneto, is mounted on the right side of the engine and chain-driven direct from the crankshaft. With it the igni-

Digitized by Google

tion unit is combined and the coil is mounted in a clip on top of the chain case, this making the wiring of minimum length. To drive the generator, the chain pinion has an internally toothed ring outside the case, and the generator shaft a pinion with a corresponding number of teeth which fits inside the ring. This gives the small amount of universal action required to allow for minute differences in alignment and also allows the generator and ignitor to be removed by merely detaching the wires and undoing a single screw holding the clip which retains the generator on its platform.

The starting motor has a Bendix pinion which draws forward, toward the body of the motor, to engage, so that there is a minimum of overhang when the starter is operating. The motor lies just beneath the right rear supporting arm of the engine where it does not interfere with the accessibility of any other part. Completing the electrical system, the battery is housed beneath the floor in the driver's compartment, on the right side, and is accessible through a detachable panel in the guard strip which joins the runningboard to the frame.

Sleeve Lubrication Different

One of the features of the engine is the system of lubrication. The earlier Knight engines were all splash lubricated, but the Willys-Knight has a pressure feed to each main bearing on the crankshaft, whence drilled holes carry the oil to the connecting-rod ends. Thence the overflow is whirled out by the cranks, so reaching the sleeves which are grooved to conduct an adequate supply to every part of the working surfaces. The oil pump is a plunger pattern, located in the base of the crankcase, and the supply delivered to the bearings is controlled by a throttle working in conjunction with the carbureter throttle, so that the engine receives oil in proportion to the work demanded at the moment. One noticeable result of this control is that the Willys-Knight engine is not prone to smoke.

Experience with the 12,000 cars made in the past year shows that this engine has the quality common to all Knight motors of insusceptibility to carbon. Firstly, carbon does not form so fast as in an L-head engine, and secondly, when it does form it has much less effect on the running. Up to a point, carbon is actually beneficial to a Knight engine, putting a sheen on the sleeves and port edges. The exact reason why this should be so has not yet been stated, but probably the absence of trouble due to presence of carbon is because of the almost spherical shape of the combustion space and the absence of any roughness. In a Knight engine every part of the combustion chamber is machined, and there are no angles or pockets to house thick deposits which could get red hot and cause pre-ignition.

Thermo-syphon cooling, which has been used for the 1916 series, is retained for the new model. There is a passage through the crankcase which makes the inlet to the cylinders from the radiator, as seen in the illustration of the right side of the motor. From the top of the cylinders a large aluminum header returns the hot water to the radiator, the water path being almost ideal for straightness and freedom from twists.

Same Carbureter

As before, carburetion is cared for by a Tillotson instrument of horizontal form bolting directly to the cylinders and drawing hot air from a muff on the exhaust pipe. The gasoline tank is at the rear end of the chassis and the fuel supply is maintained by a Stewart vacuum feed.

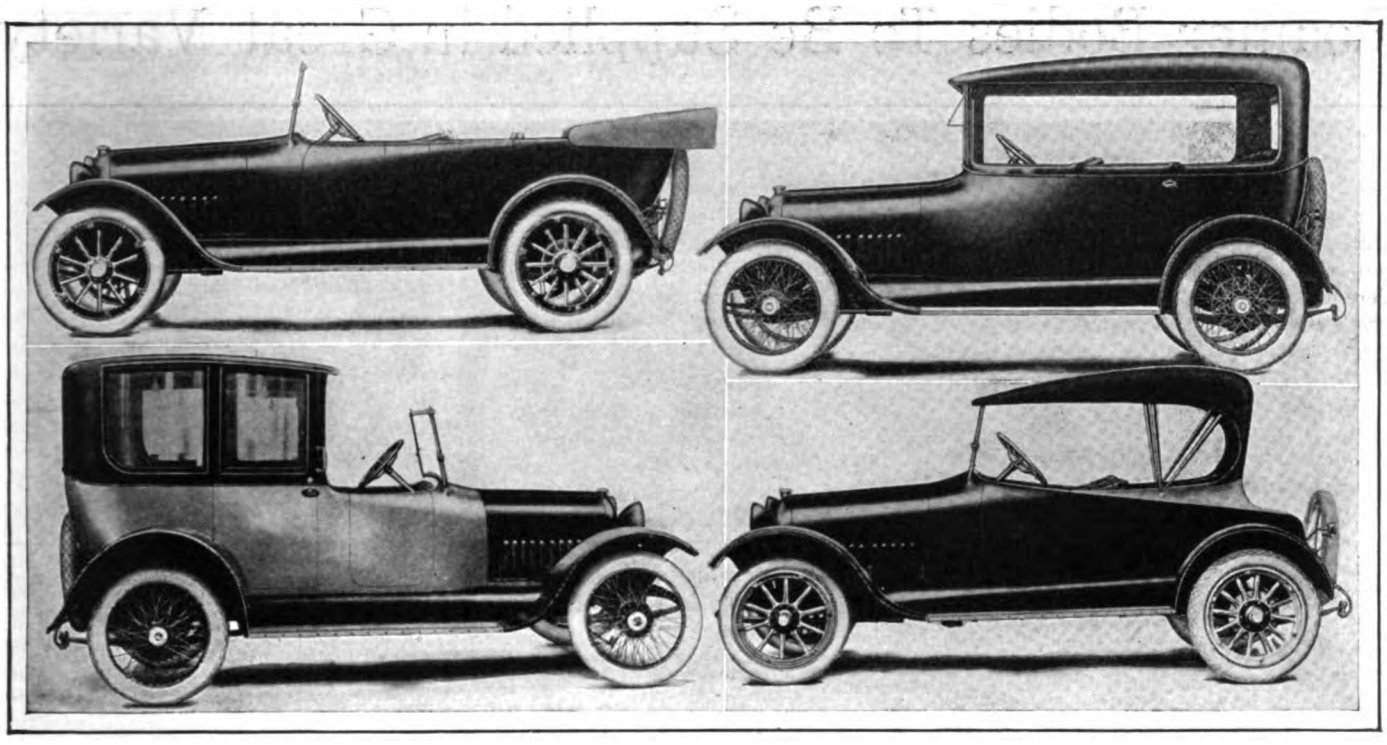
The transmission system follows the same general lines. The gearset is in a unit with the back axle and a stout torque tube incloses the propeller shaft. This tube is hung on pivots at the front end. Though at first glance the gearset appears much the same as previously, it is a new design, having the countershaft beneath the mainshaft instead of beside it, making the box narrower and so stiffer. Three speeds are used and the arrangement of the bearings is rather out of the ordinary. As usual, the tail end bearing on the mainshaft takes the bevel pinion thrust, and is a large double-row New Departure ball bearing. At the front end of the mainshaft is a substantial single-row ball race and the spigot bearing is a Hyatt roller. The countershaft is fixed in the case, the whole set of countershaft gears being assembled into a unit which is bored out larger than the fixed shaft, the space between being filled completely with Hyatt rollers from end to end.

New Rear Construction

Another notable change is in the rear axle construction. Formerly the axle had a cast center case with tubes bolted to it, but now there it is a steel stamping of the so-called "banjo" form, the differential being carried on brackets projecting from the back of the gearbox. At the back of the axle a simple cover plate completes the inclosure of the differential, so that inspection is possible with the removal of only a few nuts. The road wheels are mounted outside tubular sleeves which are fixed in the ends of the banjo stamping, so the new axle is full floating. Throughout it the bearings used are Timken taper roller adjustable.

Still another transmission change is in the universal joint, which is now six leather disks in two sets of three. This gives perfect universality without any metallic moving parts, there are no surfaces to wear and nothing that can ever make a noise. The life of the leather is said to be entirely satisfactory and it is worth noting that real leather is used, not a composition. It is the same sort of leather as is commonly employed for facing cone clutches. The flexibility of this universal is quite remarkable; it feels, when moved by hand, as free as any metal joint and more free than some of them.

The cantilever rear springs are 48 in. long and 2½ in. wide, and applying the test of driving across a railroad at 20 m.p.h. proved their ability to absorb shock. At this speed the rear seat passengers can just feel the crossing, but are not shaken off the seat, and the front seat occupants feel nothing.



In handling, the most noticeable feature is the ease of gear shifting, due to the soft acting cone clutch and the strong clutch brake which quickly brings the cone to rest. Still, with a high gear ratio of 4.6 to 1, which is the standard, there is little need for the shift lever, as the engine operates smoothly below 5 m.p.h. Another point which is noticed when driving the car for the first time is that there is no apparent increase in vibration at high speed. At 20 m.p.h. there is a slight tremor, which can be felt in the front seat but not in the rear one. At 40 m.p.h. this tremor is, if anything, less noticeable, while the engine is, of course, just as quiet at 50 as at 20. The pulling at slow speed is markedly good, and the acceleration smooth.

Rattle-proof Bodies

The bodywork is much more rugged in construction and great pains have been taken to strengthen all points where weakness might lead to squeak or rattle production. The engine being so quiet the need for soundless bodywork is greater than ever, and this can only be obtained by solidity of frame and careful fitting of doors, etc. The upholstery is deep and very soft, both the cushions and the back padding being the kind that the body sinks into. Whichever way one leans there is a springy give conforming to the attitude taken. For the cowlboard and for the back of the front seat into which the folding seats disappear a grained finish is employed, so cunningly devised that the closest examination does not disclose the fact that the material is really steel. The carpet used in the tonneau is of heavy material, in keeping with the leather of the upholstery; in fact, every detail is in keeping with the rest.

The finish is in a dark rich blue, upholstery, body and hood all matching. Road wheels are grey, and black is used for the fenders; fittings are of nickel or polished aluminum. Tires are 34 x 4½ for the touring car, with plain treads on the front and non-skids on the rear. The closed cars have non-skids all around. There is a spare demountable rim included in the equipment.

Four of the light six Velie models. Upper, left—Five-passenger touring car. Upper, right—Springfield type sedan. Lower, left—Town car, Lower, right—Four-passenger runabout

Complete Line of Attractive Bodies on Small Velie Six

Both Chassis Practically Unchanged—Prices Slightly Higher—Large Six a Seven-Passenger Only

FOR the coming year a choice of four very attractive bodies may be had on the small six Velie Biltwell chassis. In addition to the two- and five-passenger models, which are continued with some improvements, there is a four-passenger runabout, a convertible sedan and a handsome town car and several others. The larger six is made only with a seven-passenger body. The chassis are practically the same, but prices are slightly higher, the five-passenger selling for $1,085, an increase of $20, and the seven-passenger for $1,550 instead of $1,450, an advance of $100.

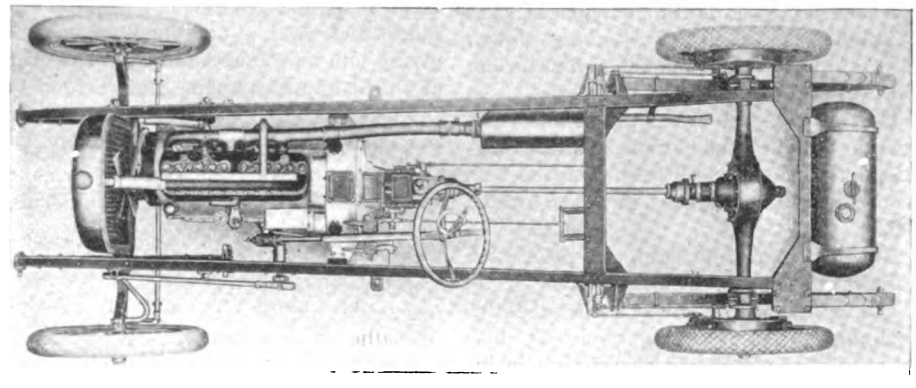
The five-passenger touring car has been improved in appearance by employing a roll edge around the top of the body, by a slightly tilted windshield, which, by the way, is standard on all models, and just the suggestion of a double cowl. The lines are straighter and the whole exterior smoother. There is an inch more room in the front and 4 in. more in the rear, due to giving the body a greater overhang.

The most striking of the new models is a four-passenger runabout with divided front seats and sloping rear deck which is molded up around the rear compartment, giving a motorboat effect. It sells for $1,085.

There is a town car of unusually good lines at $2,200, a touring sedan of the Springfield type at $1,685, a coupe at $1,750, a two-passenger runabout at $1,065 and a cabriolet at $1,485.

The principal change in the small six is the return to Timken axles, front and rear. An oil-level gage on the motor has replaced the measuring rod used this year. The vibrating horn has given way to a Stewart motor-driven model under the hood.

A special Velie-Continental motor, 3¼ x 4¼, which develops over 40 hp., is used in the small six. It is a standard L-head design with removable cylinder head. The motor is in unit with the clutch and gearbox. Increased economy and smoother running have been obtained by slight refinements in the motor, mainly due to increased compression and somewhat higher speed. Water circulation is by pump.

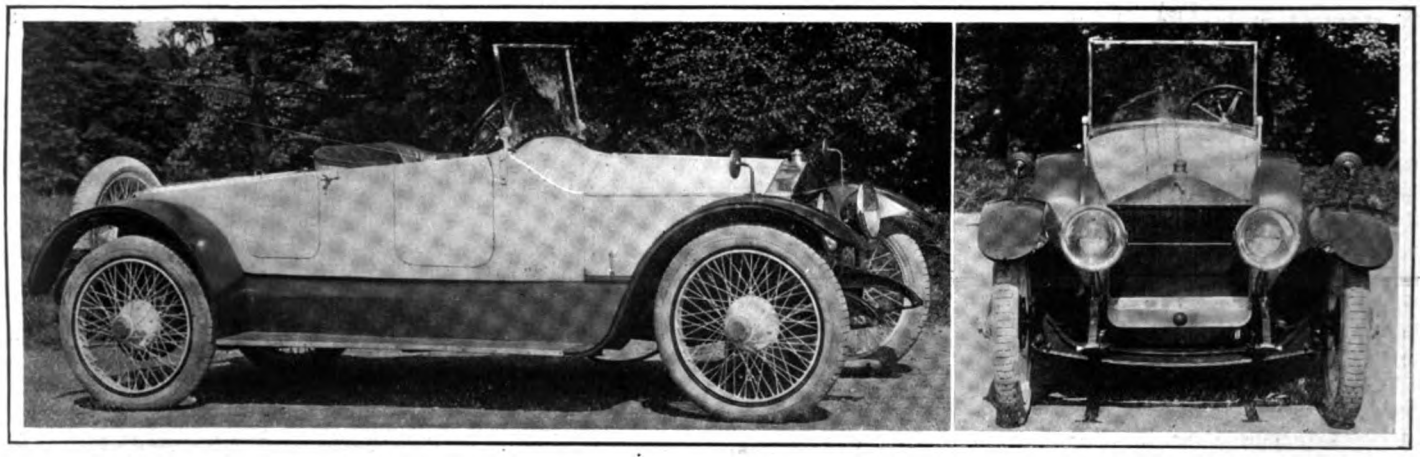


A Stewart vacuum system and a model B-1 Stromberg carbureter are used. The electric equipment is Remy throughout.

A dry-disk clutch and three-speed gearset are employed, and the rear axle is a floating design with spiral bevel drive.

Two Velie Sixes

Made by the Velie Motor Vehicle Co., Moline, Ill.



Touring, 5-pass.	$1,085	7-pass. $1,550
Roadster, 4-pass.	1,085	
Roadster, 2-pass.	1,065	
Coupé	1,750	
Touring, Sedan	1,685	
Touring Car	2,200	
Make of motor	Velie-Continental	
Number of cylinders	Six	
Shape	L-head	
How cast	Block	
Bore	3¼	3½
Stroke	4¼	5¼
S.A.E. horsepower	25.3	29.4
Magneto	Remy	
Carbureter	Stromberg	
Starting and lighting system	Remy	
Clutch	Dry disk	
Gearset	3-speed	4-speed
Wheelbase	115	124
Tires	32 x 4	34 x 4
Make of axles	Timkin	
Type rear axle	Floating	

Timken axles front and rear are the only changes of note in the small Velie chassis

Roamer Bodies To Be Supplied in Great Variety

ROAMER CARS are being produced in a number of designs of pleasing variety in carrying out the company's policy of custom work. The illustration herewith shows one type of body, a special four-passenger roadster job, selling at $1,900. The regular club touring model lists at $1,800. Mechanically, these cars are all mounted on a stock chassis of 124-in. wheelbase. They have the 3⅛ x 5 Rutenber engine fitted with Bosch magneto ignition and Bijur lighting and starting. Other special parts and fittings are: Hess axle, Grant-Lees gearset, and Houk wire wheels. The cars are offered in a great variety of finish, and, as a matter of fact, each purchaser has his choice of color. Harry J. Everall, Inc., who is now handling the car in New York, has placed an order for 150 of the Roamer chassis and for twenty-five special enclosed bodies for the New York trade. In Boston, arrangements have been made with Alfred Cutler Morse, agent for the Rolls-Royce and Lancia companies, to handle the Roamer, and in Philadelphia, the Oliver agency, handling the Mercer, will take on the Roamer.

Price of Gas Still Continues to Fall

New York, New Jersey, Connecticut and Boston Get 1-cent Cut

NEW YORK, Aug. 7—Gasoline is 1 cent per gallon lower all over the country. Reports from such scattered points as Dallas, Columbus, Boston, Cleveland and New York, all bear out the reduction. The primary cause is the fall in crude prices, which have dropped from 5 to 10 cents a barrel. Chicago reports the only exception to the general reduction.

For the first time in several years Dallas is enjoying 18-cent gasoline, prices having been all the way up to 22. Throughout the Middle West, including Ohio, Indiana and Illinois and in New York and neighboring States, the price of gasoline is 23 cents per gallon retail in place of 24 last week. In Boston prices are 1 cent higher, being 24, a reduction of 1 cent from the 25 charged for the past few months.

Both Columbus, Ohio, and Dallas, Tex., are now enjoying lower fuel prices, the Columbus wholesale price going down from 24 to 23 cents and the Dallas price now being 18 cents.

It is freely predicted that further reduction will be made in the near future and that as much as 3 cents may be cut from the present figures in some localities.

Chicago reports no change in price and no immediate prospect of a change.

The reduction is ascribed to the steadily declining price of crude, which is due largely to the reopening of old wells in Pennsylvania and Oklahoma and to the greater quantities of gasoline which are being produced both by the Burton process and from natural gas.

Business Brisk on Coast

LOS ANGELES, Aug. 4—Automobile sales throughout Southern California and Arizona have been 50 per cent better this summer than last. This figure is reached from a canvass of twenty of the largest dealers in Los Angeles, and in spite of the fact that it has been difficult to secure the 1917 shipments in many instances.

Rickenbacher Wins In Tacoma Montamarathon

TACOMA, Aug. 5 (Special Telegram)—Eddie Rickenbacher in a Maxwell won the 300-mile Montamarathon to-day at an average of 89.3 miles per hour. Ralph De Palma in a Mercedes led consistently until his jinx reasserted itself at 175 miles and engine trouble delayed him, giving him only fourth money. The order of finish appears in the table below.

Rickenbacher's 100th lap at 96 miles per hour was the fastest of the day.

Milton received the regular prize of $2,000 and an extra $500 and the Golden Potlatch trophy for leading at 100 and 200 miles.

D'Alene, Duesenberg, at sixty-four laps went out with a broken universal.

Mossie, Gandy Special, retired at the thirtieth lap with a burned bearing.

Johnson, Crawford, injured his eye in the first lap with broken goggles, but returned at the third lap and stayed until the sixty-ninth, until a broken valve put him out.

Latta, Dodge Special, ran consistently until the ninety-eighth lap, when engine trouble stopped him.

Oldfield, Delage, was forced out nine laps from the finish through the failure of his valve mechanism.

Lewis drove a thrilling race, running open on the curves and frequently taking the lead until the eighty-first lap, when he went to the pits with his car afire. After a quick tire change he brought the crowd to their feet by sweeping into third place and making one lap at the rate of 94 miles. Henderson covered 150 laps without a stop. Fast work by the pit men of De Palma and Rickenbacher helped them greatly. The winners' cars were equipped with Goodyear cord tires. The weather was good and the track was fast.

Montreal Race in September

MONTREAL, Aug. 5—An automobile race and aviation meet will be held late in September by the Montreal Automobile Trade Association.

Finish	Driver	Car	Time	Average	Prize
1	Rickenbacher	Maxwell	3:21:40.1	89.3	$4,000
2	Milton	Duesenberg	3:23:05.62	88.6	2,500
3	Lewis	Crawford	3:24:29.35	88	1,500
4	De Palma	Mercedes	3:27:20.41	87	1,000
5	Henderson	Maxwell	3:33:03.96	84.5	750
6	Toft	Omar	3:33:25.62	84.4	250
7	Chandler	Crawford	3:37:31.29

Buick Dealer to Send Cars on Fair Circuit

Northwest Buick Co. Plans Series of Exhibits at State Fairs in Washington

TACOMA, Aug. 5—The Northwest Buick Co., distributer of Buick pleasure cars and G. M. C. trucks in the Pacific Northwest and maintaining headquarters in Seattle and Spokane, will show at all fairs and exhibitions in the State of Washington this year a complete line of Buick cars and G. M. C. trucks under their own canvas.

The initial effort in this direction was made in Lincoln County, Wash., during the encampment of the Pioneers' Association of Lincoln and Adams counties, June 21 to 23. While not intending to engage in the circus business, this company has purchased its own tent, 40 x 80 ft., and in which are contained a Buick D-6-45 and a Buick D-6-55, with a ¾-ton, a 2-ton with trailer, and a 5-ton G. M. C. truck. At the conclusion of the exhibition the tent and accoutrements were folded, packed and hauled away on the G. M. C. trucks, much after the fashion of a circus.

Sues "Karoline" Makers

COLUMBUS, Aug. 8—In a suit for violation of contract, Clarence W. Miller has made charges against the Union Oil & Grease Co. and Grant C. Holliday and Warren C. Miller, claiming that the product known as "Karoline," a substitute for gasoline, is simply kerosene with a small percentage of gasoline added. The plaintiff claimed that the company demanded $200 from him for a certain territory and he was to receive $20 weekly as local sales manager. He worked for some time, but found his customers complaining of the product and thus he had an analysis made. He asks for $422 damages.

Some Gasoline Law!

ST. LOUIS, Aug. 7—Small dealers in gasoline are bringing pressure to bear on Mayor Kiel to have him veto the bill passed by the Board of Aldermen last week, forbidding the delivery of more than 3 gal. of gasoline to a motor at any place except a filling station. Paul Browne of the Independent Oil Co., who is spokesman for the small dealers, declares that the bill was introduced on behalf of the Pierce Oil Corp., which owns twenty-five of the 100 filling stations in the city.

Alderman J. W. Renick, author of the bill, is a Pierce corporation salesman, but he denies his employees had anything to do with originating the bill, declaring its origin was in suggestions made to him by Commissioner of Public Safety Swingley and the fire department. The bill was passed under suspension of rules and unexpectedly. Downtown firms who have trucks filled from tank wagons and whose headquarters are distant from filling stations are supporting the fight. The bill passed with only one dissenting vote, that alderman taking the position that street traffic in gasoline should be stopped altogether if dangerous and that the 3-gal. limit was foolish.

Predict Gasoline Will Drop

WASHINGTON, D. C., Aug. 7—*Special Telegram*—There will be a decided drop in the price of gasoline this month if the prediction of the Federal Bureau of Mines is correct. The prediction is based upon the report of Bureau agents who state that new wells are being opened and that all existing wells are being worked to capacity.

It is also reported here that the Federal Trade Commission investigation of the Standard Oil Co. will disclose no illegal activities, although it is said that the Commission found that approximately twenty directors controlled the different gasoline companies and that gasoline could be sold with profit at 17 cents.

Hollier to Add a Six

CHELSEA, MICH., Aug. 8—The Lewis Spring & Axle Co., which has heretofore made only the Hollier 8, will build a six for the coming season in addition to the 8. It will sell at $1,085 with either a five-passenger touring or a four-passenger roadster body. It will have left drive, cantilever rear springs, floating axle, valve-in-head block motor, 3 x 4¼, 116 in. wheelbase, wood wheels and 33 x 4 non-skid tires all around.

Colorado Law Upheld

DENVER, Aug. 5—Colorado's law requiring a State license each year for motor vehicles has been upheld as constitutional by District Judge Burke of Sterling in a decision just handed down in the first suit brought to contest the law since it went into effect 3 years ago this month. The case was started nearly a year ago when several Logan County car owners refused to pay their license fee. Secretary of State Ramer brought suit to collect the fees and a justice of peace declared the law unconstitutional.

New Gray & Davis Starter for Fords

BOSTON, Aug. 8—Gray & Davis has just brought out a two-unit electric lighting and starting system for Fords; it sells for $75. The motor and generator are separate, though they are inclosed in the same housing. The system may be attached quickly and easily.

New Gas Tank Rules Made for Cincinnati

Thicknesses of Walls Are Specified for Different Sizes of Fuel Storage

CINCINNATI, Aug. 7—New regulations governing the storage of gasoline in Cincinnati are embodied in an ordinance passed by the City Council under a suspension of rules. Restrictions as to location of public garages and automobile filling stations are removed. It provides that gasoline shall be stored in closed tanks of steel, coated on the outside with tar. All joints shall be tightly corked or soldered.

The tanks must be placed on a firm foundation and must be located under ground, the top being not less than 3 ft. below the surface of the ground and the same distance below the level of the lowest pipe in the building to be supplied.

The thickness of the steel required varies according to the capacity of the tank. The scale is: 1 to 30 gal., 18 gage; 31 to 350 gal., 16 gage; 351 to 1000 gal., 14 gage; 1001 to 3000 gal., 10 gage; 3001 to 5000 gal., 7 gage; 5001 to 10,000 gal., ¼ in.; 10,001 to 20,000 gal., 5/16 in.; 20,001 to 30,000 gal., ⅜ in.

Not more than 10 gal. of gasoline shall be kept in vessels in a garage, and then in approved safety cans, constructed of metal and self-closing and of not more than 5 gal.

Permits will be granted for the construction of filling stations and garages only when the plans meet with the approval of the building commissioner and conform to the provisions of the ordinance.

Tests Kerosene Carburetor

BOSTON, Aug. 5—Frederick D. Jordan and Dr. E. R. Hackett made a trip to this city from Maine a few days ago in a Ford car fitted with a kerosene carbureter invented by Jordan. The device worked all right, and those who have seen it demonstrated believe that it will be a big factor in the fuel problem. He used a low grade of kerosene such as can be bought for 10 cents a gallon and traveled from 35 to 40 miles with one gallon.

Fight Gas Adulteration

COLUMBUS, Aug. 1—The Columbus Automobile Club is back of an ordinance which is pending in the City Council to prevent the adulteration of gasoline with kerosene or other foreign body. The ordinance, which will be enacted soon, provides for a stiff fine for adulteration. This is to prevent dealers from mixing gasoline with kerosene, which has been done in Columbus. The proposed provisions to fix the specific gravity and the boiling point was found to be impracticable.

Kill All But One of the Year's Bad Bills

Massachusetts Associations Check Great Flood of Drastic Legislation—One Is Good

BOSTON, Aug. 5—Dealers and car owners of Massachusetts, working together, killed all but one drastic would-be law in the legislature this year.

Secretary James Fortesque of the Massachusetts State A. A. has just filed his report relative to the legislative work of his organization, assisted by James T. Sullivan, Bay State A. A., and John B. Sullivan, Jr., Boston Automobile Dealers Association. There were just fifty-nine measures introduced relative to motor vehicles. A number were duplicates of the same idea, so that there were practically fifty bills up for consideration.

When it is considered that out of that number there were only nine measures passed, and of that nine but one was against the motorists, it shows that the legislative committee did excellent work. The one bill against which the motorists worked in vain made more stringent the law for reckless and intoxicated drivers, but it is so worded that it makes no distinction between a man who has taken one glass of beer and the fellow who is incapable of handling a car, nor between the really reckless driver and the man who may go a mile faster than the law allows. The motorists wanted a law against the really reckless and drunken drivers, but not the one that was steam-rollered through to "make political capital for the Governor."

Favored a Number

All the other laws enacted were advocated by the motor organization. One of these called for lights on all vehicles using the highways to be lit uniformly from half an hour after sunset to half an hour before sunrise. In other years the horse-drawn vehicles were lighted 1 hr. after and the motor vehicles half an hour. A law was passed also, compelling all vehicles that have become stalled or stop on a road at night for any reason to show two white lights.

The nuisance caused by contractors spreading tar and oil over the entire surface of the highways has been made an offense now, and the new law provides that only one-half the width of the road be so treated at one time, thus allowing vehicles to pass without danger from skidding or occupants getting all over tar and oil. There was passed also a law allowing owners in other States within 15 miles of the boundary of Massachusetts to register in the Bay State for a $2 fee. Another bill allowed all the motor vehicles of a city or town to be registered for a fee of $2. In the past, some paid a full rate, according to horsepower, and others did not pay anything.

The motorists had the horses in mind when they favored a bill to allow the Highway Commission to build experimental roads where the sides would be made safe for horses, while the center would be smooth for motor cars. The fee for getting a renewal of a license to drive has been raised from 50 cents to $1. Another bill gives cities and towns the right to regulate the jitney business. A bill was also passed covering what are known as autopeds, allowing their registration at a low figure.

Among the bills that were killed were some designed to amalgamate the Highway Commission with other boards; bills that would compel all owners of motor cars to file bonds before they could get a license to drive their cars, some bonds to be $2,000 and others $5,000; others that would create crosswalk zones in cities and towns; to compel the equipment of cars with safety signals front and rear; to prevent women driving cars more than 30 hp.; to compel every applicant for a license to pass a physical examination; to raise the age limit for those allowed to operate to 20 years; to compel motor trucks used in transportation to be so built that the driver would have an unobstructed view of the rear wheels, and others of minor importance.

They Do but They Don't

DALLAS, Aug. 5—That the ruling of the Texas attorney-general several months back, in the prosecution of certain automobile concerns in Texas for alleged violation of the Texas anti-trust laws, has not hurt the automobile industry in Texas is the belief of automobile dealers.

As a result, however, of the attorney-general's holding on the question it was necessary for automobile distributers to make new arrangements and agreements. Under his ruling it was a violation of the law for automobile distributers to make contracts in writing for the sale of certain cars in certain prescribed territory. The new plan is for the automobile distributer and the automobile manufacturer to get together and by verbal agreement decide what territory he shall cover. This, it is declared, is not a violation of the law, while if the contract is put in writing it would be a violation of the law.

At any rate, as a result of the ruling of the attorney-general automobile distributers are said to have made these new agreements. It was feared at first that the attitude of the attorney-general in connection with the contracts by automobile distributers would retard the sale or distribution of cars in the State. On the contrary, it has not.

Atlantic City Stages Show on Its Big Pier

Opens Pageant at a Time When Pleasure Seekers Throng Famous Summer Resort

ATLANTIC CITY, N. J., Aug. 7—The First Annual Automobile Exposition opened on Young's Million-Dollar Pier this morning. The exposition will last 2 weeks, or until Aug. 20, and it will be visited by thousands of people from all parts of the country.

When the doors of the famous pier opened the dealers who occupy space were in high spirits, as prospects for making sales during the show are excellent. Owing to the nature of Atlantic City and its transient population, it is expected that the number of prospects obtained will exceed actual sales; but these, if followed up properly, will justify the space taken.

August was selected by the managers because the Queen of Resorts, which indeed this cosmopolitan city is, entertains most of its visitors in that period. While a large number of these visitors are excursionists who come down for the day only, they include persons in all classes and stations of life.

A large number, too, are tourists who come all the way by automobile from points as far west as Cleveland and as far south as Richmond. The time and the place are exceptionally appropriate because of national touring week, which starts to-day and which will bring a larger number of tourists to Atlantic City than ever before. The value of the show, therefore, will be more national than local in scope.

Most of the exhibitors are from Philadelphia, although New York and other Eastern cities are more or less represented. Among the cars on the floor this morning were the Empire, MacFarland, Apperson, Cole, Grant, Oldsmobile, Ford, Moline-Knight, King, Maxwell, Briscoe, Peerless and the Jeffery. The show is being managed by W. E. Shackelford and Thomas Beran.

No More Street Tire Changes

HARTFORD, CONN., Aug. 7—Changing tires in front of dealers' places of business has been forbidden by Chief of Police Farrell. The case of which a test will be made is that concerning Jack, the Tire Expert, 128 Allyn Street.

Steal 21 Cars a Week

ST. LOUIS, Aug. 7—Twenty-one cars were stolen last week in this city and several suspects are held by the police. It has been found that parts on stolen cars are interchanged and the identity of the vehicles altered.

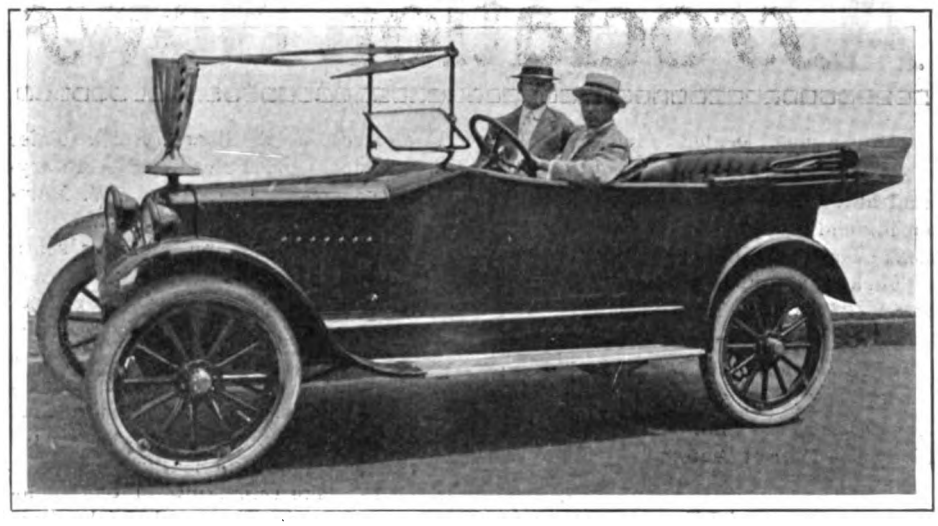
Dealers Everywhere Hold Sales Sessions

Opening of New Season Finds Men Who Sell Cars Learning of Cars and How to Sell

WEST TORONTO, ONT., Aug. 5—Ten million dollars' worth of Overlands sold in 3 days is a new record for Canadian business, whether in the motor car business or any other industry, but that is what was achieved by Willys-Overland, Ltd., during the first annual Canadian convention, held in the Thousand Island House at Alexandria Bay. There were contracts to show for it, bearing the signatures of 150 of the best business men in the Dominion of Canada.

The 150 dealers present at this 3-day convention were guests of Willys-Overland, Ltd., and it was the largest convention of Canadian automobile dealers ever held. These men represented nearly every district from Victoria, B. C., to St. John, N. B. The convention adopted as the slogan for the coming year: "Ten Thousand Willys-Knight and Overland Automobiles for 1917; Not 9,999."



In anticipation of this increased volume of business, Overland service has taken a new departure in order to meet the needs of the new owners without lessening, but rather increasing, the service to the present owners of Overland cars. The Canadian corporation has enlarged the authority previously placed in the dealer, knowing that he has adequate knowledge of the service requirements. A service interchange policy has been planned so that an owner touring in another territory or province is assured of obtaining the same attention that he would receive from his local Overland dealer. Enthusiasm was much increased by the showing of moving pictures of the Willys-Overland factory, followed by a lecture on the Knight motor by H. H. Hower of Toledo.

Henshaw Celebrates as Dodge Leader

BOSTON, Aug. 4—The Henshaw Motor Co., Dodge Bros. dealers in eastern Massachusetts, had a two days' celebration here, ending Saturday, in honor of the big success the company has attained here. Friday evening there was a banquet at the Hotel Somerset, when C. W. Matheson of the factory force was the guest of honor. There were addresses by various heads of departments. Henshaw read a telegram from George H. Phelps, director of advertising, stating that after going over the records for the year the Henshaw Motor Co. led all the other dealers, standing first. This telegram evoked much enthusiasm.

Saturday the entire party went to Nahant, where Henshaw has his summer home, and there they were treated to a clambake and this was followed by a series of outdoor sports. The guests all received souvenirs of the outing. Henshaw paid all the expenses of the celebration.

Takes Advantage of Test Run Result

The Frye Motor Car Co., St. Louis, is making an exhibition of the silver trophy won by a six-cylinder Saxon car in the Saxon factory's recent gasoline conservation contest. The trophy is mounted on radiator cap and the car driven about town at times when the crowds on the street are most apt to loiter and look. The gasoline contest was participated in by 206 Saxon cars and the Frye company car, driven by Martin J. C. Ghio of the Frye staff, won by an average of slightly more than 34.68 miles to the gallon. The nearest competitor was 31 miles and the average was 23.59 miles per gallon. The Frye company has named the car "The Saxon Economy Car" and through judicious advertising the name has caught on.

Maine Chalmers Dealers Confer

PORTLAND, ME., Aug. 5—The Maine Motor Car Co. held a Chalmers dealers' conference here last week which was attended by twenty Chalmers dealers in Maine. Several carloads of cars had arrived and the machines were turned over to the dealers following the conference on sales methods. Then the party motored to Pine Point, where a shore dinner was served, after which they left for their respective cities. The Maine Motor Car Co. has just added the Marmon to its line.

Dealers Honor Collins and Nash

ST. LOUIS, Aug. 5—F. W. A. Vesper, president of the Vesper-Buick Auto Co. of this city, has completed arrangements for the presentation of silver services to R. H. Collins, sales manager of the Buick Motor Co., and to C. W. Nash, president of the General Motors Co. The centerpiece of each service is a large tray, on which is engraved the fac simile signatures of the thirty-eight Buick branch managers and distributers. The gifts were made to these two officials who retired from the Buick service Aug. 1. Vesper was selected to purchase the gifts by the other donors because of his long association with them while in service at the Buick factory.

Distributer Entertains Dealers

MILWAUKEE, Aug. 5—The Wisconsin Oakland Co., distributer of the Oakland in Wisconsin and upper Michigan, recently entertained 125 of its retail dealers at Milwaukee. The afternoon was devoted to a 4-hr. cruise on Lake Michigan in a large passenger steamer, and in the evening a seven-course banquet was served in the Fern Room of the Hotel Pfister. W. H. Upham, manager of the company, was in charge.

Two Peugeots for Harvest Classic

INDIANAPOLIS, Aug. 5—Entries for the Harvest Classic, to be held on the local speedway, Sept. 9, have started to come in. The two Peugeots driven by John Aitken and Charles Merz are the first two entries. There will be a total of $12,000 in prize money in this race, which will be over a distance of 300 miles. The entry of the two Peugeot cars is made by the Indianapolis Speedway Team Co. and the car which Aitken is to drive is the same as that with which he won the Coney Island Cup at New York this spring.

Can Still Use "Midgley"

LANCASTER, OHIO, Aug. 5—The Lancaster Tire & Rubber Co. has the right to continue the use of the term Midgley, the petition of Thomas Midgley, Sr., for an injunction restraining the company from the use of his name having been refused by the court.

Association News

Springfield Dealers Plan Show

SPRINGFIELD, MO., Aug. 5—An annual automobile show is planned by the Springfield Automobile Dealers Association. The committee in charge consists of Richard Tumphrey, W. M. Baldwin and B. B. Axbury.

To Hold Trade Association Excursion

DETROIT, Aug. 5—A moonlight excursion to Lake St. Clair will be held Aug. 22 by the Detroit Automobile Trade Association.

Los Angeles Wants Big Show

LOS ANGELES, Aug. 5—There has been no date set for the Los Angeles automobile show, but there is a strong sentiment in favor of but one show, and a big league show that will put Los Angeles on the map as a motor car market.

Los Angeles, in the center of the world's richest motor market, believes it should be able to stage a great motor car show each year which would give publicity to the city throughout the United States. Last season Los Angeles had two shows. Both were successful, but they were conducted by rival interests and neither one was the success that it would have been had it not been for the antagonizing influences of the other.

There is some talk in Los Angeles of a great used-car show, to be held in the fall. This would be a novelty show and would have nothing to do with the great show planned by the dealers, as the used cars are all handled by used-car merchants, who are specialists in the line, or by managers of used-car departments conducted by the dealers and distributers.

Show Building for Brockton Fair

BROCKTON, MASS., Aug. 5—The contract has been awarded for a permanent motor show building on the grounds owned by the Brockton Fair Association. The Brockton fair is the most widely attended in New England and the managers have approved plans for a building to cost $25,000, in which motor cars and trucks will be shown. It will be finished in September in ample time to sell space for the October fair week.

California Association Elects

STOCKTON, CAL., July 29—The annual meeting of the California Automobile Trade Association was held here last week and these officers were elected: President (re-elected), L. F. Tarnell, Stockton, Saxon dealer; vice-president (re-elected), J. E. Sloane, Buick dealer in San Jose and Palo Alto; secretary-treasurer (re-elected), Robert W. Martland, Martland-Priest Co., Oakland.

During the discussion a strong sentiment developed against price-cutting and other so-called illegitimate forms of business. A safety first movement was discussed and it was decided that a course of education to the public in keeping its head in emergencies would do more than the imposition of fines. It was suggested that members be supplied with cards on which to make complaints of traffic violations. A protest was made to the State Highway Commission against ordering the road signs of a certain tire company cut of the State. A number of addresses were delivered.

Want New Law in Columbus

COLUMBUS, Aug. 1—The Columbus Automobile Club is backing a traffic ordinance which has been favorably reported by a special committee. The ordinance will provide that all traffic, automobile, horse-drawn and pedestrian, must obey the crossing rules, and no "jay walking" is allowed. Stiff penalties are provided for all traffic which fails to obey the law. Headlights must be dimmed. No change is made in the regulations relating to speed, as that is controlled by the State law.

Arrange Credit Plan

SPRINGFIELD, MO., Aug. 1—The Springfield Automobile Dealers Association has arranged with the United Mercantile Agency to handle credits and to assist in bringing about other features of co-operation. The association appointed the following committee to make arrangements for the annual automobile show: Richard Humphrey, chairman; W. M. Baldwin, B. B. Asbury. The officers of the association are: John C. Hastie, president; Al White, vice-president; C. K. Curran, secretary; George W. Culler, treasurer. The executive committee includes George Culler, chairman; Keet Curran, J. A. White, W. H. Yandell and Rex Wheeler. The membership committee consists of Keet Curran, Huy Haskett and H. McCune.

Pass Drastic Ordinances

PHILADELPHIA, Aug. 1—With very few modifications the ordinances regulating automobile traffic in Philadelphia were passed by the Council. They are the most drastic of any laws made in this city for the regulation of traffic. Parking privileges in the congested districts of the city, especially along Motor Row are greatly restricted, and in some sections where traffic is heaviest no more time is allowed than is necessary to take on and discharge passengers. The ordinances also include the regulation of horns, lights and highway signs.

Boosting for Jefferson Highway

DES MOINES, IOWA, Aug. 2—Talking and driving in relays, a great inspection and boosting tour of the Jefferson Highway Section from St. Joseph, Mo., to St. Paul, Minn., a distance of 470 miles, was staged last week. Four cars of speakers led the tour and each car of speakers worked 10 min. at each town, leaving immediately upon the arrival of the next car.

Totten Drowned in River

ROCK ISLAND, ILL., Aug. 5—William C. Totten, president of the Totten Automobile Co., was drowned while bathing in the Mississippi River this week. He founded the Totten company 7 years ago and also operated a taxicab company for a number of years.

Firestone Outing in Boston

BOSTON, Aug. 8—The New England branch of the B. F. Goodrich Tire Co. at Boston was closed tightly to-day while the 200 employees attended the second annual outing, at Riverside Recreation Grounds, Newton.

Springfield Hudson Men Play

SPRINGFIELD, MASS., Aug. 5—All the employees of the Harrington-Gifford Co. of this city, and the Harrington-Hudson Co. of Hartford, both of which are affiliated in the handling of the Hudson, held an outing and clambake with sports at Riverside Park, Wednesday. There were several interesting contests in which much rivalry was displayed between the Hartford and Springfield men.

It Was Some Race!

AUGUSTA, ME., Aug. 5—Some of the motor car dealers here are wondering now if the Secretary of State will take any action following the race between a Hudson and a Westcott from Augusta to Winthrop and return at an early hour the other morning. The race was the outcome of an argument between the dealers handling the two lines. Perley M. Lawrence drove the Hudson and Edgar F. Marden the Westcott. The race ended in a mixup, for the Hudson burned out a bearing, but it finished first, coasting down a hill. The Westcott blew out a shoe that delayed it. Both drivers were haled into court and fined.

PULLMAN DEALERS held a convention at the factory at York, Pa. The men grouped at the center are: 1—W. F. Grove, manager of the York Motor Car Co., the retailing company in York. 2—H. W. Heyden, general manager. 3—A. R. Cosgrove, general sales manager. 4—C. G. Swartz, factory superintendent. 5—H. P. Jones, secretary-treasurer, Pullman company

Pullman Dealers Hold Sales Convention at York

YORK, PA., Aug. 5—One hundred and twenty-five dealers of the Pullman Motor Car Co., not only from this country, but also from the foreign field, assembled in York last week to attend the annual Pullman dealers' convention, July 27, 28 and 29. The automobile trade prospects for the 1917 season were discussed and attention was given to the new Pullman models. Special entertainment features were provided by the Pullman company and York Motor Car Co. for the dealers during their stay in the city.

The spacious room in the Coliseum, North George Street, several doors south of the Pullman plant, was used for the convention hall, and all the sessions were held there. A half a dozen or more of Pullman cars, including touring car, roadster and commercial car models, were on display for the inspection of the dealers, and the general public on the last day of the convention. The convention opened on Thursday morning with the registration of the dealers at the factory. At noon a luncheon was served at the Colonial Hotel, where the dealers were registered during their stay in York. The first session was held at 1.30 o'clock in the convention hall.

A shore dinner was tendered the dealers on Friday evening at the Colonial Hotel. H. W. Hayden, general manager of the Pullman plant, was the toastmaster and toasts were responded to by the following dealers: G. C. Eichelberger of the Pullman Sales Co. of Pittsburgh; R. C. Wrege of the Pullman Automobile Co. of Milwaukee, Wis.; J. A. Bland of the Pegau Auto Co. of Des Moines, Iowa; E. E. Miller of the T. G. Northwall Co. of Omaha, Neb.; L. C. Aston of the Aston Motor Car Co, Los Angeles, Cal.; W. T. Minor of the Durham Buggy Co., Durham, N. C.; D. O. Myattm of the Gulf States Auto Sales Co., New Orleans, La.; M. D. Coate of the Coate Motor Car Co., Cleveland. Ohio; John Fabick of the Ideal Motor Sales Co., St. Louis, Mo.; George E. Hannan of Denver. Music was furnished by an orchestra and a male quartet. At noon on Friday a group photograph of the dealers was taken in front of the convention hall.

Among those present were: W. L. Forney, Chambersburg, Pa.; E. B. Williams, L. A. W. Motors Co., Syracuse, N. Y.; G. C. Eichelberger, Pullman Sales Co., Pittsburgh; R. C. Wrege, Pullman Automobile Co., Milwaukee, Wis.; W. F. Grove, York, Pa.; J. A. Bland, Pegau Auto Co., Des Moines, Iowa; E. E. Miller, the T. G. Northwall Co., Omaha, Neb.; W. F. Parry, Ball-Washburne Motor Co., Rochester, N. Y.; J. A. Bentz, Bentz-Landis Auto Co., Harrisburg, Pa.; F. W. Bartlow, Hughesville Garage, Hughesville, Pa.; H. J. Morrison, Arcanum Garage, Arcanum, Ohio; R. B. Harlacker, Williamsport, Pa.; E. W. Van Dusen and L. L. Stevenson, Atlanta, Ga.; W. L. Tyson, Okolona Motor Co., Okolona, Miss.; J. W. David, Standard Motor Car Co., Philadelphia; W. P. Barnhart and Paul Barnhart, William P. Barnhart & Co., Washington, D. C.; L. C. Aston, Aston Motor Car Co., Los Angeles, Cal.; W. A. McGiven, Pullman Automobile Co., Chicago; R. W. Kelly, Knoxville, Tenn.; W. T. Minor, Durham Buggy Co., Durham, N. C.

W. A. Bosworth, Lowman, N. Y.; W. W. Hanke, Jr., Hanke Motor Car Co., Fort Wayne, Ind.; A. J. Morris, Peoria, Ill.; G. M. Dewey, Freeville, N. Y.; Elmer Frantz, Motor Supplies Co., Reading, Pa.; D. O. Myatt, Gulf States Auto Co., New Orleans, La.; P. C. Bertram, Pullman Motor Car Co., Cincinnati, Ohio; Henry Drouet, Pullman Motor Car Co., New York City; G. A. Coats, Pullman Motor Sales Co., Kalamazoo, Mich.; M. D. Coate, the Coate Motor Co., Cleveland, Ohio; John Fabick and Edward Strosberg, Ideal Motor Sales Co., St. Louis, Mo.; W. C. Stopher, Pullman Motor Co., Wichita, Kan.; George E. Hannan, Denver, Col.; M. Keller and D. Eller, Pullman export department, 100 Broad Street, New York City; A. F. Mette and George Crawford, T. B. Bennett & Co., Flanagan, Ill.; J. A. Snider, Pullman Motor Co., Kansas City, Mo.

The Des Moines branch of the Studebaker Corp. and the Schee Co., Central Iowa distributer, held a sales conference for Iowa Studebaker dealers July 21, and 150 Iowa automobile men attended. The dealers were entertained at a noon luncheon with talks by L. J. Ollier, vice-president of the Studebaker Corp.; F. C. O'Meara, salesmanship expert for the Studebaker organization; and H. M. Johnson of the Commercial Investment Trust. All three of the talks were constructive and designed to help the dealers in perfecting their organization, salesmanship, and financial methods. No dealer who attended the conference failed to gain enthusiasm and ideas for promoting his business.

Uncle Sam Hits at Bidwell

Promoter of "Leagues" and Other Multitudinous Enterprises Is Denied the Use of the Mails

WASHINGTON, D. C., Aug. 5—Uncle Sam has clapped the lid onto A. C. Bidwell and his International Automobile League and allied enterprises. A fraud order has been issued by Postmaster General Burleson, denying the use of the mails to Bidwell and his schemes.

It is charged, after nearly 5 months of investigation, that Bidwell has been fleecing the motoring public. The story of his schemes, as told by Uncle Sam's agents, is long and involved, but it throws light upon a tangled mess, in which an army of car owners and dealers has been enmeshed—and "trimmed."

Forty-six days were consumed in the Bidwell hearings before the Solicitor of the Post Office Department. Listen to Uncle Sam's story of Bidwell. In his memorandum to the Postmaster General with reference to this case, the Solicitor says:

Bidwell Uber Alles

"The International Automobile League is a corporation, practically all of the stock of which is owned by one Alfred C. Bidwell, its president, by whom the corporation is absolutely controlled. Under his own name as president he signs letters, receives mail, and uses the post office establishment substantially to the same extent as he does under the name of the corporation.

"The league undertakes to furnish each member automobile tires and supplies, which it may be able to obtain, at *dealers'*, *jobbers'* or *manufacturers'* prices, to maintain without expense to the member a home office, and to mail quotations from time to time. Membership, *so-called*, costs $10 per year *in advance* where the member owns but one automobile, and $5 per year additional *in advance* for each automobile in excess of one owned by the member.

Another Corporation

"In addition to the league, Bidwell has organized and *absolutely controls* another corporation, namely, the International Automobile League Tire Co., whose stock, in pursuance of a contract between it and the league, the league is selling on a commission basis of 40 per cent. The par value of the stock is $100 per share. No stock is sold by the league for less than par value.

"The prospectuses and other publications upon which the public was induced to subscribe for the stock in the tire company, contained representations which have been *varied from time to time*. In substance, they are to the effect that:

"1. *A tire factory or factories would be constructed and put into early operation.*

"2. *Large dividends would be paid upon the stock.*

"3. *Purchasers would be furnished all the tires required at actual cost of manufacture, and*

"4. *By reason of the large membership of the league, its financial responsibility and resources, which by contract were put behind the tire company, the accomplishment of these promises was assured.*

The "Lucky" Jobbers

"The league is also engaged in selling a so-called *jobbers'* contract, under which the jobber is *promised* the tire company's tires for resale at the same price as such tires are furnished to stockholders. The undertaking of the league in this connection is subject to the following conditions: Strikes, fires, ACTS OF GOD, contingencies beyond the control of the league, and its ability to fill the order.

"The jobber is also entitled to sell memberships on a commission basis of 50 per cent. The jobbers' contract, while a consideration of $1,000 is specified on its face, if that amount cannot be obtained, is sold for practically *any sum that can be procured* between $100 and $1,000.

"The business is the outgrowth of a plan conceived by Bidwell some time in 1907. He was at that time in the wallpaper business, and after purchasing an automobile was astonished at the high prices charged for tires and accessories. He learned that there was a considerable difference between the price to the jobber and the price to the consumer.

"He conceived the idea of putting himself in a position where he could obtain the jobbers' prices both for himself and for his *friends*, and with that end in view he built a garage capable of housing more than one car, thereby *seeking to classify himself as a jobber*. He obtained some supplies at jobbers' prices. After that he put his plan on a business basis and began charging a fee for this service to others.

Still the Wonder Grew

"He then found himself beset with numerous difficulties, for as soon as it was found that he was distributing these supplies at the same price for which he obtained them, the manufacturers refused to sell him.

"However, the business grew steadily, until the league was incorporated in 1908. After its incorporation the league began selling stock in the International Automobile League Tire & Rubber Co., a New York corporation organized for the purpose of building a factory and supplying tires to its stockholders at cost of manufacture, which was *under the absolute control of Bidwell.*

"This stock was sold by the league on a 40 per cent commission basis and under representations that a factory would be built, and that not only would the stockholders be furnished tires at cost of manufacture, but that they would be paid an *enormous dividend*, earned through the sale of its tires to members of the International Automobile League. This membership, however, was *greatly exaggerated* for the *purpose of selling the stock.*"

About 1912 a reorganization committee of the stockholders of the International Automobile League Tire & Rubber Co. was formed, and after a long controversy Bidwell was finally compelled to discontinue his association with the company, it having been found that he had *appropriated to his own use all the money obtained in the sale of the company's stock.*

Moved to California

After losing control of the International Automobile League Tire & Rubber Co., Bidwell went to California and organized a corporation first known as the Western I. A. L. Purchasing Corp., the name very soon thereafter being changed to the International Automobile League Tire Co.

The memorandum further says: "The organization and conduct of the California company, when compared with the organization and conduct of the Northland company while under the control of Bidwell, *clearly demonstrates the fraudulent character* of his recent operations with the California company. In the promotion of the New York company, the number of active members of the league, which was to furnish the market for the output of that tire company, was *grossly exaggerated in order to sell the stock.*

Where Were the Assets?

"Similar *misrepresentations* were made in the promotion of the California company. With the New York company the league received 40 per cent commission for the sale of stock. The same kind of an agreement was made between the league and the California company.

"When the organization committee took control of the Northland, although it should have been entitled to assets of some $600,000, there was *not a dollar* in the treasury and little or no available assets in its name. In that matter Bidwell had brought home to him in the most forcible manner the fact that his entire conduct with respect to the Northland company *had been illegal*, and he was forced to make restitution to the extent of over half a million dollars.

Digitized by Google

"When Bidwell was cited to appear and show cause why a fraud order should not issue against him in March of this year, there was *not a dollar in the treasury* of the California company, notwithstanding the fact that over $112,000 had been actually taken in in cash on the sale of the stock, not including 40 per cent commission paid to the league, *all of which had been appropriated by Bidwell* through various means, but there was also a charge against the California company of something like $192,000 by the league on account of various items, many of which have been examined into and found to be illegal charges."

Bidwell has been indicted by the Federal Grand Jury in Rochester, charged with using the mails to further a scheme to defraud, and by the grand jury of Fayette County, Pa., with two of his agents, on the charge of conspiracy to defraud.

The inquiry into the league was made at the request of the Associated Advertising Clubs of the World and the American Automobile Association, to protect motor car owners as a part of the nation-wide campaign of the Advertising Clubs for "Truth in advertising and honesty in selling."

TRACTOR MAKERS STILL GETTING DEALERS

(*Continued from page* 9)

harvested. Another reason is that on Tuesday there was a primary election, which naturally kept the farmers at home. Another reason is that the demonstration field, which is in Kinloch Park, is 16 miles from the city, and the transportation facilities are not all that might be desired. It is expected that later in the week the farmers will flock to the field and that dealers and distributers also will put in an appearance.

Demonstration Is Divided

Unfortunately—here again is demonstrated the smallness of Missouri farms—it was not possible for those in charge of the demonstration to secure one large field, as in Dallas and Hutchinson, where all the machines might plow at once. Ground for plowing is limited, and for this reason many of the companies are compelled to demonstrate only their small machines. Some of the machines are in one field and the remainder in another field perhaps a quarter of a mile distant. At least the smallness of the available field has had the advantage of bringing into prominence the work of the smaller tractor, and in the opinion of agricultural experts it is the small tractor that Missouri must look to for the most part.

Kerosene is used slightly more extensively here than at either Dallas or Hutchinson. During the first day of plowing thirty-three of the machines were working on kerosene as against twenty-one operating on gasoline.

Fremont Demonstration to Be Biggest of Year

Ford Tractor to Appear Here—Was Largest Show Last Year—Expect Crowd of 100,000

FREMONT, NEB., Aug. 7—Although Fremont is not a big city, it bears the distinction of being the first American city to foster the promotion of an extensive farm tractor exhibition, and is prepared to produce a repetition of its former successes at the fourth 1916 National Farm Tractor Demonstration, which opens here to-day. Numerically and in its representation of tractor manufacturers, the field is superior to any former power show.

Those who have followed the swift rise of tractor exhibitions in the United States know that it found its inception in the first of the Fremont demonstrations, held early in the fall of 1913, on a relatively small tract of Dodge County land. Cradled out here in the broad domain of the middle corn belt region, where a bountiful agriculture demanded the ultimate of thrift and economy in tillage, cultivation and harvesting, the demonstration idea developed from a single show with sixteen entrants to the present national circuit, embracing the West from Texas to Canada.

Fremont, because of its intimate identification with the exploitation of the new farm power, has come to be regarded as the home of all of the important demonstrations. Response to the call for exhibitors has been such that upwards of 100 different makes and types of machines will be found in operation upon the fields at various times during the week. Every branch of power farming, from the breaking of virgin sod to the harvesting of the matured crop, will be exhibited this year. Sufficient acreage has been obtained within 20 min. ride of Fremont to permit work in a variety of soils, from gumbo to loose sand.

To convince western farmers that the tractor is not a "one-line" worker, exhibitions of disking, cultivating corn, reaping wheat and other small grains, threshing, operating ensilage machinery, drilling in seed, furnishing power for hay balers, corn shellers and electric light plants, spreading, road grading and the like, will be staged.

Another department of the demonstration that will attract wide attention is the big accessory display which will be an integral part of the main show. Estimates compiled on a census taken among manufacturers last year indicated that more than $1,250,000 worth of accessory business was written during the week.

The Mid-West Retail Implement Dealers' Association will have headquarters on the ground, in charge of Secretary James Wallace. Special entertainment will be provided for all dealers, and an especial invitation has been extended to the trade to come to Fremont and bring as large a number of customers along as possible.

At the 1913 meet, there were present about 22,000 farmers to witness the demonstration of the crude tractors of that now distant day. At the coming demonstration it is anticipated there will be from 80,000 to 100,000 men to watch the work of the most up-to-the-minute machinery which the tractor field of to-day has produced. Hotel accommodations will be given especial attention, and every indication is that the event will be another red-letter day in the history of Fremont, the Tractor City.

Hyatt Going by Special Train

DETROIT, Aug. 7—The Hyatt Roller Bearing Co. has arranged for a special private car to convey some of its representatives and a party of engineers and friends from this city to the National Farm Tractor Demonstration which opens at Fremont, Neb., to-morrow. The car will leave Detroit to-night and reach Chicago to-morrow morning. Tuesday will be spent in Chicago, with headquarters at the Hotel Blackstone. The party will leave at 6.05 p. m. Tuesday, arriving in Fremont Wednesday morning. Following are those who will make up the party:

George W. Dunham, president, Society Automobile Engineers; A. P. Sloan, Jr., general manager, Hyatt Roller Bearing Co.; C. W. Nash, Nash Motors Co.; C. S. Mott, Weston-Mott Co.; C. S. Kettering and E. A. Deeds, Dayton Engineering Laboratories Co.; John W. Bate, Mitchell Motors Co.; Harry Bassett, Weston-Mott Co.; C. L. Barnes, Barton W. Currie, Country Gentleman; Henry Ewald, Campbell Ewald Co.; P. G. Koether, general sales manager, Automobile Department, Hyatt Roller Bearing Co.; R. L. Lane, chief engineer, Detroit office, Hyatt Roller Bearing Co.; J. G. Weiss, works manager, Hyatt Roller Bearing Co., Newark, N. J.; C. M. Eason, manager, Tractor Bearings Department, Hyatt Roller Bearing Co., Chicago.

In addition, the following Hyatt representatives will be at the Fremont demonstration: H. O. Kuchenmeister, assistant sales manager; H. M. Carroll, advertising department; O. W. Young and J. R. Bateman, sales engineers; J. E. Martin, dynamometer department, L. S. Newman, mechanical inspector.

Ford to Be At Fremont

DETROIT, Aug. 7—Henry Ford and his son, Edsel, will be at the Fremont, Neb., national tractor demonstration with three of Ford's new tractors. The three tractors will be of the same type, but will be operated on gasoline, kerosene and alcohol, respectively. In addition to the tractors, Ford will also have a comprehensive display of the various parts which enter into the construction of this machine.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

V. K. McBride, who has been in the sales department of the Federal Motor Truck Co. for over 2 years, has been appointed assistant sales manager of the company.

H. A. Conlon, formerly a special sales representative of the Federal Motor Truck Co. in England, has been promoted to field sales manager.

A. G. Williams has joined the Ross Automobile Co., Detroit, Mich., as traveling representative.

D. D. Brush, formerly factory engineer for the Mutual Motors Co., has been made manager of the service department of the Marion-Handley Sales Co. of Kansas City.

F. O. Burkholder, St. Louis, manager for the Ahlberg Bearing Co., who was married July 15 to Miss Eva P. Bender of Chicago, has been promoted to management of the Boston branch as a wedding present. H. J. Stern of Chicago comes to St. Louis as manager.

William O. Hardin, St. Louis, for two years manager of the St. Louis motor shows and secretary of the St. Louis Automobile Mfrs'. and Dealers' Association, who resigned a week ago, has bought the Multi-Print Letter & Advertising Co., which specializes in motor work.

H. W. Prine, former motor car editor of the Pittsburgh "Post," has been made Pathfinder district manager in eastern Pennsylvania.

Ferdinand Jehle has resigned as laboratory engineer of the Automobile Club of America, New York City, to assume the position of service engineer with the Aluminum Castings Co., Cleveland.

C. C. Hinckley, chief engineer of the Chalmers Motor Co., has taken over the production department in addition to directing the engineering work of the company following the resignation of S. H. Humphrey as production manager of the company.

C. H. King and J. P. Winterson have joined the sales organization of the Chalmers Motor Co. as territorial representatives.

Frank G. Kane, formerly head of the department of journalism at the University of Washington, Seattle, has left that institution to take up new duties in the advertising and publicity department of the Packard Motor Car Co., Detroit.

H. O. Harvey, for the past ten years manager of the Underwood typewriter branch in Seattle and Spokane, has given up the typewriter business to enter the automobile business as sales manager of the Seattle Automobile Co., distributer of the Maxwell and Chandler.

Melbert W. Taber has been made Detroit manager of the Asbestos Protected Metal Co., Pittsburgh. Formerly he was manager of maintenance and construction of the Packard Motor Car Co.

H. E. Merrithew, former vice-president and general manager of the O. & M. Supply Co., Kansas City, has been appointed district manager by the Findeisen & Kropf Co., manufacturer of the Rayfield carbureter.

E. W. Corman has been appointed sales and advertising manager of the Denneem Motor Co., Cleveland, maker of the Denmo truck. Corman left a similar position with the Elgin Motor Car Corp., Chicago, and was formerly with the Saxon Motor Co., Detroit.

J. H. Beaton, former assistant sales manager of the McLaughlin Co., Oshawa, Ont., has been appointed sales manager for all of Canada.

E. Ver Linden, factory manager and associate executive of the Olds Motor Works, Lansing, Mich., has been made general manager of that concern, following the resignation of Jay Hall, his associate on the Olds executive committee. With the appointment of Ver Linden the committee system of management at the Olds Motor Works is abolished and the organization is once more under one-man control.

Hugh McVey, recently of Successful Farming, Des Moines, Iowa, has been made advertising counselor of the Capper farm papers, Topeka, Kan.

W. C. Goodchild, formerly manager of the Metz Co.'s branch in Providence, R. I., has been promoted to manager of the Boston branch.

Guy D. Niles has been appointed manager of the New England branch of the Portage Tire & Rubber Co. at Boston.

Percival S. Clark, secretary-treasurer of the Rhode Island Automobile Dealers Association, who retired from the motor business some time ago to devote his time to the association show work, has formed a new company to handle the Apperson in Providence.

H. M. Richardson, assistant manager, has been appointed manager of the Detroit branch of the Chevrolet Motor Co. He succeeds C. E. Dawson, who has been appointed zone supervisor.

W. O. Derry, passenger agent of the Chicago & Alton Railroad, has resigned to become sales manager for the Elgin Motor Corp., Chicago.

R. C. Caples has resigned as general traffic manager of the Western Maryland Railway to become associated in a confidential position with John N. Willys, president of the Willys-Overland Co., Toledo.

A. C. Leverton, formerly general superintendent of the Chalmers Motor Co., has been appointed factory manager of the Briscoe Motor Corp., Jackson.

H. W. Easterly, for several years general manager of the Sheboygan Gas Light Co., Sheboygan, Wis., has resigned to accept a position with the Sterling Motor Truck Co., Milwaukee, as field and sales representative in the Russian Empire, with headquarters in Petrograd.

T. F. Flanagan has been made sales and advertising manager of the Pyrene Mfg. Co., New York, succeeding C. Louis Allen, who was promoted to president.

Frank R. Kern, who for several years has been connected with the export department of the Willys-Overland Co., Toledo, for the last year as factory representative in Australia, has returned for a brief stay at the factory.

A. J. Langford is the new Dallas manager for the Ford Motor Co. He succeeds E. T. Backus, who has been transferred to the Ford plant in Baltimore.

F. X. Devlin has resigned as purchasing agent of the Federal Motor Truck Co., Detroit, to become identified with the Elgin Motor Car Corp., Chicago. Devlin had been connected with the Federal company since its formation 6 years ago.

Felix Van Cleef has returned to San Francisco after visiting the Hawaiian Islands for the Van Cleef Bros., cement manufacturers. He plans an extended American trip.

Fred Cardway, who for many years has been interested in promoting business intercourse between nations both in Europe and America, will leave early in September for an extended tour of South America in the interest of the Packard Motor Car Co.

Packard Sets Record With Aviation Motor

Goes 100 m. p. h. on Indianapolis Speedway With Its New Type of "12" Engine

INDIANAPOLIS, Aug. 4—The Packard aeroplane twelve unofficially broke the speedway record here to-day by a half-minute. This is the first time that a lap of the 2-mile track has been made by a 300-in. motor at more than 100 miles per hour. The time was 1 min. 29.32 sec. The previous time for a motor under 300 cu. in. was that of Boileau in a Peugeot, 1 min. 30.13 sec., in 1914.

This is the same car that J. G. Vincent, vice-president of engineering of the Packard company, had at New York during April and May this year, with the exception that a new intake header had been added for better performance at high speeds. The car was driven by Rader, who carried a mechanic and 10 gal. of gasoline, and this is the first of a series of tests which are to be made by the engineering department to demonstrate the efficiency of the small-bore twelve. Vincent states that the twelve-cylinder motor was of great advantage at Indianapolis, as the steady torque made the car hold the turns at the high speed.

Electrical timing and five stop watches were used, the electrical instrument being the same as that used in timing the classics over the Hoosier track on past Memorial Days.

Displacing exactly 300 cu. in., this car has already distinguished itself as of exceptional speed. Laps were made with it during the spring at speeds of from 100 to 110 miles per hour on the Sheepshead Bay track. The motor is a V-twelve, 2 21/32 x 4½ bore and stroke. The valve diameters are 1 7/16 in. and the lift is 0.34 in., giving a very extensive area for gas flow.

Saxon Makes Relay Record

SAN FRANCISCO, July 27—Forty-three Saxon sixes, racing in relays, established a new transcontinental record when the last car reached this city at 4.40 Saturday morning, 6 days, 18 hr. and 10 min. after leaving New York City.

This record from coast to coast was made carrying a message from Mayor Mitchel of New York to Mayor Rolf of San Francisco over the proposed Lincoln Highway route.

An official observer started with the first Saxon car at 10.26 a. m. Saturday, July 15, and went the entire distance by changing from car to car as the relay progressed.

Factory News of the Week

Warner to Make Heavy Trailers

BELOIT, WIS., Aug. 5—The Warner Mfg. Co., in which the principal is A. P. Warner, former builder of the Warner Auto Meter, will shortly put on the market heavy duty trailers of 2, 3 and 5 tons capacity. The Warner trailer coupling will be standard equipment on the trucks manufactured by several of the best-known truck builders.

Warner, together with his engineers, has been experimenting with these trailers for the past 2 years, and states that they will introduce features new in trailer construction. The company has already introduced the Warner Prairie Schooner for camping and touring, and the Warner Auto Trailer for fast delivery work.

Alter Motor Breaks Ground

GRAND HAVEN, MICH., Aug. 5—Ground has been broken for the new Alter Motor Car Co.'s building. The building will be of brick, 60 x 400, and one story.

Gehl Bros. Building Tractor

WEST BEND, WIS., Aug. 5—The Gehl Bros. Mfg. Co., a manufacturer of power and manual farm implements and machinery, is now engaged in the production of a new type of general utility farm tractor, propelled by a four-cylinder gasoline-kerosene engine, 4¼ x 5¾, and rated at 25 hp. at 900 r.p.m. The tractor weighs 4000 lb. and is self-guiding for plowing. Simple changes make it ready for other farm work, such as operating belt-driven machinery.

Wald Machine to Triple Output

SHEBOYGAN, WIS., Aug. 5—Ground was broken to-day by the Wald Machine Co., a producer of motor car and cycle accessories and mechanical specialties, for a new shop building, 80 x 100. The new shop will make it possible to increase the production nearly 300 per cent.

Mayo-Skinner Succeeds Mayo

CHICAGO, Aug. 5—The Mayo Mfg. Co. has been succeeded by the Mayo-Skinner Mfg. Co. and will continue the business of making motor car accessories and supplies, but on an increased scale. The factory at 54-60 East Eighteenth Street will be retained until a new building is completed.

Goodman to Furnish Custom Bodies

NEW YORK, Aug. 5—The Goodman Auto Body Co., which was formed recently by Henry Goodman to handle the Eastern business of the Springfield Metal Body Co., has arranged to supply custom bodies to dealers.

Dort Raises Price to $695

FLINT, Aug. 5—The Dort Motor Car Co., this city, has raised the price of its touring car from $665 to $695, beginning Aug. 1.

Torbenson to Add to Plant

CLEVELAND, Aug. 7—Four acres of land have just been purchased here by the Torbenson Gear & Axle Co. of this city. This is in addition to the buildings which are now under construction and which will by Aug. 15 place 50,000 sq. ft. of manufacturing space at the disposal of this concern. The principal product of the company is the Torbenson drive internal-gear rear axle for commercial vehicles. The new factories will be of the monitor type, constructed of brick and steel with metal sashes.

Milburn Opens Branch Factory

TOLEDO, Aug. 5—The Milburn Wagon Co. has opened a branch factory in Toledo on Summit Street in the factory building formerly occupied by the Toledo Bending Co. The Milburn company is transferring its business wagon department to the new branch and will also use its new quarters for the building of custom-made automobile bodies and quantity standard body orders.

Studebaker Common Pays 10 Per Cent

SOUTH BEND, IND., Aug. 5—Studebaker common stock has been placed on a 10 per cent basis by the declaration of a 2½ per cent quarterly dividend, payable Sept. 1. Heretofore the common has paid 7. At a meeting of the directors it was disclosed that earnings of the first 6 months of this year were $6,028,329.16, including $180,000 from war orders. Deducting the war order business of last year, the regular business this year netted twice as much as last year's regular business.

General Rubber Increases Capital

AKRON, OHIO, Aug. 5—The General Tire & Rubber Co. has increased its capital by 150 per cent. The present capitalization is $500,000; was $200,000.

American to Build a Six

PLAINFIELD, N. J., Aug. 7—A six-cylinder car will be marketed by the American Motors Corp., which has erected a plant in this city. It is expected that the first cars will be finished in the fall. It will be equipped with the Amco motor, built by the Amco Motor Co., South Norwalk, Conn. This is a 3 x 5, L-head, block design, stated to develop 45 hp. at 2100 r.p.m. It has pump cooling, three-bearing crankshaft, two-unit starting and lighting and three-point suspension. Louis Chevrolet, well known as a racing driver and developer of speed cars, is chief engineer and vice-president.

Ford Truck in the Fall

DETROIT, Aug. 5—Some time during next fall the Ford 1-ton worm-drive truck is expected to be ready for delivery. Demonstrators are expected to be in the hands of Ford distributers or agents within the next few months.

What the price will be at which the Ford Motor Co. will sell this truck, officials claim not to know themselves, as it has not yet been decided, they say. It was stated from other sources that the price will be around $500, possibly a bit lower than this, and that it is expected that 200,000 of these trucks will be made during the first year.

Reo Makes Few Changes

LANSING, MICH., Aug. 5—Nineteen hundred and seventeen models of the Reo Motor Car Co. and the Reo Motor Truck Co. will be practically duplicates of the 1916 cars and trucks.

In the passenger car line the Reo four will sell at $875, as during the past season, and the Reo six, which formerly was sold at $1,250, will now sell at $1,150. An inclosed body has been added to the line of Reo fours and it will sell at $1,025, while the new Reo six sedan will sell at $1,750.

The price of the 1500-lb. Reo truck has been reduced to $1,000, $75 less than the past season. The price of the 2-ton truck remains unchanged at $1,650.

Savidge to Sell Own Product

INDIANAPOLIS, Aug. 5—The Savidge Co. will hereafter sell its own product, which heretofore has been sold through the Meixell Co. W. S. Harrah has been made sales manager.

Chase to Add 3-Tonner

SYRACUSE, Aug. 5—The Chase Motor Truck Co. will shortly announce Model X, a 3-ton, worm-drive job, to retail at $2,800, equipped with cab. This new model will round out a line of trucks of ¾, 1, 1½, 3 and 3½ ton capacities.

Buys Ohio Tractor Assets

MARION, OHIO, Aug. 5—W. H. Houghton, president of the Houghton Sulky Co., has purchased at receiver's sale the personal property of the Ohio Tractor Mfg. Co., which includes the material on hand, finished product, machinery, patterns and patents, which have been in the hands of Charles H. Lewis as receiver. Houghton announces that he may manufacture tractors, using the patterns of the Ohio company. It is generally understood that Mr. Houghton and his associates will purchase the building from the receiver as soon as the court forms can be complied with.

Pierce Lights Remove Road Menace

BUFFALO, Aug. 5—With a desire to make night driving safe for its own users, as well as all other motorists, the Pierce-Arrow Motor Car Co. has adopted as part of its equipment the Sutterly offset reflector. The upper and lower half of the reflector are each true parabolic sections, but have different focal lengths.

As a result, all the light is projected on the road, and the level of the beam is reduced so as not to dazzle the eyes of other users of the highway.

At 400 ft. distant a man can be seen distinctly, with the exception of his head. It is possible to drive or walk toward these lights and get no bad glare unless the eye level is lowered to approximately 3½ ft. from the road.

Scripps and Sterling Merge

DETROIT, July 31—The Scripps-Booth Co., which makes the Scripps-Booth, and the Sterling Motor Co., which makes motors only, have been merged as the Scripps-Booth Corp.

Bauer Declares Big Dividend

DETROIT, MICH., July 24—The Bauer Roller Bearing Co. at its July directors' meeting declared a 15 per cent cash dividend as its regular quarterly dividend.

Digitized by Google

Maxwell Common to Pay 10 Per Cent

NEW YORK, Aug. 5—Maxwell common will pay 10 per cent and second preferred 6 per cent if the recommendation of the executive committee is sustained. Earnings for the year ending July 31 will exceed $5,000,000.

From Everywhere

Los Angeles—The Los Angeles Trailer Co. has been incorporated at $50,000. J. N. Patterson, formerly of Detroit, is to be president, and G. A. Norton, from Detroit, will be vice-president and chief engineer.

Los Angeles—The Moreland Motor Truck Co. has announced a new 1500-lb., rapid-service, utility model, the chassis to sell at $990. The equipment includes: Wisconsin motor, Timken axles and roller bearings, three-speed transmission, and choice of solid or pneumatic 34 x 3½ tires.

Detroit—The Detroit Weatherproof Body Co., which was organized last year with a capital of $10,000, has taken over the business of the C. R. Wilson Body Co. and has reorganized. Its capital stock is now $750,000. The company will specialize on the Detroit Top, which is a detachable, convertible, all-season limousine top of medium price. A new factory will be erected. The company intends to make between 50,000 and 100,000 tops the coming year.

Chicago—The Perfection heater, made by the Perfection Spring Service Co., Cleveland, has been adopted as standard equipment on all Shaw and Yellow taxicabs in this city.

Louisville, Ky.—The personal property of the Hercules Motor Car Co. has been sold at auction for taxes amounting to $5,582.42. It was bid in by the H. & P. Machine Tool Co., New York City, for $6,100. The property comprised a large quantity of machinery and office fixtures, but not the real estate.

Peoria, Ill.—The Avery Co. is completing an order for 1000 military tractors, placed by the Government of France.

Philadelphia—The Edward G. Budd Mfg. Co. is having a factory addition built at Twenty-fifth Street and Hunting Park Avenue for the making of bodies.

Bridgeport—The gross value of the domestic business of the Locomobile Co. of America for the quarter ending June 30 exceeded that of the corresponding period in 1915 by about $1,000,000.

Sacramento, Cal.—The Golden West Motors Co. has been reorganized and arrangements are under way for the resumption of the manufacture of motor trucks.

Columbus, Ohio, is to be the home of a new automobile tire factory, that of The J. P. Gordon Co., makers of seat covers, tire covers and one-man tops and other automobile specialties.

Jamestown, N. Y.—The Salisbury Wheel & Mfg. Co. has increased its capital from $500,000 to $1,000,000.

Detroit—Since March 20, when the first war department order was received, the Packard Motor Car Co. has built 517 trucks for the United States Army and has shipped them, with 747 drivers and mechanics, to the Mexican border. There are 200 additional trucks on order.

Pontiac, Mich.—Effective Aug. 1, the garage owners here advanced repair charges from 60 cents per hour to 75 cents per hour, necessitated by the high cost of labor and overhead expenses.

Philadelphia—The Tay-Miller Mfg. Co. has increased its capital stock to $100,000 to provide facilities for an increased business in the company's patented Hand-I-Wash combination of water, soap and towel in a compact case.

Santa Fe, N. M.—For the 6 months ending July 1, 1916, there were issued a total of 6302 automobile licenses in New Mexico. This was nearly a 40 per cent increase in the number of licenses over last year. It is expected that not less than 1800 additional licenses will be issued during the next 6 months of the year.

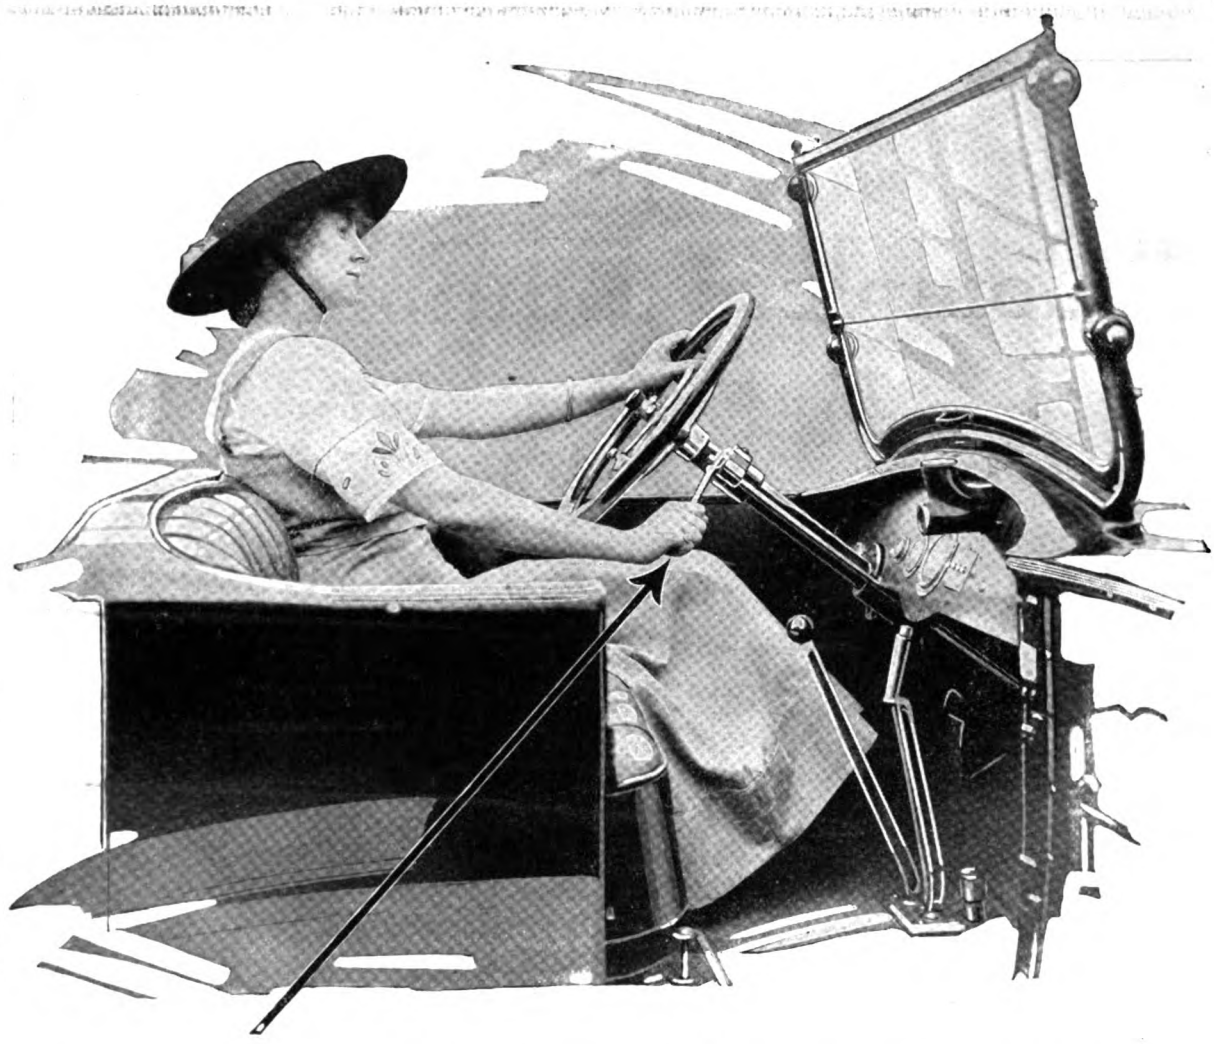
What is "Complete Equipment?"

That is the question!

In view of the number and the standing of the manufacturers who use the Waltham Automobile Clock as regular equipment, it is difficult to see how any manufacturer can consider his car fully equipped unless it includes an automobile clock.

The Waltham Automobile Clock



is standard equipment on:

Brewster	Marmon
Cadillac	Owen Magnetic
Cole	Packard
Crane	Pierce-Arrow
Detroit Electric	Rauch & Lang
Franklin	Rolls-Royce
Haynes	Simplex
Locomobile	Stearns
Lozier	Winton

WALTHAM WATCH COMPANY, WALTHAM, MASS.

The Little Economy Lever Makes Your Car a Twelve or a Six

The Enger Twin-Unit Twelve

Here is the season's biggest sensation—a Twelve and Six in one. It is the utmost in luxury, and the extreme in economy, combined.

This new Enger invention gives you twelve cylinders for starting for for quick acceleration, for slow driving, for rough roads and hills.

But for all normal driving simply pull the little Economy Lever on the steering column and instantly your Twelve is the most economical Six the world has ever seen—a Six that will take you **35 miles on a gallon of gasoline.**

You have simply cut out six of your cylinders which are now idling—but ready instantly for any emergency.

And you've cut your fuel bill in half.

Nothing could be more luxurious than this Enger Twin-Unit Twelve. Nothing even approaches it for economy.

Twelve and Six Both in One

$1295

f. o. b. Cincinnati

Emergency power in other cars eats up fuel constantly—extravagantly—needlessly.

In the Enger Twin-Unit Twelve you have emergency power in abundance—**but it uses fuel for surplus power only when called upon.**

No wonder this car has created such a sensation—has stirred up such enthusiasm.

For it combines all the luxury of twelve cylinders with the greatest economy feature known to motordom.

No other car at anywhere near the price ever has approached such attainments—none at any price combines them.

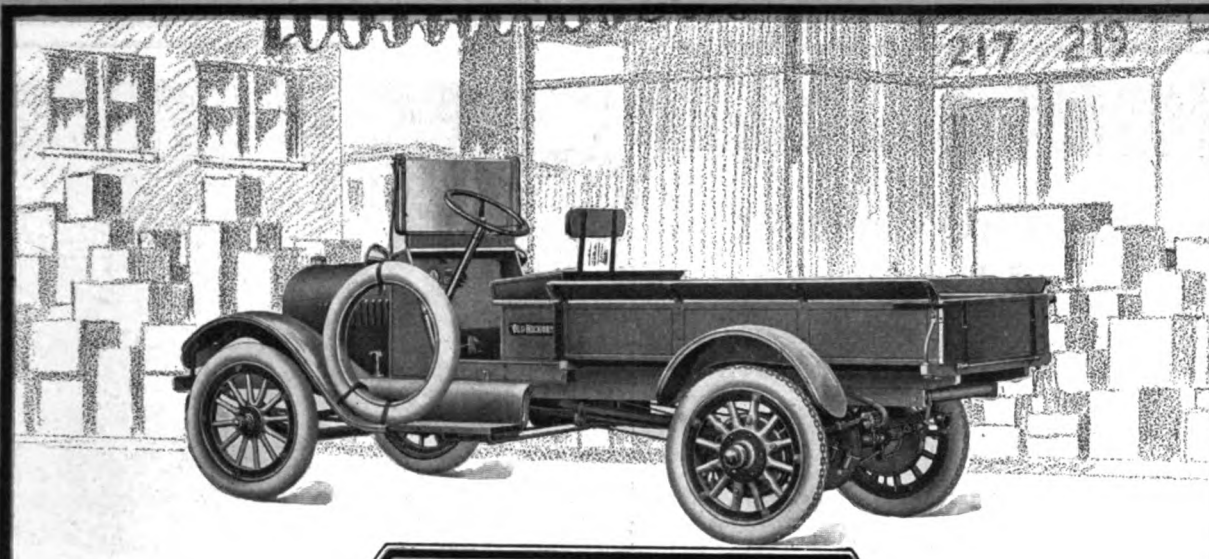
The Chance of a Lifetime for Dealers

Dealers, here is the chance of a lifetime. The Enger Twin-Unit Twelve has created new motor car ideals—and it has created an enormous demand.

Foresighted dealers are already cashing in on it.

Prospective dealers are writing in constantly—and good territory is being rapidly snapped up.

We can still use a few more men of the right type in our selling organization.



Write or wire us at once.

If you are the right man and your territory is not already taken we can make you an attractive proposition.

Write for Booklet "The Story of a Gallon of Gasoline."

"OLD HICKORY"

LIGHT MODEL DELIVERY TRUCKS

"The Truck that sells faster than pleasure cars."

A structure especially designed and built in strict accord with the most modern engineering practice, with an unusually wide margin of reserve power and strength in the motor and frame. Built to stay at work on the job, and out of the repair shop—and it does it.

Pronounced the "ideal general purpose delivery," because in both capacity and price it fits into *every man's* business, however limited or extensive.

Whether you are a truck dealer or truck user, handling heavy or light units, or both, it will pay you to investigate the "OLD HICKORY."

Built and backed by an organization with a half century's record of successful vehicle construction and square dealing in a plant covering 30 acres of modern manufacturing facilities.

CONDENSED SPECIFICATIONS

Lycoming enbloc motor four cylinder 3¼ x 5. Removable water cooled head. Grant Lees transmission, single flexible universal straight line drive, Dyneto electric starting and lighting, Connecticut ignition, Carter Carburetor, irreversible steering gear. Main frame of *rolled* steel channels. Semi-Elliptic front and double scroll full elliptic rear springs. Radiator mounted on coil springs. Semi-floating rear axle. Hyatt roller bearings. Bevel drive geared six to one. Tires 33 x 4". Weight of chassis 2100 lbs. Rated capacity 1250 lbs.

Progressive dealers can command the cream of the motor truck trade with OLD HICKORY. Its many desirable features and our liberal selling arrangements make the line a substantial business asset. Choice territory still open. Write or wire today, stating territory desired.

Chassis $825 F.O.B. Louisville

Furnished also with standard Express Body, with or without top and windshield.

Just One Grade of Material

Throughout the entire U. S. Ball Bearing plant, there is only one grade of raw material to be found—the very finest that money can buy.

Quality bearings therefore are assured in the U. S. Ball Bearing plant because materials to make inferior bearings are never to be found.

All U. S. Bearings are made of a chrome carbon alloy steel, produced from our own prescription, which we have found best suited to this special work. Obviously each individual bar of steel is tested both chemically and physically, before it is allowed to be made into bearings.

The highest type of balls obtainable are used and these balls are held accurate to the one-ten-thousandth of an inch both as to size and spherity.

The retainer or cage, is made of two corrugated steel members solidly riveted together. This gives a flexible and sturdy cage, which directs the balls at the axis of rotation with the least possible friction.

TRADE MARK
NIGRUM
REG.- U.S. PAT. OFFICE

NIGRUM (Impregnated Wood) OIL-LESS BEARINGS

Any bearing, you know, must be kept perfectly and constantly lubricated to allow the shaft to work freely within it. Otherwise, *friction* and *undue heating* will quickly result, causing the ruin of both bearing and shaft.

NIGRUM Oil-less bearings do not require oiling. They remain perfectly lubricated, without any attention whatever, almost indefinitely.

NIGRUM Bearings are used by the majority of the most prominent Motor Car manufacturers in places about a car where it is difficult or impossible to keep an ordinary bearing properly lubricated.

NIGRUM Bearings are made of tough hard wood, specially treated and impregnated with a lubricating compound. Although lighter in weight than metal, NIGRUM Bearings are eminently superior for certain uses. They remain cool and efficient in service, never squeak and, once installed, can be forgotten. They can be used with equal satisfaction for light or heavy service, of almost any speed.

Used by the majority of Motor Car manufacturers, by many hundreds of machinery manufacturers.

We also manufacture the famous BOUND BROOK Graphite and Bronze Oil-less Bearings.

All genuine graphited Oil-less Bearings have always been made at Bound Brook, U.S.A.

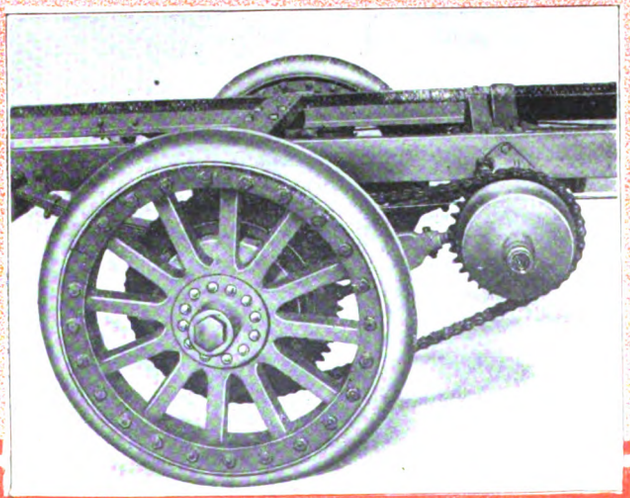
AXLE—Heat treated, 2¼ x 1¾ in. section.
Bearings—Roller, 4 on rear axle; rated for 7,000 lb. load.
Brakes—2½ x 12 in. internal expanding on rear wheels.
Capacity—2,000 lbs. in addition to body.
Chains—Baldwin, ⅝ in. roller, ⅝ in. wide, 1 in. pitch; guaranteed for 4,000 lb. load.
FRAME—4 in. steel channel, heavily reinforced in four places.
Gear Ratio—7.1 to 1 on high speed; 18.1 to 1 on low speed.
Loading Space—9 to 11 feet back of driver's seat. 4 to 6 feet wide, according to body.
RADIUS RODS—Special analysis, heavy steel, adjustable.
Springs—Side springs, 42 in. half elliptic, 10 leaves; relief spring 32 in. special, 6 leaves.
SPROCKETS—Baldwin special analysis steel, heat treated.
TIRES—32x3½ in. solid, standard equipment. 32x4 in., special equipment. Goodrich or Goodyear.
Tread—Standard, 56 in., front and rear.
Weight—Chassis, including Ford Car, 2,100 lbs.
WHEELBASE—125 in.
WHEELS—Artillery type, 2 in. spokes, second growth hickory, guaranteed.



Ton-Truck
WE MAKE

WE are in position to make immediate deliveries. Our manufacturing facilities are large enough to enable us to keep our dealers supplied up to their full requirements at all times.

It is our established policy to accept no more orders than our production capacity will enable us to fill. We make no promises we cannot keep.

The advantage of dealing with such a concern is obvious to dealers who realize that late deliveries frequently mean lost sales.

Right now thousands of prospects are in the market for Ford truck units. The MAXFER, with its exclusive constructional features, with a firm of established financial integrity behind it and with a positive guarantee of prompt delivery, should command the attention of every dealer figuring on entering this wonderfully growing truck unit business.

Points of Superiority

1. Ford axle used without change or alteration,
Saves Time

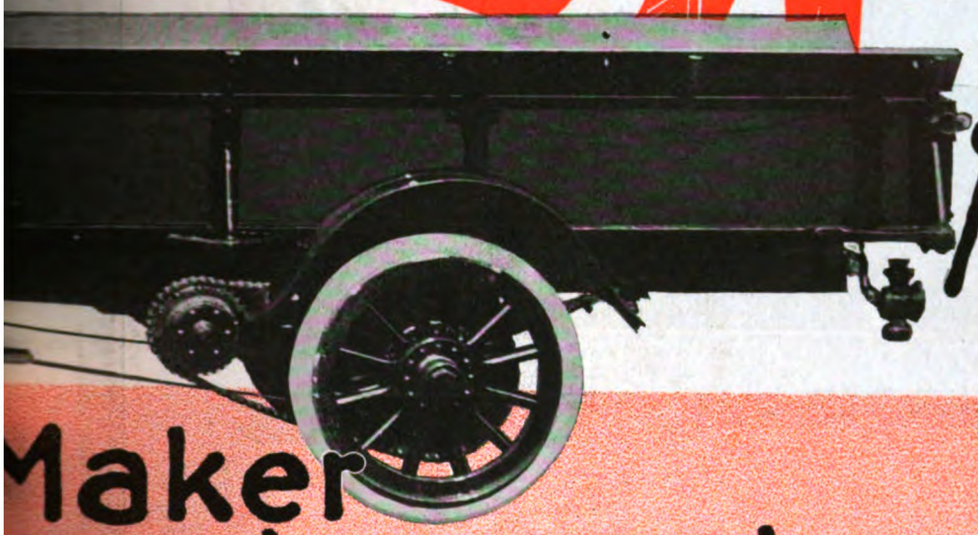
2. Engine turns over less in carrying one ton one mile,
Saves Gasoline

3. Frames reinforced with four cross members,
Adds Strength

4. Sprockets of Baldwin special analysis steel, not malleable iron,
Adds Durability

5. Shipped set up ready to attach to Ford Chassis,
Saves Labor in Assembly

6. Shipped day order is rec'd,
Saves Delay



7. Liberal proposition to dealers,
Makes Money for You

Announcing the New Westcott SIX SERIES 17

Four Passenger Cloverleaf Roadster.....$1590
Five Passenger Touring Car..... 1590
Seven Passenger Touring Car..... 1690
Complete line of closed cars to be announced soon.

Plenty of leg room and real comfort for all passengers.
Adjustable Gemmer steering gear and foot pedals.
Unusual steadiness on road.
Cool even ventilation in front and rear compartments.
Large Stewart-Warner Vacuum Gasoline system with fuel supply on rear of car.
Upholstery of best grade No. 1 long grain dull leather without buttons. Very comfortable, clean, sanitary.
Unusual attention to finish of both painting and trimming.
Very short turning radius.
Jiffy curtains on all open cars.
Water-tight wind-shield. Top glass overlaps lower 1¼". Sides water-tight with rubber strippings. Lower glass ventilates, upper glass rain visioned.
Antique mahogany instrument board, with large compartment under lock and key for small personal effects. Handsome instruments and within easy reach.
Warner electric clock and speedometer.
Automatic Thermostatic control of engine temperature.
Westcott Continental Motor, 3½" x 5¼".
Delco two unit lighting, starting and ignition system.
Timken axles with Timken bearings throughout.
Worm bevel differentials
Heavy Brown-Lipe transmission with Timken bearings.
Vanadium Springs. Dry Plate Multiple Disc Clutch.
Tubular Drive Shaft with two Spicer Universal Joints.
Pantasote one-man top. Flush Tonneau Lamps. Boyce Motometer. Power Driven Tire Pump. 125" Wheel Base. Rayfield Carburetor. Single or Double Tire carrier. Improved Auxiliary seats.

FOR THE past eight years the demand for Westcott Motor Cars has exceeded the production, although the Westcott price has advanced year by year.

Seventy per cent of all Westcott Cars have been purchased by persons who have previously owned automobiles and who presumably knew values. During recent years an ever-increasing proportion of our output has been claimed by owners of Westcotts of earlier models.

This discriminating recognition of basic motor car values has been our inspiration in creating the new Westcott of the Seventeen Series—a car of light-weight tendencies that embodies every essential of efficiency and refinement without the costly non-essentials and superfluous embellishments that increase first cost and impose a constant overload of operating expense.

Although the new Westcott does, as a matter of course, every "stunt" that any "sensational" car is advertised to do, it is not a freakish car but a practical, serviceable, road-worthy automobile of superb proportions and with endurance built into every part. In beauty, in refinement, in luxury, in spaciousness, comfort, convenience, safety and distinctive personality, the new Westcott leaves nothing to be desired.

Quantity of output has never been the ambition of this company. In these cars not one little detail has been sacrificed on the altar of frenzied manufacturing. We have put into them far more than we have saved by overhead economies resulting from a great natural increase in production.

It is for these reasons that we are able confidently to invite the prospective purchaser to compare the new Westcott, point by point, not only with cars similarly priced, but more particularly with automobiles that are universally accepted as standards of design, engineering and construction.

Catalog, containing complete specifications in detail, sent on request.

It Paves To Solid Comfort to You Mr. Car Owner

What It Is

Dann Insert is a thin, perforated strip of soft, shock deadening anti-friction metal inserted between the leaves of all the springs. It is packed with a special graphite compound which will not flow liquid and which insures maximum efficiency at all times. Springs are perfectly, continuously, permanently lubricated; will not become stiff, inactive or squeak. Your car will ride as easily as though it were floating on air Try Dann Insert on our money-back guaranty.

Easy Riding—or Your Money Back

This is our guarantee—you are the judge and you have 30 days in which to prove to yourself that Dann Insert gives you the easiest riding car in the world, and, in addition, perfect spring lubrication, increased tire mileage, reduced car depreciation, no squeaks, and freedom from dry springs.

Dann Insert is the only real and permanent relief from spring troubles. Thousands of owners of all makes of cars are using Dann Insert now. They are convinced that it is giving them the easiest riding car in the world. Their own records have shown that Dann Insert has saved them money in reduced depreciation on their cars and in greatly reduced tire troubles. Dann Insert gives them the full benefit of perfect spring action and prevents and absolutely eliminates all other spring trouble that automobile engineers admit in their instruction books.

Every User of a Dann Insert Is an Enthusiast. Read What They Say

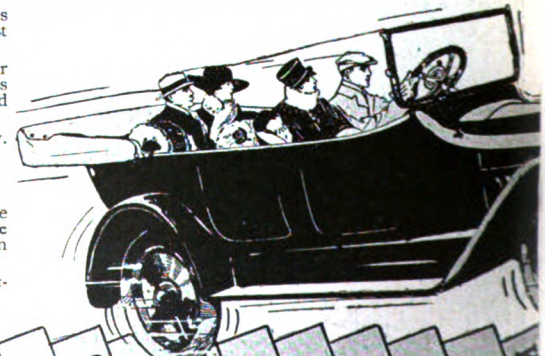
Our Riding a Comfort Never Known Before

Our Hudson car is equipped with Dann Insert. It rides smoothly over all roads and the maximum of riding pleasure is obtained. My wife and I are over sixty years of age and the fact that our car has the extra equipment of Dann Insert makes our riding a comfort never known before. I heartily recommend Dann Inserts.—A. S. Eichner, Chicago.

Mo.e Than Satisfactory In Every Way

Last June I bought a Cadillac 8 Car and had it equipped throughout with your spring inserts by the Carolina Cadillac Co., of Winston, N. C. They have been more than satisfactory in every way. I have never had a spring squeak, and have remarked on the noiseless and easy riding qualities of my car.—Chas. B. Wagoner, Concord, N. C.

The Results Were Absolutely Perfect



The writer used a "Little Six" Hudson 1914, 16,000 miles after you had placed your Inserts in the springs. The results were absolutely perfect.— E. L. Cox, German-American Portland Cement Works.

WHY DELAY ANOTHER MINUTE? We take all the risk. You know you need Dann Insert—SEND FOR BOOK NOW

Dann Insert prices have been greatly reduced. At the new prices there is no longer any excuse for your not enjoying the greatest comfort an automobile can produce.

Send for our price list, and booklet giving full information. Remember that we sell Dann Insert on thirty days trial, and if after thirty days you decide that you can do without it, you simply send it back and we refund every penny of your deposit.

Don't let Dann Insert get away from you. Send for the book today. Fill out the coupon: mail it now.

Big National Advertising Campaign

Dann Insert is now being advertised by a big campaign of pages in the **Saturday Evening Post, Collier's, Literary Digest, Leslie's, Scientific American, Life, Popular Mechanics, Popular Science Monthly,** and in the big automobile trade papers.

This campaign will be the biggest put out by any accessory manufacturer this year, and is now well on the way.

the Way To Solid Business for You Mr. Dealer

What It Does

Dann Insert keeps springs continuously lubricated—stops drying out—rusting—squeaking—breaks up road shocks—reduces vibration—gives wonderful smooth riding—cuts down tire and upkeep expense—retards depreciation. This sounds too good to be true. But we back every claim with our guaranty—proved satisfaction or your money back.

Thousands of Orders Every Day

Dan Insert sells like wildfire to every automobile owner. Dealers are specifying as high as $6,000 in monthly shipments. Desirable territory closing fast for the easiest selling, biggest money making accessory on the market.

Everybody wants Dann Insert now at the new low price—sales have quadrupled.

Big dealers and distributors all over the country are taking on money making contracts for big quantities—are cashing in on our big advertising and sales campaign.

Every well known make of car is represented by thousands of enthusiastic users of Dann Insert. Every owner of an automobile in your territory is a propsect—is more than a prospect—he is a sure buyer.

If YOU Are a Live Dealer—Use the Coupon Today

Dann Insert sales are jumping by leaps and bounds. A quarter of a million dollars worth will be sold in the next sixty days. Are you going to get your share of the profits?

Don't Fail to Read Our Book on Spring Lubrication!

It tells the wonderful saving Dann Insert effects on tires, depreciation, mileage and repairs.

Write, Wire—But Send the Coupon Today

We don't have to tell you how enthusiastic every Dann Insert dealer is over the wonderful business he is doing. You all know that from the success of the dealers around you.

The attached coupon will bring you our complete proposition — simply say you are a dealer. Right now is the big selling season, when accessories are in tremendous demand. It is the time for you to get started — to be known as the leader in your territory in handling equipment that will save the owner money, that will increase every owner's satisfaction and pleasure. Every day you delay means loss of good profit. Act now — cut the coupon out and mail it — then wire to us that it is coming.

NOW IS THE TIME TO BUY

DANN INSERT

"The Inter-Leaf Shock Absorber"

Get It Now

Read What Prominent Engineers Say About Lubricated Springs

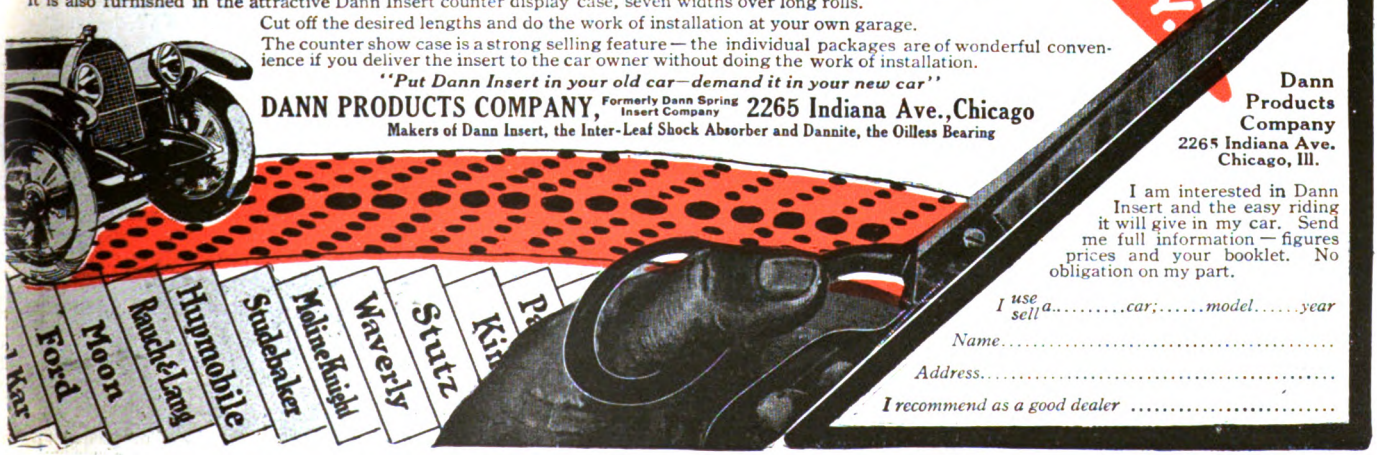
Hudson:—Springs need lubricating on an average of every 500 miles; if used in the winter, or when the roads are in poor condition, and the springs are constantly covered with mud, they will have to be lubricated more frequently. This is also true of heavy closed cars, especially limousines, which are washed more frequently than the average touring car.

Marmon:—The importance of proper lubrication cannot be too strongly impressed. Owners who show remarkable records for economical operation are those who watch this point carefully.

Cadillac:—When the leaves are not lubricated water works its way in between the leaves and causes them to rust, often to such an extent that they become like solid pieces. This causes them to loose much of their spring action. It is a good plan to jack up the frame of the car occasionally, so as to take up the weight off the springs, and insert oil and graphite between the leaves. It is also a good plan, about once a year, to have all the springs taken apart, surface thoroughly cleaned and coated with a thick mixture of oil and graphite.

A Quick, Easy Seller

Dann Insert is furnished in individual boxes for every make of car—packed ready for immediate distribution. It is also furnished in the attractive Dann Insert counter display case, seven widths over long rolls.



Cut off the desired lengths and do the work of installation at your own garage.

The counter show case is a strong selling feature—the individual packages are of wonderful convenience if you deliver the insert to the car owner without doing the work of installation.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

Some Smart Cars

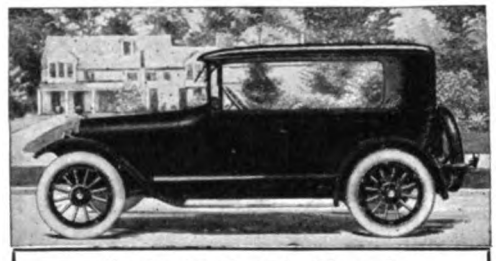
We have some very able men in this organization to keep Mitchell cars up-to-date.

They watch for new ideas and touches, and see that Mitchell cars get them quick.

Just now they are bringing out some particularly smart cars, each the last word in its type. A Limousine; a Sedan; a Coupe; a Town Car; a Cabriolet.

If you are interested in such types, we have something fine to show you.

All-Season Cars



There is a growing demand for all-season models, like the Sedan and the Cabriolet.

One is a fixed-top touring car which changes in a moment to an elegant Sedan. The other a three-passenger Roadster which becomes a Coupe. These types which serve for winter and summer, for rain or shine, have attained a remarkable vogue.

The new Mitchell models—just brought out—show these types in perfection.

New Mitchell Class

These artistic models—luxury cars—are winning the Mitchell a new class of buyers.

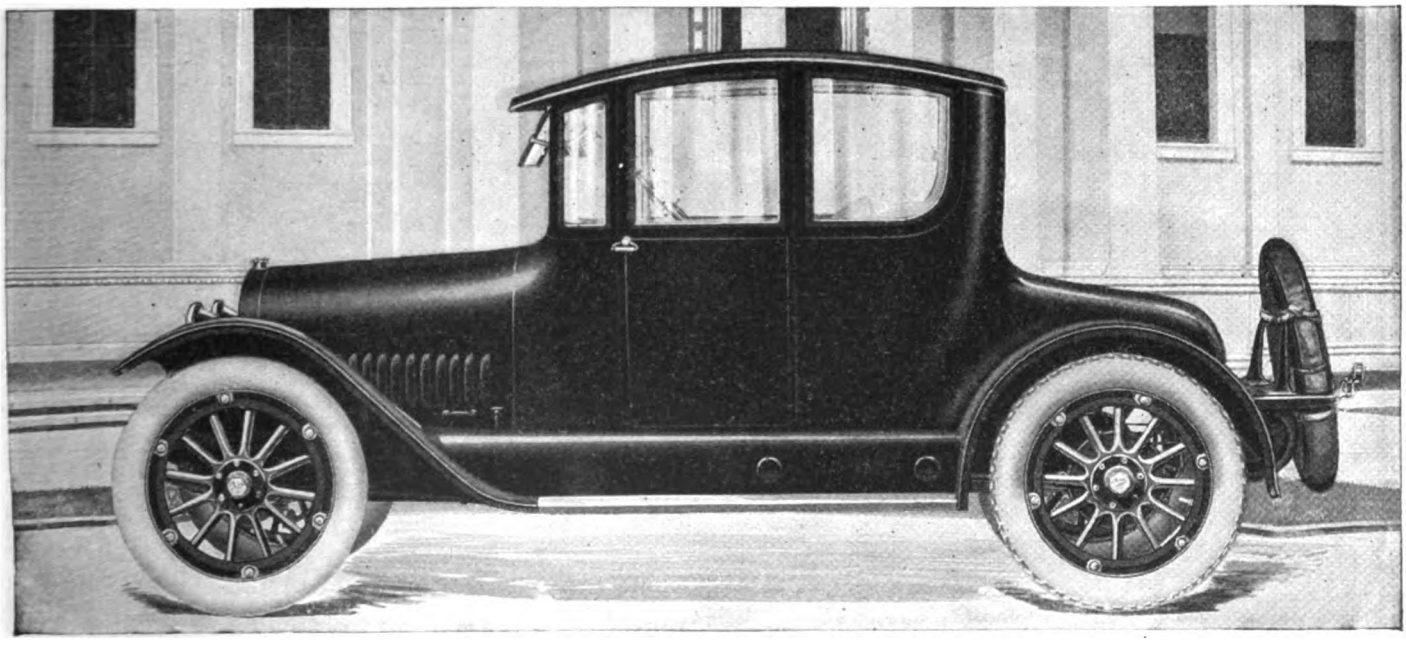
$1325 F. o. b. Racine

For 5-Passenger Touring Car or 3-Passenger Roadster

7-Passenger Touring Body $35 Extra

High-speed economical Six—48 horsepower—127-inch wheelbase. Complete equipment, including 26 extra features. Also five types of closed bodies.

Under John W. Bate, the efficiency expert, the Mitchell became known as "The Engineers' Car." It has stood for mechanical perfection. Its chief appeal has been to men schooled in engineering.



In the past two years we have given equal attention to the showier side of the car. This year we brought out a Mid-Year Mitchell with 73 new conceptions. In that one car we embodied all the best new ideas extant.

We included 26 extra features which other cars omit. And that made it by far the most complete car.

We adopted a 22-coat finish, deep cushions, French-finished leather. We put a light in the tonneau, added a locked compartment. For comfort's sake we adopted 52-inch Bate cantilever springs.

Now these new bodies will make the Mitchell the aristocrat of cars. Every dealer knows how much that means in deciding the choice of a car.

WEAVER 20-ton Garage Press List Price $56

3000 to 1—This Quick Adjustment Doubles Your Leverage for Heavy Work

One man can do work on a Weaver Garage Press that two men would break their backs over on most presses — and yet you have a quick leverage with the 1500 to 1 adjustment for all ordinary jobs (increased to 3000 to 1 by simply changing the lever adjustment to the other hole).

Excess power (50% more than the 20 ton capacity if you need it in a pinch) — open, strong construction that stands strain and permits you to press all kinds of articles (big, little, wide or long) — surprisingly low price — these are the practical features which appeal to any wide-awake garage man.

You will see by the cut that the bolster can be set at any point on the frame — extreme perpendicular capacity of 48 in. Quick acting — the wheel and screw are supported on ball bearings. The screw can be spun its full length in a few seconds.

WEAVER Auto Ambulance List Price $30

WEAVER Bucket Pump $12

Don't let press of business make you put off sending for our full catalog of the Weaver line of jacks, ambulances, towing poles, presses, etc., another day. You need them in your business because every one is self supporting and shows a profit.

Send now for Booklet 731 NOW— while you think of it.

UNIVERSAL LUBRICANT COMPANY
PENNSYLVANIA PETROLEUM PRODUCTS EXCLUSIVELY

Binghamton, N. Y., July 17, 1916.

Sunderman Safety Carburetor Corporation,
Newburgh, New York.

Gentlemen:

We have two cars equipped with the Sunderman Safety Carburetor as demonstrators, and the writer drove one of them, a Ford, carrying 750 pounds, or more, from Binghamton to Oneonta, including a bad detour, approximately seventy miles, consuming only about two gallons of gas, which has convinced me more than ever of the merits of the carburetor when properly adjusted.

Very truly yours,
(Signed) UNIVERSAL LUBRICANT CO.

SIZE F

Dimensions 4½"x2½"x1⅞".
Suitable for any engine up to 45 H. P.
Subject to different size nozzle according to bore and stroke of motor.
Weight: 1¾ lbs.

A Sunderman Safety Carburetor properly installed and adjusted increases the mileage of any car, of any make, of any number of cylinders.

Can be installed within an hour.

"Ford" installation can be made within 30 minutes.

Will decrease your gasoline bill from one-third to one-half.

Has no wearing part, thereby saving all troubles of replacements.

Simplicity itself. Composed only of 24 parts, while all other carburetors have from 50 to 140 parts.

Produces a pure dry gas, leaving no carbon deposit, eliminating valve grinding, gas pound and foul spark plugs.

THIS IS A CARBURETOR, NOT AN ATTACHABLE GAS OR AIR RECTIFIER

H. F. PARKER & CO.
AUTOMOBILE ACCESSORIES

623 W. North Ave., Baltimore, Md.

July 10, 1916.

Sunderman Safety Carburetor Corporation,
Newburgh, New York.

Gentlemen:

The Sunderman Safety Carburetor left with us is being used on a Ford delivery that makes the same measured course each day, and has been getting 12 miles to the gallon. It is now getting 29½ miles to the gallon, and this is on a baker's delivery in the city, with a great number of stops; or when they do not stop the engine it is kept running while the driver is in the store transacting business.

Very respectfully,
(Signed) H. F. PARKER & CO.

SUNDERMAN
SAFETY CARBURETOR

FEATURES:

Enormous Gasoline Saving
Greatly Increased Mileage
More Power
Great Flexibility
Fast Get Away
Quick Pick-up
Easy Starting
Positively no Backfiring
Absolute Simplicity
Adjusted to all Climatic Conditions.
SPEED
A wonder for Fords—Does great work on big cars

I AM a gasoline motor.

I serve the interests of man. I contribute to his pleasure. I aid him in his business.

My services extend to the far corners of the earth. I am depended upon by armies and by peaceful tillers of the soil. On city streets and country roads are the countless vehicles I drive.

I serve in all climates and in all weather. I am driven often by hard masters. Yet always I serve.

My needs are few. Yet what I need I cannot forego. Gasoline I need to feed me, oil to ease my efforts, an electric spark to give me life.

I ask only a proper mixture of gasoline and air, a proper quality and quantity of oil and a spark that is hot, timely and unvaryingly strong.

Give me an EISEMANN MAGNETO.

EISEMANN MAGNETOS

are Dependable—Durable—Efficient. The spark they give is hot and sure at any speed, low as well as high. Using an Eisemann, you will find the pick-up quicker, the flexibility greater, the gas consumption at its minimum.

EISEMANN MAGNETOS are made in a range of types and sizes to meet every requirement of gas or gasoline engines.

"CARSPRING" TIRES HAVE BEHIND THEM OVER A HALF CENTURY EXPERIENCE IN RUBBER-MAKING—AND THE ENTHUSIASTIC SUPPORT OF THOUSANDS OF MOTORISTS.

"CARSPRING" SELLING METHODS HAVE BEHIND THEM A FIRM BELIEF IN THE PERSONAL RESPONSIBILITY AND TRUSTWORTHINESS OF OUR DEALERS—WE GIVE THEM EXCLUSIVE TERRITORY "FOR GOOD", THE WIDEST LATITUDE IN MAKING ADJUSTMENTS AND EVERY OPPORTUNITY TO BUILD A BIG BUSINESS AND TO RETAIN IT YEAR AFTER YEAR

¶ A "CARSPRING" agency means independence to the dealer and prompt, satisfactory service to his customers.

¶ It means more customers and a bigger business every year for our dealers—more mileage and less tire trouble to the user.

¶ "CARSPRING" methods guarantee fair play to the dealer—the widest latitude in making adjustments—an exclusive territory becoming more valuable each year—and the right to hold and gather profits from that territory indefinitely.

¶ In so far as it is possible to make a perpetual contract, every "CARSPRING" dealer is protected in his territory and his customers are protected in their understandings and agreements with him. They can **depend** upon the tires and also upon those who sell them.

¶ "CARSPRING" Tires exemplify Service to the Customer and Safety to the Dealer—as well as Satisfaction to both.

We have been allotting territory very fast but some is still vacant. If you are the right man for your district, write us at once—we want you. And when you understand the liberality and fairness of our offer you will want us. Do not delay—your territory once allotted is lost to you for all time.

REMEMBER!

OpcO Is a Harmless Oil A Perfect Lubricator

And is backed by our positive GUARANTEE to refund your money if it fails to make good our claims.

TRY IT

Send for a can **today.** Use it as per simple directions and if your engine doesn't show a distinct gain in power at once return the can with what is left, and **get your money back.** Glenn H. Curtiss, the noted aviator, writes: "We have just completed a test of your OpcO Carbon Remover, and we are glad to report that the solution seems to accomplish the purpose for which it is intended quickly and thoroughly, and without the accompanying risk of damage and inconvenience common to ordinary methods of carbon removal. Kindly send me ten cans."

OPCO

It is the simplest, quickest, and most effective way ever to rid a gasoline engine of carbon trouble—to abolish overheating, knocking and loss of power.

Merely introduce a little OpcO Carbon Remover in the cylinders, start the engine, and the carbon goes out the exhaust.

Takes about 10 minutes—Costs but 6c per cylinder.

Could it be easier—quicker?

Leaves all parts of the engine perfectly lubricated.

If your dealer is out of it, send us his name and address and $1.00, and we will see that you are promptly supplied.

DEALERS Genuinely a remarkable repeater. Liberal profits for you. Write at once for particulars.

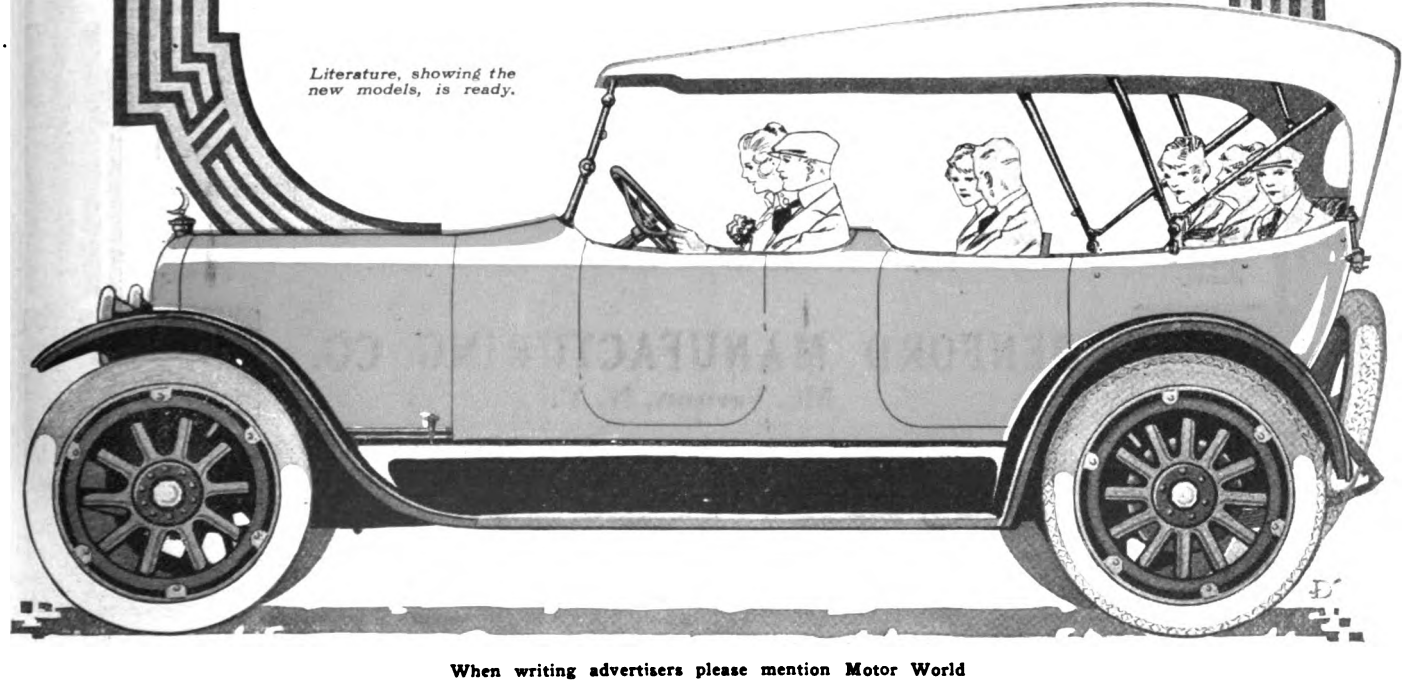
Power and Beauty

are perfectly combined in this car—pre-eminent among seven-passenger sixes at anything like the price—the new 1917 Moon

Six-66

(Actual Brake Horsepower)

Its new Continental-Moon high-speed efficiency type motor develops 66 horsepower—actual brake test—tremendous power in proportion to its weight and more than the maximum requirement. It is under perfect control—you can throttle it down to a walking gait, or drive at greater speed than most men care to try. A quick pressure on the throttle and the car picks up like a flash. Its standard equipment is headed by new Delco-Moon two-unit starting, lighting and ignition system, with Bendix automatic drive in connection with starting motor; Timken front and rear axles; over-size tires, 35 x 4½; and many other new features.



The new double-cowled body, with long, sweeping lines (Delaunay-Belleville type) is the design used on many of the most expensive European cars. The smart, slanting windshield and the genuine tan Spanish leather upholstery add further to its many attractions. The seats are specially designed to fit and rest the body—and there is more than ample leg-room in both front and rear compartments (Moon cars have always been noted for their comfortable roominess). It is a car that commands attention anywhere—no matter what its surroundings. It has an individuality and style all its own.

Seven passenger, fully equipped, $1650

The new Moon Six-43 (43 horse-power, actual brake test), five passenger, fully equipped, $1295.

"The Wise Driver from Bayside"

"I've got a good electrical system—works on storage battery, with dry cells for auxiliary ignition. I never bother with it. I'm willing to let good enough alone. But one night both went out on me and I needed the car badly. Sore and disgusted, I went for some dry cells and told the supply man my troubles. Says he, 'Use these, they'll fix you up.' He showed me two little tools—

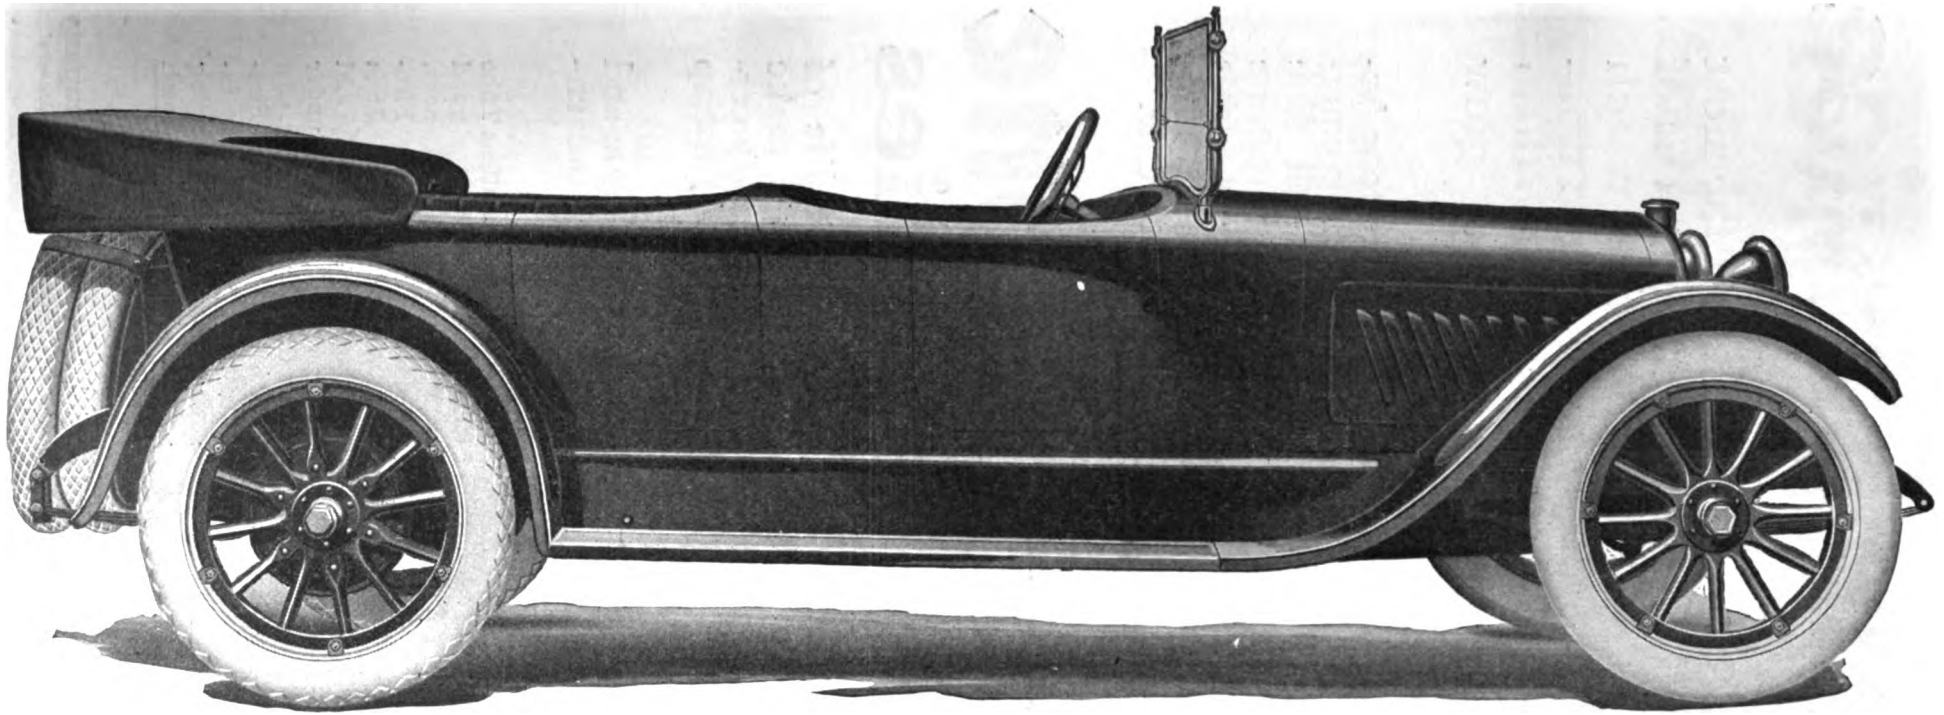
BENFORD'S INDESTRUCTIBLE BATTERY TESTERS

"One tests storage batteries and the other dry cells. You simply hold the tool *upright* on one terminal, put the wire on the other and up jumps a little tongue that tells you the exact condition of your electrical system.

"I bought them quick—I had sense enough to know that by testing my batteries regularly, they'll never double cross me again. Using a Benford Battery Tester is different from the ordinary way of testing. It's not nearly so messy and dirty. You can test in white gloves, patent leather shoes and dress trousers and never take a chance of soiling your clothes.

"You can't break 'em—the dealer threw them against the wall, and they tested just as accurately as before. They're guaranteed for five years, too."

Storage Battery Tester....$1.50
Dry Battery Tester.....$1.00



DEALERS: Nearly three million drivers will buy these. Figure the profits that are waiting for you!

People have learned that Shock Absorbers have been costing too much.

They have learned that $10.00 is enough to pay to get everything that any shock absorber can offer.

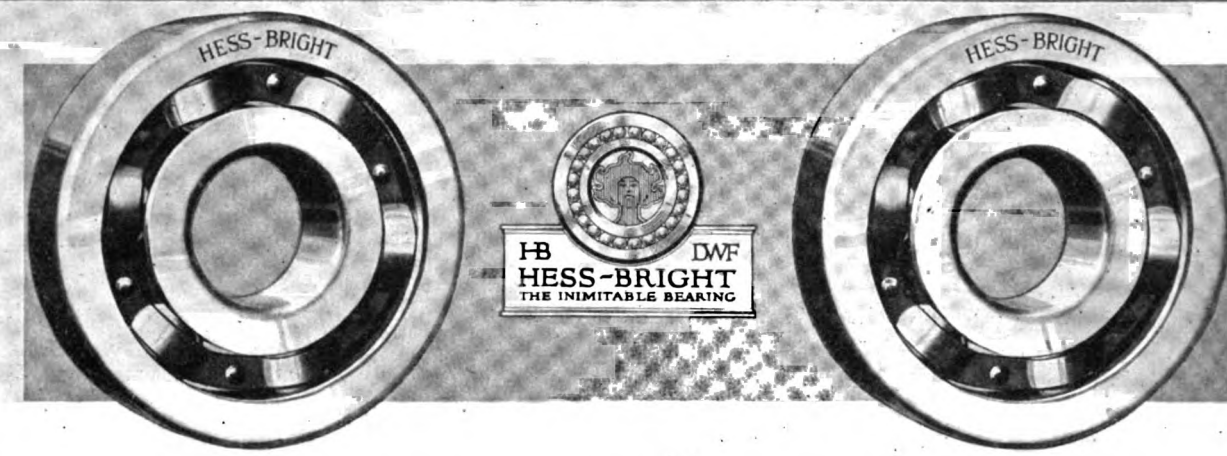
And they know that the safest way to spend $10.00 for Shock Absorbers is to spend it for the Shock Absorber that first broke down the high prices.

A Triumph of Quality and Price

The Stone Shock Absorber improves the riding quality of any car. It has a two-inch throw of springs that are strong enough to stand the work and quick enough to keep off road-blows. Double bearing surfaces on the moving parts, and Stone's ingenious device for keeping the Shock Absorber in perfect alignment, gives this absorber great length of life. We have never yet seen one that shows wear.

The Stone Shock Absorber is bringing in trade to dealers everywhere. This is a live wire which a live dealer cannot afford to overlook. You'll get new trade with the Stone Shock Absorber. And every pair you sell makes friends. There is a good profit for dealers in Stone.

Write your jobber today. If he cannot supply you, write us.



Note These Points

Two-inch thrust of springs. Adjustment range of 1500 pounds. Thorough lubrication that never fails. Increases capacity of leaf springs 10 to 30 vibrations per second. Reduces elastic duty of leaf spring 90%. Keeps the tires and car on the road. Guaranteed for one year. Any part that fails will be replaced free.

Made and Guaranteed by Universal Rim Co., Makers of Baker Rims
Dept. 48, 1502 Michigan Ave., Chicago

Prest-O-Lite Storage Battery

Not only a better battery but backed by Prest-O-Lite Service

Even the BEST of Batteries Need the Best of Service

After years of experiment and tests on storage batteries—

After employing some of the best brains in the battery business—

After buying other storage battery factories, besides building and equipping a great factory of our own—

After producing thousands of batteries on a large scale and watching and studying them in actual use—

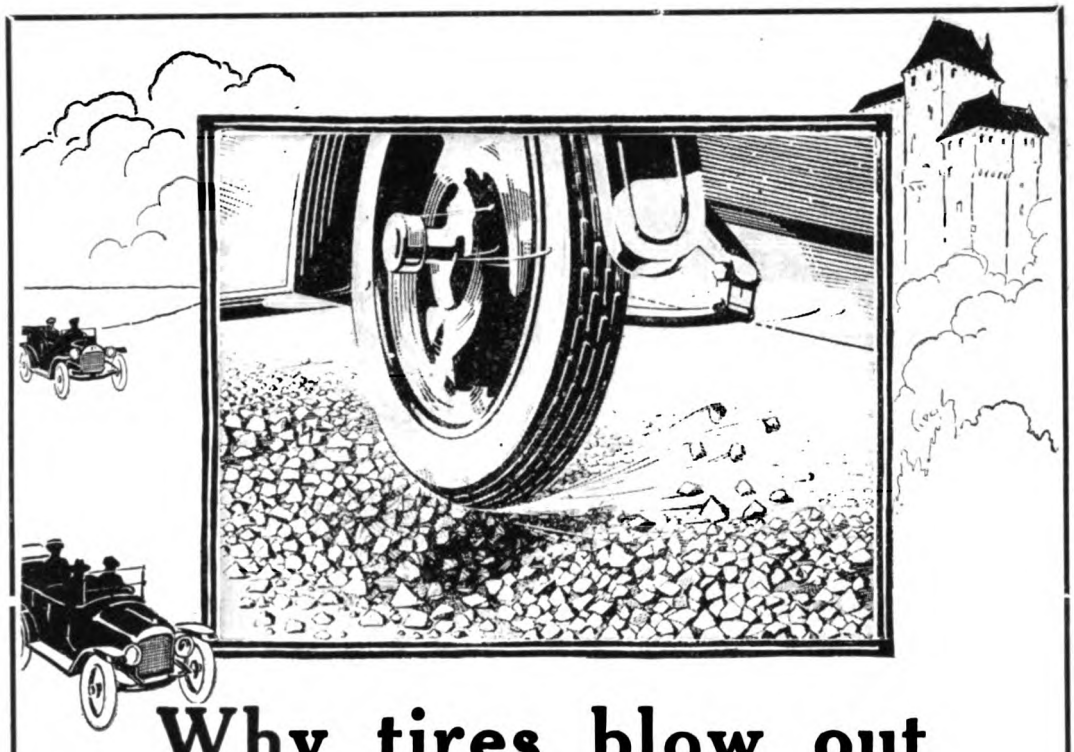
Neither we, nor any other battery manufacturer, can offer a battery which does not require first-class service.

Every Prest-O-Lite Storage Battery is backed by Prest-O-Lite Service.

The Prest-O-Lite Co., Inc., maintains more Direct Factory Branches than all other battery makers combined. They form the nucleus for the largest amount of actual service obtainable in the storage battery field.

There is a Prest-O-Lite Battery of correct shape, size, voltage and capacity for every make and model of car, and for every starting and lighting system which is or ever has been in general use.

It will pay every dealer (whether he can repair and charge batteries or not) to know the excellent business proposition afforded by the Prest-O-Lite Battery. Ask us for information.



The Prest-O-Lite Co. Inc.

902 Speedway
Indianapolis, Ind.

FACTORY BRANCHES—Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Davenport, Denver, Des Moines, Detroit, Indianapolis, Jacksonville, Kansas City, Los Angeles, Memphis, Milwaukee, Minneapolis, New York, Omaha, Philadelphia, Pittsburgh, St. Louis, St. Paul, San Antonio, San Francisco, Seattle, Syracuse.

Each of these Factory Branches is fully equipped for Battery Repairs and Service.

Why tires blow out prematurely

How Prodium Process Rubber eliminates the principal cause of this chief of tire-troubles

In good tires most blow-outs are caused by rotted fabric, and fabric rots because cuts in the tire tread expose it to water, oil, mud, etc.

Republic Tire builders have overcome this difficulty by making a tread stock so tough that even sharp stones and fresh-crushed rock do not gash or cut it.

This tread stock is Prodium Process Rubber, a new compound discovered and controlled exclusively by The Republic Rubber Company. It wears down as evenly as fine steel, is heat-proof, oil-proof, almost wear-proof.

Stylish STAGGARD Black Tread

Trade Mark Reg. U. S. Pat. Off.

Republic Prodium Process Tires can now be had in the stylish black tread, so much in vogue among motorists. In the Staggard Tread or "WM" Tread non-skid styles, this new rubber furnishes immunity from skidding possessed by no other tire. And even the plain tread style has remarkable anti-skid qualities.

Write for sample strips of this wonderful rubber, and test its great strength yourself.

A Quick Start Saves Your Battery

That long continued Whr-r-r-Whr-r-r-Whr-r-r-when you start your motor will soon kill any battery. It's a strain, a drain—on your battery, your purse and your patience which can be stopped with a

PFANSTIEHL Starter Coil

Gives a Shower of Sparks instead of one for Starting

When your motor starts with difficulty there are just two things to blame; the mixture or the spark. With a low grade fuel, or a cold or lean mixture, starting is always difficult—even with a good hot spark.

The reason is that the *spark* has to supply the *heat* to fire the mixture—some job for a tiny spark. Naturally the mixture has to be *just right* before your motor fires. In the meantime you wait for the mixture to "get right"—and wear out your battery at a fearful rate.

The way to save your battery, your purse and your patience is to put a Pfanstiehl Starter coil in your ignition system. It delivers to the spark plug a *continuous shower* of sparks while each cylinder is at the firing point. This intense heat will fire practically any mixture that a motor will run on.

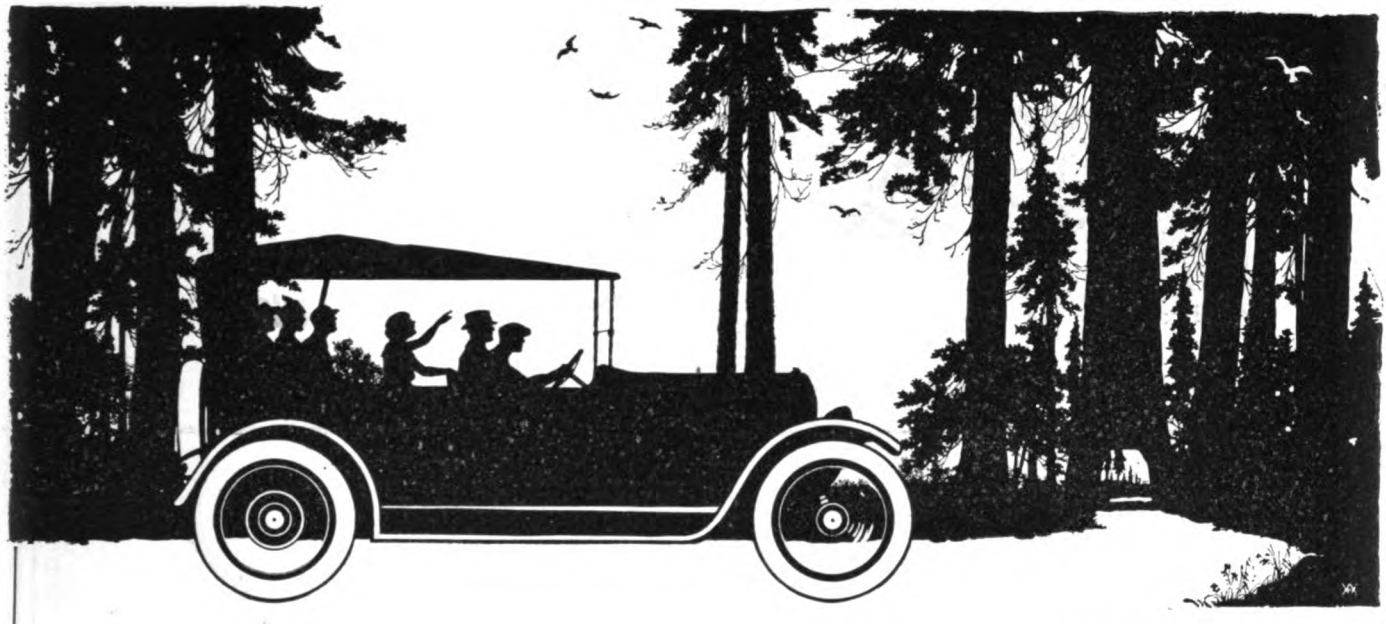
The Pfanstiehl Starter Coil is easily applied to *any battery or magneto ignition system,* either with or without electric starter. It will save its cost in saving your battery. It will save gasoline because you can have your carburetor adjusted for a *running* mixture instead of a starting mixture.

Model F
Pfanstiehl Starter Coil

Made without switch, for mounting under hood, price $9.

Model D with removable lock switch mounted in dash. Price $12

Our complete catalog sent free on request, showing wiring diagrams for every ignition system. See how the Pfanstiehl Starter Coil applies to your system. Fill out and mail blank below now while you think about it. Dealers write your jobbers or direct to us.



PFANSTIEHL COMPANY, NORTH CHICAGO, ILLINOIS

There is good money for Garages, Repair Shops, Supply Dealers

handling this much needed coil. Our advertising in the automobile papers is educating your customers to want the Pfanstiehl Starter Coil. Write for our trade proposition.

IN THE REDWOODS
WITH A JEFFERY

BOSCH

IS THE NAME YOU MUST LOOK FOR

AFTER you have faced the pain of ignition breakdown—after you have "forked up" for a magneto so as to have dependable ignition, you will have learned forcefully the necessity for looking for the name "Bosch" on the ignition system of the motor car you buy.

No item of your motor car is as important as is the ignition system.

No item is quite as puzzling or so seemingly mysterious as ignition.

No other individual accessory costs the car maker as much.

None can make or mar your motor car so readily.

For these reasons look—look for the name "Bosch" and insist on getting Bosch Magneto Ignition, for then you will have the ignition system recommended by the men who know—the highest priced system, to be sure, but the very best system, the system without a "Big Bogey Man" within itself.

BE SATISFIED

The Motor Car you buy or sell can be Bosch-Equipt—Insist

WOODWORTH TROUBLE-PROOF // TIRES //

Woodworth Inner Tubes are highest quality through and through, good strong rubber, full of life and service.

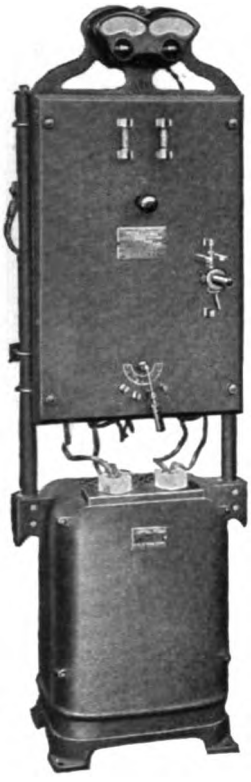
There is no Mystery

—about this tire. We have not waved a wand over it or performed any Abracadabra. We have merely built it in an obviously sensible way and have put all the cards on the table, so that you may know and understand exactly what we have.

The Woodworth Tire is, first of all, built for wear—for good service.

It is **not a** Freak tire. It is built along the lines experience has shown to be the best—the lines on which are built all tires of high quality—of Sea Island Cotton, Pure Gum, very strong Breaker Strip, and Tread Compound.

THEN—IN ADDITION TO AND ENTIRELY APART FROM THE MAKE-UP OF THE TIRE ITSELF—WE **ADD** A STRIP OF PUNCTURE-PROOF NON-HEATING CHROME LEATHER ON THE INNER SIDE OF THE CASING.



WE GUARANTEE THE WOODWORTH TROUBLE-PROOF TIRE FOR 5,000 MILES AGAINST PUNCTURES AND BLOW-OUTS, IN ADDITION TO ORDINARY WEAR.

DEALERS: All over the country dealers are now reaping a harvest from this tire, which is selling faster and over a larger territory each day. If **you** are not getting your share of this, write us at once for terms.

Mercury Arc Rectifier for charging electric pleasure vehicles, at home

Dealers' Profits in Electric Accessories

The automobile of today never could have attained its high standard of efficiency without electricity.

The battery is the heart of the electrical system on the car but its maximum usefulness can only be obtained when it is kept fully charged.

"Keep the Battery Fully Charged"

is the slogan of our advertising in Motor, Motor Age, etc., to car owners; dealers can reap the benefit of this advertising by selling Mercury Arc Rectifiers.

The most effective device for charging batteries from alternating current lighting circuits is the G-E Mercury Arc Rectifier. It is made in various sizes; the small portable, shown here, which can be plugged into any lamp socket; another type, also illustrated, for charging electric pleasure vehicle batteries; and other rectifiers for those who make battery charging their business.

These home charging rectifiers add profits to sales for those dealers who have arranged with us for an agency. Many good territories are still open and waiting for a live representative.

We also make MAZDA lamps, sockets, switches, wire, cable, trouble lamps, insulations, etc., all for the car owner's use.

Write us for full particulars of dealer discounts and prices on all G-E Automobile accessories.

Form K Mercury Arc Rectifier which can be plugged into any light socket

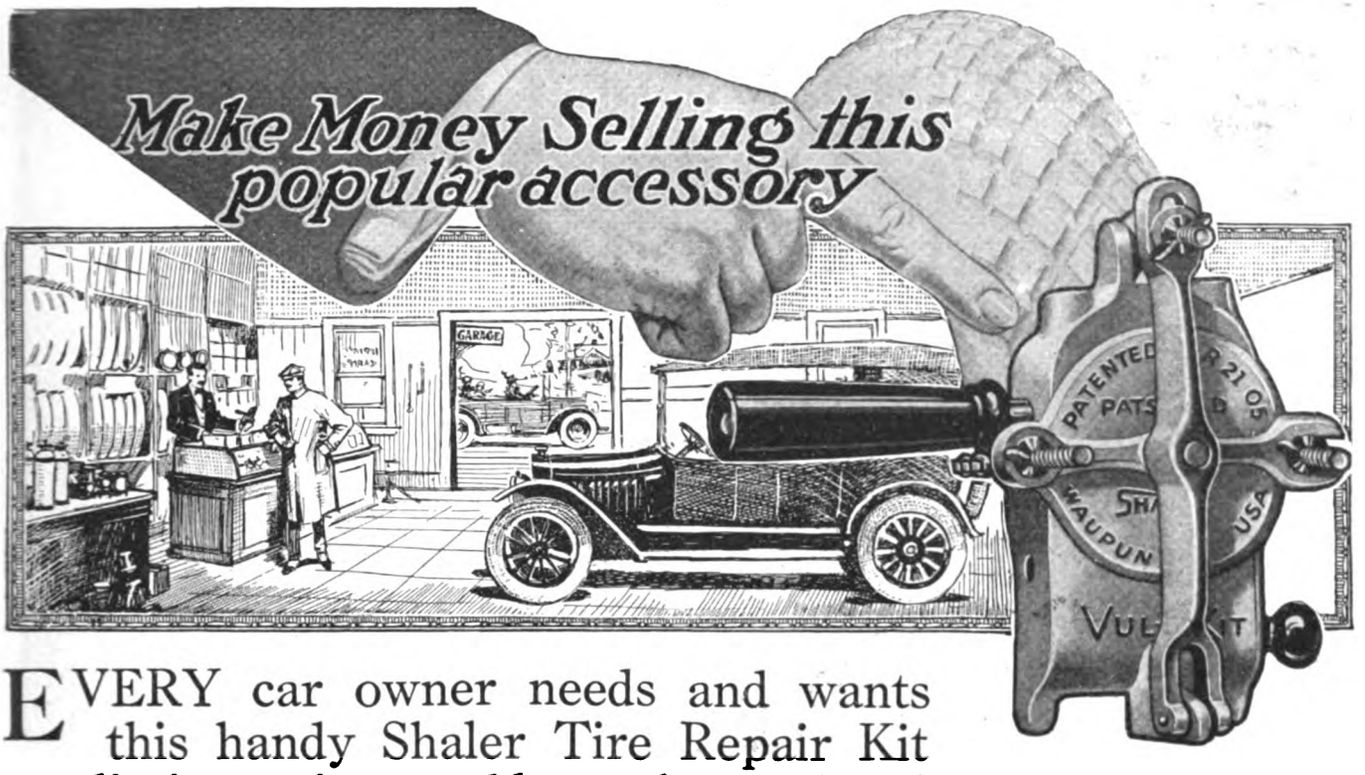
¶ If you'll go over in your mind the list of those automobile dealers throughout the country who have made money consistently, you will find that a very large percentage of them are those who have handled the Reo line of automobiles and motor trucks for several years.



¶ And those among them who have prospered most, and who today as business men stand for most in their respective communities, have handled Reo cars exclusively.

¶ The inference is, an exclusive representation of the Reo line spells financial success as well as reputation for the distributor.

EVERY car owner needs and wants this handy Shaler Tire Repair Kit to eliminate tire trouble on the road and double his mileage. It means many additional accessory sales and profits because the motorist is compelled to buy one from his dealer, as no car comes equipped with a tire-saving device. Every one of your customers is a likely prospect.

SHALER

Each sale gives you a liberal profit on the kit itself and besides gives you a continuous permanent profit on the sale of repair material and supplies that the motorist must buy from time to time, for use on the road.

Every Shaler user praises this handy Shaler outfit when he discovers how easily and safely it works and how much tire money it saves for him.

Tire Repair Kits

For motorists to carry in their tool boxes

He will praise it to his friends, which will result in more sales for you.

Because the Shaler Tire Repair Kit is such a practical, necessary accessory—especially in view of the increasing tire prices—every motorist is eventually going to buy one. And some dealer is going to make the sale. You might as well get the profit as let the next fellow have it.

The Shaler is advertised regularly throughout the season in the Saturday Evening Post and more than fifty other magazines. Motor car owners know the Shaler and call for it by name.

Write on Your Letter Head for Catalog and Dealers' Prices

Write today for complete catalog of Shaler Tire Repair Kits—dealers' discounts and full information about Dealers' Helps we furnish, including Counter Stands—Posters, Wall Hangers—Window Displays—Booklets, Circulars, Signs and Window Cards.

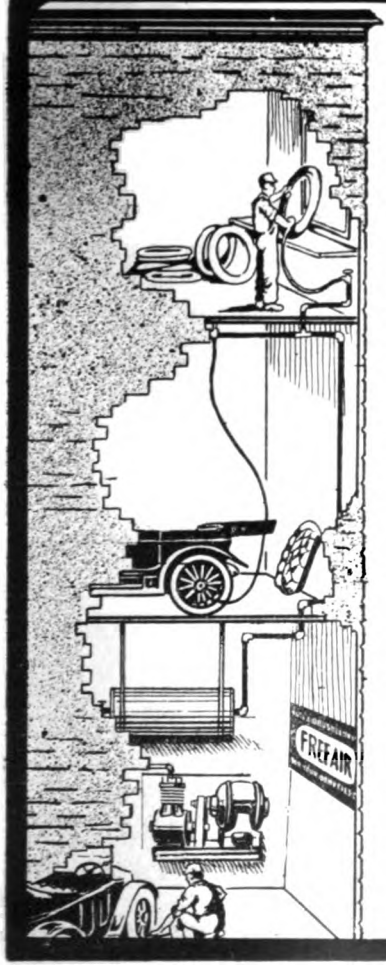
"Did you order ADAMSON Repair Gum, Tom?"

"You've probably noticed," said an "Adamson" Dealer to his chief clerk, "that Adamson Vulcanizers always give the best results when Adamson Repair Gum is used with them. This gum is especially made for use with portable vulcanizers of all kinds; no cement is required, and its use is a guarantee of a perfect tire repair.



"Let's push the gum when we sell a Vulcanizer. We'll not only make more sales but we will assure ourselves of another satisfied customer as well. So be sure and order Adamson Repair Gum. Look over our stock of Adamson Vulcanizers, too, and stock up on all sizes. They sell at from $1.50 up, so we can't miss a sale, no matter what size is wanted."

Your copy of the new Adamson Catalog is ready and waiting. "Repair and Care of Tires" is a free booklet that you will need every day. Write for it now.

ADAMSON MFG. CO. East Palestine, O.

BRUNNER AIR COMPRESSORS

A Brunner Air Compressor in Your Garage and a Brunner Air Sign on Your Garage Will Bring "Brunner Wise Motorists" to Your Door

The systematic distribution of the Brunner Air Sign among thousands of garages using Brunner Air Compressors has been going on uninterrupted for the past three years, and thousands of motorists have come to know that the Brunner Sign means Brunner Service, which is the last word in "free air service"; they know that prompt and highly efficient service awaits them under the Brunner Air Sign and we have accomplished just what we started out to accomplish three years ago—the creation of the "Brunner wise motorist" for you, Mr. Garageman.

SECURE THE TRADE OF THE BRUNNER WISE MOTORIST

You can secure it by installing a Brunner in your garage and displaying the Brunner Sign on your garage; the Brunner Sign is another original Brunner idea; it is a proven success and is now at your disposal; there will be imitators, of course, but remember the Brunner Sign has a three year start; watch the progress of the Brunner Sign, watch the growth of the standing army of "Brunner wise motorists"—get in on the ground floor, Mr. Garageman; we are going to bring trade to the door under the Brunner Sign.

Brunner Air Compressors Have Consistently Demonstrated their Sterling Value in the Garage Ever Since the Garage Business Has Been a Business

The Brunner Line was designed and built to meet the garageman's special requirements, it has always been honestly made and honestly advertised, and the Brunner Mfg. Co. and the Brunner Jobber stand squarely back of it from start to finish—you cannot go wrong with a Brunner.

Write for Catalogue and Garageman's Handbook on Compressed Air, also name of the Brunner Jobber covering your town.

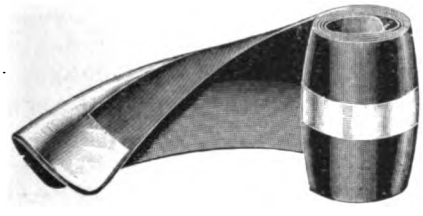
FREE

A handsome spark plug case and a spark plug wrench . . **Free**

With four spark plugs that will outlast your engine . . **$4**

Mail us a $4 check or money order for four Splitdorf Spark Plugs (the plug with the Green Hex Jacket). We will forward you the plugs, carriage prepaid, and with them we will send you, free, a highly polished spark plug case and a spark plug wrench, complete with detachable handle. The case is handsomely finished, and fitted with recesses for four plugs. Keeps your "extras" handy and compact. The wrench is one of the most convenient tools you can have.



These plugs are practically indestructible. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motor cycle, motor truck, motor boat, aeroplane, tractor and stationary gasoline engine.

When ordering, be sure to state size desired or name of engine.

SPLITDORF ELECTRICAL CO., Newark, N.J.

K-C "Red-Coat"
Self-Vulcanizing Reliner

K-C Tire Accessories have the kind of live features which make them ready-sellers—the self-vulcanizing "Red-Coat" Reliner is a good example. This reliner makes a hit because it overcomes all of the old prejudice against reliners. Your customers will like the fine, finished appearance of this article—and more than that, they will like the ease with which it slips into a casing—and takes hold!

Strip off the Holland cloth—moisten the surface of the entire reliner with gasoline, and K-C special Red Cement, and the strips of quick curing gum make the rest of the job easy.

Record mileage from weakened casings is obtained with the "Red-Coat"—Record profits for the dealer, too.

Extraordinary Lift and Overhang

—has the Hilite Portable Floor Crane

With light steel superstructure and heavy cast iron base, its center of gravity is near the floor, preventing top-heaviness and giving it the high lift and deep overhang required in Garages and Shops. The only crane possessing these features, it is lighter, easier to handle and stronger than other cranes. Its trussed Cantilever (bridge type) construction is the strongest known. It is a necessity and a big labor saver in every garage.

No.	Cap.	Lift	Over-hang	Base high	Base wide	Wgt.	Price

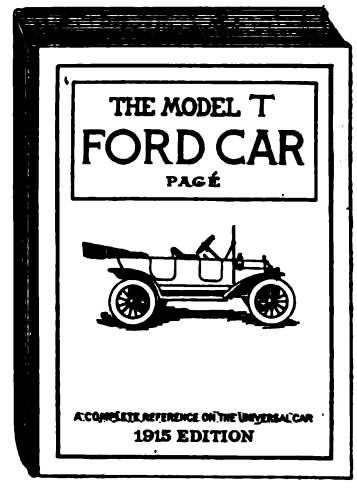
A New, Complete Book for Every Ford Dealer, Salesman and Repairman

The
Model T Ford Car

Its Construction, Operation and Repair



By Victor W. Page

Member of the Society of Automobile Engineers,
Author of "The Modern Gasoline Automobile," etc.

300 (5x7) Pages Over 100 Specially Made Engravings

And Two Large Folding Plates

Price $1.00

This is the MOST COMPLETE and PRACTICAL instruction book ever published on the FORD CAR. A high grade cloth bound book printed on the best paper, illustrated by specially made drawings and photographs. All parts of the Ford Model T Car are described and illustrated, in a comprehensive manner—nothing is left for the reader to guess at. The construction is fully treated and OPERATING PRINCIPLE MADE CLEAR TO EVERYONE. Complete instructions for driving and repairing are given. Every detail is treated in a non-technical yet thorough manner.
This book is written specially for FORD DRIVERS AND OWNERS, by a recognized automobile engineering authority and an expert on the FORD, who has driven and repaired Ford Cars for a number of years. He writes for the average man in a practical way from actual knowledge. All parts of the Ford Model T Car are described. ALL REPAIR PROCESSES ILLUSTRATED AND FULLY EXPLAINED.

The Universal Automobile Record Book

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.

The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

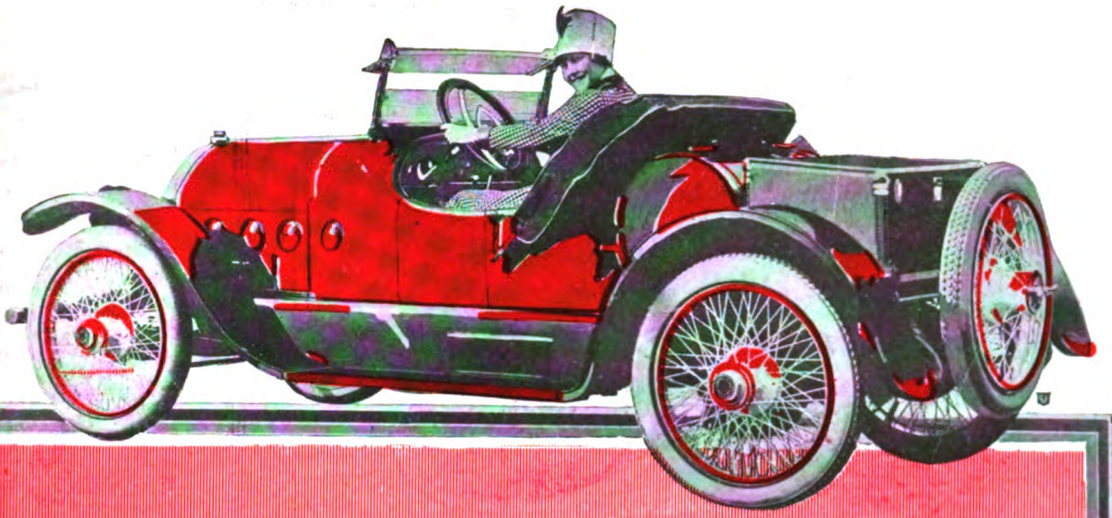
Studebaker Opportunities

Who wants this one in Maine?

STUDEBAKER has an opening for dealer representation in Maine's capital. Being a live, throbbing center of 15,000 and more population, this opportunity will go to the man who can prove his ability to cultivate the excellent market for Studebaker cars that we know exists there.



The city is the head of steam navigation on one of the state's largest rivers, and is a big terminal point on the Maine Central Railroad. Its leading industries are the production of cotton goods and shoes, while a variety of smaller business enterprises round out the well-developed industrial activity of this progressive city

This is a splendid opportunity for some one. Who'll be the first to write for details?

35,000 More Hudson Super-Sixes

An Announcement of Hudson Policy

We have to-day to announce:

Detroit, Mich., July 1, 1916

That more than ten thousand Hudson Super-Sixes have now been delivered to owners.

That we have in four months, by tremendous exertion, quadrupled our daily output.

That we have parts and materials, on hand and in process, for 20,000 more of the present Super-Six. Constantly increasing demand has just forced us to place contracts on materials for an additional 15,000.

That at least 35,000 more of the Hudson Super-Six will be built like the present model. Our production is now 3,500 monthly.

After eight months of experience, with 10,000 cars, not one important improvement in design suggests itself to our engineering corps. So the Super-Six will remain as it is. And, because of our patents, it will maintain its supremacy.

Speedometers for Fords

The Market Grows Bigger Every Day

Run through the pages of this book.
Note the preponderance of Ford accessory advertisements.
They point out a tremendous market—and one that is growing bigger every day.
Think it over and remember—
No Ford accessory is needed, demanded, or advertised like the Stewart Speedometer for Fords.

"No car is better than its accessories"

Why I am a Studebaker Dealer

After selling out my interest here in one of your competitive lines which I have been handling for the past seven years, I went to Detroit and the other manufacturing centers and looked the field over thoroughly, going through the different factories, and was most impressed with the wonderful manufacturing facilities that you incorporate in your car. Not only was the mechanical end the best I saw, but the finish on your cars, and all the little details were worked out, and the car itself was much ahead of anything in this priced class.

Your business methods seem to be more up to date, but above all, the name "STUDEBAKER" is one selling asset that no dealer could afford to overlook.

Our sales have been most flattering and it begins to look now as though it is only a matter of deliveries as the new Series 17 cars practically sell themselves if you can once get the customer to take a demonstration.

Pres. Kirkland-Dailey Motor Co.
Kansas City, Mo.

Studebaker

IT takes a mighty good proposition now-a-days to induce a dealer to change over from one make of motor cars to another. The margin of profit allowed on each sale is secondary to the subject of value that a car gives, its reputation for performance, and the things said about it by people who have used it.

The entry of Mr. Kirkland and his company into the ranks of Studebaker dealers is therefore significant. It adds one more to the large number of dealers who were formerly interested in the sale of other makes, and who substituted the Studebaker line because of superior selling qualities and reputation—which, of course, mean repeat orders, greater profits, and the building of real and lasting business.

We have some interesting facts to send—if you'll write for them.

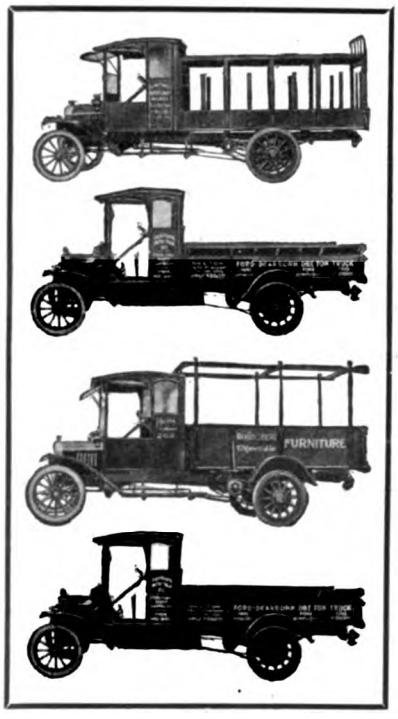
DEALERS: Get the Money

Patents Pending



Convert Fords Into One-Ton Trucks

Handle the Sturdiest, Most Dependable Ford Truck Attachment

A FORD CAR NEW or OLD and

$350

Makes This One-Ton Truck

9 ft. Loading Space.
Will Take 50% Overload.
Firestone Solid Rubber Tires
Economical Ford Upkeep.

90% of load carried on Rear Axle and Heavy Truck Springs

Automobile dealers have never before had a money-making opportunity equal to that which is offered them in the DEARBORN ONE-TON TRUCK UNIT. The Dearborn Truck Unit is in every way superior to other attachments and the field for its sale is practically unlimited. Every merchant and farmer is a live prospect.

Our proposition to dealers is the fairest and most liberal of any.

You can take any Ford Chassis, combine it with a Dearborn Truck Unit and you have a truck that will do the work of any $1500 One-Ton Truck made. And it will do the work cheaper than any other truck. The Ford-Dearborn Truck has *Ford Efficiency, Ford Simplicity, Ford Economy and Dearborn Strength.*

Any auto mechanic can attach the Dearborn Unit to the Ford Chassis in a few hours' time. The Dearborn frame surrounds and reinforces the Ford frame, to which it is bolted at front, sides and rear. The rear axle assembly on the Ford becomes a jack shaft rigidly held in place by specially designed hangers. The Ford rear wheels are removed and sprockets attached to the Ford hubs in their place. The tread of the rear wheels is standard, 56 inches, the same as the front wheels of the Ford.

The Dearborn Unit is made in our own shops, under our own supervision and you can be certain that it is right in every way. You can absolutely depend on the strength of the Dearborn Unit. It's one-ton capacity is guaranteed. It will carry a ton and a half if necessary. It is strong where other units are weak. The materials throughout are of the finest quality.

Loading space is 9 ft. and 90% of the load is carried on the rear dead axle with its heavy truck springs and wheels. Rides as easy as in a pleasure car. Tires are Firestone solid rubber.

The Dearborn Unit comes to you complete with full instructions for attaching to the Ford chassis.

We are going to put a dealer in every town. This is your chance to get the agency. This truck unit is the biggest and best selling proposition ever offered to you. The truck gives absolute satisfaction after it is sold. Your service expense is reduced to the minimum. Write today for our Agency Plan and full details on the Dearborn Truck Unit.

Who'll Get Her?

In the competition for the tractor business everything favors the motor car dealer. Capable, equipped and always on the job, he is for the tractor manufacturer a better ally by far than the old-style implement man.

Digitized by Google

Why the dealer entering the tractor business must

THINK FARMING

By Stanley P. McMinn
Motor World Staff Representative with the Tractor Circuit

THIS IS THE FOURTH of a series of articles on the merchandising and service problems peculiar to the farm tractor dealer. Previous articles have discussed tractor service and the merchandising possibilities of tractor accessories. The fifth article will appear next week.

THINK farming!

You are now thinking tractor. The National Tractor Demonstrations have filled you with tractor, enthused you, cast a rosy halo around the iron horse.

Think farming, instead.

Slide into the farmer's easy chair after supper and think with him; get his angle of this great tractor problem.

The farmer is thinking in acres. He has not yet gotten to thinking in horsepower or gasoline, or even dollars. His thoughts all turn to acres plowed.

"What will the tractor do?" he says.

"Can I get out on my land as quickly after rain as I can with horses?"

"What about disking and harrowing and seeding?"

"Where does the tractor fit into my belt work?"

Who is going to answer these questions for the farmer?

The dealer.

The dealer must be the farmer's adviser.

Performance is uppermost in the farmer's mind. Judging by the tractor circuit, he does not care much about construction or operation or anything else. What he wants to know is: "Is the tractor practical for me?"

"How big a tractor shall I get?" is one of his first questions.

"The four-plow outfit," says the dealer who is well posted.

"Why?" says the farmer.

Mr. Dealer, you must think farming to answer this question intelligently.

Let us analyze this question as the dealer must analyze it, with the experience of the tractor circuit in view, and always remembering the fiasco of the big tractor.

Four-Plow Coming Outfit

The four-plow outfit is the logical outfit, because it undeniably reduces man labor, which is the object of every improved farm implement; because it is sufficiently powerful to do all the farmer's plowing; because it has enough power to do all the farmer's belt work.

Will the farmer come to this conclusion himself?

He will not.

He will remember the mammoth tractors of a few years ago; he will remember that to-day he must pay cash for his tractor. He will be cautious.

In short, the farmer will be over cautious.

He will view the one- and two- and three-plow tractors with greater favor because they are cheaper and because he has not sufficient vision or knowledge of mechanical power to see the advantage—nay, the necessity—of more power than they can supply.

He is thinking in acres plowed. He has overlooked that he needs more power for his belt work than he does to plow his land.

Let us go back for a minute to the big tractor, so that we may understand better the farmer's point of view.

The Big Tractor Fiasco

Several years ago, when the big tractor boom was in full swing, thousands were sold. Farmers who had not sufficient land to operate a four-plow machine efficiently bought six- and eight-plow tractors, some larger, expecting, many of them, to keep the tractor busy doing custom work.

But when it came to operating these giant machines, troubles arose. The expense of operation was high; repairs were frequent because of the lack of experience of the designers; proper housing facilities were difficult, due to the size of the machines; big gang plows had not been perfected; and man labor was not appreciably reduced even though horsepower was cut.

The big tractor got a black eye that it has never recovered from. Quite likely, this mistake made by implement dealers, who loaded these great machines onto farmers whom they must have known would be unable to use them efficiently, will never be made again, for there is a greater tendency now to work for the good of the industry than for the good of an individual pocketbook.

To-day a dealer would hesitate to recommend a tractor which he knew would be too large.

Wants a Machine Too Small

But the memory of the big tractor on a little farm remains, and the farmer is over cautious. *To-day the farmer is inclined to buy a machine too small rather than too large.* This, too, will have a more or less bad effect and is one that must be guarded against.

Price will have an important bearing on the farmer's choice. When the big tractor boom blazed its trail across the country, price was secondary. The farmer was not required to pay cash; he

Digitized by Google

paid a couple of hundred dollars down, if he could, and was supposed to pay half the balance following the first harvest and the other half following the next harvest. Sometimes the debt stood much longer when crops were bad two years in succession.

The small tractor has changed this. Cash on delivery is now the order of the day. True, some dealers are arranging to take part down and the balance in notes extending over 6 or 8 months, but the farmer has got to meet the notes.

The Influence of Price

So, price is of greater importance than it was a few years ago, and the farmer is very apt to be influenced by price alone. He may decide upon a one- or two-plow machine when he should have a four-plow tractor. Unfortunately, it has not seemed possible yet for the tractor manufacturer to produce a really good tractor that will pull four plows at a really low price. There are plenty of cheap, flimsy, ill-designed machines, which put up a good appearance and which will make a good impression in a short demonstration; but a tractor of this kind is expensive at any price, not only to the farmer, but to the dealer as well, for it always means a heavy service burden.

Manufacturers themselves are looking forward to the day when standardization and market conditions will permit of extensive production of a tractor type that will meet the needs of the great majority of farmers and which will sell at a low price.

But why is the four-plow machine a logical machine

Why the Four-Plow Machine?

A one-plow tractor will not reduce man labor, and it is man labor that the farmer is seeking to reduce; nor will it reduce horse labor, because the horses will have to be kept for other purposes. Again, it will not furnish sufficient power to operate all the machines that a farmer will expect to operate with the belt. On the other hand, the tractor will do more work than the horses it replaces because of its greater speed, and it can be worked irrespective of temperature or insect life. Furthermore, it is possible to work the tractor day and night.

The two-plow machine is little better than the one-plow outfit. It does reduce man labor because of its ability to remain more continuously at work, assuming that there are no breakdowns. It will deliver more power at the belt, though frequently there will not be sufficient power to operate all the farmer's implements. Thus, it may be necessary for the farmer to hire some of this work done. In some cases, notably where the investment in machinery is fairly great, as, for example, in the case of a grain separator, it may be desirable to hire such work done. But, as a general rule, the farmer should own all his equipment, and it follows that he should have power to operate it.

The three-plow tractor is better for the all-around work of the farm, because it undeniably reduces man labor and generally has sufficient power to operate all the implements, including the modern-sized thrasher.

Four-Plow Is Economical

But the four-plow tractor is by far the best size for a man farming about half a section. It will have ample power both for plowing and belt work and it will not be too large for efficient and economical use on a farm of this size.

Another important advantage of this tractor is, that where the acreage to be plowed is not sufficient to keep the machine operating efficiently at plowing, the number of plow bottoms can be reduced by one and a disk or peg-tooth harrow hooked on behind the plow. With the one-, two- or three-plow machines, this would not be feasible, because of the lower power available and because of the narrower strip of plowed ground.

That there will always be a market for the smaller tractors and also for the much larger ones there seems no doubt, but already a number of manufacturers are preparing to center their activity on the four-plow machine, and this quite likely will be the big seller.

Small Farms CAN Use Tractors

The U. S. Department of Agriculture states that no farmer with less than 160 acres under cultivation should purchase a tractor. In truth, however, there are plenty of farms as small as 80 and

(*Continued on Following Page*)

Ford Tractor Makes Its Debut at Fremont

Three of Them—One Running on Gas, One on Kerosene and One Operating on Alcohol

(*Pictures of Tractor on Page 36*)

FREMONT, Neb., August 12.—The widely heralded Ford tractor made its debut at the farm tractor demonstration here this week. That it is of wide public interest is indicated by the fact that something like 100,000 people flocked to the demonstration grounds, each intent on getting a look at this product of Henry Ford & Son, Dearborn, Mich.

The crowd was almost as great as that which attends the national motor car shows in New York and Chicago—and was even more interested.

There were three of the Henry Ford tractors at the demonstration, one operating on gasoline, one on alcohol and one on kerosene. The new tractor created quite a stir, not only among the spectators, but among the other tractor makers. This was the first public appearance of the tractor from the Dearborn plant, and the fact that Ford, father and son, were responsible for it made it an object of special interest among the farmers of Nebraska, where Fords are the common means of locomotion. Though the specifications are not at all those of the pleasure vehicle, it has familiar Ford features sticking out all over it.

Among tractor makers, Ford's tractor aroused much discussion, chiefly on account of its extremely low weight—under 1 ton—in a service where great weight has been thought essential, its absence of water pump and its worm type of final drive. The general opinion seemed to be that Ford will find a number of radical changes necessary before the actual production goes on the market next year.

The tractors are not on the market yet, nor will they be until some time next year. Participation at Fremont seemed to be more in the way of feeling out the market than direct sales effort.

Nevertheless, had the Ford people been there to take orders instead of feel out the market, it is believed scores would have been sold on the spot—so much does the name of Henry Ford mean in that section.

The models on exhibition seemed to have no difficulty in doing their stunts in the plowing demonstrations, except a reprimand or two

Digitized by Google

from the judges for speeding; that is, plowing faster than the advertised plowing speed.

Ford's idea in bringing out the tractor was to produce a machine of comparatively small capacity—2 mould-board plows, of as small weight as compatible with strength and wearing qualities, as simple as possible and at as low a price as possible—the same features that have made his pleasure cars a success. That designer Joseph Galamb has succeeded would appear from the fact that while the exact selling price cannot be announced as yet, it is in the neighborhood of $300, it weighs just under 1 ton, and it has the familiar Ford flywheel, magneto, thermo-syphon cooling and other elements of simplicity throughout.

The engine is simply a larger edition of the Ford pleasure car engine, its four cylinders being 4 x 4¼ inches. The engine is rated at 20 H.P., and the tractor at 10 H.P. drawbar pull by the factory. It has three-speed and reverse gearset of the constant mesh type, and a worm drive on the rear axle. It is capable of 5 to 6 mph. on the road and 2.5 to 3 mph. plowing. The clutch is a multiple disk. Headlights are provided for night plowing, from the magneto. There is a unit power plant and four steel wheels.

THINK FARMING

(*Continued from preceding page*)

60, and even 40, acres, which are economically farmed with plows, and this is where the one- and two-plow outfits fit in. But these are highly specialized farms and for this reason the element of competition has been greatly reduced, if not eliminated. In general, however, it is folly for the farmer with less than 160 acres to let the tractor bug get into his head.

Plowing ability is uppermost in the farmer's mind. Construction, operation, cost of maintenance appeared always to be secondary considerations at the National Tractor Circuit.

Day after day, at all the demonstrations, thousands of farmers crowded along behind the tractors, earnestly studying their work. They would squint along the furrow to see that it was straight; they measured the depth plowed and dug down into the soil to ascertain how thoroughly it was turned over and pulverized. In thousands of cases an inspection of the plowing work seemed more satisfying. After watching the machines on the demonstration field, thousands of farmers immediately traced their way back to the cars and to their homes or to the city.

Why is the farmer so interested in plowing ability?

Plowing Ability Uppermost

Consider that he has been plowing for years with horses or mules. He knows to the fraction just how much work he can do in a certain time, how deep he can plow under existing conditions, and is thoroughly familiar with that somewhat elusive factor, quality of plowing. He has been hearing that the tractor does more work than horses, that it can plow deeper and that the quality of the work will be better. Naturally, he wants to know the why.

The answers to some of these questions require only good eye-sight.

But the farmer may not understand at first just why the quality of plowing is better. He perhaps has overlooked the factor of speed. With a horse-drawn plow moving slowly and plowing perhaps only 4 or 5 in. deep, the effect of impact, if it can be so termed, is practically negligible. In other words, the plow merely pushes the earth up into one side.

But with the tractor drawing the plows faster and deeper, the effect of the impact of the plow is noticeable. Instead of merely pushing the earth to one side, the tractor-drawn plow actually throws the earth. For this reason, pulverization is more complete and many of the large clods which remain after horse plowing are broken up. Frequently, depending on the character of the soil, it is unnecessary to disk after tractor plowing; the harrow can be put right on, thus eliminating one farm operation.

Another reason the farmer may not openly show his interest in the belt ability of the machine, is he is familiar with stationary engines. Most farmers have at least one stationary engine for operating wood cutters, ensilage machines, cream separators, etc., and they are likely to take it for granted that if these stationary engines will do the work, the tractor will also do it. But here the farmer may be wrong if he plunges on a one- or two-plow outfit, as already has been pointed out.

Need For Missionary Work

Right here it is necessary for the dealer to make plain that it may be advisable for the farmer to get a machine slightly too large to do all his plowing, in order that he may have one with power enough to operate his other implements. Few farmers who have owned moderate-sized tractors sell them and get smaller ones. Almost invariably a farmer with a small tractor, however, will sell it and get a larger one, and lots of those who saw the demonstrations stated that if they ever purchased another machine it would be larger.

It is a matter of record that many farmers who have purchased tractors sufficiently powerful to do their belt work and therefore slightly too large for efficient plowing, have increased their land holdings either by buying outright or by renting.

The question of practicability, insofar as construction is concerned, is a matter to which the farmer apparently does not attach much importance. If the machine will plow and do his belt work, he is apt to assume that it will continue to do so for an indefinite period, when exactly the reverse likely will be the case if he has followed his own inclination and paid as little for the machine as possible.

Will It Plow Anywhere?

But the farmer does want to know if the machine is a practical machine insofar as plowing on all kinds of land is concerned, working on plowed land, on the side of a hill, and handling the other various field implements for which he now uses horses.

The National demonstrations have shown him that almost any type of tractor on the market now will plow almost any kind of soil, provided the land is practically level or only slightly rolling. They have not yet shown him whether these same machines will go out and plow as quickly after a rain as he could do with horses. Obviously, however, if it is going to take him 15 days to plow a certain acreage with horses, and the same land can be tractor plowed in 10 days, he has a margin of 5 days and can afford to wait a day or two until the land dries out somewhat. Actually, however, experience shows that except in rare instances it is quite possible to get on the land as quickly with a tractor as with horses. This is particularly the case with the type of machine that runs on its own endless track.

What About Other Implements?

As for operating the various other field implements such as are used on plowed land—harrows of various types, disks, seed drills, etc.—there is no particular difficulty. Most tractors will operate on plowed land with the addition of extension cleats, which are furnished by the manufacturers. One large tractor manufacturer, who also produces farm implements, has specialized on header hitches, and now has half a dozen of different types to fit as many different makes of headers. Development along this line is slow, but progress is being made. For the present it must suffice that if the dealer is called upon to supply such equipment he can do so, though he is limited in his choice.

100,000 Go to Fremont to See Henry Ford Plow

Nebraska's Farm Tractor Demonstration Is the Biggest of the Year—Interest Is Great

FREMONT, NEB., Aug. 11—The 4-day demonstration of agricultural tractors which closed at Fremont to-day has been the most successful in every way of all that have been held. It is the fourth of the series of eight national tractor demonstrations, which started July 18 in Dallas, and included Hutchinson and St. Louis.

In point of attendance, interest exhibited, business done and prospects of future business obtained, the present demonstration is far and away ahead of any of the previous ones on the circuit and ahead of the similar affairs held in Fremont in previous years.

Attendance for the three big days, Wednesday, Thursday and Friday, probably totaled between 80,000 and 90,000 on the two latter days. Wednesday was the best day in the point of numbers, estimates varying from 30,000 to 60,000 for that day alone, but the tractor men were better pleased with the smaller crowds on the latter days, because there were fewer who were simply sightseers.

Gave Away 25,000 Canes

Those 40,000 people who braved the mud of Thursday and the discouraging, steady half day of rain Friday, were attracted to the field not as to a spectacle, but for solid business reasons. Attendance figures, however, are largely guesswork, because there are no paid admissions and there is no exact method of checking the number of visitors. I. H. C. gave away over 25,000 canes in one day.

In point of business done the tractor men, with few minor exceptions, were a unit in proclaiming this the most satisfactory week they have had. How many actual sales were made as a direct result of the demonstration never will be known, for the effect is not wholly immediate; besides which some of the tractor makers do not care to give out sales figures. The International Harvester Co. by Thursday noon had sold 109 tractors, all actual sales, closed at the field, and all to consumers. This is almost equal to the total of this concern's sales during the entire week at Fremont a year ago. This year's high record cannot be credited wholly to this week's demonstration, for it is the cumulative effect of three years of tractor demonstrations.

Fremont Cradle of Demonstrations

Fremont claims the distinction of being the birthplace of organized tractor demonstrations in the United States. Canada had had plowing competitions by tractors before the first of the annual demonstrations at Fremont, but the Canadian affair bore somewhat the same relation to the demonstrations that have been carried out through the central West as a motor car race does to the annual motor car shows at New York and Chicago. Here, the competitive feature is eliminated as far as possible, the plowing speed even being held down by the judges to that advertised by the tractor manufacturer. Nevertheless, there is a great deal of friendly rivalry as to which tractor shall be the first to finish its allotted portion of the plowing field and at the same time turn the deepest furrow and the straightest one.

Deeper Plowing

The 3 years of tractor demonstrations at Fremont have had their effect on the attitude of the farmers of that section. They do not have to be shown that the farm tractor as a piece of farm machinery is a practical and successful thing. Their neighbors have been using them and have produced better crops on account of the deeper plowing made possible by the tractors. Three different farmers, one of whom lived 75 miles away from Fremont, pointed out a field upon which the demonstration tractors had operated the two preceding years and which this season produced a yield nearly double that of its horse-plowed neighbors—"Deeper plowing," was their explanation.

Then, too, that territory is one which has been assiduously cultivated by the big tractor people. Such concerns as the J. I. Case T. M. Co., the International Harvester Co., the Avery Co. and others with wide distribution facilities already established for their farm implements, have done a great deal of educational work with their tractors, as have some of the concerns which specialize on tractors. *That this has had an enormous effect, may be gained from the instance of the I. H. C. dealer in Plymouth, Neb., who brought thirty-five prospects with him and sold seven almost before the demonstrations started. It was preliminary work did that.*

The Classic

Tractor manufacturers exhibited at Fremont to a greater extent than at the earlier demonstrations, both because there were more of them ready and because the Fremont demonstration has become to be recognized as the classic. There were forty different makes of tractors to be seen, and at least one-half of the makers had two or more models on display.

In Thursday's plowing demonstration, which was a representative day, sixty-five machines were in the 160 acres of stubble and the field was plowed in just about 2 hr. The soil was ideal for plowing, being a black loam, just damp enough. It was a little too hard the day before for best plowing, but the night's rain put the field in best condition, though it made the mud roads bad for motor car travel. It opened one's eyes to see the unwieldy-looking tractors running through the mud road at 2½ m.p.h. and pulling stalled motor cars out of ditches.

540 Pounds Pull

According to the Hyatt dynamometer, the draft was 540 pounds with a 14-in. mold-board plow at a depth of 7 to 8 in. in the field Thursday. Mold-boards were almost universally used, though there were a few disks in action. Two of the Twin City tractors were fitted with deep-tillers, for sub-soiling. These are curved spikes from 12 to 24 in. long, fitted to the drive wheels instead of the usual traction lugs or points. The action is similar to that of a rooster's spurs.

One of the stunts in connection with the demonstration was the continuous plowing test of the Standard Detroit 10-20, Wednesday. The tractor plowed 14½ hr., until stopped by a rain storm, and during that time plowed approximately 14½ acres (unofficial) and finished the day's work by pulling a stuck touring car out of the mud.

As to the fuel situation the tractor makers seem to be quite divided. Approximately one-half of the tractors in the field were operating on kerosene. To make sure that there was no false claims in this regard, the technical committee tested the fuel used in the plowing demonstrations. Nevertheless, some of the tractor men who favored gasoline impressed one with their doubts as to the real nature of the fuel used by the kerosene burners.

All of the tractors were exceptionally free from stoppages due to mechanical troubles. With one or two exceptions, all the machines dug in and finished up their task in a steady and businesslike way that was an eye-opener to the novice in tractordom.

Prospects of Selling

Marketing of agricultural tractors differs from the marketing of motor cars in one essential respect. If a farmer, or any other man, for that matter, have sufficient of worldly goods to buy and

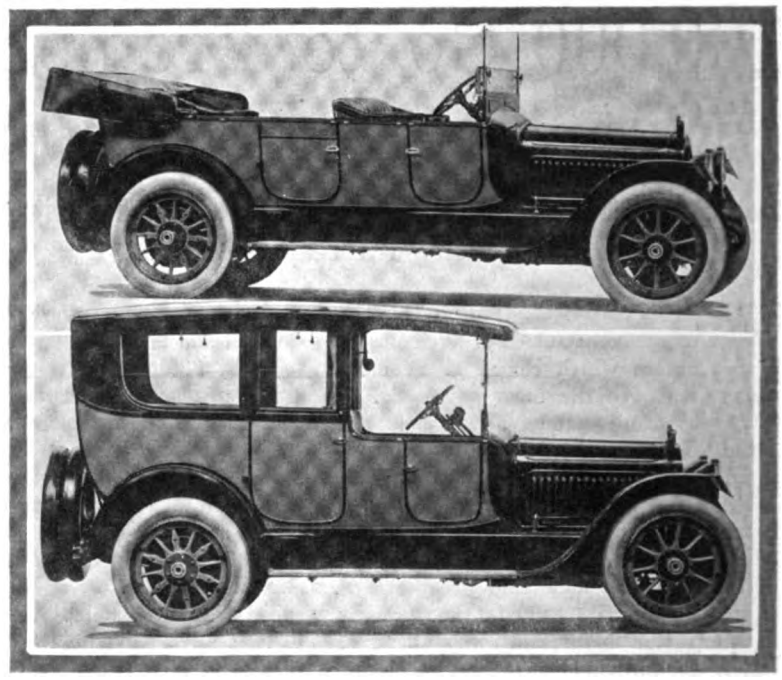
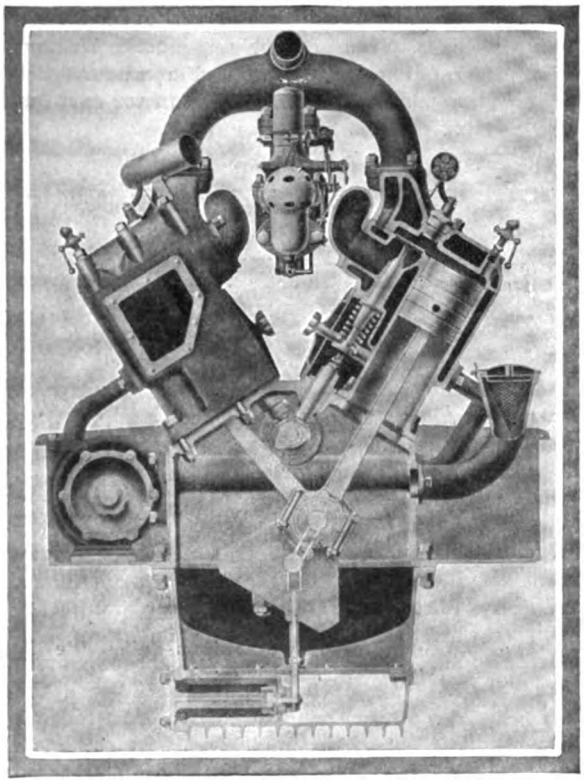
The New Packard

has



Detachable cylinder heads,
which increase accessibility and facilitate machining operations in manufacture.

New water system,
which eliminates pipes.

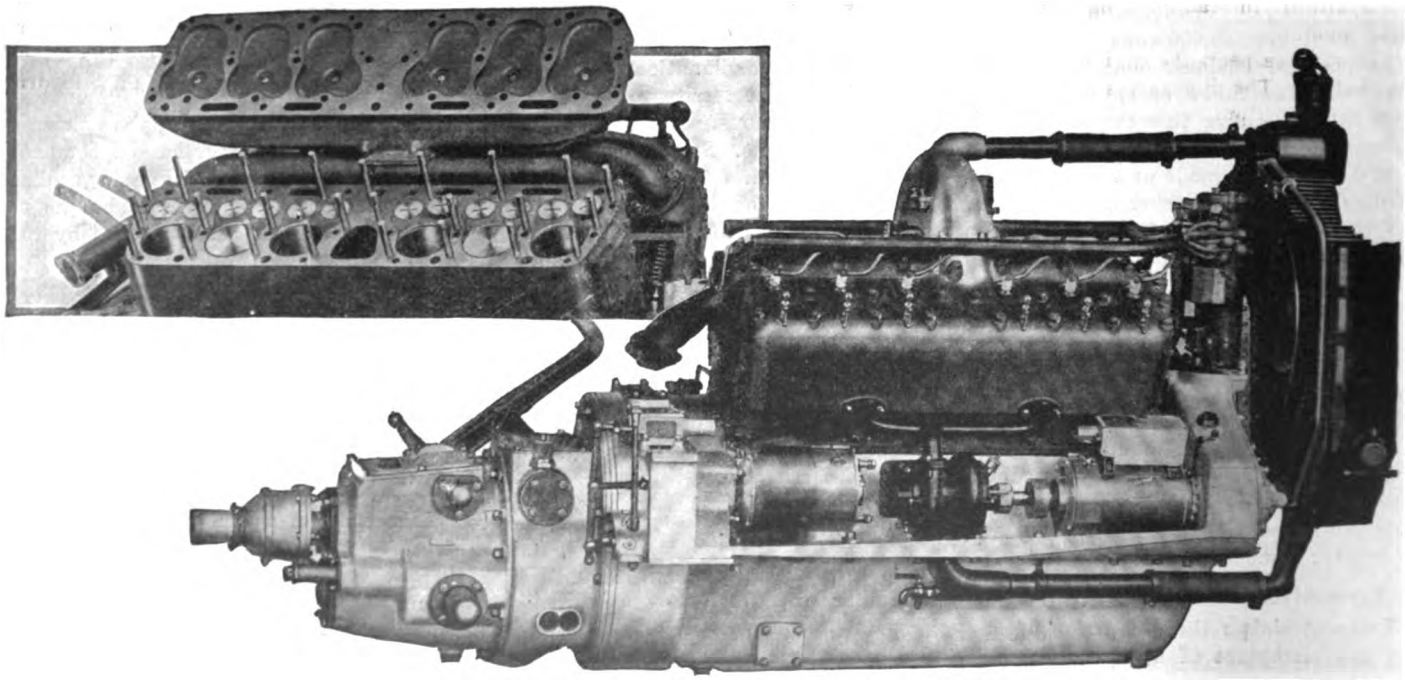


Deeper frame,
which gives body rigidity and lowers it 2 in.

Detail refinements,
which give greater value.

Higher prices,
on touring cars a raise of $115.

The frame has been dropped 2 inches, giving the cars a much more pleasing appearance



HAVING built close upon 8000 Twin Sixes, the Packard Motor Car Co. is making no changes of real importance in the 1917 series. In matters of detail there are improvements, but the twelve-cylinder engine, the transmission system and the chassis, generally speaking, are the same as before. The Twin Six Packard was entirely new a year ago, and a year's use has shown no weak spots, no detail that had to be changed. All that has been done is to improve here and there so as to make the car still better.

Equal Size Combustion Spaces

As an example of the sort of changes that have been made, the alteration to the cylinder castings is the most striking. Formerly the Packard has had one-piece L-head cylinders, and with these it is not

Left—Sectional view of the new motor. The intake manifold is waterjacketed and contains the outlet for the cooling water

Lower—The cylinder heads are detachable and the compression chamber machined to accurate dimensions. The method of waterjacketing the intake manifold is clearly shown

Digitized by Google

commercially possible to machine every portion of the inside of the cylinder. There is advantage in having the compression exactly the same in all the cylinders, and to do this it is essential to machine everywhere, so the new car has detachable cylinder-heads, which do not alter the relative positions of any parts of the engine, merely permitting the full machining and, incidentally, making it easier to remove carbon deposit, as the cylinder heads are held on by twenty-five studs and nuts and can be taken off far more easily than could the cylinder blocks.

In conjunction with the detachable cylinder heads there has been a change in the water outlet system. There are now no separate water pipes running from the cylinder-heads to the radiator; instead of these the intake manifold is surrounded by a larger pipe, which acts as the water outlet from the cylinders, and a single separate pipe then connects the top center of the manifold to the radiator. The layout makes greatly for accessibility and is excellent for carburetion. The proximity of the exhaust manifolds to the carbureter keeps the latter well warmed, and the water surrounding the intake manifold maintains the temperature of the gas.

Thermostat Position Altered

The position of the thermostat has been altered; instead of being beside the pump it is now mounted in the radiator inlet, that is, at the top of the radiator, where the outlet pipe from the cylinders attaches. Here it admits water to the radiator when warm and, when cold, bypasses the water down a branch pipe to the inlet side of the pump. This change of position means that the thermostat now occupies the point in the cooling system which normally is at the highest temperature instead of being at the coolest point.

In other respects the engine is the same as before. The dimensions are 3 x 5 in., the power output is about the same, and the details of lubrication are precisely as on the 1916 car. The aluminum pistons have been changed to the extent that they now have the three rings located two at the top and one at the bottom, the latter acting as an oil scraper. There is also a small detail alteration to the Delco ignition distributor which causes a reduction in the current consumption, while the Bijur generator has been speeded up a little and has an increased output. As formerly, the distributor is situated at the extreme front end of the engine, just behind the fan, but the coils are now located upon the left front crankcase arm instead of being on the cylinders.

New Body Lines

The next change which is noticeable is that the frame has been lowered 2 in., this altering the appearance of the car in a remarkable way. Two inches does not sound a large amount, but it makes a very striking difference in looks. Packard has also abandoned the horizontal end piece on the rear mudguards, which has been a feature for very many years. The fenders now follow the curve of the wheel in a more conventional manner, and this has had the effect of smoothing out the rear end lines of the whole car, giving a much smoother general effect. The touring body is still typically Packard, however, having all the characteristics which give this distinctiveness.

There are two lengths of chassis; the larger is 135 in. wheelbase and the shorter 126½ in., this being an increase of 1½ in. over last year. There are nine bodies for the short chassis and twelve for the long, and all the prices are a little higher, the advance on open cars being $115. This increase is due to the rise in the price of materials, the quality of which has not been changed. On the short chassis $2,685 is the price for the five-passenger and seven-passenger touring cars, for the two-passenger runabout and for a new four-passenger runabout, while there is also a five-passenger salon phaeton at the same figure.

For the long chassis no runabouts are listed, but the price of $3,265 will buy a seven-passenger touring car, seven-passenger salon phaeton, five-passenger phaeton or five-passenger salon phaeton, the word "salon" signifying that the front seats are divided.

Inclosed cars on the short chassis are a three-passenger coupe, $3,965; six-passenger limousine, $4,265; six-passenger landaulet, $4,315, and a four-passenger brougham, $4,315, also. On the long chassis there are four styles of limousine, one for six passengers at $4,665 and three for seven passengers at $4,715, $4,765 and $4,915. There are also two seven-passenger landaulets at $4,765 and $4,815, a six-passenger landaulet at $4,715, and a four-passenger brougham at $4,715.

Recapitulating some of the details that were new a year ago and are still retained, mention may be made of the unit power plant which was new to Packard at that time and is unaltered in any way. The little Hyatt roller bearing in the gearshaft spigot has been entirely satisfactory and, owing to the smooth torque of the twelve cylinders, there has been no difficulty whatever in maintaining the quietness of the constant mesh gears.

In describing the 1916 model it was said that the lubrication system, giving pressure-fed oil to every moving part in the motor, was probably the most thorough ever used for a motor car. This has proved its worth, and the divided supply inside the crankshaft, which gives practically an independent feed to each connecting-rod lower end bearing, has worked out entirely in accordance with anticipations. The same is true of the Morse chain front-end drive, with the eccentric adjustable pinion on the generator shaft, and of the Lanchester vibration damper, which is used as the fan pulley on the crankshaft.

Axles, steering, brakes and springs are unchanged, the platform rear suspension suiting a heavy car particularly well.

Regarding equipment, all Packards will have Goodyear cord tires, 35 x 5, on all four wheels, the fronts having rib treads and the rears the "all weather" tread; Kelly-Springfield or Goodrich fabric tires can be had instead if the customer so desires. The lamp variations are considerable, as there are side lamps as well as small head lamps combined with the large headlamps. The switch gear is all on the control box on the steering post and gives all the possible combinations of lighting at the touch of a finger.

The accessories include Sparton horn, Waltham speedometer and clock, a complete set of spare lamp bulbs, fuses and a battery syringe, two extra demountable rims and a tire pump. The company wishes to draw attention to the fact that it is prepared to vary the specifications of body and equipment when so desired at an extra charge, and that there is a special department in the factory to take care of orders which depart in any way from the standard.

Through College on Gasoline

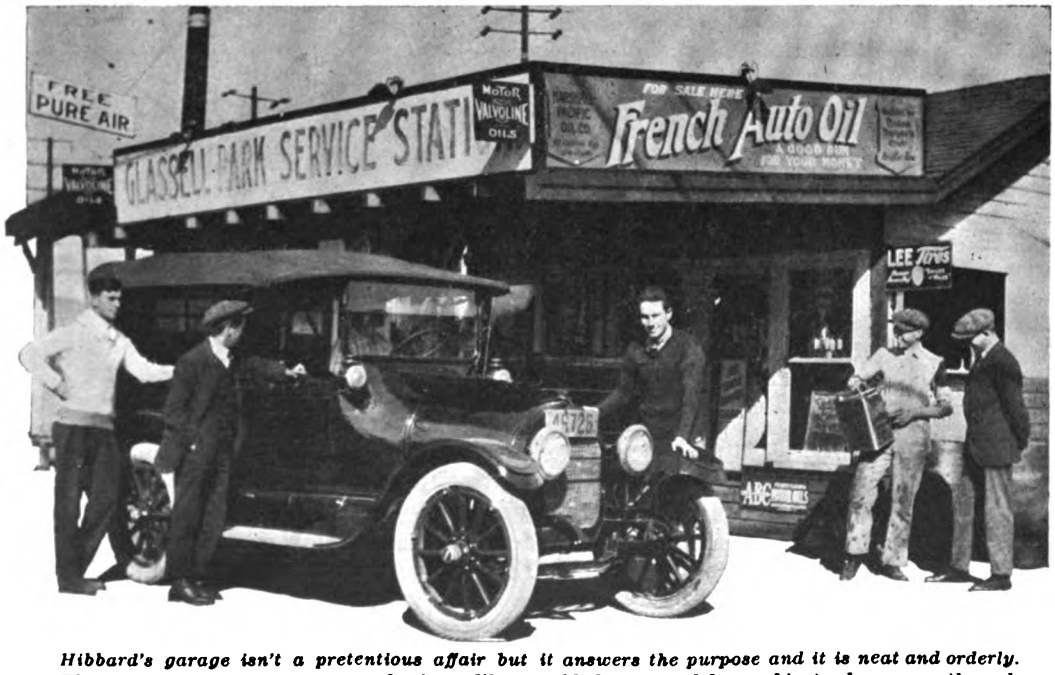
"Slim" Hibbard Is Paying His Way Through School by Operating a Garage

When Hibbard isn't boning over his books he is gathering shekels with his can and funnel

LOS ANGELES, CAL., Aug. 14—Gasoline is putting W. E. "Slim" Hibbard through college. A member of the next senior class at Occidental College, Los Angeles, he takes part in all student activities and operates a supply station a short distance from the campus which supplies him with the necessary funds for his education.

While other students work their way through college by waiting on table, doing gardening work and acting as janitors in the college building, young Hibbard dishes out gasoline and oil. The supply station pays well and provides employment for two young men.

Occidental College boasts of the only college automobile club in the West. There are more than 100 cars on the campus and the faculty has constructed two garages for the motoring students. Hibbard has a corner on the college automobile club's business, and as a special inducement offers gasoline and oils at a reduced rate to the students. This trade alone is enough to keep the supply station busy, but located on the San Fernando Boulevard, better known as El Camino Real, Hibbard gets a lot of business from motorists traveling between Los Angeles and San Francisco over the inland route or coast road.



The station is known as the Glassell Park Service Station. The owner's slogan is, "A station of quality."

The building is well covered with signs proclaiming the merits of the goods handled. Puente Gasoline stands out in letters a foot high. Valvoline motor oils is another sign which stands out like a headlight. A line of accessories is also carried. The boys specialize in Howe inner tubes and Lee tires.

W. G. Stidston is in charge of the station while Hibbard is in class or taking part in athletics on the campus. Hibbard is a baseball star and one of the best high jumpers in the State. The proprietor lives between the supply station and the college, so that he is able to divide his time between the two places without loss of precious moments.

Between classes Hibbard is often seen studying in the shade of the station, while Stidston is busy elsewhere. There are times when several cars will be lined up, taking on oil and gas, and there are times when business is so brisk for the college "gent" that he has no time for study but contents himself with taking in the price of gasoline.

The money to start the station was supplied by Hibbard's father, but he has cleared the mortgage and now has a flourishing business. The young supply man also owns his own touring car, which is to be seen in all college doings, such as football parades, class tours and automobile rides for prominent visitors to the college; he has piled up a neat little bank account.

Hibbard's garage isn't a pretentious affair but it answers the purpose and it is neat and orderly. The proprietor operates a very business-like establishment and has a big trade among the college cars

Works Novel Ad Plan

MONTREAL, Aug. 12—The idea of giving a person something for nothing is being carried out by the proprietors of the Inter-Ocean Auto Co., Ltd., 596 St. Catherine Street, W., Montreal dealer in motor car accessories and supplies.

They secured from the license department of the city of Montreal a list containing all the motorists of Montreal and vicinity, and every week pick at random from this list a license number and advise the owner of the car that by applying at their store he will be entitled to whatever article they may be giving that week—mentioning the article or articles—absolutely gratis.

In addition to this, the number is pasted on the firm's window with a printed slip stating that if the driver of the car whose number is given will apply within he can get delivery of the articles mentioned thereon.

Make the Prospect Want Your Car

Concessions will get you little or nothing

By Ray W. Sherman

"I OFFERED him everything!" declared Henry Bennett. "I threw away almost all my profit on the car. I threw in a tube and a tire and a bag of chains—and still the poor boob wouldn't buy. He went down to your place and bought a Sennett for cash, paid for his tube and shoe and everything else. It's beyond me!"

Henry waved his hands and forearms in a gesture of resignation and half turned his back on Cornelius J. Reilly, the Sennett dealer in Callawassa.

But Reilly only smiled at his boyhood companion and manhood competitor on Callawassa's motor row.

"Henry," he said, "do you remember the time you and Lou Tompkins and Robbie Gray were all running a neck-and-neck race after Tessie Mulvihill?"

He Couldn't Get Tessie

Henry did remember that experience with the present Mrs. Gray.

"And do you remember how, at that same time, Lorella King was running after you about as hot as you were after Tessie?"

Henry hadn't yet forgotten that, either.

"Why didn't you warm up to Lorella, Henry?"

Henry reddened—and grinned.

Reilly answered the question for him: "The thing you can't get is always the thing you want, Henry, isn't it?"

"I suppose so."

"And does that apply any more to a woman than it does to a car or a house or a diamond, or anything else we are likely to want?"

"I suppose not."

The Reason for Values

"Your 'suppose' is correct. The harder it is to get a thing the more we want it. The more difficulty there is in getting it the greater becomes its value—to us. Ice comes high in the tropics because it's hard to get. Gold is valuable because it is scarce—and hard to get. And so it goes.

"Iron is cheap because there is lots of it. It's easy to get. Ice doesn't sell for very much in Greenland.

"Also, the company that makes good goods and can sell all it makes at its own price is often haughty in its attitude to the public. It can afford to be. Some of us car dealers have good cars and the factories can sell all they make, and then some; but we don't seem to get the idea that we still can sell them if we ask the list price for them.

"We're foolish, Henry. The easier you make it for a prospect to get a car, by throwing off on the price or making long trades or giving him accessories, the harder you are making it for yourself to make the sale. What's easy to get is hard to want. The prospect is nothing but a plain, every-day human being, and he's just like you and your young lady friends of four years ago.

It Sold the Car

"I had an Englishman come into my place once to look at a Sennett. He was quite an engineer, and he wanted to crawl all over the car and inspect it himself. I let him go the limit. Finally he said the car suited but that I undoubtedly would throw in a shoe. I said no. He said I surely would throw in a tube. I told him no, that we never allowed a cent discount even in an indirect form. He said he could get such and such discounts at other places, and I told him I would lose the sale rather than give him a postage stamp.

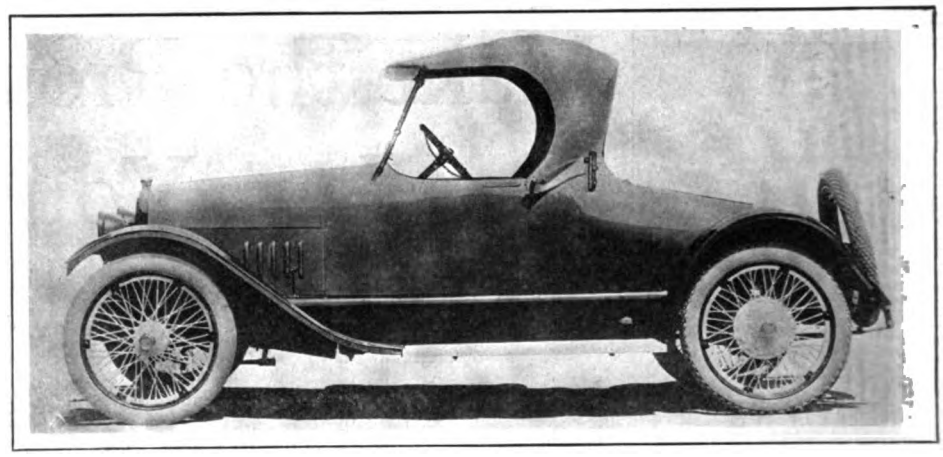
"It worked just as I thought it would. He said: 'Rulleh, the cah must be verreh good, you're so indifferent abowt selling it!' He bought it, Henry. I made him want it because I made him pay for it. The ordinary man believes in his heart that what comes cheap is cheap—and generally he's right. And by cheap I mean punk, not low in price.

"Sample Shoes"

"Every time I see advertised a sale of sample shoes of six and seven dollar grades I pass it up. And why? Because I have investigated several and have found that 'what comes cheap is cheap.' A bargain is a darned scarce animal. Good goods at fair value and a list price from a good dealer are the only sure protection to the buyer.

"The buyer knows this, too, and yet some of them hunt bargains in cars. Sometimes a cut price will make a sale, but a car that is always sold at a cut price loses its value standing. There is one car to-day that is going to have a hard time living down the reputation that has been created through its numerous branches selling cars at ridiculous trade figures. They're easy to get, and are becoming just as hard to sell.

"The man who is out to buy a car wants value for his money. He doesn't want something that isn't good, for a car that won't give satisfaction isn't a bargain even at 5 cents.



The Only Way

"Prospects have all sorts of ways for figuring out what car is good, but away back in their brains there is something that counts aside from bare facts.

"When you stand for your price, Henry, you take the only possible way of hammering into the prospect's noodle that your car is worth what you ask for it and is not being sold at an exorbitant price. That's why you lost a sale to me. You played Lorella King while the prospect wanted a Tessie Mulvihill."

Three Attractive Bodies and a New Truck

DETROITER ROADSTER

(Right)

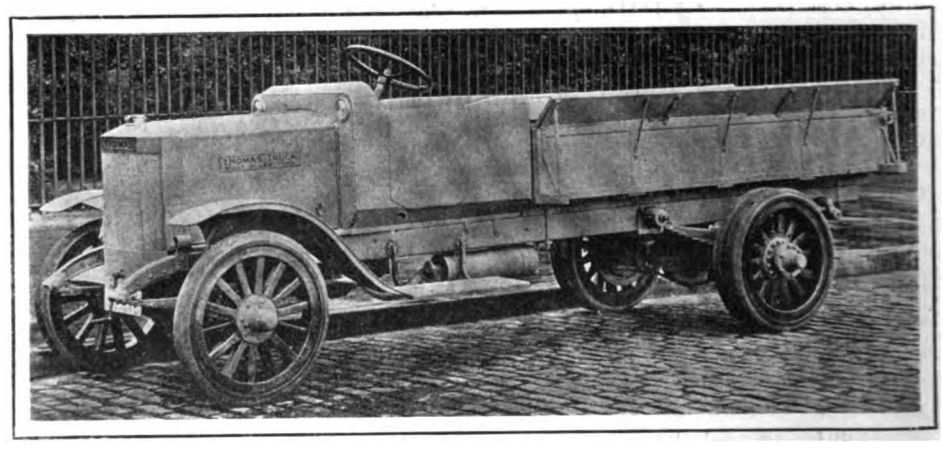
THE Detroiter Motor Car Co., Detroit, which heretofore has manufactured a touring car only, has added a three-seated roadster body to fit the same six-cylinder chassis, priced at $1,098. The lines are modern, with sloping hood and cowl, slanting windshield and sloping rear deck. At the rear is a large compartment for luggage and made exceptionally weather tight. The color and upholstery are at the option of the purchaser.

NEW MERCER LIMOUSINE

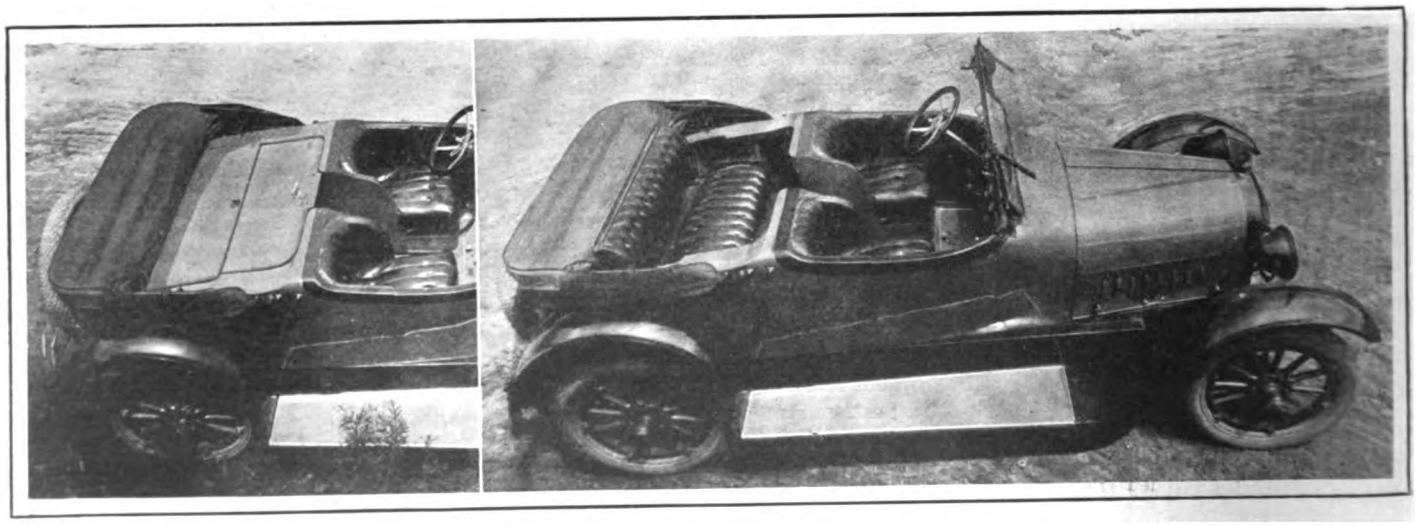
(Left)

NEW inside-driven Mercer limousine which is to sell for about $5,000. Front seats are divided to give access to the rear. Tiny side lamps are at each side of the windshield.

THOMAS 2-TON TRUCK

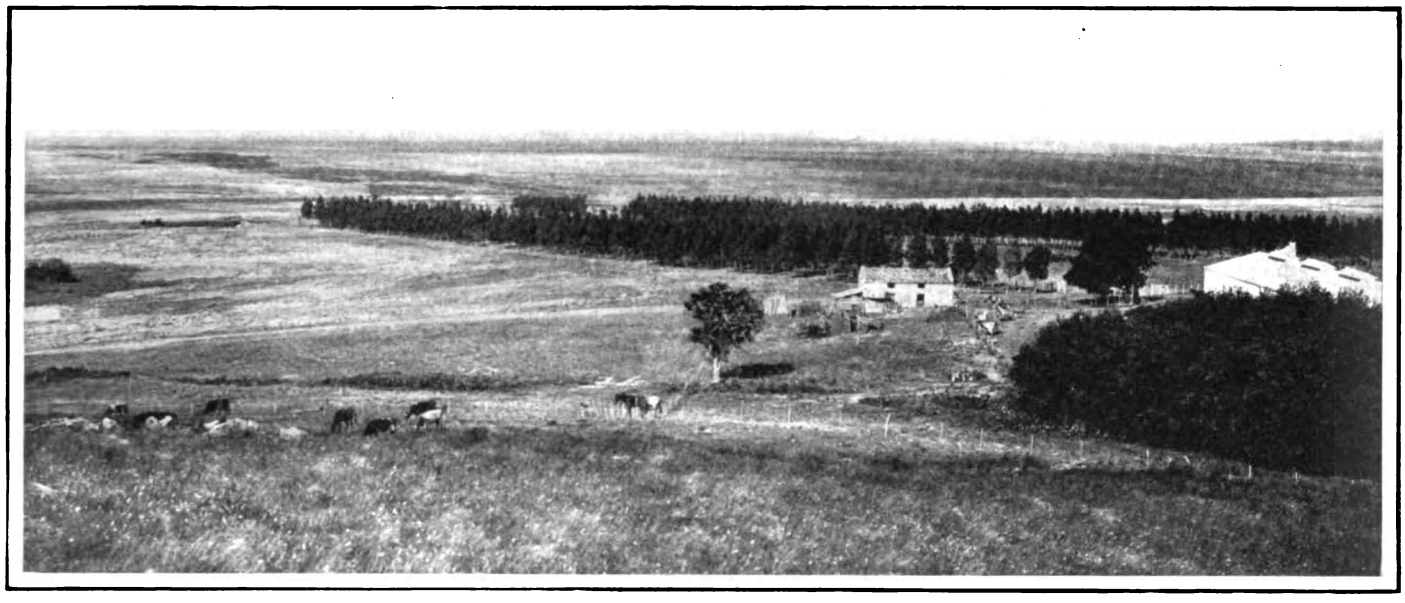


(Below)



THE Thomas Auto Truck Co., West Fifty-sixth Street, New York City, was organized early this year by C. K. Thomas to make a ¾-ton, a 1-ton, a 1½-ton and a 2-ton truck. The last named is now completed and is shown in the accompanying illustration. The engine is a Buda four, 4⅛ x 5½, with Bosch fixed-spark magneto. There is a dry-disk clutch and a unit gearbox with three speeds, the rear axle being a Timken worm drive design. The wheelbase is variable to order, the standard length being 150 in. and the alternative 166 in.

ANDERSON 5-PASSENGER ROADSTER



(Below)

AN innovation in the way of a five-passenger roadster body is the latest Anderson Six-forty-six model, which is produced by the Rock Hill Buggy Co., Rock Hill, S. C. The rear seat, which holds three, is so arranged that when not in use it folds over so as to form a flat deck. The entrance to the rear is through the front compartment, the front seats having an aisle between. The body was designed by Joseph A. Anglada, chief engineer, and a patent has been applied for. The outstanding feature of this line of cars, which was described a few months ago, is the equipment, which includes: extra rim, power tire pump, windshield, searchlight, electric cigar lighter, tonneau heater and Boyce Moto-Meter.

Thousands of acres in the Argentine, undulating like our own West, are awaiting the U. S. A. motor car for the development of roads and the upbuilding of this wealth-yielding country.

Argentina Calls for the U. S. A.'s Young Men—But It Offers No Broadway

By David Beecroft

THIS story is the third of a series on South America by David Beecroft, managing editor of Motor World, who spent ten weeks on the southern continent, investigating the possibilities there for American cars. The car of the U. S. A.—for so the Argentine calls our country—is making headway, but our young men are needed. There is opportunity for them, but they must not go blindly. There are difficulties of language and business and social custom, but the effort is worth while.

BUENOS AIRES, ARGENTINA, June 30—We have told in the preceding two articles about the selling of expensive motor cars in Argentina some years ago and of the recent large-scale introduction of the cheap U. S. A. car within the last 2 years.

This week we shall look briefly at how business has been done by the dealers in the past and how it is being done to-day and must be done to-morrow.

The fact that there never has been a a meeting of motor car dealers in this city of 1,500,000 population and with 4500 motor cars and 4000 motor taxis will suggest that business has generally been of the individual type, too much self and no co-operation.

D. B. Richardson, who is head of the Studebaker business in South America and has as up to date a shop in Buenos Aires as you could find west of Chicago—or even west of New York—has declared that he is going to have a meeting of Buenos Aires motor car dealers and hopes to put that over this fall. He will deserve a Southern Cross if he is successful, for that spirit of cooperation is the thing the Argentine dealer needs. *He has never learned what co-operation means in selling motor cars. Knocking has been his major weapon.*

It's a Long, Long Way

It is a long way from the motor car factory in France, England and Germany to the motor car dealer in Buenos Aires. It takes you just 22 days to come by the best boats from New York to this city and if you get on poor boats you are several days longer. It is exactly the same distance from here to the factories of England, France, Germany and Belgium and a little further to Italy.

Further: Not over one or two of the big men in any U. S. A. motor car factory has ever been here. The same is true with regard to the European factories. In other words, the dealers here feel a long, long way off. They have complaints by the ton and you can scarcely blame them if they have made errors and if they have not their dealers' and jobbers' organizations such as the U. S. A. boasts.

Perhaps some of our U. S. A. dealers would be a little further back if it had not been that they were within long-distance telephone reach of the factory; if it had not been that they were within the zone of night or day telegraph tolls; or if they had not had the sales manager visit them once every three months, pushing more cars onto them or cutting down their territory; or if they had not had the opportunity of going to the Chicago, New York, Minneapolis, Kansas City, Denver or a few other of the annual motor car shows and getting full of the latest talks on salesmanship and just how to sell cars.

Has No Good Dealer Paper

Perhaps they would have been further back if they had been beyond the range of MOTOR WORLD *with its talks on better merchandising, better selling of acces-*

Digitized by Google

sories, keeping cleaner shops and better business.

The Buenos Aires dealer has been outside the pale. He has been far away from all of these beneficial influences. He has known the factory only as a trouble source, sending cables collect when they should have prepaid the bill; sending cars that arrive at the end of the selling season instead of the beginning; sending coupes when only five-passenger touring cars will sell; sending 56-in. treads when the country wagons are all 60-inch; sending cars painted black when they have been ordered red; charging for this and charging for that; waiting three years to get an instruction book in Spanish so that those who buy the cars can actually read; and we might cite a score of other troubles that the dealer of the Argentine has of which the dealer in the United States has never dreamed.

Let us pity the Buenos Aires dealer if he does not measure up in car selling stature with the Broadway or Michigan Avenue expert. Let us feel sorry if he has not grown as has the dealer in Salt Lake City or Los Angeles.

The Business Differs

Running a motor car business in Buenos Aires is quite different from running one in the United States. To start with, more capital is needed. You have to pay for the cars when they are on board at boat at New York. It is then three weeks before they reach here and generally a week more before they are out of the customs. That means you have paid for your car a month before it reaches your salesroom. Then boats sail only once in two weeks or once a month, so that you must buy in relatively large quantities, otherwise you will be out of cars.

To buy quantities requires some money, so the Buenos Aires dealer must have a good deal of liquid credit at his disposal. You cannot operate on the shoestring principle, and this may be one reason why our U. S. A. factories so often tie up with large machinery houses that have plenty of credit and are very reliable. They may not be expert car sellers but they have the store and they have the money.

American Men Needed

It is generally conceded here that more U. S. A. business men and dealers will have to locate here if the sale of U. S. A. cars is to go ahead as it should. This information is really a chapter from the experience of those strong U. S. A. concerns in other lines that are well established here and are making a success of their businesses. It is this fact that has really prompted this series of articles.

Take such old lines as Singer sewing machines, Remington typewriters, National cash registers, General Electric, Westinghouse, Edison, International Harvester and a score of others, and they have practically all placed U. S. A. business men in charge and not a few other U. S. A. men in positions of responsibility.

The large packing houses have brought their managers and assistants and practically all heads of departments from Chicago. With these in charge it is not difficult to build up a competent organization. The National City Bank of New York has recently opened offices here, in Rio, in Montevideo, in Sao Paulo and in Santos Brazil and it, too, has placed its own managers in charge and has a good sprinkling of competent U. S. A. men in any of the departments.

Many examples could be cited along the same line in other businesses. This plan of manning establishments has been carried out by the large English and German houses. But they generally have gone further and in many instances have brought chief clerks from the homeland. Some of their best stenographers have been brought here. They have built up selling organizations very similar to what they have at home.

Must Send Americans

This is exactly what the motor car makers will have to do. The selling plans of the United States will have to be brought into the Argentine. They will have to be brought in by young men from the United States. Many of our factories will soon be opening branches in Buenos Aires. Our makers are already feeling that the dealers here are not sufficiently in sympathy with U. S. A. methods, and it is only natural that our makers should profit by the experience of the last ten years in establishing selling organizations at home.

To those young men who hope to come here—and there will be good opportunities for them—it will be essential that they come prepared. Spanish is the language spoken here. In this city there are not over 500 in the U. S. A. colony, but the English colony has 25,000, so that there are quite a few English speaking people. The rank and file with whom you sell cars will speak Spanish and nine out of every ten in your office force will speak Spanish.

You may have difficulty getting an English stenographer. Your telephone girl must be able to speak Spanish and perhaps English. Your salesmen will nearly all be Spanish. You may have one who can speak English. The head of your stock room will speak Spanish. The manager of your repairshop may speak Spanish or Italian. *You can readily see what you will be up against if you do not understand Spanish.*

The successful dealers here speak Spanish, and if they were not proficient in it at the start they secured the services of two or three high-class and dependable men who were masters of it as well as English. The majority of the largest motor car dealers here have one man who speaks English well. If two men are in partnership generally only one understands English.

It is quite possible to secure a competent organization here of native help. The Argentine is quick to "pick up." He is a good imitator, but you must show him. He will make a good salesman but must be told how. Then he must be watched very carefully. Eternal vigilance is essential. Many are not so reliable as in the United States. This imposes an extra duty on the young man who comes here from the United States to take charge of a business. He will be between upper and lower millstones if he has not a knowledge of the language or has not others on whom he can rely to the last word.

Studebaker Has Organization

Studebaker here has the same kind of selling organization as in Chicago or New York. The salesmen are all Argentines and practically all of them are Spanish. They are selling cars here just the same as in Indianapolis. The city is divided into zones and each has his territory. The plan is working successfully. To Ford and Studebaker go much of the credit for introducing the American system. General Motors has had representation here but the plan of selling has not been pushed as it has with the other two.

There is no difficulty in getting competent repairmen. Europe has furnished Argentine with hundreds and thousands of skilled mechanics. They are good workmen and are reliable. Frequently they are not so good at analyzing troubles in a car as in accomplishing the specific repair. The local Argentine frequently makes a good mechanic but not a good foreman. Show him how to repair a job and he will do the work well, but leave him alone and he may not know how to start.

Good Mechanics Available

There is no trouble getting all kinds of machinists here. The dealers and garagemen are generally better qualified and equiped for this work than in the United States. Here they are so far away from the factory that they feel the necessity of relying on themselves. If a bearing breaks they must either have a stock on hand or have the wherewithal to make a new one. They are generally protected in both ways. I have seen them regrinding races for ball bearings and then re-sizing the balls and re-sorting them. You find every grade of intricate repair being done, and you find the finest machinery from the United States and Europe in the garages and salesrooms. Repairs have been carried

Digitized by Google

so far that in some shops they have repairmen who specialize on certain popular makes of cars, such as Renault, Benz or Panhard.

It would be quite unusual if quite a number of young men from the United States did not come here within the next few years. Young men are coming here on every boat to take places in other industries. Some of the largest hide-buying companies are U. S. A. firms and they are sending young men here to do the buying. Practically all of the buying in the cattle yards for Armour and some of the others is done by men who have been buying in Chicago, Kansas City and Fort Worth. The express companies have young men from the United States.

College Men Managers

The main work of the telephone companies is being handled in the same way. A Harvard or Yale graduate may be manager of the trolley system, the electric light plant or the water works. With this manning of interests closely related to the United States by our own young men it is only natural to expect that as our motor car industry grows we shall need our own young men. We need them to-day. We shall have more need for them to-morrow, and when the war is over we shall need them badly indeed.

The Climate Differs

Argentina is not as pleasant a place to live in as Seattle, New Orleans or Atlanta. It has a nice climate but there are not a few disadvantages. Looking at the brighter side first: The climate is hot in summer and very pleasant; it is cool in winter. Seasons here are directly opposite to those in U. S. A. Thus, in June Argentina is in winter while the United States is in summer. Christmas day here is generally one of the hottest of the year. December, January and February are the hot summer months, and the weather gets as hot as in St. Louis or Kansas City. In the winter you will wear an overcoat. There is no snow but some frost.

Social Life Not Pleasant

Looking at the social side of Argentine life, the picture is not so inviting. Argentine home life is different from that in the United States. There woman occupies a much lower level than at home. She is more isolated. She rarely walks on the streets of this great city alone. She is afraid of men making embarrassing remarks about her. So when she goes on the street a servant goes along. That makes her safe. If there is not a servant then one of her children goes and that too makes it safe. A young girl rarely if ever goes out alone. Two or

Accounting and Business Systems

By T. W. Snead

Partners' Accounts

System Editor:

We are partners, about to start a garage, each receiving half and putting in half, I to borrow my half of the bank at 6 per cent for a year, payable in any amount each month. We will have accessories, Ford parts, wash-rack and repair department, and on a cash basis. Each will draw a salary each week for living expenses.

Would you kindly suggest how to open the accounts of each partner and handle them?—R. E. D.

Upon starting business as outlined in your letter, if the entire capital of the business was $2,000 and each partner was to contribute one-half of this amount, entries would be made as follows:

The $2,000 would be entered in the cash received column and under all other accounts on the credit side; $1,000 would be credited to partner A and $1,000 to partner B, giving the names of the accounts as "partner A proprietorship," "partner B proprietorship." I presume that partner B in borrowing the money from the bank would do so on his personal promise to pay, and therefore the interest expense would not affect the partnership in any way.

At the end of the month, the net profit, or loss, from the operations of the business would be carried in a profit and loss account, and at the end of the year this profit would be divided equally between the two partners. The salary for each partner would be charged to the expense of the company in the various departments in which the partners show the most activity.

If, however, either partner withdraws any money from the concern, this would be charged to his proprietorship account, thereby reducing his percentage of the net profits of the business, or either it would be loaned to him, upon which he should pay the usual rate of interest.

Entering Deferred Bills

System Editor:

I would like instructions how to enter a bill of gasoline which I will not pay for until the first of the next month, and then show the items as they are paid and how entered.

In the statement of Profit and Loss, Table 1, I would like a practical example of how things would work out if one department did not show a profit.

K-E-B-O Garage.

Bar Harbor, Me.

At the end of the month you would take all of your bills for gasoline purchased during that period and after same had been checked up for deliveries, expenses, etc., the total amount would be entered on Form 2 as follows:

The debit or charge would be under stock accounts and be a charge to the gasoline stock. Your credit would be under all other accounts and would be to accounts payable, Blank Oil Co. Then, in the rear of the binder you would carry sheets similar to your accounts receivable sheet, with the exception that this would be an account payable, and the amount, instead of being entered on the charge side, would be entered on the credit side and the name of the oil company at the top of the sheet.

We will now suppose that it is the first of the next month and we wish to pay this account—a check would be drawn on Form 2 and the amount would be entered under "all cash paid." The debit would be under "all other accounts" to "accounts payable, Blank Oil Co." This amount under accounts payable would then be charged on the sheet in the rear of the binder, which charge would offset the credit that you made the previous month, wiping out this account.

In the profit and loss table, when one department showed a loss instead of a profit, this would be shown in red figures and would be deducted from the total profits of the other departments. In other words, as follows:

Car Dept. made.....	$200.00	profit
Repair Shop.....	100.00	"
Accessory Dept.....	50.00	"
	$350.00	"
Less: Loss Storage Dept.	50.00	"
Net Profit.....	$300.00	

Gas Record System

Editor Motor World:

A short time ago you published a card to be used for gasoline selling which, we recall, was very good. Would you oblige us by securing a sample of this card and forwarding same to us with prices?—Republic Sales Co., 214 Penn Street, Reading, Pa.

We have no samples of the card you mention, nor have we made any for sale, so cannot quote prices. Your local printer can produce these cards for you at a reasonable figure; 1000 would certainly not cost more than $2.

Fig. 1 shows a similar card to the one you mention, but it is more complete. Any recording system to be of any value must be complete. Every item entering into the transactions must be considered and a check provided for the resulting conclusions.

The record extends from 7 a. m. one day to 7 a. m. the following day. This period is divided into day and night shifts, and the shifts are kept separate.

The foreman records the pump indicator reading at the start and finish of his shift. The difference is the amount pumped during the shift, and should agree with the sales record.

The amount actually in the tank is measured at the time the pump readings are taken. The amount in the tank at the start plus that received during the day, minus what is in the tank at the end of the shift, gives the quantity taken from the tank. The method employed here is shown under the item "Tank Measure."

The sales record should not only show the number of gallons sold to customers but also the amount used in the garage. The pump man should be under orders not to pump to employees unless he has a shop requisition signed by the foreman. The sales slips should be totaled at the end of the day, the amount used in the shop accounted for, and the whole tabulated under the sales record.

At the end of the shift the foreman should check the tank measure footing with the sales record footing. If these do not agree the mistake may be located

SUMMARY FOR DAY

Price paid—24c. Sale price—28c.

Gasoline	Gallons	Cost	Selling Price	Gain
Sold	1672	$401.28	$468.16	$66.88
Shop, etc.	28	6.72	6.72	.....

Fig. 1

by comparison with the pump readings. If the pump reading agrees with the sales record incorrect measurement will be indicated, and the stroke of the pump should be adjusted.

If, however, the pump reading and the tank measure agree and the sales record differs, the fault will be that of the pump man. He has either given gasoline without a requisition slip or, in the case of sale, has neglected to record the transaction.

The record would be incomplete if a summary for the day were not taken and the results entered in a book kept for that purpose. The daily cards need only be retained for a month back, as the daily record has all information that should be kept and the monthly report may be made from that.

Handling Bank and Petty Cash

System Editor: In your system kindly advise me how you handle the daily deposits to the bank and how the petty cash is balanced daily.

In posting to the customers' accounts and also to accounts in the general ledger, do you show a folio number? I do not see any columns for check mark or folio on Forms 1 and 2.—El Paso Auto Sales Co.. El Paso, Tex.

If you will refer to the system booklet, a copy of which we are inclosing, you will note on the debit side of Form 1 a column headed All Cash Received. As this sheet is a daily record, the total of this column for any one day should be deposited in your bank and the total amount as shown in this column should show on your bank book.

In regard to petty cash: If you carried, say, a petty cash account of $15, this can be balanced at any time by simply adding the items in the petty cash box, which should at all times amount to $15. In other words, if on Monday, the 27th, you had $15 in cash and on that day you spent $1 for, we will say, carfare, you would put a memorandum in the box saying "Carfare, Gen'l Dept., $1." At the end of the day you should have $14 in cash and $1 expense memorandum, making a total of $15.

You would continue to do this until you had used, we will say, $14 of your cash. You would then take the $14 worth of expense memorandums and enter them on Form 2 in a lump sum, charging on the debit side of Form 2 each department for its own particular expenses, making a total of $14.

Your credit entry would be your check which you would draw to the order of petty cash. This check, after being cashed at the bank, added to the $1 that you had left in your petty cash drawer, would again bring the total up to $15, and so on indefinitely.

In posting to the customers' account and to accounts in the general ledger, instead of using a folio number you post by dates. For instance, if you charge John Jones for a spark plug to-day on Form 1, this amount will be posted to John Jones' account as of Aug. 10, 1916, on Form 3, postings to general ledger sheets to be made once a month at the end of the month, after recapitulation of Forms 1 and 2.

Argentine Calls to the Young Man

(*Continued from Page 17*)

three may go together, but they generally go with their mother.

Read This, Boys

Here a young man rarely calls on a young lady at her home unless he intends to marry her soon. If he does the call is made with the mother or other members of the household in the room all the time. If a young man is seen on the street with a lady it is immediately assumed that they are engaged and will soon be married.

This social custom is a relic of Spanish life and is not conducive to the general good. As a result of this, young men from the United States find life quite weary at times. They find it practically impossible to get into Argentine homes. There is a great barrier between the young man who is not an Argentine and the Argentine home, which makes it lonesome, and many of the young U. S. A. men tire of it. The theater life is not to be compared with that in our second or third rate cities at home. True, the operata is the finest south of the equator and nearly as good as in New York City, but it is very expensive, too expensive for the young man here working on salary.

Breaking Down the Barriers

These and a few other disadvantages have to be overcome by the man from the United States. *They are being overcome.* Men are much better able to cope with the situation here than U. S. A. women. Very frequently you meet the man who likes the city but the woman refuses to live longer under this regime.

This situation is very unfortunate and has already hurt U. S. A. trade here. *It is being mastered.* Conditions have changed very much in the last few years. The next five years will make great changes. The motor car itself is bound to be one of the strongest factors in introducing new social customs.

I have purposely painted the picture as nearly as possible in its true colors. There is no use making it a bed of roses only to discover it a hard stone road of business life.

Argentina needs our young men in the motor car business. Our country is growing into export fields and must be prepared to tread those paths of developing business that citizens of other lands have trod.

The possibilities are here. There is much money for the dealer who gets all Argentina for any one of 20 or 25 U. S. A. cars, not to mention light trucks and heavy trucks, all of which must come into more general use here.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 810) WRIST PIN REMOVER

The pistons of eight- and twelve-cylinder motors are small and it is difficult to remove the wrist pin without injury to the piston. This is particularly true with pistons made from aluminum composition. The remover shown herewith is constructed of cast-iron and permits a powerful leverage to be applied to the pin with no attendant damage to the piston. Wrist pins may be removed and new ones fitted without taking the connecting-rod from the engine.—Cadillac Automobile Co., Boston.

(No. 811) BRAKE BAND GAGE

Brake bands are frequently sprung out of round, and although dragging at certain points are too loose for effective breaking action. The high and low points may be located by the aid of the gage shown herewith. The hub may be made from cast-iron, bored to fit the axle; the arm and pointer being made from soft steel rod. The wheel is removed from the axle, the gage slipped in place and rotated. The high points are marked and the band bent back to shape. A similar gage may be made for cars having floating rear axles.

(No. 812) LATHE DRIVEN TIRE PUMP

A small tire pump, of the type commonly installed on an automobile motor, may be used to supply compressed air for the small garage. The pump is mounted on the tail stock end of the lathe and is driven through a gear fastened to the lathe lead screw. This latter gear is the one supplied with the pump for attachment to the motor, and its split construction permits it to be readily bolted to the lead screw.—William Cook, 3 High Street, Brookline, Mass.

(No. 813) CONNECTING-ROD TESTING

Ordinarily a connecting-rod testing set is only good for engines of one model. The use of self-centering mandrels in the manner shown provides a testing set that may be used on many makes of motors. The threaded mandrils are turned from soft steel, case-hardened and ground. The cone washer B is made in the same manner and ground down until its diameter is the same as that of A. The mandrils are placed in the bearings of the connecting-rods and the nuts tightened until the cones come to a bearing all the way around. The connecting-rod is then rested on V-blocks, supported on a surface plate. If the bearings are in alignment, the weight will be equally distributed on each block, but if any freedom is noted the connecting-rod must be bent or twisted until equal distribution is obtained.—Packard Motor Car Co., Boston.

YOUR IDEAS

If you have been helped by this department, you may help others by contributing your own ideas. You have been thankful to those that have given their ideas, and you should reciprocate. Never mind about literary style or finished sketching. Forward your ideas in the rough; we will do the finishing.

(No. 814) PORTABLE TOOL BOX

A portable tool box, having leather loops for holding tools and parts, is illustrated. The loops are made from a strap and extend around the inside and outside edge of the box. Not only are the tools convenient to use, but the desired tool may be located at a glance.—Stanhope Forge Co., Boston.

(No. 815) LAPPING RINGS

New rings may more readily be fitted to the cylinder by the use of the dummy piston illustrated. The top of an old piston is cut off, leaving only one ring groove; then the bottom is cut away slightly, to permit the wrist pin to be used as a handle. The ring to be fitted is placed on this piston, the cylinder is smeared with Prussian blue, and the piston inserted. The piston is then removed and the high spots taken down with a file or by scraping.—G. A. Wadman, J. W. Maguire Co. (Pierce-Arrow), Boston.

(No. 816) PORTABLE REPAIRSHOP LAMP

An electric light may be placed and held in almost any position by standard shown herewith. The base is a wooden box filled with concrete, supported on castors and carrying the iron pipe upright. An adjustable clamp holds the arm to the upright and permits the lamp to be extended over the work or dropped to shine on the under parts of the car. —Henley-Kimball Co. (Hudson), Boston.

(No. 817) ADJUSTABLE MOTOR STAND

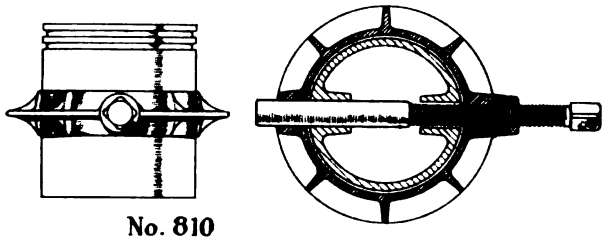
This engine stand is made of 2-in. angle iron riveted together. The cross-members are hinged at the center and may be locked in an inclined position. A motor of any width may be accommodated, as the lengthwise members may be bolted in any position. The construction of the stand does not permit the engine to be completely turned over. It may, however, be swung down to an angle of about 60 deg., permitting free access to the crank bearings or a more easy position in grinding valves.—Stanhope Forge Co., Boston.

(No. 818) VALVE AND SPARK TIMING

Ignition and valve timing on inclosed flywheel motors is greatly facilitated by the device illustrated. The bushing holding the cross-member is made of an old spark plug, and acts as a guide for the vertical rod resting on the piston. The pivot supporting the pointer is placed at ¼ of the distance of the rod to the scale, and the travel of the piston is made twice as large on the scale. In valve timing, the piston is placed in the position that it is desired to have the valve open and the camshaft set. A spark gap held in a fiber washer provides a means of timing the ignition; the scale and pointer being used to determine the position of the piston as before. With L- or T-head motors the rod may be offset to rest on the piston.

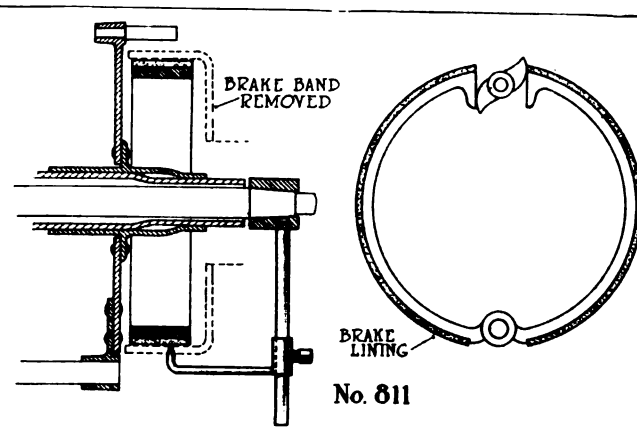
(No. 819) MOTOR COOLING TANK

After the motor has been overhauled it is often desirable to test it out on the stand. Much damage may be done, even in a short run, if some method of cooling is not provided. A 5-gal. can, mounted on a wooden stand and provided with suitable hose connections, offers a handy solution. Connections may be readily made or broken and the thermo-syphon cooling is sufficient for an ordinary test run. — Henley-Kimball Co. (Hudson), Boston.



(No. 820) EXTENSION BIT

Clean holes, for the installation of instruments on the instrument board or dash, may be cut by the adjustable bit illustrated. The shank is made from soft steel, with the point case-hardened, and the upper end squared and tapered to fit a bit-stock. The arm and knife should be made from a good grade of tool steel. —Henley-Kimball Co. (Hudson), Boston.



(No. 821) CASE HARDENING

The durability of all fittings and small tools made from soft steel can be greatly increased by the formation of a thin case of hard steel on the outer layer of the piece. Such a layer may be made by heating the part to a cherry-red heat and sprinkling it with potassium-cyanide. The cyanide will fuse and flow over the entire surface, changing the outer layer of the metal to tool steel. The depth of this layer depends largely on the time the heat is held after the cyanide is applied, from 1 to 2 min. usually being sufficient. It should, however, be understood that the case obtained from the above treatment is very thin and is not suited to parts that must be ground to a finish or parts that are to be subjected to much wear.

FIREPROOF GARAGE

Figs. 1 and 4

A garage with many points to recommend it is being completed by Charles H. C. Tiffany, Poughkeepsie, N. Y. First, no elevators are used; second, there is a salesroom for cars and a separate store for accessories; third, there is an apartment on the third floor for the owner and his family; fourth, the building is light and airy and there is no waste space.

The building is situated near the center of the city and on the main road between New York and Albany. It is a concrete and steel structure consisting of three stories and basement, and measuring 53 x 174 feet.

The accessory store and salesroom are situated on either side of the entrance, and the rest of the space on this floor is used for car storage. On the second floor, above the accessory store, is a stockroom for accessories, and above the salesroom is a private office and a ladies' room. The full width of the front of the building on the top floor is the owner's apartment.

The remainder of the two upper floors has not been completed and will not be until this space is required. At this time it is planned to build a ramp connecting these two floors with the ground. The beginning of the ramp, as indicated by the accompanying drawing, will be at the right of the building and will run outside of the building to the second floor. A driveway will extend across the second floor, and the ramp to the third will slope up towards the front of the building.

An unusual feature of this garage is that the distance between the floors has been made no greater than necessary to accommodate the largest limousine, or about 9 feet. Thus the total height of the building is reduced, material is thereby saved, and the length of the ramp and the amount of space it takes up is minimized. The slope of the ramps will be about 13 per cent, or 3 per cent more than the slope of the ramps in the new A. C. A. garage in New York city. The width of the ramps will also be made the minimum, probably 7 feet.

In addition to the front entrance, which is wide enough to accommodate two cars, there is a side entrance to the ground floor through a driveway from a side street. This is nothing more than a ramp and it has a slope of 13 per cent.

Entrance to the repairshop, which is in the rear of the basement, is also through this side street, the driveway from the street to the shop sloping down at a slight angle. The shop is 78 feet long and the full width of the building. A bench is arranged along the rear and the more intricate repairs are done adjacent to this bench. The machine tools, consisting of a lathe, drill press, milling machine, arbor press and speed drill, are situated in one corner of the shop, separated from the rest of the room by a grating.

To guard against fire the heating plant is placed in a small building to the right of the repairshop. Steam heat is used throughout.

One interesting feature of the accessory store is the use of the wall, separating it from the entrance, for the display of goods. This partition is entirely of glass, and since gasoline and oil pumps are located in the entrance, the goods so displayed are noticed by every person who enters.

The arrangement of gasoline and oil pumps is particularly neat and convenient. There is a recess in the wall at either side of the door leading from the accessory store to the garage entrance. In one of these is the gasoline pump and in the other three oil pumps. Above the gasoline pump is a glass cupboard with a padlocked door, in which is contained emergency accessories, such as Prest-O-Lite, batteries, grease, oil and spark plugs, and the purpose of this is to allow the night man to sell these necessities without running the risk of giving him access to the main store.

CONCRETE OR TILE

Editor Motor World:

I am thinking of building a new garage here and would like to have your advice as to what you think would make the best building, solid concrete or tile for the walls. Where can I get cement in carload lots at wholesale prices? I can use about two carloads of cement. —Star Garage, Kinmundy, Ill.

Hollow tile is cheaper than brick and equal to it in every way. It is fire-proof, and is a better protection against heat and cold than concrete. Just how much cheaper it is depends on local conditions and an estimate would only be misleading. Any cement manufacturer will be glad to quote you prices on two carloads of cement.

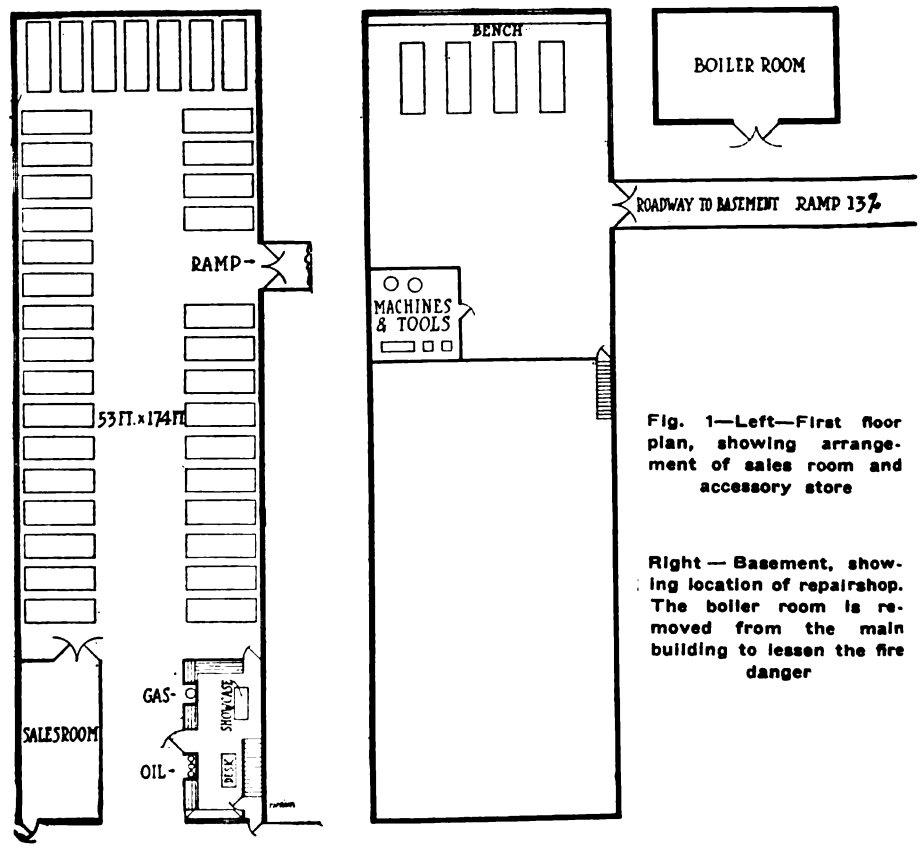

Fig. 1—Left—First floor plan, showing arrangement of sales room and accessory store

Right — Basement, showing location of repairshop. The boiler room is removed from the main building to lessen the fire danger

Digitized by Google

The wall should be 8 in. thick, finished inside and out with a concrete plaster. Care should be taken to secure a good mason for the work. Not until the mortar in which the tile is laid is set and thoroughly set, should the plaster be applied. The outside layer should have a waterproofing compound incorporated in it.

Lock hollow brick might be substituted for the tile unless the freight charges are so high as to make this material uneconomical. These bricks are like ordinary ones in appearance and consequently no plaster finish is required.

GARAGE AND SALESROOM 100 x 200

Figs. 2 and 3

Editor Motor World:

Am contemplating building a garage and salesroom and I would be glad to get any plans and suggestions that you might be willing to give.

The ground is 100 ft. wide, fronting north, and 200 ft. deep. Nothing joins this on either side, having three streets and an alley. My plans are a 30 x 40 salesroom on the northeast corner for cars, supplies and office. Immediately in the rear of this is a ladies' rest room and in the rear will be the garage proper with an exit on the east side, an important street. There also will be two entrances on the north. I plan to partition off the rear for repairshop and washrack, which would be about 25 x 100, and have the main entrances to this from the rear.

My plan is to have an all plate glass front and to extend the glass along the east of the salesroom for a short distance. No doors on the west; nothing but high windows.

Would be glad to hear from you as to the advisability of the salesroom, supplies and office altogether, and how to best arrange. Also gasoline tanks, air, etc.—H. L. Simpson, Gainesville, Tex.

Fig. 2 provides for the storage of about eighty-five cars, but the arrangement is rather crowded. Furthermore, the layout of showroom, accessory store and so forth is not all that could be desired. Fig. 3 provides for only about seventy-five cars, but is a much more attractive arrangement. We think both these plans are better than the one suggested by you.

The wash rack is placed in the aisle in both plans. If, however, you have very much work to do by day, of course it will interfere with cars being moved in and out.

It is better to have the accessory store and showroom separate. Putting these two departments together is a disadvantage in that the noise in the accessory store distracts the attention of the salesmen and prospects and it is hard to make a very attractive looking showroom and still have one side of it filled with accessories. The two departments look better and may be run more efficiently when they are separate.

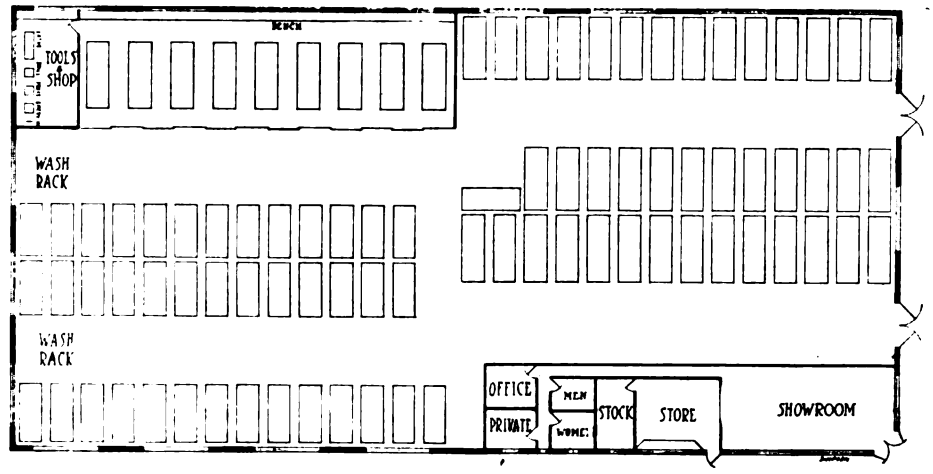

Fig. 2—This arrangement allows 85 cars to be stored, but is not as desirable as the one below

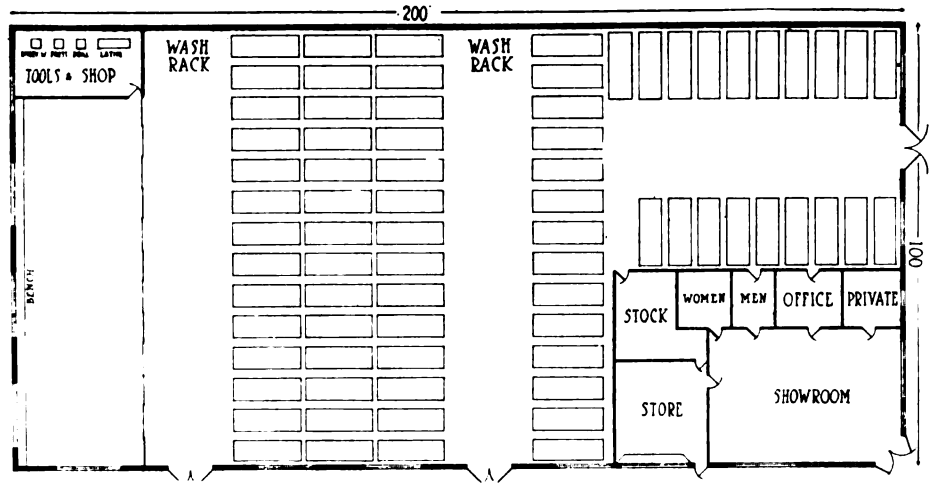

Fig. 3—A more attractive and convenient arrangement of the showroom and repairshop than that shown in Fig. 2. About 75 cars may be cared for

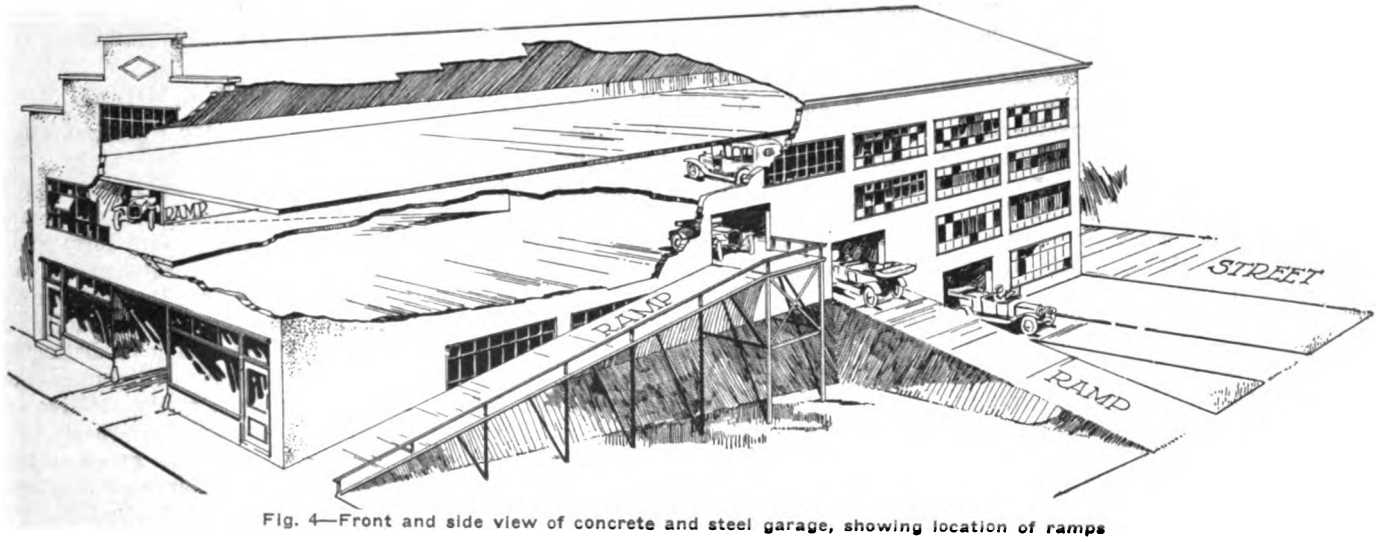

Fig. 4—Front and side view of concrete and steel garage, showing location of ramps

Accessories & Supplies

PORTABLE FLOOR CRANE

The United Engine & Mfg. Co., Hanover, Pa. PRICES: No. 66, 1-ton, 6-ft. 6-in. lift, 33-in. overhang, $64; No. 76, 1-ton, 7-ft. lift, 33-in. overhang, $66; No. 80, 2-ton, 7-ft. 6-in. lift, 36-in. overhang, $82.

A portable, hand-operated floor crane having the high lift and deep overhang required in repairshop work. A heavy cast-iron base mounted on truck wheels supports the light steel superstructure carrying the hook, chain and drum. Because of the heavy base and light upper structure the center of gravity is very low, preventing top-heaviness and permitting a high lift. The U-shape of the base allows the crane to be placed in any desired position about the car and is narrow enough to pass between the wheels.

NEW GREENFIELD TAP

Greenfield Tap & Die Corporation, Greenfield, Mass.

The Gun tap is so made that it cuts with a shearing action, curling the chips ahead of the cutting edge and preventing clogging. The cutting edges are ground at an angle at the point, permitting the tap to cut freely and make clean, sharp threads. The body of the tap has no cutting action, only serving to hold the work true to the lead. The taps are made with two or three flutes only, shallow so that the tap is nearly as strong as the solid stock. It is claimed that chipping is confined to the cutting edge, which may easily be reground. Regrinding may be repeated until only two or three full threads are left, it is said, and will retain its cutting size to that limit.

MARMON ENGINE STAND

Nordyke & Marmon Co., Indianapolis. PRICE, engine stand, $105; rear axle stand, $45.

These two stands are designed for the new Marmon and are used throughout the Marmon factory with such success that it has been decided to furnish them to dealers. The engine stand is mounted on four wheels, so that it can be readily moved. The engine can be turned into any position and completely assembled or disassembled while on the stand. The rear axle stand may be used for all rear axle work, as it permits the complete building up or tearing down of the rear system. The arm extending from one of the uprights has a spring arrangement by which one side housing is placed against the center piece of the rear axle when the other side housing is mounted above, so that all three pieces of the axle are held in position while they are bolted together.

AUTOMATIC SPARK ADVANCE

Automatic Spark Advance Co., Monadnock Building, San Francisco.

The spark is automatically advanced by the centrifugal action of four balls. The driving and driven members of the coupling are constructed so that there are four V-shaped compartments, in each one of which is a ball. One side of the compartment is part of the driving member and the other part of the driven. As the speed increases, centrifugal force throws the balls outward, and forces the sides of the V's apart, thus advancing the spark. It is said that it may be installed in place of the usual coupling between the pump and magneto and will fit any standard magneto.

MAJOR'S SPRING LUBRICATOR

Major Mfg. Co., 461 Pearl Street, New York. PRICES: Per set of four, Ford, $12; runabout or five-passenger, $20; seven-passenger, $25.

A combination dust boot and lubricator for leaf springs. It is a waterproof, oil-tight casing lined with felt and laced over the leaves of the spring. The felt is saturated with oil, and the motion of the spring draws the oil between the leaves. All grit and water are excluded, and the constant supply of oil promotes easy riding and reduces spring breakage.

COSMO TIME STAMP

A. D. Joslin Co., 221 West Erie Street, Chicago. PRICE, $7, plain dial.

Stamps the time-card with the time at the beginning and end of the job, giving the elapsed time accurately. A small metal case holds the watch and carries the stamp indicating the day, hour and minute. Four different models are made. Model A has a 12-hr. dial, stem winding and setting; model AA is the same, except that it has key-wind; model B has a 24-hr. dial, as has the model BB, the former being stem-wind and the latter key-wind. This time system promotes efficiency and furnishes the repairman with evidence that cannot be disputed.

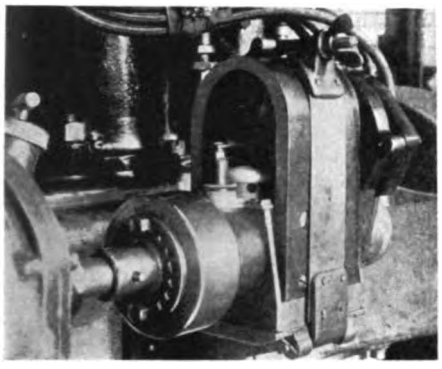
LAMINATED WOOD WHEELS

F. S. Merrill, Amesbury, Mass. PRICE, $175 per set of four, painted and finished.

A wheel of laminated wood, the wheel appearing as a solid disk, like a pressed steel wheel. The wheel is built up in a very ingenious manner. Wood is cut into triangular pieces, so that a number of triangles put together make up a circular sheet of wood. Several such circles are laid on top of one another, but the centers or places where the peaks of the triangles meet are not on a single center line. Suppose there are six layers of wood, then the center points of the six triangle assemblies will be spaced equally apart. Actually the points are arranged around a small circle, so that if a nail were driven through each center the six nails would be six points on a circle. The layers of wood are consolidated by heavy pressure. The principal claims for the new wheel are immense strength, moderate weight and handsome appearance, and lends itself admirably to decorative painting. In natural wood it looks well, having none of that heavy appearance which often characterizes a disk wheel of steel.

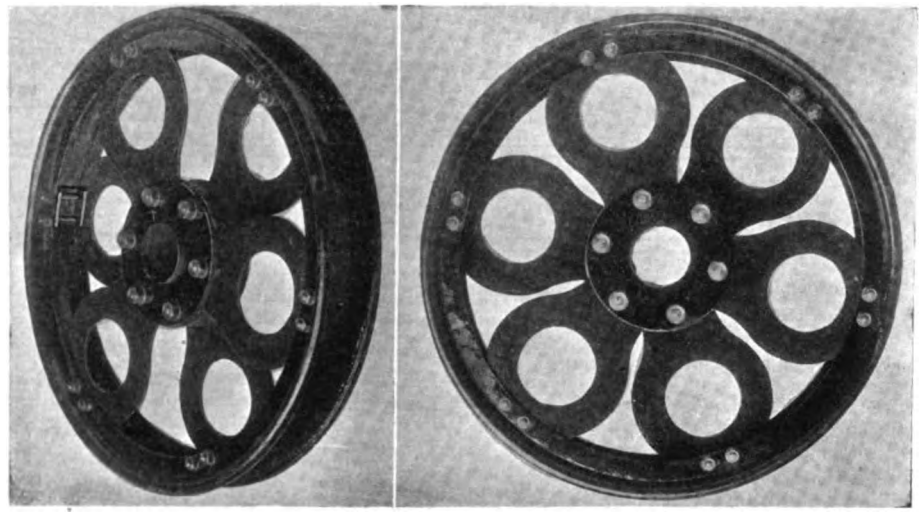
PRIVATE GARAGE HEATER

W. A. Schleit Mfg. Co., Inc., Syracuse. PRICES: $35 to $75, depending on the size of the garage.



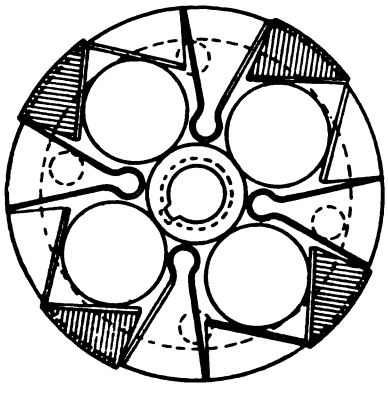
The Wasco is a hot-water heating system designed for the private garage. The outfit consists of a cast-iron hot-water heater, one-piece radiator and hot-water cylinder and piping cut to fit. It is equipped with an automatic regulator designed to give an even heat under varying climatic conditions. The heater burns either hard or soft coal of pea, chestnut or coal size. Heaters are built for garages housing from one to six cars, the small, single-radiator system being suited to the 10 x 12-ft. garage.

STEEL MOTOR WHEEL



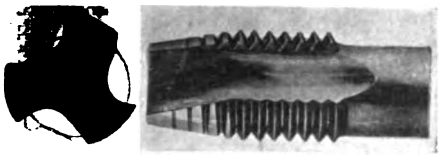
G. W. Morrison, 1170 Broadway, New York.

A steel wheel, styled the Blakoe double trefoil, stamped from sheet metal and designed to accommodate any form of demountable rim. The side plates are bolted to the hub and to brackets in the felloe, and the wheel may readily be taken apart. The wheel has a distinctive appearance and a look of lightness that is a marked contrast to the massive appearance of the solid disk wheel. The lateral strength is not as great as that of a wire wheel, but compares favorably with that of a good wood wheel.

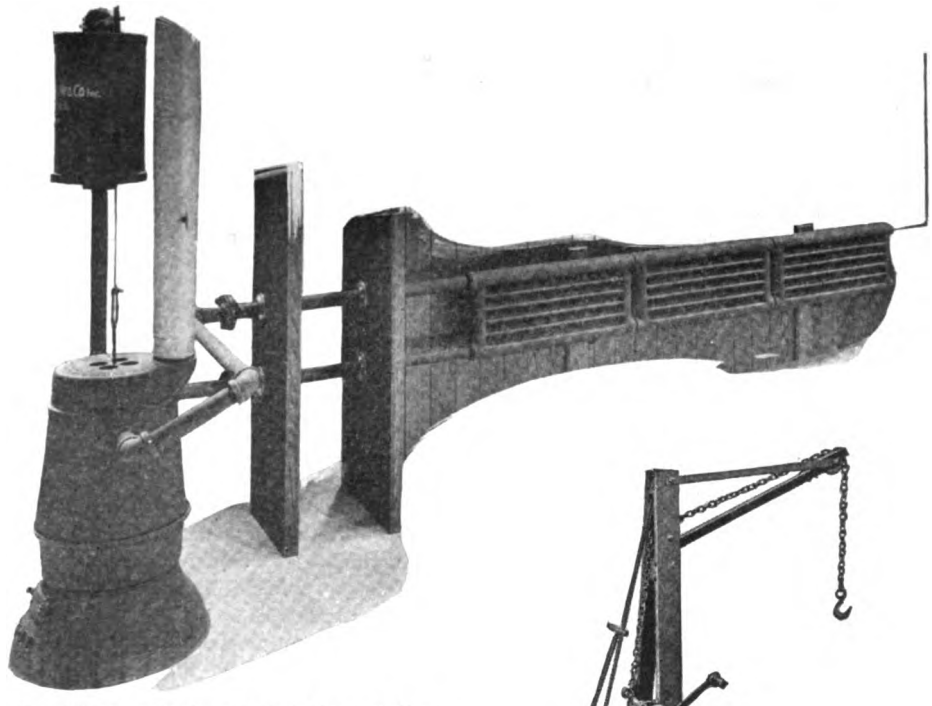


Digitized by Google

Automatic spark advance as attached to a magneto



Left—Side view showing method of attaching the spoke-plates to the hub and felloe. Right—Front view showing the light and pleasing appearance of the wheel



Cross section of the governor on the automatic spark advance. The centrifugal force of the balls in the V-slots advances the spark

Showing the method of lacing Major's spring lubricator to the spring. The outside covering is a waterproof material and lined with oil saturated felt. The lubricator is said to keep all grit water, etc., from between the leaves and furnish a constant supply of oil to the springs

The new Greenfield tap

The Wasco private garage heating system can be supplied for 1 to 6-car garages. The heater burns either hard or soft coal of chestnut or pea size, and is fitted with an automatic regulator

The Cosmo time stamp is convenient to use, promotes efficiency and protects both the owner and the repairshop man

This portable hand-operated floor crane is designed for repairshop work. It has a high lift and deep overhang, and may be had either in the 1 or 2-ton size

Do It This Way—

···QUERIES ANSWERED···

CASE HARDENING

Editor Motor World:

We would be greatly pleased to have your advice at your early convenience with regard to the hardening of wrist-pins for Fords, particularly the carbonizing agent to use, the degree of heat to maintain, how long to run the heat, how long to let the pins anneal before reheating, etc. We have a gas furnace and a water bath.—E. A. Francis, American Mach. Prod. Co., Marshalltown, Iowa.

The material should be the first consideration: 0.12-0.15 per cent carbon steel is best, although 0.20-0.22 per cent carbon is sometimes used.

The wrist-pins should be machined to a rough finish and ample allowance given for warping and grinding to a finish. The tolerance varies, but we would advise at least 0.02 in.

There are many carbonizing agents on the market, and, if you wish, one of these may be used. A good agent may be made from:

60 parts wood charcoal.
40 parts barium carbonate.

The whole mixture should be dry and granulated. A mixture used by another manufacturer is:

11 lb. prussiate of potash.
30 lb. sal soda.
20 lb. coarse salt.
6 bu. powdered charcoal (hickory).

The carbonizing may be done in your gas furnace. The wrist-pins are packed in the compound and placed in a section of iron pipe. The lower end of the pipe is plugged with fire-clay, a layer of the charcoal mixture packed over it at least 1½ in. deep and the wrist-pins introduced and packed. Contact with each other or the pipe should be avoided and the compound should be rammed tight around the pins.

After sealing the top with fire-clay the pipe is placed in the furnace, blocked up away from the bottom and heated to 1600-1650 deg. Fahr. This heat is held for from 6 to 8 hr., when the pipe is removed and allowed to cool.

The subsequent treatment depends on the grade of job you desire. Many makers reheat the pins to 1550-1650 deg. Fahr. and quench them on a rising heat. This refines the grain of the low carbon core. The pins are then reheated to 1350-1425 deg. Fahr., a cherry-red, and plunged to harden the case.

A tougher case may be obtained by drawing the temperature to 450 deg. in oil.

All temperatures should be measured with a suitable instrument, the Bristol pyrometer being perhaps the best practice. Otherwise the results will be far from uniform.

However, the treatment outlined is rather elaborate and good results may be obtained as follows: After heating at 1600-1650 deg. Fahr. for 6-8 hr., allow the pipe to cool. Remove the pins, reheat to cherry-red and plunge in brine. The pins are now ready for finish grinding.

The case should be 0.90 per cent carbon and the core about 0.20 per cent carbon. The case should be 1/16 in. deep for the compound, heat and time we have indicated.

You many find, on trial, that the temperatures, time and method of treatment may be changed. We would strongly advise that you experiment, find the combination that gives the best result, and then keep the treatment standard. The treatment outlined, however, is very nearly standard.

SPEEDING UP A FORD

Editor Motor World:

I am going to strip a Ford for a racer and intend to bore sixteen ⅛-in. holes in each piston and four ¼-in. holes in each connecting rod and put 2 7/11 gear ratio in rear end. I want to know if you advise taking all of the magnets off of the flywheel and the field coil out. I have an Atwater Kent to put on.—Raymond Ganett, Ardmore, Okla.

Your plans regarding your Ford are all right as far as they go. We would advise that you take off the magneto magnets and coils, as these units will cause a slight drag and will also make a slight difference in the acceleration. It is not important to remove them, but inasmuch as you will no longer require them they might as well be taken off.

Just the changes you have mentioned will make very little difference in the speed of your car. The addition of the ignition system should increase the speed somewhat, but the lightening of the reciprocating parts will have no effect on the speed. It will, however, reduce the vibration and consequently impose less strain on the car at high speeds and make it more agreeable to drive under these circumstances.

If you desire speed there are several other things you might do, and these will be mentioned about in the order of their expensiveness.

The first thing to do is to remove all parts which cause wind resistance, such as fenders, windshield, etc. The next step is to fit a pointed radiator and a smooth, streamline body. With these changes and the new gear ratio you should obtain a speed of at least 60 miles per hour.

A carbureter better adapted for high-speed work than the one regularly fitted will also produce an increase in the speed.

If still more speed is desired the compression may be raised by shaving about 3/16 in. off the cylinder head; and, finally, you might put in a special camshaft. This may be made by any high-class machine shop, or can be purchased at about $12.50. If you do not care to buy the special camshaft you might shift the present camshaft one tooth ahead at a time until the setting which gives the maximum speed is attained. This method will not, however, give any great increase.

With all these changes your motor will be capable of running at a considerably higher speed than it is now and the resulting vibration will cause trouble. Nuts all over the car will loosen up and excessive strains will be put on the various moving parts of the motor. To eliminate or minimize this difficulty you should fit aluminum pistons.

MOTOR HORSEPOWER RATING

Editor Motor World:

Please tell me how the Hudson Motor Co. claims 76 hp. for its Super-six and the ratings are only 29.4 according to Motor World.—J. P. Imbsen (S. D. McCook Co.), Salem.

The S. A. E. rating as published in Motor World is found from the formula:

$$\text{Horsepower} = \frac{D^2 N}{2.5}$$

Where D is the diameter of the cylinder in inches, N is the number of cylinders and 2.5 is an arbitrary constant.

This formula is arbitrary and assumes that all motor car engines will deliver, or should deliver, their rated horsepower at a piston speed of 1000 ft. per minute, that the mean effective pressure in such engine cylinders will average 90 lb. per square inch, and that the mechanical efficiency is 75 per cent.

No account is taken of the construction of the motor—the excellence of the bearings, the high thermal efficiency, the perfect action of the valves and ignition, the increase in compression and speed, and absence of vibration. Any engine having the same number of cylinders and the same bore as the Hudson would be rated the same by this formula.

All engines will show greater horsepower on the brake than is accorded them under the S. A. E. rating. The Hudson motor develops 76 hp. on the brake; hence the Hudson company's rating.

ANGLES OF THE LAW

By George F. Kaiser

Yes, You Can Sell It

Editor Motor World:

Kindly advise me if you know of any cases where a motor car has been sold for storage and repairs.

We have an automobile which was left here about a year ago for repairs and, same being made, the owners were notified and promised to come and get the car, but have not come, so we would like to know if we have a right to sell the car, as our lawyers do NOT think we have? They say they cannot find any law whereby we can sell the car.

Thanking you very much for this information.

Yours very truly,
(Signed) C. H. Collins.

Utica, N. Y.

You have a lien on a motor car if you have repaired and stored the same. This is provided for under Section 184 of the Lien Law, which reads as follows:

> 184. LIEN OF BAILEE OF MOTOR VEHICLES. A person keeping a garage or place for the storage, maintenance, keeping or repair of motor vehicles, as defined by Article XI of the highway law, and who in connection therewith stores, maintains, keeps or repairs any motor vehicle or furnishes gasoline or other supplies therefor at the request or with the consent of the owner, whether such owner be a conditional vendee or a mortgagor remaining in possession or otherwise, has a lien upon such motor vehicle for the sum due for such storing, maintaining, keeping or repairing of such motor vehicle or for furnishing gasoline or other supplies therefor and may detain such motor vehicle at any time it may be lawfully in his possession until such sum is paid.

To sell property under this lien you must do the following things:

Serve notice upon the owner within the county where the lien arose, or mail it to him at his last known place of residence, or to his last known post office address, if he is then not in that county.

Similar notice must be served on persons who have advised you that they have an interest in the property. The notice must state the nature of the debt or the agreement under which the lien arose, and contain an itemized statement of the claim and show when it became due.

It must contain a brief description of the property against which the lien is claimed, its estimated value, and the amount of the lien at the date of the notice.

You must also request the owner to pay the amount of the lien on a date not less than 10 days from the service of the notice, and state when and where the property will be sold if the amount is not so paid.

You are entitled to charge for storage between the time that the notice is given and the property is sold, if you make a demand for that amount in your notice.

Notice of sale must be published once a week for two consecutive weeks in a newspaper published in the town or city where the sale is to be held, and the sale must be held not less than 15 days from the first publication.

If there is no newspaper published in such town, notice must be posted at least 10 days before the sale and in not less than six conspicuous places therein.

It would not be advisable to attempt to sell this property without the aid of an attorney to guide you through the devious requirements of the law in this regard.

And Now the Tractor

Tractor cases are already beginning to make their appearance in the courts.

The Supreme Court of Mississippi has just passed on the question of oral representations in a recent case of this kind.

Suit had been instituted to recover the purchase price of a tractor, a hay baler and a four-bottom gang plow, for which promissory notes had been given, after the contract of sale had been signed.

In the contract of sale, certain warranties had been set forth which the purchaser claimed had been broken. The machines were retained by him until they were taken by the sheriff on filing of the suit.

The court held that all the oral warranties which might have been made by the agent were superseded by the written contract, as it expressly provided that all warranties were contained therein.

It was further held that as the purchaser had been advised by an expert within the first 7 days it had the machine that it was defective, it was his duty to have notified the seller of the defects within the 10-day period mentioned in the contract.—Case vs. McCoy, 72 Southern (Mississippi), page 138.

Did Not Lose Lien

When a garageman reduces his claim for repairs, he does not lose his lien for the larger amount, according to a recent New York decision.

An automobile was delivered to a dealer for repairs. After the repairs were completed the dealer held the automobile under its lien for the value and amount of such repairs.

It appeared that a bill of $992 had been rendered, which was disputed by the owner. Eventually the owner sold the automobile on condition that the buyer should contest and settle the repair bill. This party offered to pay $550 in settlement of the bill, but the dealer refused to accept less than $792 as the least sum in settlement of the bill.

The new owner thereupon sued the dealer for conversion and the court held that, although the dealer had only recovered a judgment in the sum of $665, he did not lose his lien in the entire amount. —Macumber vs. Detroit, 159 N. Y. S., page 890.

What They Think of Smoking

KANSAS CITY, Aug. 10—Many newspapers in the Middle West have taken cognizance of the Eastern ruling with respect to the garageman who knocked a cigar from the lips of a patron. The following is a characteristic editorial on the subject, which appeared in the *Southwest American* of Fort Smith, Ark.:

THE SMOKER

According to a ruling by a Massachusetts judge, a smoker has no redress if the proprietor of a garage knocks a cigar from his mouth, even if he knocks so hard as to injure the smoker's face. And the decision of the court will be approved by all sensible persons who take the time to stop and think of the danger of smoking in a place where oils and gasoline are kept.

The average American is the most careless person in the world in the matter of fire. He thinks nothing of striking a match on a powder magazine, and he smokes while filling the gasoline tank of his car. He doesn't take the trouble to remove the fire menaces about his own home, where the safety of his family is at stake, and when he takes out an insurance policy he considers his full duty done in the matter of prevention.

Of course, the average American pays the price of his carelessness, and the price is tremendous. It runs into the hundreds of millions of dollars every year and the number of lives claimed would be appalling to any other people. But all the preaching that can be done doesn't seem to improve him, and we have the daily fires in all American cities which we would not have if only the average American would pay a little attention to fire prevention.

The "Gyp"

COMPLAINT is made regarding the "gyps," which isn't a disease, exactly, but is the colloquial term for the gypsy car trader, the man who plays a David Harum rôle in the motor car business.

It is complained that his methods are illegitimate, that he uses the ultra-extreme in sales methods—if they may be termed sales methods—and takes advantage of every point by which he may buy a car for less money or sell it for more.

It is complained that he is unscrupulous in his money dealings, that he has no conception of the word "service," and never operates in the hope that his satisfied customers will come back again. It is complained that he wants only to get a man once, sting him and get a fresh one the next time.

There are good and bad used car men in this business; that no one disputes. Similarly there are good and bad dealers. The question is: Can the legitimate trade do anything? If so, what?

Withholding patronage would not harm him much and, like the second-hand clothes man, he may continue to exist despite all the better business men of the industry think about him. He may skate on thin legal ice, but a "good gyp" never breaks through. Motor World would like to hear from its readers on this subject: Is there a "gyp" evil? What can be done about it?

Association Bulletins

SOME of the trade organizations in an effort to keep in close touch with members have instituted bulletin services, which are an admirable institution. They play an important part in keeping alive the interest and activity of members.

These bulletin services take various forms. One form is a letter-sized sheet of letter style sent out whenever occasion demands—and with a live association these occasions are frequent.

Another form with many variations is the publication, the magazine, or house organ, whatever it may be termed. In using this form some associations have shown wisdom and foresight and have made their bulletins bulletins and not magazines. When a service of this sort is permitted to run into magazine form it begins to lose its effectiveness. It may furnish an excuse for more advertising revenue, but it loses its effectiveness as an association builder.

These remarks are not made because Motor World fears some of these are going to invade its field, for most of those that are let to run out of the bulletin field into the magazine field eventually run out of the field—and existence—entirely.

Running a publication is a business, and operating an association is also a business. Neither should be a side-line of the other. When the bulletin becomes more than a bulletin it loses its effectiveness as a bulletin, and the promoter is quite likely to develop more pecuniary interest in it than is good for the health of the association. He cannot serve God and mammon—his association and his bulletin.

Motor World has in mind one association—the National Association of Automobile Accessory Jobbers—which is achieving great success with letter-style bulletins. And there are several other associations which achieve their end with small four-page printed bulletins. And it knows of other association publications that are now being run for profit—or an attempt at profit—and which have opportunity for using their association connection as a club over prospective advertisers.

These latter are of little value—if any—to any association. And none of them are getting rich. The small, four-page bulletins carry some advertising, about enough to pay the printing expenses, and one secretary says that if a demand grows for his space he will cut down the size of spaces sold instead of enlarging the bulletin, which truly is a wise idea.

As to the great flock of alleged association publications which slink along under the association cloak with an advertising club in the hand, little needs to be said.

All of which is why Motor World has turned down suggestions that it become the "official organ" of various associations. It believes it can serve them, and all other branches of its section of the industry, by standing on its own feet, selling what it has to sell on its merits, seeking business, not asking favors, and publishing a real trade paper.

Crookedness Is Made the Easiest Way

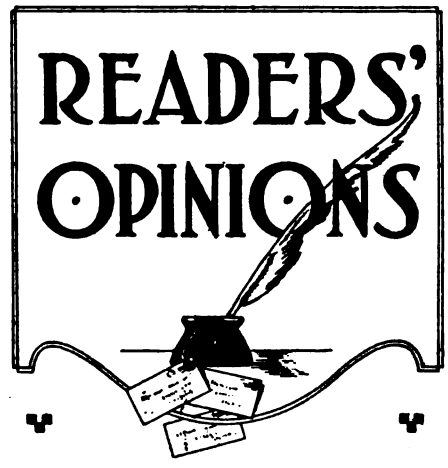
A garageman in Kansas City, who asks that his name be not used, sees an evil that he says must be corrected some time, for it is demoralizing the profits as well as the innate honesty of too many garagemen and owners of cars.

This is the evil of repairing collision damage to be paid for by insurance companies. He says:

"The present practice is wrong and is harmful to the insurance companies, the garagemen and the owners. Personally, I don't touch insurance stuff unless it slips in unknown. And I can keep away from it with tolerable ease. The adjusters usually come around and make arrangements for us to repair their cars free, in return for their sending damaged cars to us that they will O. K. repair bills on.

Adjusters' Graft

"This is the first crooked element in the situation: the graft of the adjusters. Why should we do $50 or more repair work a month for nothing in order to get other work on which we must charge only the usual fee, or else must charge exorbitant fees to the ruin of our consciences? The adjusters' repair work is pure graft, and acceptance of it is too likely to imply that the garageman is going to graft some himself in the size of his repair bills to make up for the cost of such gratuitous repairs.



Owner Graft

"The next harmful element is that, horrible as it must seem, the garagemen are being expected to stand in with the owners in the inclusion of repair bills with collision damage bills and force the insurance companies to pay both.

"That this practice is growing I have had actual proof. Some garageman, hard pressed by a customer, must have started it against his will, and now too many others seem forced into it to save their patronage. Not long ago a car was brought into our shop and we made an estimate on the cost of repairing it. The estimate was $120. The owner took the car out. A few nights later the car was stolen and found in the morning on a country road. It was brought to us. The only damage due to the theft was a bent guard and a broken lamp. The owner told us to make full repairs. We did so, and sent him the bill. Three weeks later a check came for the full amount, $140—a check from the insurance company, indorsed by the owner of the car.

Led Into Duplicity

"You see the duplicity that a garageman is unconsciously led into if he monkeys with repairs that are to be paid for by insurance companies. Why should the garageman be made the catspaw to get this illegal disbursement? Yet the

garageman almost has to make a positive agreement to fleece the insurance companies on collision claims if he is going to get the owner's repair business. Owners wait until their cars need repairs, then have a collision, or, to state it less harshly, they do not have repairs made until after a collision.

"What's the answer?

"I'd have the insurance companies give their collision repair business to one garage, and oversee the work. Perhaps several companies could contract with one shop for the work, or each could have its separate shop. The principle would be that the owner would not have the chance to make any deal with the garageman, and the latter would not be forced to enter an illicit, though perhaps silent, compact.

"As a matter of fact, the rates for collision insurance have to be figured now on the basis of more than 50 per cent repair bills not due to collision. I am confident that rates would be less than half what they are now if insurance companies had to pay only for collision damage and not for wear and tear suffered prior to the collision.

"And the way to start the new system is for some garageman to make a deal with an insurance company, or adjuster, to make repairs on collision damage. He will make a great hit with insurance companies and strike the entering wedge that will reduce rates wonderfully. And he will also start something that will relieve garagemen of this hateful necessity of entering repair bills on the collision damage bills."

A Plea for Spark Plug Education

Editor Motor World:

As an example of fine retail selling and what I call service salesmanship, I submit the following—it may act as a tonic for some other accessory dealer:

I was selling a bill of goods to one of my best customers in Greenville the other day, when a motorist came in to purchase a new set of spark plugs.

"What kind of plugs do you want?" asked the garageman.

"———," was the prompt reply.

"What type of ——— plugs?" persisted the garageman.

"Type!" exclaimed the motorist. "I thought there was only one type. I drive a Maxwell car, and want the kind that was in its motor when it left the factory."

The garageman reflected a moment, then referred to a list he brought out from beneath the counter.

"Oh, yes," he said. "You want heavy duty. ——— heavy duty plugs are standard factory equipment on all Maxwell cars. There are fifteen other ———, you know, and it pays to select the style of plug that best suits each particular motor. I know this from experience."

After Mr. Motorist had left with his plugs my customer turned to me and said:

"That's a good example of what I meet every day. The average motorist knows the brand of plug he wants, and about 80 per cent of these, I may add, prefer ———; but ninety-nine out of a hundred think that each manufacturer makes but one type. They forget that automobiles vary as much in their motors as in their body designs. And the dealer who does not make sure of the type best suited to the requirements of each particular car makes a big mistake.

"I would no more sell spark plugs promiscuously than tires. A dealer wouldn't think of selling a tire without asking the motorist whether he wanted clincher or Q. D. type, and yet he does as bad, or worse, when he sells him plugs without full information as to the kind needed.

"When a motorist buys spark plugs in a hit-or-miss fashion the chances are he gets a type adapted to some car other than that which he drives, which means trouble eventually. And the unfortunate part of it is that the motorist blames the plugs instead of the dealer, who, had he been solicitous enough, could have brought out the type designed specially for that motor.

"Satisfied customers mean permanent customers. So it pays to sell people goods that give the right kind of service."

B. H. B.

Tackle Used-Car Evil

OAKLAND, CAL., Aug. 12—In order to reach a better understanding as to the market price on used cars as part payment on new cars, the motor car dealers of Oakland and Berkeley have suggested that all dealers hand to the secretary a complete list showing the selling price of all second-hand cars by filling out cards as inclosed, dating from July 1 to Aug. 1. From these cards a complete list will be compiled which will be placed in the hands of every dealer sending in such report.

The RETAIL NEWS

MIDDLE WEST

Murray & Co., Gaylord, Mich., have contracted for a two-story garage, 45 x 90.

F. M. Backus, Howell, Mich., is now the sole owner of the Fowler & Head Garage.

A. E. Runnels, Sault Ste. Marie, Mich., has disposed of his livery business. The Chippewa Automobile Co. has taken over the former barn and will have it remodeled and use it as a garage.

The Wetmore-Quinn Co., 279 Jefferson Avenue, Detroit, which has handled the Paige and Saxon during the last several years, will hereafter devote all its attention to the Paige.

The Becker Motor Car Co., Grand Rapids, Mich., formerly Ford distributer and now handling the Saxon and Studebaker, has made some changes in its personnel. Ray E. Becker is now president of the company; Rex Johnson, who was with the engineering department of the Studebaker Corp., has become treasurer; L. F. Carter is general manager; J. A. Noblett, retail sales manager; Fred Nebelious, floor service manager; Tine Carr, shop foreman.

The Siegel Garage & Service Co., Milwaukee, has been incorporated to operate a garage, repairshop and deal in cars and accessories: capital, $2,000; incorporators, Louis, Nell, David and Etta Siegel.

The Badger State Oil Co., Milwaukee, has been incorporated at $225,000 by A. J. Eberhardt, F. F. Wolfgram and M. H. Shekley.

Whitmore & Persson, Watertown, Wis., operating a garage in First Street, have dissolved partnership, Persson retiring.

Nirschl's Garage, 906-908 Milwaukee Avenue, South Milwaukee, is erecting a large addition.

The Peninsula Automobile Co., Sturgeon Bay, has moved into its new garage, costing $10,000. The office, showroom, ladies' restroom and reception room are finished in fumed oak, fitted up with wicker furniture, and are always decorated with cut flowers. The garage caters to the tourist business, which this season reached its highest point in the Door County peninsula of Wisconsin.

J. Wesolowski, Merton, Wis., who took occupancy of a new garage only six months ago, is building an addition.

The Ford Motor Co. of Detroit has acquired a two-story building at Adams and Ontario Streets, Toledo, where a branch salesroom was opened Aug. 1. W. Barclay Deyo will be the manager, with K. D. Sheldon assistant. On account of the nearness to Detroit, the branch will be used only for sales purposes.

H. G. Edwards, Niles, Mich., has established a Buick sales agency.

Wilke & Seiler, Forestville, Door County, Wis., have dissolved partnership, Bert Seiler retiring. W. J. Knopp has purchased the interest and the firm henceforth will be styled Wilke & Knopp.

Ervin and Jerry Seismeyer, Wrightstown, Wis., have leased the former Powers livery and will open a garage and repairshop.

The Calumet Auto Co., Brillion, Wis., has moved its repairshop into a new garage building on Main Street.

C. A. Pope, Darlington, Wis., has sold his repairshop to J. W. Wilkinson.

J. C. Haberman, Prairie du Sac, Wis., is installing new machine tool equipment, including boring and reaming tools, lathes and drills.

The Packard Cleveland Motor Co., Cleveland, has increased its capital from $60,000 to $100,000.

C. J. and F. L. Shaw, Galesburg, Ill., have purchased the old Christian Church, West and Ferris Streets, and remodeled it into a garage and repairshop.

The John Dee Automobile Sales Co.'s plant, Rock Island, Ill., is to be enlarged by a brick addition, 40 x 65, one story, to cost $5,000. A new front for the old building is to be installed at the same time.

Monroe Bros.' garage, Ottawa, Ill., was destroyed by fire.

The Martin-Matteeson Co.'s garage, Galesburg, Ill., was damaged by fire.

Ray C. Sparks, Champaign, Ill., has purchased a half interest in the Herrick Automobile Supply Co. of that city and will take an active part in the management. The company is preparing to establish branch houses in central Illinois.

J. J. Basten, New Franken, Wis., is erecting a large garage, farm machinery warehouse and service station of reinforced concrete construction.

H. G. Franz, Columbus, formerly a partner in the Vintent-Franz-Clemens Co. Garage at 909 Gustavus Lane, has taken over the entire business from his two partners.

Wilbur Winders, Columbus, distributer of the Velie and Chevrolet, will soon move into new quarters at 180-182 East Long Street.

The Shisler-Bidlack Auto Sales Co., Columbus, has taken the agency for the Regal.

The Abbott-Detroit Sales Co. of Michigan has been incorporated at $50,000 in Bay City, Mich., to distribute the Abbott-Detroit in Michigan. Its officers are: D. L. Galbraith, president; H. W. Garland, vice-president; H. F. Smth, secretary-treasurer, and M. W. Crawford, general manager. Headquarters wil be in a new building being erected at Sixth and Adams Streets.

The Salem Motor Co., Salem, Ohio, has been incorporated under the laws of Ohio at $40,000. The company was incorporated to take over the business known as the Frank W. Glass Garage, 157 Garfield Avenue, which deals in cars and accessories. Frank W. Glass is president and general manager.

The Briscoe Co. of Wisconsin, Madison, Wis., has been incorporated to deal in new and used cars and operate a garage; capital, $50,000; incorporators, Glenn W. Steshens, Ethel Lee and Louis C. Horner.

Archie N. Durand, Stevens Point, Wis., has organized the South Side Garage Co. and opened a garage and repairshop in the Kingsbury Building, 751 Strongs Avenue.

The Thorp Automobile Co., Thorp, Wis., is building a new fireproof garage costing $5,000.

Pattison Bros., Mondovi, Wis., have purchased a site for a new reinforced concrete garage and repairshop, to cost about $6,000 with equipment.

Asire & Palmer, Marquette, Mich., Overland, Cadillac and Jeffery dealers, are about to open a branch salesroom in Ishpeming, Mich. The branch will be managed by Bret Read.

The Sandusky-Buick Co., Sandusky, Ohio, has been formed to handle the Buick. The company, located at 221 Fulton Street, is under the management of F. A. Purdy.

Charles Forbes, Grant, Mich., has opened a garage.

The Seman Garage, Grant, Mich., has been purchased by Glenn Bullman. George Bishop, former proprietor, will retire from the garage business.

Albert Binkle, Harbor Beach, Mich., Overland and Buick dealer, will shortly move into a new garage and salesrooms.

The Becker Auto Co., Grand Rapids, Mich., which for the past seven years has handled the Ford in western Michigan, discontinued the Ford Aug. 1 and took the Saxon agency. The Ford company will hereafter operate its own retail store.

The Hoppe-Hatter Motor Co., 539-543 Broadway, Buick and Baker-R. & L. electric dealer, will move within a few days to its new garage and service station on Milwaukee Street. The building is of reinforced concrete, 60 x 120, with steel-trussed floors and roof, two-story and basement. The salesroom floor will be done in terrazzo, with black and white panels. All walls will be wainscoted with wood panels finished in ivory.

The Overland-Wausau Co., Wausau, Wis., organized recently to distribute the Overland and Willys-Knight, has taken temporary quarters in the Morgan Garage until its new branch house is completed. The new building will be of reinforced concrete, with pressed brick front, three-story and basement, 66 x 120, and located at First and McIndoe Streets. W. R. Stelling is general manager and T. O. Kellogg, secretary and treasurer.

Grover McGeehan, DePere, Wis., has purchased the agency, repairshop and garage of the R. J. McGeehan, Son & Co., machinery and implements, which recently passed into the exclusive ownership of Elmer McGeehan.

The Central Garage, Greenland, Mich., has been opened by R. J. Barbera.

James McClure, Houghton, Mich., of the McClure Garage, has secured the agency for the Buick.

Ernest Vriesland and **Harry A. Sherwood**, Grand Rapids, Mich., will operate a garage at 1110 Ferrace Avenue, S. E.

J. C. Cushman, Williamstown, Mich., has opened a garage.

The Cadillac-Overland Co., Cadillac, Mich., has taken possession of its new garage and service station, 50 x 120, on North Mitchell Street.

William S. Brown, Portland, Mich., has taken the agency for the Maxwell.

The Chesaning Garage, Saginaw, Mich., has been incorporated at $30,000 by Theodore S. Greenfelder, Frank A. Greenfelder, Frank J. Walser and Henry Stuart.

The Niles Buick Sales Co., Niles, Mich., has recently been established by H. G. Edwards and George Thompson. Salesrooms will be maintained at the White Front Garage, of which Mr. Thompson is the proprietor. The building will be remodeled.

The Miller-Myers Implement Co., Stanley, Wis., will erect a garage, service station, repairshop and implement warehouse, 38 x 116, to be ready Oct. 15.

J. H. Ford, Dodgeville, Wis., owner of the Dodgeville Motor Car Co., has sold his garage to Ford Carter and will erect a new two-story fireproof structure on South Iowa Street. Ford is a Studebaker dealer.

Charles Byse, Red Granite, Wis., has purchased a site for his proposed new garage and repairshop, to be 36 x 110, of concrete and brick.

Julius Detert and Arnold Pankow, Watertown, Wis., have formed a partnership to handle the Dodge Bros. and have established a garage and repairshop at 111 Fifth Street.

The Prairie du Chien Garage, South Church Street, Prairie du Chien, Wis., has passed into the possession of Frank Zach, who purchased the interests of his partners, James E. Harris and Van J. Brokaw.

The Ohio Tire Service Co., Columbus, has removed from 241 North Fourth Street to larger quarters at 70 North Fourth Street. J. C. Henne is manager of the concern.

The Milwaukee Packard branch at Grand Avenue and Thirty-fifth Street will be enlarged by a 70 x 60-ft. addition, to be used principally as a service station.

Digitized by Google

The Farmer Auto Co., St. Joseph, Mo., which for 6 years was the Ford distributer, is now handling the Dodge Bros. and Hudson since the Ford company established a branch in the city. The Diamond Motor Co. has been taken over by the Farmer company.

George W. Franklin, Detroit distributer of the Dort, has incorporated as the George W. Franklin Co.

Venner & Blackhurst, Midland, Mich., have purchased the Main Garage.

The C. F. Mahoney Co., Beaver Dam, Wis., has sold its tire and accessory business to W. E. Snyder. Mahoney has become connected with the Ruedebusch Garage, Mayville, Wis.

The Hoppe-Hatter Motor Co., Milwaukee, Buick dealer, has been made Wisconsin dealer for the Paige, until now distributed in this territory by R. D. Rockstead.

Robert Robertson, Randolph, Wis., is erecting a garage and repairshop, 46 x 116.

The Galloa Garage, New London, Wis., will be ready for occupancy Sept. 1.

DeMars Bros., Washburn, Wis., owning and operating the Service Garage, have made an installation of oxy-acetylene welding and cutting apparatus.

The Algoma Motor Truck Co., Algoma, Wis., which has just taken occupancy of its fine new garage, has taken the agency for the Republic truck.

P. E. Lehmkuhl, Cumberland, Wis., has opened a tire store and repairshop in the Merchants' Hotel garage.

Schauer Bros., Westfield, Wis., have purchased a site adjoining the Westfield Garage and will open a repairshop.

Floyd Ghastin, Sextonville, Wis., will erect a new garage and repairshop.

W. W. Gilson, Baraga, Mich., has purchased a site on State Street, where he will erect a garage and livery barn. The garage will be 1½ stories high and 40 ft. long, while the livery barn will be 30 ft. long.

The Ford Service Station, Imlay City, Mich., has been opened here.

The Dewey-Smith Co., 208 Cooper Street, Jackson, Mich., has taken the agency for the Redden Make-a-Truck.

The Auto Liquidation Co., Kalamazoo, Mich., has been incorporated at $15,000 to sell cars and dispose of properties of liquidating automobile concerns. The incorporators are Mrs. Mary B. Lay, Edwin J. Dayton and Sam Levy.

The Rivers & Norton Garage, Battle Creek, Mich., has become distributer for the Maxfer 1-ton truck and the Elgin.

William S. Brown, Portland, Mich., has taken the Maxwell agency.

The Loveland Co., Woodward and Palmer Avenues, Detroit, is now distributer of the Saxon in Detroit and ten counties of Michigan. Formerly the Saxon was handled by the Wetmore-Quinn Co., which now concentrates upon the Paige. The Loveland company, which started in business in 1911, has been dealing in new and used cars and will now give up its used-car department. The company, which has branches in Cleveland, Akron and Buffalo, will handle 4000 Saxon cars during the 1917 season.

SOUTH

H. J. Roberts, Montgomery, Ala., who has been associated with the Hudson Motor Car Co. and also the Chalmers Motor Co. at different periods during the past 8 years in the manufacturing and service departments, and also sales departments, was appointed general manager of the Weaver Henderson Auto Co. on July 15.

CANADA

J. M. Armstrong, Edmonton, Alta., of the Imperial Garage & Auto Co., has been appointed Chalmers dealer.

The Vancouver Motor Co., Vancouver, B. C., has removed to 825 Pender Street.

The Canadian Double Tread Tire Co., Vancouver, B. C., has removed to 1260 Granville Street.

EAST

Alvan T. Fuller, Boston, who has the Packard agency for Eastern New England, has signed a contract for an addition to his service station here that will be a duplicate of the present one. It will be connected with the other by a bridge of U shape, leaving an 80-ft. court between the two buildings. The additional structure will give him 150,000 additional square feet of floor and make it what is claimed to be the largest plant in the country controlled by one dealer. The first floor of the new building will be for the used cars and the rest for a service station. The cost will be about $250,000, making the total plant worth more than $500,000.

The Gramm Co., Inc., 1457 Broadway, New York City, has closed a contract with the Day-Elder Motors Co., Newark, N. J., as eastern distributer of D-E motor trucks in the territory comprising New York City, Long Island, and lower New York State as far north as Albany, the State of Connecticut, and northern and eastern New Jersey with the exception of Union and Essex Counties. The Gramm company is at present distributer of the Gramm-Bernstein line of heavy trucks.

H. H. Hay, Baltimore, Md., has closed a contract with the Day-Elder Motors Co., Newark, N. J., as distributer of D-E motor trucks in the States of Maryland and Delaware and the District of Columbia. Hay is located at 932 Linden Avenue, Baltimore, Md.

The Sanford Street Garage, Buffalo, has been opened as an agency for the Atterbury truck.

The Atlantic Refining Co., Philadelphia, is having garage and service stations erected at Broad and Hunting Park Avenue, Philadelphia, and at Wilkes-Barre and Norristown, Pa.

Alvan T. Fuller, Boston, Packard dealer, has opened a branch in Haverhill.

Frank Crockett, Boston, has joined the Connell & McCone Co., Overland dealer, to take charge of its new service plant.

The Pennsylvania Rubber Co., Boston, has moved into a new building on Beacon Street.

The Greenfield Buick Co., Greenfield, Mass., has moved into new salesrooms.

Wallace O. Powers, Athol, Mass., has bought back the garage he sold to E. L. Gladwin.

George F. Lombard & Son, Medford, Mass., have purchased the Fellsway Garage.

John H. Bates & Son, Wakefield, Mass., is enlarging their garage.

Curtis, Curtis & Lyon Co., Brockton, Mass., has been formed to operate the Allen Garage.

The Overland service station, Portland, Me., was opened last week and another one will be opened in Bangor.

J. W. Maguire, Boston, Pierce-Arrow dealer, has had plans drawn for a service station that will cost $100,000.

The White Motors Co., New Haven, is erecting a large two-story building at 264-266 Crown Street, on which work is well advanced. On the ground floor will be a showroom and offices; the rest of the building will be devoted to service and stockroom. Over 24,000 ft. of floor space will be provided and the walls will be built strongly enough to allow for the addition of a third floor. The White, Chalmers and Buick will continue as the White Motor Co.'s line.

Charles E. Riess, New York, Hupmobile distributer in the metropolitan district, will move to 1741 Broadway about Sept. 15, at which address he will occupy all four floors. The service station, which will continue at 226 West Fifty-sixth Street, will be enlarged and improved.

George D. Knox and **James H. Whaley**, Hartford, Conn., have formed the Knox-Whaley Co. and taken the Maxwell agency, previously held by the Erwin M. Jennings Co. Knox is the Peerless and Monroe distributer, at No. 344 Pearl Street. Whaley until recently was with the Hartford-Buick Co., which he left to go into business for himself.

The Heydt Motor Co., Reading, Pa., has been incorporated at $20,000, by Irvin H. Heydt, Preston L. Bell and Earl L. Auman.

The Hartford Crow Elk-Hart Co., Hartford, Conn., has removed from 25 Belden Street to 280 Franklin Avenue.

NORTHWEST

Louis Dupois, Thorne, N. D., will build a garage.

John and Leslie Swanson, Fordville, N. D., will build a garage and repairshop.

The Phoenix Iron Works, Winona, Minn., will build a $5,000 addition to its garage.

I. H. Foutty, Ethridge, Mont., will remodel a grain house he bought into a garage.

A. N. Rust, St. Paul, has been made manager of the Fisk Rubber Co. agency. He is from Chicago.

The Ford Motor Co. has opened the first factory branch here at 102-104 Michigan Street. It is in a four-story-and-basement building and will handle cars for northern Minnesota and northern Wisconsin. A repairshop is part of the equipmet. Fifty employees will be on the list. H. A. Netter of Milwaukee will be manager and R. W. Foster of Minneapolis assistant manager. The Mutual Auto Co., former agent, has relinquished its Ford business.

The Doubele Sewed Tire Co., 134 East Sixth Street, St. Paul, has been opened by W. C. Stevens of Milwaukee.

The Velva Auto Co., Velva, N. D., has been sold to John F. Warner of South Prairie, N. D. J. D. Atkinson will remain as manager, and W. F. Slaybaugh, sales manager, becomes manager of the Minot Auto Co., Minot, N. D.

Stice & Jensen, Williston, N. D., have dissolved. Jensen will organize a Maxwell agency at Minot, N. D.

Morse Merritt Auto Co., Billings, Mont., has filed a petition in bankruptcy.

At Buffalo, Minn., a brick and stone garage to cost $10,000 will be built after plans being prepared by Leo Schaefer, St. Cloud, Minn.

Wreisner Bros., Dassel, Minn., will erect an addition to their garage, 20 x 60.

A. C. Carney, Wells, Minn., has succeeded B. O. Henjum as manager for the Motor Inn Co.

Aughenbaugh & Kelly, Waseca, Minn., are building a garage at First Street and Lake Avenue.

G. F. Miller, Annandale, Minn., has opened a garage.

Chris Rogstad, Van Hook, N. D., has opened a garage.

W. H. Thomas, Bowdon, N. D., has formed a partnership with Otto Mielke, Jr., and moved to the new garage of Mielke & Sons.

Irvin McCormick, Bottineau, N. D., has leased the Battcher garage.

Burnett & Syverud, Canton, S. D., garage, have dissolved, Mr. Syverud continuing.

Fred Linnberg, Hibbing, Minn., is erecting a brick garage on Third Avenue.

Schwender Bros., Mankato, Minn., 210 N. Front Street, have plans made for an addition to their garage, 22 x 150.

F. A. Buch, Fargo, N. D., is having a building erected for his taxicab business.

Erskine, Logan & Co., Grand Rapids, Minn., is building a garage.

George E. Hall, Red Cloud, Neb., has sold his interest in the Hall Garage to Don Fulton, who, with Earl Hall, will continue the business.

Digitized by Google

Harry Wendelschaefer, Waterville, Minn., has bought back the garage business he sold Martin & Lucas.

The Northern Motor Car Co., 344 Exchange Street, St. Paul, has taken the Republic truck agency.

M. J. Osborn, St. Paul, Overland agent, has leased a garage at 305 West Third Street.

Altschwager Bros. Co., Minneapolis, is making alterations to its public garage at 1308 Marquette Avenue, to cost $7,500.

Samuel Amundson, Litchville, N. D., has left the Tvedt Garage and opened a repair-shop in the Frogen blacksmith shop.

George J. Welsh, St. Paul, Neb., has bought the Grothan Garage.

The S. N. Dawkins Garage, Ute, Neb., has been traded for the farm of Carl Ballantyne, Moorhead, Neb.

Walter Kershaw, Eddyville, Neb., has purchased the motor delivery and supply business of Fred C. Hyde.

Causner & Mercellus, Atkinson, Neb., have bought out the Nelson Garage, Gregg & Hewitt retiring.

The Lunze Auto Co., Lewis, Iowa, has opened for business.

Walter Hansen, Newman Grove, Neb., has disposed of his interest in the West Garage to his partner, Peter Petersen.

John Muff and **Frank Vyhnalek**, Crete, Neb., will open a new garage soon.

The Farmers' Union, Glenville, Neb., has purchased the garage formerly run by Martin Marsh.

The City Garage, Alliance, Neb., has been purchased from B. U. Shepherd by George Hedgcock.

Broan & Jones, Central City, Neb., have sold out their Ford agency to H. F. Lee and Herbert McCullough.

Peter Gibbons, Ranier, Minn., is remodeling the Clark Building for a garage.

The Motor Inn Garage, Aitkin, Minn., has opened. Earl Ame is manager.

Eureka Garage Co., Eureka, S. D., has been incorporated at $15,000 by Stephen Harrison, J. E. Zoerb and D. Zoerb.

The Dakota Motor Sales Co., Minot, N. D., will occupy the building formerly of the Western Motor Sales Co., West Central Avenue.

A. Jette, Polson, Mont., will erect a garage.

M. C. Christopherson, Mabel, Minn., has opened a garage on Main Street.

Western Motor Co., Valley City, N. D., has succeeded Ben Sykes at the Second Avenue Garage.

SOUTHWEST

The S. G. Davis Motor Car Co., Dallas, has leased the two-story building at 2114 Commerce Street. Some innovations in service requirements are planned. The company handles the Scripps-Booth.

W. S. Cline & Son, Esbon, Kan., have opened a garage.

I. W. Rice, Bethany, Mo., has bought the equipment of Charles Stagner, and will open a garage and repair shop in the Edison Building.

The Imperial Auto Supply Co., Kansas City, branch of the Crescent Tire Co., has leased a building at 1530 Grand Avenue and will open a supply store.

M. G. Slawson, Girard, Kan., has bought the Studebaker agency and service station of Love Smith; Smith has established a Studebaker agency in Pittsburg.

The Peake Auto Supply Co., Kansas City, has moved to Seventeenth and Grand Streets, the former location of the Firestone Tire & Rubber Co.

The Kansas City branch of the Firestone Tire & Rubber Co. is now occupying a new home at Twentieth and Grand Streets; the formal opening will take place in September.

F. M. Hayden, of the White Co., Cleveland, has been named assistant to Branch Manager Wallace C. Capen of St. Louis.

W. C. Erwin of Indianapolis, expert on road tractors, has joined the sales staff of the White Co. branch in St. Louis to handle these vehicles.

The Supreme Motor Co., St. Louis, organized recently to take over the Stutz agency, opened the company's new building at 3019 Locust Street Aug. 1. The manager is D. A. Livingston.

The Hudson-Phillips Motor Car Co., St. Louis, has removed to new quarters at Locust Street and Leonard Avenue. There will be a formal opening in September.

Joseph T. Zook, Louisiana, Mo., has opened a garage on Fifth Avenue. A repairshop will be operated.

Alex and **Willis Hamel**, St. Joseph, Kan., have purchased the Louis Gagnon Garage.

R. D. Bone, Trenton, Mo., who has been assistant sales manager of the Kansas City branch of the Buick agency, and A. M. Hyde have taken the agency for the Buick and will operate under the name of Hyde & Bone.

Beetler & Gray, Marceline, Mo., have opened a garage, taking the agency for the Allen.

Beals & Walten, King City, Mo., have built an addition to their garage.

The Shefts Bros., Oskmulgee, Okla., will open a repairshop.

John Mulkey, Ardmore, Okla., purchased an interest in the Reo Motor Sales Co. and moved his Dort agency to the Reo Building, combining the two businesses.

Oscar Ek, McPherson, Kan., has opened a new garage and will handle the Jones and accessories.

J. T. Zook, Louisiana, Mo., has opened a garage.

George Parkins, Douglass, Kan., is erecting a garage and machine shop, 50 x 25.

Fred B. Johnston, Fort Smith, Ark., distributer of the Reo, will occupy the Lee-Collier Tire Building as soon as it has been enlarged and remodeled.

The Ollinger Auto Co., Salina, Kan., has taken over the Overland agency, changing its name to Overland-Salina Co.

Elmer Freebury, Goodman, Mo., has rented the repairshop of A. R. Wardell.

A. J. Missimer, Russell, Kan., has bought the Main Street Garage.

Carl Keen, Valley Falls, Kan., has purchased the S. H. Early Garage.

H. H. Dean, Cedar, Kan., is enlarging his garage.

H. S. Biethroad, Lamar, Mo., has sold his garage and repairshop to D. A. Benedict.

Chas. Stagner, Bethany, Mo., has sold his garage to I. W. Rice, who will move the business to the Edson Building.

The A. B. D. Motor Co., Kansas City, has taken over the Chandler agency. The officers are as follows: E. Bierwirth, formerly president of the National Paper Box Co., president; A. W. Aylor, Eldorado Springs, Mo., first vice-president; M. E. Groom, formerly retail sales manager of the Southwest Motors Co., second vice-president; K. L. Day, formerly branch manager of the Paterson Motor Car Co., treasurer and manager; W. M. Goodrich, who has had charge of the wholesale work of the Chandler Motor Co. in this territory since the opening of the Chandler company here, treasurer. The building in which the company has located at 1830-32 Grand Avenue is being remodeled.

Hahn Bros., Coffeyville, Kan., have taken the Overland agency and are having salesrooms built.

T. B. Yaryan, Carthage, Mo., has sold his garage to W. D. Barcroft.

Carpenter & Van Alstine, Oswego, Kan., have purchased the garage formerly owned by Scott & Hollingsworth.

W. F. Lyons, Kansas City, for 3 years owner of the Central Garage, Twelfth and Central, has leased a garage at Twelfth and Sharlotte Streets, 124 x 305.

Amos J. Missimer, Russell, Kan., has purchased the Main Street Garage from H. H. Bashor.

The Donald D. Davis Motor Car Co., Kansas City, which has the agency for the Scripps-Booth, will also handle the National.

I. H. Snider has secured the agency for the Pullman, distributing over Kansas, Oklahoma, Arkansas and Missouri. The firm will operate under the name of the Herff-Brooks Motor Co.

C. S. Wright, Kansas City, for 3 years manager of the Bond Motor Co., Saxon and Oldsmobile, has retired and it is said will enter business for himself. The sales department of the Bond Motor Co. will be in direct charge of the secretary of the company, W. T. Scarritt.

Wm. Stretton, Downs, Kan., has bought the Baker Garage.

William Burdett & Son, Vermillion, Kan., have opened a garage and taken the Overland agency.

COAST

The Jamieson Motor Co., Spokane, distributer of the Pathfinder, has moved into a new home at Jefferson and Sprague Avenues.

The Culton-Moylan-Reilly Auto Co., Spokane, is now occupying a new home on Second Avenue.

The Ford Factory Branch, Tacoma, has been opened, with J. W. Capeck, manager; Bert Blanghy, assistant manager, and H. F. Weeks, chief clerk.

N. F. Rea, Tacoma, has been appointed Gramm-Bernstein truck distributer in southwest Washington and has opened salesrooms and a service station at 2135 Jefferson Avenue.

The East Side Auto Repair Co., Portland, Ore., is now located at 717 Hawthorne Avenue.

The Carlton-Shephard-Bowles, Inc., Los Angeles, is the successor to the Carlton, Faulkner & Bowles Co. and has been appointed distributer of the Stewart truck in addition to the Jeffery, Fiat and McFarlan.

J. B. de Long, Los Angeles, has been appointed southern California distributer of the Partin-Palmer and has opened a garage and salesroom at 1042 South Olive Street.

The Hyatt Roller Bearing Co., Los Angeles, has leased a new store at Grand Avenue and Twelfth Street.

Ballard & Leaming, Los Angeles, have opened a vulcanizing plant and tire store at 745 South Los Angeles Street.

J. D. Stall, Norwalk, Cal., has opened the Norwalk Garage.

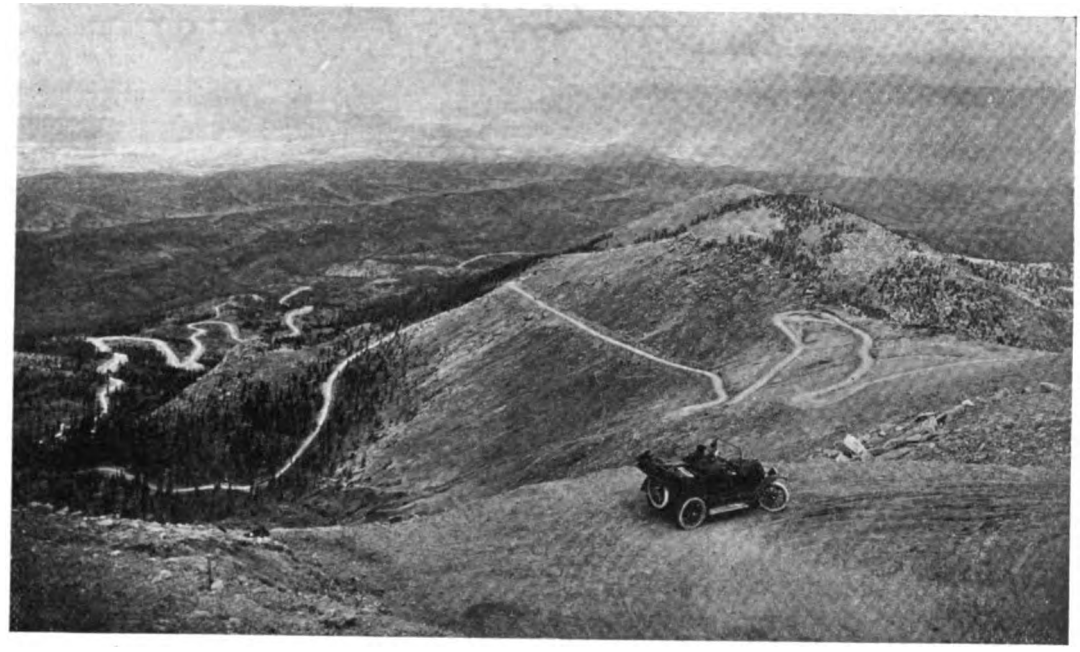
G. R. Smith, El Segundo, Cal., has opened the first garage in the place. The Smith Garage is housed in an attractive brick building on Main Street.

Earl V. Armstrong, Inc., Los Angeles, has taken over 1200 additional feet of floor, having secured the garage room adjoining the Chandler agency and service station at 1144 South Hope Street.

J. A. Hansen and **Charles E. Palmer**, Readan, Wash., have erected an addition to the Hansen Building and have installed machine shop equipment.

Offutt & Edwards, Newport, Wash., have purchased the City Garage and installed a vulcanizing plant.

G. O. Nettleton, Spokane, secretary of the Northwest Auto Supply Co., has been placed in charge of the company's garage at 142 First Avenue. The capital of the company has been increased.



F. U. Bliss, Spokane, has been appointed manager of the Spokane branch of Rothweiler & Co., 224 S. Washington Street, manufacturer of Ford truck attachments.

The Washington Magneto Exchange, 161 Sprague Avenue W., Spokane, has doubled its floor space and added a stock of accessories. An electric equipment repair department has been installed. Otto J. Goeppinger and Albrecht Gross continue as proprietors.

The Reliance Auto Accessories Co., Spokane, has leased salesrooms at 1023 South Sprague Avenue.

*And cup.

COLORADO SPRINGS, Col., Aug. 12—Rae Lentz, Ralph Mulford and Fred Junk, driving respectively the Romano, Hudson Super-Six and Chalmers, divided honors in climbing Pike's Peak during the 2-day motoring festival that ended here to-day. It was predicted before the events took place that the winner's time in each of the three events would be close to 15 min.; but the prognosticators did not take into consideration several factors, among which were the weather, carbureter troubles and proper gearing.

Two events were run yesterday, one for cars of 231 cu. in. displacement and under and one for cars with a displacement ranging from 231 to 300 cu. in.

Six cars were entered in the 231 to 300 cu. in. event. These were sent away in two groups, the first including Hughes, Mulford, Parish and Oldfield, and the second Buzane and Patterson. Hughes went out in the Ws above timberline with motor trouble, and a faulty timing device made it necessary to recall Oldfield and Parish after they reached Glencove, as their time at the start was not registered. This left the course free for Mulford, and he covered the 12½-mile course in 18 min. 24.7 sec.

Sending two cars back put four in the second group to start, and Patterson's Hudson seemed to have second place cinched but ran off the course when about 20 ft. from the finish line and was disqualified. This left Buzane, in a Duesenberg, second and Parish, in a Mercer, third, as Oldfield's Delage did not do anything spectacular. In fact, Barney did not get his car on the course until the morning of the race.

To-day's event, which was for the Penrose trophy and $3,000 in cash, was won by Rae Lentz in a Romano special having an eight-cylinder aeroplane motor with a displacement of 402.12 cu. in. Ever since Lentz began to perform on the course he was predicted to be a likely winner, but his time to-day was not equal to that shown by Mulford in winning yesterday's event; but, of course, physical conditions were different to-day, for most of the race was run in rain, sleet and snow. Mulford finished second in to-day's race, and he, too, found climbing more difficult to-day.

Conditions were anything but auspicious for to-day's event. Most of the climb was through a driving storm of rain, hail and snow, and the spectators, who journeyed far up the mountain to watch the drivers zigzagging far below them, shivered in the cold. Goggles worn by the racing crews were so covered with rain and sleet that they had to be discarded.

Ross Increases Price

DETROIT, Aug. 15—The Ross Automobile Co. has increased the price of its seven-passenger touring car and three-passenger roadster $200, to $1,550. This raise goes into effect Sept. 1, and was caused by the increase in the cost of raw materials and refinements in new models.

New England Enforcing Headlight Law

BOSTON, Aug. 12—A general headlight crusade has been started in this territory. The Massachusetts Highway Commission has written letters to every chief of police in the state enclosing a copy of the law and calling attention to the fact that it has been on the books since January 1 but without enforcement. The Massachusetts law requires all cars to show an object distinctly 150 feet ahead, 10 feet on each side, and not dazzle any person by throwing a glare into the eyes. The latter is covered in the rule requiring no glare above 3½ feet above the ground 50 feet ahead of the car. Merely dimming the big lights and using the small bulbs does not meet the law, for the small bulbs do not throw light ahead far enough to see an object 150 feet or light the side of the road.

New Yorkers coming through Connecticut will find the Springfield police very active, and as the police officials there have equipped their machines with a device that meets the law they claim all motorists can find something if they try.

Schwarz Wheel to Expand

PHILADELPHIA, Aug. 14 — The Schwarz Wheel Co. has purchased 6 acres at Holmesburg near its present plant for extensions. The close of the fiscal year showed the greatest volume of business ever done. All the officers were re-elected.

Conducting a Sales Contest

A contribution by L. H. Van Riper, advertising manager of the L. J. Robinson Co., Detroit, Chalmers distributer

THE spirit of rivalry is always an incentive to the man with red blood in his veins, and when that rivalry can be figured out on a basis of giving every man an equal chance to win it works out in automobile selling.

In a sales contest just closed we attempted, by the handicap system, to place each man on an equal footing, and results have proven that in most cases we were successful.

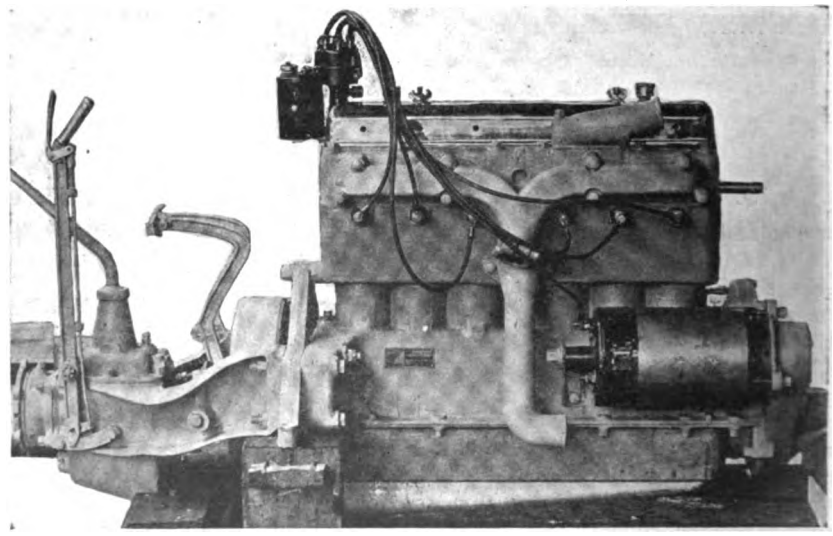
Before announcing the contest we had each salesman photographed behind the wheel of a Six-30 Chalmers, with the idea of putting a personal touch into it and making it interesting to our owners and prospects. We then had a board made with slides, into which these photographs fitted, as will be noted in the illustration, and as each sale was made and the car delivered the photograph was moved along. For instance, the salesman with a twenty-car quota was moved 5 points and the man with a five-car quota was moved 20 points.

Each salesman could see himself on this chart racing across the 31 days of selling. The figures at the top represent per cent of quota.

No Advance Information

No advance information regarding the contest was given out, as otherwise sales might have been held over from the preceding month. The morning of the first a sales meeting was held and an idea gotten from each man as to just how many cars he thought he could sell during that month. Comparison with our schedule showed that we had alloted less cars to each man than he had stated he thought he could sell.

Announcement of the contest, with individual allotment figures, was then made and a prize of $50 offered to each man who sold his full allotment and reached the 100 per cent mark. To make it further competitive, we grouped the first six men in pairs, giving each pair a different quota and thereby providing rivalry between the individual men.



The board was hung in a conspicuous place in our sales manager's office and proved to be a magnet of interest to our owners and visitors, as well as to everyone connected with our own establishment, the most frequent morning salutation among our men being, "Where do you stand to-day?" It produced a marked effect on our salesmen, for it kept every man working in the endeavor each day to head the list. At one time or another every man but one showed ahead of the rest and kept the interest among them up to fever heat.

Each salesman was, of course, interested in winning an additional $50 for his month's work, but the real incentive that kept them working from early morning till late at night was the nosing out of some other fellow who was but a few points ahead. A pretty race developed between Schoen and Montgomery, the former finishing first under the wire, with Montgomery just one car behind. De Velin, who got away to a poor start, came fast in the last few days and finished third, with the balance of the men close at his heels.

Another contest will be worked out for late summer, and still another in the fall, for I am sure this initial contest has more than repaid us in additional sales. Aside from that, it has produced a competitive spirit which cannot help but increase our sales during months in which no contest is scheduled.

The publicity given the contest had much to do with its success, as but few people came into our showroom who were not interested in some one of the competitors, and much outside help was given in the way of suggesting possible purchasers.

Any way you want to figure it a sales contest is constructive in its effect, for it develops additional energy in the man who is inclined to be satisfied with a fair showing, shows up the unsuccessful salesman to his fellows, and spurs the best man to still greater endeavors in salesmanship.

The valves in the new Hollier Six motor are contained in the detachable cylinder head, and are exceptionally accessible

Digitized by Google

Hollier Has Added a Six to Its Line

The straight lines of the 5-passenger body give the six a very pleasing appearance

A SIX-CYLINDER car, as well as the eight, is now being manufactured by the Lewis Spring & Axle Co., Chelsea, Mich. It is priced $100 lower than the eight, selling for $1,085, and is a new car throughout. Some of the characteristics of the Hollier eight, however, will be found in the six, particularly the spring suspension, which is the identical 42-in. cantilever, and all the chassis frame and structural work.

The six cylinders are cast in a single block, with the valves in the detachable cylinder-head. With the 3 x 4¼-in. cylinders, a formula rating of 21.60 hp. is given at 1000 ft. per minute piston speed, but the makers claim a much greater output than this, due to the high-speed characteristics of the engine and an advantageous shape of combustion chamber, due to the use of large overhead valves.

Probably the most noticeable feature of the engine is the accessible arrangement of the valve action. This is entirely contained in the cylinder-head, which is detachable, thus allowing the valves to be readily ground, besides affording easy access to the pistons and cylinders. All the valves are actuated by a single camshaft by the use of a rocker arm motion. The drive of the camshaft is through helical gears, working steel against iron, with the gears inclosed in the usual front case and running in a bath of oil.

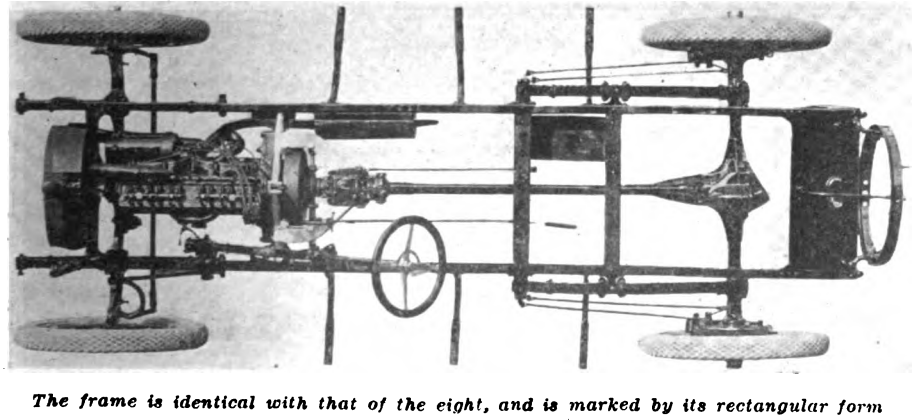
In the moving parts of the engine conventional practice obtains. The pistons are three-ring and the connecting-rods alloy steel I-beams. Three bearings support the crankshaft, which is also a special alloy of 1 9/16 in. diameter. The bearings are die-cast white metal and before the shafts are mounted the running contact parts are ground to a mirror finish.

Oil is supplied by a splash system fed by gravity from a sight feed on the dash. The oil is pumped to the sight feed and at this point has sufficient head to give a positive feed to the splash troughs. The cylinders are oiled from the lubricant thrown off from the connecting-rods.

Vacuum feed is used for the gasoline. This is from a 14-gal. tank on the rear of the frame, the tank being connected in the usual manner by a suction pipe which syphons the gasoline to the feed tank on the front of the dash. From here the flow is by gravity to the carbureter. Thermo-syphon is used for cooling.

The Hollier Six

Price—	
Five-passenger touring	$1,085
Four-passenger roadster	1,085
Color	Blue
Number of cylinders	Six
Shape	L-head
How cast	Block
Bore	3
Stroke	4¼
S. A. E. horsepower	21.60
Engine starter	Allis-Chalmers
Lighting system	Allis-Chalmers
Clutch	Cone
Wheelbase	116
Front tires	Non-skid 33 x 4
Rear tires	Non-skid 33 x 4
Wheels	Wood
Steering	Left
Control	Center
Type rear axle	Floating



In the power transmission system there is a leather-faced cone clutch mounted on an aluminum casting. This has a nominal diameter of 12 in. and a 2½-in. face. The gearset is in a unit with both the crankcase and clutch, forming a unit power plant. It has three speeds froward, with the main shaft made from a solid forging of chrome vanadium steel. The gears have ¾-in. faces and are also chrome vanadium steel forgings, heat-treated and ground. Annular ball bearings are used on the main shaft and on the front end of the secondary shaft, the rear end bearing being made up of a bronze bushing with babbitt lining.

Under normal load the driveshaft is about horizontal. The rear axle is floating, with solid swaged tubes pressed into a housing of malleable steel. Five-pitch driving gears with tooth face width of 1 5/16 in. are used in connection with a four-pinion bevel differential. Annular ball bearings are used throughout. The front axle is a high-carbon steel forking of I-section having a 2¼-in. web with 1¼-in. flange. The spring seats are forged integrally with the axle and the tie rod is at the rear. Stops are provided to limit the movement of the steering knuckles.

Twelve-spoke artillery wheels are standard. They are of hickory and fitted with 33 x 4 tires with non-skids in the rear as stock equipment. The brakes operate directly on the rear wheels and are fitted with 12-in. drums. There is a double set of these brakes, both internal expanding and external contracting being used on the single set of drums. The drums are of steel and the brakes asbestos combination.

Six volts is used for the entire electrical equipment. This is in connection with a six-cell storage battery of 80 amp.-hr. capacity. The headlights are 15 c.p. and fitted with dimmers for town driving. The tail light is wired in series with the dash lamp.

Two styles of bodies are furnished as standard. These are a five-passenger touring and four-passenger roadster. On both these bodies leather upholstery and curled hair are used. The finish is blue.

The frame is identical with that of the eight, and is marked by its rectangular form

Ford of 1917 Doesn't Look Like the Old One

But Few Changes Have Been Made and Still the Model T Looks Vastly Better

DETROIT, Aug. 15—The new Ford for 1917 has to be seen to appreciate how greatly the few alterations improve its appearance. The average person will have to look twice to be sure it is a Ford. These changes are principally in the externals. They are:

1—*The fitting of an entirely new radiator of black enamel, which is of about the same width and height as the present one, although it has the appearance of being of slightly less thickness.*

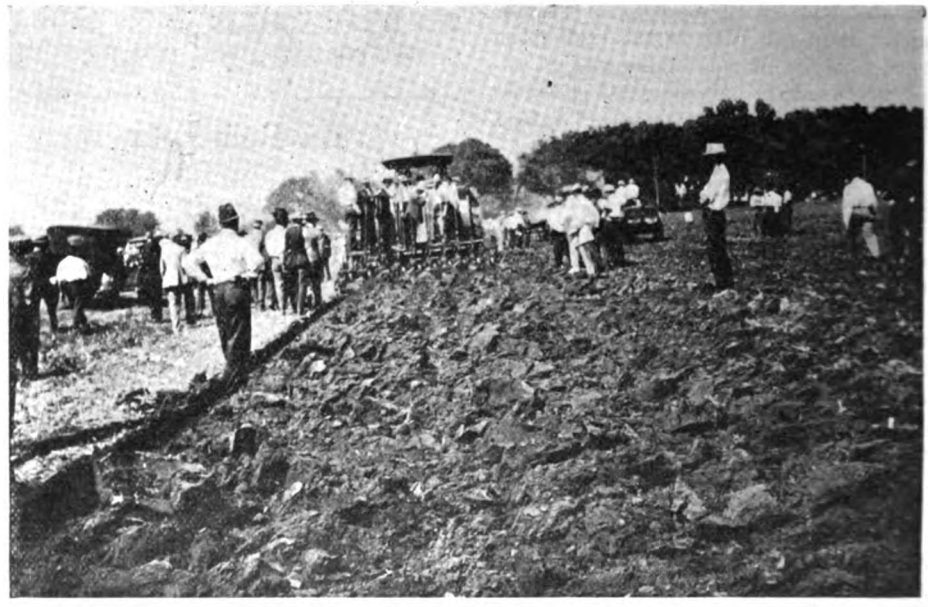
2—*The use of a sloping hood that eliminates any break where it adjoins the body.*

3—*The addition of crowned fenders front and rear which conform to the curve of the wheels in most modern fashion.*

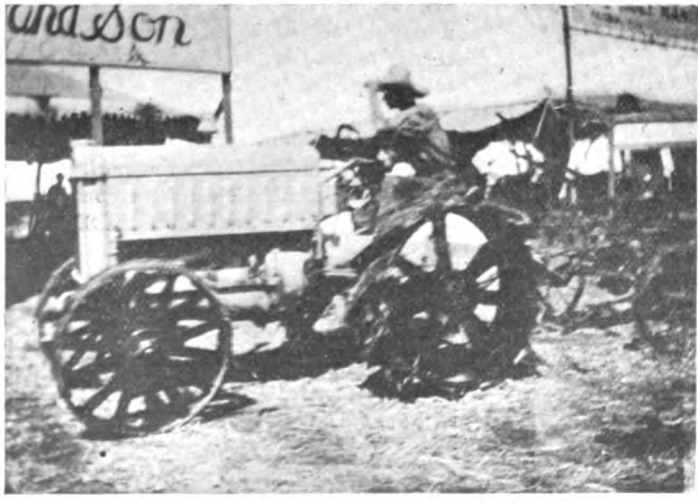
There is no other change. The wheelbase and body remain identical with the previous model. The new radiator shell in a stamping in two pieces: one, the shell proper and the other the top portion that bears the Ford name stamped in it. The familiar Ford filler cap and radiator [illegible] of brass protrude at the top.

Now that the radiator is enameled, there is really very little brass about the car, only the filler and hub caps being of this metal. The shape of the new radiator is very pleasing in that there are no abrupt edges as in the type that has become familiar the world over, the new shell having rounded edges where the side parts of the shell curve into the top portion, and the front edge is also rounded over.

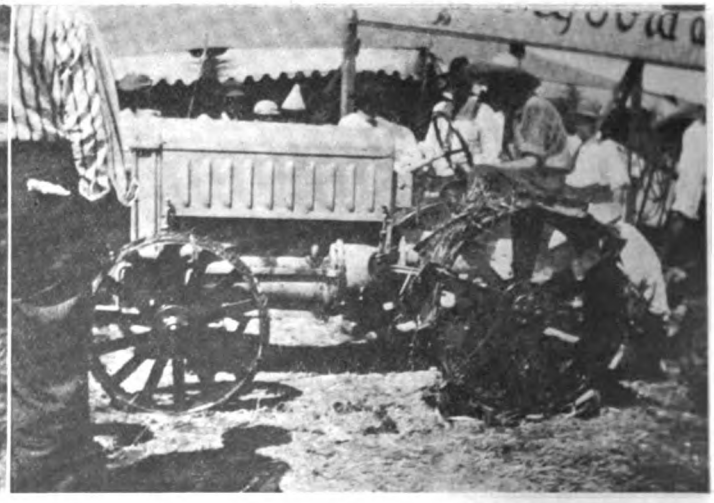
The new hood is provided with louvres in the sides, and is shaped so that there is an unbroken line from the radiator to the body proper and it, as well as the radiator and fenders, have been given a high finish. The fenders are substantial pressings that are free from vibrations when in position on the car. They are well attached to the chassis and also to the body.



Besides these external changes, which add a great deal to the general appearance of the car, there are two minor changes under the hood. One is the fitting of a shield around the fan, this concentrating the air and insuring its going to the whole of the radiator surface, as an aid to cooling, and the other is the fitting of an electric horn. This horn is mounted at the right rear side of the cylinders between them and the steering column. It is of the vibrator type and is arranged to operate from the current of the flywheel magneto. The operating button is mounted on the steering column just under the steering wheel. As told previously, the touring car is $360 and the runabout $345.



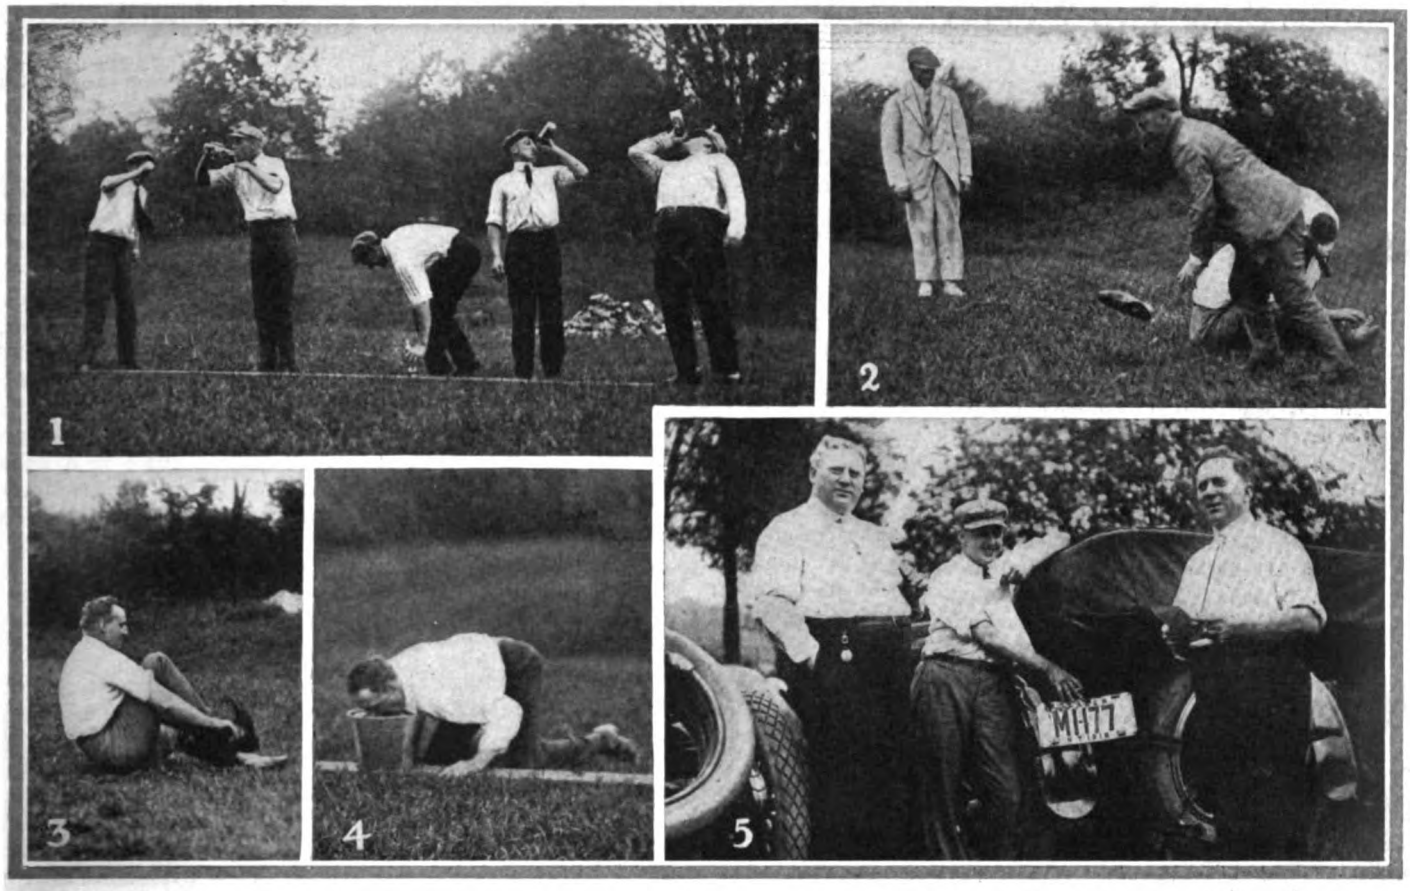
And Ford Is to Quit Selling Cars at Retail



Is Going to Market the Cars on an Unrestricted Agency Plan Just Like Plows or Hats

DETROIT, Aug. 15—That the Ford Motor Co. will discontinue the selling of cars at retail is a certainty, although it will probably be some little time before the new plan of marketing the Ford car is worked out completely.

Briefly, the new merchandising plan of the big producer is similar to the methods of distributing any manufactured article, in that the actual distribution *to the ultimate user will be through dealers who will have no exclusive territory rights, and who will be allowed to sell the machines anywhere or everywhere. The many Ford branches throughout the country are to be nothing more than assembly stations and*



FORD'S TRACTOR AT FREMONT
Thousands followed the Ford tractors as they turned over Nebraska's soil at a rapid clip and hauled machinery around the lot. The upper picture is not of a Ford, but shows well what the tractor can do

Utica's Dealers Can Do Something Besides Sell Cars

THE ANNUAL OUTING OF THE UTICA (N. Y.) AUTOMOBILE TRADE ASSOCIATION was held August 9 at Trout Brook. The pictures tell the story. 1—Soda water contest (yes, it's soda water); left to right: Leo Fülkins, Allie Smith, August Menge, George Van Slyke, Henry Burch. 2—Shoe-off-and-on contest; white suit, Charles G. Hanna, who put sand in the shoes; half standing, Secretary George C. Donahue; and (No. 3) George Bronner, of Little Falls, trying not to hurt his corns. 4—That isn't a pail of beer; it's crab apples in water, and William T. Carroll is winning the contest. 5—Number plate contest; John M. Weaver, center, won it by having the best poker hand on his plate. A. A. Lederman, left, and T. F. Fitzpatrick, right, haven't anything to do with it

wholesale distribution points to these dealers. The dealers, in turn, will be required to give service.

It is believed that the Ford car to-day is well-nigh a standard product, just as a lawn mower or other implement might be regarded, and nearly everyone who knows anything about machinery or mechanical matters should be able to take care of it and do ordinary repairing. With this thought in mind, the service matter clarifies greatly, and with the wholesale branch nearby, it is no great problem to take care of any condition in connection with the car that may arise. The dealer will have the branch from which he bought his cars to fall back upon in every way, and he will also get all his parts through that branch.

In short, the new Ford selling methods are revolutionary so far as the automobile industry is concerned, but they are the principles of merchandising any standard article of commerce. Take any piece of merchandise such as any of the well-known brands of breakfast food, for instance. The maker of this distributes to jobbers, who in turn supply the grocers, and any grocer can get a stock with no restrictions as to where he sells.

Suppose we consider the marketing of plows. If a certain man with a general store wants to handle a line of plows, he can secure such merchandise with no territory restrictions. The store across the street might also carry the same make of plow for his trade.

So with the sale of Fords. The Ford branch houses in all parts of the country will distribute the finished cars to the dealers, at wholesale, and one garage might handle them across the street from another. Each would retail them to his own trade.

These retailers of Fords will of course have to be reputable dealers before they can get a supply of cars, and they will have to contract to give recognized service, but they can sell anywhere they are able to sell.

No information as to the number of cars a dealer will have to buy in order to get them through the branch at wholesale is available, but in all probability the minimum allotment will be ten cars.

It is thought that the new method will greatly reduce the garage and service cost to the ultimate user of the cars, although the plan is not yet old enough for any predictions of this kind to be made. Economies all along the line, resulting from the new plan, might suggest ways and means of lowering the cost, but these are yet to be proved.

In the sense that any reputable concern will be able to get a supply of Fords at a Ford branch, any big user of cars, even though these machines be for his own business, can get them direct, providing he wants enough to come within the minimum wholesale requirements.

In other words, if a big department store wanted ten or twenty-five cars for its own delivery system, it could go direct to the Ford branch and secure them at wholesale prices, without going through a dealer. If this same concern wanted less than the minimum wholesale allotment, it would have to buy them through any Ford seller and pay retail prices.

Ford Salesmen Won't Lose Jobs

NEW YORK, Aug. 15—The salesmen in the Ford retail branches will not be cast adrift upon a cold world. Many will be better off than heretofore. Advices from leading cities state that they are forming partnerships and agencies to sell Fords, and will thereby be able to profit by their previous experience. There will be eight agencies in Cleveland and in St. Louis ten. Some of the salesmen will get jobs with their former co-workers who now become dealers.

Gasoline Falls in All Sections 1 to 2 Cents

Except in Portland, Ore., Where There Is a Raise—Fear of Crude Over-Production

NEW YORK, Aug. 15—Gasoline continues to drop in price throughout the country. Declines of from 1 to 2 cents occurred last week, and further reductions are predicted.

The recent reduction in prices by the leading gasoline companies, it is stated, was caused by a threatened overproduction. It was feared the output would overreach the demand and well-drilling was discouraged as a result.

Reports from different sections of the country show a steady decline. New York City prices again declined 1 cent, making a reduction of 2 cents a gallon within 3 days. The spot, or present-delivery, gasoline basis was nominally steady at 23 cents per gallon in steel barrels to garages and 25 cents to consumers.

Portland, Ore., prices have proved an exception to the rule. Instead of a reduction prices have been advanced 1 cent and gasoline is now retailing throughout the city at 20½ cents per gallon.

Gasoline at the present time is selling lower throughout the South and Southwest than in any other section of the country. The Standard Oil Co. is now selling gasoline in New Orleans at filling stations at 19½ cents, as against 21½ cents a month ago. A further cut is expected.

Gasoline in Dallas is still selling for 19 cents, with prospects of no decrease. Although reductions of 10 cents per barrel have been made in Oklahoma and Louisiana crude oils, the price of gasoline is not expected to go much lower in this part of the Southwest. One motor car dealer in Dallas will start on Oct. 14 a novel plan for selling his customers gasoline. He will furnish them with gasoline and oil at cost. A service station will be opened at his plant.

Louisville, Ky., prices have declined 2 cents during the past 3 days. For several months the fuel has been retailing at 23 cents, but since Thursday it has been selling at 21 cents. The Louisville branch of the Ford company continues to sell gasoline at 20½ cents a gallon to Ford owners only.

Prices throughout Denver territory remain unchanged, wholesaling at 23 cents to the garages and filling stations.

New Jersey prices were reduced last week 1 cent and customers are now paying from 24 to 26 cents a gallon. The wholesale price is 21 cents to garages. Gasoline declines were reported yesterday by the Atlantic Refining Co. in Philadelphia from 25 cents to 24 cents, tank-wagon basis. Pittsburgh quotations by the principal oil companies have been reduced 1 cent a gallon to 26 cents. This follows three reductions in the price of crude oil, a total of 25 cents a barrel.

Lower prices now prevail throughout New England. Last week Boston prices dropped 1 cent, from 25 to 24 cents wholesale. The dealers then announced a 1-cent drop. Some of the dealers are wondering about the retail price, which varies above the wholesale by 2, 3 or more cents.

The gasoline situation in Milwaukee has caused one independent oil refiner to pit its forces against those of the Standard Oil Co. by the medium of newspaper advertising. Answering the full-page advertisements being published by Standard Oil in all Milwaukee newspapers, the Wadhams Oil Co. is using large newspaper space to explain why it chooses to sell Wadhams gasoline exclusively and why its prices are higher than the 18.6-cent price offered by Standard.

Sues Standard on Patent

KANSAS CITY, Aug. 12—The Universal Oil Products Co., Chicago, has filed suit in the United States District Court here against the Standard Oil Co. of Indiana, involving the title to a patented process for making gasoline. An injunction and an accounting are asked.

Fall Fair Grows

CLEVELAND, Aug. 14—All the space allotted for automobiles at the industrial exposition and fair to be held Sept. 2-9 has been sold and it has been necessary to add more space. It is now suggested that a fall show be held annually.

Here's One on Henry!

ST. LOUIS, Aug. 12—Henry Schnuhr, Mascoutah, Ill., does not read the newspapers. Last Tuesday he attended a public sale at the Louis Forcade farm, in his neighborhood, and bought a 1915 Ford car for $377. Not until Friday did he learn of the cost of a new one, and then he consulted a lawyer to learn if there was any way by which he could get "out of his bargain."

Haynes Declares 108% Stock

KOKOMO, IND., Aug. 12—The Haynes Automobile Co. declared a stock dividend of 108 per cent at its annual meeting Aug. 8 in this city. The capital stock was increased from $1,400,000 to $4,000,000, and it was decided to proceed immediately to the erection of a new factory that will turn out the light sixes. Net earnings of $1,000,000 are reported. The company built 6700 cars and will be able to produce 12,000 the ensuing year, 3000 of which will be twelves and the remainder sixes. The directors re-elected Elwood Haynes president, Stephen Tudor secretary, A. E. Starbuck treasurer, and A. G. Seiberling general manager.

Say Repairmen Break Cars to Get Business

Serious Charge Made in Massachusetts and Investigation Is to Be Made

BOSTON, Aug. 12—What appears to be attempts on the part of garage employees to tamper with cars so that the owners would have repair bills has been brought to light in a city near Boston and the owners of the cars are considering taking the matter before the highway commission. One man bought a car and had an expert go over it. There was nothing the matter with it and it ran smoothly. He hired space in a garage, and the next day when he went out he found that the car was missing on a couple of cylinders. Then he got his expert friend to go over it again, and they found the marks of wrenches where the car had been tampered with. He took his car away.

In another garage nearby a physician left his car one afternoon and when he took it out again the steering gear seemed to be acting queer and he bumped a pole. His son was talking about the accident with two other boys, and they remarked that while they were in the garage getting a bicycle fixed two men were working on the physician's car. As he had not ordered anything done and the car was in perfect shape he became suspicious. Talking with some of the other motor owners in the little city they compared stories, and it led to the belief that employees were tinkering with cars to make repair jobs necessary. So the matter is now being discussed as to the advisability of having the highway commission make an inquiry among owners in that place to see if it is a general practice. If so the garages would be closed by the revocation of their registrations and the highway commission would mete out drastic punishment, for such a system would leave any owner liable to figure in a fatal accident unintentionally.

Pathfinder Makes High-Gear Run

NEW YORK, Aug. 5—A Pathfinder twin-six has crossed the continent with its gears locked in high. It arrived in this city from San Diego Tuesday and as a final demonstration was run at 60 m.p.h. on the Sheepshead Speedway. The car left San Diego July 3 and was checked along the route by A. A. A. officials. The mileage was 4921 at the end of the speedway test. The daily average was 200 miles. There was no night driving. The days actually traveled were 28. The average gasoline consumption was 10.2 miles per gallon.

Dealers to Fight for Goodrich's Road Signs

California Would Tear Them Down Through a "Snap" Law and Trade Is Up in Arms

SACRAMENTO, CAL., Aug. 12—Tradesmen and motorists throughout the State are up in arms over the decision of the State Highway Commission against the road signs placed along the California highways by the B. F. Goodrich Co.

At the session of the State Legislature a bill was slipped through, giving the highway commission power to remove or have removed all signs along the public highways of the State bearing advertising. The law gives the highway commission the right, however, to make exceptions, and this is the point over which a great fight is promised.

The Goodrich company has been instructed to remove all its signs in California, although these are of great benefit to motorists in many sections. The company has been given until Dec. 1 to remove these road signs, but some organization, seemingly, is already removing the signs. At least the road signs of the Goodrich company are disappearing, especially in Southern California.

The motor clubs which have placed signs are exempt from the ruling of the highway commission, although the club's signs bear advertising in every case. The California State Automobile Association, with headquarters at San Francisco, which is affiliated with the A. A. A., has indorsed the work of the Goodrich sign posting service and officials of the A. A. A. have been warm in their praise of the signing system employed by the Goodrich company in California.

The Automobile Club of Southern California, which is not affiliated with the A. A. A., has worked against the Goodrich signs, and it is claimed that it was largely due to the influence of the club located in Los Angeles that the highway commission ruled as it did.

There is a large motor club at Santa Ana, Cal., known as the Automobile Club of Orange County, and this organization is friendly to the Goodrich company, also. With the Santa Ana club in the south and the strong A. A. A. affiliated organization in the north, both supporting the tire company, and hundreds of individual motorists all over the State writing letters of protest to the highway commission, strong pressure is to be brought to bear to protect the signs.

The Automobile Club of Southern California places signs and charges the county for the same, while the Goodrich company places signs free of charge. The National Old Trails route, which was signed as far east as Kansas City by the Automobile Club of Southern California, was paid for by towns and organizations along the route, it is claimed, and the club is given credit for it.

If the highway commission makes all motor clubs exempt in ruling against advertising signs, it will be an easy matter for the California State Automobile Association to furnish metal disks to be attached to the Goodrich signs, making these official club signs by merely accepting the service of the tire company and the co-operation of that organization for the benefit of the California and visiting motorists using the State highways.

Texas Overlanders Meet

DALLAS, Aug. 14—Overland dealers from many points in Texas gathered here this week at the annual meeting of salesmen. Ideas of salesmanship were discussed, new contracts were made and new territory was allotted. Several men from the factory attended.

Marmon Places "Truth" upon Its Record Run

NEW YORK, Aug. 14—Authenticity was the keynote of the system of the Marmon company in carrying out the checking work on its transcontinental car which established the record last week. The Automobile Club of America was the official medium selected by the Marmon company to do this work. The car was sealed in a dozen places by a representative of the club in New York City and on its arrival in San Francisco the California representative checked the seals. The run was made in 4 days, 18 hr., 30 min.

Out of twelve seals put on the car at the beginning of its run, eight were intact. Of the remaining four, three were gone and the other broken and hanging on the car. Those seals that were missing were placed on the transmission case to the torque tube; on the bolt through the differential case; and on the left front spring. The seal on the torque tube to the differential housing was broken, but hanging to the car.

After thoroughly investigating the original seals on the car, certain identification marks on the car were gone over. It was found that the original six wheels were gone. The rest of the parts were found intact with the exception of the socket on the torque tube end, which had been moved or repaired.

105,000 Cars in Texas

DALLAS, Aug. 12—According to an estimate of the Dallas Automobile Club, the State of Texas June 1, this year, had in actual use and operation a total of 105,000 cars, an increase of 15,000 since Jan. 1.

Crops of Texas Mean Business for Car Men

Cotton Will Bring $100,000,000 More Than in 1915—Other Production Promising

1916 Texas Crop Estimates

	1915	1916
Cotton (bales).....	3,322,480	4,200,000
Cotton (price).....	$225,000,000	$326,000,000
Wheat (bu.).....	22,862,000	12,000,000
Corn (bu.).....	175,075,000	165,000,000
Oats (bu.).....	44,375,000	12,000,000
Rice (bu.).....	7,113,000	10,000,000
Maize (bu.).....	.....	75,000,000

AUSTIN, Tex., Aug. 12—Good crops and high prices for the products of the farms and ranches mean much to the motor car trade of Texas. Money from the sale of this season's crops is beginning to circulate and the benefit that it is having on all lines of business is already apparent. Cotton-picking will have become general by the middle of August. The bales that have been marketed up to this time brought record-breaking prices, and it is expected that the market will continue its present high level during the remainder of the season. This season's prospective crop of 4,200,000 bales will bring an increase of more than $100,000,000 over the returns of the preceding year.

While the forage crop is not as large as last year, it is being utilized to much better advantage and profit by reason of the fact that there has been a great increase in the number of silos. In western Texas the maize crop will go above 75,000,000 bu., which is a considerable increase over last year's yield. It is only within the last few years that the threshing of maize has been carried on to any great extent in this State. Under the general head of maize are included Kaffir corn, feterita, milo maize, cane and other varieties of sorghums. This grain is now regarded as one of the staple crops of Texas and the demand for it has spread to remote parts of the United States and to foreign countries. It usually sells for about the same price as corn.

In the matter of fruits, vegetables and melons, the returns from these crops have been larger this season than was ever before known. It is estimated by traffic officials of railroads that the total shipments of onions, new potatoes, sweet potatoes, tomatoes, cabbages, lettuce, cauliflower, strawberries, cantaloupes, watermelons and peaches will have reached 25,000 carloads by the end of the year.

Livestock interests are unusually prosperous. Stock farming and dairying are being carried on much more than they were a year ago.

Colorado Association Teaches Salesmanship

Establishes Auxiliary Wherein Sales Subjects Are Discussed by Member Salesmen

DENVER, Aug. 12—The Automobile Trades Association of Colorado is operating a Salesmen's Bureau for the betterment of salesmanship.

This is affiliated with the parent trades body, but has its own meetings, separate membership fee and activities. And the new bureau has already accomplished enough to be regarded as one of the most valuable enterprises ever undertaken in this territory for the welfare of the motor car industry.

Meetings are held once in 2 weeks, and the programs present selling methods and deal with selling problems from many angles. There are addresses by experts and open discussions by the members. In addition to speakers from large Denver concerns, the bureau secures visiting sales managers and other factory representatives from all parts of the country.

Such visitors have been especially plentiful this year on account of the rapid growth of business in the Rocky Mountain region and the numerous tests of cars and appliances in mountain driving, and these speeches treat both scientific selling and a wide range of technical subjects.

The members of the bureau are able to glean a large amount of valuable information from these talks, and also increase their acquaintance and improve their knowledge and ideals through their own exchange of experiences and suggestions in the open discussions.

"One of the most important results of the few meetings held thus far has been breaking several salesmen of the habit of 'knocking' the other man's line," declares Secretary Edgar W. Johnson of the Trades Association. "Through getting better acquainted with one another and listening to the advice of successful men, who hold responsible selling and other positions in big concerns, a lot of fellows have seen the folly of wasting time trying to run down a competitor's goods instead of devoting their efforts entirely to showing the good qualities of their own line.

"I believe this 'knocking' foolishness is now practically eliminated among the members of our new bureau, and that customers, employers, the salesmen themselves and the standing of the automobile business in general will benefit greatly from this achievement.

"And I want to say further that this 'anti-knocking' campaign, and also other practical movements we have started for greater efficiency in salesmanship and higher ideals and ethics in the general conduct of business have been aided substantially by the valuable pointers constantly set forth along all these lines by Motor World."

Dues are $5 a year. The membership now numbers 66, and the membership committee predicts that the 100 mark will be reached before the close of the year. On account of hot weather and an extra brisk condition of business right now, the regular meetings of the bureau have been discontinued until September, but at that time a special campaign will be conducted to enlist new members.

The Salesmen's Bureau took a prominent part in the Trades Association's first annual picnic recently held, and promises to become one of the most lively divisions of the central trades body.

Trims Windows for Dealers

NEW YORK, Aug. 14—As part of a dealer co-operation plan, the Champion Spark Plug Co., Toledo, is sending a window-trimming motor car about the country. It is now in this section. George B. Nason and E. D. Farquharson, who accompany the car, have already visited a large number of cities and have installed window displays for Champion dealers. It is planned to place several more of these cars in service.

Find Gasoline Men of Bay State Honest

BOSTON, Aug. 12—Commissioner of Weights and Measures Thure Hanson has started his inspectors on a state-wide tour of inspection of gasoline pumps. There have been vague rumors that some of the pumps were not as accurate as they might be.

The first places visited were in the Allston section of Boston, which is the very end of the motor district. From there the inspectors will work their way in town. After the first week of tests Mr. Hanson said he found that the pumps were varying in measurement. There were 178 pumps tried out. Of that number 42.7 per cent were correct. There were 33.7 per cent giving long gallons and 23.6 per cent were not giving full measure.

The inspectors tested each pump from two to five times so that there could be no charge of hasty decisions. The largest shortage found was 8 gills, or 5 per cent, in 5 gal., while the largest excess was 36 gills, or 22.5 per cent, in the same amount. The inspectors said that it appeared that the public was getting full measure.

Columbia University Adds Selling Course

To Open This Fall and Last Three Years—Intended as Practical Help to Business Men

NEW YORK, Aug. 14—Columbia University plans a course in salesmanship, which coincides with the idea that played such a big part in the recent World's Salesmanship Congress in Detroit.

A new business school is to include courses in spelling, advertising, sales management, business English and commercial correspondence. It is planned to make the instruction practical and of immediate value to young men already engaged in business vocations. The course will be 3 years.

Mayor Kiel to the Rescue

ST. LOUIS, Aug. 12—Mayor Kiel has vetoed the proposed gasoline ordinance which would have prohibited pouring more than 3 gal. of gasoline into motor car tanks on the streets. More than 100 small dealers and grocers protested the ordinance at the public hearing. The Mayor, in vetoing the bill, said that permitting the pouring of 3 gal. of gasoline destroyed its effect as a safety measure.

The ordinance was introduced by Alderman Renick, salesman for the Pierce Oil Corporation, which owns about one-fourth of the 100 filling stations in the city. An outside protest came from the produce district, where practically all of the delivery trucks get their gasoline from oil wagons. All of the automobile associations protested the bill, which was passed by the Aldermen with only one dissenting vote, and if the same vote obtains again the veto will be overruled.

Thirty Thousand Cars in Oregon

PORTLAND, ORE., Aug. 12—Thirty thousand five hundred and four cars have been registered thus far in Oregon. Last year at this time there were 23,585.

Establishes "Shopeteria"

SEATTLE, Aug. 12—Imitating the "serve-self" restaurant, the C. P. M. Garage has established what is calls a "shopeteria" to provide service for customers who wish to work on their own cars. In order to avoid the loss of tools a room is provided wherein the customer may work on his own car under lock and key. Tools are issued from the office to the customer, and must be accounted for and returned when the bill is settled. If a helper is required his time is charged for.

Dealer Show Boosters Will Tour Wisconsin

Milwaukee Tradesmen in String of Cars Will Preach State Fair and Motor Show

MILWAUKEE, Aug. 12—Fifty-five cities and more than 100 villages and hamlets will be visited by the second annual "booster" tour of the Milwaukee Automobile Dealers Association, which starts from Milwaukee Monday, Aug. 28, and ends at Milwaukee Saturday, Sept. 2. Governor E. L. Philipp of Wisconsin and Mayor D. W. Hoan of Milwaukee have consented to accompany the tourists from start to finish.

The principal object of the tour is to advertise the Wisconsin State Fair at Milwaukee, September 11 to 16, and the big motor show to be conducted by the dealers on the fair grounds. The route as definitely fixed this week is:

First day—Milwaukee to Madison, via Waukesha, Oconomowoc, Johnson Creek, Jefferson, Lake Mills, Deerfield and Cottage Grove.

Second day—Madison to Green Lake, via Sun Prairie, Marshall, Waterloo, Columbus, Fall River, Randolph, Fox Lake, Markesan.

Third day—Green Lake to Green Bay, via Ripon, Berlin, Omro, Oshkosh, Neenah, Menashy, Appleton, Kaukauma, De Pere.

Fourth day—Green Bay to Sturgeon Bay, via Luxemburg, Casco, Rio Creek, Forrestville.

Fifth day—Sturgeon Bay to Elkhart Lake, via Algoma, Kewaunee, Two Rivers, Manitowoc.

Sixth day—Elkhart Lake to Milwaukee, via Plymouth, Fond du Lac, Campbellsport, Kewaunee, West Bend, Cedarburg.

The forty members of the M. A. D. plan to enter a total of sixty cars, accommodating from 275 to 300 "boosters." The tour will not be a contest in any sense, but purely an advertising affair and sociability run for the benefit of the motor car industry of the State and the promotion of the big agricultural show next month. The committee in charge consists of Edgar F. Sanger, chairman; Raymond D. Rockstead and W. A. Rafter.

Willard Plans Four New Buildings

CLEVELAND, Aug. 12—The Willard Storage Battery Co. plans four new buildings, which will mean 150,000 cu. ft. of floor. One of the buildings is a power house.

The Fremont Tractor Demonstration

(*Continued from Page 9*)

maintain a motor car, he is considered at least a possible prospect. But when it comes to buying a tractor for tilling his fields, there enters another consideration, and that is, "Will it pay?"

The answer to this question involves a number of considerations, but the chief of these, particularly in level country, is the tillable acreage. The Department of Agriculture has found that in general on level land a tractor will pay if properly managed, when the tillable acreage is not less than 160 acres. According to Nebraska real estate men, who have been in touch with conditions in this territory for years, the average size of the farms in Nebraska is double that figure. There are, of course, many farms of 160 acres or less, but there also are many in which the acreage is in the neighborhood of 1000. It is on the larger farms that the tractors have been operating for the greatest period and with the most success.

Custom Work Does Not Pay

One landowner, whose holdings approximate 1200 acres of corn and wheat lands, has been operating two very large tractors for several years, and this week purchased two smaller ones of the same make to use in addition to his larger ones. To a certain extent it is the smaller-capacity and less expensive tractors that are popularizing these machines in this territory. A big, heavy, expensive machine, capable of pulling eight or ten 14-in. plows, represents too much capital to the owner of 240 or 360 acres, and its capacity is so great that there is not work for it on one farm a sufficient proportion of the time. It has been found as a general rule that to keep the machine sufficiently busy by doing custom work on other farms is not a paying proposition.

The later types of smaller, lighter and less expensive tractors, capable of handling from two to four plows, seem in the opinion of a large proportion of the farmers in the territory to meet the demands of the moderate-size farm.

Crops Are Good

The August crop report for the State of Nebraska, as compiled by the Federal Bureau of Crop Estimates Aug. 1, together with the actual production last year, is given below. It should be borne in mind that last year's production was approximately 120 per cent of the normal yield for the past 5 years; also that this estimate was made before the general rains of this week, which put hundreds of thousands of dollars in the pockets of the Nebraska farmers, and in the minds of some meant a full corn crop instead of a partial harvest.

Crop	Aug. 1, 1916 (Estimate) Bushels	1915 Production Bushels
Corn	180,000,000	213,000,000
Winter wheat	61,600,000	66,618,000
Spring wheat	4,560,000	5,536,000
Oats	75,100,000	70,400,000

Fremont markets Aug. 9, 1916, quoted No. 2 wheat at $1.30, No. 3 corn at 75 cents and oats at 35 cents per bushel. On Aug. 1, 1915, wheat was 29 cents less, corn 5 cents less, and oats the same. Livestock and dairy products last year put $244,000,000 in the coffers of the Nebraska farmer and 1916 will do as well.

Fake Advertisers Are Being Brought to Time

Ad Clubs Get After Those Who Make False Claims and Many Fines Are Imposed

NEW YORK, Aug. 12—Those who advertise falsely are being brought to time by the Associated Advertising Clubs of the World, whose motto is "Truth." A vigilance committee is maintained for this work. Post-office fraud orders are secured where advisable against those whose claims are not true.

One New York City retailer who advertised "Genuine Panama hats at $2.85—values $5, $6 and $7.50" was prosecuted and fined $25 when it was proven the hats were not Panama.

A Spokane piano merchant advertised "Weiler pianos, regularly $400, on sale at the special price of $195." It was found that these pianos cost $75 at the factory and were laid down in Spokane at $90. The advertiser was fined $50.

A fraud order has been issued against a Niagara Falls concern which advertised for men to travel and appoint agents at a salary of $80 a month. It was disclosed that the principal object was to sell sample cases to salesmen at $6 each. These are but instances of the cases that are being brought from time to time. The Associated Clubs had much to do with the recent case of A. C. Bidwell of the International Automobile League.

One Hundred Victims in St. Louis

ST. LOUIS, Aug. 12—Matthew F. Morse, secretary of the Automobile Club of St. Louis, who aided in obtaining the fraud orders against the International Automobile League and kindred organizations, estimates that more than 300 St. Louis car owners paid membership fees to this organization. Some of these people were mulcted of large amounts before they decided to heed privately circulated warnings. The St. Louis license list was the basis of membership solicitation here.

Hits Back at Standard

MILWAUKEE, Aug. 12—At least one independent oil refiner in Milwaukee is pitting its forces against those of the Standard Oil Co. in the present gasoline war in Milwaukee. Answering the full-page advertisements being published by S. O. in all Milwaukee newspapers, the Wadhams Oil Co. is using large newspaper space to explain why it chooses to sell Wadhams high-quality gasoline exclusively and why its prices are higher than the 18.6-cent price offered by the Standard.

Atlantic City's Show Aid to Whole Country

So Many Visitors Are From Out-of-Town That Names Are Sent to Other Dealers

ATLANTIC CITY, N. J., Aug. 14—The dealers who are promoting their first annual automobile show on Young's Million Dollar Pier believe they are doing a great deal of missionary work for dealers all over the United States. Thus far, about 50,000 visitors have flocked in to see the nineteen exhibits, and their number includes tourists from everywhere, but whenever a name is secured as a prospective buyer, it is forwarded to the dealer in the prospect's home town.

The daily attendance has run as high as 12,000, and it is estimated that when the 2-week show closes next Sunday evening the attendance will have been 125,000. The cosmopolitan character of the attendance is indicated by the presence of four natives of India. The exposition is regarded as one of the best advertisements Atlantic City has ever had.

The average space per dealer was 342 ft. and the charge was 25 cents per square foot.

A serious handicap to the dealers was the rigid rules of the Young's Pier management, which makes impossible the sale of anything on the pier after the general admission price of 25 cents is paid. The latter includes access to the automobile show, the dance floor, the vaudeville show and observation chairs. In spite of this, a number of sales were actually made, but the salesman had to take the buyer out on the boardwalk and there accept his check.

The general feeling among the exhibitors is that Easter would be a more logical time to hold the show, on account of the better prospects of actual sales. The number of visitors, of course, would be curtailed, as it is estimated that the several railroads bring about 10,000,000 people to the "shore" each summer season. An effort will be made to change the date for next year.

The show is staged on the south side of the pier, overlooking a broad expanse of bathing beach. There were no preferred positions, each dealer taking as much space as he found necessary. The spaces vary from 150 to 500 sq. ft., with an average of 342. The new 1917 cars on the floor were the McFarlan, Ford, Cole, Grant, Peerless, Maxwell and King.

The exhibitors were: L. S. Bowers Co., Philadelphia, Cole and Grant; E. C. Johnson Co., Philadelphia, Premier and Reo; Moline-Knight Sales Co., Philadelphia, Moline-Knight; Peerless Automobile Co., Philadelphia, Peerless; Baker-Bell Motor Co., Philadelphia, McFarlan and Empire; King Car Agency, Philadelphia, King; Maxwell Motor Sales Co., Atlantic City, Maxwell; Ford Motor Co., Atlantic City, Ford; S. R. Blocksom Motor Co., Philadelphia, Stutz; Oldsmobile Co., Philadelphia, Oldsmobile; Fiat Motor Co., Philadelphia, Apperson; Jeffery Agency, Atlantic City, Jeffery; Briscoe Agency, Atlantic City, Briscoe; Auto Appliance Co., Baltimore; Bales Puncture Plugger Co., Philadelphia; Keystone Lubricating Co., Philadelphia; International Harvester Co., through O. H. Gutridge, Atlantic City; Guarantee Securities Co., New York; Crew-Levick Co., Philadelphia.

Salem to Have State Fair Show

SALEM, ORE., Aug. 12—The third annual car show at the Oregon State Fair will be held Sept. 25-30, at this city, under the management of Joseph M. Rieg. Half of Machinery Hall will be used.

Texas Tractor Show Next Fall

DALLAS, Aug. 14—The second Texas tractor show and demonstration will be held at the Texas State Fair grounds during the 1916 fair, according to announcement to-day by J. C. Duke, superintendent of this division of the State fair.

St. Louis Run in October

ST. LOUIS, Aug. 12—The Reliability Run of the Automobile Club of St. Louis will be held early in October to Keokuk, Iowa. It will last 3 days.

New Philadelphia to Organize

NEW PHILADELPHIA, OHIO, Aug. 14—The dealers and garagemen of this section plan an organization to be affiliated with the Ohio Automobile Trade Association. The first meeting will be held Aug. 17. F. T. Price, state president, will attend.

Joseph Maw Passes Away

WINNIPEG, Aug. 10—Joseph Maw of Joseph Maw & Co. died recently. The company handles implements and the Chalmers, Reo, Briscoe, Gray, Dort, Hupmobile and Scripps-Booth, and is one of Canada's pioneer dealers. Maw retired some time ago and spent much of his time in Los Angeles.

Gives $500 for Armory Examination

MINNEAPOLIS, Aug. 12—To insure opening of the National Guard Armory for the winter automobile show, the Minneapolis Automobile Trade Association advanced $500 for a quick examination of the building, which settled some this summer. A move is on also for the erection of a convention and display hall building by civic organizations. The Pence Automobile Co. has offered its large warehouse at Eighth and Washington Avenues N. for the meeting of the National Association of Stationary Engineers, Sept. 11-16, in place of the Armory, while the examination is being made.

Dallas Going to Have Big Show at the Fair

Trade Has Already Started on Work for Fall Merchandising Fete at State's Exhibit

DALLAS, Aug. 9—Plans for an automobile show during the State Fair, Aug. 14 to 31, were practically completed at a meeting held to-day by nearly all of the automobile and accessory dealers of this city.

State Fair officials will allow $5,000 for decorations and plans and the dealers will increase that amount by their own appropriations. Indications are there will be more than ninety exhibits, and in case Dallas dealers do not take all the space, outsiders will be permitted to enter. Entries close Sept. 1. The manager of the show will be M. A. Sacksteder of the Sacksteder-Potter Co. These committees were appointed:

Rules and Regulations—W. G. Langley, Franklin Automobile Co., chairman; Dan F. Safford, Overland Automobile Co.; M. F. Sterett, Electric Appliance Co.

Decorations—S. G. Davis, Davis Automobile Co.; Oscar Dunlap, Ferris-Dunlap Co.; W. F. Burton, Burton-Rountree Co.

Publicity—J. V. Hardy, Ray Rose Co.; J. W. Frawley, Frawley Automobile Co.; E. E. Rhodes, Fisk Co.

Regulation of Traffic at Grounds—Roy Munger, Munger Automobile Co.; W. F. Rose, Rose-Fosdick Co.; J. H. Sides, Maxwell.

Drawing of Space—C. L. Zutavern, Texas Oakland Co.; J. R. Frey, Tennison Bros.; E. O. Thackston, Burton-Rountree Co.

Distributers maintaining Dallas offices who to-day contracted for space are: Burton-Rountree Co., Hupmobile; Battle & Hubbard Automobile Co.; Couch Auto Co., Case; R. L. Cameron Auto Co., King; S. G. Davis Automobile Co., Oldsmobile; Dallas Chalmers Co.; Electric Appliance Co.; Frawley Motor Co., Reo and Dort; Ferris-Dunlap Co.; Franklin Auto Co.; Gray & Reardon, Paige and National; Haynes Auto Co.; Overland Automobile Co.

Mitchell-Lewis Motor Co.; Morris Automobile Co.; Munger Automobile Co., Cadillac; Randall Adams Auto Co., Packard and Chandler; Ray-Rose Co., Saxon; Rose-Fosdick Co., Hudson; J. H. Sides Motor Co., Maxwell; Kissel Kar Co.; Tennison Bros. Co., Briscoe; Texas Oakland Co.; Trinity Motor Co., Dodge Bros.; Hart Bros. Co., Apperson; Buick Automobile Co.; Tri-State Motor Co., Pathfinder.

Puritan Compiles Garage Register

DETROIT, Aug. 12—The Puritan Machine Co., in order to keep in closer touch with and protect legitimate garagemen, have evolved a plan of registering garagemen.

The plan is to issue identification cards to garagemen, entitling them to a trade discount. These cards are numbered serially and given to each garageman, who will then be registered with the company.

Upon the presentation of the card, or by furnishing the number of this card, he will be given the proper discount on repair parts and accessories. This plan has worked out very successfully in Detroit and has received the co-operation of the garagemen, as it protects them from individuals who are not garagemen and, therefore, not entitled to any discount.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

C. C. Winningham has taken direct charge of the advertising of the Hudson Motor Car Co., Detroit, following the resignation of W. L. Agnew. Winningham previously had been sales manager and the advertising had been part of his department.

W. L. Agnew, until recently advertising manager of the Hudson Motor Car Co., has joined the Chalmers Motor Car Co., where he will be connected with the sales promotion department.

J. M. Ramsden has resigned as St. Louis manager for the J. I. Case T. M. Co., Racine, Wis., to become a general traveler for the Oakland Motor Car Co., Pontiac, Mich.

Fred A. Wade has been appointed purchasing agent of the Buick Motor Co., succeeding J. T. Wilson. He was in a similar capacity with the Maxwell Motor Co.

R. W. Dudley, of the St. Louis branch of the U. S. Tire Co., has been named traveling representative for that company in Arkansas, succeeding S. L. Chorlins, who resigned recently to go into business at Pine Bluff.

W. F. French has been appointed purchasing agent of the Bour-Davis Motor Car Co., Detroit.

G. Vernon, "Billy" Beck, has been made sales manager of the Elgin Motor Car Corp., Chicago. He has been connected with several automobile companies and lately was western sales manager for the Detroiter Motor Car Co.

George S. Morrow has resigned as president and general manager of the Oldsmobile Co. of Pittsburgh. He may engage in business on the Pacific Coast.

Ben Rennard, formerly with the Chandler Motor Car Co., Cleveland, has been appointed special representative of the Ross Automobile Co., Detroit.

E. H. Baker has been appointed central eastern sales manager for the Cole Motor Co. Baker was formerly president of the Cole Motor Co. of Buffalo.

Chas. Kuehn, for many years connected with the advertising department of the Packard Co., has joined the Cheltenham Advertising Agency of New York. His headquarters will be in the New York office.

Paul B. Donaldson, formerly connected with the Philadelphia branch of the Chase Motor Truck Co., has been transferred to the home office at Syracuse, N. Y., to act as special field representative.

L. R. Smith has resigned as Indianapolis representative of the Eisemann Magneto Co. to become general sales manager for the motor department of The Buda Co., Harvey, Ill.

W. J. MacInnes, formerly connected with the General Motors Co., United Motors Co., and the Winton Co. in advertising work, has become connected with the Western Advertising Agency, Racine, Wis., and Chicago.

Buda to Sell Own Motors

HARVEY, ILL., Aug. 12—The Buda Co. is organizing a sales department and will handle the sales of the Buda motor direct, instead of through Bradenburg & Co. Lon R. Smith, former western representative of the Eisemann Magneto Co., will be motor sales manager, beginning Sept. 15. C. V. Richardson, recently chief engineer of the Republic Motor Truck Co., has been made sales engineer.

Ford Production for 13 Years

Total output 13 years, 1,406,997 cars
Ford Motor Co., organized June 16, 1903.
Employed 311 men first year.
Capital stock in 1903, $100,000.
Capital stock in 1916, $2,000,000.
Number of men employed in 1916, 31,035.

Year	Cars Made and Sold	Increase or Decrease	Daily Average
1903-1904.	1,708	.....	5
1905.....	1,695	— 13	5
1906.....	1,599	— 96	5
1907.....	8,423	+ 6,824	28
1908.....	6,398	— 2,025	21
1909.....	10,607	+ 3,209	35
1910.....	18,664	+ 8,057	62
1911.....	34,466	+ 15,802	115
1912.....	68,544	+ 30,078	228
1913.....164,452		+ 95,908	545
1914.....248,307		+ 83,855	827
1915.....308,213		+ 59,906	1,027
1916.....533,921		+225,708	*1,816

Largest one-day output, 2,430 cars, Feb. 29, 1916.
Sales value of 1916 output, minimum, $235,000,000.
Sales value of 1903-1904 output, less than $2,500,000.
Expected output of 1917, minimum, 750,000 cars.
The Ford Motor Co., in June, 1915, announced that it will increase its capital stock to $100,000,000, but as the laws of the State of Michigan do not allow such a large capitalization and as the Ford company did not want to incorporate in another State, the present capital stock of the company is still $2,000,000.

* The average daily output is based upon 300 working days, except for 1916, where the actual number was furnished by the company as 296.

New Name for American Jack

HICKSVILLE, OHIO, Aug. 14—The American Automatic Automobile Jack Co. has reincorporated as the Maumee Valley Mfg. Co. with capital of $100,000 and will take over the Goller show case factory. The new company will continue the manufacture of show cases and fixtures along with the jacks. Those interested in the new company are Dr. J. S. Hall, H. M. Hartzler, C. J. Horn, J. D. Serrill and W. E. Simmons.

Invades Downtown

PORTLAND, ORE., Aug. 12—A departure new to the automobile trade here is an exclusive salon salesroom near the heart of the business district, just opened by W. B. Doan, Paige and Saxon distributer. The salesroom contains 2000 ft. of floor.

Enger Raises Capitalization

CINCINNATI, Aug. 12—Papers were filed with the Secretary of State recently, incorporating the Enger Motor Car Co. at $4,000,000 for the purpose of manufacturing Enger cars, which have been on the market for some time. It is planned to build additions and secure more equipment for the factory. The incorporators are Frank J. Enger, E. L. Jones, George W. Platt, E. E. Lincoln and Edward Ritchie.

Simplex in Aircraft Merger

NEW YORK, Aug. 10—The Simplex Automobile Co., which for a year has been part of the Wright aircraft organization, is included in the $10,000,000 Wright-Martin aeroplane merger just completed. The Simplex company has for some time been manufacturing aeroplane motors for foreign countries, along with a high-priced automobile chassis. The merger will not cause any changes in this policy. The Simplex plant at New Brunswick, N. J., which has been entirely rebuilt, will be used to manufacture the aviation motor, which is of the Hispano-Suiza type, and the Simplex cars. There are 2200 employees at the New Brunswick plant.

The principals in the deal are the Wright Co. of New York and the Glen L. Martin Co. of Los Angeles. The new consolidation will be known as the Wright-Martin Aircraft Corp.

Factory News of the Week

Durant Denies $700 Eight Report

NEW YORK, Aug. 10—W. C. Durant, president of the Chevrolet Motor Co., has gone on record as denying the intention of the company to put out a $700 eight. The report was published widely in the press of the country, and it was also stated that a big cut in price was to follow the Ford announcement. This has also been denied categorically.

It is well known that the Chevrolet company has been developing an eight-cylinder car for some months, and no denial of this has been made by the company. It is well understood, however, by those who have followed the plans of the company closely that this will be priced at considerably above the figure given and very likely at from $1,100 to $1,200. The present prices of the Chevrolet cars are $490 for the little four and $750 for the larger one.

W. C. Sills, treasurer, states that the company had on hand Aug. 1 cash and securities in excess of $25,000,000.

Page Plans Ford Starter

ADRIAN, MICH., Aug. 10—The Page Fence Co., which has been making windshields, is to begin soon the manufacturing of a starter and light regulator for Ford cars. The company has made an arrangement with the inventor, B. S. Baldwin, Hicksville, Ohio, to that effect, it is said. In the windshield department work is being rushed, as orders on hand are at least 50 per cent ahead of what they were at this time a year ago.

Chalmers Assets Gain 50 Per Cent

DETROIT, Aug. 10—Chalmers assets have increased by 50 per cent in the last year. Preliminary statements made regarding business during the 1916 fiscal year which ended June 30 show a gain in total assets of $4,857,274, the total now being $13,051,538.

The surplus totaled $2,066,673.88 instead of $1,010,422 in 1915. Cash on hand and in banks showed a decrease totaling $564,746.64 instead of $1,173,135.

Auto Parts "Opens" New Home

MILWAUKEE, Aug. 10—The Auto Parts Mfg. Co. informally opened its new factory to-day at 313-317 Milwaukee Street. Engraved invitations were used.

Digitized by Google

Can't Revive Revivo

LOUISVILLE, KY., Aug. 10—Pursuant to a resolution adopted by the directors of the Kentucky Revivo Battery Co. Monday, a voluntary petition in bankruptcy was filed for the concern July 25, the action being taken by J. T. Gathright, the president. Liabilities, according to the petition, aggregate $3,692.43, while assets total $4,934.37.

Acason Truck in New Factory

DETROIT, Aug. 14—The Acason Motor Truck Co. has taken possession of a new factory at 429 Brooklyn Street.

Simplex Moves to Fifth Avenue

NEW YORK, Aug. 12—The Simplex Automobile Co. has rented for a term of 5 years the store and basement of the new building at the southeast corner of Fifth Avenue and Fifty-eighth Street, and will establish there its local salesroom.

The New York and metropolitan sales of the company have heretofore been handled through a dealer, John G. Dale, 240 West Fifty-ninth Street, but the company has recently taken over this business and will operate this branch itself.

From Everywhere

North Tonawanda, N. Y.—Three hundred and fifty employees of the Herschell-Spillman Co. attended the company's outing at Niagara Beach, Saturday, Aug. 12.

Milwaukee—The A. O. Smith Co. entertained more than 6000 persons at its annual outing at Waukesha Beach Aug. 12.

Oshawa, Ont.—The Chevrolet Motor Co. plans to build a $50,000 factory here.

Walkerville, Ont.—The Motor Products Corp. will build a factory here. W. C. Rand, president of the Rand Mfg. Co., is president.

Chillicothe, Ohio—The Arbenz Motor Car Co. has been incorporated at $1,000,000 to manufacture motor trucks. The concern will take over the factory formerly operated under the name of the Arbenz Car Co., install additional machinery and start the manufacture of trucks on a more extended scale. The incorporators are M. F. McFadden, E. C. Spader, M. C. Hayes, W. J. Purcell and R. I. Pillars.

Flint, Mich.—The Buick Motor Co. has promoted the following men: W. J. Browne, who had charge of the assembling plants, is now plant manager of factories No. 1 and 4, succeeding Mr. Durham; P. J. Moohn has been made manager of assembling plants, succeeding Mr. Browne; R. E. Benner, who has been research engineer of the company, is promoted to the position of general superintendent; C. B. Durham, who had charge of factory No. 1, has been made general master mechanic of all Buick plants.

Chicago—Beginning Sept. 1, the manufacture of Warner Auto-Meters will be carried on in the new additions to the Chicago plant of the Stewart-Warner Corp., and the Beloit plant will be devoted exclusively to foundry operations connected with the production of Stewart-Warner products. Plans have been made to double the size of the Beloit plant.

Jackson, Mich.—The Central Auto & Supply Co. has distributed checks to its employees in pursuance to its profit-sharing plan inaugurated 1 year ago. The checks are based on the length of service and wages earned. The plan became effective Aug. 1 for another year.

Detroit—A dinner was tendered Aug. 2 to Frank N. Sealand, until recently manager of the Detroit branch of the Winton company and formerly president of the Detroit Automobile Dealers Association. Sealand goes to Cleveland as manager of the Cleveland-Cadillac Co.

Get Your Part of Thirty Million

CONSERVATIVE estimates place 30,000,000 as the number of automobile lamps to be bought this year. Now that practically all cars are electrically lighted, the day-by-day and year-by-year demand for new lamps to replace those burned out is bound to increase as fast as the number of cars increases. The astute dealer who makes *his* store the headquarters for lamp renewals reaps constantly growing profits.

Small Stock Moreover the initial investment is so small that anyone can put on his counter the lamp assortment with enough selected sizes and types of lamps to supply all needs. Reordering to keep this stock complete is so simple as to be almost automatic.

Easy Terms With our little booklet as a guide, any clerk can instantly supply the right lamp for any car—the name and year of the car being the only information needed. Another helpful sales aid is the lamp chest, in which the car owner can carry a set of six spare lamps for his car. With this chest, it's easy to sell six lamps at once, as the lamps are specially selected to fit the customer's car.

Write Now No matter how many or few auto accessories you may have handled, write us for full particulars. If you think you can also handle flashlight lamps to advantage, write also for complete information on the flashlight Assortment, another lamp renewal proposition as full of profit possibilities as the auto lamp assortment. The sooner you get your assortment of lamps the quicker you'll be prepared to take advantage of your share of the big fall renewal business.

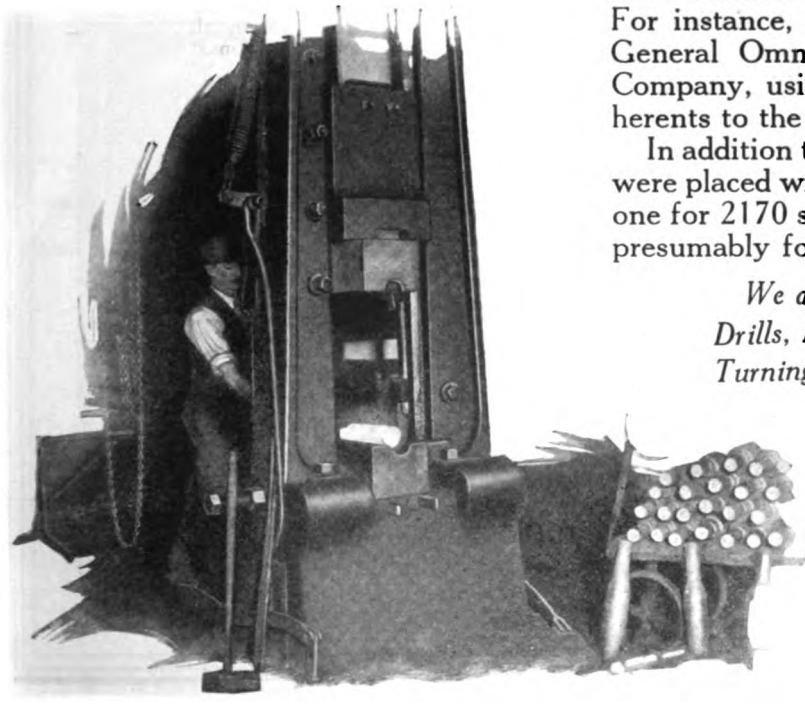
BAUSH

WORM DRIVE



Ninety-one Truck makers Use Worm Drive

From nothing to over 50% in three years

NOT only are worm gear driven trucks rapidly replacing all other types of drive in this country, but abroad, after many more years of usage than they have enjoyed in this country, the percentage increase is still in favor of the worm, and is growing. Even under war conditions, when the European countries were glad to get anything that rolled, the output of worm gears has maintained its dominant position.

It is interesting to note also that not only have the individual truck makers shown their preference for worm drive the world over, but the most prominent users of trucks have verified the judgment of the manufacturers. For instance, such traffic concerns as the London General Omnibus and the Fifth Avenue Coach Company, using thousands of trucks, are firm adherents to the worm drive.

In addition to this situation, two enormous orders were placed within the past few weeks from France, one for 2170 sets of worms and another for 3500—presumably for Governmental use.

We are also manufacturers of Multiple Spindle Drills, Radial Drills, Lassiter Stay Bolt and Bolt Turning Machines.

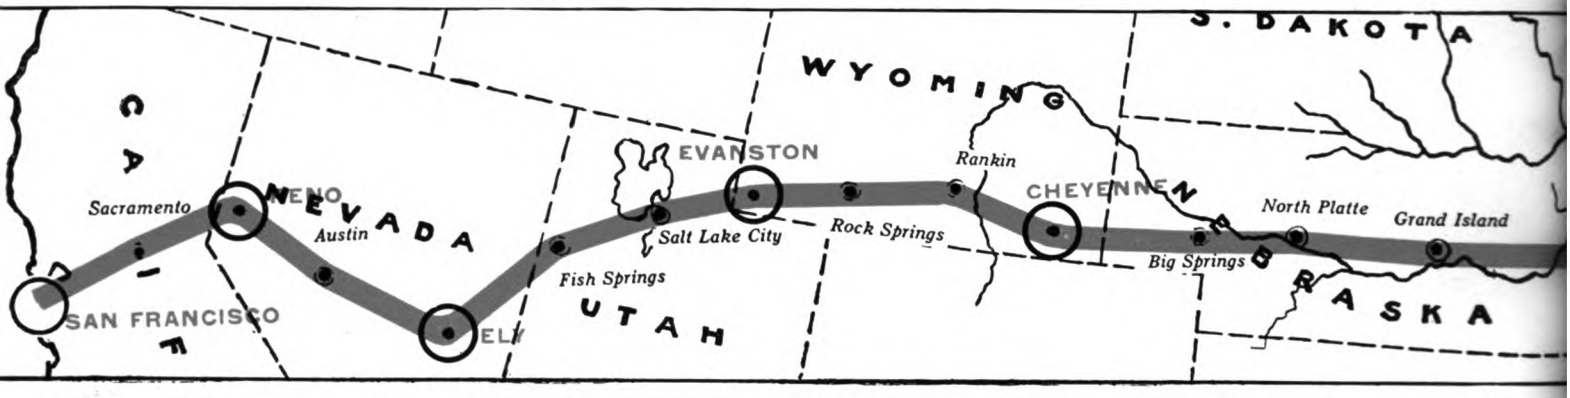
Across the Continent in 5 Days–18½ Hours

MARMON 34

Establishes a Transcontinental Record New York to San Francisco–3476 miles



S. B. STEVENS, a millionaire sportsman of Rome, New York, driving a Marmon 34, arrived at Third and Market Streets, San Francisco, at five o'clock, Saturday afternoon, July 29, just 5 days, 18½ hours after the car had left Columbus Circle, New York City, 3476 miles away.

This completed the most remarkable and fastest journey ever made across the United States in a motor car—the average rate of speed being almost equal to the schedule of the fast transcontinental railroad trains.

The car was a Marmon 34 touring car of regular production and was driven by Mr. Stevens and other amateurs under the auspices of the American Defense Society to demonstrate the possible speed and reliability of motor transportation across the continent. This epoch-making run by the Marmon 34 demonstrates again the soundness of its advanced scientific construction—the extensive use of aluminum, the deep section frame, the new rear spring suspension, the self-oiling chassis lubrication system and other features.

The Fastest Coast to Coast Jo

First Day

Start, New York 1:30 a. m. Monday, July 24. Syracuse, 10:30 a. m. Monday, 295 miles, average 34 m.p.h. Cleveland, 7:55 p.m. Monday, 647 miles, average 34 m.p.h.

THE start was made at 1:30 a. m., Monday, July 24, from Columbus Circle, New York City. Fred Barbour, of New York, drove the first leg of the trip. Two hundred and ninety-five miles from New York to Syracuse were covered in nine hours, the car arriving at 10:30 a. m.

Stevens took the wheel at Syracuse and drove to Cleveland, by way of Batavia, Buffalo, and Erie, arriving in Cleveland, 647 miles from New York, at 7:30 p. m. Monday night. There was some delay in Cleveland on account of the car getting caught in a parade and bad luck at railroad crossings. At one crossing the car was held twelve minutes.

Second Day

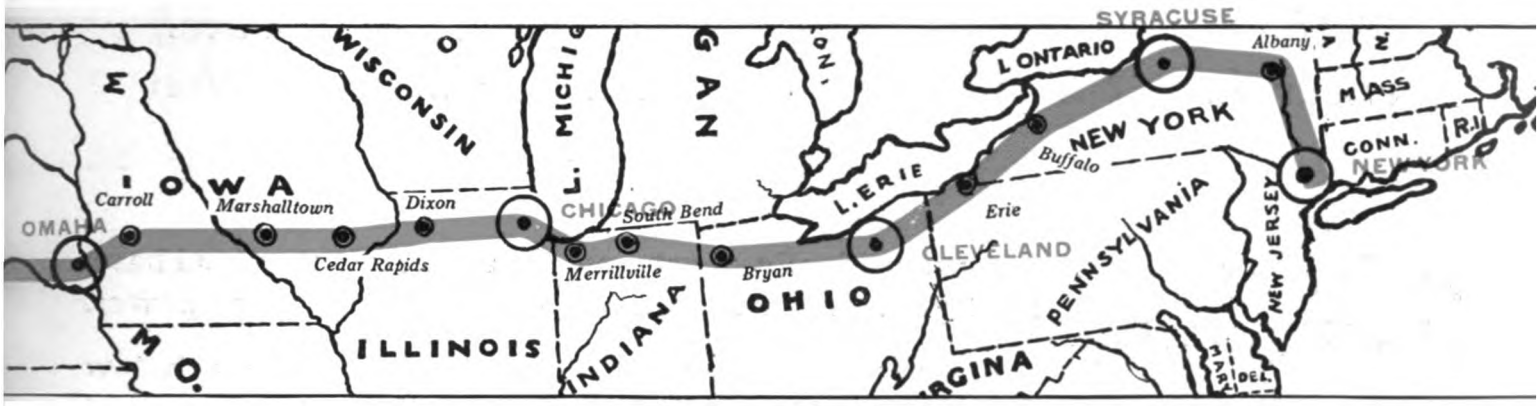
Merrillville, Ind. (near Chicago) 6:45 a. m. Tuesday, 977 miles, average 33.3 m.p.h. Cedar Rapids, 3:45 p. m. Tuesday, 1235 miles, average 33 m.p.h.

AT Cleveland, William Binz, of Chicago, took the wheel and drove during the night 330 miles to the next station which was Merrillville, Indiana, near Chicago. The time made on this stretch was limited to the time which could be made by Stevens in getting from Cleveland to Merrillville by train. The train stop near Merrillville is Gary, and it was impossible for Stevens to get to Gary until 6:45 a. m. Tuesday morning.

The Marmon car reached Merrillville exactly on time and after taking on supplies another car flashed over the hill, bearing Stevens, the driver, who was to take the car to Omaha. The car left the station as per schedule at 7:00 a. m. On this leg the car passed through Elyria, Norwalk, Fremont, Bryan, and South Bend.

Third Day

Omaha, 1:05 a.m. Wednesday, 1536 miles, average 33 m.p.h. Cheyenne, 4:50 p.m. Wednesday, 2113 miles, average 32.3 m.p.h.



UPON leaving Merrillville the car sped through Aurora, Dixon, Clinton, Cedar Rapids, Marshalltown, Ames, Grand Junction, and Carroll into Omaha, arriving on schedule at 1:05 a. m. Wednesday morning. At Omaha the car was turned over to Fred Barbour while Stevens took the train for Cheyenne, Wyo.

From Omaha the tourists dipped down to Kearney, going by way of Fremont, Columbus, and Grand Island. After leaving Kearney, they passed through North Platte, Big Springs, Sidney, Kimball, Pine Bluffs, Wyo., into Cheyenne, arriving there at 4:50 p. m. and stopping for thirty minutes. At Cheyenne they were about thirty minutes ahead of their schedule.

Marmon 34 starts from New York M

Digitized by Google

ney ever made in a Motor Car

STEVENS was driving from Cheyenne to Evanston, a distance of 407 miles. He encountered about 20 miles of muddy roads during the last hundred miles and arrived at Rawlings at 1:10 a. m. Between Cheyenne and Rawlings the car had to be driven up the long Sherman hill, reaching an approximate elevation of 8,000 feet and crossing the Great Continental Divide. At Evanston, Stevens wired:

"Delay on account of much rain. Roads muddy. Car in best of condition."

Heavy rains in Utah reported by Salt Lake papers as cloud-bursts, made the trip across Utah dangerous and slow. Walter Bieling drove the car from Evanston, to Ely, Nev., passing through Salt Lake City, County Well, Fish Springs, and over the Shelbourne Pass, crossing through the great American Desert, which was one of the worst parts of the trip. The heavy rains in Utah had put the roads in bad condition and caused numerous washouts. Three hours were lost west of Salt Lake City because the pilot became confused in the route through the desert.

Fourth Day

Evanston, Wyoming, 11:30 a.m. Thursday, 2529 miles, average 30.1 m.p.h.

AT Ely, the car was turned over to Robert Creighton, who drove to Reno. Here again road conditions were very bad. The trails over the Nevada desert were in terrible shape. The transcontinental car, however, was in fine condition. Creighton passed through Austin, Alpine Ranch, and Fallon. Aside from being delayed by the rough trails, a short circuit left him without lights. He located the trouble, however, and remedied it so that delay from this source was not considerable. Breaking through a bridge several miles out of Fallon caused a further delay of 3½ hours.

At Reno, Stevens was again waiting to take the car. He left Reno at 5:40 a. m., going by way of Truckee and Colfax, arriving at Sacramento at 12:22 Saturday afternoon, and thence to Vallejo, arriving at 3:10 p. m. Here a special boat was waiting to take the victorious car to San Francisco, and at 5 o'clock p. m. the car was officially checked at Third and Market Streets.

Fifth Day

Ely, Nevada, 7:55 a. m. Friday, 2890 miles, average 27.6 m.p.h. Reno, 5:31 a.m. Saturday, 3240 miles, average 25.7 m.p.h. Finish, San Francisco, 5 p. m. Saturday, 3476 miles, average 25.1 m.p.h.

[redacted], arrives San Francisco Saturd-

Digitized by Google

This is Final Proof

of the soundness of the advanced principles which enter into the Marmon 34 scientific construction

A few of the Principles

A scientifically constructed car of 136-inch wheel base, 1100 pounds lighter than cars of equal size and power.

A perfectly balanced car—easily handled—with low center of gravity and a minimum of unsprung weight which eliminates body sway at high speeds.

The new Marmon frame construction with side members 10 inches deep and steel running boards an integral part.

The cross cantilever rear spring construction which protects the car from road shocks and insures exceptional riding comfort.

The Marmon system of chassis self-lubrication, which eliminates all but four grease cups on the entire car.

A powerful, rapid accelerating, six-cylinder, overhead-valve motor, and many other advanced features.

TWO VITAL FACTORS

in making this record were Lynite Aluminum monoblock motor casting and Lynite Aluminum pistons.

LYNITE ALUMINUM

For 1917 This Remarkable Car Will Remain Unchanged

THE Marmon 34 will not be different in 1917—save perhaps a few refinements in minor detail such as are likely to be made at any time during a season's production.

This new car of scientific design, in which aluminum plays an important part, is still far ahead in its advanced and distinctive features. Hundreds of these cars, in regular service in the hands of private owners, have proven conclusively that the Marmon 34 has *more* than lived up to every claim that we have made for it.

Light, easy riding, powerful, and flexible, and finished in perfect taste, the Marmon 34 is without doubt the car of most advanced and practical design of the season.

stock touring car Model 34 equipped with Sheldon Springs at the start of the record-breaking transcontinental tour—New York to San Francisco.

Digitized by Google

Perfect Spring Performance

Stock Sheldon Springs equipped the Marmon 34 which established a new Transcontinental record Saturday, July 29—when the Marmon 34 completed the trip from New York to San Francisco, 3406 miles, in 5 days, 18 hours and 30 minutes.

That this Marmon car should complete this gruelling test without the slightest attention being paid to the Sheldon Springs, and without any spring trouble whatsoever, is no surprise to the makers of Sheldon Springs, for Sheldon Springs are made to perform just this way all the time.

And yet we submit that to drive this distance continuously over the roads encountered and at so high a speed average is surely an unusual tribute to the quality and character of Sheldon Springs.

In 1907, that great old Panic year, I called on Mr. Howard Marmon, showed him some fractures of NON-GRAN Bronze (it's only by looking into the inside of a piece of bronze that you can tell anything about it) and told Mr. Marmon what my company was going to do to maintain the uniformity of that wonderful knit structure—that remarkable molecular cohesion.

Before I had returned to Berwyn, Mr. Marmon's order had arrived calling for 26 piston pin bushing castings. He wanted to see, for himself, just what this remarkable molecular cohesion would accomplish. A year's test was enough. Orders then arrived for the Marmon Company's complete piston pin bushing equipment. Then a test of NON-GRAN for some other part—then another and another, all through the car.

This picture of the freight car shown below, taken last month, nine years after my first meeting with Mr. Marmon, will tell whether or not my company has made good its promise to maintain uniformity in this wear-resisting, cohesive, molecular structure of NON-GRAN.

HIGH SPEED
NON-GRAN
BEARING BRONZE

Good design and good workmanship make a car a good performer. Back these qualities with NON-GRAN in the vital wear-subjected parts and a car also becomes a **permanently** good performer.

Another World's Record On SILVERTOWNS!

New York to San Francisco in 5 days, 18 hours and 30 minutes! Breaking every transcontinental auto record—and bringing San Francisco TWO WHOLE DAYS nearer the Eastern Coast.

That's the record Goodrich SILVERTOWN Cord Tires made on the sensational Marmon run—held under the auspieces of the American Defense Society and with Gen. Wood's sanction—to show Americans the possibility of transcontinental mobilization independent of railroads.

They left New York City July 24th and officially checked in at San Francisco July 29th.

Mr. S. V. Stevens, who drove, has the warmest of praise for the wonderful performance of Silvertowns on this gruelling test. He says: "I have toured across the Continent probably more times at good speed than any amateur driver. Since 1900 I have used all standard makes of tires, but none can hold a candle to your Silvertown Cable Cords. They are the most resilient, fastest and strongest in the world."

This is the tire, remember, that holds all world's records for Speed and Endurance—that has won every important auto race since 1914!

Follow the example of the big drivers, the big engineers and the men who KNOW Tires—

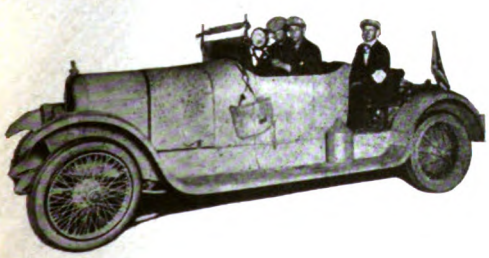
Stromberg Equipped Marmon Breaks Coast to Coast Record

by 2 Days!

A stupendous feat!—indisputable proof of the wonderful serviceability of the New Stromberg Carburetor!

S. B. Stevens, millionaire motor enthusiast of Rome, N. Y., and Chairman of the American Defense Society, with his Stromberg-equipped Marmon 34, broke the coast to coast record by two days.



It required just 5 days, 18 hrs., 30 minutes, from New York City to San Francisco—a distance of 3,476 miles.

3,476 miles of constant grind across the continent—through sand and mud, across creeks and over rutty mountain roads—with the thermometer always around the boiling point of 100 degrees.

That's the kind of test which shows **again** the remarkable serviceability and reliability of the New Stromberg Carburetor.

Hundreds of thousands of car owners are getting maximum economy, speed, power, acceleration and service from the New Stromberg Carburetor.

We want to show you how the New Stromberg will make **yours** a better car. Write today! State name, model and year of your car.

"New Tops for Old"

THOUSANDS of automobile owners all over the country who are using Johnson's Prepared Wax and Johnson's Cleaner with such wonderful results will want to use our new product—

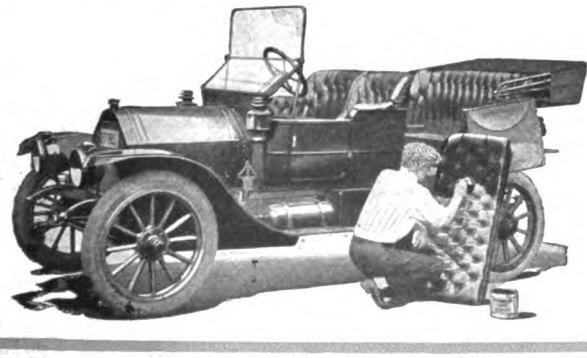
JOHNSON'S BLACK-LAC

It is unequalled for touching up **leather cushions—side curtains—tire covers—auto trunks—pantasote and mohair tops and linings.** One coat of Johnson's Black-Lac gives a rich, black surface just like new. It is easy to apply—dries in fifteen minutes—does not rub off on the hands or clothing—is permanent—water-proof and inexpensive.

It is splendid for blackening **fenders—rims—running boards—hoods—radiators—guards—lamps**—and in fact all worn metal parts. Prevents rust and keeps your car in a high state of repair.

Nationally Advertised

Our advertising campaign on **Johnson's Black-Lac** has already started. We will use half-pages in Saturday Evening Post—also large space in practically every motor paper. There is bound to be a large demand and we hope you will stock immediately. Automobile owners who have been in the habit of purchasing **Johnson's Cleaner** and **Johnson's Prepared Wax** from you will naturally turn to you for this new product.



It is no longer necessary to stock three or four different articles for dressing up automobiles. Johnson's Black-Lac is six products in one:

1—It is a mohair top dressing. 4—It is a cushion dressing.
2—It is a leather top dressing. 5—It is a metal enamel.
3—It is a lining dye. 6—It is a rim paint.

Johnson's Black-Lac is put up and listed as follows:

Quarts	**$ 1.10**	**Half-pints**	**$ .40**
Pints	**.65**	**Also in gallons for large users.**	

Liberal dealers' discount. Mail coupon for further information.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

The Mitchell Creed

We believe that the light Six, with small bore and long stroke, is the ultimate type of motor.

This we say after building all types, from Ones to Eights, and for 13 years.

We believe that this type must be so built as to give maximum economy.

That is why we use drilled pistons, why we conserve the heat, and why we use an extra-cost carburetor. The result is from 16 to 21 miles per gallon with a big, powerful car.

We believe in factory efficiency, which means production of a fine car at the lowest cost.

That is why we brought John W. Bate to this plant—the great efficiency engineer. We gave him free hand. He has built and equipped here the model automobile plant.

He has cut our factory costs in two. He is producing the Mitchell car for one-fifth less than any other plant could do it. He is building 98 per cent of the car in this plant. Even the bodies are built here.

We believe in lifetime cars.

John W. Bate has worked to that end for years. He has made in the Mitchell 700 improvements. He has perfected it part by part. Castings have been almost displaced in it. Now 440 parts are drop-forged or steel stamped.

He uses a wealth of Chrome-Vanadium steel. His margins of safety are at least 50 per cent. Mitchell cars in the building get hundreds of tests and inspections.

One Mitchell car has run 218,734 miles. Six have averaged 164,372 miles each, or over 30 years of ordinary service.

We stand for complete cars.

In the Mitchell we include 26 extra features, most of which all other cars omit.

We stand for up-to-dateness.

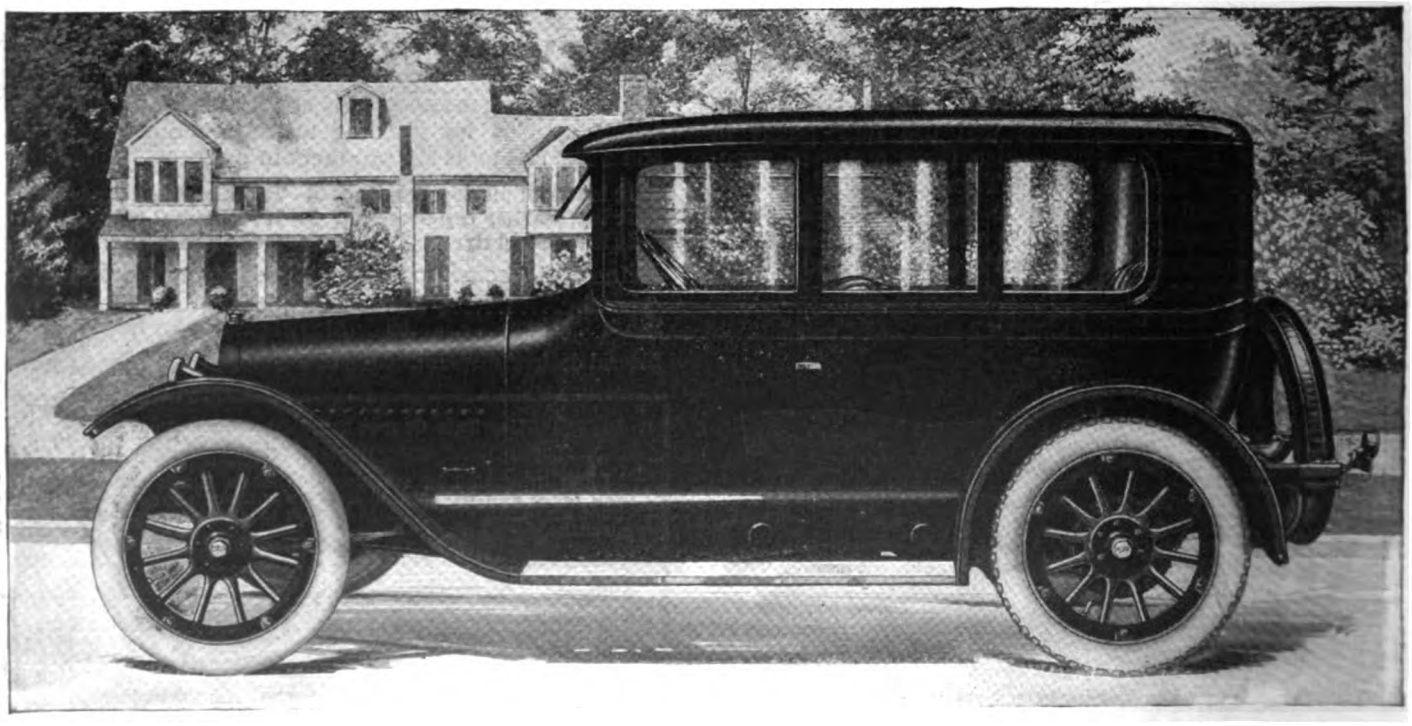
The Mid-Year Mitchell—our second this-year model—brought out 73 new conceptions. And more have been added since. Our experts examined 257 new models before completing this one.

We believe in attractions.

It is little things which often decide the car. So we include every beauty, comfort and luxury we know.

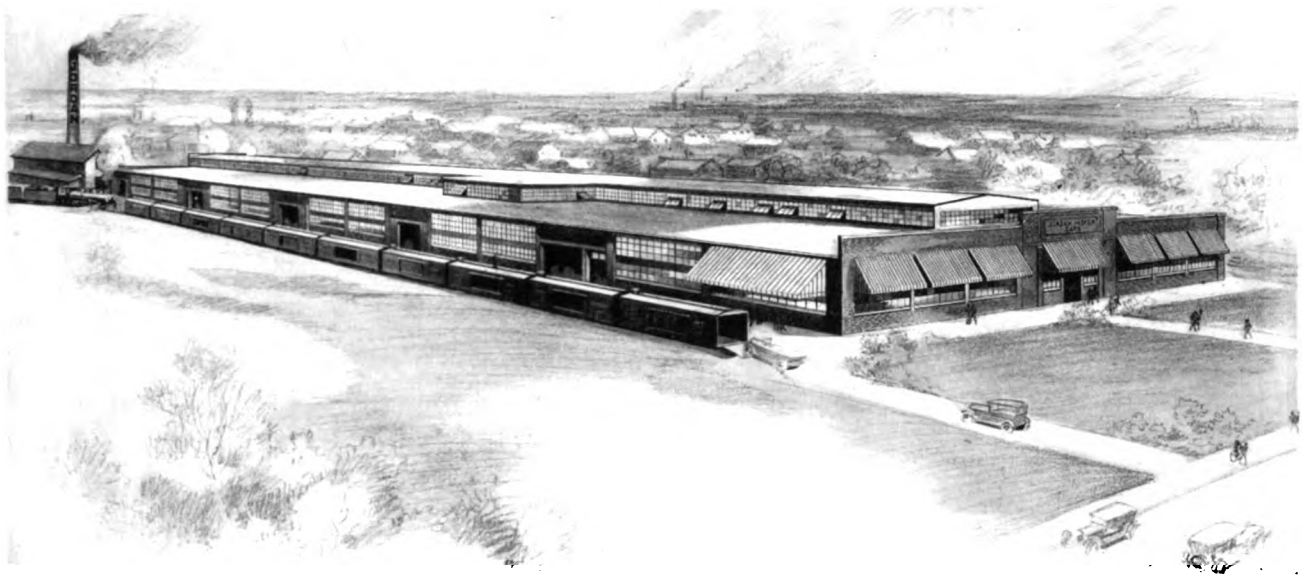
We use shock-absorbing springs. We add a power tire pump. We put a light in the tonneau, a locked compartment in front. An engine primer at the driver's hand. We use a 22-coat finish, deep springs, French-finished leather—all the outer things that count.

We believe in advertising.



This season alone we spend on the Mitchell $500,000. We are letting men know where the Mitchell excels. We are creating respect for the car and our methods. We are bringing buyers by the thousands, half-converted to the car.

There are still many sections where we are looking for dealers who believe in the Mitchell creed.



$1325 F. o. b. Racine
For 5-Passenger Touring Car or 3-Passenger Roadster
7-Passenger Touring Body, $35 Extra

High-speed economical Six—48 horsepower—127-inch wheelbase. Complete equipment, including 26 extra features. Also five types of closed bodies.

Gentlemen:

In view of the conditions existing at the present time in the material market, we feel that it would be wholly advisable to warn our good friends, the Automobile Dealers and Repairmen, against the purchase of the so-called "cheaper" brake linings.

Crude Asbestos has more than doubled in price. Brass Wire has advanced over 300%, and the chemicals used in the manufacture of Brake Lining have advanced accordingly. Taken altogether it is absolutely necessary to increase the price of the finished brake lining if the usual quality is to be maintained.

Copy Dept. Run this! Strong ad as it is! J.H.T.

However, this necessity has been partially avoided by some manufacturers through the use of flimsy construction and the substitution of copper wire in place of brass wire. This combination makes a very inferior Brake Lining which cannot be depended on.

As one of the largest Asbestos Textile Manufacturers in the world, it stands to reason that we can manufacture brake lining as cheaply as anyone. GARCO Asbestos Brake Lining is selling for a higher price than heretofore because its quality has been maintained, and the fact that any Brake Lining sells for less is proof positive that quality has been sacrificed in its manufacture.

Kindly use this information as you think best in the preparation of an advertisement to our customers and the trade in general.

Yours very truly,

GENERAL ASBESTOS & RUBBER CO.

99 Per Cent Efficient, Say 11,000 Owners

Motor	*99.9%*	*Electrical System*	*99.5%*
Transmission	*97. %*	*Rear Axle*	*99.7%*
Clutch	*98. %*	*Frame*	*100. %*

YOU'VE heard, time and again, what a wonderful hold the Hupmobile has on its owners. Eleven thousand of them now tell you why. The net result is a tribute such as no car has ever had.

Classified and tabulated, these thousands of opinions result in a rating of 99 per cent for Hupmobile efficiency.

Until we cast up the result we did not know what a gold mine of good opinions we had uncovered.

A Gold Mine of Good Opinions

We have encouraged the owners of the present model Hupmobile—11,000 out of our total ownership—to register their criticisms, complaints and comments.

The engineering department especially sought evidence covering every unit in the car. They wanted to know any and all troubles the owner might have had.

Owners' estimates varied, of course. Some had had minor troubles in one part of the car, some in another. But the net result, out of the 11,000, was an overwhelming vote of complete satisfaction. It figured down to an exact 99 per cent of efficiency.

We never expect to come closer to the goal. No human effort can. We don't think any car other than the Hupmobile ever attained this high peak of popular approval.

Doesn't this explain why better than 50 per cent of all Hupmobile owners buy the Hupmobile year after year?

Isn't it plain why the Hupmobile public has not been won away by multi-cylinder promises?

Performance Is the Answer

Performance, of course, is the one and only answer.

In high gear work, for instance, these 11,000 owners know that the Hupmobile daily duplicates—if it doesn't actually outdo—cars that have more cylinders, or cost more money.

In pulling power, and quick getaway, they see nothing under another name that they do not have.

In flexibility, they find themselves relieved of gear-shifting to an amazing extent.

The Broadest Service System

In the Hupmobile service system, they know they are getting more than any other car offers: expert inspection, adjustment and care each month for eight months by trained Hupmobile experts at Hupmobile service stations, paid for with coupons supplied *free of cost.*

Do you wonder, then, that 11,000 owners vote the Hupmobile 99 per cent efficient? Do you wonder that Hupmobile dealers are breaking previous sales records in spite of what you might be pleased to term multi-cylinder competition?

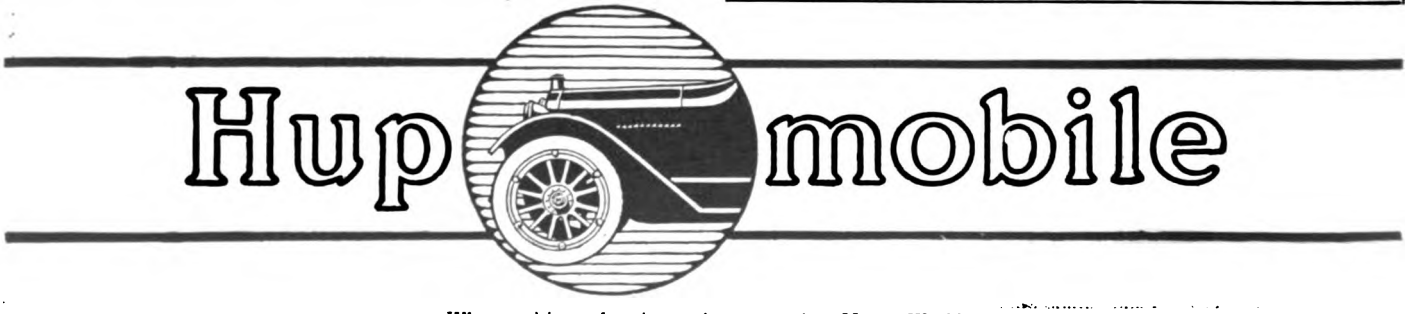
Don't these facts make you want to know whether your territory is open?

Hupp Motor Car Corporation
DETROIT, MICH.

The Mark of Superior H *Motor Car Service*

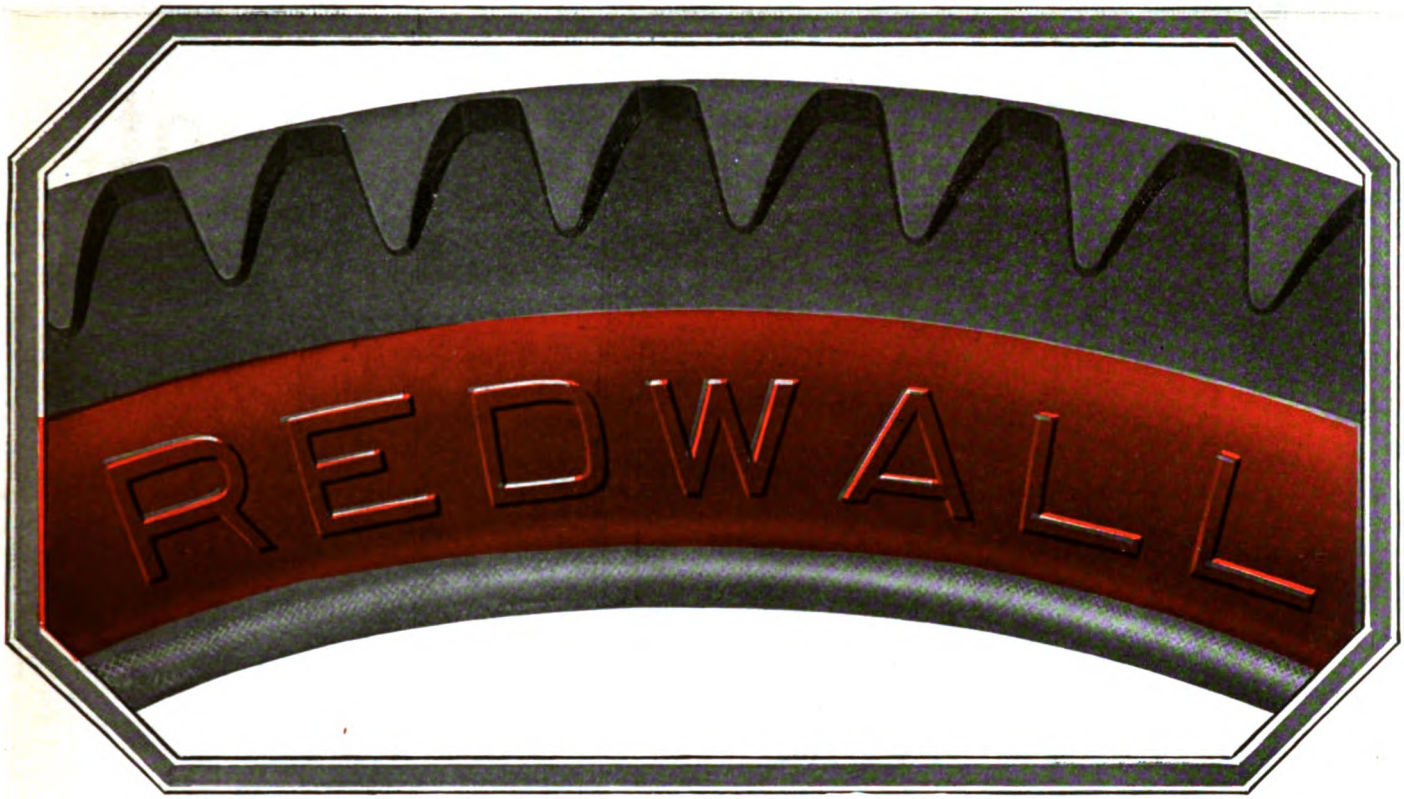
Five Hupmobile Points to Remember

PERFORMANCE—A high-gear performer in the usual low-gear situations.



COUPON SERVICE—Regularly each month for eight months, free labor, inspections and adjustments at more than 5000 authorized Hupmobile service stations in the United States and Canada.

ECONOMY—In line with the well-known Hupmobile repair cost record of ¼ cent per mile. This is real economy—maintenance economy. Car is easy on tires, fuel and oil.



EFFICIENCY — Eleven thousand owners report the Hupmobile 99 per cent efficient.

REPEAT SALES—Fifty and eight-tenths per cent of the Hupmobile output is sold to Hupmobile owners, because they are completely satisfied with Hupmobile Performance, Service, Economy and Efficiency.

5-Pass. Touring Car $1185 Roadster $1185 7-Pass. Touring Car $1340

Speedway Type TIRES

"Speedway" Tires deliver more than average mileage and successfully withstand more than average punishment *simply because they are well made of excellent materials.*

To be sure there are other tires equally well made, but there the comparison ends for such tires invariably sell for a higher price than *"Speedways."*

This is a strong statement to make. It is paramount to claiming that National REDWALL "Speedway" Tires, in spite of their price, are similar in quality and performance to tires selling for a much higher list.

Yet facts speak for themselves. Performance convincingly bears out the truth of this statement.

At no time since the introduction of this tire have we been able to supply the demand for it.

For it has all the qualifications necessary to meet the demand for tire luxury at a popular price.

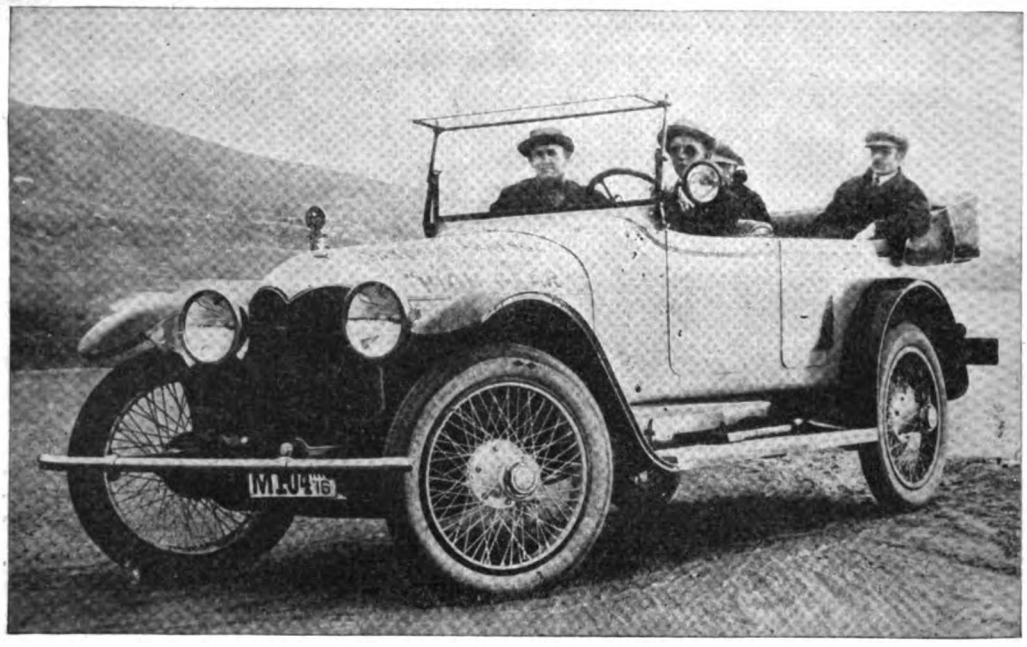
It is rich and distinctive in appearance. It outstrips other tires in mileage and all round satisfaction.

It has a new type of *smooth riding* non-skid. This one feature alone is sufficient to distinguish it from all other tires selling at anywhere near the price.

For this new type of *smooth riding* non-skid has many advantages. It is extra thick, like an added or double tread. There are no lumps, nor knobs nor depressions. Inside fabric wear, such as develops in most non-skids, is impossible because of the continuous unbroken contact of the tread with the road. In this tire the tread is not its own worst enemy. It increases, rather than decreases, the natural life of the tire.

Yet these are merely extra features, to insure extra satisfaction. We repeat, the big important reason why SPEEDWAY Tires are good is *because "they are made well of excellent materials."*

TO DEALERS



By early Fall our present capacity will be greatly increased. The big addition which we are building to our factory is all but completed and ready for operation. We will soon be in a position to handle additional quantity orders.
In the meantime, we would urge dealers and jobbers who have commenced to consider their next season's requirements to test out now a few of these tires in actual service.

Dealers and Jobbers who are looking for a high quality tire to sell at a popular price, on an exclusive territorial basis, to be backed by a generous national advertising campaign, should investigate our proposition at once.

More complete details will be forwarded upon application.

"The Light That Failed"

Many dealers and garage owners throughout the United States have suffered defeat in business, because they did not adopt some adequate accounting system to direct them into profitable channels, and take them from the broad and too easily traveled path of loss—at the end of which was failure.

How much did you make in June?

Maybe you think so—but do you know?

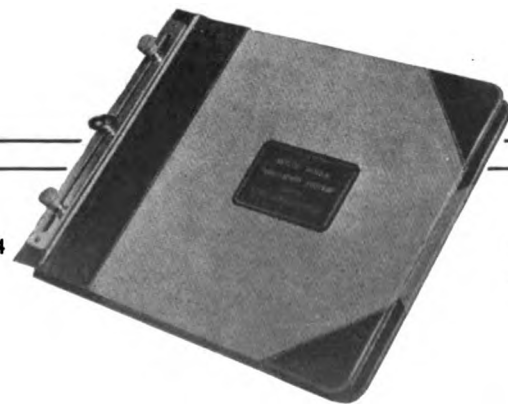
How much will you make in 1916?

Does your repairshop gain or lose?

How much do you make when you charge a customer for an hour of labor?

How do your May and June collections compare?

If you don't know these things you are not on the road to business success. You should have an accurate and timely record of all parts of your business. You should have a simplified and easy to operate accounting system that will light up the dark corners of your business—that will make your business road safe to travel.



Motor World has devised such a system. It costs $12 complete. Everything in one book. We advise you to get SOME kind, whether it is Motor World's or some other. But if you want this one (which is designed by experts who have made a careful study of the various problems of YOUR business) send $12—check or money order—and plan to get started on the right track August 1st.

Booklet with a complete illustrated description of the system (price $1.00) will be sent complimentary with each system. Send your order at once. Address:

The Motor World Publishing Co.

System Department

239 West 39th Street New York City

This is the only book required—size 11 x 14 inches—canvas, leather corners.

Includes 100 income sheets—100 expense sheets—500 customers' sheets.

JOHNS-MANVILLE SERVICE
COVERS THE CONTINENT

When the Horse Came Before the Car

"In the hard-to-remember days," when we paid good money to bump along in the two-horse car with its long-levered, round-house brake that served to stop the car—

Even then Johns-Manville made Asbestos Brake Lining.

For years J-M Asbestos Brake Lining has played an important role in the industrial field, and today it is known as the most efficient material for use on giant cranes, mine elevators, derricks—uses that prove its fitness for motor vehicle service where wear and safety are paramount.

You run no risk as a dealer when you recommend J-M Asbestos Brake Lining as safest and most serviceable. The letters "J-M" on a strip of automobile brake lining are an assurance of satisfaction—a worth-while asset to every dealer.

Our proposition offers unusual possibilities for jobber and dealer profit. Full details may be obtained from our nearest branch.

U. S.

BALL BEARINGS

Where the Quality is Built Into U. S. Ball Bearings

It is in the grinding operation that real quality is built into any ball bearing.

No matter how fine the design—no matter how high quality the materials used—unless the grinding operation be microscopically accurate, the finished bearing is but a makeshift,

So far as we are able to ascertain, there isn't a grinding department extant that is the superior of that in the U. S. Ball Bearing factory—illustrated herewith—and there are few equals.

The inherent superiority of U. S. Ball Bearing grinding machines lies in the fact that they are specially designed to do ball bearing grinding. Extra heavy and massive, they practically eliminate vibration and in this way provide the smoothest possible finish combined with microscopic accuracy—accuracy held within limits of one-ten-thousandth of an inch.

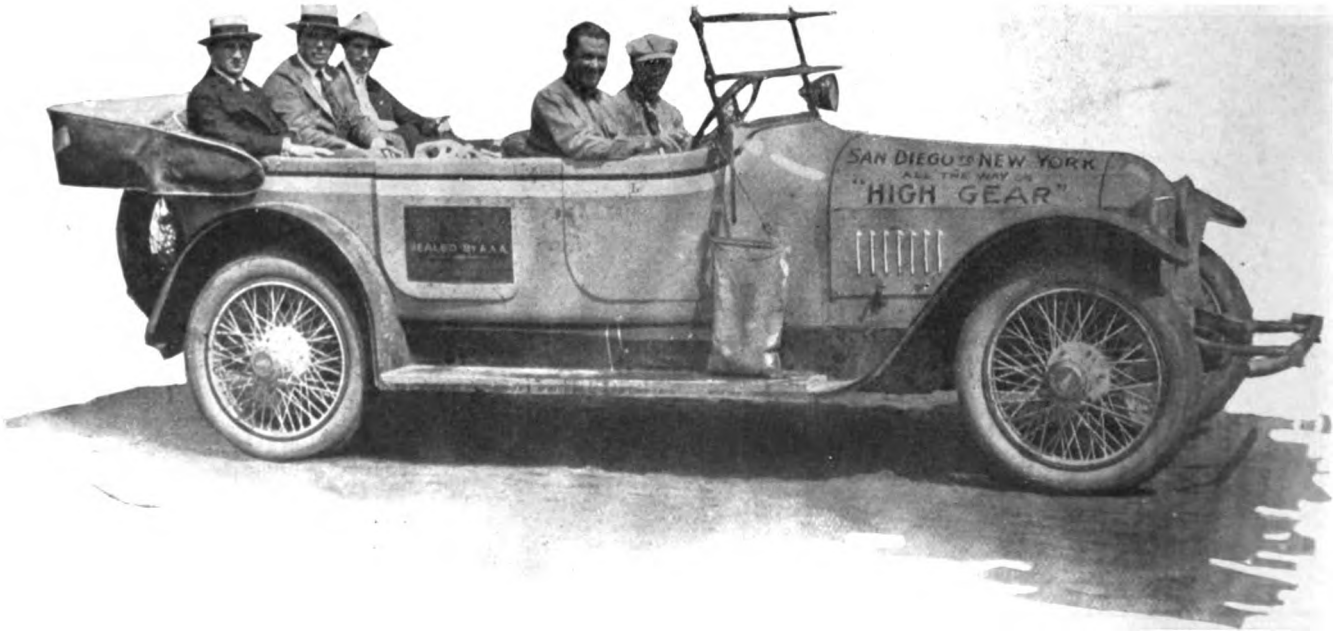
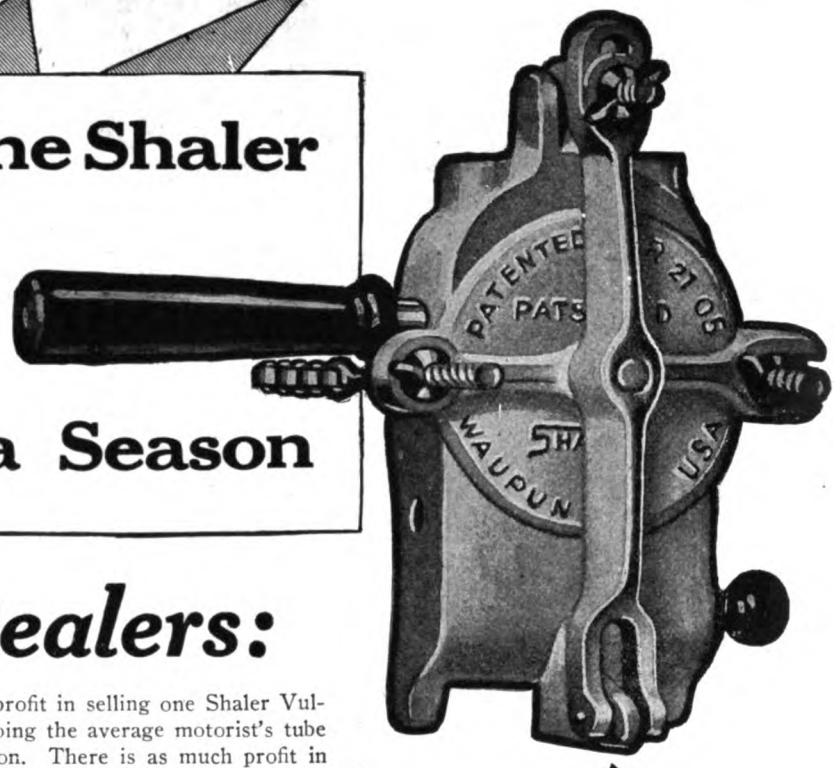
FEDDERS RADIATORS



Fedders Radiators are stock equipment on Pathfinder cars.

Fedders Radiators, as usual, performed perfectly on the Pathfinder 12 which recently made the Ocean to Ocean high gear trip with transmission sealed. The trip was made without leaks or radiator troubles of any sort, and from start to finish only 24 gallons of water were used, regardless of the fact that the thermometer registered from 100 to 106 a great part of the time.

This performance again substantiates our former claims that Fedders quality compels efficient performance, regardless of running conditions.



Not only do Fedders Radiators dominate both the pleasure car and truck field where quality is considered, but with this recent Pathfinder performance they have added a wonderful road performance to their long list of road and track racing victories.

The Sale of One Shaler Brings More Profit Than The Tube Repairs for a Season

Dealers:

There is more profit in selling one Shaler Vulcanizer than in doing the average motorist's tube repairing all season. There is as much profit in repair rubber as in the patches and gums the dealer is selling. Some dealers have the mistaken idea that selling small vulcanizers competes with the tube patches and gums that are being sold, but it brings more profit, so the dealer is ahead in the end. Dealers who have sold dozens of small vulcanizers say that they can't see any effect on their repair business.

SHALER Vulcanizer

They can be carried with the car for making emergency and permanent tube repairs. Besides they mend small casing cuts, which, if neglected, would let in dirt and water to rot the fabric and cause blowouts. You can boost your reputation for selling good tires with every customer who cares for his tires with a Shaler. Every Shaler you sell helps you sell more because the motorist praises his success to his friends.

Shaler Vulcanizers retail from $2.00 up. There are models for every need heated by gasoline, alcohol, steam or electricity. We also make vulcanizing plants for repair shop use.

Non-Combustible Non-Inflammable Polishes an Entire Car in 15 Minutes for 5c.

ROYAL MIST

Is Ready for the Dealers

More than a year ago—before ROYAL MIST ever polished the body of an automobile—we made an investigation. We made the rounds of some of the largest supply houses and dealers and we asked: "What kind of body polish do car owners ask for?"

And every dealer told us: **"The kind that sprays."** That's why we put together the ingredients we had already prepared for our new polish into the kind that sprays. **It's the easiest for dealers to sell.**

Liberal Discounts on the Kind of Polish Motorists Call For

ROYAL MIST gives the best, most permanent polish you can get on a motor car, **even if the body is damp when applied,** because it replaces the elements of the varnish that are dried up and removed by atmospheric conditions. Not a veneer you put **on** the car, but a varnish food that becomes **part of the finish,** and stays there.
Requires no hard rubbing. Sprays on from Midget Sprayer, furnished free. Cannot injure the finish of the finest car. Gives a high polish that **does not collect dust, is easily applied and economical.** Always in solution. No shaking necessary.

ROYAL MIST was not the first polish on the market—but neither was the "12" the first motor. ROYAL MIST has profited by the faults of others. It is **ready to put over sales for you.**

Mail the coupon now for free information, details, and discounts.

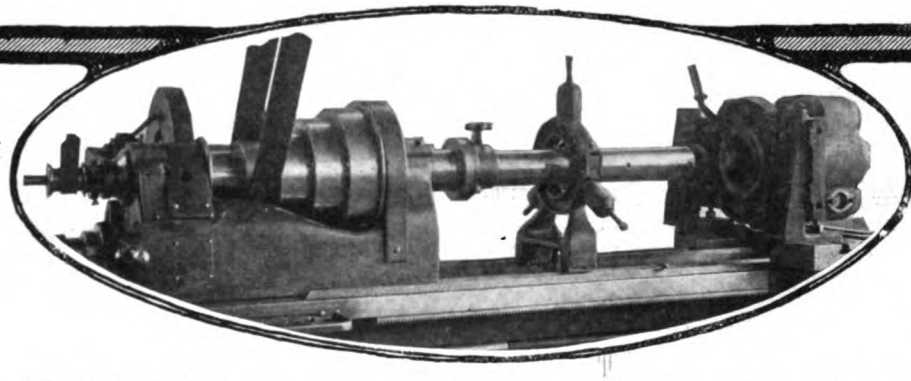
84,628,590 Sparks Without a Miss!

This is the remarkable achievement of

HERZ PLUGS

"Bougie Mercedes"

The Pathfinder Twelve stock touring Car which recently completed the remarkable Coast to Coast High Gear Run, from San Diego to New York, used HERZ "Bougie Mercedes" PLUGS. This statement sums up their performance:



"This car was equipped with Bougie Mercedes Plugs and I am pleased to say that the motor fired perfectly, and we made no adjustment on any of the Spark Plugs on the entire trip. At the conclusion of the trip, the Spark Plugs were in perfect condition."

(Signed) WALTER A. WEIDELY.

These were stock plugs. You can have their duplicates in your own motor. It's the Clover Leaf Electrode that accounts for the sure sparking of HERZ PLUGS, the Unbreakable Double Stone Insulation that accounts for their durability. Put them in your motor; then forget spark plug troubles. Your dealer or

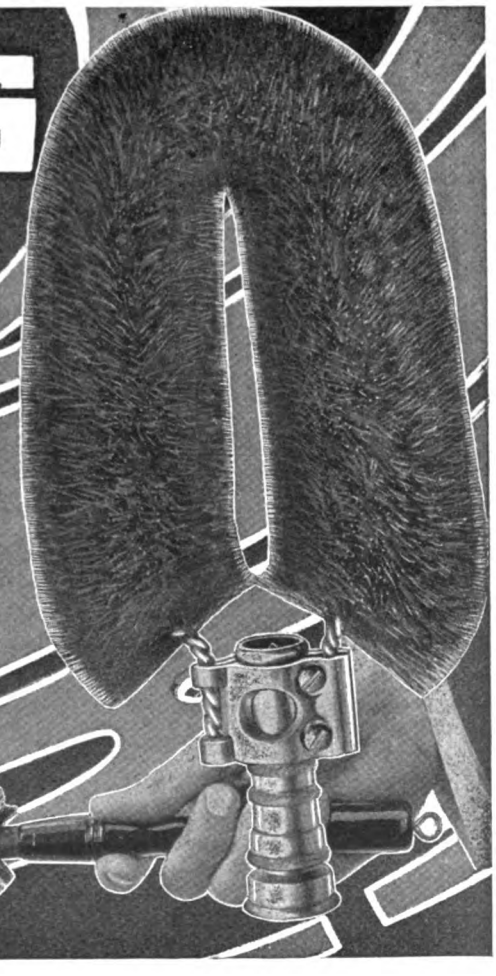
Your Ford Will Take This Road as smoothly as a big car if equipped with W & C Double Arm Shock Absorbers for Fords

W & C Shock Absorbers on your Ford car ease the short choppy jolts from a road full of holes into even swells without noticeable beginning or end. Absolutely free from the snap, jar and recoil of old-time springs and shock absorbers. Built on the accepted principle of **cantilever spring suspension,** in use on easiest-riding high-priced cars.



Sold on 10-days' Trial

W & C is the original double arm shock absorber—in use by more than 25,000 satisfied Ford owners. Not extra equipment to hinder the springs or throw the car off balance, but a **built-in Easy Rider** that makes car and tires last longer, and minimizes mechanical troubles. Price $10 per set of 4. Less expensive than others, due to greater output. Order through you dealer, or direct.

Selling W & C Shock Absorbers is profitable and easy for dealers. Write or wire for special proposition.

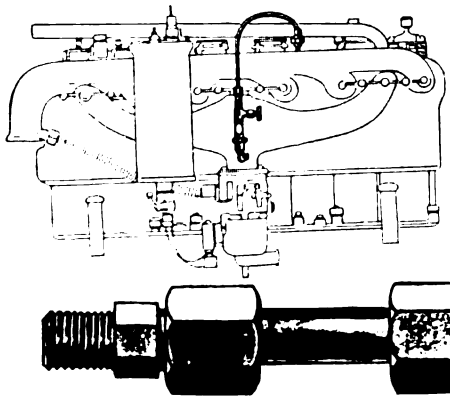
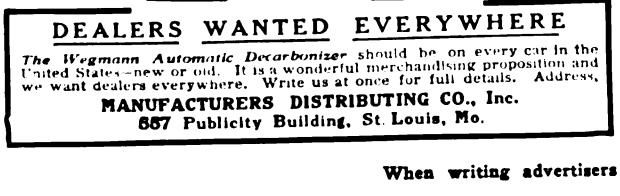
Keeps your Motor free from Carbon

THE Wegmann Automatic Decarbonizer will remove every trace of carbon from your motor, no matter how choked up it may be, and absolutely prevent any further carbon from accumulating. It is an automatic device, attached to intake manifold and to water supply pipe or water jacket, which injects a fine spray of steam into combustion chambers with mixture from carburetor. This principle of steam scavenging is well known and is used in all Diesel and Semi-Diesel type motors. Its application to the automobile motor is now made possible by this ingenious, automatic device. The



WEGMANN AUTOMATIC DECARBONIZER



not only acts as a permanent carbon remover and preventor, but causes a more perfect combustion, which adds 10% to 20% more power, and cuts down the gasoline and lubricating oil consumption. It is easily attached, simply adjusted by needle-valve and fed by automatic ball check-valve which *closes when motor stops and opens in relation to speed of motor.* Instrument is made of polished brass, with two-piece strainer, glass sight-feed, needle-valve, automatic ball check-valve and leak-proof compression couplings.

PRICE, complete, ready to install, $5
(GUARANTEED FOR LIFE)

Special Introductory Offer:
The Wegmann Automatic Decarbonizer is really a self-demonstrator, and in order to create a quick demand we will, for a short time, accept a limited number of mail orders direct from car owners, at the above price, postpaid, with the understanding that if Decarbonizer is not satisfactory after 30 days actual trial it may be returned and money will be refunded.

Manufacturers Distributing Co., Inc.
557 Publicity Building, ST. LOUIS, MO.

DEALERS WANTED EVERYWHERE

The Wegmann Automatic Decarbonizer should be on every car in the United States—new or old. It is a wonderful merchandising proposition and we want dealers everywhere. Write us at once for full details. Address,

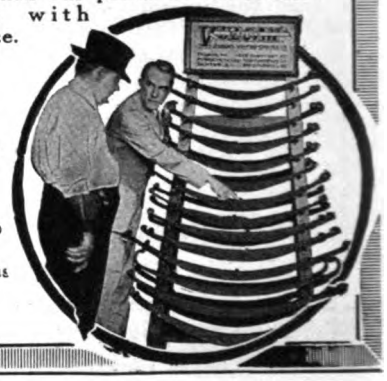
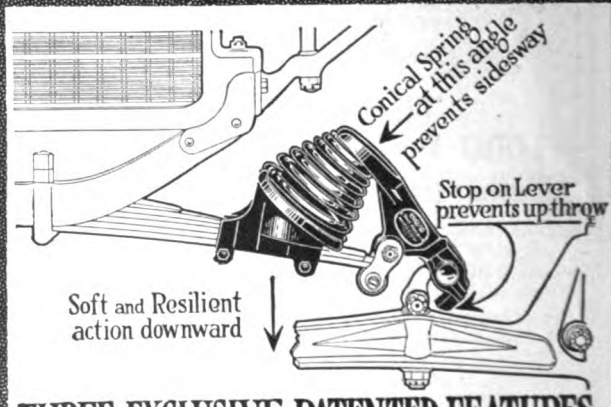
Quality, Service, Price



—are the distinguishing features of our methods, as well as our output.
Dealers make satisfied customers and steady profits by handling VULCAN SPRINGS.
Years of steady, unremitting effort have concentrated in

VULCAN QUALITY



SPRINGS a Quality of material and workmanship seldom equalled.
Our recognition of the value of complete stocks, prompt deliveries and courteous treatment, has led to the development of a constant, unerring Service.
Our determination to divide fairly with dealer and consumer alike has fixed our prices at the lowest level commensurate with good business practice.

Write us today for liberal proposition in territory still open.

HIGH CONDUCTIVITY BRUSHES

SPEER Composition-Metallic Brushes have compelled recognition of a carrying capacity far above the limits of carbons and graphites with the minimum of brush and commutator wear.

Our grades KKK and KKKK have a range between 6 and 40 volts and are capable of 110 and 150 amperes respectively per square inch.

Grade Metal B is composed almost wholly of metal and represents the highest attainment in the production of a composition-metallic brush. This brush stands alone in the sphere of electric starters and is capable of current densities as high as 200 amperes on continuous load and will take care of 100 per cent overloads on intermittent service.

These brushes are a necessary factor in obtaining the highest efficiency in generators and motors for high speeds and high current densities.

Speer Carbon Co.
St. Marys, Pa.

AKRON-WILLIAMS

Tire Repair Equipment

Developed by the Leading Tire Companies

EACH and every piece of Akron-Williams Tire Repair Equipment has been designed and brought to perfection with the active aid and co-operation of experts employed by the Akron Tire Factories—the largest in the world. These engineers work side by side with us to develop the most efficient Tire Repair Outfits, firstly, to use in their own factories and, secondly, to sell and recommend to their dealers and agents throughout the country.

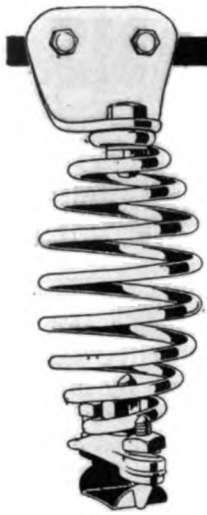
As a result, Akron-Williams Tire Repair Equipment is always the latest and most improved. The Repair Outfit we offer you is the same in every way as used, sold and recommended by more than 60 leading Tire Manufacturers.

An Akron-Williams Tire Repair Outfit is built to turn out a large quantity of high-grade work. There's a big profit for you on every job and the cheerful recommendation of your customers is bound to boom your business from the start.

Get Into the Tire Repair Business

Over three million cars will be in use this year; one hundred million dollars is a conservative estimate of the sum that owners will pay for tire repairs. Tire Repairing is your best chance for big money, either as a separate business or as a department of a garage. Your success depends absolutely on the equipment you choose.

Grasp this opportunity NOW. Write us for copy of free Booklet 45 telling of possibilities in Tire Repairing for the man with small capital.



"Everything for the Tire Repair Man"

Just out—our new catalog illustrating full and complete line of tire repair machinery, equipment, tools, etc., for every size shop. Brimful of new time and labor-saving devices. Write for it today.

MANLEY "QUICK ACTION" PORTABLE BENCH

Are you moving the big car to your work-bench or are you moving the light, portable Manley bench to your car?

By using this "Quick Action" bench you can finish a job in the time it takes to move the car.

This bench is specially made to hold exactly the tools needed. Wheels can be locked, making bench immovable when using vise. It is just the right size to slip between cars and get anywhere in the place easily, quickly and conveniently. It is invaluable when tearing down a car, to keep all parts together.

A glance at this illustration tells you where the right tools are kept, convenient to the hand at all times.

A convenience no garage should be without, it is sold at a price to justify its purchase for any shop.

Top 13 x 44 inches. Height, 33 inches.
Bottom Width 22 inches.
Price, $27.50; with vise, $31.50

FREE

A handsome spark plug case and a spark plug wrench . . Free

With four spark plugs that will outlast your engine . . $4

Mail us a $4 check or money order for four Splitdorf Spark Plugs (the plug with the Green Hex Jacket). We will forward you the plugs, carriage prepaid, and with them we will send you, free, a highly polished spark plug case and a spark plug wrench, complete with detachable handle. The case is handsomely finished, and fitted with recesses for four plugs. Keeps your "extras" handy and compact. The wrench is one of the most convenient tools you can have.

These plugs are practically indestructible. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motor cycle, motor truck, motor boat, aeroplane, tractor and stationary gasoline engine.

When ordering, be sure to state size desired or name of engine.

SPLITDORF ELECTRICAL CO., Newark, N.J.

REPAIRMEN

What Is Your Answer to This Statement?

My motor uses too much oil and gasolene, the plugs foul, valves require grinding frequently, has excessive carbon, lacks power and life.

STEVENS NEW YORK

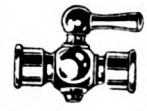
Fittings

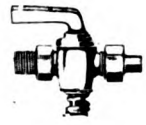
For those who prefer "Quality First" in material and workmanship.

Priming Cups

All brass, ground in, absolutely tight. This one has 13/16 in. cup, ⅜, 7/16 or ⅞ in. shank, ⅛ or ¼ in. pipe thread.

This model is made with ¾ in. cup; shank and thread measurements same as above. In both these models, as well as 3 others that we carry, a substantial spring takes up any wear.





Air Cocks

Strictly high grade, all brass, keys ground in. This pattern can be had (No. 37) ⅛ in. or (No. 38) ¼ in. pipe thread.

Here is another style (No. 63) ⅛ in. or (No. 64) ¼ in. pipe thread. We also carry several other patterns.

Shut Off Cock

All brass, keys carefully ground in, tension spring taking up any wear, held with cotter pin and lock washer.

Lever Handle Drip Cock

All brass, keys ground in, made with spring, lock washers fastened with cotter pins. No. 72 has ⅛ in., No. 73 ¼ in. pipe threads.

Drip Cock

No. 630—⅛ in. P.T.; No. 640—¼ in. P.T. All brass, polished finish, keys ground in, tension spring and lock washer.

Brass Pipe Fittings

Standard iron pipe thread made to proper specifications. For gasoline or steam. Generally used on automobiles. All styles and sizes.

Complete catalog on request.

See Your Jobber

Dealers should know the COMPLETENESS of the Stevens lines. There is no needed item that is too small for us to carry; there is no IMPORTANT item that is missing from our stock. No one knows better than the dealer how necessary this service is. Make more money by taking advantage of it. *Louis Schwab*

WANTED

Purchasing Agent for Eastern Motor Car Company. Must have had experience. Good position for good systematizer and result getter. Address Box I-928, care Motor World.

WE HAVE
a distributing contract with the OVERLAND factory for 3000 cars

and can place a number of A1 men among our dealers, and in some instances as foremen of garages at top wages. Also need several first-class mechanics for work in our own service department. Have an especially good job for a magneto, generator and starter expert. Best of opportunity for getting into business for yourself. When answering, advise length of experience, and furnish references.

KRIT

Owners who buy repair parts are fortunate in having a service department back of their car which takes a real interest in seeing to it that the cars are kept in perfect running condition.
Not only are the best workmanship and materials used, but if any new ideas have been developed in the automobile business since the car was built, which will make it better, these ideas are incorporated into every part that is made.
This is real service that can be enjoyed by Krit Owners if they will see to it that all orders are sent into the factory direct. No stock of parts is carried by us elsewhere.

KRIT MOTOR CAR COMPANY
Detroit, Mich.

KRIT OWNERS

We furnish quick service on all engine, clutch, transmission, differential, front and rear axle, steering gear, wheels, steering knuckles and cones, fenders, frames, and body parts, from original Krit Stock. For all models from 1909-1915 inclusive.

Thousands of owners of these cars have complimented the unusually prompt and efficient service, which is now being rendered on these cars. We have taken over the entire repair and service business and have installed every possible safeguard—every system of efficiency that we can devise to improve the service to owners, and eliminate shipping delays.

You will be sure to appreciate these improvements.

But be sure to order only from the factory direct.

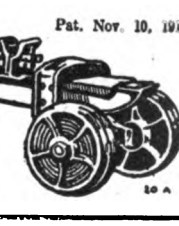
The Automobile Catechism Price Cut in Half $1.25

"THE AUTOMOBILE CATECHISM" (de luxe edition) is a complete course in automobile instruction—each subject discussed and illustrated so that YOU will grasp every point worth while—every subject is made as simple as A B C. You are interested—you are instructed—you are directly benefitted. Its information is final. It's a handsome piece of book work—splendidly printed, with 101 illustrations; flexible black leather binding, rounded corners and gold-edged pages—beautiful, while being intensely practical.

We want every reader of Motor World to have a de luxe copy of "The Automobile Catechism." To make our offer irresistible we have decided, FOR A LIMITED TIME ONLY, to CUT THE PRICE IN TWO. This half price ($1.25) will prove the best investment you ever made. Remember, this is the de luxe edition—264 pages—every page full of real, money-interest value. *Send for this today*

THE MOTOR WORLD PUBLISHING COMPANY (Book Department) 239 West 39th Street, New York City

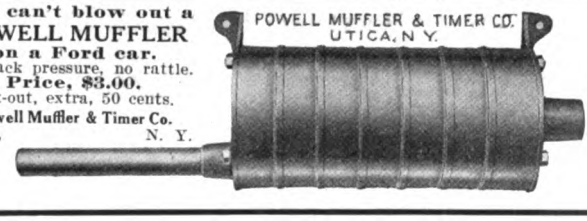


Stop the Spring Breakage

It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING."

Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business. New Era Spring & Specialty Co. 879 Woodward Ave., Detroit, Michigan

When you bring in a wrecked car you need this Truck. In a moment you raise the car with this lever, then strap the Tongue in place, and away you go. Hundreds of garages are now equipped and the way they bring in their customers is a great surprise. One truck for front or rear. Let us send you our literature. You need it.



ROBERT HOLMES & BROS., Danville, Illinois

Quality First

Hitting the Prospects Where They Live

During July, August and September, Chalmers advertising will be directed at the smaller cities and towns, because that is where buying is most active in the summer months.

Starting July 20th we are running a rapid-fire campaign—two ads a week in the newspapers of every town under 50,000 in the United States where there is a Chalmers dealer.

This is a part of the Chalmers plan of intelligent co-operation with dealers.

There are some additional towns where we would run this big advertising campaign if we had dealers.

Maybe you are the man we are looking for in one of those towns.

Chalmers Motor Company, Detroit

BACK OF THE DEALER

When you, as a Dealer, have back of you the Reputation, the Customers, the real satisfying, money-making ability of

MULTIBESTOS

you can feel certain of holding and enlarging your brake-lining trade.

You cannot give your customers any better brake lining—and you cannot give yourself any better business proposition.

It is our policy to help YOU, THE DEALER, all we possibly can. Upon you we depend for proper treatment of MULTIBESTOS buyers and you can depend upon us to deal squarely with YOU.

If not convinced of this by a cordial relationship already established with us, write **NOW** and find out what we do for you.

It will give you a new light on the brake-lining business, put **extra** dollars in your pocket and new customers in your stores.

SHAFT-DRIVE

Genemotor

TRADE MARK

Why don't you get a Genemotor?

Genemotor matches the Ford in excellence.

It's the product of the General Electric Company, world's greatest specialists in electric motors.

Just like the Ford car, it is light, simple and strong. It is shaft driven and that means still greater simplicity, 12 pounds less weight and more power. Weighs 42 pounds, complete.

Built to form a perfect auxiliary to the Ford engine.

Charges the battery at low speed. "U S L" Battery standard equipment.

It is the universal starter for the Universal Car.

Price $85 f.o.b. Lynn, Mass.
Sold Everywhere.

Studebaker

Opportunities

Another in Kentucky

IT'S the second largest city in the state, located on the Ohio River and connected by a suspension bridge with one of the leading cities in Ohio. In fact these two centers might easily be called "the twin cities of the South", so closely are they bound by the ties of business and friendly relationship.

In this city of over 55,000 people Studebaker has an opportunity for a "live-wire" dealer to go in with the Studebaker line and build a lasting and profitable business. Current reports indicate that this city was never more prosperous than at present.

Water and rail transportation afford excellent facilities for the development of its chief industries comprising cigar and tobacco factories, foundry, machine shops and flour and steel mills.

Rarely has Studebaker been able to offer such a splendid opportunity as this in the South. It won't "go begging" long, that's sure. If you are interested, don't delay but write for the facts immediately.

Buy a FISK Red Top Tire

TRADE MARK REG. U.S. PAT. OFF.

Time to Re-tire? (Buy Fisk)

The feature of this entire advertising campaign is the slogan, ***"Buy a Fisk Red Top Tire."*** *This has been displayed everywhere — in magazines, newspapers and billboards, reaching practically every tire buyer in the United States. The effect was electrical.*

The advice, ***"Buy a Fisk Red Top Tire,"*** *applies to you as well. Keep even with the demand if you would keep your trade satisfied with your service to him.*

THE reports we have already received are to the effect that Red Top advertising now running is a tremendous success.

It is not too late for you to stock Red Tops and get your share of the Fisk profits now being made.

Write at once to Dept. 23 for our Dealers' Proposition.

Innocence Abroad

—particularly when accompanied by an automobile, is soft picking for the town constable. Don't be innocent. It's expensive. The man that "did not know" always has to pay.

Your dealer is ready right now to equip your car with the famous

CORBIN-BROWN SPEEDOMETER

"The Speedometer of Absolute Accuracy"

By all means let him do so—not only will it save you money and keep you out of trouble, but it will also add new zest to driving. You will know exactly what you are doing and how fast you are doing it; you will gain a more intelligent idea of your trips and the country about you, and you will be able to know your car more intimately. Then there is tire wear, gas and oil consumption to be considered. The Corbin-Brown will help you to consider them and they are worth considering, because you pay money for them.

This is true talk, but investigate for yourself. Visit your dealer today. Catalog upon request.

Dealers Who Have Made Good

WITH this issue, Motor World inaugurates a series on Dealers Who Have Made Good. They are men who have won their way to the top in the motor car industry's distributing division. Others will appear in succeeding issues. Each will include a picture of the man, a brief biographical story and a summary of some of the methods that have helped in his career.

Inglis Moore Uppercu

President of the
Cadillac Motor Car Co. of New York

SINCE he took over the Cadillac New York agency in 1908 he has never had a year's business that was less than that of the preceding year. With a small beginning, he now has 461 people in his organization and has branches in Bridgeport, Conn., White Plains, Newark and Brooklyn. In his New York organization are 328 employees.

Two and a half years ago he moved into a new, white building at Broadway and West Sixty-second Street.

He was born in 1875 — is 41 years old. Association with Charles E. Duryea, in Cartaret, N. J., was his first "horseless carriage" experience—in 1896—and he was ashamed to let his friends know he was "monkeying with the thing."

From 1898 to 1899 he was with the Gasmobile—ever hear of it?—in Marion, N. J., and then in 1902 he formed the Motor Car Co. of New Jersey to sell the Autocar, Cadillac and Packard in Newark. Here he remained until he bought the Cadillac New York branch in 1908.

The Why

THE telephone girl is forbidden to say: "Who is it? What do you want?" when any one asks for Mr. Uppercu. He is accessible even to his newsboy—if the latter calls on the telephone.

Entrance to his office is easy. No cold barriers exist.

Selling a high-grade car, he insists upon high-grade men. For a new man, intelligence and gentlemanliness are more essential than experience.

Selling to a high-grade public, he sells accordingly. One reason for his hold on the New York public is his special body offerings—because New York likes them.

Decisions with him are made in an instant. No wavering. The motor car industry is a business of quick decision in every phase.

He sells the Cadillac on its merits and lets his customers talk about his service afterward.

The Dealer Must Teach the Farmer to

THINK RELIABILITY

By Stanley P. McMinn
Motor World Staff Representative with the Tractor Circuit

THIS IS THE FIFTH of a series of articles on the merchandising and service problems peculiar to the farm tractor dealer. Previous articles have discussed tractor service and the merchandising possibilities of tractor accessories. The sixth article will appear in a following issue.

AFTER performance, the most important tractor consideration to the farmer is reliability. His tractor must keep on working to be profitable. Breakdowns and wear must be minimized.

Construction is vital.

The farmer has not yet gotten to thinking this way. *Acres plowed is what he is thinking of, but he has not yet hitched reliability and acres plowed together.*

This work is up to the dealer.

The dealer must THINK tractor construction, VISUALIZE the conditions under which a machine operates and have his sales ammunition ready to shoot at the farmer.

The reliability of a tractor hinges on a great many things. One of the most important is dust. In dry weather a tractor works continuously in a cloud of fine, gritty dust. Dust is drawn through the carbureter into the cylinders and bearings. Many tractors have their working parts exposed and wear is rapid.

Too much emphasis cannot be laid upon the necessity for some device which shall effectively prevent dust getting into the cylinders. During a 1-hr. run on a two-plow tractor in Hutchinson, Kan., *exactly 1 oz. of fine dust collected in the air cleaner with which the machine is equipped.* This dust was almost entirely grit and was so fine that it would float away in the air.

Dust Wears the Rings

Under ordinary circumstances, and if there had been no air cleaner on the carbureter, this grit would have gone directly into the cylinders. *On some machines that are not equipped with air cleaners, piston rings are worn almost paper thin in as little as 6 weeks.* One manufacturer insists that his dealers agree to furnish pistons, piston pins and piston rings to purchasers at actual cost.

Fortunately, a great many tractors have air cleaners. In some cases the farmers know about them, but mostly they don't, and few of them appreciate the abrasive action of this gritty dust. The farmers need education. They need to be told that an air cleaner is a necessity.

Trend to Anti-Friction Bearings

The trend toward the use of anti-friction bearings is noticeable and the farmers have been educated up to their advantages by their motor cars. Plain bearings still are used in a great many cases, and for some uses they probably never will be replaced. But in gear-sets and drive wheels the anti-friction type is making rapid headway. Such bearings are always as nearly dustproof as it is possible to make them and last almost indefinitely.

Service Education

Because of the rugged construction of tractors and the liberal factor of safety provided, breakage of parts is not serious, and even where parts break the farmer has not yet been educated to the desirability of that brand of quick service in which the motor car dealer and garageman specialize. *However, those dealers and garagemen who have entered the tractor business are quite generally carrying stocks of spare parts and the farmer is being educated out of his way of sending direct to the manufacturer for a part and then waiting more or less patiently until it comes.*

For the most part the adjustment of the modern small tractor is a very simple matter. Parts are big, and as appearance counts for exactly nothing, nuts and bolts can be put where they will serve the most useful purpose. Hence there is plenty of room to swing a wrench and the necessity for swinging it is made plain because few adjustment points are hidden.

Approaching Simplicity

Up to about a year ago the use of low-tension magnetos and make-and-break ignition was quite general, and it was not always easy for the farmer to adjust his make-and-break mechanism so as to give the best results. Lately, however, the use of high-tension magnetos has made a great gain, and, while this has tended to cause some confusion where trouble was experienced, that confusion is rapidly subsiding because of the greater reliability of the instruments and because of the decreased number of moving parts and attention necessary.

Carburation necessarily brings up the question of burning kerosene and is something of which the farmer knows little, not being an engineer, and the dealer must know a lot.

Tractor manufacturers naturally have been talking long and loud regarding the ability of their respective machines to burn kerosene, but the farmer does not appear to be greatly interested in it as yet. It may be that he has not learned to figure his costs or that he has learned to figure them so well that he cares little which fuel he uses.

They Saw Kerosene

The farmers who visited the demonstrations saw machines of every conceivable type burning kerosene one day and gasoline the next, and apparently burning one as well as the other. They also saw some machines which were supposed to be burning kerosene, dripping kerosene all over the lot, choking up when a sudden load was put on them, and belching forth great volumes of black smoke.

Digitized by Google

THE CEDAR RAPIDS DEMONSTRATION this week showed what the tractor can do for the thousands of prairie farmers of Iowa. This state has the price of the tractor provided it is "sold" on that machine. Great interest was displayed as the gasoline horses worked

When burning kerosene properly, a tractor will throttle well, will not choke up under a sudden load, there will be little or no odor to the exhaust to denote that kerosene is being burned and not gasoline, and there will be no smoke worth noticing.

Must Be Rightly Designed

ENGINEERS WILL TELL YOU THAT IN ORDER TO BURN KEROSENE IN THIS WAY A MOTOR MUST BE DESIGNED TO DO IT; THAT IT IS IMPOSSIBLE TO TAKE A MOTOR BUILT FOR GASOLINE AND BY MEANS OF HOT AIR ATTACHMENTS AND OTHER DEVICES MAKE IT BURN KEROSENE EFFICIENTLY.

But not all tractor engines are designed and built to burn kerosene, though most any of them will burn kerosene with every appearance of complete success—for a short time. After that short time there is excessive heating, sooty deposits and absence of lubrication, depending upon the type of lubrication system employed and the efficiency of the carbureter.

Immediately a kerosene carbureter fails to function properly, or loading up occurs—this being an engineer's way of saying that kerosene collects in the manifold due to insufficient heat or to a decrease in the speed of the gases—the liquid fuel finds its way down past the piston rings and into the crankcase, where it plays havoc with the lubricating oil.

Advocate Crankcase Draining

Most tractor manufacturers when burning kerosene strongly advocate that the crankcase be drained every night and refilled with fresh oil the next time the tractor is put to work. The farmers are being trained to know that this is necessary, BUT THEY ARE NOT DOING IT, and for this reason lubrication troubles, burned out bearings and scored cylinders frequently result.

The oil that is drained out of the crankcase still retains some lubricating qualities, though it is worthless in a motor. It can be used for oiling other parts of the tractor, such as the bull-ring gear, and can also be used on other farm implements. For the most part, however, it is merely permitted to drain away into the field.

Never a Gas Substitute

Where the lubricating oil is changed nightly, no lubricating difficulties are experienced, though the process is an expensive one. Some farmers look upon it as offsetting the advantage to be derived from burning kerosene and therefore are not greatly interested in the cheaper fuel. This applies also in the case of some manufacturers. *Others state frankly that they do not believe that anything will supplant gasoline, which is easily vaporized and burned, promotes reliability and minimizes many troubles.*

Some manufacturers advocate the wasting principle in lubrication and claim to be getting good results. In this system a small quantity of fresh lubricating oil is constantly fed into the crankcase to enrich what is there.

Is Kerosene Wrong?

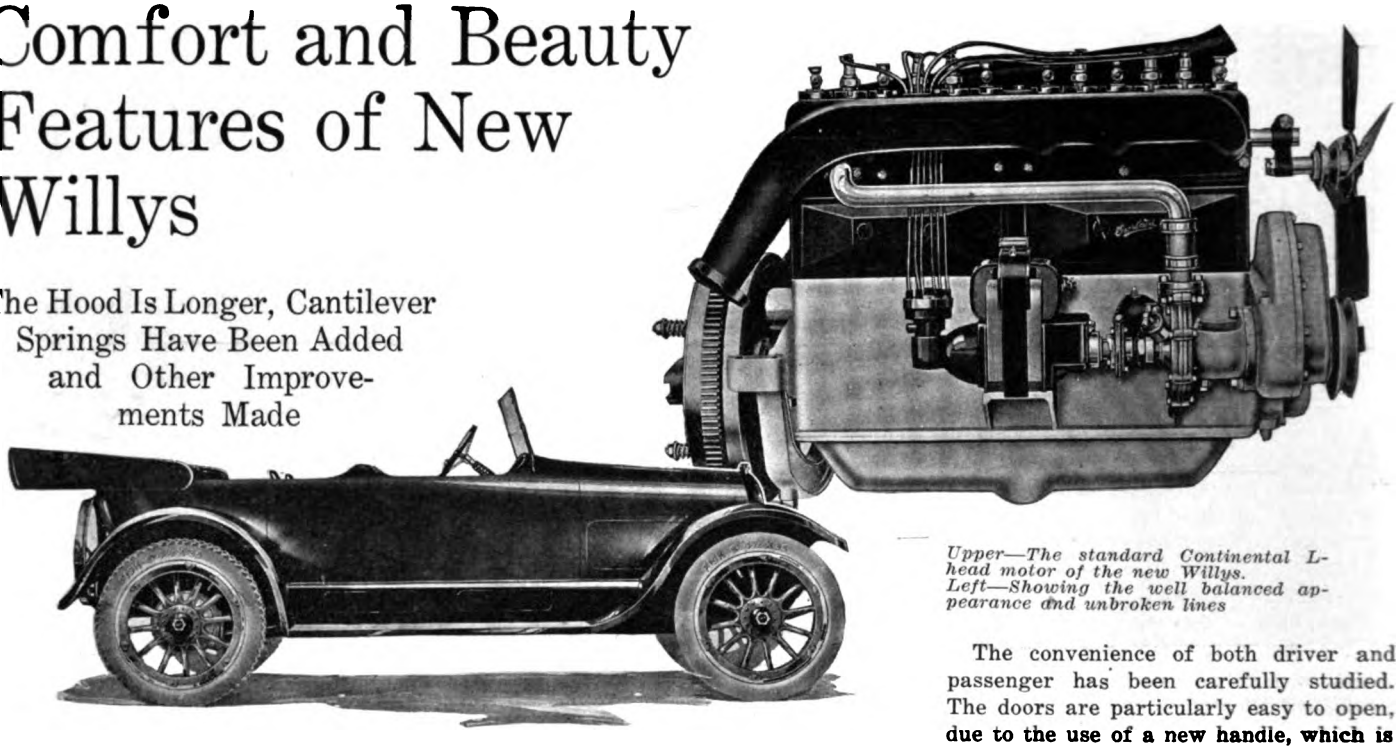
But that kerosene is being burned successfully in quite a number of tractors admits of no doubt. Where a machine will operate on kerosene day in and day out without trouble, as have some of those at the demonstrations, it may be assumed that it will continue to do so after it has left the care of the manufacturer.

But where a manufacturer starts out to burn kerosene and then suddenly decides that he will switch to gasoline when advised that an 8-hr. plowing test is to be put on—as it is said some of them did at the demonstration at Enid, Okla., this spring—it may be assumed that there is something seriously wrong with the tractor as a kerosene burner.

Dallas Show to Draw 3,000,000

DALLAS, Aug. 21—So great is the demand for space at the State Fair motor show, Oct. 14-31, that a wing will be added to the show building. It is expected that 3,000,000 will attend the show. Last year nearly that many visited the fair and car exhibition.

It is also expected that this show will reveal many of the new models of cars that otherwise would not be exhibited until the New York show in January.



Uncle Sam Advocates System

WASHINGTON, D. C., Aug. 21—The Federal Trade Commission which was formed to better trade conditions and relations has taken a deep interest in accounting systems and has issued two pamphlets covering the principles of accounting. One pamphlet is for manufacturers and the other for retailers. These do not advocate the use of any particular system, but urge greater attention to accounting, and tell how different operations should be handled.

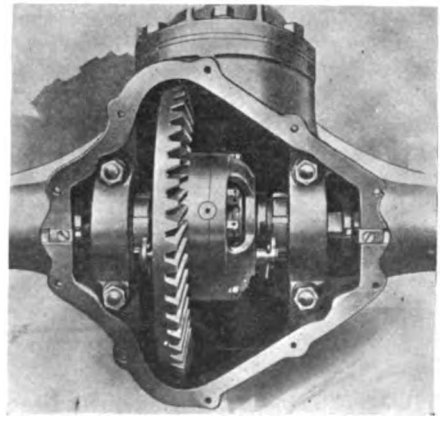
Comfort and Beauty Features of New Willys

The Hood Is Longer, Cantilever Springs Have Been Added and Other Improvements Made

Upper—The standard Continental L-head motor of the new Willys. Left—Showing the well balanced appearance and unbroken lines

WITH the exception of a longer hood, the new Willys seven-passenger 88-Six at $1,325 is identical in its appearance with the Willys-Knight four recently described. Cantilever springs have been substituted for three-quarter elliptics, battery ignition made by Connecticut has taken the place of the magneto, the gearbox used on the 1916 Willys-Knight has been adopted, and the gasoline tank has been moved to the rear from under the seat, the change bringing with it the installation of a Stewart vacuum system. Continental motor, Auto-Lite starting and lighting, and the Tillotson carbureter are the same as heretofore.

Comfort and beauty are the features of the new car. The lines are unbroken from front to rear. The radiator edges are rounded, and the radiator is slightly higher, the top edge of the body is rolled in, and there is a double cowl and a tilted windshield. All these details combine to give a very attractive car.



The body is dark blue with gray wheels. Metal fittings are nickel and polished aluminum, and fenders and trimmings are black enameled.

The car is comfortable. The upholstery is unusually soft, due to the use of smaller springs and because each one is in a canvas casing, which acts as an air chamber, giving a pneumatic cushion effect. The body is roomier. There is plenty of knee room when the auxiliary seats are up. Cantilever springs, 48 x 2½ in., make this the easiest riding Overland, since it also has the longest wheelbase, 125 in. Larger tires than usual, 35 x 4½, contribute to the easy riding. The springs have been attached to the axle in such a way that the tendency is for the axle to roll backward slightly, thus reducing the force of the shocks.

The Willys Six

Made by the Willys-Overland Co., Toledo, Ohio.

Price, 7-pass. touring	$1,325
Make of motor	Continental
Number of cylinders	Six
Shape	L-head
How cast	Block
Bore	3½
Stroke	5¼
S. A. E. horsepower	29.4
Maker's rating	45
Gear ratio	4 to 1
Weight	3515
Ignition, battery system	Connecticut
Fuel system	Tillotson double-jet carbureter, Stewart vacuum system, and 15-gal. tank.
Clutch	Leather-faced cone
Gearset	Three speeds on axle, annular ball and Hyatt rollers; nickel gears.
Wheelbase	125
Tires	35 x 4½, rear non-skid
Rear axle	Full-floating
Front axle	Timken bearings
Demountable rims	Standweld straightside.
Motor main bearings	Three 2½ x 3 in.

The full floating rear axle has spiral gear drive and Timken adjustable taper bearings

The convenience of both driver and passenger has been carefully studied. The doors are particularly easy to open, due to the use of a new handle, which is pulled toward the seat to close the door. This movement is easier than that required to unlock the ordinary door, especially when the door is stuck. For the sake of cleanliness and safety, rubber pads with ridges on them have been place on the runningboards under each of the four doors. They not only act as mud scrapers, but also give a firm foothold.

As in previous models, the control is very convenient. A very light pressure is required to disengage the clutch, merely the rocking of the foot on the heel being sufficient to depress the pedal. Horn button and ignition and lighting switches are placed in a box on the steering post, where they are easy to reach. Gearshift and emergency brake levers may be operated without leaning forward. The two large pedals are adjustable as to length.

The cowl board equipment is complete, including a Warner speedometer with ½-in. figures on the speed indicating cylinder and ¼-in. figures on the 100,000-mile indicator and on the 100-mile trip register. The latter may readily be set back by turning a small knob at the right. The oil gage registers up to 10 lb., and the ammeter has a range of 15-0-15 amp. A Boyce Moto-Meter relieves the driver of worry as to the condition of the cooling system.

The new motor will throttle down as low as 4 m.p.h. on high gear and still run smoothly, and will pick up quickly from this speed without any difficulty. The ability of the car may be judged from the fact that the motor is rated at 45 hp., has a gear ratio of 4 to 1, and weighs 3515 lb. with all tanks full and a spare non-skid tire and rim.

(Continued on page 12)

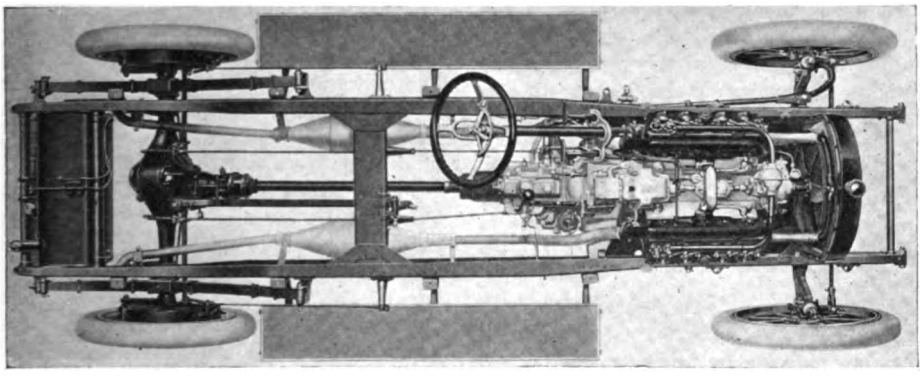
Cadillac Bettered but Price is the Same

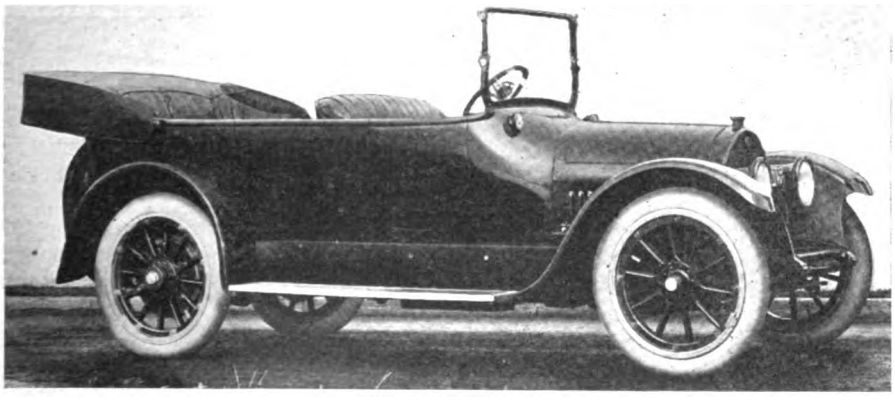
And There Are Eleven Body Designs of which Enclosed Types Are Features

AS a luxury vehicle, the Type 55 Cadillac is much more desirable than the Type 53, which it succeeds, good though the latter was. Yet the price of the open models remains at $2,080, although the inclosed designs are somewhat higher.

Dark blue is now the standard color on the open cars, although dark green, which has been standard on all models since the first eight was announced, will still be used on the inclosed models. The appearance is enhanced by the adoption of crowned fenders, the addition of a molding around the top of the body, and new headlamps, which, in a general way, follow the shape of the coat or arms on the radiator.

Comfort is greater because of a more vibrationless motor, softer upholstery, longer wheelbase, now 125 instead of 122 in., roomier body and Gabriel no-bound snubbers.





The exhaust pipes have been placed nearer the cylinders, making the valves more accessible

To meet the growing demand for variety, the number of body models has been increased to eleven, four open and seven inclosed. In the former class, in addition to the seven-passenger touring with disappearing seats, there is a four-passenger phaeton, two-four-passenger roadster with a pair of disappearing rumble seats, and a club roadster seating four, all selling for $2,080.

There are two convertible cars with permanent roofs and disappearing windows, one a four-passenger victoria at $2,550 and the other a seven-passenger at $2,675. A four-passenger coupe sells for $2,800 and a five-passenger brougham at $2,950. There are three seven-passenger cars with 132-in. wheelbase, a limousine at $3,600 and a landaulet and imperial at $3,750.

One pound has been clipped from each pair of pistons and connecting-rods. The reduction is largely due to a different design of piston, which, however, is cast-iron as heretofore. The center portion is cut away so that the piston bears against the cylinder only at each end.

The wheelbase of the new eight has been increased and lines of the body improved. Except for increased strength, the frame is unchanged

The New Cadillac 8

Made by the Cadillac Motor Car Co., Detroit

Price—	
Seven-passenger touring	$2,080
Four-passenger phaeton	2,080
Two-four-passenger roadster	2,080
Four-passenger club roadster	2,080
Four-passenger Victoria	2,550
Seven-passenger Victoria	2,675
Four-passenger coupe	2,800
Five-passenger brougham	2,950
Seven-passenger limousine	3,600
Seven-passenger landaulet	3,750
Seven-passenger imperial lim.	3,750
Color—	
Open cars	Blue
Inclosed cars	Dark green
Cylinders	L-head
Cast	Two blocks
Bore	3⅛
Stroke	5⅛
Displacement	314
S. A. E. horsepower	31.25
Starter	Delco
Ignition	Delco
Lighting system	Delco
Clutch	Mult. dry-plate
Wheelbase	125 and 132
Front tires	36 x 4½ smooth
Rear tires	36 x 4½ non-skid
Wheels	Wood
Rear axle	Floating

Digitized by Google

Lightness and reduced friction are thus obtained, the latter since the amount of piston surface coming in contact with the cylinder walls is less.

Unfailing and adequate lubrication of the cylinder walls is assured because of the oil which gathers in this depression. At the same time, over-lubrication is prevented by the presence of several holes which run to the interior of the piston and allow the excess oil to drop to the crankcase. Along with the new piston design the wristpins have been enlarged to give longer wear.

The upholstery is softer and much more comfortable, due to a new form of spring, which is very resilient, yet is so made that it will not settle with continued use, it is said. Another improvement involving both appearance and comfort is the adoption of dull-grained leather instead of the glazed, and it is plaited instead of tufted.

Convenience, comfort and appearance have been increased in many small ways. Gearshift and emergency brake levers are easier to operate, since their length has been increased a couple of inches. A wrench is no longer required to remove the gasoline filler cap, since the threaded type has been replaced with one which locks by a hand clamp.

The gasoline gage may now be easily read at night without straining the eyes or making a light, since the taillight has been so modified that it illuminates the gage. The radiator is better protected against splashing mud by the use of a horizontal guard between the frame members instead of a slanting guard.

Accessibility of the valves is improved by a 2¼-in. wider valve alley, effected by placing each exhaust pipe 1⅛ in. closer to its cylinder block.

The frame is more rigid, partly because the depth of the channels has been increased from 6 to 8 in., but also because tubular cross-members, one at the front and two at the rear, are now used. These are both stronger and lighter.

The balancing of the torque reaction of the motor against the torque reaction of the rear wheels has been approximated by placing the torque rod at a certain point at the right of the driveshaft instead of at the left.

The thrust of the drive pinion is better taken care of by putting both bearings ahead of the pinion instead of one on each side as heretofore.

Except for the changes noted, the new chassis is the same as 1916 and not much different from the original design brought out in September, 1914. Cylinders are 3⅛ x 5⅛ in., giving a displacement of 314 cu. in. and actual horsepower of 70 and an N. A. C. C. rating of 31.25. L-head cylinders, cast in two blocks, are mounted on an aluminum crankcase, with clutch and gearcase in unit.

Camshaft and generator shaft are driven by silent chains, located at the front. A double-throw crankshaft is used, the same as in a four, each throw having two mating connecting-rods, one being attached to the crankshaft in the usual way and the other being forked and fitting over the first one.

The crankshaft has three bearings and the camshaft five. The main bearings are reinforced bronze, babbitt-lined.

Each cam operates two opposite valves. The camshaft assembly is on the under side of a plate which bolts to the top of the crankcase between the cylinder blocks. On each side is pivoted a row of eight rockers, each rocker having a cam roller; thus the motion is transmitted from cam to push rod.

Lubrication is force-feed, a gear pump driven from the crankshaft drawing oil from the reservoir in the bottom of the crankcase and forcing it through pipes to each of the main bearings; from thence the oil makes its way to the connecting-rod bearings through passages drilled in the crankshaft.

Lubrication of the camshaft bearings is taken care of by the overflow from the safety valve in the main oil line. Above a certain speed this valve opens and the excess flows through a pipe connecting to the camshaft bearings. Pistons and cylinders are lubricated by overflow from the main and connecting-rod bearings.

Cooling water temperature is still controlled by a thermostat, there being one for each block of cylinders; there is a pump for each, also. When the temperature drops below a certain amount the thermostat automatically cuts off the supply of water from the radiator, thus causing the water in the jackets to circulate and recirculate until the temperature rises.

The specifications include a multiple dry-plate clutch having fifteen carbon steel plates 7¾ in. in diameter; three-speed gearbox; floating rear axle with spiral drive and a pressed steel housing; tubular open driveshaft with two universals; platform springs in the rear; 20-gal. gasoline tank with fuel fed to the carbureter by pressure; Delco two-unit starting and lighting system and Delco ignition; power tire pump attached to the gearcase; tires 36 x 4½, smooth in front and non-skid in rear.

The New Willys

(Continued from page 10)

The bore and stroke is 3½ x 5¼, giving an S. A. E. rating of 29.14 hp. and a piston displacement of 303 cu. in.

The motor is a standard Continental model, with L-head cylinders cast in a block and mounted on a two-piece aluminum crankcase, the lower part serving as an oil reservoir and the upper carrying the three-bearing crankshaft.

Accessibility is fostered by placing the ignition distributor and the generator and the water pump in a straight line on the right side. These units do not interfere with reaching the valves. Each is mounted on a bracket on the motor and may be removed without disturbing the other.

This leaves the left side of the motor clear for the installation of the steering gear and the starting motor, access to both being easy. The oil filler opening is at the front on this side and the oil gage is plainly visible from its position at the center near the bottom of the crankcase.

Electrical equipment consists of an Auto-Lite two-unit, six-volt system, with head, tail and dash lamp, and headlight dimmers, as well as an ammeter.

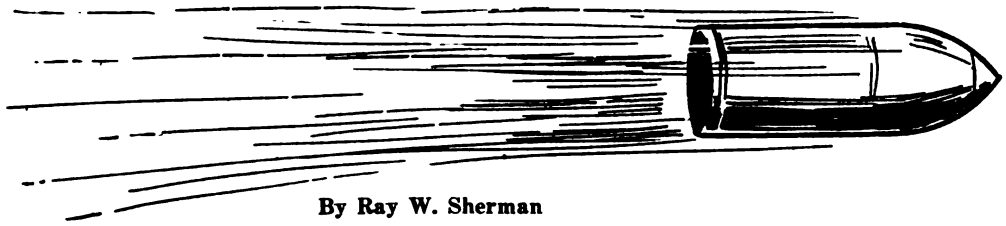
The starting motor is mounted high in order to keep it away from dust and dirt, as well as to make it accessible, drive being by Bendix pinion, which meshes with teeth in the flywheel.

Back pressure is minimized by the fitting of a double exhaust pipe, there being a passage from the three front cylinders and another from the three rear ones.

Lubrication is a combination of force and splash feed, a plunger pump operated from the camshaft, sending oil under high pressure to the main crankshaft bearings, camshaft bearings and the timing gears. Troughs catch the overflow and dippers on the connecting-rod caps distribute spray to all parts of the motor.

The clutch is a cone with a leather facing, and spring actuated plungers which are equally spaced give smooth engagement by pressing out on the face. The clutch spider is held in engagement by three comparatively light springs placed near the rim, and gear-shifting is facilitated by a clutch brake.

The gearbox is mounted on the rear axle, and torque and driving strains are taken by a torque tube which terminates in yoke, which is pinned to a cross-member of the frame. The gearbox gives three speeds forward and reverse. The gears are double heat-treated nickel steel of the stub-tooth type. The main shaft is mounted on annular ball bearings and the countershaft is stationary, but the countershaft gears rotating on it have Hyatt rollers placed between them and the shaft.



The rear axle is a full-floating type with a spiral gear drive and Timken adjustable taper roller bearings throughout.

The front axle is an I-beam drop forging, produced in one heat without welding, and the wheels have adjustable taper roller bearings.

The steering gear is a worm and full gear type of hardened steel. It is provided with ball thrust adjustable bearings.

The Direct-Line Mind

By Ray W. Sherman

"REILLY, is it true that all advertising is only about 30 per cent efficient, only 30 per cent par value?"

Tommy Trumbull, junior salesman in the establishment of C. J. Reilly, Inc., turned from his perusal of an advertising magazine ad and shot this query at the boss.

"H'm'm," parried Reilly.

"It says here," added Tommy, "that every time a man uses an ad he gets only about 30 per cent of what he ought to get, because the ad isn't rightly written, the circulation is part waste, the product isn't up to snuff, the ad isn't followed up, and a whole lot of other things. What about it?"

How Efficient Are We?

"No doubt it's true, Tommy," replied Reilly, "but I don't see anything startling about it. How efficient do you suppose you are? How efficient do you suppose I am? How efficient is the average man?"

"I don't know. Never thought much about it."

"It's all right for us to say such-and-such things about advertising, and to make all sorts of destructive remarks, but when it comes to doing something constructive we fall down. It is true that advertising is a long way from perfect to-day, and it probably never will be perfect. No ad probably ever will be an absolute 100 per cent.

"One reason ads are not more efficient; one reason salesmanship is not more efficient, and the real, big reason why everything is not more efficient is that men —you, I and every one else—are not truly efficient. It is the human element that makes the ad, that sets the pace in selling and that guides in all endeavor—and where you find an efficient man you find his efficiency reflected in everything about him.

Some Day

"Some time, Tommy, somebody is going to produce a big thought, a big plan, that will help every man in making more out of himself, and when that time somes there will be greater efficiency in advertising, selling and everything else. But until that big thought comes it is up to you and me and the rest of us to work out our own destinies.

"And even that isn't difficult. We can all be more efficient. And this greater efficiency in ourselves will reflect itself in our work and in the results that come to us from our work. If we're in business we shall get more business, and if we work for a living we shall get a better living.

"If you want to know how efficient you are, take a look at yourself and ask yourself if you have ever tried to make yourself MORE efficient. The increase in personal efficiency isn't the doing of single big things. It is more the doing of little things, for if we are efficient in little things, it necessarily follows that we shall be efficient in the big things. We are like the dealer with a display window. He CAN'T have a slick and clean display window and a dirty garage. The two won't go together. If he keeps the window slick and clean, he will have an attack of cleanitis and clean up the garage, or else the window will degenerate into the same condition as the garage.

Making Minutes Count

"When you get up in the morning—which is the first thing you do every day —how long does it take you to dress? We all like to sleep in the morning, I surmise, and we value those early morning moments, but did you ever try to make them count? If you are anything like me at that hour of the day, you probably put on your B. V. D.'s, put on your shirt, sit down and put on your socks, stand up and put on your collar and tie, sit down and put on your shoes, and make all sorts of useless motions, just standing up and sitting down and reaching around for things, whereas you can put on nearly everything you wear while standing in one spot—and do it in less time.

Early Morning Wool-Gathering

"When you shave, you probably monkey-diddle around, dabbing the brush in the water about five times as much as necessary, and make more waste motions than in any other job of the day. And so it goes. We are inefficient in these little things, so how can we expect to be efficient in the big things when our mind is not being guided in channels of efficiency?

"We come to work in the morning with no set task for the day in mind. The result is that we sit down at our desks and spend a considerable part of the first few minutes of the day wondering what we are going to do. We paw over a lot of papers that we left lying around the night before, retrace a lot of the steps of yesterday, look at all the drawers and pigeonholes in the desk, and sit in a sort of foggy mental atmosphere where we can't see out for some time. Then the fog lifts after a while and we begin to work. Why couldn't we have gotten down to work the minute we sat down at the desk? If we are always going to waste the first half-hour, we might better come in a half-hour late—or, better yet, come in a half-hour earlier and do our daily wasting early.

The Why of Life Itself

"If the minds of all men were trained to work in a direct line, what a wonderful thing it would be. Every time we undertook a job we would brush aside all superfluous details, proceed uninterruptedly in a direct line, and get to the end in much less time than it now takes.

"This indirectness of working and thinking is why there are so many motormen and plasterers and so few really good executives. The indirect mind is always at the beck and call of the directing mind, which moves in a direct line. The directing mind sees the task and its completion and moves everything —including the less efficient minds—along that line.

"The direct mind plans work; the indirect mind works without a plan. The efficient mind takes one job, finishes it without a stop, and then takes up another. The less efficient mind may finish one job, but throughout that job it has permitted numerous detail interruptions, and at the finish it spends considerable time wondering what to do next.

Ready for the Big Job

"With the warring nations of Europe, years had been spent in efficiencyizing in details; it was years before the big job came. It's the same with you and me; if we are to do the big things right we must get into the 'right habit' and accustom ourselves to efficiency in little things. Then when a big job is handed us we will work it efficiently, because that is the natural way for us to work."

Argentina Wants Accessories—and She Needs Men to Sell Them

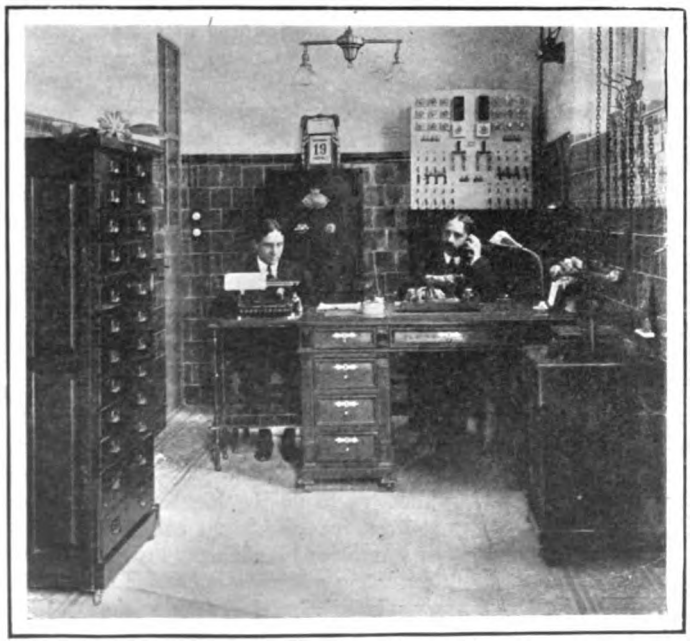
By David Beecroft

THIS story is the fourth of a series on South America by David Beecroft, managing editor of Motor World, who spent ten weeks on the southern continent, investigating the possibilities there for American cars. The car of the U. S. A.—for so the Argentine calls our country—is making headway, and there is now a crying need for the U. S. A's. accessories. Even greater is the need for young men of the U. S. A. to sell them.

BUENOS AIRES, ARGENTINA, July 15—There is a very profitable field for U. S. A. accessories in the Argentine Republic. Conservative estimates place the number of motor cars of all makes in Argentina at 30,000. Of this number, fully 8000 are U. S. A. machines. Accessories are needed for all of these cars. Previous to the war, Argentina got practically all of its accessories from Europe, but to-day she cannot and *they must come from the U. S. A.*

Very few of our accessory concerns are directly represented in Argentina and SCORES OF OUR BEST ACCESSORIES CANNOT BE FOUND IN ANY OF THE LARGE ACCESSORY STORES. The majority of the accessories that have reached here have not been sent by the manufacturers in the U. S. A., but have been purchased by U. S. A. exporting houses in response to orders from Argentine dealers. As a result, you will meet with very small quantities of our best accessories, *yet you find a strong demand for them.*

Demand Is Great



There is to-day a great need for U. S. A. accessories in Argentina, and this can also be applied to Brazil, Uruguay, Chile and other South American countries. It can also be applied to the Islands of the West Indies.

Last year we shipped a total of 6725 motor cars to all of South America; we shipped a total of 4658 to the West Indies. Here we have a total shipment of 11,383 for the fiscal year of 1916, ending on June 30. These figures give some conception of the accessory market that awaits us in Latin America. Argentine alone took 4444 U. S. A. cars in the fiscal year ending June 30.

The only arm of our accessory business that has been adequately handled to date is the tire business. Half a dozen of our leading tire makers are well established in Buenos Aires and other parts of Argentine and also in Brazil. THEY ARE ALL DOING A BIG BUSINESS. *Our tire makers have generally had to bring out special metric sizes for all Latin America, as metric measurements are standard in all of these lands. Bringing out the metric sizes delayed the business, but within the past few months our biggest makers have firmly entrenched themselves and are already getting cable repeat orders in good quantities.*

Goodrich Was First

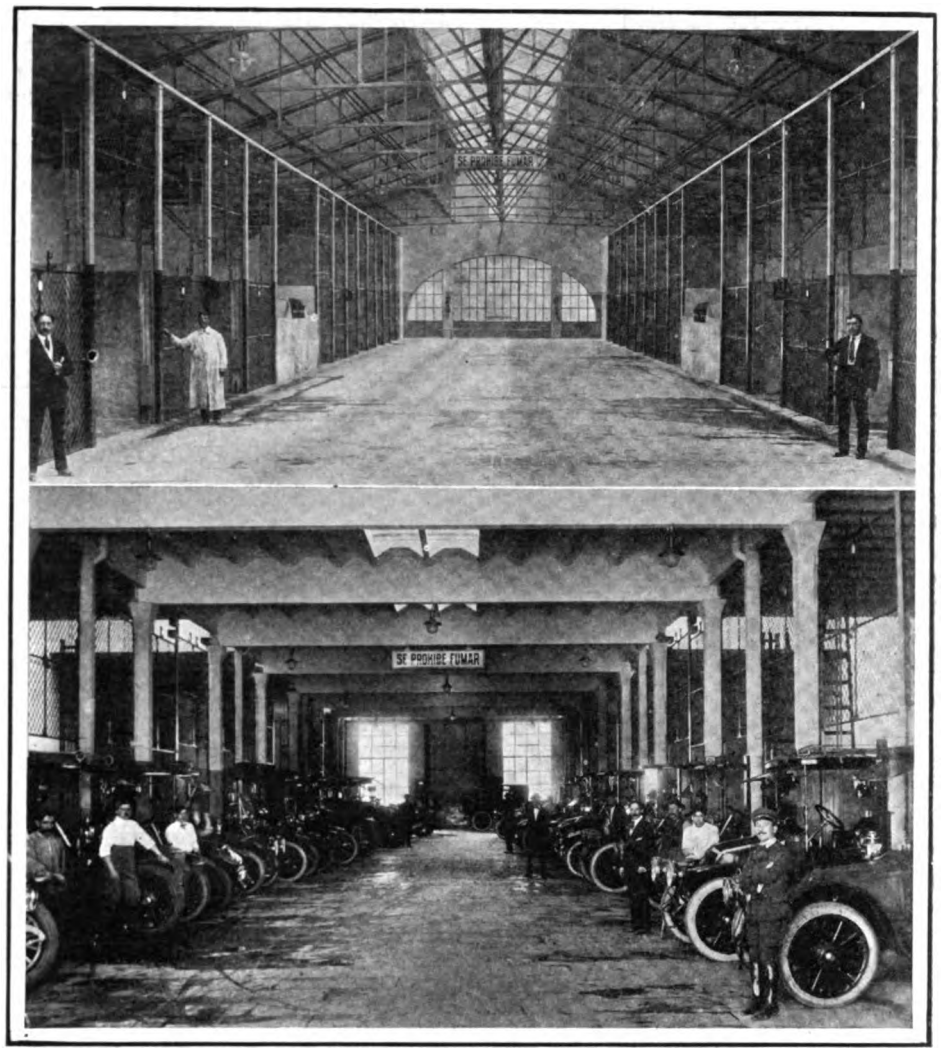
Goodrich was first in the South American field and has been established for several years. Goodyear got under way about 6 months ago and now has a fine branch in Buenos Aires and is placing agencies all through the country. U. S. tires have a strong hold in Rio de Janeiro and are just getting into Argentina. Firestone, Fisk, Republic, and

THE OLYMPIA GARAGE, Buenos Aires, is modern in its exterior and its office

Digitized by Google

a few other brands have had their representatives in the field for several months.

Previous to the war—and we cannot refrain from using the foregoing phrase—the tire business was largely French and Italian, with a good percentage of English. Michelin had the bulk of the trade—and still has. The war largely stopped European shipments and the U. S. A. got its chance.

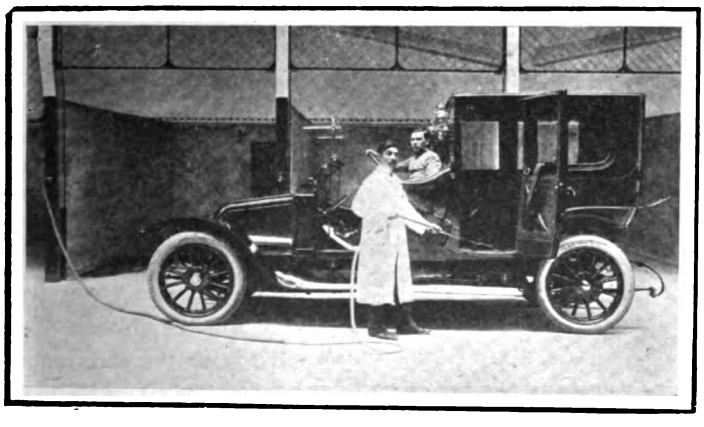


To care for 30,000 cars per year means at least 180,000 tires, which is no mean amount of business. But this is only Argentina, a fraction of the field. IT IS A BUSINESS WELL WORTH GOING AFTER.

Practically all of our tire concerns have sent ambitious young men through Latin America to develop this field, and there is still room for many more men. You meet these men in different parts of the several countries. They all have had years of experience in the rubber field. Some have been travelers for their home companies in Texas; others have had charge of large territories, and in nearly every case the men are practical types, who know how to get business in the U. S. A. and are well qualified to go after business in South America.

How Field Men Work

I have had several opportunities to observe two or three of these young men operating in Argentina, Uruguay and Brazil. A few pages from their note books of experience may be interesting.



When reaching a new city, perhaps the largest city in a country, they rarely have any previous connections. They may not have a single letter of introduction. They may not know a person in the city. Some of the wiser ones spend several days examining the tire situation. They first observe the makes of tires in use on the street. They know what makes the taxi companies use and are generally able to get all of the prices paid, if the drivers get a commission and if the tires are sold for cash or on 60 or 90 days. This investigation work is expanded and takes in the passenger cars. Next the garages are visited and a closer tire check obtained.

The UPPER AND LOWER FLOORS of the Olympia Garage, Buenos Aires, are equal in construction and cleanliness to some of the best garages in the United States. Each car has its stall with protecting wire doors

Thus fortified, the tire representative is ready to visit the different tire dealers handling European or other lines of goods. The tire man soon discovers if they are getting all of the goods they want and on what terms. He soon learns those concerns that are shipping tires on consignment, those that are paying against document in New York and those that are buying on 60 or 90 days. IN 2 OR 3 DAYS HE KNOWS WHAT MAKES OF TIRES ARE GIVING GOOD RESULTS AND WHAT ONES ARE NOT. HE KNOWS WHAT TIRE DEALERS WANT TO TAKE ON NEW U. S. A. LINES; IN SHORT, HE HAS THE MARKET WELL SIZED UP.

With this preliminary work in hand the representative is now ready to make his selection. Perhaps his home firm in the U. S. A. has written him that a certain firm has been inquiring about the line and he must decide if such a connection is best or not. Very often such inquiries prove of least value. He must be mature enough and a sufficiently keen student of human nature and business possibilities to make his own selection. *Sometimes he has to decide on an agent directly opposed to the instructions from his home factory.*

For cleaning the cars of the wealthy garage patrons, a vacuum cleaner is used

Digitized by Google

The Job Is Hard

This special representative work is not easy work. IT CALLS FOR A REAL MAN, and, fortunately, many of our concerns are paying salaries commensurate with the work to be done. The representative must be careful not to oversell the new dealer he appoints. Overselling is a common error. The representative has been several days in the country and has not sent a single order home. If he were in Texas he would be wiring orders to the factory every night. So he is inclined to make the order as large as possible. He tries to raise the dealer. This is generally poor business. South American business houses when dealing with you for the first time are inclined to be suspicious when you show too much zeal in making big orders. It is better to be content with a small order. It is better to suggest cutting the order than enlarging it. Leave the new dealer with an appetite, rather than overfeed him.

In placing initial orders the new dealer generally needs wise council. Perhaps he has never handled rubber anti-skid treads, and, of course, you want to fill him up on such. It makes the order larger. Take care! *You must aim at giving the dealer what he can most readily sell.* Your careful observation around the city will aid you in this.

Men From the U. S. A.

Practically all of our tire concerns opening branches in South America have taken their own managers from the U. S. A. and have taken three or four other good men. Ross A. White, the Goodyear manager, has had experience in Chicago and many other Central West cities. The same applies to the manager of the U. S. Tire Co. This applies to many lines of motor car accessories and will continue to apply. Our accessory houses will find it necessary to send competent U. S. A. men to assume charge of their South American business. We have mentioned before how many of our large concerns in other lines have had to follow this policy to meet with success. *What they have done the motor car accessory trade will have to do.*

What we need most of all in our South American business is a big supply of experienced, competent young men. We must have them. We need them to introduce our goods into those markets. After that we need them to handle our business there. There are many openings for such young men in the next year or so.

Certain qualifications are necessary. You must be more than a salesman, because when in South America and 6,000 *miles from the factory you have to rely on yourself, and frequently your judgment on the situation must take precedence to that of the factory. Your one great qualification then must be a* JUDICIOUS MIND.

You have much more to do than take orders. You have to interpret character, to understand trade conditions, to fairly correctly gage demand, to weigh financial conditions, to look up the credits of the prospective agents; in short, you have to be a real business man. With all of these responsibilities the position assumes proportionately greater importance. The responsibility you carry is proportionately greater. YOUR JOB IS PROPORTIONATELY WORTH MORE.

Must Know Spanish

Let us reiterate that you cannot make a success of business in South America unless you know Spanish. Once you get Spanish it will not be difficult for you to acquire enough Portuguese to carry you through Brazil. There is a marked similarity between the languages. Get Spanish first and learn Portuguese after you get there or on the way down.

The status of our accessory trade in South America in 5 years will largely depend on the caliber of young men we get to come here to manage the business. There is unquestionably a great future here. The natural resources are here and the future is certain. To-day the possibilities are not small, and in order that you may grasp a little clearer the accessory situation in South America we will give a brief synopsis of what accessories are most in demand at present.

Perhaps before doing this it will be well to interject a suggestion that it may be valuable to follow out with regard to selling our accessories in all of the South American countries. It will be expensive for several individual concerns to send a special representative to Argentina for their particular line. The business to-day would not warrant such. To overcome this, the plan of three, four or five accessory concerns uniting on a merchandising problem may be suggested.

There is no reason why five, or even ten, firms in non-conflicting lines should not unite and open one office in Buenos Aires for the control of the business in Argentina, in Uruguay and in Chile, and perhaps in Paraguay. A similar office could be opened in Rio de Janeiro to handle all of the Brazilian business.

Might Combine These

You might combine such non-conflicting lines as one each of carbureters, magnetos, spark plugs, metal polishes, body polishes, slip covers, oils, greases, jacks, shock absorbers and speedometers. These are all general lines that sell equally well throughout the country.

You could handle a line of accessories that would especially appeal to the garage trade such as gasoline storage tanks, oil and kerosene storage outfits, air compressors for tire inflation, and other lines, garage machinery, such as small lathes and grinders, and those accessories which nearly all of the garagemen handle.

Our manufacturers will have to consider seriously such uniting for sales purposes. To-day you cannot buy many of our accessories that are needed for our cars now there.

This is particularly true of speedometers for Fords, as the majority of these cars are shipped to all of these countries minus the speedometer.

There is not an accessory house in this city that carries one-tenth the supply of U. S. A. accessories needed.

In every city you visit the same complaints of not being able to get U. S. A. accessories reaches your ears.

THERE IS URGENT NEED FOR ACTION.

Next week's story will tell of accessories most in demand here.

New Row Has Open House

BOSTON, Aug. 20—A new retail motor district was opened in Boston today and for a whole week the dealers handling lines in the block are to keep open house. The buildings have just been finished and turned over to the concerns. The location is on Beacon Street, near the junction of Commonwealth Avenue in what is known as the Five Points.

The Oakland is at the eastern end and has a building all to itself. Next door is the Cole, handled by the Bryant G. Smith Sons Co., with the National in the adjoining section.

The Becker-Stutz has building number three, and the H. A. L. is a partner, being handled by the Bishop Motor Sales Co. The Pennsylvania Rubber Co. and the Atwood Lamp Co. divide the fourth building, and John L. Judd, with the Allen, Auburn and Smith Form-A-Truck, has the western end of the block.

For the opening week the showrooms of some of the dealers will be decorated and invitations have been sent out to owners to inspect the new places.

The Dealers in Milwaukee Are Boosting Something All the Time

AUGUST 28, next Monday, they start with a string of cars and tour the State of Wisconsin, boosting for the Motor show and State fair, to be held Sept. 11-16. The pictures on this page show how they boost when they start out to boost. These pictures tell how they decorated their places of business this summer to boost business. Newspaper advertising was used and for a week cars carried visitors over the circuit of this salesroom-to-salesroom show. Things simply have to move in Milwaukee.

Accounting and Business Systems

By T. W. Snead

When Cash Is "Off"

System Editor:

We would like to know, in working your system, how you handle transactions when the cash is short or long, not covering the items listed on the cash register slip.—CRARY MOTOR CAR CO., Boone, Iowa.

Crary Motor Car Co.:

The writer does not just clearly understand what you mean when you say: "How do you handle transactions when the cash is short or long, not covering the items listed on the cash register slip?"

Offhand, the writer supposes you mean when the cash drawer is short of what your register calls for, or if it is over, and on second thought we can hardly believe that this is what you mean, as it seems to us that while such a case might appear once or twice, you would not possibly permit this as a regular thing.

If you will advise us a little more definitely what the trouble is, we will be glad to go into it with you.

Wants One-Book System

System Editor:

We understand from your representative, Mr. Brace, that you have an accounting system suitable for a garage. What we want is one book which will make the daily distribution of sales and repairs. Our departments comprise the motor department, the blacksmith department, trimming department, painting department, and body or wood-working department. If you have a book of this kind made up, we would like very much to have you send it to us, so that we may get started with as little delay as possible.—THE MULHOLLAND CO., Dunkirk, N. Y.

The Mulholland Co.:

While our system is mainly devised for garages, service stations and automobile dealers, it can, by simply changing a few headings at the top of the columns, be made to do the same work for a business similar to yours.

In order that you may understand clearly what we mean by this, we are forwarding you sample sheets of the system, which consists of two forms, each form divided into debit and credit entries, making the system self-balancing, or double entry.

You will notice on Forms One and Two that the Income or the Sales are divided into various departments, as designated by the headings at the top of the columns. If you so desire, we could turn out a system for you similar to this one and in place of these headings substitute Motor Dept., Blacksmith Dept., Trimming, Painting and Woodwork. This would give you the same result as obtained in our own system, and the complete book of instruction which is presented to you with the system would simply have to be read with these changes.

Wants Research

System Editor:

I am much interested in your pamphlet and when business quiets down a little I shall probably take up the whole thing thoroughly. In the meantime, I want to experiment with a few sample sheets.

Please send me six sheets each of Forms 1 and 2 and bill same to me.

Are you planning to obtain the data from the users of these standardized systems and publish them, as *System* is now doing in connection with the Harvard Bureau of Business Research?—F. H. KENNEY, Worcester, Mass.

F. H. Kenney:

If you are interested to the extent of adopting the system, a complete illustration and description can be obtained at a cost of $1, or if you are a subscriber and wish to renew your subscription for a period of 1 year, we will gladly present you with the pamphlet. However, we are forwarding you a few sample sheets in order that you may determine whether or not the system would fit your business. There will be no charge for these sheets.

In answer to your last inquiry in regard to publishing the statistics obtained from these standard systems, wish to say that the writer is at present working with the committee on retail accounting systems of the Associated Advertising Clubs of the World, and this committee, with the co-operation of Harvard University and the Federal Trade Commission, are planning to obtain statistics such as you speak of from standard accounting systems that are being devised by this committee.

It might be interesting to you to know that there are in the neighborhood of 1000 Motor World systems in use to-day, and we hope within a year's time to see this number reach the 2000 mark, at which time the information that could be gathered would be of immense value to the automobile trade.

Wants to See One

System Editor:

Please let us know if any garage or sales office in Pittsburgh has recently adopted your accounting system, and how you think it would work out if applied to our business. We do not have a great deal of ordinary garage work, but try to confine our shop to a service station for Republic trucks.—MARTIN-WHITEHILL CO., Pittsburgh, Pa.

Martin-Whitehill Co.:

We can only suggest that you investigate the system thoroughly before installing, and to that end are forwarding you sample sheets of Forms 1 and 2 of the system. There are in the neighborhood of 1000 systems in use to-day and the writer personally knows of many service stations using it with splendid results.

We have gone over our records carefully to find someone in the City of Pittsburgh to whom you could go for investigation, and while there may be someone in your particular line who purchased the system direct from the manufacturer, we can find no one on our list to refer you to. We have many systems in use in Harrisburg, Lancaster, Warren, Charleroi and Erie, and if you so desire we will send you the names in any of these towns, to whom you can write for information.

ANGLES OF THE LAW

By George F. Kaiser

Made Salesmen Settle

Legal Editor:

A salesman—A—working on commission, while demonstrating, is struck by B on a street crossing. A's left rear wheel was struck by B's left wheel, doing damage to both cars. B sues A's employer for $100 damage to the cars. Should the mere fact that he had the right-of-way give him the privilege of colliding? Later, A's employer, when threatened by suit, settles with B, charging A's account, without saying anything to him. Can A recover?—Spokane.

It was decided by the Supreme Court of Alabama in a case just recently handed down that although the ordinance of a city may provide that vehicles going in certain directions shall have the right-of-way over vehicles going in other directions, it does not necessarily follow that the vehicle which has not the right-of-way at a crossing must, at its peril, avoid collision with a vehicle having the right-of-way.

If B's motor car damaged A's car because of the negligence of B, it would seem to follow that B would have no claim for damages sustained by himself, while, on the other hand, A would have a good valid claim for any damages he sustained.

If then A's employer settled the matter by paying $100 to B—which he was not under any legal obligation to pay—he naturally would not have the right to charge that amount against A's account, and I think that A would be able to recover that amount from his employer.

No, If It Runs

Legal Editor:

A dealer in used cars writes on the order: "Car guaranteed to be in first-class running condition." Purchaser takes delivery; 1 week later comes back, requesting return of his money. Is it your opinion he would recover purchase price? Car sold on terms. Dealer considered it good value for price sold.—Spokane.

Whether or not the purchaser can recover the money he has paid in a case of this kind depends, of course, on the condition of the car.

In the absence of any other warranties and representations, it would seem that he would not be able to recover back the purchase money he has paid if the car is in "first-class running condition." By first-class running condition would be meant the kind of condition a car of that year, make, model, etc., could reasonably be expected to be in.

There naturally would be no obligation on the dealer's part to furnish a new, perfect car, and, even if the parts were somewhat old and worn, he would not be guilty of misrepresentation if the car was able to run as well as a used car of that kind might be expected to run.

Maker Can't Cancel

Where the manufacturer of motor cars, during the existence of a contract, accepts orders for motor cars ordered thereunder and agrees to ship them, a subsequent failure and refusal to ship them creates a liability to the dealer for the amount of the loss occasioned to him.

The Court of Appeals of Georgia was called upon in a recent case to construe a motor car contract which provided that the dealer estimated that he would take delivery of not less than thirty-six automobiles between the date of the contract and Sept. 30, 1913; and further, that he would purchase a specified number of automobiles during each of the months covered therein, and by an express agreement it contained, provided that the failure on the part of the dealer to purchase the number of automobiles in any one month should give the manufacturer the right and privilege to cancel the agreement, such privilege, however, being the limit of liability for such failure on the part of the dealer.

A further provision that failure on the part of the manufacturer to supply the dealer with the number of automobiles in any one month would give the dealer the right and privilege to cancel the agreement, which right was to be the limit of liability for such failure on the part of the manufacturer.

During the life of the contract the dealer ordered seven automobiles. His order was accepted by the manufacturer and he thereupon ordered a "Roadster" from the manufacturer's manager in Atlanta, Ga., which order was also accepted and a promise was made that it would be filled at a time subsequent to the expiration of the contract between the dealer and the manufacturer. Instead of filling the orders, however, the manufacturer declined to ship any of the seven automobiles.

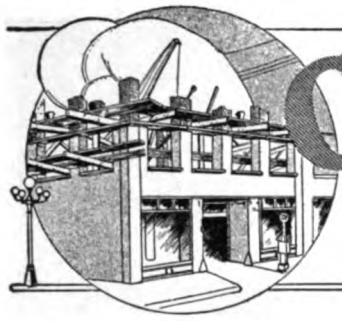
The court held that, although under the contract the dealer had the right to cancel the agreement, and that right fixed the limit of liability on the part of the manufacturer for such failure to deliver the cars, and accepted orders were subject to delay occurring in the manufacture or delivery of cars from any cause whatsoever, the manufacturer was, nevertheless, liable in damages in a case of this kind, as, although it was the manufacturer's privilege to decline orders, it could not accept them and then fail to fulfill its obligation.—FORD vs. JOHNSON, 89 S. E. (Georgia), page 430.

Bars the Copy-Cat

That when a spark plug manufacturer copies the product of another manufacturer, who has an established reputation, so closely that confusion is likely to result among spark plug buyers, relief may be granted from such unfair competition, is the decision in a late New York case.

The manufacturer of spark plugs sold some to a motor company practically at cost, making its profit out of new plugs which car owners subsequently purchased. Another manufacturer made spark plugs very closely resembling the first maker's plugs. The first manufacturer then brought suit, claiming unfair competition.

The court held that, as the buyers of cars which ordinarily were equipped with the first manufacturer's plugs would not be familiar with the cartons in which the plugs were sold, dissimilarity as to such cartons would be no ground for denying relief, and the infringing manufacturer would be required to color its plugs so as to distinguish them from the others.—233 Federal (New York), page 112.



Oakes Sells His Last Car

HUTCHINSON, KAN., Aug. 17—Lewis W. Oakes, agent for the Studebaker automobile agency, Hutchinson, Kan., died at 12.30 Aug. 5, after an operation at the Methodist Hospital.

Rich Tool in M. A. M.

NEW YORK, Aug. 19—The Rich Tool Co., maker of engine valves and miscellaneous metal specialties, Chicago, Ill., has been elected to membership in the Motor and Accessory Manufacturers. The organization now has a membership of 235.

Figs. 1 and 2

Editor Motor World:

As a subscriber of Motor World we wish to get your opinion on laying out a garage. This building is to be altered for our use, giving us a space 250 x 60, blind at one end and side.

There will be no machine shop or repair work done in this building. Under these conditions, where would you locate the gasoline pump, oil storage, customers' rooms, wash stand and office? And how would you arrange the location of cars for economy of floor space and still to let them get in and out readily? There is no showroom, as we do not sell cars.—Reader.

You did not mention whether you were planning to have an accessory store, but with a garage of this size one is certainly necessary, and since your letterhead shows that you sell supplies, consequently an accessory store and stockroom have been provided.

Your garage is wide enough to place two rows of cars on each side of the aisle, providing that the cars are not too long. Fords, Dodges, Maxwells, Overlands, and even cars as long as the four-cylinder Studebaker, come within this classification. You probably understand that with this arrangement the cars in the row next to the wall are those that go out late in the morning and those in the front row are those that go out first. Which row a car is to be placed in is determined by asking the driver when he comes in at night. You will find that practically all of the cars will be moved out of the first row before there will be a call for any of the cars in the second row. At first glance you may not think that this plan of arranging the cars is practical, but it is used in many of the best garages throughout the country and it is satisfactory in every case.

The proper place to put the gasoline and oil pump is at the door, so that cars may be filled on their way out, as this is the logical time for the purchase of supplies. You will find this also the most convenient place to have this equipment.

An air pump is almost a necessity in the modern garage, and is often driven from the power shaft in the machine shop. In your case, however, it will be advisable for you to install a motor-driven pump for the convenience of your patrons. This may be either of the portable type, driven from sockets located at convenient points around the building, or may be permanently located at the rear of the gasoline and oil stations, as there is sufficient space there.

SHEET-METAL SHINGLES

Merchant & Evans Co., Philadelphia. PRICES: Gothic, 14 x 20 size, 68 shingles per square, $4 painted, $5.75 galvanized.

A light fire- and storm-proof metal shingle. May be made up of copper, tin plate or galvanized iron. Constructed on scientific principles, this shingle can be put on more readily than any other form of metal roofing, it is said. Expansion and contraction are provided for, and the large overlap makes an absolutely tight roof of one-sixth pitch or over. A pleasing appearance and reliability at a moderate cost are the advantages claimed for this type of shingle.

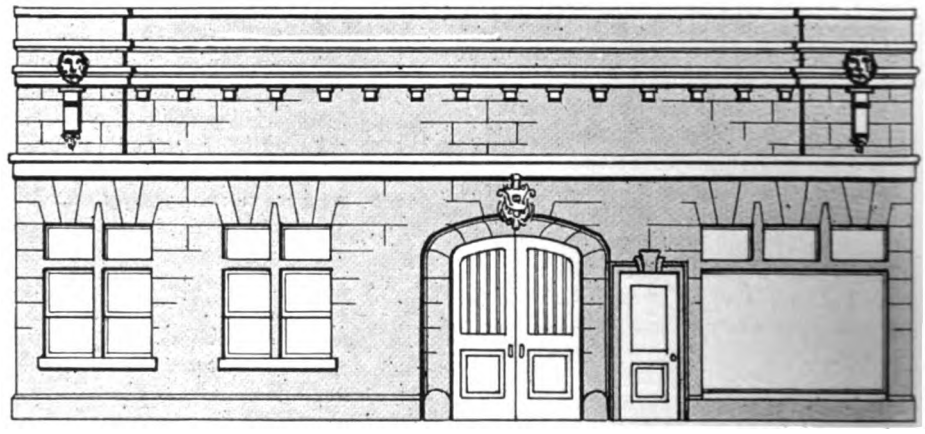

Fig. 1—Suggestion for an attractive arrangement of the garage front

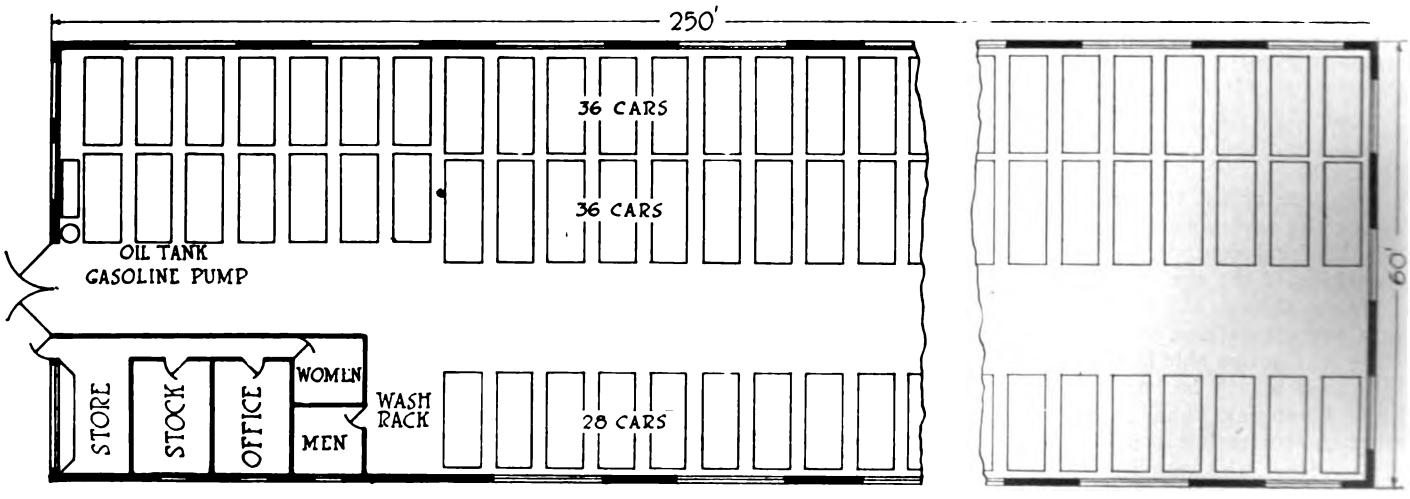

Fig. 2—Showing the altered floor plan of an old building, 250 x 60, that was made over into a 100-car garage. There is no machine or repairshop, though a store is provided for the sale of accessories

Garage and Salesroom Fronts from the Four Corners of the Country

Walter Williams, The Dalles, Ore., has one of the leading garages along the Columbia Highway. Spacious windows admit plenty of light. He handles the Ford, Dodge Bros. and Studebaker

The Grosse Pointe Motor Service Station, Detroit, in the picture below, is built for an elite class of trade. The front is of a style that matches well the neighborhood and the premises are ornamented by a lawn and flowers

Williams Garage, above, is in St. Petersburg, Fla., and it smacks of the South with its balcony and shaded front. The architecture is of an attractive type. He handles the Studebaker

The Slayton Automobile Co.'s building, Slayton, Minn., is typical of many western towns. The construction is substantial, but is not expensive, yet the front is made quite attractive. Note the excellent accessory displays

The Bethard Auto Agency, Richmond, Ind., utilizes its front to good advantage with display windows and gas and air stations. The sign helps get trade

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 822) TIRE RACK LOCK

It is often necessary to leave the store room unlocked and unwatched during the day, making the theft of a valuable tire an easy matter. A piece of pipe, supported and locked in the manner shown, secures the tires and yet leaves them accessible to the proper persons. All parts entering into the construction of the lock may be purchased directly from a hardware store stock.

(No. 823) FLASHING SIGN

An electric sign that alternately flashes and then goes out attracts much more attention than one that is constantly lighted. Economy is another point in favor of the flashing sign. A flashing device operating on the principal of unequal expansion of two different metals is illustrated. Two thin strips of metal—one brass and the other iron—about 4 in. long and ½ in. wide, are riveted together and screwed onto the wooden base in the manner shown. After being insulated with mica, a length of small-sized soft iron wire is wound around them and carried to the contact screw at the top. Care must be taken not to have the coils of wire touch each other. The current going to the sign is passed through this wire, and because of the high resistance of the iron the two metal strips are heated. The brass is expanded approximately twice as much as the iron and the strip is bent away from the contact screw, breaking the current. The strip then cools, straightens out, and again makes contact, starting the cycle again. The on-and-off period may be regulated by the contact screw.

(No. 824) TIMING GEAR PULLER

The puller illustrated is made specially for the timing gear of the Maxwell car, but one of similar construction may be made for any make of car. It consists of a flat triangular plate of cast-iron, having a ¾-in. tapped hole in the center and 7/16-in. plain holes in each corner. The hooks are made from ⅜-in. steel rod, each about 4½ in. long and threaded half their length.—E. W. Chamberlain (Maxwell), New York.

(No. 825) EYE-BOLT WRENCH

In removing or replacing radiator eye-bolts it is difficult to get a full turn with the common solid wrench, even when one that will fit is at hand. A special hook-shaped wrench may be made up in a few minutes, and permits a full turn with a good leverage. After the nut has been removed the wrench may be used as a hook to pull the eye-bolt from the frame.

(No. 826) PRIVATE DOOR LATCH

It is not desirable to permit free access to the repairshop or tool room, and an inside-operated latch effectively keeps out the undesirables. With the device shown, the knobs are removed from the door and the bent wire fitted into the door casing. A cord is carried from the handle to a point convenient to the tool room boy, a helper, or anyone that is always in sight, and opens the door for the privileged person.

(No. 827) VALVE RESURFACING TOOL

Pitted valves may be resurfaced quickly and accurately by the use of the proper grinding fixture. The accompanying layout shows a grinder that may be made up and requires no separate motor drive, being driven from the power line. The emery wheel is mounted on V-blocks, sliding in a cast-iron base bolted through a slot to the bench. Forward and backward adjustment is effected by means of this slot, the V-block and hand wheel controlling the cross-feed of the emery wheel.

The valve is held and rotated in a chuck supported in an adjustable spindle. This chuck consists of a split bushing held firmly against the valve stem by the pressure of the lock nut on the spindle. The rear end of the stem is supported by the bushing. Various sizes of bushings may be made to handle the common valve stems and are easily removable.

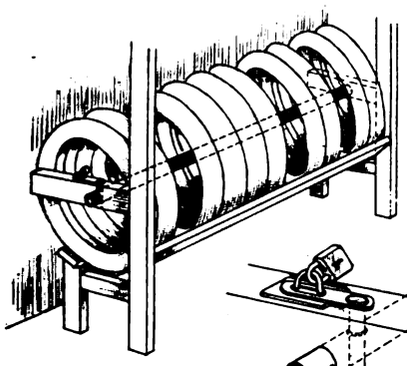
The spindle is supported by two bearings and driven by a round belt. It is mounted on an adjustable base that permits the valve to be swung at any angle to the grinding wheel and locked in the position. After carefully setting the valve at the required angle, the wheel is fed onto the work and the valve readily resurfaced.—Packard Motor Car Co., Boston.

(No. 828) VALVE GRINDING TOOL

Valve grinding is made less tedious and the work better done by this tool. The clutch is held in the S-shaped handle and is tapped to permit either a screw-driver or spanner point to be used. These points should be made from tool steel and hardened, as soft steel is not durable enough for this purpose. Sufficient pressure may be easily applied and the proper partial rotation imparted to the valve. This device is also very serviceable as a high-power screwdriver.

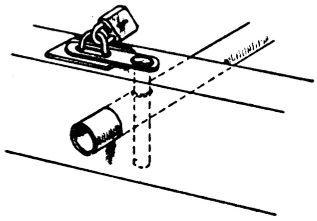
(No. 829) BEARING TESTING

Loose bearings may be quickly located with the aid of the oil-pressure tank shown. It is a small tank, carrying a 20-lb. gage, and made air tight by means of a screw cap over the opening. An inner tube valve stem, valve and cap permit the pressure to be applied and held on the oil, the oil being delivered to the oil manifold after the removal of the oil pump. The oil is thus forced to the bearing under pressure, and if the bearing be tight no leakage will occur. The test may be made with the engine idle and the loose bearings found and tightened.

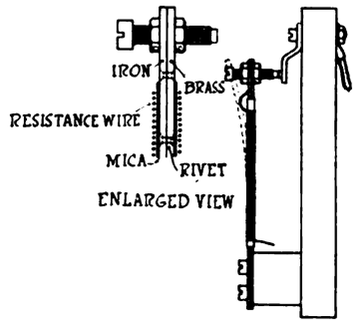


(No. 830) REPAIRING CRACKED WATER-JACKETS

Cracked water-jackets may be repaired and the crack prevented from spreading in the following manner: Drill and tap a ⅛-in. hole at each end of the crack and screw in brass plugs. This stops off the crack and prevents it from spreading. Then, with a small cold chisel, cut back the sides of the crack to permit the packing in of the rusting compound. The crack is then filled with a compound made up of two parts of iron filings to one part of sal ammoniac, with just enough water to make a good working mixture. Rapid rusting and hardening takes place and the crack is effectively sealed.



(No. 831) CRANKSHAFT GEAR PULLER



A simple gear puller is shown herewith. Though designed to remove a crankshaft gear, it may readily be adapted to many jobs that the common type of puller cannot handle. The cross-bar is made from a steel bar and the two end bolts fit loosely into the holes. It is advisable to make the center bolt from tool steel and have it fit the threads of the cross-bar very loosely. This will permit a sharp blow to be struck on the end of the bolt, applying a shock to the gear and loosening it very readily.—E. W. Chamberlain (Maxwell), New York.

Accessories & Supplies

THE GENOLITE

The Detroit Starter Co., Detroit. PRICE, $19.85.

The Genolite is a complete electric lighting system for Ford cars. The generator is mounted on a special bracket, held by the hose-coupling bolts, and driven through a spiral wire belt from a split pulley clamped onto the fan hub. The generator bracket also carries the automatic cut-out that connects and disconnects the generator and the battery at varying engine speeds. The two side lights, a tail lamp, storage battery switch and all wiring necessary to make the installation are included. No machine work is required, and the outfit may be attached in less than 2 hr., it is said. The lights may be lighted when the motor is idle, and when running, enough current is generated to more than take care of the lamp load.

ALLOY PISTONS FOR FORD

Featherweight Piston Co., 11 Guyman Way, Pittsburgh. PRICE, $15 per set, including pins and rings.

An aluminum alloy piston for Ford motors. Being light in weight, each piston weighing about 1 lb., the installation tends to reduce the vibration and decrease the wear. Four sizes are supplied, the standard, 0.0025 oversize, 0.031 and 0.033 oversize for rebored cylinders.

WHEEL PULLER FOR FORD

Motor Specialties Co., Waltham, Mass. PRICE, $1.

A loose plunger extends through the center of the screw and affords a means of starting off a wheel which is stuck or frozen to the axle. The hub-cap of the rear wheel is removed, the puller screwed on, and the set screw tightened. A sharp blow with a hammer on the end of the plunger readily starts the wheel. Wheel pullers of the same type are made for Overland, Buick, Maxwell, Saxon and Chevrolet cars.

V-RAY SPARK PLUG

Stewart-Warner Speedometer Corp., Chicago. PRICE, $1, in all standard sizes.

This plug has four sparking points and a core made from a high grade of porcelain. The wire used in the sparking points is chosen for long service and is claimed to resist corrosion. The terminal cap fits nearly every terminal in use and embodies a means for cleaning the sparking points. The V-Ray plug was formerly a product of the V-Ray Co., but has been bought outright by the Stewart-Warner corporation.

HI-LO-JACK

Hi-Lo-Jack Co., 140 Green Street, Worcester, Mass.

The toggle joint principle is incorporated in this automobile jack, enabling the operator to lift a heavy weight with a minimum of exertion. As shown in the illustration, the upper and lower joints of the toggle are fastened to the top and base of the jack, respectively. The horizontal screw connects the two other joints and applies the leverage that raises or lowers the jack. A ball thrust takes the side pressure, eliminates friction and aids easy lifting. In the closed position the jack is 5 in. high and will lift the load to 17 in. Owing to the construction the lifting power increases with the height and a graduated scale is attached showing tons in inches which can be lifted with safety.

BEMUS TIMER FOR FORD

Motor Specialties Co., Waltham, Mass. PRICE, $2.50.

A ball contact timer for Ford cars. Contact is made by a hardened steel brush engaging steel balls, both the brush and balls turning each time, so that new surfaces are continually brought into contact. The timer requires little oil, as there is little friction between the balls and the roller. The roller is made sufficiently long to permit each ball to have a path of its own, lengthening the life of the parts. The shell is made from one piece of an insulating material claimed to be very strong and impervious to oil and grease.

STAR TIRE RETREAD KIT

Star Auto Supply Co., Spokane, Wash. PRICE, complete, $8; dealers, $5.50.

This kit contains the tools necessary to rivet the tread of one old tire over another. It consists of three mandrels, a rivet set, fabric knife, pliers, can of cement, brush and clamp. The bead of one old shoe is removed and its tread is cemented over the tread of another old shoe having a good bead. The mandrels are then employed in driving the rivets from the inside and clinching them securely on the outside of the tread.

AUTOMOBILE MONOGRAMS

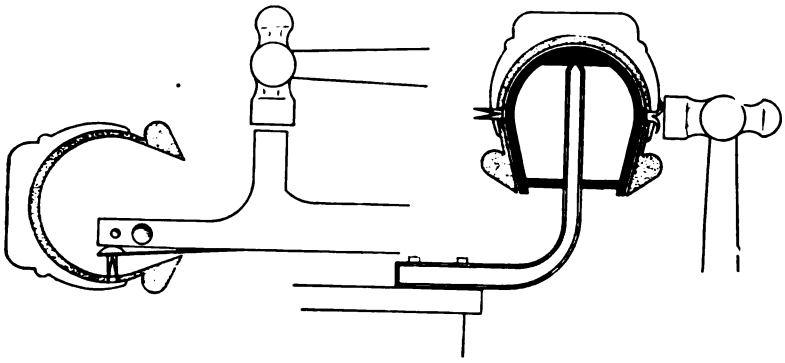
C. F. Essex, 306 Central Avenue, Jersey City. PRICE, as illustrated, $10 per pair; dealers, 25 per cent.

A distinctive monogram that may easily be attached to any car and just as easily transferred to another. All monograms are hand engraved and enameled in any color on sterling silver. Any special design will be made up on order without extra charge.

COMBINED SEARCHLIGHT AND MIRROR

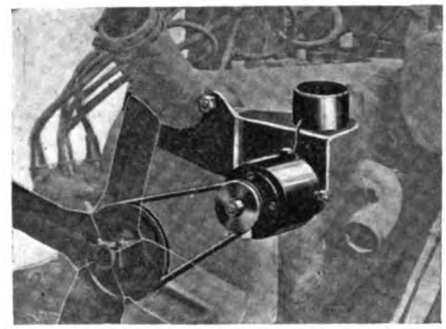
Pittsburg Electric Specialties Co., Pittsburgh, Pa. PRICE, $6 with mirror, $5 without mirror.

A combined searchlight and diminishing mirror. This searchlight is known as the Pittsburgh "Five M" and consists of a 5-in. double curvature parabolic reflector searchlight, with a 3½-in. diminishing mirror located at the side at the proper angle. This combination of two accessories looked upon by most drivers as essential to the avoidance of delays and accidents, makes a very neat device that serves both purposes the same as two separate devices.



One of the features of this searchlight is the outside focusing adjustment, which enables the use of any size or type of automobile lamp manufactured. Besides permitting the use of lamps of different sizes, the lamp can be focused in a second's time to throw a sharp beam or broad beam, as desired.

UNIVERSAL AUTO PRESS



United Engine & Mfg. Co., Hanover, Pa. PRICE, $55 complete.

The particular features of this press are the two leverages, large clearance, and one fixed and one adjustable table. The high speed leverage of 1000-1 will handle 75 per cent of the garage work, it is claimed, while the low speed leverage is 2200-1. The frame is made of heavy 5-in. channel section, securely bolted together. The upper press will take work 18½ in. wide by 16 in. under screw. The adjustable lower table will take work up to 42 in. wide by 24 in.; 1/16 in. lost motion is left in the retaining bearing of the hand wheel to permit a blow to be struck on the exposed top of the screw in extremely obstinate cases. The makers state that it has a factor of safety of many times its rated capacity of 22 tons. It has a total weight of 450 lb.

Do It This Way—

···QUERIES ANSWERED···

ALUMINUM PISTONS

Editor Motor World:

I received your letter and was very much pleased with the information I derived from it. Now I would like to know about aluminum pistons, and if I install them in my roadster how much clearance I would have to give them so they would not bind at high speed. Would it be any advantage to have the flywheel made lighter? About the camshaft, would I be able to gain any speed by having the cams on the shaft ground off—that is, on the lower part of the cam—so I could get more lift and a quicker closing of the valve?—FRED BONNEAU, Manteno, Ill.

1—We cannot definitely state the clearance you should allow on aluminum pistons, as this depends on several things. The aluminum pistons should be at least .003-.004 in. smaller than the cast iron pistons they replace. The following paragraph is taken from an abstract by Eugene Gruenwald as presented to the Society of Automobile Engineers:

"The most important characteristic of aluminum alloy for pistons is its coefficient of expansion. The clearance cannot be the same as in the case of the use of cast iron. Furthermore, the clearance cannot be determined by the coefficient of expansion. Many tests have shown that light-metal alloy pistons vary in expansion as they differ in design. A straight-head piston has a different expansion than a concave- or convex-head piston of the same size."

"It is advisable to allow from .003 to .004 more clearance than in cast iron practice, and then determine by test whether the allowance is correct. A piston which has proper clearance will not rap after the first few explosions, or show any sign of a tight fit after the engine has been run at high speed and under heavy load. A few careful tests will determine quickly the proper clearances above and below the rings."

In ordering the new pistons, you should inform the maker exactly what you wish to do and he will make the pistons with the proper clearance.

2—The advantage in reducing the weight of the flywheel would be too small to merit the work. While the motor would accelerate quicker, it would not run smoothly at slow speeds; there would be no effect at the maximum speed attainable.

3—We would not advise you to attempt to change the shape of the cam. To be sure, you could make the valve open farther and quicker, but that is a doubtful advantage. At high speeds the altered shape would cause knocking, as the cams would be too steep for smooth action. The period of opening is decreased and the advantage gained in the increased lift would be lost in the shorter time of opening. Wear on the valve motion would be excessive. Careful timing with the present camshaft should give you all the speed you wish. Otherwise, we would advise a new special camshaft.

GEAR RATIO

Editor Motor World:

Please advise us what gear ratio would give us the most speed in a Buick 23 on a mile dirt track.—FENNELL-YOUNG MOTOR CO., Chester, S. C.

The question of gear ratio is largely a matter of reserve power. Any decrease in the gear ratio increases the power required to drive the car. You should therefore remove all parts that offer resistance to the air and see that all running parts are free and well lubricated.

The motor should be overhauled and the ignition set ahead. You may even find it advantageous to fit the cylinders with alloy pistons and rods. But you should at all events remember that high speeds require more oil than the stock oiling system can supply, and some new provision must be made.

Now is the proper time to consider the gear ratio. If the car seems to develop plenty of power at high speeds, and yet does not develop the speed you desire, it would then be advisable to change the gear ratio.

Too great a reduction in the ratio is as bad as none at all, as the speed of the motor will be held down so low that it cannot develop its power. The ratio best suited to your needs is 3 to 1, and any reduction beyond that is not advisable.

DIRECTING THE TOURIST

The amount of time and energy wasted in giving directions to tourists is no small matter in the average garage. How often have you heard, or perhaps taken part in, the following conversation:

"You go up this street four blocks, turn to your left, and go straight ahead for 4 miles. Then you come to a Y, where you bear to the right. It's 20 miles to Theresa, and then you——" It is the daily gas pump duet, the tourist trying to find where he should go, and how far he must go, and the garageman trying to direct him.

The tourist then pulls away—with his brain a confused mass of roads, turns and distances. The garageman resumes his work, only to perform the same ceremony with the next sale of gasoline. Like as not, the second turn out of town will find the tourist asking the same questions to the farmer over the fence. Meanwhile, the garageman has lost 3, or 4, or 5 min. of his time.

Cornell and Barber, proprietors of the Hodskin Garage, at Canton, N. Y., answer these questions this way: Taking the home town as a center, they made up a table of all the towns, and their distances on the radiating roads. This was printed in the form of a pocket card, and has an advertisement of the garage on the reverse. Now when the question comes, a card is produced, and the route marked out. For example, suppose the objective point to be Saranac Lake. The first town struck is Potsdam, and a dot is placed there. Several towns lead from Potsdam, but the one desired goes through Nicholville, Moira, and on through the towns in sequence to Saranac Lake, the destination. A dot is placed beside each town on the route, and any points that require explanation are noted.

New All-Year Kissels

Include Sedan, Coupe, Victoria

The Victoria Town Car

The Sedan

The Coupe

Although the tops on all these cars are detachable, the door opens as a solid piece

FOR the winter of 1916-17 the Kissel Motor Car Co., Hartford, Wis., has brought out a number of improved All-Year bodies for the chassis model marketed under the title of Hundred Point Six. This is the smaller of the two Kissel sixes, and the larger will also be equipped with the All-Year tops, as before.

The new top line includes the sedan and coupe designs which were marketed last year, and in addition a town-car top mounted on a Victoria body. The price of the sedan and coupe bodies is $1,520, while the Victoria town car lists at $1,850. These bodies are about the same in construction as those of last year. They are distinguished by their easy convertibility from the open to the inclosed type, allowing the owner to have all the benefits of two cars for practically the price of one.

Selected white ash and elm are used for the main and door frames of the detachable top, with a covering of sheet steel. The roof is three-ply, paneled white wood under heavy duck canvas laminations. French plate glass is used for the windows, and these are set solidly into hard rubber to prevent leaks and to eliminate rattles. The standard tops are leather-lined, and special cloth lining can be secured at additional cost.

The body and the top are connected at ten points by rectangular bolts fitted into sockets, which are arranged to prevent any projections from marring the appearance. Between the body and the top is inserted a layer of felt anti-squeak material. In attaching the top the electric wiring is connected automatically by spring plungers. The winter bodies are all equipped with dome lights operated by push buttons.

All the Kissel bodies are fitted with divided front seats, a wide corridor allowing easy passage. Seventeen coats of paint are used, requiring twenty-two finishing operations. The concealed hinges are of pressed steel. Ventilation is secured by dropping the windows into the lower halves of the doors.

Burke Off the Road Forever

KOKOMO, IND., Aug. 19—Thomas H. Burke passed away at the Good Samaritan Hospital last week, age 55. As "Tom" Burke he was known to thousands throughout the State of Indiana and was one of the best known traveling men in the State. For some time past he has acted as local salesman for the Haynes Automobile Co.

$100 Fine for Gas Violation

LOUISVILLE, KY., Aug. 19.—Charged with selling gasoline in violation of an ordinance regulating weights and measures, the Roy E. Warner Co. was fined $100 in the Ordinance Court.

Five Days, Not Four

Through a typographical error, the story of the Marmon transcontinental run last week said that the time was 4 days, 18 hr. and 30 min. It should have been 5 days, 18 hr., 30 min.

Connersville Firms Combine

CONNERSVILLE, IND., Aug. 19—The Connersville Wheel Co. is winding up its affairs preparatory to consolidation with the Central Mfg. Co., also of Connersville. The stockholders of both companies are largely identical, and by combining under one management it is expected to effect certain economies.

Bower Pays 60 per Cent

DETROIT, Aug. 19—The Bower Roller Bearing Co. has placed its stock on a 60 per cent dividend basis. A quarterly dividend of 15 per cent was declared.

Digitized by Google

To All Ford Salesmen—

THE new Ford merchandising plan means a great deal to you—to each and every one of you men who have been selling cars in Ford branches. It may also mean a great deal to those of you who have been selling Fords in other than Ford branches.

Heretofore you have been salesmen—working for a salary. Now you have the opportunity of *becoming dealers.*

Heretofore you have been an employee; now you may become an employer.

You have been a salesman; now you may become a BUSINESS MAN.

This step may be the future for thousands of you. It surely is a big opportunity. Already a lot of you have formed partnerships or have set up alone and are retailing Fords. You already are classed as BUSINESS MEN.

And right here is what Motor World had in mind to say when it began this editorial—BE BUSINESS MEN.

If you do that, you will succeed; if you don't, the chances are you will fail. And if you fail you have thrown away the big opportunity that they say always knocks once at every man's door. It has knocked at yours—this month.

Heretofore you may have thought unkindly of some of the things the boss required of you. But probably he had a good reason.

Now it is you who is the boss and your employees may be thinking unkindly of you. And now you will see the reasons for the things you didn't understand when you were an employee. You will learn that there are TWO sides to EVERY situation. Profit by it. Work WITH your employees.

You can get men to turn the world upside down WITH you. You can't DRIVE them into doing anything worth while.

And then there is the BUSINESS side of the story.

Heretofore you have had no financial responsibility aside from drawing your salary. Now you are PAYING salaries, and you must get the wherewithal to pay these salaries.

Instead of chucking your work-a-day cares at 6 o'clock at night, you are going to carry them home with you, eat with them and sleep with them. But don't let them become too big a burden.

Think and plan. Work intelligently—but don't worry.

Above all, YOU ARE NOW AN EXECUTIVE. You are steering the ship, not pulling a rope. You must have an accounting system in your business, and if you don't find one anywhere else, there is a Motor World Simplified System of Accounting that will help you wonderfully.

You must run your business in a BUSINESS way. You must account for every cent that comes in and every cent that goes out. It is the ONLY way you can succeed.

And as to selling, GET THE PRICE. Henry Ford has drummed that into the industry for 13 years —Get the Price! And is Ford a success or a failure?

Remember this: If you cut a price once, you'll cut it twice. And every time you cut a price you are taking so much money out of your pocket and throwing it away. It doesn't even get you the good-will of the buyer. He laughs at you. He thinks you are a boob business man. AND YOU ARE.

As for succeeding, the men who have been trained in the Ford branches are more than a match for the many others who will set up as Ford dealers, because you ex-Ford men are Ford specialists. You are trained in Ford selling. You have a big handicap in your favor at the very start.

There is every reason why you Ford men should succeed. You should make more money than you ever made before in your lives. You can do it if you go at the job right.

PLAN YOUR SELLING.

Plan your sales story. Shape it for greatest effectiveness. Make it bang against the prospect's resistance. Get his money. Then handle that money like a BUSINESS man.

Don't imagine you can rent a salesroom, take orders and call the job done—for you can't. You must be

AN EXECUTIVE,
A BUSINESS MAN,
AN EMPLOYER,
A MANAGER OF MEN.

There is a wonderful future before you. Years stretch out beyond in an entrancing vista. You stand at the beginning of the Valley of Business. At the other end is Success.

The biggest opportunity that ever came your way is with you NOW. Go to it, Ford boys.

We're for you.

Tractor Accessories

Editor Motor World:

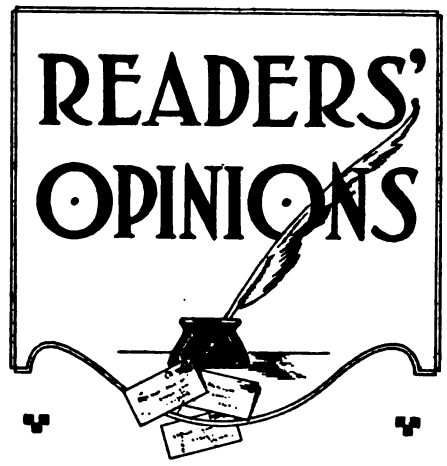
We congratulate you upon Mr. McMinn's article in the Aug. 9 issue of Motor World. It is a subject which you cannot too strongly place before the automobile accessory jobbers at this time, because this tractor accessory business is wide open to them now if they will go after it.

After talking with scores of tractor owners at the four tractor demonstrations held thus far, we find that scarcely one of them thinks of the implement dealer from whom he bought his tractor when there is a necessity for new piston rings, spark plugs, grease cups, cable, or re-equipment of any sort. It is the garageman or the town machinist whom he thinks of, and the garageman has first call, because he carries in stock at least some of the accessories which the tractor owner most frequently needs.

All the garagemen need is to be educated to actively go after this business. It is waiting for them. To be sure, the market as yet is comparatively small, but it is increasing so fast that by another year it will be a real factor in the business of any man in the accessory line who vigorously goes after it. When 40,000 people attended a tractor demonstration at Fremont, Neb., it is significant of the future.

The very service which tractors render necessitates more frequent replacement than is the case with pleasure automobiles. There is another side to it. The man who might postpone new equipment for an automobile cannot do so for his tractor. It must give 100 per cent service when he needs it. The garageman is the only person equipped to give him this service.

We have talked at the tractor demonstrations with tractor owners from the rice field of Louisiana to the Canadian line, and in not half a dozen cases have we found them depending upon the implement dealer for supplies or service. Now is the time for the accessory jobber to get his garage customers wakened up to this splendid opportunity.



McQuay-Norris Mfg. Co.,

Kissel Claims "All-Year"

Editor Motor World:

The following letter, copy of which was sent to all automobile manufacturers under date of Aug. 4, is respectfully referred to your attention:

"On account of one automobile manufacturer recently using our trade name, although slightly modified, we again wish to give due notice that:

"'THE ALL-YEAR CAR' is a Kissel trade name, used continuously in special display form in our advertising for the last 2 years. It identifies our product and is not legally applicable in whole or in part as a descriptive phrase to any car of other make.

"Last year we sent out a notice to this same effect and our rightful contention was acknowledged by most of the leaders of the automobile industry.

"We must therefore insist that 'ALL-YEAR,' used either with or without the word 'Car,' or otherwise modified, in advertising a competing car, is a violation of our just rights, and, if necessary, proper action will be taken to protect those rights.

"We feel sure you will agree that the English language is rich enough and broad enough to adequately describe other detachable tops or convertible cars without using our established trade name.

"Yours very truly,
"The Kissel Motor Car Co.,
"By G. A. Kissel, President."

Wants Name Protection

Editor Motor World:

The manufacturer of a nationally known and standardized trade-mark must of necessity jealously protect it. Our trade name, "LEAK-PROOF," has been nationally standardized through extensive advertising and the phrase "LEAK-PROOF" is our own registered trade-mark.

Like many pioneers in a new field, this company has suffered through misuse of our trade-marked name "LEAK-PROOF." The name "LEAK-PROOF" applies specifically and only to the piston ring manufactured by this company. It is not a descriptive phrase, pertaining to a type of ring. Yet some automobile and engine builders who are departing from the conventional type of one-piece ring have described their ring equipment as being leak-proof or of a leak-proof type. The injustice of this is manifest.

Therefore, we will appreciate your giving publicity in the columns of Motor World to this letter and the fact that there is no "LEAK-PROOF" PISTON RING except our patented, trade-marked product, which is not used by any automobile motor builder as universal equipment. "LEAK-PROOF" PISTON RINGS are sold only through jobbers and dealers for replacement purposes.

Yours very truly,
McQuay-Norris Mfg. Co.,
L. A. Safford, Second Vice-President.
St. Louis.

Registers 10,000 Cars in 60 Days

OMAHA, Aug. 17—Ten thousand cars have been registered in Nebraska within the last 2 months. At the end of July there were 86,690, and 90,000 is expected by the end of the year. In 1915 there were 59,000, which gives a 1916 sale of 31,000.

Now 1 Car to 13 Iowa People

DES MOINES, Aug. 19—There is now one car to every thirteen persons in Iowa—178,000 cars and 2,300,000 people. At the same date last year there were 141,000 cars, 1 to 17 of population. Last year 146,000 cars were registered in this State; this year it is expected there will be 190,000, a sale for the year of about 45,000.

Owen Continues as Denning Dealer

CHICAGO, Aug. 18—Owen & MacGowan have succeeded the Owen-Buxton Co., which handled the Reo until the Reo company recently established a branch. The new firm is distributing the Denning farm tractor, which was handled with the Reo. Headquarters are at 1532-34 South Michigan Avenue. The principals are O. C. Owen and F. D. MacGowan, Jr.

Finds Bargain Day Pays

MONTREAL, Aug. 21—The New Automobile Accessory Store, 11 Park Avenue, Montreal, run in conjunction with the Cadillac Motors, Ltd., has adopted department store methods and every Saturday is bargain day. Although this firm has only had one such advertised day, it has proved a success beyond expectations and demonstrates that a slight cut on a limited number of standard articles pays and at the same time it gives an opportunity of working off obsolete and poor selling lines. The firm in question ran good-sized copy which, among other things, referred the readers to the classified columns, wherein is stated the bargains for the day.

These bargains are restricted to Saturday only and any buyer coming in for one on Monday has to pay the regular price. The idea is to help increase Saturday sales, as this day is generally slack.

The Modern Garage, West Twenty-fourth and State Streets, Milwaukee, has broken ground for a new garage and machine shop. The building will be 45 x 125, one story, and cost $8,000.

Hugo A. Ernst, Oconomowoc, Wis., will erect a new garage and repairshop. It will be 70 x 100, two stories and basement, of brick and mill construction.

O. A. Jasperson, North Cape, Wis., has been appointed district agent for the Ford and has leased the Gill Garage, Burlington, Wis., as headquarters. Jasperson takes over Ford agencies held by numerous concerns in the territory.

Lochen & Heindl, West Bend, Wis., have changed the style of the business to West Bend Motor Co. Nicholas Heindl has sold his interest to Elmer Eberhardt, until now a Milwaukee city salesman for the Ford Motor Co.

The Pell Garage, Bloomer, Wis., is building an addition to its shop.

Arthur Manske, Lake Mills, Wis., will build a $5,000 garage at Wilton, Wis., having purchased the former Sorge Building for $3,000.

P. E. Lehmkuhl, Cumberland, Wis., who recently established a tire shop, will move into the Schultz Building. His floor space will be tripled.

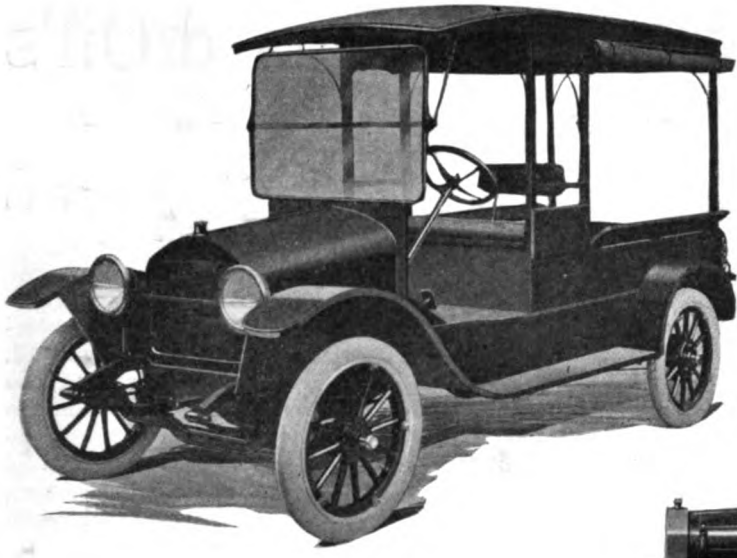
Hugh Agner, Burlington, Wis., is erecting a garage and repairshop on Chestnut Street. The difficulty of getting steel at reasonable prices made it advisable to change plans, so that only a first story and basement will be erected at this time, but foundations will be sufficient for three stories.

H. L. Bergstrom, DePere, Wis., has purchased a site at Broadway and Charles Street and will erect a fireproof garage, 60 x 100, of which 60 x 80 ft. will be equipped for machine and repairshop purposes. Two entrances are provided.

The Detroiter Garage, Platteville, Wis., has started work on its new garage on Main Street, 40 x 120, and two stories.

The Overland-Green Bay Co., Green Bay, Wis., organized recently to distribute Willys products in northeastern Wisconsin, will build a two-story salesroom, warehouse and service station, 100 x 125.

The West Side Buick Co., Milwaukee, has been organized to retail Buick cars within the city. E. M. Jordan and W. S. Schurman are proprietors.



The Reeke-Osmond Motor Car Co., 455-459 Broadway, Milwaukee, Wis., distributer of the Jeffery, has changed its corporate style to Osmond-Vogel Motor Car Co. Alfred Reeke, president, retired several months ago to become general sales manager of the Thomas B. Jeffery Co., Kenosha, Wis., and has disposed of his interests to N. E. Osmond and H. E. Vogel.

The Saxon Service Co., Fond du Lac, Wis., expects to take occupancy of its new garage and repairshop at 239 South Main Street Sept. 15. The building is L-shaped, with the Main Street section 40 x 106 and the other part 34 x 60 ft. The salesroom is 25 x 20 and the shop 24 x 40 ft. L. K. Price is owner.

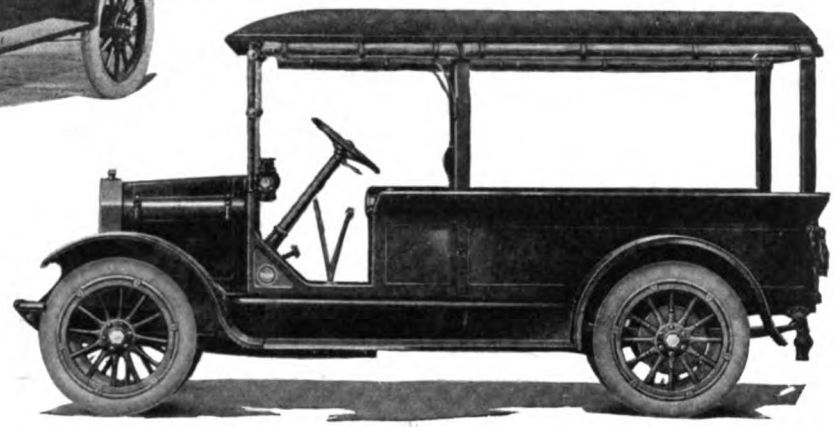
Three New Entries In The Light Truck Field



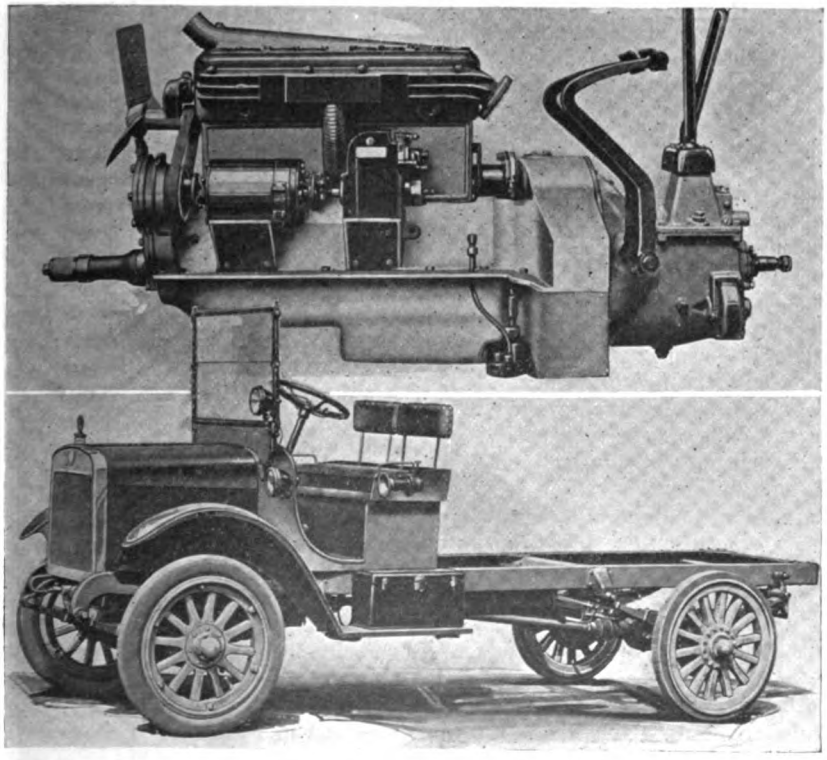
Ellsworth, Ranier and Denmo

Ellsworth Light Truck
(*Above*)

THE Mills-Ellsworth Co. of Keokuk, Iowa, formerly in the buggy business, has entered the light delivery field with the announcement of an 800-pound truck. The features of the truck are the light weight with its attendant economy and flexibility, rugged construction and low first cost.

The specifications are in part as follows: Motor—four cylinder, cast en bloc; bore and stroke, 3¼ x 5 in., developing 30 horsepower at 1800 r.p.m. Clutch—12-in. cone with six compensating springs. Drive—chrome nickel steel shaft with one universal joint through nickel steel pinion and gears to a full floating rear axle. The differential is mounted on annular bearings; the wheels on roller bearings. The wheelbase is 108 in., and the tread standard. The price, complete, with express body, $695, f.o.b. Keokuk, and any special body design will be furnished at a cost as low as the construction will permit.

Ranier 1-2 ton
(*Above*)



THE Ranier light delivery truck, which will appear in October, marks the re-entry of John T. Ranier and Paul N. Lineberger into the field of manufacture. The makers realized the demand for a truck of 1,000 lbs. capacity, designed in conformance with big truck experience and selling at a moderate price. One chassis only is produced, selling for $850, and may be equipped with bodies to meet any requirement. The illustration herewith shows one type of body, styled the model E and selling for $950 complete.

The 4-cylinder motor is a special Ranier design, block-cast and of the high-speed type. Both manifolds are cast integral with the crank case, giving compact construction and ready access to the cylinder heads. The bore and stroke are 3½ x 4½ in. and the motor is claimed to develop 28 horsepower at 2000 r.p.m.

The driving system includes a Borg & Beck 3-plate dry clutch, a Grant-Less 3-speed gearset, a two universal shaft drive and a Timken worm drive axle with the Hotchkiss drive.

The frame is of unusual size, being 4½ in. deep, of 5/32 in. pressed steel and properly necked in at the front to provide a short turning radius. The front springs are 38 in. long, 2 in. wide, and have seven leaves. The rear springs are 50 in. long and 2¼ in. wide, having eight leaves and are of a special construction developed by the Ranier Motor Corporation in co-operation with the Perfection Spring Co. A double-eye arrangement on the front ends of the rear springs gives additional strength and permits the truck to stay in operation if the top leaf be broken.

Tires are 33 x 4 all around, an unusually large size for this capacity and mounted on demountable rims. The 115-in. wheelbase permits the use of larger bodies than is customary on ½-tonners and gives 74 in. of load space back of the driver's seat.

Denmo 1 1-4-ton, $1385
(*Left*)

THE Denneen Motor Co. of Cleveland has entered the motor truck field with its first model—a 1¼-tonner that is to sell for $1,385. The truck has been designed to give dependable day-after-day service with a minimum expense for operation, maintenance and repair. With this in view, the units entering into the construction were chosen with the greatest care and tested over thousands of miles of roughest roads.

Here are a few of the specifications. Motor—Denmo-Wisconsin, 3¾-in. bore, 4 cylinders, and having a S. A. E. rating of 22.5 horsepower. A Pierce centrifugal governor, driven from the propeller shaft controls the vehicle speed, and not the speed of the motor. This permits the operator to run the truck at its maximum capacity, and yet prevents him from running at reckless speed. The ignition is by a model 44 Dixie high-tension truck magneto, and the starting and lighting is by a Splitdorf-Apple double unit. A single dry plate disk type Borg & Beck is used, and has all parts fully enclosed and protected.

$28 Lost Business Started Standard Oil's War on the Independents

Indiana Subsidiary Claims Independents Started 1915 Price-Cutting by Underselling It to That Amount

(Reprinted from the National Petroleum News.)

BECAUSE all the Independent marketers in Standard Oil Co. of Indiana territory for 6 months sold a carload of gasoline at the rate of 5 gal. a day in each State at a "cut" under the market price, amounting all told to $28.66 on the entire car over the entire period, the Standard Oil Co. of Indiana started its big war on the Independents of last year.

This is the summary of the "evidence" of "wholesale price cutting" by Independents presented by the Standard of Indiana to the Federal Trade Commission this summer in defense of its acts.

Investigated Tickets

Personal investigation of each tank wagon ticket submitted to the Commission by the Standard, made R. L. Welch, general counsel for the Western Oil Jobbers' Association of Chicago, showed that in the case of 6384 gal., the Standard either failed to show the different marketing conditions at points which accounted for a few mills difference in the price, lied, or some one falsified the tickets after they left the hands of the customers of the Independent marketers.

The remaining 2359 gal. was sold at $20.54 less price—all told—than the Standard said it should have been sold for. Of more than 1000 gal. of this Mr. Welch could secure no trace, for some tank wagon tickets neglected to state the town where it was bought; which left 1300 gal. on the sale of which Mr. Welch said any fair-minded person would probably approve.

In what seems to the oil trade to be a press agent story on behalf of the Standard of Indiana recently printed, the following paragraph appears, in which, for some unknown reason, is the name of only one jobber in the whole territory of the many accused by the Standard of price cutting:

What Stewart Claimed

Mr. Stewart (general counsel for the Standard of Indiana) exhibited to the (Federal Trade) Commission a quantity of tank wagon tickets, one of these showing that the Cedar Rapids Oil Co., on June 12, 1915, sold 165 gal. of gasoline at 8.8 cents a gallon against the witness' company's price of 10.2 cents. That was at Coggon, Iowa. Another ticket of the Cedar Rapids Oil Co. June 26, 1915, showed a sale at 8.8 cents. Mr. Stewart challenged any one to show that the prices his company sold at were different from those he gave the Commission, unless it should be an occasional cut on the part of a tank wagon driver.

This information was wired to the Cedar Rapids Oil Co., by Petroleum News, and Grant Collins, president of that company, at once replied, as follows:

June 12, 1915, ticket for 165 gal. to T. L. Donnely at 10.1.

June 26, 110 gal. to same party at 9.1. Our price at Coggon 10.1 and 9.1 in 100 gal. lots (the last drop in tank wagon market having gone into effect in that month). Their records must be damn lie or they hired some one to make the tickets. We are sending you the entire business done in Coggon in June, 1915.

The tank wagon tickets for that place were received. Careful inspection fails to show where the carbon copies of the originals have been tampered with in any way, and the carbons for the days named are especially clear. There were two other sales made in Coggon on the 26th of June, one to a minister and the other to the city, but both at the Cedar Rapids Company's market price, which appears from the Standard's statement to be 0.1 of a cent below the S. O. price.

Another statement credited Mr. Stewart in that press agent story was that the Standard's competitors in Kansas City got together and advertised gasoline at 1 cent below the Standard's market. What these Independents did advertise was 1 cent above the Standard's market.

He Passes Buck

Mr. Stewart, on behalf of the great Standard of Indiana, then, according to this press agent story, paid the company's compliments to its army of tank wagon drivers by referring to their "low order of intelligence" as follows:

"In handling the business of this kind we are dealing with the low order of intelligence that the average tank wagon driver possesses, and some discrepancies are likely to come in little 'warts' on the body of our business."

Here is the account by General Counsel Welch of his investigation into the Standard's price-cutting claims:

By R. L. Welch, General Counsel, Western Oil Jobbers' Association, Chicago, Ill.

The tentative report of the Federal Trade Commission prepared by Prof. L. H. Haney and submitted to the conference, held in Washington on June 13, 1916, contained an intimation that the Standard Oil Co. of Indiana led in reducing prices during the first half of the year 1915, generally in February and June. Presumably the finding was based upon the evidence which the Commission had gathered.

Deny Charge

L. J. Drake, vice-president, and Col. Stewart, director and general counsel for the company, very strenuously denied the charge and asserted that the Standard Oil Co. of Indiana had merely followed the Independent refiners and jobbers of the Middle West. Both gentlemen were very vehement and emphatic in their denial. Col. Stewart stated that he had a room full of tickets to substantiate his position, and that he would produce the evidence. He was requested to do so.

Although but 10 days were given by the Commission for the various persons interested in the report to produce evidence to overcome any of the tentative findings, and although it would be supposed that this room full of tickets would be so classified and prepared as to permit of their being promptly forwarded to Washington, more than a month was consumed in preparing and taking to Washington the vast aggregation of evidence which had been so industriously collected! The matter is really one of great importance, because the price recessions which occurred in the Indiana territory were the only ones in practically the entire United States. It has always been maintained by the Independent jobbers that these recessions in price were deliberate cuts in the market, made solely for the purpose of obtaining lost gallonage.

What the Standard Submitted

Covering the period from Jan. 1 to June 10, 1915, and in support of its contention that it reduced the market only for the purpose of meeting competition, the Standard of Indiana submitted to the Commission tickets showing sales in the aggregate by Independents of only 8743 gal. of gasoline during the 5 months and 10 days in controversy. This was the room full of evidence!

Digitized by Google

Figuring this gasoline at the prices submitted by the Standard Oil Co. (which, by the way, in many instances were incorrect), and taking every sale just as the Standard wished it to be taken, it was claimed that the Independents received for this gasoline $773.57, while, if it had been sold at the alleged prices of the Standard Oil Co., it would have brought $802.23, or a difference of $28.66. It is this $28.66 which we are to believe was responsible for the bitter commercial war which has been waging for a year and a half. The Independents committed the unspeakable crime of selling one carload of gasoline below the market in the short period of 160 days. They sold 794 gal. per State during this period, or less than 5 gal. a day in each State.

An Analysis

The statement of this absurd evidence contains its own answer, but an analysis of the evidence would not be amiss. The writer is not at liberty to disclose the names of the oil companies which it is claimed cut the market, but actual instances are referred to, and if the Federal Trade Commission shall hereafter permit, the names of the companies will be given. It should not be forgotten that the quantity discount price was in effect during nearly all of the period in question, and that the testimony before the Commission showed that about 90 per cent of the sales of gasoline were made at the quantity fill price.

It was, therefore, a very easy matter for the Standard to gather up a lot of Independent tickets at the quantity fill price and claim the Independents were below the market, although it was notorious that the Standard drivers at the very time were selling at the quantity price quite irrespective of the amount taken by individual purchasers.

Let us take typical instances of tickets. It was claimed that a certain oil company sold 50 gal. of gasoline at a point in Kansas for 11 cents a gallon when the market was 11.4 cents. The facts are that the Independent company maintains a tank station at the point in question, and that the Standard of Indiana does not, but is compelled to haul gasoline from another place. The price charged by the Independent was precisely that which the Standard would have charged had it a station at the point. Is this cutting the market?

Another sale by the same company of 200 gal. at 9.5 cents when the Standard's price was 9.9 cents is charged. The circumstances were absolutely identical. And the difference in price would have to be made no matter what the market may have been. Can the Standard Oil Co. of Indiana legitimately claim that an Independent shall have a varying scale of prices at its tank stations, because the Standard happens to have no tank station at one competitive point and must haul goods across the country?

Employee to Blame

Here is a real cut price. A jobber was said to have sold 40 gal. of gasoline at 10 cents when the price was 11 cents. It was a fact. A dishonest agent made the price. He was discharged for falsehoods which he told the company. The difference between the market price and the amount charged on this sale was collected from the agent. Was this a deliberate cut of the market?

Again, it was charged that an Iowa jobber sold 55 gal. on March 20 for 10.9 cents when the price was said to have been 11.9 cents. No place was given on the tickets, so that it was impossible to either deny or verify this sale. The quantity price in Iowa on March 2, 1915, was around 9.6 cents. Where on earth did the Standard Oil Co. of Indiana have a price of 11.9 cents on March 20?

A prominent jobber was charged with having sold 55 gal. of gasoline at 11.1 cents when the price in fact was 11.2 cents. This jobber has 350 stations, and it is the only sale charged against him from the first of January to June 10. One single market irregularity of 0.1 of a cent! The company in question supposed the sale was made at the market, and the trifling error was corrected. Is this a cut of the market?

A company in Kansas is said to have sold 55 gal. of gasoline at 11 cents when the price was said to have been 11.6 cents. This sale is a positive joke. The jobber had never met the quantity fill price. The Standard agents were selling all around him in large and small quantities at 10.5 cents, which was the quantity price. In other words, this jobber was 0.5 cents above the market.

Grades Differed

A jobber in Wisconsin, it is claimed, sold 80 gal. of gasoline at 11 cents when the Standard's price was 12 cents. The comparison was made between two different qualities of gasoline and the sale was at the market.

Another jobber is said to have sold 55 gal. at 11 cents when the price was 11.4 cents. The sale is absolutely and flatly denied by a reputable company, which states in the strongest terms possible that under no circumstances during 10 years of business has the company ever deviated from the established market.

The next ticket was issued by a company of notorious affiliation with the Standard Oil Company. Let it make its own defense.

A sale in Oklahoma of 110 gal. of gasoline at 10.7 cents on March 22 was charged to the Independents. The Standard Oil Co. of Indiana is not in that territory. In addition, the sale was at the market price!

A sale in Wisconsin of 125 gal. at 10.1 cents, when it is claimed the market was 10.4 cents, was charged to the Independents. It was an out-of-town delivery. Will anybody in the oil business rise up and tell us what the Standard's market price is when it makes out-of-town deliveries in this territory?

Out-of-Town Price

Another sale of 75 gal. was said to have been made at 11.1 cents when the market price was 12.1 cents. The purchaser lived at the end of a delivery route and was willing to take more than 100 gal. of gasoline. The driver had only 75 gal. in the tank wagon and sold it to the purchaser at the quantity price. Was this a cut of the market?

At a point in Kansas it was claimed that a refining company sold 100 gal. at 9.4 cents when the market was 9.9 cents. Investigation shows that the market in fact was 9.3 cents, and the sale was above the market.

A prominent jobber was said to have sold an unknown quantity of gasoline at a point in Iowa 0.5 cent below the market. The jobber absolutely has no station at the point named. The sale ticket, if there be one in existence, may have been issued at some point where the price was perfectly proper.

Sales of 2635 gal. out of this carload of gasoline sold in the 160 days were claimed to have been 1 cent below the market. Over a quarter of the sales, therefore, were only 1 cent under the market, and it is claimed for them that they were deliberate price cutting. Does one need to answer the assertion?

Some evidence on a par with that which has just been analyzed was submitted to show that even after June 10 the Independents demoralized the market. Let us take a good instance. A large jobber with stations scattered through Iowa, Nebraska, Missouri and Kansas was claimed to have cut the market seven times! The evidence submitted by the jobber in question shows conclusively that the statement was absolutely false, except in one instance a new agent made a sale 1 cent below the market, and he was very promptly charged with that 1 cent and compelled to pay it.

The evidence submitted by the Standard Oil Co. of Indiana was beneath the dignity and standing of so great a corporation.

Who is cutting the market now? Who has cut it ever since June 10? Who has maintained a lower level of prices in eleven States than in all the rest of the United States? Who has cut the market not on thousands of gallons, but on millions of gallons of gasoline?

Ford Salesmen Flock Into Line as Dealers

Ex-salesmen, Thrown Out of Jobs By New Merchandising Plan, Set Up in Business

NEW YORK, Aug. 21—With the adoption of a new merchandising policy by the Ford Motor Co., hundreds of Ford salesmen, instead of finding themselves out of jobs, have found new futures for themselves in that they may now become dealers. In many cases, Ford salesmen have set up by themselves and in other instances have formed partnerships with their co-workers. In still other cases, they have readily obtained positions with the many new Ford agencies that are being established.

The unrestricted territory plan has occasioned the formation of many agencies even by those not heretofore connected with Ford branches, and many garagemen, equipped to give service, have become Ford retailers. The change is most noticeable in those cities where there have been Ford branches. In towns where representation has been by a dealer only, new agencies as yet have not been established in any great number, and sometimes not at all.

One of the greatest changes will be in America's biggest city, New York. In Manhattan it is estimated there will be twenty-five or thirty, and in Greater New York—which includes Brooklyn, Manhattan, The Bronx and Staten Island—fifty or more.

In Chicago there will be about thirty Ford dealers, who will handle 10,000 Ford cars during the coming year. None of them will be allowed more than 500, and the minimum, according to the plan, will be ten.

In St. Louis, nine new agencies are to be formed, making ten, including the Johnson Auto Co., the original Ford retailer. Several of these agencies have held openings, served lunch and entertained the public.

While additional appointments may be made, there are already in Milwaukee ten and in the suburbs two. In Wisconsin and upper Michigan the business in the immedate future will be handled by 254 dealers, of whom 238 are in Wisconsin and sixteen in upper Michigan. Many of these have been handling the Ford. The branch had thirty salesmen, most of whom have already made new connections.

In Louisville, Ky., four dealers have already been appointed, and in Lowell, Mass., the agency has been given up by Stephen L. Rochette of the Lowell Motor Mart and has been taken over by Harry Pitts of the Pitts Auto Supply Co.

In Connecticut the number of dealers has been increased from twenty-two to thirty-eight. The Elmer Automobile Co. has controlled the territory and states that it plans to operate much as in the past. It has headquarters in Hartford, with branches in Manchester, New Britain, Willimantic, Torrington and Winsted. John M. Butler, manager of the Elmer company, said he expected to dispose of 28,000 cars during the next 12 months. Dealers who heretofore have had more than one town, will concentrate on one town, which means an increase of 73 per cent in the number of dealers.

It is stated that in Columbus, Ohio, the Ford branch has, where possible, given preference to its former sales force. In fact, outside of one dealer, who formerly handled the county, every Ford agency in Columbus will be controlled by former Ford salesmen. There will be eight in all in the city and quite a few in the county, although it is said that most of the country dealers will be unchanged.

Ten of the fourteen Philadelphia salesmen have left the branch to open agencies.

Conditions similar to these exist throughout the United States, and while the unrestricted territory plan will vitally affect some dealers and distributers, there are instances in which the actual operation of the plan will be less revolutionary than its theory indicates. This belief seems to hold true among dealers especially with regard to country districts.

SOME OF THE NEW FORD AGENCIES

St. Louis

Johnson Automobile Co., 3667 Olive Street.
Mendenhall & Sievers, 2315 Locust Street.
Ayres Auto Co., 1045 Grand Avenue.
Ollie Haupt Motor Car Co., 4125 Olive Street.

Aug. 19, 1916	70	41:35.09†	101.01†	5,000

*Total time for three heats and average speed.

†Total time for two heats and average speed.

CHICAGO SPEEDWAY, Aug. 19—With the same assurance that has marked his driving in every professional race on the local speedway, Dario Resta drove his Puegeot to victory again to-day, this time winning the 50-mile American Speedway Grand Prix.

He drove against a field that he apparently did not fear and after taking the first heat of 20 miles in 11 min., 42.6 sec., he went into the 50-mile final and won easily in 29 min., 52.49 sec., or an even hundred miles per hour. In all, he drove 70 miles in 41 min., 35.09 sec., at an average speed of 101.01 m.p.h., pulling down the big end of the $10,000 prize money—$5,000—at the rate of $71.43 a mile.

There is a certain sense of security that is bred of experience, and if this is applicable to racing, then Resta's previous record on the Chicago speedway may account for the assurance with which he drove to-day. With to-day's win he has chalked up five victories in as many starts on the local board oval; in fact, he has been winner in every race held here with one exception—an amateur drivers' event. In all, he has driven 1054 miles on the Chicago track in competition and for this has taken down $51,000 in cash prizes as well as four trophies.

The winners of the heats, their times and speeds follow:

First—Resta	11:42.60	102
Second—Galvin	11:37.72	103
Third—Lewis	12:07.30	99
Fourth—Buzane	12:27.68	96.5
Fifth—D'Alene	Ran one lap.	

As an added feature, the two Packards that were scheduled to start in the race but which were withdrawn 2 days ago, were put on for a 10-mile exhibition, with Ralph de Palma driving one and W. Rader, one of the Packard engineering corps, the other. De Palma brought his car across the finish line somewhat in advance of Rader, Ralph's time being:

		Speed, m.p.h.
2 miles	1:16.70	94
4 miles	2:23.70	107
6 miles	3:30.35	108
8 miles	4:36.00	110
10 miles	5:43.50	107

Average—105 m.p.h.

In his qualifying trial Resta set the official course record of 113.5 m.p.h., a fraction better than Barney Oldfield did this summer with his front-drive Christie.

The crowd was not large and it is doubtful if a profit will show after prize money and the expenses of administration of the race are paid.

King Running For Two Weeks

WASHINGTON, D. C., Aug. 19—An eight-cylinder King touring car is making a 2-weeks' non-stop run on the boulevard between this city and Baltimore. The start was made at noon Aug. 12, from the plaza fronting the United States capitol, and at the conclusion of the first 168 hours' run had a mileage of 3515 miles. The gasoline consumption has averaged 12.126 miles to the gallon. Edelen Bros. of this city and J. Stewart Smith of Baltimore are promoting the run.

King Goes 616 Miles In Actual Tour Test

Sends Car From Pittsburgh to Milwaukee to Show Sample of Owner Performance

CHICAGO, Aug. 21—In order to demonstrate the performance of the King eight under actual touring conditions, the King Motor Car Co. has just completed a tour economy run from Pittsburgh to Milwaukee. The run was under A. A. A. supervision.

The distance is 616.4 miles and the car averaged 14.658 miles to the gallon of gas and 962.4 miles to the gallon of oil. The run was in charge of F. E. Edwards, of the Technical Committee of the American Automobile Association, with H. A. Tarantous of New York as observer. The car left Pittsburgh at 8 a. m., Aug. 14, and arrived at Milwaukee 3.41 p. m., Aug. 15, averaging 19.44 m.p.h., including stops, and 22.67 m.p.h., excluding stops.

Controls to take on fuel had been selected in advance and the gasoline used was obtained from stations at these controls. The car was a regular stock, seven-passenger touring model. The car with baggage and five passengers weighed 4250 lb.

A Boyce motor-meter and a spot-light were the only equipment carried that is not regular.

How Gasoline Was Measured on the King 8 Test

F. E. Edwards, A. A. A. official, holding graduate and note book; T. P. Chase, chief engineer for King, holding certified gallon measure and funnel. Every gallon was measured in this copper can, being filtered through filler. In case gasoline was left in copper gallon can it was then measured in graduate, and it was possible to obtain the fractions down to an ounce. Every notation of fuel, work done, time of arrival and departure in all cities passed through or stops made was recorded

Gasoline Continues to Decline in Price

Falls Cent to Two Cents All Over Country—Trade Feels Further Drop Is Coming

NEW YORK, Aug. 22—Gasoline continues to drop in price. No universally satisfactory reason has been given, although many authorities say the decline is due to the digging of new wells.

A belief prevails in certain quarters that the price will reach 20 cents a gallon in nearly every section of the country within 2 weeks. The price has been falling steadily the past week throughout the Middle West and Far West from Chicago to Denver.

In most cases, the Standard Oil Co. is in competition with independents and either one leads in the cutting. Nearly all the reductions are a cent, although in a few instances they have been 2 cents. Reductions in the East have not been so high as in the West. Some of the prices follow:

Chicago and Des Moines, 17½.
St. Louis, 16.9 to 17.9.
Rocky Mountain section, 22.
Columbus, Ohio, 22.
Milwaukee, 17.6, 18.6.
Buffalo, 23.
Albany, 25.
New York, 25.
Louisville, 20.
Pittsburgh, 22, 23.
Detroit, 18.

The Texas Co. to-day made reductions of 1 cent, tank-wagon basis, to meet competitors in the following territories, where the prices are:

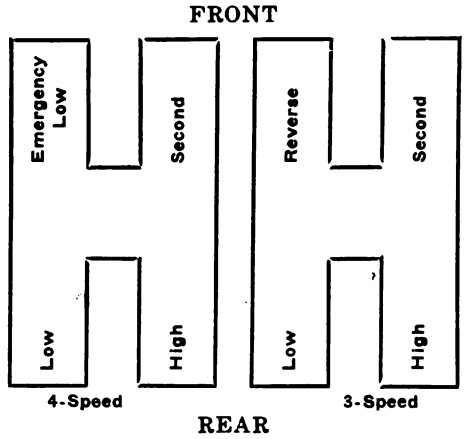
Illinois, 17½.
Minnesota, 18½.
Missouri, 16.9 and 17½.
Florida, 22, 23½.
Georgia, 22, 25.
Louisiana, 18½ and 20½.
Mississippi, 20½, 22½.
Alabama, 22½, 26.
Ohio, 21.

Entries In For Cleveland Show

CLEVELAND, Aug. 19—The following companies will have exhibits at the exposition and fair to be given by the Cleveland Chamber of Industry at Edgewater Park, Sept. 2 to 9, inclusive:

Loveland Co., Saxon; Cuyahoga Sales Co., Chandler; Safe Motor Sales Co., Federal and Vim trucks; Jackson Sales Co., Jackson; Euclid Motor Co., Paige; Main Auto Sales Co., Grant; Ford Motor Co.; Forest City Garage Co., Inter-State and Paterson; Lucas & Christianson, Mitchell; Packard-Cleveland Motor Co., Packard; Peerless Motor Co.; Cleveland-Cadillac Co., Cadillac; Winton Co., Central Auto Co., Ford; National Garage Co., G. M. C. truck; Ohio Auto Sales Co., Oakland and Detroiter.

Among those exhibiting accessories are Brown Spring Oiler Co., Equalizer Mfg. Co., Kelley-Springfield Tire Co., Fen Far Co., Globe Machine & Stamping Co., American Ball Bearing Co., Cleveland Automobile School, M. & M. Co., National Carbon Co., Pull-U-Out Co., Smith Form-A-Truck Co., Lubric Oil Co., Banner Tire & Supply Co., Presto-Cloth Mfg. Co. and Willard Storage Battery Co.



Judge Gets Own Evidence

BOSTON, Aug. 19—The first judicial decision on the headlight law, where a judge went out for himself and made an inspection of a device, was rendered in the Boston courts yesterday, when Judge John Perrins, Jr., stated that the Warner Lenz complied with the Massachusetts law. The importance of the decision lies in the fact that a judge has really passed upon the matter after a demonstration. Heretofore the judges sat in court and heard policemen say a light dazzled even if it had a device on it, and the officer's word was accepted and the motorist fined or his case filed.

Is In Easy-Riding Business

KANSAS CITY, Aug. 19—Making cars—particularly Fords—ride easier, is the business of Rice's Motor Shop, Kansas City. This company has built up quite a business graphiting and taping the springs of Fords. The leaves are first separated and cleaned and then a coating of Gredag is spread between them. The spring is then tightly wrapped all over in ordinary tire tape to keep the lubricant in place and prevent the ingress of dirt. It generally requires about 4 hr. to do two springs on a Ford and the charge to the owner is $3. The springs of larger cars also are treated at from $3 to $4 for two springs, according to the size of the car.

Recommends Same Gearshift for All Trucks

The above illustration of a gearshift quadrant shows a recommended form of standard track gearshift positions that would make a driver at home on any truck. The recommendation is made by the Truck Standards Division of the S. A. E. Standards Committee. On the 4-speed the location of the reverse is left optional; the main idea has been to get high, second and low in the same relative positions.

Abbott Car Factory to Go to Cleveland

Consolidated Car Co. Raises Capital and Becomes Abbott Corp. and Will Leave Detroit

DETROIT, Aug. 21—The Consolidated Car Co., manufacturer of the Abbott-Detroit, has been reincorporated as the Abbott Corp., and the capital stock has been increased from $500,000 to $1,250,000. The larger stockholders in the concern are F. C. Hull and A. W. Gardiner of this city, and F. C. Hull of Toledo. It has been definitely decided to remove the business of the Abbott Corporation to Cleveland, where a factory has already been secured with facilities for increasing production over the 15 to 20-car-a-day output possible in the present factory. Difficulties in getting materials and the labor situation here are given as two reasons for the change, although Messrs. Gardiner and Hull have material financial interests in Cleveland, according to M. J. Hammers, vice-president, and this move will, therefore, serve to group the holdings of those principally interested and provide the best of financial and commercial support for the Abbott concern. The personnel of the company will remain the same, with the exception that an executive officer will be appointed to succeed C. L. Lewis, who recently retired from the presidency to become affiliated with the General Engineering Co.

Sounds Reasonable

DALLAS, Aug. 19—J. W. Frawley, head of the Frawley Motor Co., Reo and Ford distributer, tells it on Roger Stewart. Stewart hints that "Bill"—who is Frawley—was the man who did the trick.

The story goes that in a certain Texas town there was a certain very sandy hill. This hill was the bane of all salesmen, and prospective purchasers had a habit of demanding that the car they were figuring on pull the hill in high. No car ever has done it yet.

Stewart, so Frawley says, got hold of a prospect who made such a demand. He had made the similar request of other salesmen and they hadn't closed a deal with the would-be buyer.

"I want to buy a car," he told Stewart, "but I want a test first."

"All right, sir," suavely responded Stewart; "what shall it be?"

"Can you pull such and such a hill on high?" asked the would-be and skeptical purchaser.

"Why, man," said Stewart, with the greatest of confidence, "I can pull that hill backwards."

And he did, and the sale of the car was made.

New England's System Seems to Be Changing

Distributers of Boston Are Reaching Out and Establishing Many Branches

BOSTON, MASS., Aug. 19—Will Boston eventually be the big distribution point for New England, with many of the men in the other cities managers instead of dealers? That is the question some of the dealers in the smaller cities will have to answer, judging by the trend of events where the big fellows are gradually absorbing the smaller ones.

Worcester is a good example of one such instance of the smaller giving way to the larger. Several of the dealers there have been absorbed by the Boston branch.

Alvan T. Fuller, who has the Packard, with headquarters at Boston, reached out and took over the Worcester territory. The Stanley company was another that reached out and took over the business there. So did the Metz, but it has decided to make a change again to an agency and is looking for one now. But the Henley-Kimball Co., Boston, took over the Hudson business here, and the Henshaw company slipped in and got the Worcester territory just at the time a deal was being closed to have it handled by an agent. Studebaker reached out and added Worcester under Boston jurisdiction, and the Oldsmobile agency is said to be directed from the Hub.

Last week the Connell & McCone Co. of Boston, Overland distributers, took over the Overland-Winton Co. agency at Worcester, and the New England Jackson Co. at Boston directs the destiny of the Worcester man. The Buick agency comes under the Noyes-Buick Co. of Boston, New England wholesale agents, as does all the Buick agents, but it is supposedly a distinct agency. Some of the other dealers who have popular cars at Worcester are wondering if the handwriting is on the wall for them.

Another place that will very likely be added next is Providence. That city represents the entire Rhode Island territory and part of Connecticut and southern Massachusetts. Alvan T. Fuller directs the Packard affairs there through his subordinates. The Becker-Stutz Co. of Boston, that now includes Springfield in its territory, has gone into Providence. Some time ago the Peerless at the latter city was under Boston.

With that city dominated, the next place to be added would be Portland, Me., the city on the entrance to that State. Here, again, Fuller has anticipated others, for he has the Packard interests for that city. Some of the Boston dealers work in conjunction with their Maine dealers there, so that it would be an easy matter to take over a territory. Manchester, N. H., might be added, as it is the big city of that State, and again we have Fuller there with the Packard. The Boston Cadillac agency also controls that in Manchester.

Where the desirability for controlling these smaller places comes in is in the moving of used cars now taken in trade so freely. If an agent has three or four places, he can take some used car of a particular make, say, at Portland, knowing that he can get rid of it at Providence to some one, or at Worcester, and vice versa. In other words, he can keep moving his cars in a circle, and so get the greater margin of profit. It means some financiering, but as Fuller has made it a success others are now being innoculated with the idea since they have realized how great is the demand for their lines in the outside territories.

Why Marmon Seals Were Broken

INDIANAPOLIS, Aug. 18—The Nordyke & Marmon Co., one of whose cars recently made a record transcontinental run with A. A. A. seals attached to parts, states that the reason some seals were missing or broken was that they came in contact with the road and were torn away. A story last week in Motor World mentioned the breaking of the seals, but did not state why. Standard equipment wire wheels were used, and instead of changing tires complete wheels with tires were changed, which explains the disappearance of the seals that had been affixed to the wheels.

Draw For Milwaukee Show

MILWAUKEE, Aug. 19—Forty Milwaukee car and truck agencies have been granted space for the State Fair motor show to be conducted under the auspices of the Milwaukee Automobile Dealers, Inc., in Machinery Hall, at State Fair Park, West Allis, Milwaukee County, during the week of Sept. 11.

Drawing for space took place at the regular August meeting at the Milwaukee Automobile Club. At this time the by-laws were amended to the effect that local manufacturers of either pleasure cars or trucks who have retail sales departments may become members of the M. A. D. As a consequence, the Stegeman Motor Car Co. and Sterling Motor Truck Co., both of Milwaukee, have been elected to membership. Four new retail agencies also were admitted to membership as, follows:

Saxon-Reynolds Co., 124 Mason Street, Saxon; Stephens-Adams Motor Sales Co., 495 Broadway, Case; Olson & Pauly Automobile Co., 441 Jackson Street, Ross 8; Rademacher & Jaeger, 2405 Vliet Street, Paterson.

Service to be Fixed by Each Ford Dealer

And No Dealer Can Get More Than 500 Cars—Ford to Give No Service at All

DETROIT, Aug. 22—Supplementing the exclusive publication in last week's issue of the details of the new Ford selling plan, which is revolutionary in the automobile industry, complete information as to the workings of the new method of marketing Fords has now been secured.

The plan is really very simple in its workings, and requires only that the prospective dealer have financial responsibility and a garage at which he can take care of service for the car. The dealer can interpret the word service in any way he sees fit. Possibly Ford will continue to give service for some months yet at the various branches and assembly plants throughout the country, but when a man comes for service he will be told that that time is the last from the Ford company direct.

The number of cars that a dealer may secure for the year is based upon an estimate of his possibilities of selling them, and the maximum allotment that any dealer can get is 500 cars. The reason for this limiting of the number is obviously to prevent any strong dealers from monopolizing the retail selling to the detriment of the less strong ones. There is a regular discount per car, and if the dealer meets the estimated number of cars he has arranged for per month he will get a bonus on each car at the end of the fiscal year. If, for instance, a dealer contracts for twenty-five cars a month for the year and takes this number, his discount per car is increased by a bonus payment.

The number of agencies in any city or locality will be based upon the population and experience in that locality. In Detroit the maximum number is to be twenty-five agencies, and this will vary for other points. Already some eighteen dealers are either selling or getting ready to take contracts.

The contract limits the dealers to selling cars in Detroit, Highland Park and Grosse Point, which are really all a part of Greater Detroit. Thus, in any locality the dealers will have to confine themselves to certain selling fields as per their contracts. Dealers must do their own advertising.

This is all there is to the plan. Ford salesmen and other branch men affected by the change will be taken care of by the factory in the event they elect to stay with the Ford company.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

H. B. McMaster, general manager of branches of the Berger Mfg. Co., Canton, Ohio, has resigned to become vice-president and general manager of the Gordon Tire & Rubber Co., Canton, Ohio.

H. T. Boulden has resigned as sales and advertising manager of the Chase Motor Truck Co., Syracuse, effective Sept. 1, to become sales director of the Selden Truck Sales Co., Rochester, N. Y. He will be succeeded in the Chase organization by S. E. Blackley, who has been Boulden's assistant. R. H. Salmons will continue as secretary of the Selden organization.

Theodore F. MacManus will leave the Erwin & Wasey Co., advertising company, Aug. 31, and as Theodore F. MacManus, Inc., will handle the advertising of the Cadillac, Dodge Bros. and Hupp companies. His offices will be in the Kresge Building, Detroit.

F. A. Wager has been appointed sales and advertising manager of the Michigan Auto Trailer Co., Detroit, builder of light and heavy duty trailers for cars and trucks. Wager left a similar position with the Swinehart Tire & Rubber Co., Akron, Ohio, and was formerly assistant sales manager for the Regal Motor Car Co., Detroit.

L. Trevor Hudson, vice-president and wholesale manager for the Hudson-Phillips Motor Car Co. of St. Louis, has left that company to become general sales agent of the Memphis-Overland Co., at Memphis, Tenn.

D. P. Edwards has resigned as comptroller of the Olds Motor Works to become connected with the Gier Pressed Steel Co., Lansing.

Don S. Devor, formerly assistant factory manager of the Olds Motor Works, has been made production manager.

John Scott, formerly superintendent of final assembly, has been made factory manager of the Olds Motor Works.

Lewis M. Browne has been placed in charge of the Northwest sales division of the Anderson Electric Car Co., Detroit, with headquarters in Minneapolis. Previously he was connected with the Eastern sales division.

N. E. Wahlberg, chief engineer of the Oakland Motor Car Co., has resigned to take a similar position with the Nash Motors Co., Kenosha.

D. T. Hastings has become the engineer for the Empire Automobile Co., Indianapolis. Formerly he was a member of the engineering staff of the General Motors Co.

S. B. Howard, formerly Eastern and Foreign representative of the General Motors Co., has been appointed New England sales manager of the Denneen Motor Co., Cleveland. Edward P. Strang, formerly with the Kirk-Latty Mfg. Co., Cleveland, has been made Middle Western sales manager.

J. M. Barker has joined the sales force of the Kentucky Wagon Mfg. Co., Louisville, Ky. He will represent the Old Hickory truck in Alabama and Georgia. He formerly was connected with the I. H. C.

B. D. Zimmerman, president of the Overland Sales Co., Chicago, has acquired an interest in the Milwaukee Auto Engine & Supply Co., Milwaukee, and has been elected its secretary and treasurer. He will assume his new duties in the near future.

Lloyd P. Jones has been made sales manager for the Federal Brass Works, Detroit. For the past 5 years he has been connected with the American Bronze Co., as manager of its Western office since 1913.

L. G. Dodge has resigned as general sales manager of the Houk Mfg. Co., Buffalo, to take effect Sept. 1.

Edward King, for several years manager of the B. F. Goodrich Co.'s Boston office, has been promoted to the administration force at the factory. O. E. Hoeger, for several years St. Louis manager, has been transferred to Boston. C. E. Littlefield, who had charge of advertising and publicity in Boston, has been promoted to the factory advertising department. King was presented with a watch by his associates.

Men Scarce in Ohio

COLUMBUS, OHIO, Aug. 19—F. T. Price, president of the Ohio Automobile Trade Association, is in receipt of dozens of letters from garage owners and managers of repairshops, asking for mechanics. It is almost impossible to get mechanics in many places in Ohio. One of the reasons for this state of affairs is the mobilization of the Ohio militia, which took away many mechanics.

Another Rap At "League" Bidwell

BUFFALO, N. Y., Aug. 19—A fraud order has been issued by the Post Office Department at Washington against the Buffalo Automobile Supply Co., 2966 Main Street, Buffalo. This is the third fraud order of a series against companies with which A. C. Bidwell is alleged to be associated.

The first was directed against the International Automobile League, Inc.; the International Automobile League Tire Co., and A. C. Bidwell, president of both concerns. The second was against the Robert J. Connelly Co., alleged to have been organized to continue the business against which fraud orders had already been issued.

Inspector William A. Golden claims that the Buffalo Automobile Supply Co. was started as a part of the plan to carry on the business fostered by Bidwell as president of the original companies.

Can You Help Him?

Editor Motor World:

If you know of any list of standard prices for certain classes of repair work, kindly tell us where we can get them.

W. W. Taylor.

722 Marshall Street, Shreveport, La.

Forbids Use of Trailer

MILWAUKEE, Aug. 19—The City Council of Escanaba, Mich., has passed an ordinance prohibiting the use of trailers on motor trucks. The same law fixes the maximum speed of motor trucks at 8 miles an hour and the maximum load of any vehicle at 8000 lb.

Capt. Lewis Pays Up Every Cent of Debts

Creditors of L. P. C. Get 100 Per Cent Although 76.3 per Cent Is Paid By Lewis Himself

RACINE, WIS., Aug. 19—Capt. William Mitchell Lewis, former president of the Mitchell-Lewis Motor Co. and later the moving spirit in the L. P. C. Motor Co., Racine, Wis., has fulfilled his promise to creditors of the L. P. C. company that all claims would be paid at 100 per cent of value, regardless of the amount accruing from the sale of assets of the company.

The L. P. C. Motor Co. made a voluntary assignment 11 months ago. At that time, Capt. Lewis gave creditors his personal pledge that none would lose even a penny in the transaction. On Aug. 16, last Wednesday, the assignee, F. Lee Norton, filed in Circuit Court his report of receipts and disbursements, amounting to $102,000. It was stated that preferred creditors were paid in full some months ago, and checks were mailed to other creditors on Aug. 15 for 100 per cent of their claims, although the sale of assets gave general creditors only 23.7 per cent of claims. The referee states that Capt. Lewis gave him his personal check to make up the balance, amounting to 76.3 per cent, thus making it possible to liquidate every cent of the indebtedness.

The Lewis family recently disposed of its holdings in the Mitchell-Lewis Motor Co. to the Mitchell Motors Co.

Widen the St. Louis Row

ST. LOUIS, Aug. 19—After months of patient and persistent effort by the motor car dealers, the city has begun widening Locust Street by 6 ft. This thoroughfare is almost entirely given over to automobile and accessory dealers. The curb will be set back 3 ft. on each side of the street. The first work has been undertaken by the City Forestry Department in cutting down the trees within the 3-ft. limit. These men work from midnight until 8 a. m., so that the work will not impede traffic. The dealers are disappointed in that the work will not be completed in time for the October "open week." So that the street may be kept open, only half of the street will be surfaced at a time.

To Sell Twin City Speedway

ST. PAUL, Aug. 21—The Twin City speedway will be sold in portions, according to demand, as nobody seems to want to buy the equity. P. W. Herzog is receiver.

Gasoline Still Being Probed By Uncle Sam

Trade Commission Has Not Dropped Its Inquiry Into Charge of Price Manipulation

WASHINGTON, D. C., Aug. 19—The Federal Trade Commission met again to-day to consider the gasoline phase of its oil investigation that has been in progress for several months. It announced that the report on gasoline would be issued shortly, but those in close touch with the commission say the report will not be submitted before the adjournment of Congress.

That the commission was co-operating closely with the Department of Justice also was learned. When the investigation was first inaugurated, such co-operation was planned; any specific complaints in regard to gasoline prices were to be turned over to the trade commission and anything of intrest to the Department of Justice was to be called to their attention.

G. C. Todd, assitant attorney general in charge of anti-trust prosecutions, met with the commission to-day and listened to some of the information it has collected to report to Congress on the causes for the rise in the price of gasoline. The Department of Justice has kept an eye on the companies into which the old Standard Oil Co. was dissolved under the Supreme Court decree several years ago, but never has discovered evidence to show that decree has been violated.

Todd declined to discuss the value of the evidence collected by the trade commission, but it was understood that so far the Department of Justice had not determined whether there was new information in Government hands to warrant proceedings.

It is understood the commission's report, insofar as it has been completed, deals at length with price differences in cities where the Standard company has competition and where it has none. Distribution also plays a large part in the price determination and is analyzed in the report.

Indians Are Buying Cars

OKLAHOMA CITY, Aug. 21—Many sales of cars are being made to the Indians in this section. According to an estimate made by an Oklahoma automobile man, more than $4,500,000 will be spent for cars here within the next 30 days.

This represents half the sum that will be paid to the members of the Choctaw and Chickasaw tribes of Indians by the Federal Government. Thousands of orders have already been placed and the dealers are stocking up, expecting a big business.

Most of the cars have been bought on the time-payment plan. Each Indian has received enough money to make the initial payment on any of the low-priced cars, and has contracted to pay the remainder by the month.

Redden Enlarging

DETROIT, Aug. 21—The Redden Motor Truck Co. has recapitalized at $500,000 in order to expand its business. It manufactures an attachment for making a Ford into a 1-ton truck.

Torbenson Adds To Factory

CLEVELAND, Aug. 21—The Torbenson Gear & Axle Co. has purchased the three factory buildings of the Samuel Austin Co., 152nd Street and Nickel Plate Railroad, which it will use as its own factory, with the addition of another building. The site contains 4½ acres.

Brown Takes Lubricating Bolt

SYRACUSE, N. Y., Aug. 21—The Brown Co., this city, has taken an exclusive license to manufacture the automatic lubricating bolt recently patented by David Landau, New York, and H. G. Farr, Springfield, Mass. The lubrication is from a main reservoir wick of felt that is positively attached to a threaded cap plug with feed wicks.

Building National Addition

INDIANAPOLIS, Aug. 21—Work has been begun on the new $150,000 addition to the National Motor Vehicle Co.'s factory. It will be completed Nov. 9. The building is 380 x 60 and three stories. Another new building will be 328 x 140 and one story. They will extend the plant over half of the block adjoining the complete city block now occupied by the factory.

McClurg to Reorganize

COSHOCTON, OHIO, Aug. 19—Prior to a reorganization of the McClurg Tire & Rubber Co., a receivership has been asked by J. S. McClurg, L. C. McCurday and Dr. Jesse McClain. The plaintiffs are sureties on notes aggregating $17,500.

Westgard to Build Plant

WARREN, OHIO, Aug. 19—The Westgard Tire & Rubber Co., capitalized at $1,500,000, will erect a plant on a tract of land containing 4½ acres northeast of this place. It is said that the capacity of the plant at first will be about 400 tires per day and at least 200 men will be employed. The officers are: President, A. L. Westgard; vice-president and general manager. A. E. Gordon; treasurer, F. A. Vallbrecht. The directors are nearly all New York men.

Kissel Needs More Room

HARTFORD, WIS., Aug. 19—Approximately 14,000 ft. of floor will be added to the plant of the Kissel Motor Car Co. at once. Contracts have been let for sheet metal and body building additions, 77 x 123 and 40 x 100.

Herschell-Spillman Enlarging

NORTH TONAWANDA, N. Y., Aug. 21—The Herschell-Spillman Co. is building an addition to its already large motor manufacturing plant.

Factory News of the Week

54,700 Chevrolets During Year

NEW YORK, Aug. 21—The Chevrolet Motor Co. during the year ended July 31 turned out 54,700 cars, including the output of the Canadian factory, thereby entering the list of the seven largest producers in the country.

The company will turn out about 10,000 cars this month, and plans 100,000 to 125,000 cars for next year.

Phianna Car Now on Market

NEWARK, N. J., Aug. 21—Another high-priced car will soon make its appearance in the East. This is the Phianna, which will be built in special body designs for town car use and will sell for $6,000.

The Phianna car is made by the Phianna Motor Co., Newark, N. J., capitalized at $500,000, all paid in. This company has just started manufacturing and will turn out 200 cars of special body work during the first year. The car is not an assembled product and all parts will be made at the factory. The chassis sells at $3,600, and with the coupe or closed body at $6,000. T. M. Pepperday, former Simplex agent in Pittsburgh, is president.

The car has 62-in. cantilever springs and a four-cylinder 3⅞ x 6-in. motor. The wheelbase is 125 in.

Denneen to Add ½-Ton Truck

CLEVELAND, Aug. 19—The Denneen Motor Co. will soon be on the market with a motor truck of about 1000 lb. capacity. It will sell for from $750 to $800 equipped and including a body. Only recently this company announced a 1¼-ton truck, the first of several models they will put on the market.

U. S. Truck Recapitalizes

CINCINNATI, Aug. 19—The United States Motor Truck Co. has voted to increase the capital stock from $300,000 to $1,000,000 and has declared the regular annual dividend of 7 per cent on the preferred. Quite a large sum was placed to the credit of surplus. Sales and production increased greatly during the past 6 months.

The company was established 7 years ago with small capital, and in 1914 was reorganized and the capital stock increased to $300,000, with R. C. Stewart as president.

Buildings Going Up In Trenton

TRENTON, N. J., Aug. 21—The Thermoid Rubber Co. has under way construction work designed to double the capacity of the plant. The Mercer Automobile Co. is erecting buildings which will add nearly 100 per cent to its present facilities. In addition to extensions made during the last year, the Ajax Rubber Co. has started work on a four-story steel and brick addition.

Digitized by Google

Overland Gets Broadway Home

NEW YORK, Aug. 21—The Willys-Overland Co., which recently took control of its sales in this city by the establishment of temporary quarters on Columbus Circle, has leased the property at Broadway and West Fiftieth Street, belonging to the Wendell Estate. This building has remained vacant for 14 years. The Overland company will be the first tenant and will occupy the entire three floors and basement. The company has also opened a used-car department at 1700 Broadway, near Fifty-fourth Street.

1915 Biggest Petroleum Year

WASHINGTON, D. C., Aug. 19—That 1915 was the most successful year of production in the history of the petroleum industry is shown by statistics just compiled by the United States geological survey.

The total quantity of crude petroleum entering the world's markets in 1915, which amounted to 426,892,673 bbl., exceeds the former record, established in 1914, by 28,194,307 bbl., or 7 per cent. The bulk of the increase in 1915 came from the United States and Mexico, though Russia, Argentina and Japan recorded significant gains. The marketed production of crude petroleum in the United States in 1915 was 281,104,104 bbl. of 42 gal. each.

Lets City Select Plans

KANSAS CITY, Aug. 21 — The Sweeney Automobile School, which was already well known in this section, gained valuable publicity recently when it made the whole city and surrounding country a partner in the selection of designs for a new building.

It was possible to enlist public interest because the building is to stand on the Plaza at the new Union Station. This Plaza is surrounded by few buildings as yet and the whole city jealously watches the section in the hope that only buildings of a handsome architectural design will be erected there. The city wants to make the Plaza one of its show spots.

When the Sweeney school secured a site on this Plaza, it had four designs of building drawn up, each about ten stories high. It used page advertising in the newspapers, showing a map of the site and the four designs. In a corner of the ad was a coupon on which the public was invited to vote for the design it preferred to see upon the Plaza; 3100 answers were received and in addition many letters commending Emory J. Sweeney, owner of the school, upon his enterprise and public spirit. The total cost of the advertising was $900. The new school will cost about $250,000. It accommodates sometimes more than 1000 students.

Coming Events

General Events

Sept. 25.....Indianapolis, Convention for the formation of Indiana Automobile Trade Association, under auspices of National Automobile Trade Association. Hotel Claypool.

Oct. 2-3-4-5.....St. Louis, Fall Meeting National Association of Automobile Accessory Jobbers.

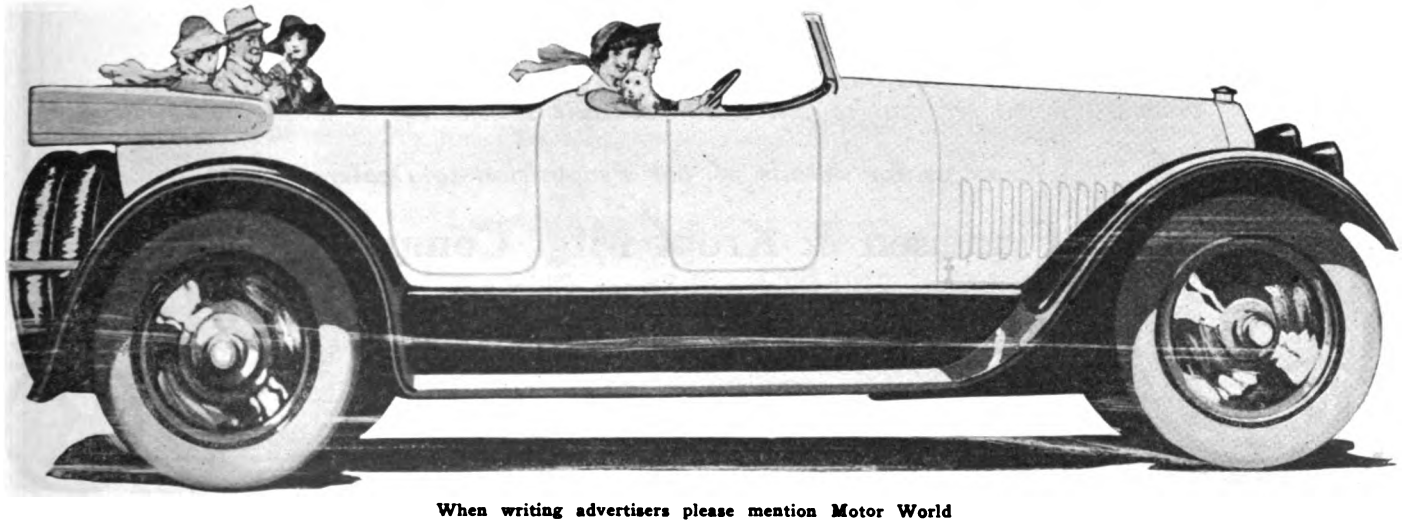
PROMINENT AND DOMINANT

National HIGHWAY



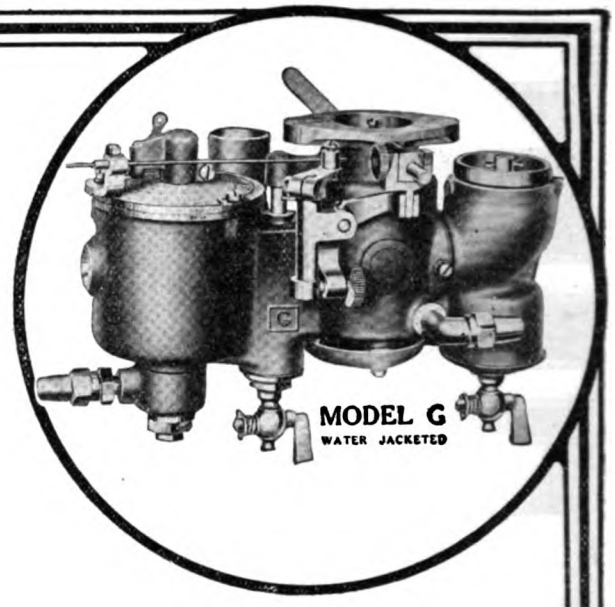
Highway *Six* $1750 Highway *Twelve* $2150

IN all automobile history there has been achieved no such success as the Twelve. National built Amerca's first Stock Sixes and maintains its rank in this field with the Highway Six. National was one of the Twelve pioneers. National Twelves are now in daily use in every state in the country.

Why not be associated with the very newest and most satisfactory type of car? Write us.

National Motor Vehicle Co., Indianapolis

Sixteen Successful Years



Digitized by Google

In the recent 300-mile Non-Stop run of stock

Saxon Sixes

—the 206 cars that participated, aggregated 61,800 miles, and averaged 23.5 miles to the gallon of gasoline.

All these cars were equipped with

RAYFIELD CARBURETORS

In the Saturday Evening Post of August 5th, a double-page spread of the Saxon Motor Car Corporation announced the results of this now famous run.

Three paragraphs from the Post tell the story of this achievement:

"ON July 1st, 206 Saxon dealers in all parts of the country, ***driving stock model Saxon "Sixes,"*** staged a 300 mile ***non-stop*** run to prove the remarkable gasoline economy of "Saxon Six."

The total distance traveled was 61,800 miles—more than twice around the world—nearly 20 times across the continent. During the entire 61,800 miles not a single motor stopped running.

The winner averaged 34 2/3 miles per gallon of gasoline. The grand average for the 206 Saxon "Sixes" was ***23.5 miles*** per gallon."

We guarantee to dealers and car owners that the Rayfield will save from 20 to 50 per cent in fuel cost — absolute satisfaction or money back.

BALL BEARINGS

What We Mean by Balanced Bearings

It isn't so much the question of the number of balls in a ball bearing—

It isn't so much the thickness of the raceways which carry those bearings—

But rather the designing of the one part in relation to the other part, so that both perform to their fullest possibilities, within certain definite factors of safety.

The point we are making is that we might add two or three balls to our bearings and still have a weaker bearing than we have at present.

Conditions must be balanced.

U. S. BALL BEARINGS are balanced bearings because there are just the right number of balls to supply the correct capacity to the proper sized raceways. And it is this proper blending or balancing of the various components of U. S. BALL BEARINGS, combined with the high quality of materials and extreme care in production, that gives to U. S. BALL BEARINGS their extremely high ca rrying capacity

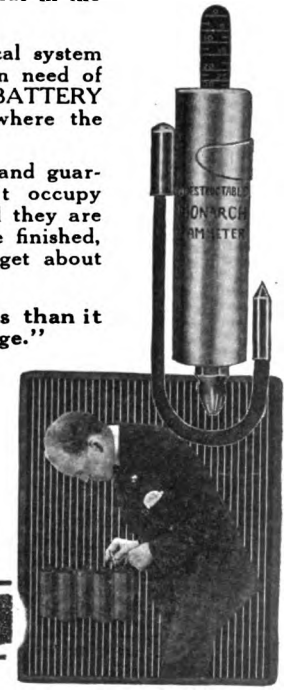
GOOD MORNING, JUDGE!

Lights out—and you can't discover the trouble! You decide to take a chance of reaching the garage safely—but it can't be done. A motorcycle cop scorches up alongside of you. You try to explain, but excuses don't go. He hands you a summons and next day you appear in the police court and say—

"Good morning, Judge!"

It cost you a five spot. You pay up and, then you pay again to the garage man for locating the trouble.

You've lost time from business. You've lost your temper, and you've lost real money —all of which could have been prevented with



BENFORD'S INDESTRUCTIBLE BATTERY TESTERS

They're as useful to the car owner as the "Gold Dust Twins" are to the housewife. They're real trouble-finders. When your batteries go wrong; when your electrical system is out of order; or when you are in need of help, just call on BENFORD'S BATTERY TESTERS and they will tell you where the trouble exists.

They are accurate, indestructible and guaranteed for five years. They don't occupy much more room than a pencil, and they are just as easy to use. When you are finished, throw them in the tool-kit and forget about them until the next time.

The cost is small, too—much less than it costs to say, "Good-Morning, Judge."

Stop that Leak with an ADAMSON

AN "Adamson" Vulcanizer is the one indispensable motor car accessory that never comes with the car. It offers the surest, quickest method of making permanent tire repairs right at the time when they are needed most and at the lowest cost. Thousands of "Adamson" users are doubling their mileage, getting continuous use out of their cars and saving ninety per cent of their tire trouble and expense.

No steam or electricity is required with an "Adamson" Vulcanizer. It is absolutely automatic, does not require watching or regulating and cures the repair to the exact degree for perfect service.

MODEL "U" $3.00

"Adamson" Vulcanizers use common gasoline. They are so simple in principle and construction that anyone can operate them with no experience whatever. "Adamson" Vulcanizers are most reasonable in price—quickest and surest in operation.

DEALERS: **A million satisfied users boost the sale of "Adamson" Vulcanizers; continually send new customers to you. Hundreds of the most progressive and successful dealers rank "Adamson" Vulcanizers the quickest and easiest selling automobile accessories on the market.**

The big selling season is here. Give your "Adamson" Vulcanizers a good display right up in front where your customers can see them. Remember, a million new cars sold this year and every purchaser represents a red hot prospect for an "Adamson" Vulcanizer. Let your customers know that you handle "Adamson" Vulcanizers and a good share of this profitable, easy business is bound to come to you. Recommend "Adamson" Repair Gum for absolutely the best results on all repair jobs.

Write today for catalog and your copies of new booklet, "Repair and Care of Tires." It's free. Don't delay—write us at once.

DENMO TRUCKS

Note the clean cut appearance of the DENMO Chassis.

Left side of DENMO Motor, Dixie High Tension Truck Type Magneto is standard equipment.

Ten DENMO Features

Wisconsin Motor—DENMO design—forced feed, non-splash lubrication.

Splitdorf-Apple two unit starting and lighting equipment.

Spring cradled battery suspension—a DENMO invention.

Straight line drive—prevailing European practice.

Pierce Governor-DENMO transmission drive.

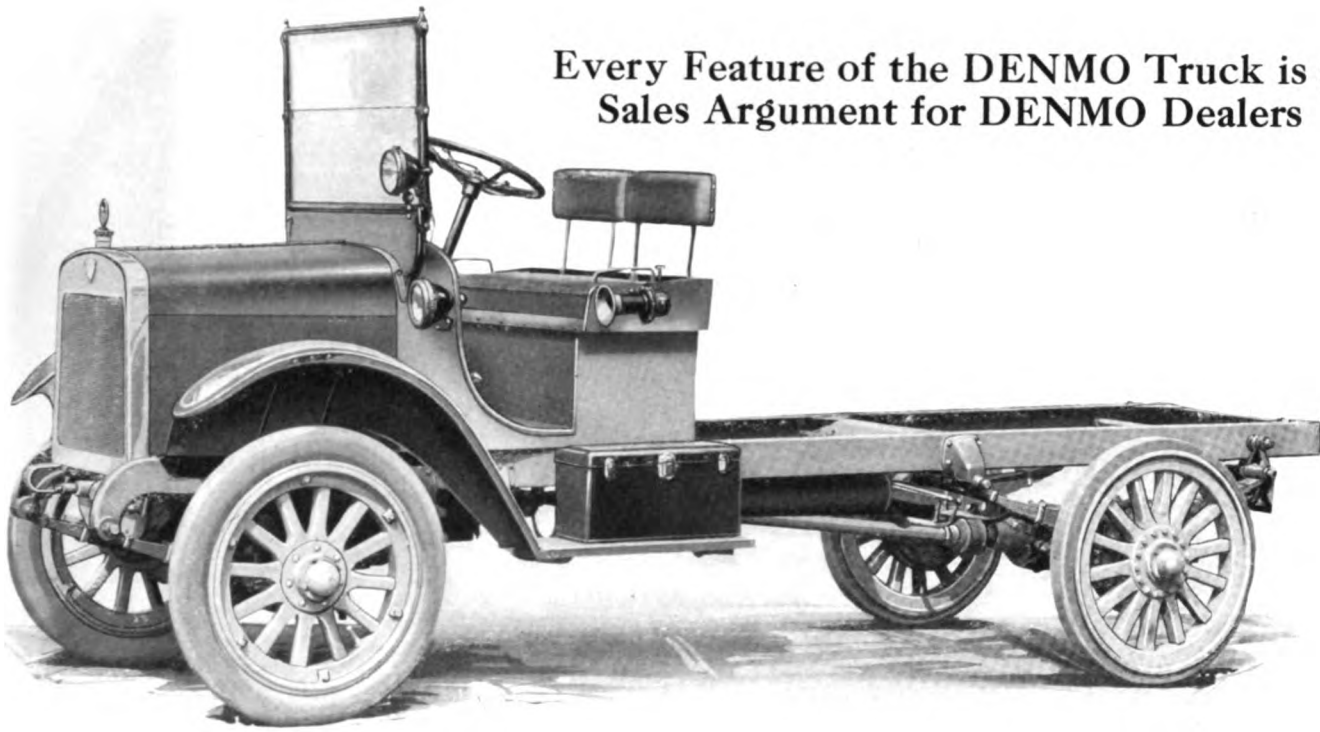
Stewart-Warner Speedometer—transmission drive.

Correct load distribution only 85% on rear wheels.

Cushioned radiator carrier—a DENMO invention.

Torbensen Drive Axle backed by Gold Bond Guarantee.

100% complete chassis equipment for $1385 a DENMO achievement.



Electric Starting and Lighting equipment is but one of the big features made possible by the superior construction of DENMO Trucks. Yet on this one point alone hundreds of truck sales will be decided. And every time in favor of the DENMO. The invention of our spring cradled battery suspension eliminates all the difficulties that have hitherto prevented the use of storage batteries in commercial car service.

More than a year's test of this starting and lighting equipment on a DENMO truck has proved its success beyond question.

DENMO TRUCKS

Every Feature of the DENMO Truck is a Sales Argument for DENMO Dealers

NEVER in the history of the commercial car industry has a truck been offered embodying the unusual sales and service features found in DENMO Trucks. Each unit entering into their construction has been proved through actual use to be the best that money can buy. DENMO construction establishes a new era in motor truck manufacture.

The organization and ample resources back of DENMO Trucks are the greatest assurance of their success. As they stand today they represent the combined experience—the broad knowledge of men who have been responsible for the most successful pleasure and commercial cars in the country.

The inbuilt strength and durability of the DENMO has marked it truly "The Truck for Super Service." Before this announcement was made experimental DENMO Trucks were tested for more than 8000 miles. And while they were designed for a 2500 pound load—through all of this, the most gruelling test ever given any motor trucks—excessive overloads were carried

In this 8000 mile test every conceivable condition was met. No hill was too steep. No condition of road travel was too severe. And at the end of this period not one single feature of the DENMO was found wanting in strength or efficiency—no changes whatever in the construction were found necessary.

If you are looking for a permanent connection—for a big paying business that will be yours this year and all the years to follow—The DENMO Agency offers a golden opportunity. The field for a rightly designed ton and a quarter truck is unlimited and the possibilities of profit from The DENMO Agency are not equalled throughout the industry.

To the man familiar with the truck industry the specifications are proof positive of the highest quality in DENMO Trucks. But is only when you consider that the price includes such long-needed features as electric starter and lights, windshield, warning signal, spot light, speedometer, etc.—in fact **100% complete equipment**—that you realize the wonderful value of a DENMO Agency.

Read the Detailed Specifications on the Next Page.

PRICE $1385

ROYAL MIST

Polishes an Entire Car in 15 Minutes—for 5c.

The first two questions users ask about any polish are HOW LONG? and HOW MUCH?

Dealers can better answer these vital points in polish selling, with ROYAL MIST than with any other polish on the market.

ROYAL MIST—in 15 minutes, for 5c—combines the lasting virtues of wax polishes and the quick application of the spray-on feature. It's the easiest to use with best results—the easiest to sell with

Liberal Dealers' Profits

ROYAL MIST is a polish built to the fancy of the trade. Sprays on because car owners prefer the spray. Comes in quart, half-gallon and gallon cans, to suit the convenience of prospects. Gives a lasting polish that holds the trade.

ROYAL MIST replaces the elements of the varnish that are dried up and removed by atmospheric conditions. May even be **successfully applied when the body of the car is damp.** Always in solution. No shaking necessary. Be ready to make ROYAL MIST sales. Our advertising brings in prospects.

Map of Uniontown Hill, showing grade percentages.

Over Uniontown Hill at 42 Miles an Hour

Among the many motor performances on the famous test hill at Uniontown, Pa., a recent one by a Ferro V-type motor stands out as exceptional.

The motor, a stock 8-48 model, took a stock five-passenger Jackson car the entire length of the hill—three miles—on high and carried it over the crest at 42 miles an hour.

The car with which this record was made weighed 3056 pounds, including driver. It had a standard rear-axle gear-ratio of 4¾ to 1. Wheels were 34-inch.

On another trial, the motor took car, driver and a passenger, weighing in all 3270 pounds, up the hill on high and reached the top going 30 miles an hour.

These tests were made in the presence of representatives of a half-dozen well-known motor-car and accessory manufacturers.

The results were convincing both as to the remarkable "lugging" power and speed of the motor.

To these qualities Ferro motors add many other advantages. They are so flexible as to make the gear-shift almost superfluous. They are entirely free from vibration, unusually accessible and decidedly economical to operate.

Four sizes—three Eights and a Twelve—to fit any car from 2000 to 5000 pounds.

This is the Badger Jack Family

They're eight stalwart, cheery fellows who like nothing better than a good, hard lift.

Of course they don't wish you tire trouble, or anything like that; but when it comes they are ready for it. It's sheer fun for any one of them to put his shoulder under your axle and give it a boost.

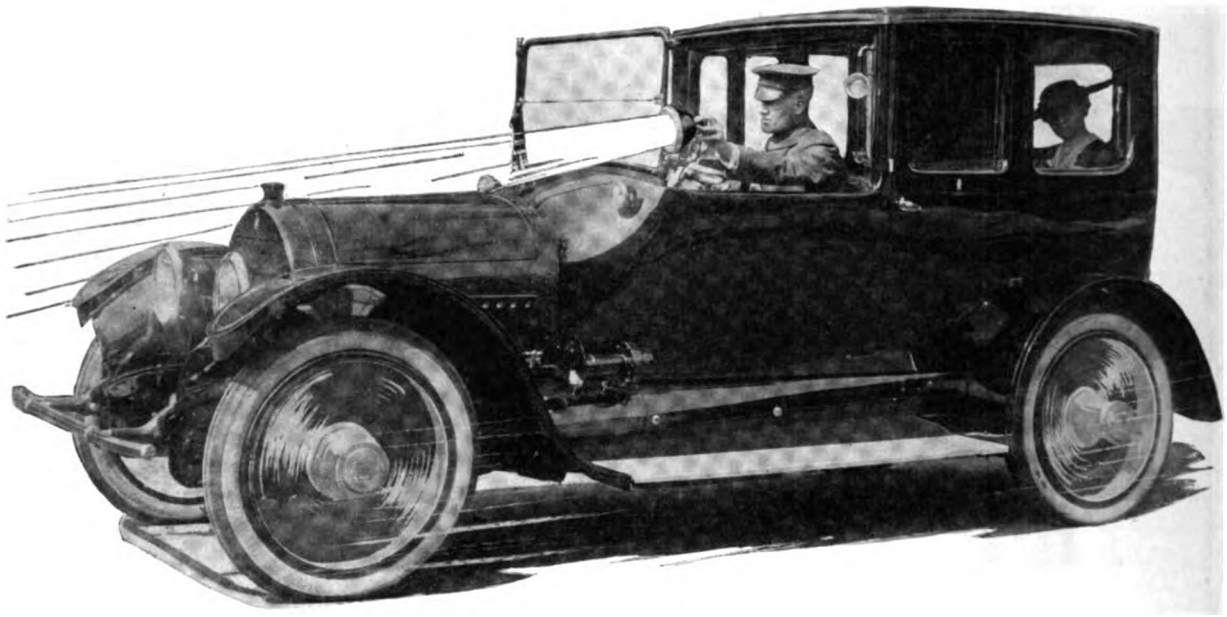
He'll almost do it alone, without any help from you. All you've got to do is to give him a place for his feet and his shoulder, and then press down on the lever.

Quick, short, easy strokes put your car where you want it—and keep it there till kingdom come. He won't let go until you give him a gentle hint in the reversing lever.

Badger Jack has no use for a junk-jack that'll lay down on a job. He thinks they're a disgrace to the automobile business. He's putting them out of business as fast as he can, which is pretty fast, for he brought joy to 200,000 automobile owners last year, although he's scarcely five years old. And nobody has called him a junk-jack yet.

Badger Jack's mother's name is "Efficiency." He has a sound constitution of steel and iron from Father Shop. There's not a weak spot in his body, or in his disposition. Everybody likes Badger Jack because he's a good fellow who wants to help and knows how.

If by any chance you should get hold of a Badger Jack who isn't up to the family standard, we want to know it. We want to get hold of him, and we want you to get hold of a good one in exchange for him.



But that isn't likely to happen, because every Badger Jack goes through a grilling test here at home, before we let him start out in life, that's two or three times as severe as anything he will ever go up against among strangers.

There's a book about this remarkable family which you ought to have, and which Badger Jack would be proud to have you read. We'll consider it a privilege to send you one. It's called—"The Story of a Jack."

The DIXIE FLYER

1917 Models Now Ready

Five Passenger Touring **Four Passenger Cloverleaf Roadster**

IN the early days of the 1916 Season the DIXIE FLYER was termed by Motor-wise men—"Distinctly the Season's Best Offering." Succeeding months of growing popularity with the public and conservative dealer interests have proven it true.

The 1917 Models embrace all of the mid-season refinements added to the original structure and a number of distinctly new Structural, Mechanical and Artistic features, many of which excel, some of which are exclusive, that lift this car out of the comparative class. *It is Distinctive.*

The *One* reason for the instant popularity of the DIXIE FLYER is that every detail of the structure was painstakingly developed and perfected before offering to the public and the first and every succeeding car delivered has continuously made good with its owner.

DIXIE FLYER popularity is building itself on the permanent foundation of DIXIE performance. It is first of all a *dependable* structure, in every situation it *satisfies.*

These very qualities will help *you* into a larger and more permanent success, and give you a greater profit by reducing your service cost.

These qualities have attracted to our selling organization the cream of the conservative and substantial dealer patronage in the larger motor centers. They realize the DIXIE FLYER is a permanent proposition.

There is behind it a factory covering thirty acres of modern manufacturing facilities, an engineering corps of the best trained men in the industry, an experienced executive and sales organization, three millions of real *spendable* money and a growing dealer organization, including some of the most successful motor salesmen in the country.

If *you* are the best dealer in *your* territory we want *you.* The policy behind the DIXIE FLYER is liberally in your favor. Immediate action on your part may be the means of securing for you an exceptionally lucrative connection. Write or wire today stating territory desired.

Some Extremely Desirable Territory Open for Dealers With Push

Our Dealers' Proposition Never Fails to Get Across and Bring in Interesting Profits for Dealers

Dealers
Let's Get Together for the Big Drive on

"W'RIGHT" COMPRESSION TIGHT PISTON RINGS

"W'RIGHT" ALLOY ALUMINUM PISTONS

Dealers who formerly *carried* piston rings, and seldom sold them, are now disposing of 300 to 500 W'RIGHT Compression Tight Piston Rings a month at a profit they find altogether worth while.

That's the experience we have to offer a few more good dealers who want to duplicate the profits of the hundreds of dealers we already have established in the past 6 months.

W'RIGHT Piston Rings are alone in their class. They both *outlast and under-sell* competition, and insure lasting efficiency that others cannot give.

Backed up by advertising in leading motor car publications, W'RIGHT Compression Tight Piston Rings are selling fast—making good profits for dealers. Wire or use the coupon for full details.

Pat. Applied for

Motorists everywhere, with cars from seasons gone by, are putting new life into old motors with W'RIGHT Alloy Aluminum Pistons, equipped with W'RIGHT Compression Tight Piston Rings.

The sudden demand, and the rush to fill it, have made W'RIGHT Pistons the selling sensation of the year. Dealers have sent back re-order after re-order for the pistons that insure greater power, economy, quicker pick-up and all 'round motor efficiency at a nominal cost.

Record-breaking business—with profits in proportion—is what W'RIGHT dealers report. It is what awaits more W'RIGHT Dealers in good territory, still open, where there are Ford, Overland, Maxwell, Studebaker, Chevrolet, Hupmobile and other makes of cars.

If you want to reap the advantage of W'RIGHT popularity, class and advertising, get in now for the big drive. *Use the coupon today.*

THE V. A. LONGAKER CO.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

Runs 200,000 Miles

A Bate-built Mitchell has just completed 200,000 miles. Another has a record of 218,000 miles. Six Bate-built Mitchells have averaged about 165,000 miles apiece—over 30 years of ordinary service.

John W. Bate's idea, when he came with the Mitchell, was a 100,000-mile car. Later he doubled that figure, and attained 200,000 miles. In the Mitchell he is building now he aims at a lifetime car.

These Things Count

In the long run, remember, such are the things that count. The car that outlasts others will in time outsell them.

So will a car which gives most for the money, because of factory efficiency. That is why Mr. Bate is here. That is why we have paid him, year after year, to give us a model factory and a model car.

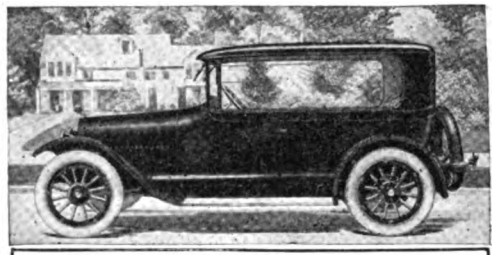
In this Bate-built factory our making costs have been reduced one-half. In this Bate-built car, after 700 improvements, we have arrived at a car which will hold its prestige, against all the field, and forever.

Time Sells Them

The years are selling the Mitchell in a larger and larger way. In the past year alone the demand for this car has trebled. Now we are doubling our output for the year to come.

And these New Mitchells, every year they run, will add to the Mitchell fame.

Owners will tell how they endure. They will tell of the trifling upkeep, the absence of repairs.



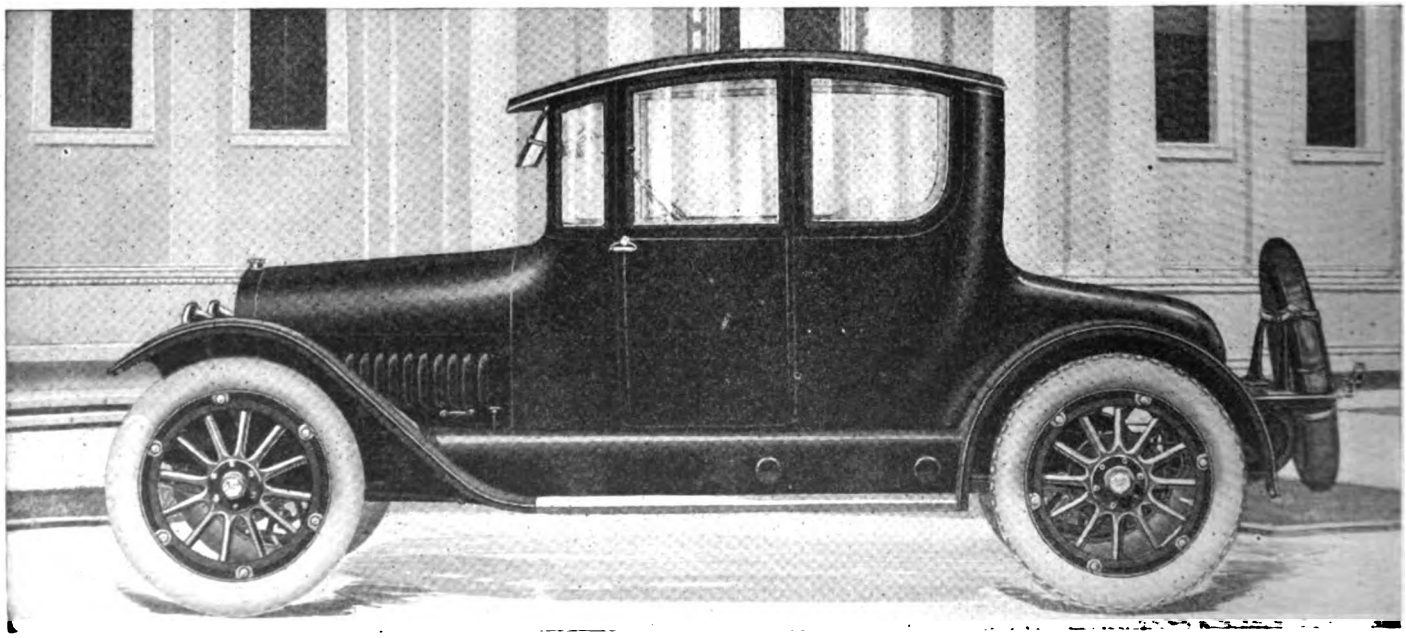
It has taken many years to standardize this car, and to bring every part to perfection. It has taken years to build and equip this plant.

But the result is a car where 440 parts are either drop-forged or steel-stamped.

A car in which every margin of safety is at least 50 per cent. A car rich in Chrome-Vanadium steel. A car with Bate cantilever springs, not one of which has ever broken.

And a factory that saves so much in the making that we spend $2,000,000 this season for extras which other cars omit.

Men who buy cars, and men who sell them, should investigate the Mitchell. The time has come when a car like this must rule.



$1325 F. o. b. Racine

For 5-Passenger Touring Car or 3-Passenger Roadster

7-Passenger Touring Body $35 Extra

MASTER Carbureter WINS

Pike's Peak Climbing Contest

Rae Lentz, driving a Master Carbureter equipped Romano Special, captures Penrose trophy and $2,000 first prize, in Free-for-All.

Distance 12.5 miles; maximum grade 10½%; Average Grade 7½%; Weather, HEAVY RAIN, HAIL and SNOW.

Colorado Springs, Col., Aug. 12—Competing with 15 other contenders for the Penrose trophy and a prize of $2,000 in cash, Rae Lentz, driving a Master Carbureter equipped 8-cylinder Romano Special, today finished first in the climb to the summit of Pike's Peak. Lentz covered the distance of 12.5 miles with its maximum grade of 10½ per cent and average grade of 7½ per cent through a driving storm of rain, hail and snow and the spectators who journeyed up the mountain to watch the drivers shivered in the cold. Goggles worn by the racing crews were so covered with rain and sleet that they had to be discarded. The last five miles was raced through a dense cloudbank. Lentz's time was an average of better than 36 miles per hour over a 10 per cent grade. The altitude of the peak is 14,190 feet, and the starting point at Crystal Creek has an altitude of 7,600 feet.

The value of the steering post control feature of the perfected MASTER Carbureter was never more strikingly demonstrated than in this gruelling test under the most trying conditions. Being able to instantly change his mixture, to command a rich mixture for quick starting and to change with a movement of his wrist to medium or lean to suit every change of altitude and temperature, Lentz had a tremendous advantage over all other contestants whose difficulties were almost entirely carbureter troubles.

Lentz was able to produce in his carbureter, for every yard of his climb, exactly the right mixture for the requirements of the moment. At every altitude he had complete control of his mixture while the effects of the heavy moisture and severe cold were instantaneously overcome by operating the carbureter's air damper simply by moving the steering post control.

PENROSE TROPHY EVENT

Car	Driver	Time
Romano	Lentz	20:55.6
Hudson	Mulford	21:40.5

Maxwell	Worthington	Out

Steering Post Control

The superiority of the Master Carbureter with its mechanical control operated from the steering post was never so clearly shown as in this remarkable test. Lentz was not obliged to make a single adjustment under the hood. The Master, in fact, has no adjustments. Every change of atmosphere and temperature from the warm weather of the foothills to the freezing cold at the summit, every change in the barometric conditions from rain to hail, was promptly met and overcome by the simple steering post control device.

No matter what car you make, sell or drive, investigate this perfected improved carbureter. Ask us for the name and address of our dealer in your vicinity.

Send This Coupon for FREE BOOK

"Carbureter Troubles" and How to Overcome Them. Write today for proof that the Master actually delivers 25 to 40% More Mileage, 30% More Speed and 30% More Power than old-style carbureters. Just send this coupon.

THE EXPERIENCE OF OWNERS IS THAT SAXON "SIX" GIVES BETTER SERVICE AND GREATER MILEAGE AT LESS COST

Briefly, this sums up the situation among cars costing $1000 or less. Saxon "Six" superiority is a fact.

Motor car buyers have reached this conclusion after critically comparing the road-service records of all cars during the twelve month period just past.

In the beginning, selection of the car costing less than $1000 which offered the best investment presented a perplexing problem. There had been insufficient time clearly to demonstrate the relative values of the various makes.

And sincere but over-enthusiastic salesmanship, by printed word and word of mouth, had contrived to cast an illusion of fine quality around many a mediocre car.

As soon, however, as the mileages began to mount claims were replaced by records and phrases gave way to facts.

It was at this point that Saxon "Six" began to pull up into a position of leadership in the opinion of purchasers.

Verified reports from hundreds of owners showed that Saxon "Six" coined 21 to 26 miles of arrowswift travel from a gallon of gasoline. It wrung more than 150 miles from each quart of oil.

It was shown that Saxon "Six" had a wealth of "pick-up pep"—that it could go from a standing start to 45 miles per hour in less than 24 seconds.

It was shown that Saxon "Six" had a wonderfully powerful motor—able to climb an 18 per cent grade, mile long hill in one minute and two seconds.

It was shown that Saxon "Six" could "burn up" the highway like a racer or idle "on high" at a mile and a half an hour. And, do either with effortless ease.

And it was shown that the fine construction and skilled engineering in Saxon "Six" had endowed it with uncommon strength and ruggedness. Its freedom from repairs and replacements caused marked comment.

So now all motordom knows that our positive belief expressed at the outset, that Saxon "Six" would give better service and greater mileage at less cost has been completely justified in competitive service.

"Six" Touring Car	*$815*
"Six" Roadster	*815*
"Four" Roadster	*395*
Delivery Car	*395*

Canadian Prices, f. o. b. Windsor, Ontario: Standard equipped "six," $1115; detachable top, $200; standard equipped "four" roadster, $530; electric equipment, $70; detachable top, $75.

"CARSPRING" TIRES ARE MAKING MILEAGE RECORDS UNDER SERVICE AND "CARSPRING" DEALERS ARE MAKING NEW RECORDS ON THE CASH REGISTER.

ARE YOU MAKING NEW RECORDS IN YOUR TIRE BUSINESS, AND, IF SO, WILL THE BUSINESS BE YOURS "FOR KEEPS"? ARE YOU BUILDING FOR YOURSELF OR SOMEONE ELSE?

¶ "CARSPRING" methods answer these questions in the affirmative for every Dealer. They give him a splendid tire in the first place, one that makes satisfied customers and upholds his reputation.

¶ In the second place, "CARSPRING" methods give you an opportunity to put in your very best selling efforts without factory branch interference.

¶ "CARSPRING" methods mean liberty to you, they mean the widest latitude in making adjustments, the authority to appoint your own sub-dealers and to manage your territory in your own way—**helped** by us in every possible way but **not hampered.**

¶ And "CARSPRING" methods mean a future for you, the full results of your own efforts without fear of having one foot of territory or one cent of profit taken away later on.

¶ You can't grow "too big" to suit us—we are **for** our Dealers—now and **all the time!**

Quick action on your part means money. There is only just so much territory to be allotted, and it is going fast. Write at once and find out whether or not your territory is still available.

MAKE MORE MONEY

Woodworth "Live Long and Serve Well" Tubes are made of tough, elastic, live rubber, of the highest quality. There are none better made.

—and at the same time hand your customers something that will **make good with them.**

Ours is a REAL GUARANTEE.

We know that the Woodworth Trouble-Proof Tire will travel day in and day out without any sign of puncture or blow-out, so we **promptly and cheerfully pay up** when the very extraordinary thing happens and we are called upon to make good.

Entirely apart from its puncture-proof addition, the Woodworth is a tire of extremely high quality. The finest material is used, expert workmen are employed and the greatest care is exercised in its manufacture.

WOODWORTH TROUBLE-PROOF // TIRES //

The Woodworth is not a freak—its qualities of general wear and resiliency are equal or superior to those of any other tire on the market—and the puncture proofing is provided by a strip of non-heating chrome leather, placed on the inner side of the casing **after the tire proper is finished.**

Our Dealer Proposition will vitally interest you. Write for it at once while some good territory is still available.

SHALER

Electric

Shop Vulcanizers

$60

Subject to Trade Discount

A Money Maker for Every Garage

Your garage, where every part of the automobile is repaired and cared for, is the logical place to mend tires. Thousands of ambitious garage owners realize it and are increasing their revenue as a result. They utilize the spare time of their help thereby reducing their overhead expense.

Every car you store, repair or adjust means eight prospective tire repair jobs because every car means eight tires per year on the average. These tires need daily attention because they blow out or puncture constantly.

Wrapped Tread Method

This simplifies tire repairing and makes every casing and tube repair perfect and permanent. It is the same method that is used and indorsed by the big tire makers. The Shaler is acknowledged to do better work than the high priced complicated machines.

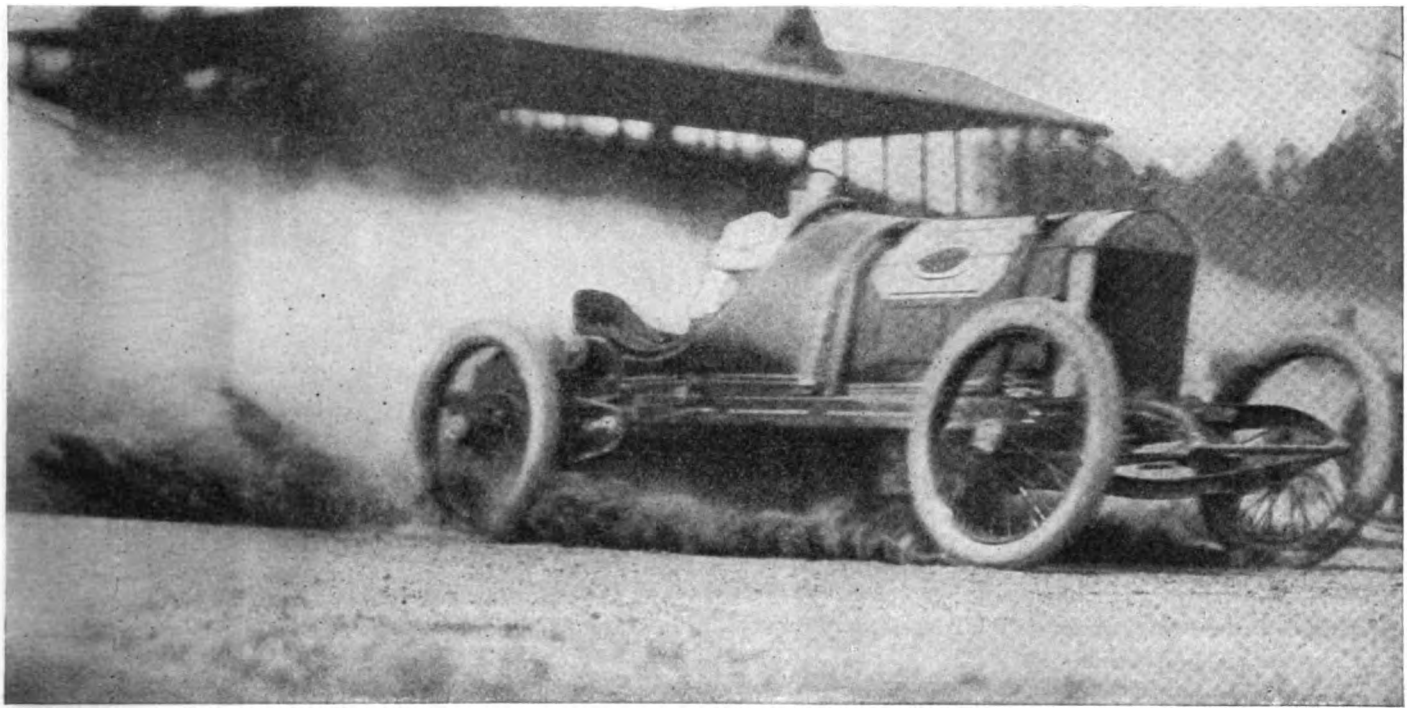
It is so easy to repair tires the Shaler way that anybody who can clean or wash a car can operate a Shaler the first time and make perfect repairs. It heats from city electric light—uses very little current and requires little bench room.

Automatic Temperature Control

This, together with thermostat attachment, is an exclusive Shaler feature that controls and maintains the temperature of the Vulcanizer exactly at the right point for every type of repair without watching or regulating and without fear of overcuring or undercuring the tire.

Tubes can be repaired simultaneously with casings yet each unit is complete in itself and may be used independently. In casing repairs the Shaler retains the original pattern of any non-skid tread and makes the repair the strongest part of the tire.

Write Today for Complete Catalog



Send at once for the new Shaler Catalog of Shop Vulcanizers and investigate this extra avenue of profit for garages. You'll be surprised how easily and quickly you can add to your revenue. Steam heated vulcanizers furnished if you have no electric current. Mail your letter tonight.

Eddie Hearne in a Bosch-Equipt Racing Car. This car has been in 592 races, and in 191 of them it never was headed. In all, nearly 4000 miles were traveled in contests against Father Time, every mile at better than 60 m. p. h. This car has been in three "smash-ups," the last in the Vanderbilt Cup Race of 1915, with Burman driving. It never has been out of a race nor failed to finish because of ignition trouble. Of course, it uses Bosch Magneto Ignition and the same Bosch Magneto first installed is still doing its work. That's ignition service.

Use Magneto Ignition On Your Car

EVERY MOTOR CAR RACE of importance run during this year has been won by a car using a Bosch Magneto for ignition. Practically every big race run for the past six or seven years has been won by a Bosch-Equipt car.

Why?—Because, merely a spark in the cylinder would not satisfy the exacting drivers—because the manufacturers of the cars they drove could not take a chance. While they wanted the utmost in speed from their engines, they desired reliability first—that is an important reason why most races, whether for motor cars, motor boats, or motor cycles, are won by engines using Bosch Magneto Ignition—Bosch Ignition is reliable ignition.

These plain facts are good proof why the Bosch Magneto is superior to other forms of ignition. The test by racing is severe and gruelling, and Bosch Magnetos always come through without a falter, but the CLIMAX of PROOF lies not in the continuous demonstration of Bosch Magneto superiority in contests, but in the fact that there are more than

TWO MILLION BOSCH MAGNETOS IN USE

The superiority of Bosch Magneto Ignition is further shown by the increasing demand for Bosch Magnetos to replace other ignition systems depending directly or indirectly upon batteries. Special consideration has been given this problem, and with a view to facilitating installations on battery-equipt cars, special attachments have been designed and can be obtained for those cars for which Bosch Magneto Ignition is most in demand.

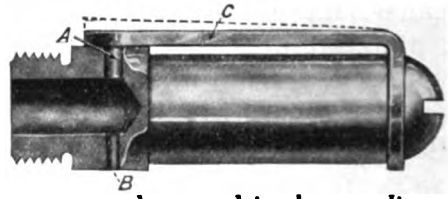
YOU FORD OWNERS
HAVE LOOKED FOR THIS CARBURETOR

Cuts gasoline consumption 25%. Adds power and snap to motor. Prevents carbon accumulation.

GARDNER *thermostat* CARBURETOR

Makes your Ford motor more flexible—it will run slower and faster with wonderful smoothness.

SCIENTIFIC PRINCIPLE



This wonderful, new-departure carburetor does big things because of the Thermostat (see explanation below). It's built upon a practical, scientific principle. Makes a surprising difference in economy, flexibility, power and cold-weather starting. Produces a rich mixture when motor is cold, then automatically leans mixture as motor warms up. Nothing to get out of order—no constant adjustment. The simple, sturdy construction makes it practically indestructible—guaranteed to last the life of your car.

DEALERS

The price of $10 for this carburetor makes every Ford owner a hot prospect. We offer you liberal discount and will stand back of every Gardner Carburetor you sell. Write or wire today for particulars.

RESULTS GUARANTEED

Installed in a few minutes and sold on a money-back guaranty. If it doesn't give at least 25% more mileage, greater power and flexibility, we'll gladly refund your money. Thousands have installed Gardner Carburetors on the same guaranty that we offer you. Remember, this isn't a mere plug which screws into the manifold—it's a scientific and practical carburetor built to successfully operate under all conditions. A trial will convince you. It pays for itself in no time. Order today and begin reducing your gasoline costs.

Thermostat, submerged in the gasoline, is controlled by the temperature and acts as the temperature changes.

A—Thermostat gasoline feed gradually closes as engine warms up.

B—Fixed engine feed.

C—Thermostat variation .001″ for every 12° F.

There Are No Bumps Ahead of the Stone Ten-Dollar Shock Absorber

This shock absorber has proved itself. When we first announced it at the amazing price of ten dollars, lots of motorists would not believe that it was as good as we pictured. But lots of them tried it. And they were soon convinced. It does not take news like that long to spread amongst enthusiasts. So now thousands are using the Ten-Dollar Stone. And urging other thousands to use it.

Stone Shock Absorbers—Ten Dollars the Pair

Study These Points

Double-coiled springs of finest material, giving greatest liveliness with greatest strength.

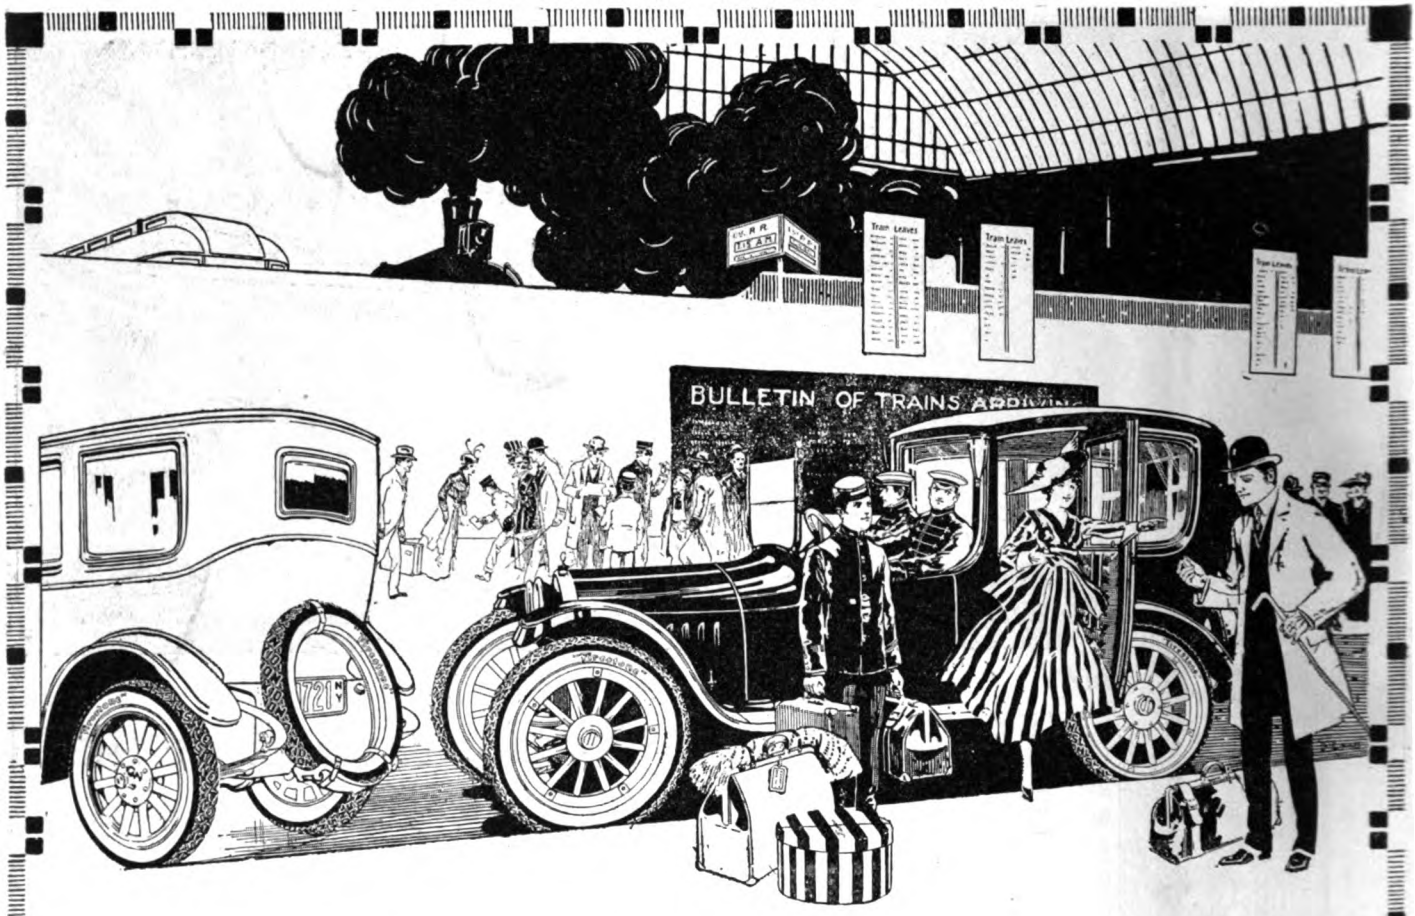
A two-inch play instead of an inch and a half. This stops jolts that get by others and practically does away with any chance of a broken leaf spring.

Four bearing parts instead of two. This preserves alignment and prevents side wear.

An adjustment load which permits a load range of 1500 pounds, for varying load and road conditions.

They are made to fit all cars without bothering about different sizes. Bushings and Washers will take care of that.

They are easily adjusted. Merely knock out the shackle bolt of the spring and put in the absorber bolt. It is done in a few minutes.



New Business—New Friends

Owners now go to the dealer that can supply the Ten-Dollar Stone. This means that you can have a chance at new customers if you carry this absorber. Every pair you sell creates a favorable impression for you. Owners like the man who fits them out with the Stone. They go back for other things. Write your jobber at once for further information. If your jobber cannot supply, write us.

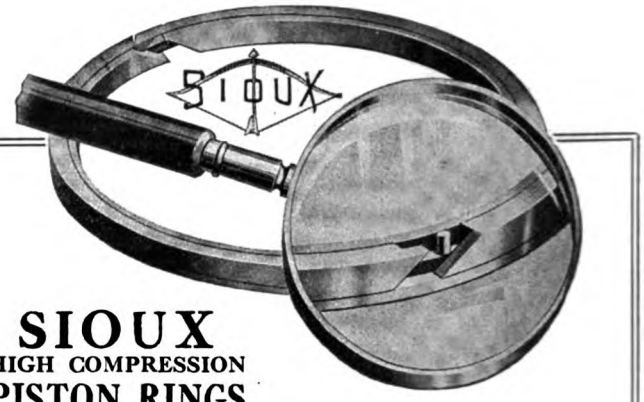
February twenty-sixth
Nineteen-Fourteen

American Oil Products Co
Buffalo, N. Y.
Gentlemen:-

We have just completed a test of your OPCO carbon remover, and we are glad to report that the solution seems to accomplish the purpose for which it is intended quickly and thoroughly, and without the accompanying risk of damage and inconvenience common to ordinary carbon removers



The fact that the composition has an oil base makes it possible to run the engine after the carbon remover is applied without danger of damaging the cylinders, and also prevents the solution from getting past the pistons and spoiling the oil in the base, as sometimes happens with ordinary carbon removers A single application will loosen and remove the carbon, clean the plugs and, in the instance of our test, increase the power and efficiency of the motor at once.

Kindly send me ten cans.

Yours truly,
Glenn H Curtiss

Kelly-Springfield Automobile Tires—Hand Made

FEW buy Kelly-Springfield Tires until they have had experience with other tires and learned to measure tire values in terms of mileage rather than initial cost.

Every Kelly-Springfield Tire you see is a certificate attesting: "This is an experienced motorist."

It testifies: "This man has driven other cars, measured the wearing qualities of tires, and learned to purchase mileage at the minimum cost."

The reason is simple. Kelly-Springfield Tires cost more. They are hand-made—to be sure that mileage is built into them. They are excess-mileage tires.

So they are found on new cars of the better class only, as special or optional equipment when the car buyer knows tire values and appreciates that the car manufacturer has paid the price necessary to provide the best service to be had.

Kelly-Springfield Tires cannot be made to meet the price allowed for tire equipment on lower priced cars, when buyers expect only guaranteed mileage. So they are not found on cars until the car buyer has learned to ignore initial cost and guarantees and considers cost per mile.

Because the public expects a guarantee, Kelly-Springfield Tires are guaranteed for 5,000, 6,000 and 7,500 miles, according to type. But they yield 8,000, 10,000 and often greater mileage. Cases where adjustments are necessary are rare.

Few who have once used Kelly-Springfield Tires ever change to other tires, except when they buy new cars equipped with other tires chosen by the manufacturer.

You Can Do Twice the Work in a given Time if You Use

Kester Crystal-Core Solder

Kester Self-Fluxing Solder is a seamless tube of solder the core of which is a soldering flux that flows as solder is used. CRYSTAL CORE being especially adapted for AUTOMOBILE work. Tube is a series of cells, each cell is filled with the proper amount of flux. Kester Crystal-Core Solder is cheaper to use than wire or bar solder, as no time is lost in preparing or applying the acid.

Cleaner, Neater, Quicker Results

Use it in your garage for battery terminals, gasoline pipe and tank joints, electric light connections, radiator leaks, cracked fenders, speedometer flexible shaft, spark plug terminals and general garage use. Sold in coils of 1 pound, and on spools of 1, 5 or 10 pounds.

30,000 miles with 4 SPLITDORF SPARK PLUGS

Bloomfield, Neb.

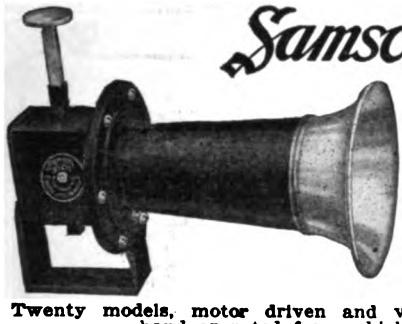
I have a 1910 E. M. F. 30 that is equipped with one of your magnetos and coils. Same has run over 30,000 miles—never has had anything done to it.

I am still using the four original 1910 Splitdorf Spark Plugs. **W. B. FRYMIRE**

Splitdorf Spark Plugs will outlast *any* engine. The laterally wound mica core *positively* prevents leakage of gas and oil, giving you at all times the full power of your engine.

The price of all standard Splitdorf Plugs is one dollar. If your dealer can't supply you, write us for them stating make and year of engine.

Magnetos, electric starting and lighting outfits, ammeters and ignition service in its every detail, at your call at our branches in leading cities.



SPLITDORF ELECTRICAL CO., Newark, N. J.

A Size and Type for Every Engine

Splitdorf Plugs are made in all sizes and in types to suit every car, motor cycle, motor boat, tractor and aeroplane.

The Universal Automobile Record Book

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.

The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

Manufacturers' Opportunities

Opportunity for Manufacturer in Automobile Trade

OWNER OF FIRST-CLASS MANUFACTURING plant, consisting of 40,000 ft. floor space in substantial brick buildings with private switch connecting three railroads and good acreage for future development, wishes to retire from active business.

Plant could be readily adapted to the manufacture of automobiles, especially trucks, or many kinds of automobile parts.

Owner would retain considerable interest, if satisfactory.

C. H. BROWNELL
PERU, IND.

EVER HEAR OF IT?

There's a plant in Detroit, Michigan, known as the Puritan Machine Company. If you never heard of it push yourself to read through the next few lines and we will tell you some facts that will be of interest to every dealer, garage man, repairman and car owner.

A few short years ago the Puritan occupied a one-story building which was on the site of the present mammoth plant. Business was done in a small way by supplying repair and service parts for one or two "Orphan" cars. Purchases from time to time were made until to date the Puritan has bought over 100 defunct Automobile Companies supplying "All parts for all Cars." Our wonderful buying power makes it possible for us to furnish practically any part for any make of car at prices below the actual cost of manufacture.

Below we list a few of our many bargains.

One-man top made of silk mohair, complete with curtains and boot $30.00

Fenders to fit most any make of car ..... 3.00 ea

Radiators for any make of car..15.00 up

$5.00 electric spot light..... 3.50

$25.00 Stewart speedometer... 9.00

Spark plugs, only..... .19 ea

Rain vision ventilating windshield 10.00

36x4½ Universal Rims..... 4.50 ea

Set of Crown Fenders (to fit a Ford) 13.00

Special hind view mirror..... 2.00

Motors, frames, tops, bodies, gears, front and rear axles at low prices.

There is room to list only a few of our many bargains which we have on hand. In order to have you become better acquainted with this company we would like to place in your hands a copy of our large illustrated Bargain Bulletin. This is a catalogue which you should keep and file away for handy reference. Write today for your copy. It is free upon request and we assure you that it will positively save you many dollars.

How About Parts?

Can you get it quick—when you need it so badly?

Why waste time writing to Tom, Dick or Harry when you can come direct to headquarters.

We have any repair parts that you could possibly order and besides save you 50 to 75 per cent.

If we can't save you money we don't want your business.

Our special facilities enable us to guarantee material for one year.

A comparison of prices is all we ask.

A trial is all we want.

Your future business is what we'll get.

AUTOMOBILE MATERIAL CO.

The Universal Automobile Record Book

MOTOR WORLD
239 WEST 39th ST.
NEW YORK

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.

The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

THE MANLEY "EVERY WAY" ENGINE STAND

supports the motor perfectly, while allowing the workman to reach every portion of it with ease and accuracy.

The "Every Way" can be adjusted to every position in a circle—100 positions if desired—but the three most convenient are the Horizontal Position for working on valve mechanism and generally around the engine; the 45-degree Position (shown in cut) for cleaning carbon, grinding in valves, etc.; and the Inverted Position for taking up crankshaft, connecting rod, bearings, etc.

In each position the engine is locked rigidly by two side braces. The "Every Way" supports the engine solidly. It will never become shaky, and should last a lifetime without repairs.

For the Factory motor assembly department no other stand has been brought out that can be compared to the "Every Way" for efficiency and convenience.

LEWIS VALVES Toledo

To Your Specifications

High quality materials and accurate workmanship are the two factors that make Lewis Valves stand ahead of the rest.

We make valves exclusively and can handle large or small orders. Lewis Valves will be made to your specifications if desired, but they will be heat treated by the Lewis method which means long wear and more power.

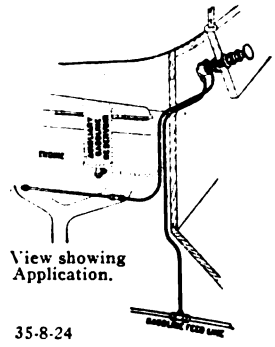
LUNKENHEIMER

Gasoline Engine Primer

It saves the starter battery.
It lessens the labor of hand cranking.



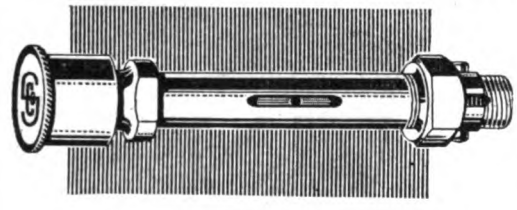
A stroke or two of the plunger forces a gasified charge to points which positively insure its entrance through the intake valves to give a power impulse on the first turnover.

The convenience of this device leads the operator to prime the engine before each start, resulting in a saving of battery energy, or time spent in cranking by hand.

All necessary fittings and tubing for attaching are furnished. No extra parts required.

A profitable accessory for dealers and garagemen.

Write for booklet No. 513.



View showing Application.

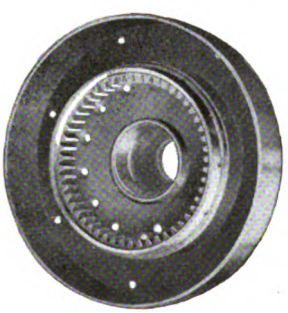
TORBENSEN DRIVE

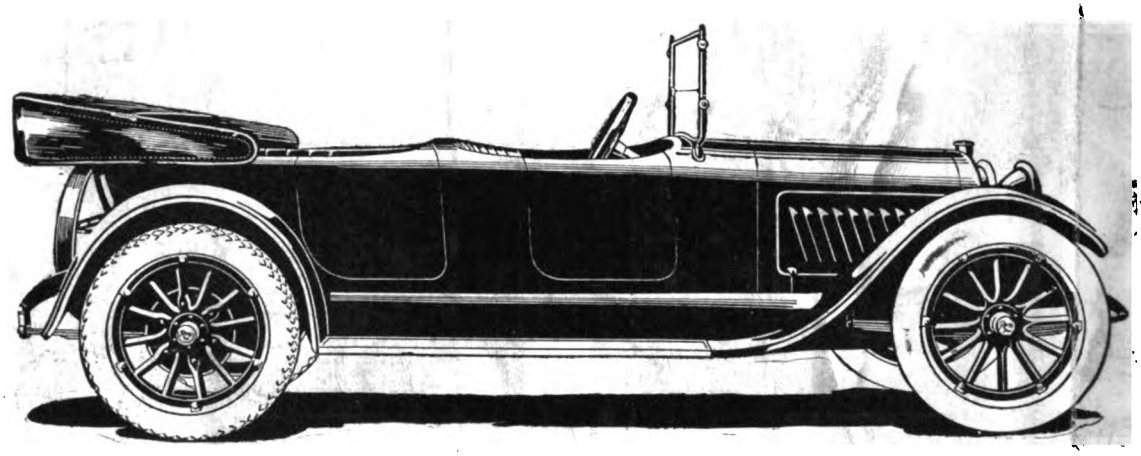


Greater Strength and Efficiency with Half the Weight of Other Types of Motor Truck Axles

IN the construction of an axle for heavy duty, sheer bulk and weight do not indicate greater strength or efficiency. The reverse is more nearly true. The above illustration, for instance, shows the comparative size of a Torbensen Drive Axle and another type axle of equal rated capacity.

Torbensen Internal Gear Axles are from one-third to one-half lighter in weight than other axles designed for the same service. A solid forged steel I-Beam supports the load instead of a cumbersome cast housing. The I-Beam is far stronger, yet lighter.

Torbensen Drive Brakes are large and powerful. Actual tests conclusively prove that they give far more reliable and satisfactory service than the brakes on any other form of final drive.



Torbensen Drive transmits the power to the wheel, halfway between the rim and hub, through a live axle. This jack-shaft member is flexible and no damage can result to the differential or bearing through flexing of the I-Beam on account of excessive loading.

Extremely low maintenance costs and a big saving in tires and gasoline consumption are assured in trucks equipped with Torbensen Drive. The simplicity and accessibility of Torbensen Drive are features that raise their value to commercial car dealers still higher. Full information and literature will be gladly sent on request.

A Big Seven-Passenger Car with a Motor Equal to Any Occasion

Here is a car that will appeal to your imagination.

It has a swiftness that is extraordinary and it has slowness that is equally extraordinary.

Throttle it down in the city or on the road and still it pulls with a steadiness and evenness that will give you a new conception of power. It is like a race horse controlled by a silken thread.

It is the embodiment of gentleness, tractability, docility.

But, step on the throttle and, presto! she becomes a very demon of speed, capable of faster mileage than you would care to make.

Yet it is this very excess of power that gives it the capacity for such easy, slow speed without any change of gears anywhere.

Every unit of the Ross Eight is built to harmonize with its 80-Horsepower Motor.

The use of the costliest materials, however, permits all the necessary strength combined with light weight—3250 pounds complete.

The Ross Seven-Passenger body challenges any car for style, luxury and completeness.

And, considered in connection with other details of Ross construction, makes the Ross price, $1350 F. O. B. factory, seem ridiculously low.

When you know that the Ross Eight is drawing to its standard many of the ablest dealers in the country who formerly sold cars of much higher price, you will appreciate why we urge an acquaintance with the Ross Eight before you purchase any car.

ROSS EIGHT

GRAY & DAVIS

Starting, Lighting, Ignition System

THE judicious selection of a car affords gratification when its accessories meet motoring requirements without annoyance or added expense.

With no need of fast driving to charge the battery and unhampered by danger of overcharging at high speed, the Gray & Davis dynamo delivers uniform current at all driving rates and conserves the battery.

The dynamo, designed to deliver full output at unusually low speed, operates with quiet efficiency, giving increased durability to the bearings.

Every Machine Is Right.

GRAY & DAVIS, Inc., Boston, Massachusetts

A Cowl Board With Every Speedometer for Ford

Just what every Ford owner needs, and wants—a Cowl Board beautifully finished in black enamel with a Stewart Speedometer, set off with a heavy nickel flange, mounted in the center.

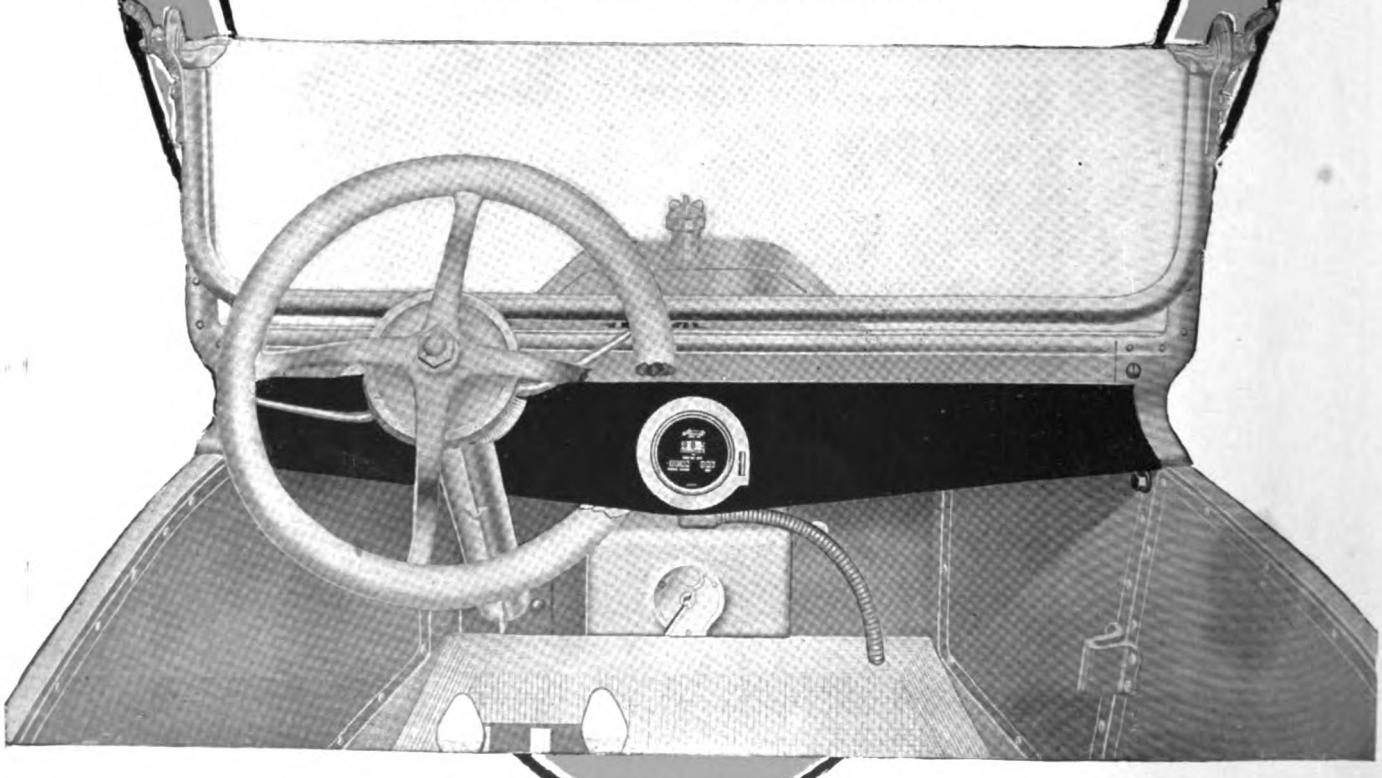
It's a beautiful job.

And it gives a finished appearance to the Ford dash—and brings the speedometer up in a position where it can be easily read—even at night.

Ford owners are going to literally snap up this new Stewart product as soon as they see it. It is put on so easily—and is such a marked improvement. And the price complete is only a trifle more than the cost of the speedometer itself.

Dealers. think of the market this new Stewart Product opens up for you.

Speedometer for Ford $10



Cowl Board $1.25 Price Complete $11.25

He Spells Success this way: S-t-u-d-e-b-a-k-e-r

That concentration of selling effort on one line of motor cars is far more productive than the scattered attention that a diversified line demands, is convincingly demonstrated in the case of Mr. C. L. Grinnell, the Studebaker dealer in Newport, R. I.

The successful record that Mr. Grinnell has established in that territory is one that any motor car dealer might well take pride in, for to date, his selling activity as a Studebaker dealer has resulted in his placing more Studebakers on the streets of that fashionable resort than any other one make of motor cars. Further evidence of his energetic campaign in behalf of the Studebaker line is found in the fact that Mr. Grinnell increased his contract three times within the past year.

The success of this dealer proves beyond all question that the value and stability of Studebaker cars are sources of bulging profits to the man who will take hold of the line and push it vigorously. There are still a few opportunities left for progressive men who can measure up to the standard set by 6500 Studebaker dealers. The facts are yours if you will write for them.

"Word of Honor"

When a man puts his name on a product he gives a pledge to the public which only Quality can make good. The value in a well-established name, therefore, is in the honor and good faith for which it stands.

On every Firestone tire there is stamped the name of the founder of the world's largest exclusive tire company—H. S. Firestone, the president of the Firestone Tire and Rubber Company.

For 16 years this name has stood for all the best possible in up-to-date tire service, maximum mileage, easy riding and economy.

The Value to Dealers in the Firestone Name

—is the value in high ideals; in the spirit of co-operation and mutual aid toward good business and the square deal.

Write for data on the Firestone "Selling Helps." Also copy of new book, "Mileage Talks." Be ready.

MOTOR WORLD
for
DEALERS, JOBBERS AND GARAGEMEN

Vol. XLVIII | New York, U. S. A., Wednesday, August 30, 1916 | No. 9

Yes, which way? We would all like to know. First up, then down. And each time there is the old reason—"Supply and Demand."

Digitized by Google

"The Sick Baby of the Institution"

THAT'S what C. A. Ackerman, manager of the used-car department of the New York branch of the Studebaker Corp., calls the used-car business. Because it was sick it needed doctoring and the medicine of merchandising, and in spite of its being sick it must carry all the burden—mistakes, criticism, leaks and losses.

ACKERMAN is turning a loss into a profit by giving the customer always a square deal and by employing trained and highly specializing used-car salesmen. This is how he is doing it.

WHEN Ackerman first took a hold of the used-car business of the New York branch of the Studebaker Corp., he faced a net loss of nearly $60 on every used car sold. Something had to be done and it had to be done quickly. So Ackerman set about the difficult task of putting this department on its feet—of turning the loss into a profit.

In a year he has doubled the used-car business of the branch. In a year he has reduced the net loss per car from nearly $60 to just about $6. In a year he has built up a sales organization of highly specializing men who know how to sell used cars.

Now the business is going ahead by leaps and bounds. Ackerman is in the same fix as a good many dealers in new cars; he cannot get used cars to fill the demand. And in a very short time, perhaps only a month or two, the used-car department will show a profit instead of a loss.

And then, probably, Ackerman will be taken away from the New York branch and put to doctoring up the sick baby of some other institution. For he knows how to do it. He has been for more than a dozen years specializing on the sale of used cars.

His methods are simple; there is no sleight-of-hand or ledgerdermain in them; they are simply plain, common sense, coupled with a degree of executive ability. And for this reason the story of his success is worth the reading.

Success Based on Policy

Ackerman bases his success, first, on the policy of the Studebaker organization. This policy spells a square deal to everyone. Every purchaser of a car, new or used, must be thoroughly satisfied. He must never be misled by a salesman. He must never misunderstand the salesman. He must never be dissatisfied. In brief, he must get the squarest kind of a square deal. And Ackerman sees that he gets it.

Ackerman always displays cars "as is." That is to say, they are put on the floor in exactly the condition they are received. This is one of Ackerman's ways of making sure the customer receives a square deal. He sees the car the way it came in; no more or less fictitious value added by a coat of paint; no tinkering with the mechanism of the car.

There is another reason for showing the cars the way they come in. Ackerman has found from experience that it does not pay to spend a lot of money on a used car in having it all fixed up, because generally the man who buys it will want something that has been done, done another way and the work has to be done again.

Keep the Owners Satisfied

Ackerman is so anxious to make certain that the purchaser will be satisfied with the car he buys that on several occasions he has actually succeeded in getting a car back from a man who was abusing it. In one case he went to the purchaser and told him frankly that he was abusing the car and that he would not get real satisfaction from it. The man reformed. In another, he got the purchaser interested in a later model car—one that was better able to stand the abuse—and made the exchange.

"Keep the owners satisfied" is Ackerman's slogan. When a car is purchased it is put in good running condition, but it is not overhauled or rebuilt unless the customer requires this work and will pay for it. Small things, such as grinding the valves, repairing upholstery, tightening nuts and bolts, etc., are done as a matter of course.

But everything the salesman promises to do, or that the purchaser requests done must be entered on a form provided for the purpose (Fig. 1). This avoids all disputes and makes it impossible for the purchaser to claim something was promised when it was not.

In other words, the purchaser then knows exactly what he is going to get. Furthermore, if the work cannot be done by the time the purchaser wants the car, he has the privilege of taking it over to the Studebaker service station in Long Island City within 10 days, when the work will be done for him.

Making certain that the customer always gets a square deal and is not promised things that the car cannot perform or the service department give for nothing, has had a tremendous effect on the cost of doing business. Customers go away satisfied with their cars; they know that they have gotten their money's worth and when they want something else they pay for it willingly.

It is impossible for a salesman to misrepresent. Proper representation of the car exactly as it is has been made a frame of mind with the salesmen. Ackerman does not believe his men could misrepresent if they would, and this means dollars and cents to his used-car department.

Digitized by Google

The second important factor upon which Ackerman bases his success is his salesmen. These are all picked men, trained for this special service, and they have all had years of experience. For example, one salesman was for 12 years the Studebaker dealer in a nearby town. Another has been promoted from a demonstrator. Another has been recruited from the ranks of another concern.

Real Used-Car Salesmen

But they are all, first and foremost, used-car salesmen. Ackerman does not believe that a new car salesman can sell used cars. He believes that this requires a different type of man. This is the way he explains it:

"A man selling new cars has a set of stock phrases and arguments which will fit any car he is trying to sell. He has only a certain number of sales points which he can make, or that he need make. He can talk beauty and service and the reputation of the company and then dilate on the mechanical advantages of the car, and that is about all.

"But when this same man attempts to sell used cars he has all his props except one—the reputation of the house—knocked out from under him. He has only promises to sell the car on. If you let him alone he will sell the car on promises—promises that in nine cases out of ten neither he nor the car nor the house can live up to.

Promises Prove Boomerangs

"And right here is where the used-car business gets a black eye. The promises the salesman has sold the car on are a boomerang, or a series of boomerangs. The purchaser can never be happy as long as he remembers those promises.

"Another thing: When a salesman accustomed to selling new cars attempts to sell used cars he always tries to sell first the best-looking ones, or those that are in the best mechanical condition. This is natural, because they are easiest to sell. The result is that after a short time there is nothing left in the shop but junk. The new-car salesman can't or will not sell this.

"Your true used-car salesman, on the other hand, isn't a bit concerned over the appearance or the condition of the car he is selling. He knows that the car is worth what we are asking for it, and that the purchaser will get a square deal and there is an end to it. He simply does not care whether he is selling an A No. 1 used car or one that has been abused. It's all the same to the salesman."

And because Ackerman's men are real salesmen, and because they know the used-car business from A all the way through to Z, they are getting better prices for their cars than are many other organizations. This is one big reason for Ackerman's success.

Ackerman employs eight salesmen at the present time, and they are all paid on a straight commission basis. He starts a man with a drawing account, but if the man has not got some money coming to him at the end of two months he is let out as being not good enough.

Used Cars Always Abused

The way used cars are abused, not only by those who purchase them, but by everyone else connected with an organization, is one reason Ackerman has called the used-car business the sick baby of the institution. The purchaser feels that he does not have to give the car the care he would give a new one. And repairs that could be made on a new car for $10 or $12 would cost twice that much on some of the used cars he sells. Again, chauffeurs "don't give a hang about used cars," to use Ackerman's language. They drop the clutch in and slam the brakes on and up goes the repair bill. Further, members of an organization are apt to rob a used car just because it is a used car. Someone needs a hub cap and it is stolen from some used car. The purchaser will never notice the difference. But it shows up on the books against the used car when it has to be replaced. Used cars are continually neglected and abused and the cost comes back on the used car department.

Ackerman appraises all the cars taken in by the department. He uses only his own experience and allows only what the car actually will bring in cash when sold. At least two-thirds of the cars handled are Studebakers, and Ackerman very seldom has to sell a car for less than he allowed on it.

Used Cars for Used Cars

Not all the used cars are taken in trade for new cars. Some are taken in on used car deals, and this part of the business, says Ackerman, is its salvation. In other words, he would have to allow a purchaser of a new car say, $300 on a certain used car. But if the purchaser wants a used car he will only allow $200. And he always tells the customer this. He explains the deal by telling the customer that he cannot afford to allow more than the $200 in this case, because the used car he is purchasing has been taken in for exactly what it is selling for.

Here's an example of Ackerman's insight into human nature. He had a number of 1916 six-cylinder cars that he could not move at $600. So he prepared the ad. which is illustrated herewith (Fig. 2), and moved them all at $720. Why? Simply, he says, because the ad. was gotten up in the same way as an ad. for a new car. There is a picture of the car and complete specifications just as they are given for a new car.

Forty Per Cent of Business on Time

The ad. also states that time payments will be considered. Ackerman says that fully 40 per cent of his business is done on this basis. The company handles all its own paper, taking one-half the purchase price down and the balance in four to six equal installments. It has been necessary to replevin only one car since the plan was adopted.

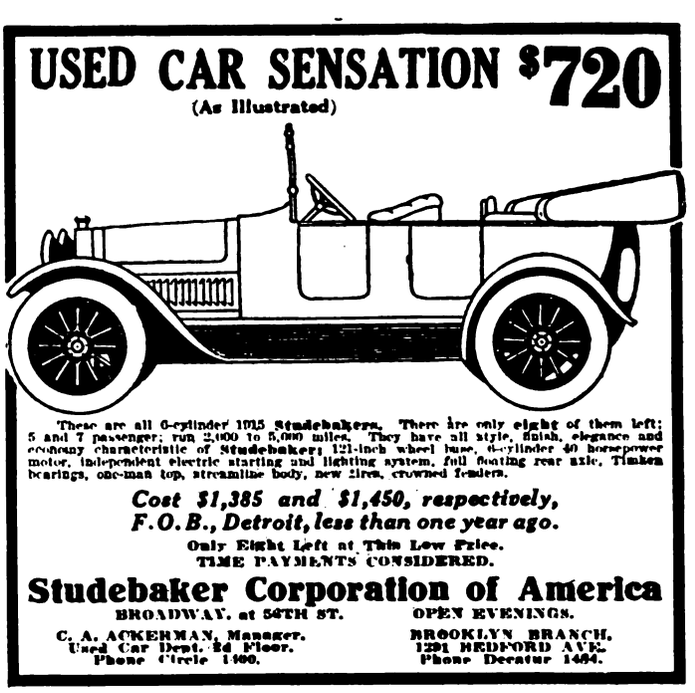

Fig. 2—Ackerman used a set up like this to move a lot of used cars. It moved them because the ad looks and reads like a new-car ad

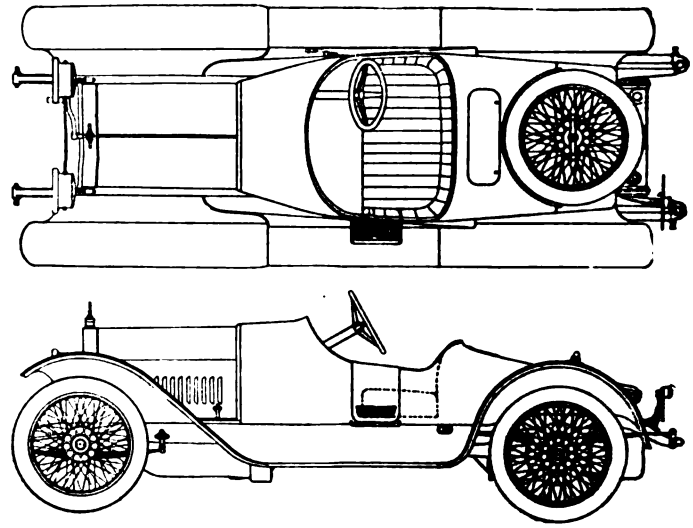
Undertakers Buy 17 Cars

LOUISVILLE, KY., Aug. 26—The Association of Louisville Undertakers, in changing from horse-drawn to motor vehicles, has contracted with the Kentucky Automobile Co. of this city to furnish seventeen eight-cylinder Cadillac cars of the newest model.



Of these, twelve are to be limousines and five special chassis for mounting hearse and wagon bodies. The amount of the order is in the neighborhood of $51,000 and is said to be the largest of its kind ever given in this section.

100 Cars in Auction Sale

DULUTH, MINN., Aug. 28—John M. Ford, a dealer, held an auction sale of used cars lasting 2 weeks and sold nearly 100 cars. They were turned in by all the dealers.

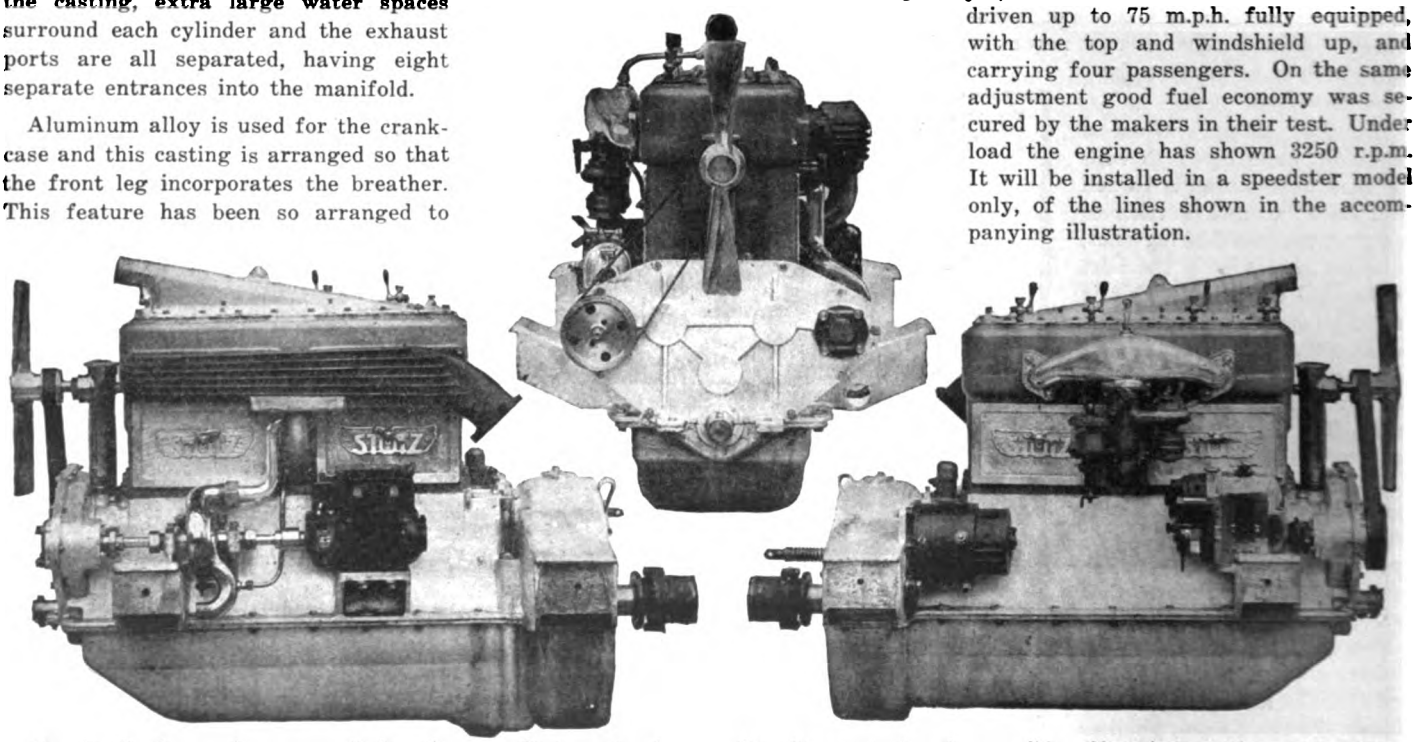
Stutz Evolves 16-Valve Four Speedster Model

The 16-valve motor will be installed only in a speedster model like this

FOR some time it has been predicted that the tendency observed in racing toward multi-valve cylinders would find its reflection in vehicles intended for ordinary use. The Stutz company bears out this prediction in announcing a sixteen-valve four-cylinder motor, placed in a roadster intended for high-speed work.

High volumetric efficiency is naturally the object in the greater number of valves per cylinder, and the gain is not noticeable except when the ratio of piston speed to displacement becomes such as to require exceptionally high gas speeds. Therefore, in order for an engine of this type to be of use to the average individual who does not expect to travel over the highways at 90 m.p.h. we would expect a power plant with large cylinders.

This is the case in this new Stutz job, which has a displacement of 360.8 cu. in., with its bore of 4⅜ and stroke of 6. This gives a formula rating of 30.63 hp. based on the 1000 ft. per minute piston speed. As the engine is intended for high-speed work, this rating is exceeded to a very large extent. The cylinders are cast in a single block, which is a departure from usual Stutz practice. In spite of the compactness of the casting, extra large water spaces surround each cylinder and the exhaust ports are all separated, having eight separate entrances into the manifold.



Aluminum alloy is used for the crankcase and this casting is arranged so that the front leg incorporates the breather. This feature has been so arranged to prevent the accumulation of oil vapor over the exterior of the engine, thereby cutting down the collection of dust. The bolts holding the main bearings in place are through-bolts with a collar countersunk into the crankcase also holding the cylinders in place.

Nickel steel is used for the crankshaft, which is supported on three extra long main bearings. In mounting these, the bearing seats, as well as the bearings themselves, are carefully scraped in so that the solid backing is given the shaft supports. The valves are all operated by roller lifts from the camshaft.

Lubrication is by pressure feed through a hollow crankshaft. Oil is pumped from the reservoir in the crankcase through a main duct cast integral with the crankcase to independent ducts leading to each crankshaft bearing. The stream of oil then passes through the hollow shaft to the lower rod bearings which are fed by a constant flow. The pistons are lubricated from the main and rod bearings, the oil filler is incorporated with the fan bracket, and a gage is provided on the side of the crankcase showing the amount of oil in the reservoir.

The fan is a two-blade aeroplane type of an aluminum alloy, mounted on an annular ball bearing with an eccentric bearing for adjusting the tension of the fan belt. The intake manifold, which is water-jacketed, is so designed that the carbureter is very close to the cylinder ports and very accessible. Hot air is taken directly from the exhaust manifold by a hot-air tube extending between the middle two cylinders.

This engine has been in a car for some time and driven several thousand miles. The particular car in which it was installed for trial was a four-passenger job, which the makers state has been driven up to 75 m.p.h. fully equipped, with the top and windshield up, and carrying four passengers. On the same adjustment good fuel economy was secured by the makers in their test. Under load the engine has shown 3250 r.p.m. It will be installed in a speedster model only, of the lines shown in the accompanying illustration.

Despite its four valves per cylinder, the new Stutz motor is exceptionally compact and accessible. Very large water spaces are provided. The motor speeds up to 3250 r.p.m. under load and the car has done 75 m.p.h. with full equipment and carrying four passengers

The second in a series showing

Dealers Who Have Made Good

John Van Benschoten

Poughkeepsie, N. Y.

"JOHN VAN BENSCHOTEN, Distributer of Automobiles and Supplies," is the way he styles himself. "Sarsaparilla Van" is what his friends call him—and he has many friends. He is a great, big man physically and financially. He is known the length of the Hudson River and for a good many miles inland on both sides.

At present he operates a big establishment in Poughkeepsie, with branches, operated entirely independently, however, in Newburgh and Kingston. He handles Packard, Chalmers, Studebaker and Dodge cars, in addition to doing a big wholesale and retail trade in accessories.

He was born 46 years ago on a farm 6 miles from Poughkeepsie. From the farm he graduated to the clothing business, and in 1891 entered the bicycle business "on his own hook."

For 25 years he has been in business in the same street. In 1896 he built the big building that now houses his business and in 1900 started selling the Mobile steamer. Then he sold the famous curved dash Oldsmobile and later the Autocar. Afterward he sold the Thomas for a while, and with all these cars he controlled the entire Hudson Valley, including seven counties; he still controls the greater part of this territory.

Latterly he has taken an active interest in the Pouvailsmith Corp., Poughkeepsie, and will direct the sales policy of the company in addition to his other responsibilities.

The Why

He is a staunch believer in upholding the list price. If he has anything to give a man, he gives it after the sale is made and not before.

NEVER MISREPRESENT, Van Benschoten pounds into his salesmen, and they don't.

The Tractor Dealers Must

THINK

TRACTOR CONSTRUCTION

By Stanley P. McMinn

Motor World Staff Representative with the Tractor Circuit

THIS IS THE SIXTH of a series of articles on the merchandising and service problems peculiar to the farm tractor dealer. Previous articles have discussed tractor service and the merchandising possibilities of tractor accessories. The seventh article will appear in a following issue.

GET IN your mind a picture of a farm—level or rolling land, or hilly. Get OUT of your mind the picture of a broad highway and pneumatic tires.

Visualize rough going over fields, sun-hardened into humps and bumps and hillocks. Think of traveling over freshly plowed land, soft and yielding, of plowing through sand and mud a foot deep.

This will give you some idea of what the tractor designer must have in his mind, and what the farmer ALWAYS has before him.

The farmer must have a tractor which will work on that kind of land.

Farms are more or less alike, yet there is no similarity between the tractors made by any two manufacturers. There is NO PREDOMINATING TYPE. There is no type built for a particular type of soil or topographical condition. All manufacturers are building for all conditions. Yet each is working along his own particular line, and every one of the tractors is pulling its plows.

In the motor-car field it is different. Every standard motor car has four wheels and a more or less standard motor.

All Kinds of Tractors

In the tractor field we have two-wheel tractors, three-wheelers and four-wheelers; tractors without any wheels, strictly speaking, endless tracks taking their place, and tractors with drums.

Similarly, in the engine field we have one-cylinder vertical and one-cylinder horizontal, two-cylinder opposed, longitudinally or transversely, two cylinders together horizontal, four-cylinder opposed and four-cylinder vertical, some of the latter transverse and some longitudinal, and six-cylinder transverse and longitudinal and eight-cylinder.

As a general rule, the manufacturers of tractors equipped with massive single and two-cylinder motors are the old-line implement manufacturers, while the newer machines in the field, those produced by makers who put out only tractors, and no other implements, more closely resemble the conventional motor car, in that they have four-cylinder vertical motors placed either transversely or longitudinally in the frame.

There are exceptions. Some of the old-line implement manufacturers are producing tractors which closely resemble an automobile but are of comparatively recent development. Similarly, some of the newer manufacturers are producing tractors with heavy two-cylinder opposed motors.

The Two-Cylinder Predominates

In point of numbers produced the heavy two-cylinder opposed motor predominates, but in view of developments during the past year it seems likely that the four-cylinder vertical type, placed either transversely or longitudinally in the frame, but preferably longitudinally, may soon become as popular as the other type. The fact that the majority of newcomers in the field, many of them representing experience in the motor-car and commercial-vehicle fields, seem to prefer this type carries with it a certain significance. It is impossible to overlook, however, the long experience which the older manufacturers of tractors have had with the two-cylinder opposed type and the satisfaction which it has been giving.

Some manufacturers are on the fence on this question, and one even has placed his tractor on the market equipped with either type of motor at the option of the purchaser; the four-cylinder motor is slightly more powerful than the two, in this case, though the tractor is otherwise unchanged.

As to Vibration

On the score of vibration, there may be something to choose between the two types which would favor the four-cylinder, though in actual operation there is not a noticeable difference when plowing at normal speed. I have plowed with machines of the two types, drawing three and four bottoms, and it was practically impossible to note any difference, either in vibration or pulling ability. Provided a two-cylinder opposed motor is properly designed and balanced, vibration should not be noticeable.

The number of wheels a tractor may have, judging by the demonstrations, does not appear to have an important bearing on its ability to plow, provided the soil is dry and firm. Two-wheelers, the plow itself forming the third point of bearing on the ground; three-wheelers, with the third wheel—or drum, in some cases—either in front or rear, and four-wheelers appeared to work with equal facility.

Little Good Comparison

There was no rain during the demonstrations, and in consequence there was no opportunity to compare the work of the various machines in wet soil. It is conceivable that there might be some advantage with the machine having two drive wheels widely separated, in that it might be possible to pull the machine out of a mud hole if traction could be got with one wheel and provided there was no differential or a means of locking the differential. Actually, however, a condition such as this would seldom be encountered.

Digitized by Google

Some manufacturers favor the use of a differential and others do not. The latter point out that when the machine is turning on the headlands it is not pulling any load worth consideration and one wheel can always slip slightly.

Traction a Moot Question

The question of obtaining traction is more or less mooted, and farmers and dealers are likely to ask themselves whether such and such a small tractor—a really little one—could get sufficient traction to pull its plows. They are apt to judge the tractive effort of a machine by its apparent weight, though they cannot arrive at a proper conclusion if they do so.

Tractive effort is a matter of design—the width and diameter of the drive wheels and balance. The farm tractor is different from the pleasure car and the motor truck in this respect. In these vehicles the diameter and width of the wheels remain practically constant. Traction is governed, to a large extent, by the weight on the driving wheels.

In the farm tractor, traction is governed rather by the pressure exerted by the wheels on the earth, and this pressure, in turn, is determined partly by the weight of the machine but to a greater extent by the design of the machine and the load it is pulling.

Designed to Give Pressure

In other words, most tractors are so designed that the load they are pulling tends to increase the pressure between the driving members and the earth, and so to increase traction. This is because the plow hitch is arranged so as to give a downward pull. In fact, when the plows are dropped into the soil the tendency is for the front of the tractor to lift, and for this reason it is important that the weight of the machine be properly proportioned.

If insufficient weight is up front there will be no counterbalancing effect to the downward pull of the plows and the desired increase of pressure between the driving wheels and the ground will be partly lost. Furthermore, with the front wheel, or wheels, tending to bounce slightly it would be difficult to steer the tractor, owing to lack of sufficient contact between the steering wheels and the ground.

Wheels Must Be Well Designed

The question of weight is more important where the tractor is working on plowed land. In this case the load is not as great as when plowing and, generally speaking, there is not the downward pull given by plows. In consequence a tractor which may have no trouble in getting sufficient traction to pull its plows may spin its wheels more or less when pulling a lighter load on plowed ground.

In either case, however, it is important that the diameter and width of the drive wheels be properly proportioned. If too small in either particular the weight of the tractor will cause the wheels to sink in—slightly in the case of plowing, owing to the harder soil, and to a considerable extent when working on plowed land—thus imposing an additional burden on the motor.

Weighing a tractor, or merely judging of its apparent effectiveness in these particulars without seeing it actually at work, is not satisfactory. It is essential that the tractor be actually tested out on the various kinds of soil.

Ease of operation is, or should be, an important matter. The farmer is accustomed to horses that are trained to follow a furrow, easily guided, and will stop and start at a word. Contrast this with some tractors which require constant vigilance on the part of the operator and permit of practically no attention being bestowed upon the plows.

To drive a tractor imposes a certain mental strain and an even more certain physical strain that it should be the object of the designer to eliminate in so far as possible. Consequently the ease with which a tractor can be guided and stopped and started is important.

Three Steering Methods

There are three principal methods of guiding a tractor. Two of them employ the familiar worm-and-gear arrangement that is used on motor cars. The other employs chains which are wound on a drum. In one of the two former types the reduction between the hand steering wheel and the ground wheels is considerable, and in steering the tractor the hand wheel must be "spun" or turned several revolutions to move the ground wheels a few inches.

In the other, which more nearly approaches in action the motor-car steering gear, the reduction is smaller and the hand steering wheel is moved little more than in the case of a pleasure car. Obviously, in this case more effort is required to turn the wheel.

In the chain type of steering gear the action is quite different. One chain is always slack. When it is desired to turn the tractor the slack is merely taken up, thus slacking off the other chain, and the movement of the machine over the uneven ground turns the wheels. The effort required to turn the hand steering wheel is slight.

How Wheels Run

In some machines having four wheels the right front wheel runs in the furrow and the machine becomes virtually self-steering. It is practically impossible for the wheel to get out of the furrow to the left, though some attention is necessary to prevent it running off to the right and onto the plowed ground. Furthermore, unless the wheel is watched it will tend to cramp against the side of the furrow and thus consume power. The same applies to three-wheel machines which have the third wheel in front and running in the furrow.

Front Wheel on Hard Ground

In other machines the front wheel does not run in the furrow, but is on the hard ground. In this case it is necessary to guide the machine constantly in order to keep the plows in the proper position. Quite a number of manufacturers, however, equip their machines with an auxiliary front wheel connected to the steering wheels and running in the furrow. This wheel controls the steering wheels and practically eliminates the necessity for attention.

In machines with the chain type of steering gear the right front wheel generally runs in the furrow and, with both chains fairly slack, the machine becomes virtually self-steering.

Plan Big Union Service Building

NEW YORK, Aug. 28—Plans for a big storage and service building in New York are being formulated by interests identified with W. C. Durant, president of the Chevrolet Motor Co. and of the General Motors Co. It will provide close to a half-million square feet of floor space and solve the storage and service problems of many New York dealers and distributers.

According to the plans, this building will occupy a plot of ground on Eleventh Avenue extending from West Fifty-fifth to West Fifty-sixth Street, with a 200-ft. frontage on the avenue and on each street. The title to this property is now vested in Durant.

A modern fireproof building is to be erected of steel and concrete or steel and brick. The plan first called for eight stories in height, but those dealers and distributers who learned of the plans recently have shown such interest that it is likely four more floors will be added. Special high-speed elevator facilities will be provided and in all other respects this building will be designed, constructed and equipped for the particular purposes it is to serve.

It is planned to divide the 40,000 sq. ft. on each floor into eight units, each unit being designed to provide both storage and service facilities. Some of the larger companies along Broadway will require several units. Not a few of them at present have their storage and service quarters divided among a number of small and unsuitable buildings in different parts of town, and this is both expensive, inefficient and inconvenient.

Erie May Have Show

ERIE, PA., Aug. 28—The Erie Motor Club will hold a show this winter if a suitable building can be secured.

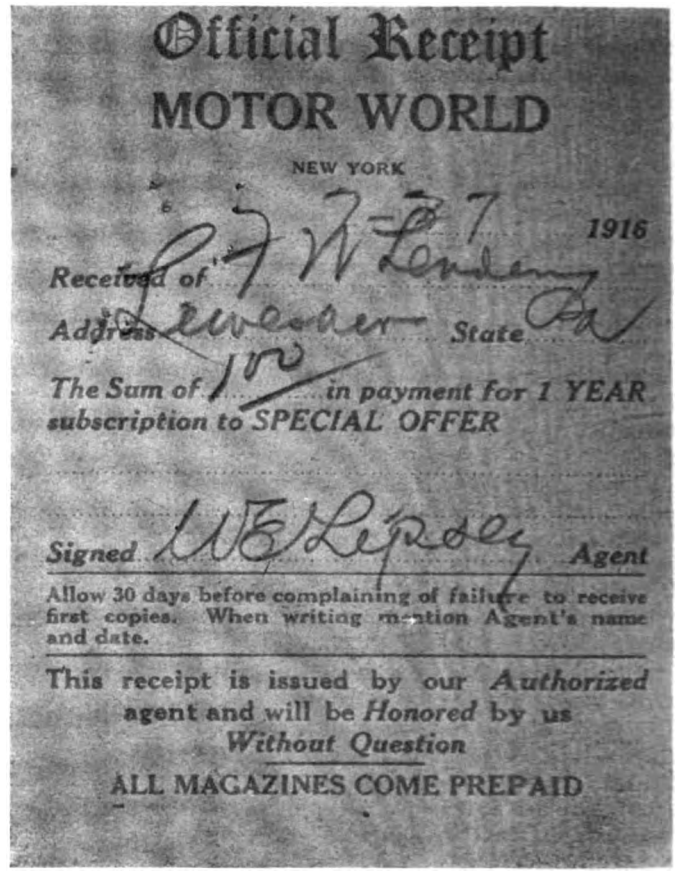
$50 Reward If You Get This Faker For Motor World

HE took a dollar from F. W. Lindig of Lewisburg, Pa., and another from T. G. Copeland of Kain, Pa., who is a jeweler. Lindig says the faker traveled in a motor car and seemed an authentic agent. He is NOT. The first time he signed himself "W. E. Lipsey"; the second time he signed "Wm. H. Marshall." He seems to be operating under half a dozen different aliases.



Motor World has circulation men who travel in motor cars and before this has had trouble with fakers of the type of the man who has been "working" in Pennsylvania.

All Motor World men carry the regular Motor World receipt which is shown at the bottom of this page, and the receipt carries no apologies or advice to "wait 30 days before making complaint."

The Motor World Publishing Co., 239 West Thirty-ninth Street, New York, will pay $50 to anybody who will grab this faker and hold him until we can start action against him.

A BIG POINT to remember is that our authorized subscription solicitors don't sell the paper at cut rates, but at the regular price of $2 a year; nor do they EVER solicit persons not directly connected with the motor car trade.

Get us the number of the car if you can. Get us any data you can on this man, and if you are able to do it, have him held by the police.

Official Receipt
MOTOR WORLD

What He Thinks He Sees Counts

This story is based upon an incident that occurred a few days ago on Broadway.

By Ray W. Sherman

"I WAS going to buy a Redman car," said Sheft, as he handed Reilly a check in final payment on the Sennett he was about to drive home in.

"Yes?" was the Sennett dealer's noncommittal reply.

"Yes, I was—but I didn't. I decided just in time that I didn't want one. You see, it's like this," he continued. "Del Mathewson bought one the other day. He lives next to me out at Croftman. I was going to buy one, too, until Del found he didn't like the car as well as he thought he was going to.

No Foot-Rail

"Del drove it home last Tuesday and on the way discovered that there wasn't any foot-rail in the tonneau. He also found that the horn wouldn't blow half the time and that the speedometer rattled. There were one or two other little things, so he called up Henry Bennett, the Redman dealer, and told Henry about it. Henry said to bring it in.

"Del left it at Henry's in the morning and Henry said he could have it at half past four that afternoon. But when Del got there the car was 40 min. coming out of the shop. There were five of us who had to wait that 40 min., for Del was giving a bunch of us a ride home in the new bus.

"When the service man left the car in front of the salesroom while Del paid the bill, the service man took the pencil out of the magneto so we couldn't run away with it. That's second-hand dealer stuff, not gentleman work.

Still No Foot-Rail

"Then, the foot-rail wasn't in. Bennett explained that all the brackets he had were two lefts. He said in the morning that he hadn't put the rail in because he wanted Del to drive the car a few days and get his leg distance fixed.

"Then, the horn didn't blow at all after it had been fixed, and the speedometer had been taken off and sent to the speedometer factory.

"There was a bill for 16½ hr. labor and 60 cents for material. The material was itemized at eight washers for the horn and a piece of insulation on a broken wire. That wire, Reilly, was broken when the car was delivered. And we counted the washers on the horn and there were only six. They charged for eight.

"Come Back Again"

"Henry said to bring the car back the next day and Del told Henry to go plump. It's about the rottenest car I ever saw. Wouldn't have one on a bet."

Sheft got into his new Sennett and drove away.

"Gee! But that was a rotten deal, wasn't it?" exclaimed Tommy Trumbull, Reilly's junior salesman, as Sheft drove away.

"Rotten, but not of much consequence from Henry's viewpoint," replied Reilly. "It's just a few little things, but they have become magnified in the eye of the buyer. That's always the way. It isn't what a man sees or hears that counts—it's what he thinks he sees or hears.

Imagination Does It

"You read in the paper that a man ran down the street, and you picture him going at 60 miles an hour. The chances are he went at a dog trot. But you imagine him going at top speed and when you find that he didn't you say the newspaper lied. Your imagination lied, Tommy, not the newspaper.

"The same way with this Redman car. Henry should take better care of his business. He should pay closer attention to his service. He should see that his cars are right before they go out. If he doesn't, he's hurting no one but himself.

"There were three defects in the car—the horn, the speedometer and the foot-rail. The car's a darned good car, no question about that, and Henry's a pretty good dealer, but the buyer doesn't see it that way.

Defects Magnified

"The buyer has pictured the enjoyment he would get from the car, and when his enjoyment is marred he sees only the defects—and even they are magnified. Our impression of things is not what we see, but what we think we see. Something comes to our brain and is there reorganized into our impression of that object. Our impression as reorganized in our mind may be entirely different from the reality.

The Little Become Big

"So it is with these cars we all sell. To the owner comes a complete visual story of the car, but by the time he has reorganized it and formed it into his impression it may be something entirely different. In this case, in his impression he subordinates the good things and sees the bad things, and his impression of the car is one of bad.

"And that's why I like to keep an eye on the little things as well as the big things. That's why I have all complaints passed on to me. That's why I make myself accessible to every Sennett owner. And it's the reason I make a periodical snoop all through the place. I can't afford not to."

Haynes So-Sha-Belle Has Successor

KOKOMO, Aug. 29—Deliveries have been going on since early in August on a new four-passenger Haynes roadster mounted on either the twelve or six chassis. It is a successor to the Haynes three-passenger So-Sha-Belle model, and although of greater capacity, resembles it. The front seats are divided and the rear seat is wide enough for two passengers. The rear passengers are given an extra amount of leg room by sloping the backs of the front seats downward towards the brake and clutch pedals. The seats and the sides of the tonneau are upholstered in hand-buffed leather, which in turn is covered by gray waterproof seat covers of soft cloth. The body is low and the runningboards have a ground clearance of 10 in.

Special attention has been given the comfort of the driver in that the pedal pads may be brought to the desired position and the seat moved forward or backwards. By grouping all the cowl instruments on a compact board the controls are moved up within easy reach.

Argentina Wants Our Accessories—but in Her Own Style

By David Beecroft

THIS story is the fifth of a series on South America by David Beecroft, managing editor of Motor World, who spent ten weeks on the southern continent, investigating the possibilities there for American cars and allied products.

The Argentine has the car and now wants the accessories, but they must be put up and sold in the Argentine way. The U. S. A. way—for so Argentina terms the U. S.—is the same to him as his would be to us.

BUENOS AIRES, Argentina, July 15—As stated last week, we shall now make a brief resume of the accessories field in Argentina, Brazil and other South American countries to show what lines of goods are most in demand.

Before doing so it may be in place to remark that chauffeurs are large factors in buying accessories here. Nearly all of the cars used in this city and in other cities are driven by chauffeurs. *These chauffeurs demand 10 per cent commission on everything they buy and have generally been getting it. There is general talk of stopping it, but the dealers cannot get together,* and if one stops the commission and the others do not, that one is on a pretty sure road to lose all of his business. There is just as much accessory rivalry here as in Chicago or Minneapolis. The accessory trade here is an old business.

Reverting to the possibility of selling accessories for the 30,000 cars in Argentina: *There are many accessories which we manufacture that will prove popular there and are proving good sellers to-day.* In perhaps twenty supply houses in ten or twelve different cities in three different countries, I have gone over a good percentage of the accessory stock on hand to see what U. S. A. goods are being carried and also seeing what lines are proving good sellers. I have found a fair representation of U. S. A. goods and find many articles that are big sellers. There are many lines of French and German goods and also many English, Italian and Belgian lines. Some of the best U. S. A. sellers are:

Hand horns,
Soaps,
Body polishes,
Spark plugs,
Speedometers,
Batteries and
Dry cells.

Hand Horns Good Sellers

Hand horns are very good sellers, but we rarely see more than one or two different makes. *Each of the 30,000 cars in Argentina is a prospective market for a hand horn.* The field is large enough to warrant our large horn makers starting after it. They should at least get their feet firmly on the ground.

Very often when you ask where the dealer bought the goods he remarks: "From a New York exporting house."

As to why he did this, the answer is that so *many of the U. S. A. accessory makers are hard to do business with. They have not Spanish stenographers, they do not know how to properly pack goods for ocean shipment, and there are other excuses.*

These dealers are willing to pay an exporting house 2.5 per cent more solely because it is easier to do business in that way than with the manufacturer.

Our 1916 Exports

If our accessory manufacturers are asking themselves if it is worth while going after export business, let them not forget that during the fiscal year ending June 30, 1916, practically 8.5 per cent of our entire U. S. A. automobiles manufactured were exported. Where these exported cars go our accessories should follow.

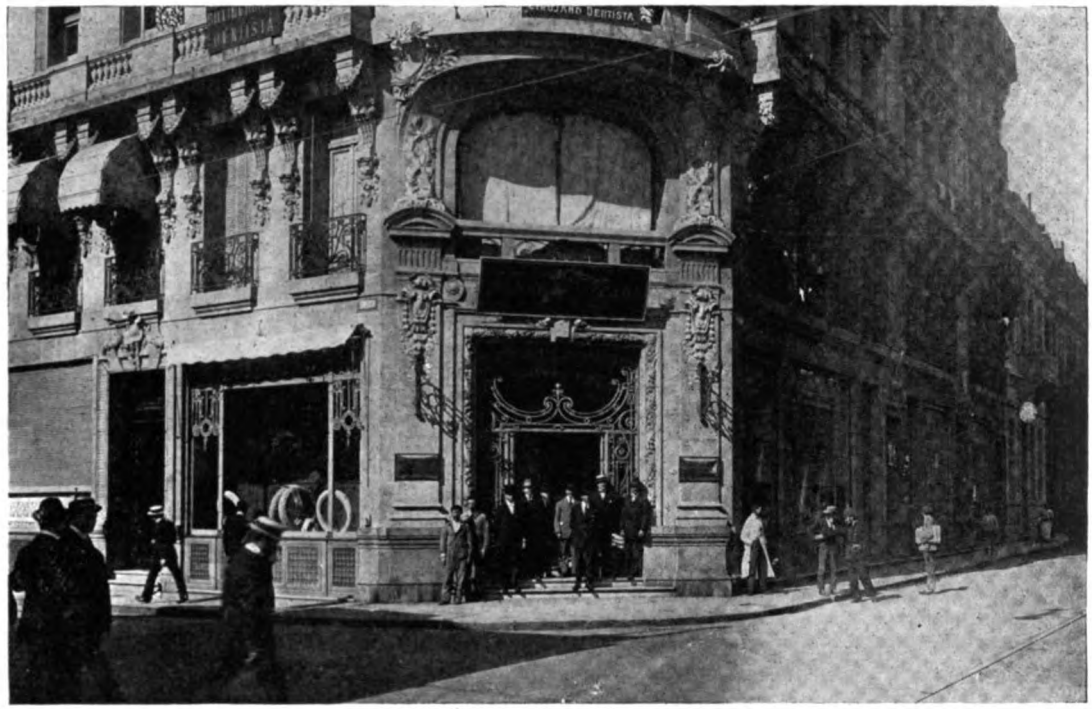
We are today becoming an exporting nation of such proportions that our makers must seriously consider this export question.

As to Polishes

Metal and body polishes are good sellers here, where many of the chauffeurs wash and polish their own cars. It is very common to do this, particularly where the cars are kept in individual stalls under lock and key, as illustrated last week in Motor World. The driver is entirely responsible, and if a single scratch appears he is held responsible. This means a very wide market for polishes.

Soaps and Cleaners

There is a brisk market for soaps and hand cleansers. Where each chauffeur becomes a body polisher, it is essential that he have plenty of soap. More soap is needed per car per month than with our system of washing, where four or five men in one garage wash 100 cars. WE NEED SOAP FOR FOUR MEN, WHEREAS SOUTH AMERICA NEEDS IT FOR 100.



Spark Plugs

Spark plugs are fine sellers. In nearly every supply house you see three or four makes of U. S. A. plugs, three or four French makes, one or two German, a couple of English, and perhaps one Italian. One criticism applies to nearly all of our plugs sent to Argentina and Brazil, namely, that PRICES ARE MARKED ON THE CASES.

The same pasteboard boxes seen in our Chicago or Kansas City supply houses are seen in Buenos Aires, Rio, Sao Paulo. THIS IS A BAD FEATURE.

If a spark plug sells for $1 in New York, it is a certainty that it cannot sell for $1 in Buenos Aires. The sign $ is the same in Buenos Aires that it is in New York, but the $ in Buenos Aires stands for only 44 cents of U. S. A. gold. In Buenos Aires that plug may sell for $4. You readily see the difficulty

Digitized by Google

The Goodyear Tire & Rubber Co. in Buenos Aires occupies a building that compares well with those on Broadway or Michigan Avenue. The company got under way less than a year ago and is making progress

of a dealer trying to induce the buyer to pay $4 WHEN THE SIGN IN PLAIN FIGURES ON THE PASTEBOARD BOX IS $1.

Asbestos Products

There is a good market for various makes of U. S. A. asbestos-copper brake facing and facing of other compositions. You meet with one or two makes, but frequently find that a supply house is short of many sizes. Keeping an adequate stock is a problem.

Priming Cups

We find very general requests for priming cups and grease cups. Solely because you have to cross the equator to get here is no reason to imagine that it is always hot here. Argentina has its seasons, just as we have. It has its winters and they are cold. It gets very cold here, and you feel it more so because the buildings are not heated. Garages are not heated and naturally a car gets very cold and priming cups are an essential.

Grease Cups Needed

Grease cups of all sizes are needed. For European cars the metric thread is best, but for U. S. A. cars our standard threads will do. It would be beneficial to us if we used the metric threads on all of such parts.

Bearings Not Well Represented

Our bearing concerns are not well represented. One of the surprises that meets your eye when looking through large accessory supply houses and in many garages here is the large stock of bearings carried. I have seen two shelves over 12 ft. long each piled nearly 1 ft. high from end to end and for nearly a foot in width with various sizes of French, English and German, Swiss, Italian and Belgian ball bearings. You soon see the reason. Argentina is 3 weeks from Europe and it is necessary to keep very large stocks.

Electric Repair Lamps

A brisk demand is noted for hand electric repair lamps. So many of the European cars use acetylene lighting that the electric repair lamps are good sellers. There is in this connection a good possible market for the individual electric searchlight which we fit to the frame of the windshield and operate by hand. THE ARGENTINES ARE FOND OF ATTACHMENTS and their poor roads would make such a lamp *very attractive.*

Top Cover Materials

Several requests have been made for top covering materials which were all cut and ready to be used in recovering such standard models as Overland, Ford, Buick, and others. Tops are not given good attention in Argentina, in fact all of our cars going into "the camp" get rough usage. Sometimes they are never under cover for months.

Ford Dealers Sell Accessories

Nearly all Ford dealers carry a large stock of accessories. The Ford dealer in Cordoba has the whole side of his shop occupied with one large showcase, with a glass front. It is filled with Ford spare parts and all of the accessories he can get. He was short of Ford accessories in June. He can sell 200 Fords per year if he can get them and as all cars arrive without speedometers he was particularly anxious to get such lines.

HE DOES NOT WANT SPEEDOMETERS THAT READ IN MILES PER HOUR, BUT THEY MUST READ IN KILOMETERS PER HOUR.

He further wants some form of constant lighting electric system for Fords, his request being only one of many similar requests received. Ford has been selling over 300 cars per month in Argentina, Chile and Uruguay. One month it rose to 470 cars, that was last February. With this output there is certainly a large demand for lighting as well as starting outfits.

Demand for Storage Batteries

More U. S. A. starting and lighting batteries are needed. We must have them for nearly all of our cars. Batteries are sure to give more or less trouble in Argentina. They gave us trouble in U. S. A. the first year or so of electric starters simply because our owners did not give them the attention they should have, generally distilled water when needed. That trouble is facing Argentina. Everywhere our batteries are conspicuous by their absence.

Metal runningboard boxes are good sellers.

Good Market for Jacks

There is a good market for jacks. You see French and English types and a few U. S. A. varieties. One English jack with a long handle for easy operation is selling well.

Ad Infinitum

We might go on indefinitely through the accessory field endeavoring to show different lines of possibilities for our accessory makers. We could add gaskets of all kinds and sizes; wrenches and screw drivers and like tools which have largely been supplied by France and Belgium; clocks which are in de-

Accounting and Business Systems

By T. W. Snead

Dividing Overhead

System Editor:

The only difficulty we have experienced in the installation of your system so far is the drawing up of the Table No. 2 and in the keeping of one or two of the assets and liability accounts. For instance, we are keeping all of our active bills payable accounts on separate sheets, placing those less active accounts together on one sheet.

Now, do we understand that in addition to these we should carry a sheet which will show the sum total of all these accounts as a liability, this total being derived from compiling a sheet at the end of each month which will show the total amount of our indebtedness to our creditors?

There is one question, however, which we should like to submit to you, and that is, the distribution of overhead expense to that department which has been a loss during any one month. Your method of distributing the overhead, according to the earning capacity, results in those departments which make a profit carrying all the overhead expense and any department which falls behind being relieved of its overhead burden.

Now, we believe that the department which loses should be charged with its portion of the overhead expense, thus making its total loss greater. To show you what we mean, we will say that during the month of January our vulcanizing department showed a greater cost of operation than the income which it earned, and we subtracted the percentage of overhead, which threw the difference onto our accessory department, which had shown a profit.—KEATING & SHAW, Portland, Me.

You should keep track of your Assets and Liabilities as determined at the end of the month merely as a matter of record.

Practically everything we do in life is a compromise, and this applies as much to the distribution of overhead as to anything else. There is no way that is absolutely satisfactory, but we believe the best method is by percentage according to profit, as we have described.

If you were to divide the overhead according to some plan that would give a constant amount each month, as you suggest, the vulcanizing department might show a loss in winter and a profit in summer. The objection to this method is that when summer came you would be making a very large profit on your vulcanizing department and you might forget about the losses of the winter months and therefore reduce your selling price.

This has happened in several cases. We know of a man who is selling accessories and told us recently that in the summer months he was able to sell his tires cheaper because on account of the large business he was doing and the proportionately small overhead his profits were very great.

This man was laboring under the delusion that his winter business should take care of the winter overhead and the summer business of the summer overhead. When he was making big profits in summer he forgot all about the losses in winter.

The System Goes to France

System Editor:

I am ordering, through our purchasing department, the booklet on your simplified system of accounting; also the complete equipment for said system and an extra July 5 issue of Motor World.

STOCK RECORD CARDS: I saw advertised in Motor World some time ago a model of stock record cards, which I understand to be part of your accounting system. As these are not mentioned in your letter under reply, kindly let me have a few samples.

Should our remittance be short a few cents, through lack of knowledge of exact price of these cards, we will remit at once upon receipt of advice from you, but by all means do not delay the shipment of articles ordered.—M. A. Chailliey, Automobiles Berliet, Lyon, France.

Bus Expenses

System Editor:

We are running the Ford bus line between St. Marys and Ridgway. There are two regular drivers employed in this department and the average income hovers around $15 to $20 a day. We are agents for four popular cars, have a well-equipped shop, and deal in gasoline and general car equipments.

We would like to keep definite account of expenses, as well as income of each individual car, as well as each driver. Kindly explain entries in connection with this department.

We use sales slips in our gas and repair departments and have as yet found no difficulties.—GLASS & WITTMAN, St. Marys, Pa.

You should number the drivers and the buses, calling one Driver No. 1 and the other No. 2, and whenever an entry is made for the one or the other you should put down the number. In this way you can separate the expenses of the two drivers and the two buses at any time you choose.

We believe that this will answer your question satisfactorily, but if you desire us to go into more detail we shall be glad to do so if you will let us know.

The expenses of the different demonstrating cars may be kept track of the same way; that is, by numbering the demonstrators 1, 2, 3 and so forth.

How to Begin

System Editor:

We have ordered your simplified system of accounting and after reading instructions fail to understand how to begin, as the inventory seems to be a separate form.

We have been keeping books the old way and we expect to use your system, but ask that you explain how to enter stock on hand when we begin. Will also ask that you explain Part Three.

We understand Parts One and Two, except that we fail to see where you

Digitized by Google

enter the inventory, which we tnink necessary to tell whether we make money on accessories or not.—VINTON GARAGE, Vinton, Iowa.

We wish to ask, first, if you have the complete book of instruction? If not, will you please advise us and we will forward same.

It is not necessary to make any entries on Forms One and Two showing the amount of stock on hand at the beginning of your system. This, of course, you should know, as your future purchases of stock and the cost of your sales of stock will have to be added and subtracted from the present inventory in order to tell you at the end of the following month your inventory as of that date.

The process of finding your inventory, as well as your other assets and liabilities, at the beginning or installation of your system, is fully explained in the system pamphlet, and if you will advise us we will see that you receive this by return mail.

Getting Started

System Editor:

We have your letter, also your booklet, reprinted from Nov. 24, 1915, to Jan. 12. 1916, issues of the Motor World, for which accept our thanks.

We wrote you that we were about to install your system in our office here. We inclose you a list of items, without giving figures, of our Assets and Liabilities taken from our old system. These are the only items we have to work on in installing your system. We would like you to say whether these figures have to be carried forward, in the different columns to which they belong, on Forms 1 and 2, or whether they need only be carried forward and posted into Table No. 2, Statement of Assets and Liabilities, page 30, column "What We Started With Jan. 1." We are particularly anxious that you should give us this information as to this matter.

We would also like to know if you have printed statements of the following: Table 1, Profit and Loss, and Table 2, Assets and Liabilities. If so, send us some forms and let us know the price and we will remit immediately.—ROBSON MOTOR CAR CO., Guelph, Canada. Per F. H. Fitz Gerald.

In answer to your inquiry as to what to do with your Asset and Liability figures, wish to say that these do not have to be entered on either Forms 1 or 2 in order to start the operation of the system.

These figures are necessary only at the end of the month, when you begin to bring into play the figures that you find on the recapitulation of Forms 1 and 2. They are necessary to a complete statement of Assets and Liabilities, and for that reason they should be ascertained as near 100 per cent accuracy as possible.

We have no printed statement of Table No. 1 and Table No. 2 in view of the fact that only twelve of these will be used during the year and it is a simple matter to typewrite a form and make four or five copies, which will be enough to last you for that period.

The figures representing those Assets and Liabilities which you have listed would then go into Column No. 3 in your Table No. 2. After finding a total of your Assets and a total of your Liabilities, you would open an account for Profit or Loss. If your total Assets exceeded the total Liabilities, the account would be opened under Liabilities for Profit. If your Liabilities exceeded your Assets, the account would be opened under Liabilities, but for Loss, and should be deducted from your total Liabilities to balance your statement.

In going over your various Assets and Liabilities accounts, we notice that you do not carry a reserve for depreciation of your equipment or a reserve for those accounts on your books that will, in all likelihood, be doubtful. Then, again, you should show under your Liabilities an account for Accrued Interest Payable on your Notes Payable, an amount equal to the interest on these notes from the time the interest was last paid up to the present date.

Wants to Change Forms

System Editor:

We have received our system of books and it seems to me that we do not need the Accounts Receivable leaves and would like to exchange them for the other two forms, Income and Expense accounts.

We keep our customers as per the inclosed form and it works out very nicely. We have been groping, as all others have been, and have been trying to find the right system to adopt, and as soon as I saw yours it impressed me very forcibly as the thing to have.

I have, however, been astray for 3 years, and it seems as if I would never arrive at a set of books again. The firm was practically new when I came with them and it has been uphill work all this time.

We have recently taken account of stock and I was wondering where I would start with it. Simply as per your Form 2, item A and B, I have decided. —GREEN & SIBLEY, Lynn, Mass.

We shall be glad to exchange your forms as you desire.

Inasmuch as we are not the manufacturer of those sheets, we would suggest that you write directly to the manufacturer, thereby saving time and trouble. The manufacturer is Tallman, Robbins Co., 314 West Superior Street, Chicago, and providing the sheets are in good condition they will be glad to make the exchange.

We are referring you to the manufacturer for the reason that we have no quantity of loose sheets on hand, but only complete systems.

Some dealers are using the Form 3 sheets in connection with forms similar to those you inclose. A singly entry is made each month on the Form 3 sheets and the purchases are itemized on the forms, such as you inclose. With this plan, the system is kept complete and yet you have the convenience of your plan also.

Argentina Wants our Accessories

(*Continued from Page* 15)

mand; tire removing tools; tire repair kits, and a score of others. Space will not permit. Enough has been said to suggest the remainder.

Garage Equipment

A word on garage equipment. Up to the present all of South America has bought gasoline in the square 5-gallon can, two cans being crated together. This is the English system. Previous to the war England supplied practically all of the gasoline to South America, but now the U. S. A. supplies all and still supplies it in the 5-gallon cans. This is a costly and unhandy way and the movement is now gaining headway to sell in bulk as done in the U. S. A. The first curb-side gasoline pump in Buenos Aires was started in May. It is popular.

Not a Single Curb Pump

Not a garage in Buenos Aires has gasoline pumps and bulk systems, BUT THEY ARE ALL IN THE MARKET FOR SUCH.

There is a good chance to sell air compressors for garages. I have not found a garage in any South American city that has a compressed air system for tire inflation.

Get This, Garagemen!

Nearly all garages here are good centers for selling accessories. They are generally immaculate so far as cleanliness is concerned. The manager invariably has a clean business office.

U. S. A. oils and greases are generally good sellers. One or two brands have good blue and white or yellow and white enamel signs that you see in most of the garages and supply houses. Generally the oil and grease is handled by large concerns that have their own representatives in Argentina and Brazil.

And All the Others

Weed chains are strong sellers. Ford agents generally include them as a part of the car equipment. There is the usual market for carbureters, magnetos, ignition specialties, torches, welding outfits, and in short anything and everything needed in the car trade. The same accessories needed in the U. S. A. are needed in Argentina and the other South American countries. Tire repair kits are much in demand, as are vulcanizers for individual use and for tire depots and public garages.

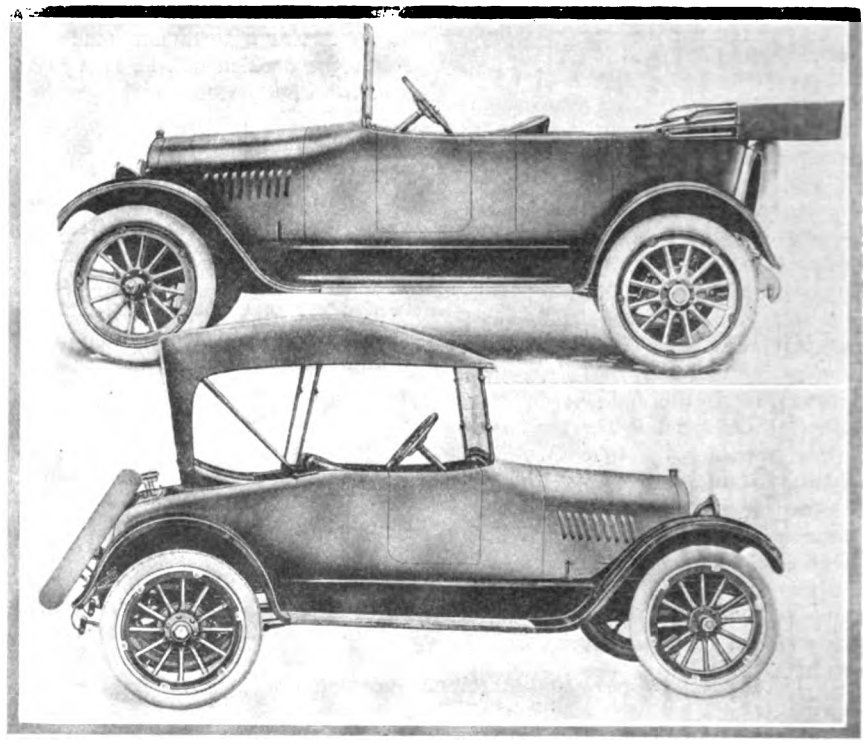
$795 Dixie Flyer Refined Only In Detail

Touring and Roadster Models on Same Chassis



VERY little change has been made in the 1917 Dixie Flyer, which is now going through production. All the alterations are detail refinements with the exception of the battery location. In the 1916 chassis the battery occupied the conventional location under the floorboards close to the motor-supporting arm. For 1917 it is placed on the left side of the main frame, well forward. The reason for this change is that considerable disadvantage resulted from the vibration of the engine and the heat. In the present position the battery is free from heat and vibration, and is now so arranged that raising the hood exposes every connection to the eye and allows considerably shorter lead wires to the starting motor.

The Lycoming engine has not been changed, and is a four-cylinder, 3¼ x 5, L-head design, with an S. A. E. rating of 16.9, and, according to the manufacturers, develops 29 hp. at 1900 r.p.m. The cylinders are cast in a block of gray iron, with the water inlet at the bottom of the casting on the opposite side from the valves.

A feature of the motor block is the reinforcement of the attaching flanges where it is bolted to the crankcase. This gives maximum rigidity with a minimum of vibration. The head is cast separately, allowing space for large valves and also permitting machining of the cylinders and giving access to the cylinders and valves. The head is also reinforced with ribs, preventing warping during machining and permitting a perfect joint between the head and cylinders. Tightness is secured by a copper asbestos gasket.

The pistons are close-grained iron centered from the inside to secure even thickness of wall. The three piston rings used are eccentric and ground on three sides. The piston pin is hollow, of case-hardened steel, with a scleroscope test for hardness. The pin is held tight in the piston, with the upper end of the connecting-rod forming the bearing through a bronze bushing.

Drop-forged I-beam connecting-rods of 40 carbon steel are used with split-type lower ends having a diameter of 1¾ in. and a length of 2⅜ in. on the bearing. The cap is retained by two nickel-steel bolts.

Two models, five-passenger touring and four-passenger roadster are built on the same Dixie Flyer chassis

A drop forging is also used for the crankshaft. It is a 40-50 carbon steel supported on two bearings. The front is 1¾ in. in diameter by 3¼ in. long, and the rear 1¾ x 3 15/16 in. The flywheel is bolted to a flange on the rear end of the crankshaft, this flange being forged integral and the whole assembly placed in running balance. The bearings are split die-cast white metal, adjustable by removing brass shims.

The 1917 Dixie Flyer

Five-passenger	Touring
Four-passenger	Roadster
Color	Brewster Green
Make of motor	Lycoming
Number of cylinders	4
Shape	L-head
Bore	3¼
Stroke	5
S. A. E. horsepower	16.9
Carbureter	Carter
Starting and lighting system	Dyneto
Ignition	Connecticut
Clutch	Cone
Gearset	Grant-Lees 3-speed
Wheelbase	112
Tires	32 x 3½
Type rear axle	Floating
How cast	En-bloc

Low-carbon steel is used for the camshaft, which is 1 in. in diameter and supported on three bearings. Dimensions of these from front to rear are: 1¼ in. diameter by 2 15/16 in. length, 1 55/64 x ¾ in., and 1 x 2 9/16 in. Scleroscope tests for hardness are used on the cams, and each is tested on a special jig for eccentricity.

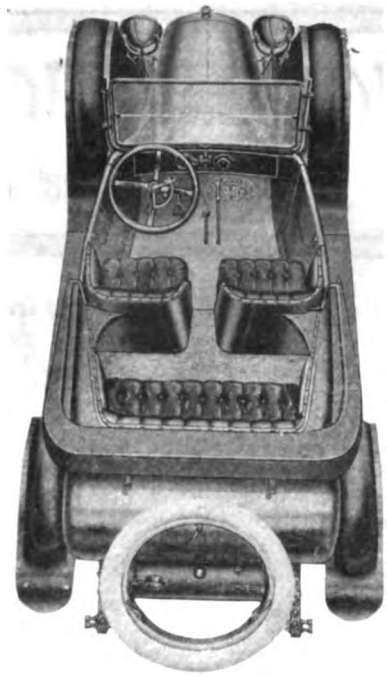
Helical timing gears are employed to drive the camshaft and other auxiliaries. The camshaft gear is of cast iron, meshing with the steel crankshaft gear. The gears are marked for mesh, so that after taking down the engine retiming is simple. The remainder of the valve action is through flat-head pushrods, also case-hardened, and the valves themselves have gray iron heads fused on steel stems. They are 1⅜ in. in diameter and located on the right side of the engine so that the steering column does not interfere with valve adjustments.

Lubrication is worked out according to the conventional combination pressure and splash system. The oil is contained in the bottom half of the crankcase, which has a capacity of 5 qt. A plunger pump circulates the oil, this being driven by an eccentric on a camshaft. The oil is carried to leads which supply the crankshaft and also the troughs beneath each connecting-rod throw. There is an oil scoop on the bottom of each of the rods which, due to the design of the oil can, dips an equal depth regardless of grade and road conditions.

Cooling is by thermo-syphon, which has several distinctive features. The radiator is on the frame instead of between the frame members, thus placing the lowest level of the cooled water in the radiator above the cylinder jackets, allowing circulation to commence as soon as the engine is started. The inlet and outlet pipes are both extra large, with the radiator connected to the engine by 2¼-in. hose. Additional efficiency in cooling is secured by having each cylinder barrel independent from its neighbor, permitting the free circulation of water all around and between the cylinder walls. Extra large waterways are provided around the valves.

Digitized by Google

The gasoline system comprises a cylindrical gasoline tank hung at the rear of the chassis, a Stewart vacuum feed and a Carter carbureter, with special adjustment on the instrument board. There is an arrangement for holding a reserve of 1 to 3 gal. in the supply tank and for automatically notifying the driver when the reserve is reached. The 2-in. section of the gas supply pipe works perpendicularly through a specially packed sleeve in the connection at the top of the tank. A stop is provided on the lower section of the pipe inside the tank to limit its travel upward. When the supply pipe is drawn up to the top the vacuum feed draws gas from a point 2 in. above the bottom of the tank. Should the car at some out-of-the-way place run out of fuel it is only necessary to push down the feed pipe to secure additional feed.



Motor Is Inclined

The clutch is a cone of pressed steel with leather facing and with six compensating spring plungers under the leather to secure easy engagement. A straight-line drive is secured by underslinging the rear springs and inclining the motor in the chassis, so that when the car is underloaded the drive does not deviate greatly from the straight line. From the clutch the drive is taken through a Grant-Lees standard gearbox with a semi-steel case having a strength of 28,000 lb. per square inch tensile. The main shaft has four splines and is of 90,000-lb. steel, with a 75 to 80 scleroscope test. It is carried on a double of S. K. F. self-aligning ball bearings. Between the stem gear and the main spline shaft a roller bearing is used. The material in all gears is 3 per cent nickel-steel testing up to 120,000 lb. per square inch and allowing of quite narrow gears and a short case.

The rear axle is floating, with chrome nickel-steel shafts and gears. The final drive is spiral-bevel mounted on high-duty roller bearings with end-thrust bearings on each side. A feature of the rear axle is that all gears and bearings are adjustable, thus permitting a continuity of good mesh and a reduction of noise due to wear.

Electrical Circuits Made Plain

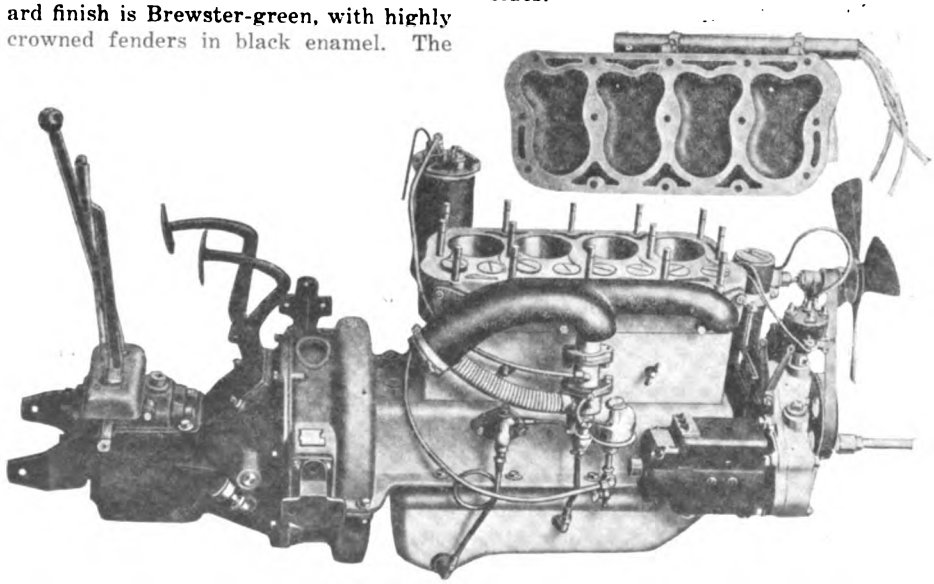
The Dyneto two-unit system is used for starting and lighting and the Connecticut system for ignition. The battery is a Willard. Bendix drive connects the starting motor with the engine through the flywheel ring gear. A wiring diagram is placed on the dash of each car and the individual circuits are marked in different colors so that non-technical owners may have a clear picture of the electrical connections. Each individual circuit, such as headlights, tail and cowl lights, ignition and horn, is equipped with a separate fuse, and the block carrying the fuses is on the dash

The four-passenger roadster is compact, yet there is ample room

beneath the hood. The generator cuts in at 10 miles per hour.

Structurally the frame is a straight pressed-steel channel with four cross-members and a noticeable absence of castings. Where these are used they are of steel in place of the malleable metal. Drop forgings are used wherever possible to secure strength with minimum weight. The wheelbase is 112 in. Steering is irreversible, and the wheels are artillery, using 32 x 3½ tires on Stanweld rims.

Straight Line Design



There is a five-passenger touring and a four-passenger roadster, the latter having the cloverleaf seating arrangement. The touring car is a straight-line design from the radiator to the cowl, with a slight curve in the side rail line. Standard finish is Brewster-green, with highly crowned fenders in black enamel. The roadster follows about the same lines as the touring car and has a sloping windshield. Individual seats are used in the forward compartment, with the rear seat wide enough to accommodate two persons.

Special Bodies Boost Business

KANSAS CITY, MO., Aug. 28—The Kirkland-Daley Motor Co., Studebaker dealer and distributer at Kansas City, has been very successful with the special custom bodies turned out by the custom body department of the Studebaker Corp. The odd, even bizarre colors, and the unusual equipment and appearance of the bodies, have sold them rapidly, and the Kansas City company plans to keep a considerable stock on hand, making a specialty of them.

The Kirkland-Daley company has a large building, with large display windows, on Grand Avenue, the widest and most popular motor street, and at one of its busiest points, Twenty-first Street, and maintains a large force of city salesmen. These two facts have fitted extraordinarily well with the innovation of custom bodies. There are always a large number of prospects, among whom are some particularly "finicky" about their cars, and one or more who is likely to be struck favorably with almost anything that Studebaker sends; the salesmen are pleased with the chance to offer customers something unusual at a higher price.

The receipt of the custom bodies has produced an innovation in the display room by demonstrating the greater attractiveness of the windows when various colors are visible. The result is that the Kirkland-Daley company is having many of the cars repainted in browns and lighter tints and effecting a marked improvement in the drawing power of its big display windows, getting away from the monotony of the blacks and deep blues.

The Dixie Flyer is powered with a unit power plant in which accessibility has been studied. The motor is a Lycoming and the gearset a Grant-Lees

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 832) WHEEL-ALIGNMENT TEST

Misalignment of the front wheels causes difficult steering and an excessive amount of wear on the tires. The alignment of the wheels should be tested from time to time and any error corrected. A simple method of checking up the alignment is to pass a cord all the way around the car just below the wheel hubs and then bring one front wheel into line with the rear wheel. The distance from the string to the rims of the wheel is carefully measured on the side in line with the rear wheel and compared with the similar distance as measured on the other wheel. To facilitate easy steering the front wheels should "toe-in" about ¼ in., and under no conditions should be allowed to "toe-out."—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 833) OIL-STORAGE TANKS

The common type of oil-storage tanks requires a pump and does not provide a convenient place for keeping the measures. Gravity flow is somewhat handier and the installation requires less floor space. A simple method of storing several grades of oil and having them on tap is illustrated. The tanks may be made by any tinsmith, and are provided with gage glasses that show at a glance the amount of oil on hand. The conical-shaped bottoms permit the draining of the last drop of oil and prevent the collection of any sediment. A shelf provided with a drip-pan offers a convenient place for keeping the receptacles.

(No. 834) DRILLING CLUTCH YOKES

It is usually necessary to remove the clutch yoke when drilling and tapping it for an oil-cup attachment. By the aid of the drilling fixture shown this may be done with all parts in place. A 5/16-in. square steel rod is drilled and tapped ⅜ in. on one end and the drill fastened in the other end by brazing. The drill is rotated by the ratchet wrench and fed into the work by the set-screw braced against the flywheel. The length may be made as little or as much as is necessary, and a similar drill may be made for drilling almost any inaccessible hole.—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 835) STRAIGHTENING FRAMES

Bent frames may be straightened cold in the manner shown without the necessity of tearing down the car. The car is run into the doorway until the parts to be straightened are opposite the frame of the door. Blocking should be placed at the point of bending between the frame and the door and the straightening force applied by means of a jack. The ordinary automobile jack is usually sufficiently strong for this purpose, and if not a screw jack should be used. The doorway may often be used in a similar manner to straighten axles or axle spindles.—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 836) VALVE TOOL

This valve tool was made for the '15 and early '16 Paige-Detroit cars. A wooden pattern was whittled out and shaped until it was found by trial to fit. A bronze casting was then made and the steel hook fastened to it. In use the hook is caught into one of the ports and the valve spring and washer forced up. A pattern for a similar tool suitable for any car may readily be made and the casting obtained from it.—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 837) REPAIRSHOP PIT

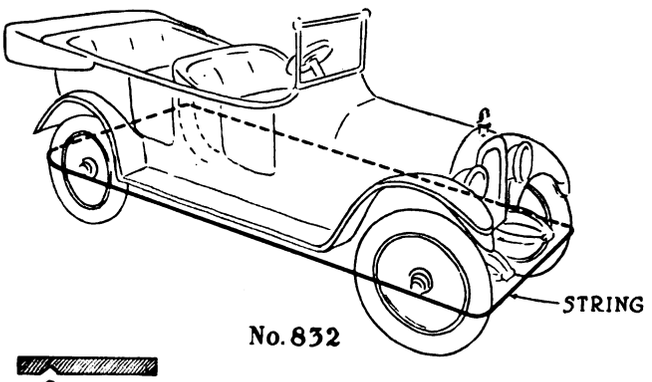
A concrete repair pit, the depth of which may be varied, is illustrated. Ledges are provided at different heights and boards may be placed across, giving the mechanic free access to the work. Much of the dampness of this type of pit is removed by the wooden floor and the space beneath. Several of the boards on one of the upper ledges may be left in place and used as shelves for the tools and for steps in getting into and out of the pit.—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 838) CRANKSHAFT BEARING WRENCH

It is often difficult to get a socket wrench thin enough to fit between the nut and the bearing housing of the connecting-rod or crankshaft bearing. Or if thin enough to do this the wrench is too weak to properly tighten the nut. A solid S-wrench may be used, but is not as satisfactory as the socket for this purpose. A solid socket wrench, cut away in the manner illustrated, possesses the required strength and has all the advantages of the full-socket wrench. As the connecting-rod nuts are not the same size as the main bearing nuts, the wrench should be made double-ended and fitted with a removable handle.—William Burke (Billie Burke's Garage), 115 Harrison Avenue, Jersey City.

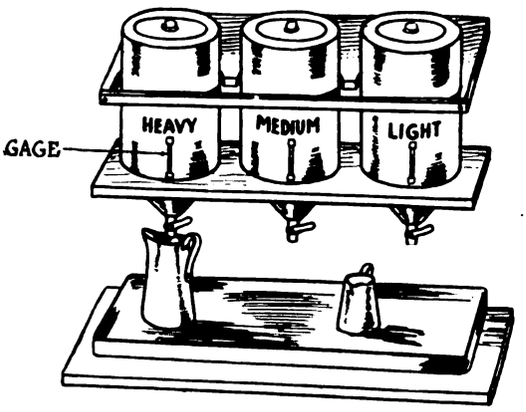
(No. 839) OIL-SETTLING TANK

The oil drained from the crankcase is usually a dead loss, as it is unfit for further motor use. It is, however, suitable for lubrication of farm machinery or such light implements as the lawnmower and the wheelbarrow, and may be reclaimed by the settling tank shown. The old oil is poured into the tank as fast as it collects and the sediment allowed to drop to the bottom, the clean oil rising to the top and being drawn off as required. The resale price should be made low to attract the trade, and is almost a clear profit.—C. R. Cook (The Island Garage), Canton, N. Y.



(No. 840) SORTING BALL BEARINGS

When dismantling old ball bearings it is advisable to save all good balls that they may be later used for replacements. With the cabinet illustrated the old balls are placed in the top drawer and are automatically sorted and placed with the proper group. The bottoms of the drawers are steel plate, having holes drilled as close together as possible, the holes in each drawer being just large enough to retain the balls for that drawer and to allow all other smaller sizes to pass. When one or more balls are desired the proper drawer is opened and a suitable ball found by micrometer measurements.



(No. 841) AUXILIARY WHEEL FOR DISABLED FORDS

Ford cars disabled by having the rear axle broken near the hub may be towed in by the aid of the device shown. A bar of steel about 3 ft. long and 1½ in. square is put in the lathe and a standard Ford hub turned on one end and fitted with the cones and locking nut. The other end of the bar is then forged out flat and bent to clear the rear brake band, after which the lower clamping straps are riveted on. The addition of the upper clamping straps and a standard Ford wheel makes the outfit complete. To use, the disabled car is jacked up and the auxiliary wheel clamped in place, permitting the car to be towed in. In the case of a front wheel the procedure is much the same, except that the cross-steering rod must be tied and the car towed very slowly. The device is not limited to use on the Ford, and has been used to bring in a 1-ton truck.—William Burke (Billie Burke's Garage), 115 Harrison Avenue, Jersey City.

Accessories & Supplies

SPEEDOMETER FOR FORD

The Standard Thermometer Co., Boston. PRICES: Outfit No. F-330, $14; No. F-355, with swivel drive for cars equipped with shock absorbers, $15.

An instrument-board, flush-mounted speedometer and flexible shaft mechanism complete and ready for installation in the Ford car. The instrument board is covered with imitation leather and is cut out for the installation of the speedometer. It is only necessary to remove one nut on each side of the dash cowl, slip the board in place and replace the nuts to install the instrument board. The entire installation may be made by the Ford owner without the necessity of drilling any holes.

FAN FIRE SPARK PLUG

Fan Fire Spark Plug Co., Yonkers, N. Y. PRICE, $1.

The central electrode of this plug carries a small fan-shaped member at its lower end. This fan is said to rotate under the action of the gases in the combustion chamber, and thereby prevents fouling of the spark gap. The spark jumps from the tips of the fan to the shell of the plug, and by the rotation new surfaces are continually brought opposite each other. With the exception of the tip, the plug is of standard construction throughout.

THE HEAT-OMETER

Heat-Ometer Co., Inc., 1 Broadway, New York. PRICES: Standard size, $3; junior size, $2.

Warns the driver of a dangerously overheated condition of the motor, so that steps may be taken to correct the same. It is an instrument inserted in a centrally drilled hole in the radiator cap and held in position by a lock-nut. A diamond-shaped frame holds the glass indicator tube that contains the sensitive liquid. This liquid is pink at normal temperatures, but turns a deep purple when a dangerous temperature is reached. The frame at each side of the tube is paneled, one side being enameled pink and the other purple, enabling the driver to check the motor temperature by comparison.

TWOMBLY TIRE FOOT PUMP

The Schlesinger-Redburn Corp., 1834 Broadway, New York. PRICE, $4.50, with hose and quick-locking adjustable connection.

This tire pump is operated through the pressure of the foot, and permits the weight of the body to be used in forcing the air into the tire. A steel barrel carries the leather-cupped piston that is actuated through a foot pedal, the piston and pedal being returned to the initial position by a spring. In use the pump is placed in a horizontal position either on the ground or on the running-board. It may be locked in a closed position so as to occupy little space when being carried.

WEGMAN DECARBONIZER

Manufacturers Distributing Co., St. Louis. PRICE, $5.

Injects water from the cylinder water-jacket into the intake manifold. The water-jacket and the manifold are connected by the decarbonizer, a ⅛-in. tapped hole in each being all the work required in making the installation. The instrument is made from polished brass, with a glass sight feed, needle valve, automatic ball check valve and leak-proof compression couplings. With the motor running the needle valve is adjusted to allow from 30 to 60 drops per minute to pass by the sight feed. The automatic ball check valve closes when the motor stops and shuts off the water supply.

COMPOUND AIR COMPRESSOR

The United Engine & Mfg. Co., Hanover, Pa. PRICE, Type No. 1-C, capacity 4.44 cu. ft. free air per minute at 200 r.p.m., $59.50; dealers, $47.50.

The air is compressed in the large cylinder to about 50 lb. per square inch. At this pressure and about one-quarter of its original volume it is delivered to the smaller cylinder and compressed to its final pressure. The construction is strong throughout, and the crank-shaft bearings are adjustable for wear. The pistons are long, with proper oil grooves, and the rings are individual casting, ground all over to accurate size. The wrist-pins are tool steel oil-hardened. The two-stage method of compression is claimed to give higher efficiency, reduce wear and tear, and to require less power to operate.

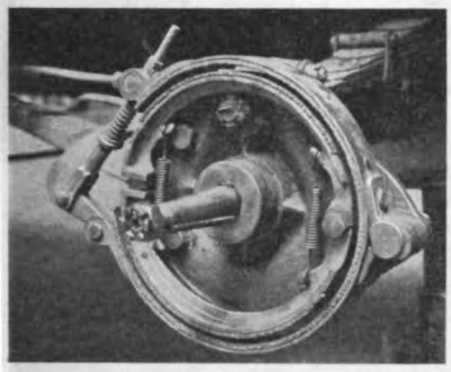
A. C. BRAKES FOR FORD

A. C. Mfg. Co., 2047 West Chicago Avenue, Chicago, Ill. PRICE, $15.

Supplies an external contracting braking system for the rear wheels of the Ford car. The brakes are fitted to the outside of the original rear-wheel drum and operated from the brake foot pedal. The original transmission band is disconnected or removed. The braking strain is thereby applied directly to the rear wheels and removed from the driving system. It is claimed that the chatter and grinding usually attendant with stopping are done away with and the life of the driving system prolonged.

EVERY-WAY ENGINE STAND

United Engine & Mfg. Co., Hanover. Pa. PRICE, $32; dealers, $25.50.



This engine stand may be adjusted to every position in a circle and locked rigidly in each position. The uprights are cast iron, cored hollow with the vertical slots in which the two steel brace clamping nuts travel. The base is composed of two steel Z bars, which are bolted down to the garage floor; if a concrete floor, by expansion bolts. The one upright is rigidly bolted to the two Z bars at one end; the other is adjustable to take in any width of engine from the smallest to the largest. It slides along the Z bars with clamps similar to the tailstock of a lathe. The supporting arms for the engine are steel angles, with numerous holes bored both in the horizontal and vertical sides. These angles are pivoted at their center in the two uprights. The engine is bolted to the angles by the same supporting brackets that hold it in the chassis frame. It is possible, on account of the large number of holes in the angles, to always be able to register them with the holes in the engine brackets. The height of the stand from the floor to the top of angles is 30 in., just right for working on engines to the best advantage.

MOSCO VALVE GRINDER

Motor Specialties Co., Waltham. Mass. PRICE, $1.50.

A hand tool that renders valve grinding an accurate mechanical operation. A round body or casing holds a chain coiled onto a pulley and adapted to rotate the grinder tool when the chain is pulled The pulley is fitted with a coiled spring that rewinds the chain. The operator pulls the handle for the forward stroke and the spring brings the tool back for the return stroke the same distance in the opposite direction. The grinding is said to be facilitated and to produce a very superior finish.

BRYANT SPRING REMOVER

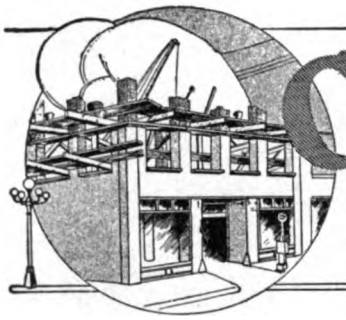
MOSCO VALVE GRINDER

TWOMBLY TIRE FOOT PUMP

FAN-FIRE SPARK PLUG

BRYANT SPRING REMOVER

Stevens & Co., 375 Broadway, New York. PRICE, $2; dealers, 33 1 3 per cent. Postage 25 cents extra.



This device renders the handling of coiled springs a comparatively easy matter. It is claimed that a spring can be compressed in the motor, removed from the motor compressed, or can be compressed out of the motor, kept compressed indefinitely and replaced in the motor and released without difficulty. Two thin steel jaws, one fixed and one movable, notched to permit insertion around a valve stem, are forced between the two upper and the two lower coils of the spring. A gear and rack operated through a handle force the jaws together, compressing the spring the desired amount. A catch-pin permits the spring to be held in the compressed position.

DYKE'S AUTOMOBILE ENCYCLOPEDIA

A. L. Dyke, Publisher, Roe Building, St. Louis. PRICE, $3; by mail, $3.32.

The fifth edition of an encyclopedia treating on the principle, construction, repairing, troubles and remedies of automobiles and gasoline engines. Many books of this nature seem to have information on every point but the one in question, but this seems to be the exception in this case. Each part of the automobile is treated in a simple and thorough manner and provided with illustrations that in many instances are self-explanatory. The basic principles underlying each element of the car are first covered, after which the particular construction as used by the various manufacturers is explained. A complete index renders ready access to the desired information.

Scientific Construction
GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

GARAGE, SHOWROOM AND REPAIR-SHOP 130 x 65

Fig. 1.

Editor Motor World:

We are contemplating building a garage, 65 x 132 ft. The frontage would be 65 ft. on the main street, running through to the alley in the rear, which would give us entrance from both ends.

We ngured on a one-story building, and provision for light would have to be made, probably a saw-tooth roof, as we would be shut in on both sides.

What would be your idea of a plan for such a building, from a sales as well as repair standpoint?—C. S. Sapp, Jr. (Chas. S. Sapp & Sons), Mount Vernon, Ohio.

You have not stated how many cars you will desire to display, but inasmuch as you handle the Buick and Dort, it seems likely that you will want to show at least one of each model.

Back of the showroom is the general office, and a private office, which may also be used for a closing room.

It is advisable for you to have an accessory store. Preferably it should be a separate room; even if it is combined with the showroom it should occupy a conspicuous part of it, such as one end, as shown.

The entrance to the garage has been placed at one side, so that the accessory store and showroom would present one continuous front and so that store and showroom might be adjacent. This will be a convenience that will be greatly appreciated. Obviously, placing the entrance at the side interferes somewhat with the layout of the garage, but this disadvantage is outweighed by the advantage of having these two departments together.

Provision has been made for five cars in the shop, and any of these may be removed without disturbing any other, since the entrance to the shop consists of a series of sliding doors.

The wash rack is placed at the rear on the aisle. It is presumed that most of the washing will be done at night and at that time there should be little traffic through the rear entrance; in fact, probably all the traffic will be through the front entrance at that time. If it is necessary to do washing in the daytime, probably it still would be advisable to retain this position for the wash rack. When there is a car on it, entering cars may use the front entrance exclusively.

We would hardly advise you to go to the expense of putting up a saw-toothed roof, but believe that you will be just as well satisfied by using plenty of skylight.

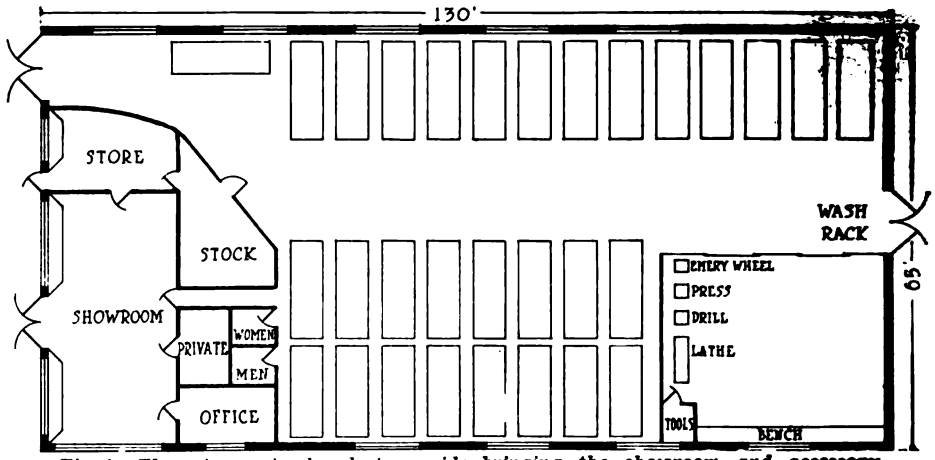

Fig. 1—*The entrance is placed at one side, bringing the showroom and accessory store together*

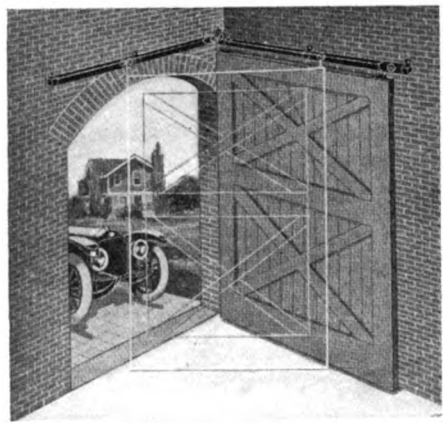

Fig. 2—*A hanging door that possesses all the advantages of the hinged type*

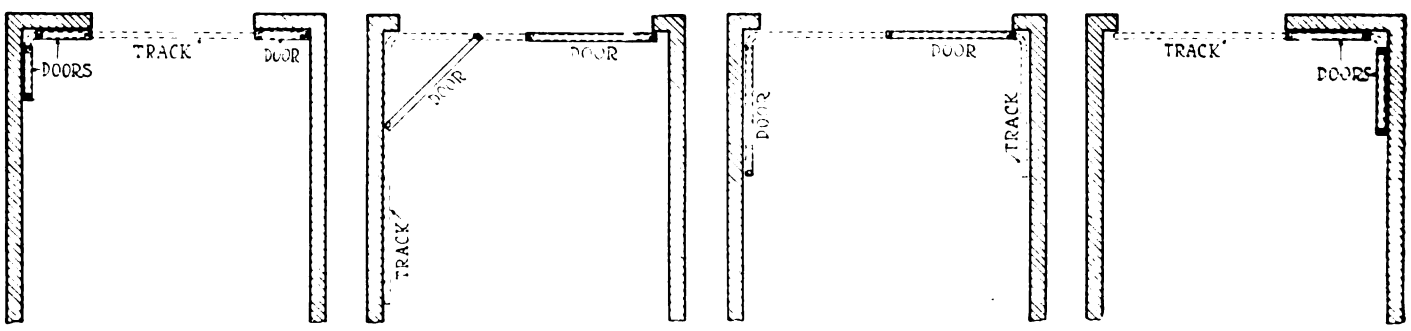
WAGNER GARAGE DOOR HANGERS

Wagner Mfg. Co., Cedar Falls, Iowa.

A door hanger permitting the door to be pushed back at right angles to the entrance. Although particularly adapted to garages where the room is limited, this type of door is well suited to the average garage, as it is easy acting and cut of the way when open. The illustrations herewith show the hangers in use, as well as several possible arrangements of the door. One double-trolley hanger is used in the track above the door and a single-trolley hanger on the wall track. The weight of the door is carried on ball-bearing swivels having a vertical adjustment. It is claimed that these doors work as quietly and as easily as those pushed straight back along the wall.



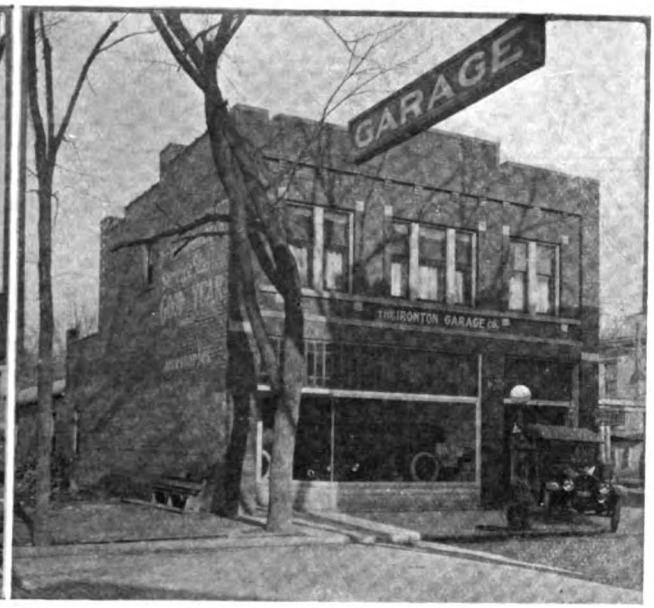


Fig. 3—*Showing the four possible arrangements of the Wagner hanging door*

Do It This Way—

···QUERIES ANSWERED···

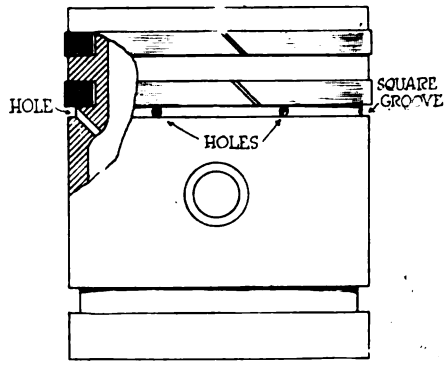
GARAGE LETTERHEAD

Editor Motor World:

We are about to get out some new stationery and would appreciate any suggestion you may offer. We are dealers in automobiles, have a garage and repair-shop, and make a specialty of vulcanizing. We are going to eliminate the picture on future envelopes, etc. If you will suggest some form it will be greatly appreciated.—LAKE MILLS AUTO CO., Lake Mills, Wis.

We believe you are wise in omitting the picture from your letterhead, because it is exceedingly difficult to get a picture effect that is good unless you spend time and money on the job.

In our suggestion we have endeavored to say about what was said in your original head. In place of "Dealers in Automobiles" you may say "Chandler and Hudson," or any other names, if you handle those cars. Perhaps, also, you will want to say "dealer" instead of "dealers"; we believe the singular is better.



Our suggested head features first your name and next your business. These are the essentials. The rest is there if anyone wants to know it. The type is Pabst Old Style, but in case your printer has not that you can get a similar effect with Bookman.

MALLEABLE IRON OR STEEL

Editor Motor World:

We have gotten into an argument with our consulting engineers, and they claim that the truck manufacturers are using malleables for their spring hangers and other malleable parts used in assembling motor trucks. However, we know several concerns in Chicago which are using steel castings. They requested us to take up this matter with some of the trade journals, which would be able to enlighten us on the matter, as we are not acquainted with any of the motor truck manufacturers.—READER.

Malleable castings are used to some extent in motor trucks, as a rule by those whose productions are small, while in large productions drop forgings are used and also steel castings. For the same strength the malleable iron casting will cost less than the steel casting, although for this strength it must of necessity be heavier. It might be stated that at a greater production than 500 of each piece (250 of duplicates) a forging would be economical.

Method of drilling piston to prevent overoiling

PREVENTION OF OVER-OILING

Carbonization, sooty spark plugs and a smoky exhaust is due to the fact that the oil works up past the piston into the combustion chamber. The illustration shows a simple but effective method of supplying a return for this excess oil to the crank chamber. The piston is removed, chucked in a lathe, and a groove 1/16 in. square cut in the outside edge of the ring groove just above the wrist pin. Six 1/16-in. holes are then drilled through the piston at regular intervals and are inclined toward the wrist pin at an angle of about 45 deg. The oil is caught in the groove and thrown downward onto the wrist pin, not only removing the excess oil from the cylinder but also effectively lubricating the wrist pin.

JACKSHAFT ALIGNMENT

Editor Motor World:

I wish you would inform me of a remedy for a Mitchell 1912 model five-passenger car flying out of high gear while coasting downgrade. The high gear will not remain in mesh while descending hills with the clutch out. Many remedies have been tried on this car for this trouble, but all have failed. One local repairer even put in a new shifting rod in the transmission, but it did no good.—J. G. BUSH, SQUARE DEAL GARAGE, Lumpkin, Ga.

The trouble would appear to be in the alignment of the high-speed gear, since you have put a new shifting rod in the transmission, which would eliminate the trouble in that direction if properly installed.

When driving on high the strain on the teeth keeps the gears in mesh. As soon as this strain is reversed—as when the clutch is thrown out on a hill—the gear is forced out of mesh.

We would advise that you test the alignment of the high-speed gear pair by careful measurement and inspection. It is very hard to effect a repair if the axis of the high-speed gear is not parallel to the axis of its mate other than by fitting a new high-speed gear pair to the transmission.

CRANKSHAFT BEARINGS

The bearing composition used in the connecting-rods of many makes of cars is extremely soft. In tightening bearings of this nature care should be taken not to make them too tight, as the bearing surface will be ruined in the first few revolutions of the engine. A good method to follow is to spread a thin layer of Prussian blue on the shaft and scrape the bearing until an even contact is registered between the bearing and the shaft. Shims should then be removed or replaced until, with the bolts drawn up as tight as possible, the piston and connecting-rod will just move under its own weight from an almost vertical to a horizontal position.

ANGLES OF THE LAW

By George F. Kaiser

He Broke Her Leg

Legal Editor:

I have been a reader of your motor magazine for some time and would be pleased to have you give me your opinion as to who is responsible legally for the accident, an account of which follows. I will try and give you all of the details, so that you will be able to give an unbiased answer.

I am connected with the largest garage in this part of the country as secretary to the president. While it is not my duty to drive a car during working hours, I have driven considerable and have been rated O. K. by men in this concern who are supposed to be able to decide. I was declared a good driver before the accident.

On July 28 I purchased a car from the company. The model was a new one, and as I was anxious to drive the car, I took it from the garage in the afternoon without having it checked out, i. e., I did not have the service department here go over it and see that everything was O. K. and that there were tools in the car.

I drove the car all that afternoon and took my mother out in the evening until about 9 o'clock. The car worked beautifully. At about 9 o'clock I called for a girl friend (19 years old) and took her for a ride. We visited the parks, and while leaving one park to go into another I decided, on account of it being 11 p. m., that we would return to town.

We were traveling north at this time, and to leave the park to go to town we would have to go straight east. As I had started around to turn to go into the last park, I had to back up a bit so as to go east. In backing I killed the engine. I tried to start it again, but the electric storage battery would not turn the engine over—it was run down.

I did not have any tools with me, as above mentioned, having left the garage without being checked out; so not having a crank, I decided to go and call over the 'phone for the service truck and have them bring me out a crank. I backed the car (it was standing on a hill) over to one side, so that other automobiles could pass. I backed it to the opposite side, over which it went later on. I left the car to go and call the garage on the opposite side of the road over which it later went over, leaving the girl in the car.

I tried for about 15 min. to find a house in which the occupants had not retired. A street car passed by at this time (11.15 p. m.), and knowing that undoubtedly our garage had closed, as it is our custom to quit at 11, I took the street car to town to get the service truck myself. This I did, and got back to where my automobile was about 12 o'clock. The girl was still there and the car had not been moved at all.

I backed the service truck up in such a position that I could pull my car out, being unable to find a crank for my car when at the garage, it being an entirely new model. I could not pull the car out on account of my having backed it on the side of the road and being on a hill. I decided to get around the back of the car and pull it down-hill to a level stretch, so that I could get it going, i. e., so that I could tow it up the hill. I stopped the motor of the service truck, set the brakes, got out of the service truck and went back to my own car and set the brakes.

That I set the brakes I am positive, and the girl admits remembering my doing so. I then unfastened the rope that was tied to my car from the service truck. I got into the service truck to take it around the back of my car, and had just started the motor, but not thrown it into gear yet (this car has the sliding gears), when I heard a girl scream. I looked around and saw the car going down the road backwards.

I stopped the motor of the service truck, set the brakes and ran for my car. The girl was at the wheel and I got on the runningboard. I tried to set the brakes, but on account of my awkward position on the runningboard on the side of the car that the steering wheel is on, I was unable to set them any tighter than they were, and I believe, though I am not sure, that they were already set.

Just then the car passed through a bunch of small trees and I was jerked off of the runningboard. I called to the girl to jump, but later she stated that she had jumped before I called. In jumping she got a compound fracture of her left leg, between the ankle and the knee. I ran down to where she was (I was not hurt in the least) and she asked me to call a doctor, which I immediately did. We took her to the hospital, where, of course, the leg was set.

The car traveled down the side of the hill it went over for about 300 ft., finally hitting the railroad track at the bottom, breaking the left front wheel to smithers and doing other damage.

Am I legally responsible for this accident to the girl? While I am responsible for the safety of my passengers, did I not take all the precaution necessary when I set the brake on the car when I saw that I could not pull it out?

About 15 min. time elapsed from the time that I set the brakes of my car until it started backward, and I was not in the car at the time it started back. You may think that I bumped it with the serving truck, but I did not, as this service truck has a big tool box on the back of it and I had no bumper on my car, so it was impossible for me to touch it without marring up the fenders or breaking a headlight or something. There was not a scratch on the car the next morning, no headlights were broken and we did not replace any fenders or refinish anything at all.

The girl also told me later on, after the accident, that she jumped before I called to her to do so.

The girl is a working-girl. She was forced to stay out at the hospital for 3 weeks and then at home for 7 more before she was able to be on her feet and return to her position.

She does not blame me for the accident, but her father does, and I would like to know in just what ways I am responsible, as he will expect me to stand all of the bills, which I am unwilling to do.

I would be pleased to have as early a reply in the inclosed stamped envelope as possible, as they are trying to effect a settlement now.

P. J. F.,
Quincy, Ill.

I do not think you are responsible for the injuries sustained by the young lady who was riding with you at the time of the accident, as you were not an insurer of her safety, but were simply called upon to use ordinary care in managing your motor car.

If the accident had occurred immediately after you took the car from the garage, there might be some question as to whether or not you were negligent in failing to examine it carefully before proceeding to use it. As, however, you had driven the car some considerable distance before the accident occurred, and had noticed no defects in it, I think you would have relief from liability on this score.

As you did not have the service department examine the car before you took it out, I think the company would also be absolved from liability. If the car had been examined they probably would have been liable.

Two Timkens Made One

DETROIT, Aug. 28—The Timken-David Brown Co., this city, the majority of the stock in which was originally owned by the Timken-Detroit Axle Co., has been bought out entirely by the Timken-Detroit company, and the manufacturing operations will be consolidated under the management of the axle company.

Coincident with the announcement of this merger comes information that Cornelius T. Myers, formerly chief engineer and later manager in charge of engineering, manufacturing and sales of the Timken-David Brown Co., has severed his connection with the concern, disposing of his interests to the Timken-Detroit Axle Co. Mr. Myers, it is announced, will again take up consulting engineering in this city, making a specialty of motor truck, tractor and worm gearing.

Yes, Iowan!

OUT in Iowa is a young man who stands on the threshold of life. He believes he sees HIS opportunity. He has asked Motor World's advice—and we give it, freely, gladly, to the best of our ability.

His letter to us appears on the opposite page. In it he says he is working in a garage for $75 a month. In a nearby town of 200 population another man has operated a garage for three years and has just broken even. Now the other man wants to sell it to our young friend—and on reasonable terms.

The field is good although the town is small. Our friend believes there are possibilities there. He wants to know if we believe he could make it pay if he took it over and ran it as a garage should be run.

Our only answer—and we make it in all sincerity—is YES.

We are sure he can make it pay if there is any field whatsoever. And the small towns of States like Iowa with their buying farmers are better business centers than some of the larger towns of the eastern and more densely populated industrial areas.

This letter writer seems to have the right spirit—AND THAT IS EVERYTHING. He bases his whole question on the premise that he would RUN THE GARAGE RIGHT. And that will be the reason for his success or failure.

The locality is of comparatively little account, the business does not amount to so much, the external conditions are not so all-important when compared with the MAKE-UP OF THE MAN.

The great trouble with many of us is that we are what might be called HALF-HEARTED. We don't run to the best of our ability. We are like a lathe that is never speeded up. The stuff is there but we don't use it.

And now to get right down to cases with our young friend: If the field is any good at all, if the building is any good, if the equipment is any good, if the price is right, and if the living seems possibly better than what you can make where you are, by ALL MEANS TAKE IT.

FIRST—Clean up the garage. Make it as clean, orderly and neat as a Dutch housewife's kitchen. Fix up the front. Make it the best-looking garage in Iowa. You don't need to spend a lot of money but you do need to apply work and attention. You'll have to watch it to see that it keeps up to par.

SECOND—Get a place to display accessories. Build a show window into or onto the front, and fix up a showcase or cabinet. Neither of these need cost you much. And, what's more, if you'll send a picture and a rough floor plan of your building the Building Department of MOTOR WORLD will advise you specifically how to make these changes at a minimum of expense.

THIRD—Plan the display of your accessories. This is a long story, although the big principles are few and easily grasped. And, if you decide to start, Motor World's Merchandising Department will give you the benefit of its experience among hundreds of dealers and over thousands of miles of territory.

FOURTH—Plan to get business. There are hundreds of car owners out in the country, besides those in your own town. Many of these will come to you IF YOU RUN A GOOD GARAGE, but many, many more will come to you and spend their money with you if you go after their business instead of WAITING FOR IT TO COME TO YOU. And, again, Motor World can help you here. We shall be only too glad to suggest plans, advertising, literature to mail, and methods of pulling in business, in both summer and winter.

THEN—Run your business as a business should be run. Have an accounting system, an inventory system, an accurate method for knowing where you are going. You ask if we know of such. We do. There is a Motor World Simplified System of Accounting that was designed for just such garages, for the little ones whose proprietors may have to keep the books themselves, and there is a book describing this system and telling in simple language all about accounting. The book is free to you if you become a Motor World reader, and the system will cost you $12.

Furthermore, our System Department will help you install the system and after it is installed will always stand ready to give you any advice you need. We have done it with hundreds. We have helped scores of garagemen from the rut of loss to the path of profits.

LASTLY—This is the biggest point—YOU. *You* are the secret

(*Continued in center column of page 29*)

Iowan's Question

Editor Motor World:

I am going to ask you a question, probably out of the ordinary, but am unable to decide on it myself.

I have a friend in the garage business in a small Iowan town of 200 inhabitants, who has been breaking about even for the last 3 years; that is, just about in the same shape financially now as he was at the beginning, and though he has a fine community to work from, he does not seem to get the business. Nearest competition is 6 miles away, a town of 1000 inhabitants.

Now for the question, after I have given you the beginning of my story. He desires to sell me this garage; that is, the equipment, and rent me the building, a new cement block structure, 40 x 80 ft., and make me very liberal terms, and I believe that a man with some hustle combined with good system in the business could make a good living at least, though I know it would be dead in the winter in the small town. But I have been in a large city all my life and worked as mechanic in garages for 6 years, getting good wages, but it takes all a fellow can make to keep expenses paid up, and I have only $1,000 extra cash to tie up.

I have a steady position, paying me $75 per month, but believe I could beat it if I had a good plant where I could work for myself, but am just a little afraid of a small town.

What would you advise?

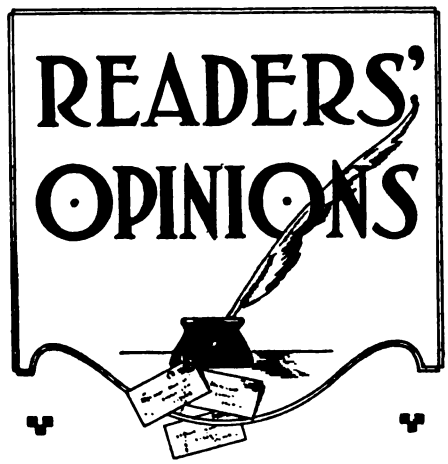
Do you think the small town would pay better than that with a man of the right sort at the wheel?

Also, I desire to get a good system of bookkeeping, and, in fact, the most simple garage accounting system that is O. K. for a small or medium garage. Where can I get one and what is the best to your estimation?

Trusting that you can give me some information that will be of value to me, giving your exact opinion of the small town garage situation, and whether you would advise it or not for a man in my position, if he had ordinary ability to handle business.—IOWAN.

Up-to-Date Start

Montreal, Canada.



Editor Motor World:

When reading through your valuable magazine we noticed on page 30 of your issue of Aug. 2 a small paragraph referring to our new accessory store. A few words regarding this new store might be interesting to you.

The Cadillac car showrooms are situated at 7 Park Avenue, and to meet the demand of an up-to-date accessory store on "Automobile Row," we have extended our premises to 11 Park Avenue. At this address we have an up-to-date store, fitted with handsome show cases and counters. Also specially constructed metal tire racks, capable of holding over 200 tires.

A catalog is issued, of which we inclose you a copy, and a mail-order business in the Province of Quebec is conducted from the new store. The mail-order department is carried in a gallery addition.

Yours very truly,
Cadillac Motors, Ltd.,
H. Millar.

Yes, Iowan!

(*Continued from the opposite page*)

of the whole thing. If you want to succeed you CAN. But it's all up to you and you alone. This is why and how:

There are thousands of human beings—such as you and we—who go through life on second speed. We COULD do many things that we don't. And each of these things would shove us farther toward success.

Why don't we do them?

WE don't know. If we KNEW and could give a formula that would MAKE all men do the things they CAN and OUGHT we would never have to work again.

But this we DO know: When you see a good idea, USE it. When you find that a certain thing will benefit you or your business, DO it. When you find that a certain practice hurts your business, QUIT it.

DO! DO! DO! DO! That's the secret as nearly as we can define it. Do things! DON'T put them off. Be up on your toes! Plug hard!

We believe Motor World is the greatest paper of its kind in the world, and if you should begin, its organization is at your service; yet even that can't MAKE you succeed, for the whole problem is—

YOU.

But your letter sounds as if you were made of the right stuff.

Standard Prices a Hard Problem

Editor Motor World:

Answering your letter of the 19th instant with respect to standard prices for repair work, it has been my opinion that a great deal of misdirected energy has been spent in investigating this subject by various associations, magazines and individuals, and that the subject is so influenced by local conditions that very little could ever be accomplished of real value.

It is true that repairmen and garage operators are charging all kinds of prices for the same job, and in most instances these prices are fixed without any reference to costs. I have personal knowledge of a community in which high-grade mechanics' labor is sold at prices varying from 40 cents to $1 an hour. It is probable that the repairshop which charges $1 an hour for its best mechanical labor has awakened to the fact that at least 100 per cent must be added to actual labor cost to provide a reasonable profit on the labor account after the distribution of overhead cost and other items.

Personally I would say that a great deal of good might be done by investigating this subject as it relates to various localities in the United States, but that conclusions be drawn in the light of properly understood local conditions. Furthermore, much good would result if the important lesson was taught that *the difference between what the customer pays per hour for labor and what the employer pays the mechanic does NOT represent profit.*

All that I have said might be summed up in the statement that an investigation of this subject would prove beneficial but that it is not practicable to standardize the prices of labor, disregarding the influence of local conditions.

National Automobile Trade Assn.,
J. C. Thorpe, Gen. Dir.

Burd Issues Double-Utility Book

ROCKFORD, ILL., Aug. 28—The Burd High Compression Ring Co. has issued to dealers a book giving the piston ring sizes of all cars and at the right-hand side of each page columns for reporting the stock of rings carried by the dealer. The book is unusually complete.

The RETAIL NEWS

MIDDLE WEST

The Cornelius-Browing Auto Co., Toledo, has taken the agency for the Liberty in northwestern Ohio.

The Fischer Auto & Service Co., Columbus, Ohio, agent for the Chalmers, has leased the ground floor of a large building at Third and Rich streets which will be used as a service station.

The N. T. Foster Garage, Columbus, Ohio, located at High and Norwich streets, has taken the agency for the Ford in the North End of Columbus.

Frank H. Lawwell and **Murray M. McLeisch,** Columbus, Ohio, have formed a partnership to handle the Fords, at 241 North Fourth Street.

Paul Mosier, Sandusky, Ohio, has purchased the U. S. Taxi Co. from Charles O'Brien.

The Campbell-Gilchrist Sales Co., Columbus, now occupies new quarters at 15-17 North Fourth Street, for the sale of the Empire. Richard Cott has been placed in charge of the service station.

The Ohio Storage Battery Co., Columbus, has been incorporated at $20,000 to take over the business of the Columbus Storage Battery Co., 79 East Long Street, central Ohio distributer for the National Carbon Co. The incorporators are George C. Lee, Jr., George C. Lee, Sr., James C. Langley, James W. Collins and J. A. Weston. George C. Lee, Jr., is president.

The Lake Geneva (Wis.) Auto Co. has dissolved. The partnership was between Arthur Jensen and Ira A. Flack. Jensen retires and Flack will continue the business under the old style.

Frank Ruelle, Lena, Wis., is establishing a tire store and repairshop.

B. A. Wintergerter, Mukwanago, Wis., has sold his garage to John and Henry Goetsch, who have been operating a Ford garage in the Mukwanago Hotel stables for some time. Wintergerter will engage in another line.

F. G. Martin, Mosinee, Wis., who has operated a garage for several months, will erect a fireproof garage and repairshop, 40 x 100.

S. A. McLean, Richland Center, Wis., has awarded contracts for a two-story fireproof garage and repairshop, to be ready Nov. 1.

The Modern Garage Co., Milwaukee, is rushing work on its new garage and service station at West Twenty-fourth and State streets, to cost $8,000.

Rochford & Co., Chicago, with T. J. Rochford as manager, has opened showrooms at 1514 Michigan Avenue and will handle the Madison. Rochford was connected with the White Co. for years.

Leo Garvey, Fenton, Mich., has purchased the garage business of Granger & Bacon.

Frank Leins, Kalamazoo, Mich., Maxwell distributer, has moved his garage and sales department from 119 East South Street to 217 West Kalamazoo Avenue.

The Weinbeck Auto Sales Co., Jackson, Mich., has taken over the agency for the Saxon car, with headquarters at the Orpheum Garage, 120 Pearl Street.

James C. Ritchie, Sault Ste. Marie, Mich., formerly manager of the Auto Livery, has taken over the Park Garage, on Douglas Street, heretofore operated by Price Eagle.

The Haynes Garage, Marion, Mich., has been opened by W. A. Cool, Haynes dealer, and W. H. Putnam.

The Falls Rubber Co., Cleveland, has leased space at 1844 Euclid Avenue and will open a branch.

The Overland-Green Bay Co., Green Bay, Wis., northeastern Wisconsin distributer for the Overland-Wisconsin Co., Milwaukee, has awarded contracts for the erection of its branch house at Pearl and Walnut streets, Green Bay. It will be 100 x 120, two-story and basement, of fireproof construction. The Overland-Wausau Co., another subsidiary recently formed, is building a three-story branch house, 60 x 120, at Wausau, Wis., to serve central Wisconsin.

R. J. Clark, Coloma, Wis., is completing a new garage and repairshop, 40 x 80.

B. H. Kleinert, manager of the Morrissonville (Wis.) Garage, has resigned to open a garage and machine shop at Keyeser, Wis.

S. Kozlowski, Friendship, Wis., is making an installation of oxy-acetylene welding and cutting apparatus in his repairshop.

R. J. Quinn, Darlington, Wis., a new Ford dealer, will establish a garage and service station in that city.

Sharp & Denicke, Mauston, Wis., are adding 40 x 100 feet to the rear of their present garage, and will use the new space for service work.

R. D. Rockstead, 148-152 Seventh Street, Milwaukee, has been appointed Wisconsin distributer of the Lexington. Rockstead has relinquished the Paige and Saxon agencies.

The Motor Car Sales Co., 525 Jefferson Street, Milwaukee, has taken the state agency for the Jordan.

The Wait Auto Co., 789 Thirty-second Street, Milwaukee, has been appointed state agent of the Stephens, and will continue the Moline-Knight.

The Blevins Auto Sales Co., Cincinnati, now occupies its new salesroom at Gilbert Avenue and Court Street. The formal opening will not be held for some time. The concern is Studebaker distributer.

The Garford Motor Truck Sales Co., Toledo, Ohio, has been incorporated at $10,000, to handle the Garford truck, by A. G. H. Jensen, W. L. Parmenter, H. E. Myers, E. F. Sayers and W. W. Smith.

The Columbus Yellow Taxicab Co., Columbus, has purchased the business and leased the garage of Fred W. Atcheson, one of the oldest and largest taxicab operators in the Buckeye capital. C. E. Bosworth, formerly of Toledo, will be manager of the new concern.

The Craig Motor Co., Cleveland, Ohio, has been incorporated at $15,000 by James W. Stewart, C. M. Colyer, A. V. Gannon, George E. Bradbury and J. E. Splittorf.

The Universal Automobile Co., Cincinnati, has been incorporated at $10,000 by F. D. Hirst, J. W. Montgomery, F. I. Coleman, B. E. Hahn and Roy M. McLaughlin.

The Mutual Auto Supply Co., Cleveland, has taken a 5-year lease on a double store in the Keystone Building on Chester Avenue, to which it will remove from its present location on Euclid Avenue.

The Fen Far Co., Cleveland, dealer in accessories, has taken a long lease on the Farr Building, 2165 East Ninth Street. The company has taken an agency for the Ford, and a portion of the building will be used for a sales and service department.

The Craig Auto Co., Cleveland, has leased space in the new Neighbors Building, Chester Avenue and East Thirtieth Street, where it will operate a Ford agency and service department. The head of the company, R. E. Craig, was formerly with the retail department of the Ford Motor Co.

Girard Barclay, Lincoln, Ill., has disposed of his interest in the Official Tourist Garage, that city, to his partner, B. E. Hayes, and the latter will handle the plant, located on Logan Street. The retiring partner will open a new garage at Chestnut, Ill.

Charles J. Schade and **Edward Game,** Chatsworth, Ill., will open a new garage at Third and Main Streets, 60 x 120, of brick.

The Holmes Garage Co., Danville, Ill., has let the contract for an addition, 75 x 75, to the present plant, thus giving room for a display room and also a new repair department.

Jesse and **Frank Simpson,** Bloomington, Ill., have purchased a lot, 60 x 140, at Washington Street and Roosevelt Avenue, and will erect a two-story garage and sales station.

The Edwards Motor & Repair Co., Peoria, Ill., has been incorporated at $5,000 by E. A. Pratt, G. A. Burton and E. B. Hamilton.

F. A. Sperry of Simonson & Sperry, Bushnell, Ill., has purchased the interest of D. S. Simonson in their garage business and the latter will retire. Mr. Sperry is the oldest automobile dealer in point of continuous business in Bushnell, opening a garage in 1908.

G. N. Kreider, Springfield, Ill., has let the contract for a $40,000 building at Fifth and Edwards Streets, 80 x 143.

M. D. Morris, Springfield, Ill., distributer of the Hudson, Velie and Scripps-Booth, has leased the entire building at 217-219 East Capitol Avenue.

W. S. Parks, Rock Island, Ill., was chosen president of the Totten Automobile Co. at a meeting of the directors. He succeeds W. C. Totten, who was drowned recently in the Mississippi River. T. B. Totten succeeds Parks as general manager.

The Byerly Auto Co., East St. Louis, Ill., has been incorporated to handle the Oldsmobile and Mitchell. It succeeds to the business of J. H. Byerly, who also is a shoe merchant. A. L. Perkins is manager of the motor company, and the showrooms at Tenth and State Streets have been remodeled.

COAST

The Willis Garage, Lamanda Park, Cal., has opened in a new brick building on Rose Avenue near Colorado Street.

The W. J. Burt Motor Car Co., Los Angeles, has opened a branch at Santa Ana, Cal., where a salesroom for the Auburn line is conducted.

The Pickwick Auto Stage Lines, San Diego, Cal., have opened the Pickwick Garage, where the stages running throughout San Diego County and into the Imperial Valley make their headquarters.

Stoffel & Kramer, Anahiem, Cal., have opened a tire store at 123 Los Angeles Street.

Dicas Bros., Calabasas, Cal., have opened a garage on the El Camino Real just north of the entrance to Topanga Canyon.

Casey's Garage, Oxnard, Cal., is now housed in a new garage building at Sixth and A Streets.

Robert Green, Oxnard, Cal., proprietor of the California Garage, Sixth and B Streets, has added the agency for the Maxwell to his garage business.

L. L. and **P. W. Bruns,** Santa Ana, Cal., have purchased the Modern Vulcanizing Works, formerly operated by Ballard & Leaning.

C. C. Stall, Downey, Cal., has purchased the Central Garage and has opened garages at Norwalk and Clearwater, Cal.

Robert H. Smith, Los Angeles, has moved his garage from 622 Lebanon Street to 548 South Figuroa Street.

E. J. Boeske, Jr., Santa Barbara, Cal., is erecting a new fireproof garage on State Street.

C. H. Kamm, San Luis Obispo, Cal., is building a brick building which is to be the new home of the San Luis Garage.

Digitized by Google

The Central Garage, Los Almos, Cal., has been opened.

F. R. McKinley, King City, Cal., has purchased a half-interest in Brandt's Garage. The business will retain the name Brandt's Garage, but instead of Streglich & Brandt, proprietors, the firm name will be Streglich & McKinley.

Hamilton & Gause, King City, Cal., have opened the Ford Garage on El Camino Real.

Broadhurst & Keith, Stocton, Cal., proprietors of the Stocton Vulcanizing Works, are remodeling their plant and putting in a large stock of tire accessories.

J. J. Jacobs, Bakersfield, Cal., and **R. C. Bridge,** Los Angeles, have taken the Studebaker agency at Sacramento, Cal., and have opened a garage equipped for service and sales.

The Pike Street Garage, Seattle, has been opened at 806 Pike Street by William J. Batts.

George A. Sabourin, Tacoma, Wash., manager of the St. Helens Auto Sales Co., has been made distributer of the Moon in the State of Washington.

The Northwest Tire Shop, Seattle, has opened at 608 East Pike Street.

The Wright Truck Attachment Co., Inc., Seattle, has opened salesrooms at 1510 Eleventh Avenue.

The McDonald-Goodwin Co., Tacoma, Mitchell distributer, has leased the A Street Garage.

The Pacific Coast Automatic Carbureter Co., Seattle, has opened salesrooms at 617 Pine Street.

J. F. Aiken, Spokane, for 12 years superintendent of schools, has been appointed general sales manager of the Interstate Auto Co., Spokane, distributer of the Inter-State and Nelie.

Floyd J. Logan, Tacoma, Inland Empire representative of the Maxwell, has opened new quarters in a modern brick garage building at Jefferson Street and Sprague Avenue.

SOUTH

The Brunswick Motor Co., Inc., Lawrenceville, Va., has been incorporated at $10,000. The officers are: T. C. Coleman, president, and E. W. Ligon, secretary and treasurer, both of Lawrenceville.

The Universal Motor Co., Inc., Richmond, Va., has been incorporated at $50,000. The officers are: J. Jordan Leake, president, and L. S. Schomberg, secretary, both of Richmond.

The Marmon Motor Sales Corp., Inc., Norfolk, Va., has been incorporated at $5,000, S. F. Bayless, president, and J. W. Coykendale, secretary, both of Norfolk, are the officers.

The Columbia Motor Car Co., Louisville, Ky., has been incorporated at $10,000 by F. R. Hodapp, E. E. Miller and J. L. Saylor.

NORTHWEST

The Bartles Oil Co., St. Paul, has been authorized to increase capital from $25,000 to $100,000.

Conrad & Orsland, 139 West Seventh Street, St. Paul, have been appointed to distribute the Glide in Minnesota and part of Wisconsin.

Jay Leslie, Spring Valley, Minn., has opened a vulcanizing shop.

Dillner & Holbrook, Mankato, Minn., are erecting a one-story garage, 55 x 150.

The Winona Motor Co., Winona, Minn., has taken the Reo agency.

Donaldson & Smart, Whitefish, Mont., have taken over the Whitefish Auto Co.

The Missouri Valley Motor Co., Bismarck, N. D., will erect a garage at Seventh and Main Streets to cost $50,000.

The Simon Garage, Clarissa, Minn., has taken the Chevrolet agency.

Splinter & Cowan, Madelia, Minn., have bought out the Madelia Machine & Repair Co.

Melhause & Heins, Olivia, Minn., have taken the Hudson and Dodge Bros. agencies.

Clark Hurlburt, Townsend, Mont., has opened a garage.

H. L. Headly, Watertown, S. D., will continue the business of the Headly Auto Co.

SOUTHWEST

Charles W. Ebel, Amarillo, Tex., is having constructed an up-to-date brick garage at Second and Fillmore Streets, to be known as the Fillmore Street Storage Garage, with Ebel himself as manager. The building will be completed about Sept. 1.

The Imperial Auto Supply Co. is establishing a branch at 1530 Grand Avenue, Kansas City, Mo. L. Bassom, for 6 years at the New York headquarters, is in charge. Louis Levene, Western branch manager of Chicago, who has been in Kansas City, goes to Des Moines, where another branch may be opened. Besides Kansas City, the company now has branches at Chicago, Memphis and Springfield, Mass.

J. W. Gilbert, Emporia, Kan., has secured the agency for the Marion-Handley. Gilbert was formerly a livestock dealer in Delavan, Kan. He is erecting a sales and repairshop building.

F. A. Britton, Kansas City, formerly city sales manager for the Hupmobile, has been made city sales manager for the Marion-Handley Sales Co. in Kansas City.

The Packard Missouri Motor Co., St. Louis, has leased 1801-07 Pine Street, formerly the Donnelly Automobile Co. showrooms, as used-car salesrooms.

Dallas—Two Ford dealers have been appointed. They are the J. H. Shelton Co. and the Newton G. Flippen Co. There will be five in all.

The Southwest Kissel Kar Co., Dallas, has moved into larger quarters at 2025-27 Commerce Street.

The Burton Rountree Co., Dallas, is the new distributer of the Hupmobile, Inter-State and Jackson.

The J. H. Sides Motor Co., Dallas, has closed a dealer contract with the Maxwell Motor Co.

The Jackson Motor Co., Kansas City, has appointed John Henning, formerly of the Mound City Automobile & Buggy Co., St. Louis, as manager of its branch in Wichita, Kan. This branch will handle Kansas.

The Clay Center Vulcanizing Co., Clay Center, Kan., has rented the old Dispatch office and located the business there.

Labbe Bros., Vermillion, Kan., have just moved into their new garage. The building is 50 x 100, and of brick and cement. They have installed a repairshop.

A. R. Cogswell, Kirwin, Kan., has just completed a new garage, 65 x 100, of cement blocks and containing an office, shop and storage room.

M. C. Wemmer, Milan, Mo., has opened a garage and repairshop in the Butler Building, Third Street.

Ralph Bloom, Hutchinson, Kan., who runs a taxi business, will erect a new garage for his cars.

Herbert G. Shimp, Columbia, Mo., has moved his used-car store from 1715 McGee Street to 1512 Grand Avenue.

George H. Scott, Columbia, Mo., manager of the Hudson-Phillips Motor Car Co., has been appointed vice-president of the same company at St. Louis. F. W. Neidermeyer, Jr., has purchased the garage of the Columbia company.

The Hiatt-Buick Co., Kansas City, handling retail sales of the Buick in Kansas City, has opened up at 1715 McGee Street. Le Roy Simons will be sales manager and J. B. Durkee will be territorial salesman. O. W. Hiatt, head of the company, was formerly manager of the retail sales department of the Buick Motor Car Co., Admiral Boulevard and McGee Streets, which hereafter will handle only the wholesale business of the territory. The used-car department of the Buick is also under the management of the new retail company.

The Kaw Valley Buick Co., Kansas City, Kan., was opened recently on Minnesota Avenue between Seventh and Eighth Streets by the Buick Motor Car Co., Kansas City, Mo. Payton Howard, who has worked for the Buick Motor Car Co., will be the manager. This branch will handle Wyandotte County.

Peter Holman, Alta Vista, Kan., has recently opened a garage.

C. E. Gardner, Burlingame, Kan., has bought the garage of C. R. Dryden.

A. J. Missimer, Russell, Kan., has secured the agency for the Willys-Knight.

Roy Kerns, Speed, Kan., has sold out to Victor Myers.

The Central Motor Co., Emporia, Kan., is building an addition, 40 x 40, to be used as a machine room and storeroom.

S. J. Riggs and **E. E. Dixon,** Pattonsburg, Mo., have rented the livery barn in Winston, Mo., and are remodeling it for a garage.

Teater & Delap, Blairstown, Mo., have just completed their new garage.

J. F. Coulter and **Guy Calhoun,** Sweet Springs, Mo., will open an automobile supply store and repairshop.

Sebastian Hahn, Coffeyville, Kan., has leased the building at 311 West Eighth Street as a temporary garage.

Edward Erickson, Ridgeway, Mo., has bought out his father's interest in the garage and will continue for himself.

L. A. Armantrout, WaKeeney, Kan., has purchased the WaKeeney Garage from G. M. Jones.

Frank Dean and **Arthur Whightsil,** Altoona, Kan., have leased the repairshop of the Ingersoll Garage.

The King Motor Sales Corp., Kansas City, has been organized and will take over the agency for the King, formerly handled by the Donnelly-Campbell Motor Co. The new company will move from 1706-08 to 1901-03 McGee Street, where a building is being remodeled. This transfer will be about Sept. 1.

The Kansas City branch of the United States Tire Co. has installed a shop for pressing on and off tires. The press develops a pressure of 300 tons.

The H. A. Dougherty Motor Co., Kansas City, will establish a branch in Wichita, Kan., Sept. 1, under the supervision of Harry H. Benjamin, who formerly had charge of Kansas. The name of the new firm, which will be situated at 224-226 South Market Street, has not yet been decided.

Glen Morris, Gentry, Mo., will open a garage and repairshop.

B. F. Hardin and **Jess Branham,** Albany, Mo., have opened a garage in the Killam Building.

J. F. Pickford, Blue Mound, Kan., has purchased the interest of C. H. Smith in the garage formerly owned by the two.

Walter Hampel, Hiawatha, Kan., is remodeling his shop into a modern automobile paint shop.

Frank Emerson, Hiawatha, Kan., will remodel his garage.

Dr. W. V. Neighbors, Cottonwood Falls, Kan., has secured the agency for the Buick.

The Bogan & Sons Motor Co., Dodge City, Kan., is a new firm which has secured the agency for the Grant.

The Scudder Motor Truck Co., St. Louis, has incorporated at $10,000 to deal in cars and trucks. Directors are Cliffton R. Scudder, Leclare H. Anirine and Charles M. Polk.

Digitized by Google

The Marion-Handley Sales Co., Kansas City, has taken a 10-year lease on the Grand Avenue Viaduct floor, south of the main entrance of the Coca-Cola Building.

Frank Zimmerman, Seneca, Kan., is having the Firstenberger Building remodeled preparatory to opening a music store and car salesroom. Zimmerman has secured the agency for the Grant.

J. F. Coulter and **Guy Calhoun**, Sweet Springs, Mo., will open a repairshop and accessory store.

EAST

The Becker-Stutz Co., Boston, has opened a Providence branch, with N. W. Rogers as manager.

The Worcester, Mass., Buick Co. has been incorporated by Chester M. Stanley, Rodney G. Clark and Harry K. Noyes, the latter being the New England Buick distributer in Boston.

The Philadelphia Storage Battery Co., Boston, has leased a new building on Brookline Avenue.

William Turner, East Boston, Mass., is remodeling the Boulevard Garage.

George S. Brewer, Athol, Mass., has moved his garage business from Exchange Street to the Highland Garage.

Cushing Bros., Brockton, Mass., have applied for a permit to erect a garage 65 x 108.

The Cliftondale Garage, Lynn, Mass., will be opened by Leslie Parsons and Frank Burleigh.

Fred W. Warner, Salem, Mass., is to erect a three-story garage on Sewall Street.

Albert E. Wills, Lawrence, Mass., Hudson dealer, is erecting a garage, 100 x 140.

The Penzance Garage, Woods Hole, Mass., has just been opened.

The Plymouth Rock Garage, Plymouth, Mass., owned by J. Henry Shaw, opened Aug. 20.

The Drown Motor Car Co., Barre, Vt., has been sold to the Barre Garage Co. and A. G. Bennett. The sale included the Buick agency.

Oscar Lawson, Bangor, Me., has leased the new garage being finished on South Park Street.

The Hawley-Cowan Co., Boston, Saxon dealer, has moved into the salesrooms on Commonwealth Avenue vacated by the Cottrell Motor Car Co., Pathfinder dealer.

The R. P. Motor Co., Manchester, N. H., has just been formed and has leased the McCrillis Garage. Dana L. Reed is manager.

The Cole Motor Car Co., Boston, has changed its name to Bryant G. Smith & Sons Co. since it moved to new quarters on Beacon Street.

The Green & Hale Co., Worcester, Mass., Marmon-Overland dealer, has moved into new quarters.

The Moline-Knight Co., Boston, has placed G. L. Parker in charge of its retail sales.

The Stoddard Motor Car Co., Springfield, Mass., has added the Autocar.

The Walter F. Kelley Co., New Haven, Conn., has just been formed to handle the Vim truck.

The Metz Co., Providence, R. I., has appointed D. E. Morgan manager.

Canney & Cassidy, Springfield, Mass., Grant dealers, have opened new salesrooms on Main Street.

The Jackson Motor Car Co. of New England, Boston, will operate its own service station from now on, the work being done formerly by contract outside. New machinery has been secured and space above the salesrooms on Commonwealth Avenue leased, so that the shop will be under the direct supervision of A. H. Sowers, the manager. The sales force has been enlarged also by the appointment of George L. Lighthall, who will handle western Massachusetts agents; Henry L. Simons, as manager of the Greater Boston territory, and Harry O. Foskett, manager of retail salesmen at the agency.

The Smith Form-a-Truck Sales Co., New York, has opened a Philadelphia branch and service station at 2121 Vine Street. W. H. Durphy is manager.

J. A. Cramer, Buffalo, has purchased the property at 1010 and 1012 Main Street and will erect a three-story building for his automobile business. It will be of steel, brick and concrete, with an Indiana limestone front, and will extend 51 ft. on Main Street and be 150 ft. deep, with entrance to the service station from North Pearl Street. He handles the Jeffery and Dodge Bros.

Frank G. Robins, Hartford, Conn., Autocar distributer, has removed from 522 Asylum Street to 45 Ann Street, to the quarters recently vacated by the Chalmers Auto Agency.

Wells Wetherell, Hartford, Conn., formerly of Kingsbury & Wetherell, has severed his connection and joined Frank G. Robins, Inc., taking with him the Saxon agency.

W. C. Nelson, Hartford, Conn., has joined the sales force of the Hartford Crow Elk Hart Motor Co., which has removed from the Central Garage, 25 Belden Street, to the Franklin Garage, 278 Franklin Avenue.

FORD CHANGES

Kansas City—G. T. O'Maley, for a year manager of the retail department of the Ford Motor Co., has secured as his own business the retailing of Fords at the retail station, 1710 Grand Avenue, and also the downtown service station, 1905 McGee Street. It had previously been announced that the company would build a new structure for sales and service near the McGee Street location, but it is said that the transfer of the downtown business to O'Maley changes these plans. Mr. O'Maley is widely known, especially in Ford circles, as for 6 years one of the leading producers, standing second, third or fourth in Ford sales in the United States in that period. Suburban retail sales and service in Kansas City will be handled by Sam S. Baker, formerly a Ford salesman here, who has leased the Elbelvedere Garage, 3332 Main Street, and buildings adjoining. He is adding to the service equipment of the garage.

Bloomington, Ill.—The L. M. S. Motor Co., organized to handle the Ford in central Illinois, has received assurance that no change will be made in the previous arrangement. The local contract has been renewed under the same terms as in the past. It is understood that the reason for this exception is the recent construction by the firm here of a $40,000 building devoted exclusively to the handling of Ford cars and service. It is asserted that in other cities where equal enterprise was shown in the conservation of the Ford interests a similar concession will be made.

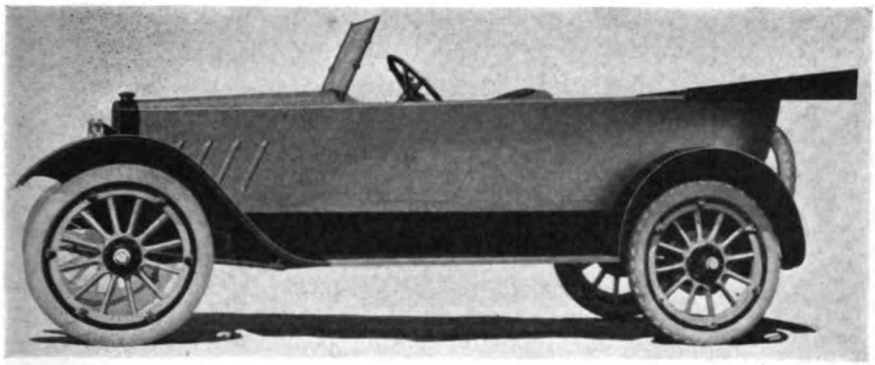
Richmond, Va.—The Ford Motor Co. will have at least four individuals or firms acting as its retailers. It is also understood from reliable sources that at least four retail Ford firms will be engaged in Norfolk. The Kaehler Motor Co., which heretofore handled the Ford exclusively, will handle the Saxon, the G. M. Co. truck and accessories. The Kaehler company has just leased a three-story building on West Broad Street, where the accessory and supply business will be conducted, leaving the Kaehler building at Ryland and Broad Streets for the Saxons and trucks.

Pittsburgh—The Ford Motor Co. has so far established nine agencies covering all parts of the old city of Pittsburgh, Allegheny, now north side of Pittsburgh, and Wilkinsburg. Its officials expect within another week to have at least three or more agencies placed here. The company has taken unusual care in investigating the character and selling ability of the agents appointed, and could have easily put out fifty agents had it not been so particular. The agents appointed are already doing a fine business. Some of them are seen every day at the lunch hour on the downtown streets surrounded by a crowd of eager investigators.

Victor Fast, St. Louis, who has been in the motor business since 1904, and who is one of the best known accessory men in this city, has returned to selling cars and will be connected with the Westcott Motor Sales Co.

Minneapolis—Twelve agencies are lined up in Minneapolis for Ford cars to replace the branch selling agency. Nine of these are closed and three are in abeyance. In some instances as high as three salesmen have gone with an agency. These agencies are reported in each instance to be well backed. Contracts in the country remain as territory line-ups and are unchanged. In the city the minimum for cars is twelve. Some of the agencies will run 400 to 500 cars, but a maximum will be established to prevent any monopoly. City agencies may sell anywhere in the city. Both maximum and minimum limit will be aranged finally with respect to conditions and locality. Conditions will be somewhat similar in St. Paul. There will be eight to ten agencies, possibly more. The situation is only a few days old and the details are not completely arranged.

Washington, D. C.—There will be about eight dealers who will handle Ford cars, and their territory will be limited to the District of Columbia. That means that any Ford salesman—and they are giving preference to salesmen under the old regime—will have a chance to work only in the District of Columbia, a territory of about 65 square miles. To date Hill & Tibbett, on New York Avenue; Hyatt, at the Parkway Garage, and Rocker, at the Columbia Automobile Supply Co., had been appointed Ford agents. Applications from five other prospective agents are being considered.



Wilmington, Del.—According to H. A. Partington, manager of the Wilmington branch of the Gomery-Schwartz Co., Philadelphia, which has the local agency for the Ford in this district, the Ford Motor Co.'s new selling plan will have no effect on this district for some time, as he understands the matter. Partington says his company has a contract with the Ford people for the local territory, which does not expire until the first of next August, and he does not believe any other selling agency will be established here until that contract expires.

The territory allotted to the Wilmington agency is New Castle County, Del. The remainder of the State and Delmarvia Peninsula are taken care of from other agencies. The local concern has established five subagencies in different parts of the county, but has none outside of that territory. It is likely that the Maryland portion of the peninsula will be under the direction of Baltimore houses, though that is not known here at this time.

Dallas—Ford cars may be purchased from one of five selling stations located in different parts of the city. They are: A. P. King, J. S. Lamberrh, J. H. Shelton, N. G. Flippen Co. and S. C. Fishburn.

Duluth, Minn—The new Ford retail sales plan will go into effect here within a short time, according to an announcement made today by H. A. Netter, manager of the Ford branch opened on Aug. 1. Three or four Ford dealers will be designated to handle this car when the plan is put into effect. The regular Ford agents in the small towns throughout Northern Minnesota will be continued as at present. The local Ford branch will be a wholesale distributing point

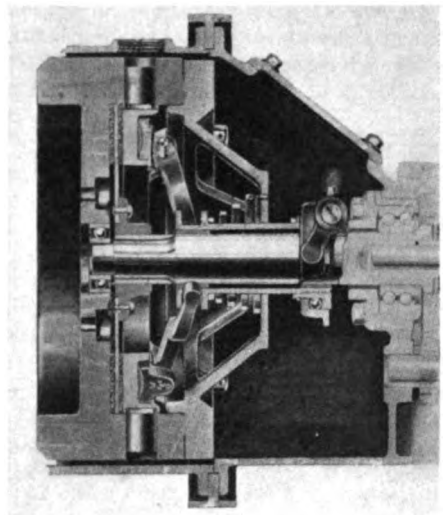
The Hackett body design is original, the straight line effect being carried from the corners of the radiator clear to the back of the tonneau

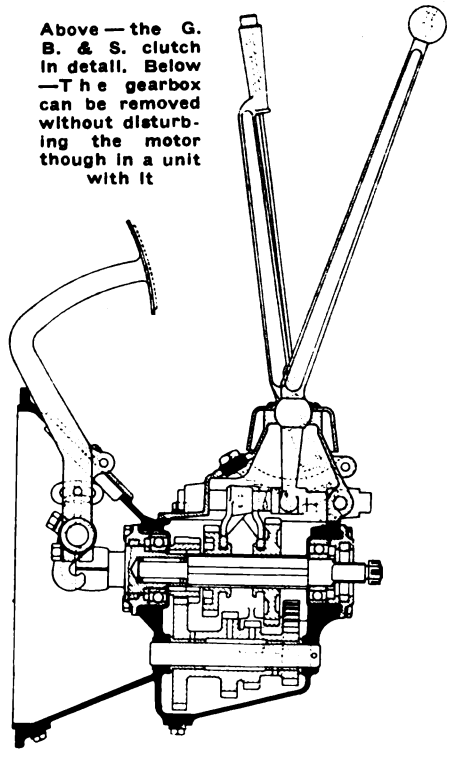
Hackett has Straightest of Straight Lines

Roadster and Touring $888

A FOUR-CYLINDER, five-passenger car at $888, with distinctive straight-line body, and low, comfortable seats, is the initial offering of the new Hackett Motor Car Co., Jackson, Mich.



The body design is original, a straight line running from the top corners of the radiator all the way back. The effect is accentuated by the use of a narrow deck extending around the rim of the body, and also forming the double cowl on the back of the front seat. The straight-line idea is still further emphasized by the fact that the seats are low. The windshield is tilted and there are large louvres in the hood at the same angle.



In addition, there will be a runabout at the same price, seating three, with the driver's seat slightly ahead of the other two; a cabriolet for about $1,000, and a winter top for the five-passenger at $110 additional.

The chassis is standard, with a unit power plant consisting of a 37-hp. motor, G. B. & S. clutch and Grant-Lees gearbox, and Walker-Weiss axles. The motor is a block detachable L-head design with the crankcase in two pieces, the lower part being pressed steel and acting as the oil pan. Bore and stroke are 3¾ x 4¼ in., giving an N. A. C. C. rating of 22.5 and piston displacement of 188.2 cu. in.

Lubrication is by combined force feed and splash. Oil is drawn from the reservoir by a plunger pump which is operated by No. 4 exhaust cam, passes through a sight feed on the cowl and to the three main bearings. The overflow makes its way to splash troughs. The oiling system is extremely accessible, the pump and all the piping being on the exterior.

The valves are unusual in that the adjusting nuts are on the stems instead of the pushrods, and consequently act as spring retainers. The end of the stem is threaded and on it is placed a thimble nut, which is held by a lock nut. The valves have cast-iron heads welded on ⅜-in. carbon steel stems. The lift is 7/32 and the clear opening 1⅝ in. The valve stem guides are bushed with 3 3/16 cast-iron sleeves.

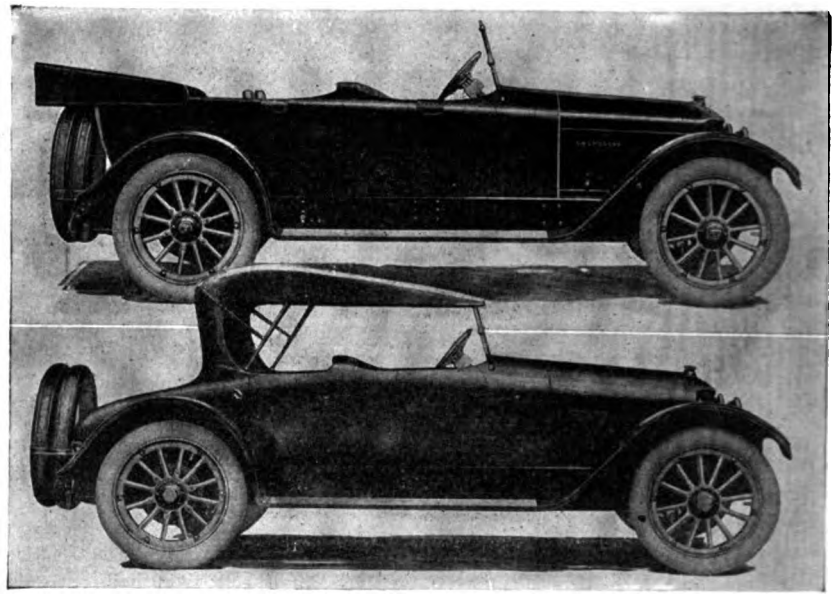
Above — the G. B. & S. clutch in detail. Below —The gearbox can be removed without disturbing the motor though in a unit with it

Camshaft and Disco motor-generator drive are by silent chains, adjustment of the latter chain being accomplished by rocking the bracket on which the unit is carried. The timing marks on the flywheel may be seen by removing the clutch oil filler plug on the top of the flywheel housing.

Ignition is furnished by a Remy coil and distributer, mounted at the front and driven from the camshaft. The fuel system consists of a tank at the rear, from which gasoline is drawn by a Stewart vacuum system to a Justrite carbureter, a single jet design in which the correct proportion of air and gasoline is obtained by varying the size of the venturi passage. Cooling is by thermosyphon, a cellular radiator and a four-blade fan.

The clutch is housed in the flywheel and has a single driven disk of steel. A ring of wire-woven asbestos fabric bears against either face. Smooth action and reduced wear are obtained by running the clutch in oil. It is so designed that no adjustment is required.

Since the rear of the motor is supported by arms attached to the flywheel housing, and the gearbox is held in place by the bolts connecting it to the bell housing, the gearbox may readily be removed without disturbing the motor. After this is done, the clutch may be taken out by first placing two blocks of wood under the clutch collar. Then the plugs which hold the mechanism solidly in the flywheel are unscrewed through the oil filler opening in the top of the flywheel housing. Finally the six nuts on the clutch cover are removed.



The axle is semi-floating, with chrome-nickel driving shafts, open-hearth ring gear and 3½ per cent nickel pinion. There are two sets of brakes operating on the one set of drums. The front axle is an I-beam design, and steering is by worm and gear. Half-elliptic springs are used in front, 36 x 1¾, and three-quarter-elliptic in the rear, 48 x 1¾ in. Wheelbase is 112 in. and tires are 32 x 3½, with demountable rims and Ajax tires. The car will be finished in Packard blue, with ivory white wheels, and the upholstery will be French pleated.

The Hackett Four

Price—	
Five-passenger touring	$888
Three-passenger roadster	888
Cabriolet	1,000
Color	Packard blue
Number of cylinders	Four
Shape	L-head
How cast	Block
Bore	3¾
Stroke	4¼
S. A. E. horsepower	22.5
Ignition	Remy
Starting and lighting system	Disco
Clutch	Disk
Gearset	Grant-Lees 3-speed
Wheelbase	112
Tires	32 x 3½
Make of axles	Walker-Weiss
Type rear axle	Semi-floating

Aluminum Motor and Magnetic Gearshift in Newest Premier

The new Premiers are characterized by a high hood, blending well with the cowl and a pointed radiator. Both models list at $1,685

ALUMINUM overhead-valve motors and magnetic gearshifts are the big features of Series 6-B Premier cars for 1917. They are in no sense the Premiers of other days, and resemble the former cars of that name only in the nameplate itself. Produced under a new financial organization, a new production and sales organization, and a different factory from the original Premier plant, the name is almost the only physical Premier feature retained.

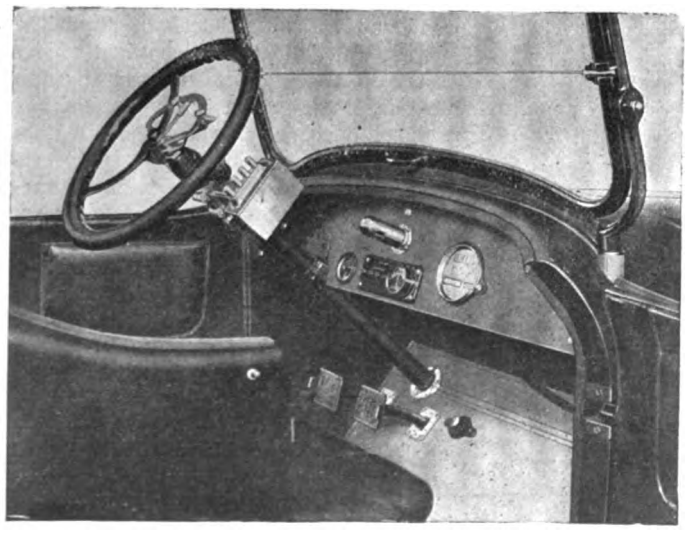
Two more obvious features are projectile body lines and an unusual amount of body room in proportion to wheelbase, obtained chiefly by placing the motor well forward and into the V of the extremely pointed radiator.

The Premier Motor Corp., Indianapolis, Ind., expects to turn out between 500 and 1000 of the new cars before Jan. 1 and ten times that many during the succeeding 12 months.

The major specifications include a six-cylinder motor, 2⅜ x 5½, a 125½-in. wheelbase, and 35 x 4½-in. tires. The bodies during the early part of the production will consist of a seven-passenger touring and a four-passenger roadster, each at $1,685.

Premier's new aluminum motor is the design of Earl G. Dunn, who as early as 1913, while general engineer of a Detroit motor making concern, produced twenty-five overhead-valve aluminum motors, similar in most respects to the one now in use in the new Premier. After painting these twenty-five experimental motors so that they could not be distinguished from the standard cast-iron motor, they were put in twenty-five cars of a prominent make and distributed to owners throughout the United States. According to Mr. Dunn, no complaints on the motor were received by the factory.

Specifications of the Premier Series 6-B



Price—	
Seven-passenger touring	$1,685
Four-passenger roadster	1,685
Number of cylinders	Six
How cast	Block
Bore	2⅜
Stroke	5½
S. A. E. horsepower	13.5
Starting and lighting system	Delco
Gearset	3-speed
Wheelbase	125½
Tires	35 x 4½

The present Premier motor is the outgrowth of this experiment. So far as the actual employment of aluminum in motor construction is concerned, this one is not greatly different from the Marmon engine, its predecessor in this field. Cylinder block and crankcase are one aluminum casting and within the cylinder bore there is slipped a gray-iron cylinder sleeve held from downward movement by a shoulder that fits a recess in the aluminum casting and held from upward movement by the cylinder-head casting which carries the valves. The sleeves can be slipped out for replacement when worn without a great deal of difficulty, but this is a factory or service station job. The whole motor weighs, roughly, 255 lb. less than a cast-iron motor of similar dimensions.

The cylinder-head carries two valves per cylinder, which operate vertically through offset rocker arms. A camshaft is carried along one side of the base of the cylinders in the ordinary way and the whole valve mechanism is inclosed by a sheet steel cover that almost completely eliminates the noise.

The crankshaft is a three-bearing shaft, with the crank arms having the metal distributed upon them in such a way that the shaft approximates a natural running balance and thus eliminates the necessity of counterbalancing weights.

Pistons are aluminum alloy and exceptionally long, the extra skirt length reducing the tendency to piston slap. Three rings are used, none of them below the piston pin, and in the skirt two rows of holes are drilled to carry back surplus oil gathered under the rings. The pistons probably also will carry another feature in that the piston skirt will be knurled with diagonal lines about 1/32 in. apart, the lines running at approximately right angles to each other. This provides space for a slight body of oil in each diagonal line and also gives room for the metal of the raised portion to spread out should there be any tendency to stick, in case the oil level be-

The control for the C-H magnetic gearshift is placed on the steering column directly below the wheel. After a control button has been depressed, releasing the clutch all the way electrically shifts the gears

Digitized by Google

comes dangerously low. Timing gears are fabric on metal. The teeth are helical.

Lubrication is by a gear pump, which takes oil from a metal sump in the bottom of the crankcase and forces it under pressure to the main bearings and connecting-rod bearings on the crankshaft. The oil is forced through the crankshaft and connecting-rod bearings, being led from bearing to bearing along the arm through tubing. Piston lubrication is by splash. The oil filler and oil level gage are on the left side and the oil pressure is registered on the dash. The pressure is regulated automatically by a valve which allows excess pressure to be relieved through a blow-off valve.

In the cooling system there are two features of moment. One of these is the thermostat, by which the water is kept at an efficient temperature. Until the water in the cylinder jackets becomes heated up to the proper point, none of it is permitted to go through the radiator, but is recirculated through pump and motor until it gets hot enough to operate the thermostat valve, at which time it is sent through the radiator in the conventional way.

A combination of two units of the cooling system has made for extreme simplicity and has cut down the number of parts and the weight somewhat. This is the mounting of the fan and impeller of the water pump upon a single, very small, hardened and ground shaft. There is only one packing gland, this being at the fan end of the small shaft, and as the gland itself is several times the diameter of the shaft, it is very easy to prevent leakage. Any tendency to leakage is further lessened by the fact that the pump is well up toward the top of the cylinder instead of near the bottom, as usually is the case, and the head is thus reduced, consequently reducing the water pressure on the gland.

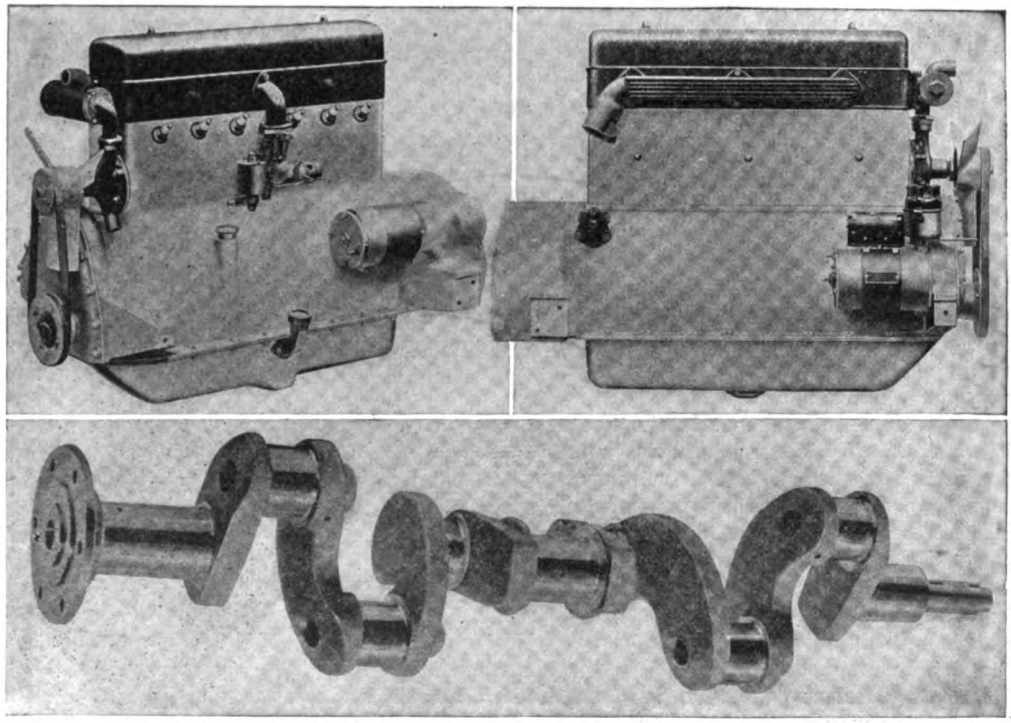
Naturally, with this arrangement fan and pump are driven by the same means, which in this case is a V-belt and pulley, the driving pulley having a simple means of belt adjustment, obtained by spreading the plates which form the V of the driving pulley, thus changing its diameter.

Starting, lighting and ignition are by the Delco two-unit system, in which the generator carrying the ignition coil and distributer is driven from the priming gears and the cranking motor operates through Bendix drive. The 108-amp.-hr. Willard battery has been disposed of by hanging it between the engine and the frame under the hood.

Gearshifting is accomplished by use of the C-H magnetic shifter. This has been used in its earlier forms previously, but Premier is making it stock equipment and in its later improved form. The design and operating principles of the magnetic gearshift have been explained so many times that it need only be said that instead of shifting gears with the conventional hand lever, this is accomplished through the magnetic shift by simply pressing a button mounted on a neat box on the steering column. Any of the three speeds may be selected and shifting is made when the clutch pedal is depressed completely. Plenty of movement is allowed in the clutch pedal for permitting the engine to run free while in gear.

An exceptionally sturdy frame is employed, having a channel section 8 in. in depth with a 2¼-in. flange.

Semi-elliptic Perfection rear springs, 58 in. long by 3¼ in. wide are used. There are twelve leaves and the spring is designed to be practically flat under a full load. The drive is Hotchkiss type.



Body room, particularly in the seven-passenger car, is unexpectedly great. An additional 6 in. is obtained, so that there is more passenger capacity than ordinarily would be regarded as possible on a wheelbase of 125 in. One feature of which will be appreciated by tonneau passengers is the fact that those in spare seats have as much room as do those in the tonneau seat proper. This is obtained by cutting deeply into the back of the front seats foot and leg space which is covered up when the spare seats fold in. Front seat passengers are equally well cared for and exit and entrance from the driver's side is made easy by a tilting steering wheel and the abolition of the gearshift lever. The tonneau seats measure 44 in. from upholstering to upholstering. The latter is of the straight vertical pleat pattern.

The 24-gal. fuel tank is suspended to the frame in the rear and carries a long goose-neck filler cap, which makes filling possible from the side of the curb without the use of a funnel or the displacement of spare tires or wheels. The tank is so hung that the frame protects it from damage by rear end collision. Fuel is taken to the carbureter through a Stewart vacuum tank.

The color is gun metal, with hood, fenders, radiator casing and chassis in jet black. Wood wheels in the natural color are stock and wire wheels an extra. The hood has a panel top, carrying two invisible hinges, which are on an angle, so that the hood may be raised and lowered in a straight position and thus prevent marring the finish of the radiator shell and body.

Locomobile Lamps Do Not Infringe in Massachusetts

BOSTON, Aug. 28—Locomobile lamps do not infringe the regulations of the Massachusetts Highway Commission, according to a decision in a test case just handed down. Officers arrested a driver of a Locomobile car at a Boston street intersection. Judge Murray declared the defendant not guilty. The case is listed in the records as Commonwealth vs. Conaty.

The Premier aluminum motor makes the car about 255 lbs. lighter than would a similar motor with iron cylinders. The pistons reciprocate in cast iron sleeves which are replaceable and the crankshaft is so balanced that vibration is practically eliminated

Association News

KANSAS CITY, MO., Aug. 28—The Motor Car Dealers' Association of Kansas City has close to a 100 per cent organization. The reason can be inferred from the program of fall activities, as outlined at a recent directors' meeting.

E. H. Coleman, who has assisted Secretary E. E. Peake in the motor car shows, has been employed as assistant to Peake and will take a desk in the secretary's office Sept. 1, to look after detail work being undertaken by the association.

A plan is being perfected for the buying of coal for the members through the association. Bids will be asked for the bulk amount, and it is believed that 50 cents or more a ton can be saved.

An investigation bureau for mechanics will be instituted Sept. 1. A card index system will be started, on which information on mechanics will be entered. The assistant secretary will glean information both in Kansas City and elsewhere, and data will be entered on the cards, especially as to the reasons for any mechanic leaving his place of employment. This information will be available for members. It is not the purpose to establish an employment bureau, nor in any way to maintain a blacklist. It is believed the proposed system will be much more satisfactory to the dealers and garagemen, and to the mechanics themselves, than the hit-or-miss plan of hiring mechanics.

The association has adopted means of handling special advertising opportunities. Two different methods are now employed. Under one of these the association itself makes contracts for space and pays the bill, collecting the advertisements and the money from the advertising members. The way this works is indicated in the case of a theater program, now under contract.

The association received a price of $7 a page, against the price of $10 a page offered the individual members. The association agrees to take at least fifteen pages at the $7 price, and can have more pro rata. The secretary's office will make separate contracts with the members who wish to use the program, handle their copy, and collect from them.

Another phase of the advertising problem has to do with special publications, and, indeed, all advertising offers except the daily newspapers; as to these, the Motor Car Dealers Association will act in the same way as the Merchants Association of Kansas City. A committee will be appointed to consider such advertising opportunities and report to the members. A favorable report leaves the members free to consider the opportunity favorably, while an adverse report is expected to indicate that the proposition should be avoided except for very special reasons.

The Merchant Association's reports to its members on such subjects are generally strictly followed, though sometimes a merchant will advertise in a medium that has been the subject of an adverse report. As a rule, solicitors are careful to secure the indorsement of the Merchants Association before putting their propositions before member-merchants; and if an adverse report is made, the solicitors usually avoid the member-merchants.

"Big League" in K. C. Bush

KANSAS CITY, Aug. 28—One of the interesting attractions in the automobile world of Kansas City is the baseball league consisting of seven teams. Games have been played all summer and much rivalry and competition has been aroused. Following is the standing of the teams: Buick, 1st; H. A. Dougherty Motor Co., 2nd; Overland, 3rd; Maxwell Motor Co., 4th; United States Tire Co., 5th, and the Webers, 6th. The games are played at Schmelzer's Park, Old Electric Park and Heathwood Park. The last game of the season will be on Oct. 1. The teams are playing for a cup offered by the Schmelzer Arms Co. The league goes under the title of the Kansas City Auto & Tire Baseball League.

New Associations in Ohio

COLUMBUS, Aug. 26—F. T. Price, president and acting secretary of the Ohio Automobile Trade Association, is assisting several new organizations, which will be completed soon and which will affiliate with the Ohio association. One of the new organizations is being formed at New Philadelphia. Steps are being taken to organize a local association of garagemen and dealers at Chillicothe. Others will be formed as soon as the heated period is over.

Jobbers to Play Golf

ST. LOUIS, Aug. 28—Members of the National Association of Automobile Accessory Jobbers will do something besides attend business sessions during their convention in this city, Oct. 2-7. Fred Campbell, chairman of the golf committee, has issued a very beautiful green and blue folder, inviting members to renew the tournament some of them were not able to finish at Hot Springs. W. K. Norris of the McQuay-Norris Mfg. Co. has donated a cup for an 18-hole handicap match play against par. President Sidney B. Dean, St. Paul, has also offered a cup to the player making the lowest actual medal score for the 18 holes. It is very kindly arranged that no start shall be made before 10 a. m. Inasmuch as the tournament is for amateurs only, there is some dispute over the entry of Mayor Sparks of Jackson, Mich.

Reorganize Canadian Association

VANCOUVER, B. C., Aug. 29—Complete reorganization was the verdict at the annual meeting of the B. C. Automobile and Motor Trades Association, held at the Hotel Vancouver recently. This association has been practically dormant for the past 2 years. The executives started immediately to compile a new set of by-laws and a revival of interest. A new slate of officers was elected: President, W. G. Palmer; vice-president, F. W. Walsh; treasurer. Chas. A. Ross; secretary, D. A. Hamilton; directors, L. M. White, G. W. Seymour and A. W. Cruise.

Postpone Ohio Merger Meeting

COLUMBUS, OHIO, Aug. 29—The proposed meeting of members of the Columbus Automobile Trade Association and the Columbus Garage Owners Association for the purpose of merging the two organizations has been postponed until after the Ohio State Fair, which closes Sept. 2. All of the dealers in the city are busy arranging for the show at the fair and thus could give no attention to the merger of the two associations. All preliminary steps have been taken and it is believed the amalgamation will be completed without a hitch.

Largest Sales Promotion Map

NEW YORK, Aug. 26—The Cold-Stratton Co., Dodge Bros. dealer, has installed in the salesroom a large framed map of New York City, mounted on Compo board, which, according to the statement of the Rand-McNally Co., is the largest city map being used for sales-promotion work. A numbered pin indicates on the map the home address of every owner of a Dodge Bros. car in the city, and the name corresponding to this number appears on the roll of honor at one side of the map.

The system operates as follows:

A prospective purchaser lives at 104 West 104th Street. By using the map, the salesman can immediately refer him to a near neighbor of his who owns a Dodge Bros. car and whose personal testimony will verify from experience the salesman's statements regarding the successful operation of the car.

Knights of the Motor World Come into Being

But They Have No Connection with the Motor World Although Most of Them Read It

PHILADELPHIA, Aug. 26 — The Knights of the Motor World has been organized in Philadelphia.

Twenty representative men, well known in the industry, fathered the society.

The membership is confined to the automobile industry. A charter has been applied for, and after this has been granted the work of organizing in other cities will be started.

The Knights of the Motor World will be a beneficial, fraternal, as well as a social organization. To bring closer together the men of the automobile industry, members will have their choice of becoming a beneficial and social member or social alone. The beneficial member will receive sick, accident and death benefits in one of the largest insurance companies in the United States, according to the plan. The officers are:

Supreme Sir Knight Commander, Robert I. Erlichman, Berrodin Rubber Co.; Supreme Sir Knight Lieutenant, C. C. T. Smith, of N. A. Petry Co.; Supreme Sir Knight Sergeant, C. H. Walz, of Electric Starter Sales Co.; Supreme Sir Knight Sentinel, Thomas G. McGahan, of Vacuum Oil Co.; Supreme Sir Knight First Master of Guards, Ivan F. Goodrich, of Goodrich Accessories Association; Supreme Sir Knight Second Master of Guard, Albert W. Stellwag, of Metropolitan Auto Supply Co.; Supreme Sir Knight Keeper of Funds, A. L. Seltzer, of Berrodin Rubber Co.; Supreme Sir Knight Keeper of Funds, George G. Weidner, of Stewart-Warner Corp.; Supreme Sir Knight Deputy Commander, J. F. Hundt, of Atlas Auto Supply Co., Chicago.

Membership Committee—Geo. B. Shearer, Jr., Gaul, Derr & Shearer; E. B. Richardson, Empire Tire Co.; John Taeffner, B. A. T. Co.; Geo. L. Fischer, J. H. McCullough & Son; Ivan F. Goodrich, Goodrich Accessories Association.

Ritual Committee—Michael Shapiro, Gaul, Derr & Shearer; N. W. Howell, The Tire Shop, Wilmington; C. P. Brewster, Edw. Cassidy Co. of New York.

The insignia of the organization will be a gold automobile wheel with a Knight in the center, the tire of the wheel being blue, with the words "Knights of the Motor World."

Buick Texas Men Discuss Service

DALLAS, TEX., Aug. 26—The second annual meeting of Texas Buick dealers was held in Dallas recently, the dealers being the guests of Manager J. W. Atwood of Dallas, in charge of Buick distribution in Texas. The managers met to discuss the new 1917 model, ideas of salesmanship, the length of time free service should be given, and other questions of interest in the salesmanship of these cars.

The sharpest discussion of the two days' convention was with reference to the time of free service, whether it should be 3 or 6 months. Most of the dealers were of the opinion that this free service should be for only 3 months, as they argued that that is ample time for a man to become acquainted with all the parts of the car. The fact, however, that parts are guaranteed for 1 year was stressed. The meeting was one of the most successful dealer meetings ever held in Texas. Two Buick 1917 models were examined and discussed in detail.

Among the Texas dealers who attended the meeting were:

B. Daniel, Vernon; A. J. Harris, Cooper; J. W. Bandy, Sweetwater; M. T. Goodman, Clarksville; P. G. Stokes, Big Springs; J. W. McDonald, Hillsboro; Bert Beall, Greenville; Wm. R. Eds, San Angelo; R. D. McClelland, Brownwood; H. G. Taliaferro, Calvert; M. T. Mast, Nacogdoches; R. I. Floyd, Ferris; A. E. Coffman, Goree; M. M. Browning, Wichita Falls; John Hutchings, New Mexico; H. L. Simpson, Gainesville; R. M. Kinard, Stamford; D. F. Moberly, McCauley; J. E. Butler, Corsicana; Bob Sears, Whitewright; J. W. Cauch, Snyder; Dick Roland, Abilene; H. E. Pearce, Denison; H. A. Hallum, Brady; B. L. Boydston, Brady; Seth Hadley, Brady; E. H. Pritchett, Bonham; Will H. Evans, Bonham; H. W. Warren, Merkel; H. C. Doss, Colorado; Sam B. Rayzor, Denton; E. W. Norris, Goree; C. B. Oliver, Caldwell; G. E. Adams, Santa Anna; C. J. Smith, McKinney; Ben Anthony, Texarkana; W. E. Hipp, Waxahachie; N. B. Feagins, Ennis; Oscar J. Rea, Clifton; C. L. Edmundston, Crockett; C. E. Welch, Waco; T. J. Goad, Mineral Wells; J. W. Simpson, Waco; J. R. Coleman, Cleburne, and others.

You Can't See Weight; Here's How To Show It

ST. LOUIS, MO., Aug. 26—The McQuay-Norris Mfg. Co., St. Louis, has developed an unusually effective method of displaying its Lynite pistons for Ford cars at the National Tractor Demonstrations. It is extremely difficult to make plain to those who stop at the exhibit the light weight of the pistons as compared with iron pistons, and to obviate this difficulty an iron piston and a Lynite piston are displayed together.

Those who stop are urged to take one in one hand and the other in the other hand. There is little those in charge of the display can add to this demonstration. The comparison of weight tells the whole story in a way that it could never be told in words. Such a comparison is particularly necessary, because so few persons have ever had an opportunity of judging the comparative weights of pistons.

Ohio Has 232,017 Cars

COLUMBUS, OHIO, Aug. 29—W. H. Walker, Ohio Registrar of Automobiles, in a report covering the present year up to and including Aug. 24, shows that there are 232,017 automobiles in Ohio. Since the first of the year the department has registered 224,700 individual gasoline car owners and 4443 electric owners. During the same period, dealers to the number of 2874 have been registered.

Everybody Sells Cars In The Inland Empire

Drug Stores, Grocers, Plumbers and General Merchandise Men, Included, but Not Hardware Stores

SPOKANE, WASH., Aug. 28—Spokane, Walla Walla, Dayton, Pendleton, and in fact every city of the Inland Empire, is advertising automobile events as the main attractions for Labor Day celebrations.

The transformation of the automobile from a specialty to a general article of merchandise seems to be complete, if the diversity of merchants, tradesmen and professional men actively engaged as motor car merchants is used as a basis of judgment.

In Deer Park, gasoline and medicine divide the attention of a prominent physician handling the Chevrolet; in St. John and Endicott the Dodge car is sold through local drug firms, and in the latter city the drug company has also entered the garage field; in Tekoa a real estate dealer sells farms and Fords, an implement dealer has added the Chalmers and Studebaker to his line, and a grocer mixes potatoes and the Abbott-Detroit in his statement of assets.

A bank cashier of St. Maries adds profits from the sale of Fords to his income; a grain merchant of Pomeroy diverts part of the farmers' profits from the sale of wheat back to his pocket by convincing them that the Buick is the best buy; in Starbuck the plumber fixes automobiles as well as gas pipes and has substituted a garage sign for the plumber's, and in Thornton and Prescott the general merchandise stores have set apart space to display cars and accessories.

In strange contrast, hardware dealers are gradually withdrawing from the automobile field. Interviews by the Motor World representative with hardware dealers in nine cities of the Inland Empire outside of Spokane disclosed a unanimous intention of discontinuing competition with local garagemen.

Sees No Broken Tractor Promises

Editor Motor World:

I have read your editorial on broken tractor promises in the issue of your paper of Aug. 9. I agree with your statements to a certain extent. As manager of the Wisconsin Tractor Demonstration I have tried to arrange such exhibits as will overcome certain objections which there have been to many of the demonstrations already held.

I do not agree with you as to the statement that the farmers are seeking information with reference to the work the tractor will do on the belt. If we

Digitized by Google

allowed ensilage cutters, feed cutters, wood saws, threshers, etc., at these shows, it would be such an extensive exhibit that neither the exhibitors nor the visitors would be satisfied. Most farmers are already familiar with what is necessary for a tractor to do in the way of belt power. Very few, if any, questions ever come to me regarding this point.

At the Wisconsin show we are going to attempt to have tractors pulling various farm machines to which they can be attached as claimed by the manufacturers. We also expect to plow certain fields which have never been plowed, thus giving an opportunity for the tractor company to make good its claims on marsh land. We also have tracts on which there are a number of rather steep hills, which will tax many of the tractors to their limit.

I think this demonstration will be of more value to the average farmer than going out on a tract several hundred acres in extent and as level as a floor.

Very truly yours,
F. M. White,
Manager of Wisconsin Tractor Demonstration.

Wholesale Trade Only For Chanslor and Lyon

LOS ANGELES, Aug. 29—The Chanslor & Lyon Co., which for the past 12 years has been conducting a retail and wholesale accessory business on the Pacific Coast through eight branches, will relinquish its entire retail trade Sept. 1 and devote its entire energies to the wholesale end of the business. The step has been anticipated for some time because of the tremendous increase in the company's wholesale trade.

The firm of Chanslor & Lyon was started 12 years ago in Los Angeles, and from an unpretentious beginning has grown to proportions which place it among the first rank of motor car accessory jobbers. To-day there are branches in Fresno, Oakland, San Francisco, Portland, Seattle, Tacoma and Washington. The firm is composed of Walter G. Chanslor, Phil H. Lyon and W. A. Avery.

Master Carbureter Holds National Test

DETROIT, Aug. 28—The Master Carbureter Corp. has just finished a nation-wide economy test with its carbureter, in which over 200 of its dealers participated. The results of the tests appear in the following tabulation and cover a number of the most important cities:

Car	City	Miles Per Gallon
Pope-Hartford	Phoenix, Ariz.	31 7/10
Overland 83	Nashville, Tenn.	15⅝
Overland 59	San Francisco, Cal.	20
Cole	Portland, Ore.	12 4/10
Haynes	Salt Lake City, Utah	22 4/10
Buick	Los Angeles, Cal.	22 3/10
Dort	Boston, Mass.	28
Ford	Tulsa, Okla.	24
Paige	Spokane, Wash.	25

Diversity in Tractors Confusing to Farmers

The Many Different Types Breed Antagonistic Sales Arguments—Bloomington Well Attended

BLOOMINGTON, ILL., Aug. 25—The Illinois farmer who visited the 5-day tractor demonstration held here this week is not concerned over whether he shall buy a tractor or not. He has already settled that question. He has made up his mind that he must have a tractor and he is going to buy one. The problem that is worrying him to-day is what tractor he will buy. His vexing problems are what size of machine and what type of machine. Size and type confuse him immeasurably.

The attendance was much larger than exhibitors had anticipated. The opinion was expressed very freely that although the numbers were not quite so great as at Fremont, the demonstration was quite as successful, from a business point of view. Perhaps the reduced attendance may partly be explained by the fact that Henry Ford and his new tractor were not present.

The attitude of the farmer towards tractors was well answered by the fact that at Wednesday's demonstration more than 5000 motor cars were on hand, a large percentage of these representing farmer machines.

One of the most serious handicaps to the more rapid development of the tractor business is the very apparent uncertainty of tractor manufacturers as to the most suitable type of tractor. Frequently a farmer asking for information finds that he cannot get any convincing advice regarding the size of machine best suited to his requirements. The position is not improved by the attitude of more than one of the old implement manufacturers, as several of these concerns are making a needlessly wide range of machines. When one firm has six machines, all quite different, the tendency is to put it up to the farmer to decide what he wants rather than to advise him to have one or another. When it is obvious that the manufacturer has not made up his mind as to which is the best type, the farmer's confidence is naturally not very swift in coming.

The variation in type is certainly holding back the sale of tractors, because the technical arguments placed before the farmer by different manufacturers are so antagonistic. For example, the champions of the very low speed and the moderately high speed engines are very bitter regarding each other, and the farmer cannot possibly reconcile the statements made by the two camps. It is the same with different systems of transmission. The tractor is nowhere near the stage of development reached by the motor car and the least discerning can readily perceive this. Consequently, the more the tractor men get together and the more closely they agree from the broader features of design, the easier will it be for the farmer to make up his mind and the greater the number will be sold.

Territorial Gatherings Beat Big Conventions

DETROIT, Aug. 19—L. J. Ollier, vice-president and director of sales of the Studebaker Corp., who has just returned from a long trip to thirty-five of the leading cities in all sections of the country, says that the idea of holding one big convention at the factory each year is all wrong. This method of getting the dealers together is quite generally practiced, but Ollier's scheme is to hold territorial conventions, where each man gets more individual attention and feels himself a bigger unit in the general assembly.

Ollier points out that if all the 6500 Studebaker dealers were to attend a big factory convention, the expense of bringing them in and entertaining them would be prohibitive. Of course, only a comparatively small proportion of them would attend, probably about 2000. A factory convention would therefore not be representative. A further difficulty is that those dealers who would attend would get lost in the shuffle, so to speak.

With the series of territorial conventions among dealers, it is entirely different. The dealers can afford to leave their business and travel 100 or 200 miles to attend a 1-day convention at a branch, whereas they would not feel like traveling 1000 miles or more to go to the factory for a 3- or 4-day convention. At the district conventions, each dealer feels more important, and he gets a chance to talk with the factory officials and realizes his place in the general factory fabric. In a word, the territorial conventions are simply a means of attaining efficiency and reducing waste. They save time for the dealer at a period such as we are now experiencing, when he is busy selling cars.

New Jordan Dealers

CLEVELAND, Aug. 28—The new Jordan Motor Car Co. has appointed the following distributers: John G. Dale, 240 West Fifty-ninth Street, New York City; Motor Car Sales Co., Milwaukee; Chicago Motor Car Co., Inc., Chicago; Decrow Motor Sales Corp., Buffalo, N. Y.; R. W. Immasche & J. A. Johansen, St. Louis.

Milwaukee Dealers Start Conquest of State

Army of 200 in 36 Makes of Cars Forges Forward on Annual Boosting Tour

MILWAUKEE, Aug. 28—The conquest of Wisconsin by the dealers of the State, an army of nearly 200, traveling in the latest styles of thirty-six different makes of cars, began this morning, and by Saturday noon, Sept. 2, a majority of the 3,000,000 inhabitants of this commonwealth is expected to be won over to a full understanding of the profit to be gained by attending the 1916 State Fair at Milwaukee, where one of the main attractions will be the second annual motor show of the Milwaukee Automobile Dealers, Inc.

It is doubtful is any "booster" expedition to advertise a State fair or a motor show has ever equalled this tour, purely a sociability run, in which forty Milwaukee dealers, nearly all of them State agents, are participating at their own expense and putting brand new cars through their best paces over a route and under conditions rivalling the famous Wisconsin reliability tours of former years.

To Cover 1000 Miles

Approximately 1000 miles, covering the most populated sections of Wisconsin, will have been traversed when the tour returns to Milwaukee next Saturday. The district includes all of southern and central Wisconsin; the great Fox River valley; the Door County peninsula fruit belt, and the west shore of Lake Michigan from the top to the bottom of the State. Included in this territory are more than 1,000,000 people, who furnish the major part of the annual attendance at the State Fair and the larger portion of the people who directly or indirectly are patrons of Milwaukee motor car dealers.

This year's tour is a cumulative effort to stimulate interest in the motor car; in the State Fair; in the good roads movement, and in the proper and courteous use of the self-propelled vehicle. With this in view, the M. A. D. has as its especial guests the Governor of the State, the Mayor of Milwaukee, and the leaders in highway improvement. Each will be expected to do his part at an appointed time.

Plenty of Fun, Too

Each city in which the tour will stop, either for a short visit, a noonday luncheon, and the night control, has made elaborate preparations for the entertainment of the party. There has been much rivalry among these cities for the honor of being placed on the route. In those cities which are large enough to support a dealers' organization, dinners, band concerts and similar fetes have been arranged for. The most notable one will be that at Green Bay on Wednesday night.

By some unusual coincidence each night control selected will furnish the means for bathing parties, water carnivals and the like. These cities are Madison, with its four large lakes; Green Lake, on Green Lake; Sturgeon Bay, on Green Bay; Green Bay, on the same water, and Elkhart Lake, on the big sheet of water by the same name.

The State Fair will open Sunday, Sept. 10, and close Saturday, Sept. 16. There will be 2 days of motor racing on the mile track, the feature events to be offered by a string of cars which is making Middle Western State Fairs this season.

Enthusiasm Marks First Day's Run

By Ray W. Sherman

Motor World Staff Representative with the Tour

MADISON, WIS., Aug. 28—If the enthusiasm which has marked the first day of the state fair boosting tour of the Milwaukee motor car dealers indicates anything the 1916 fair should be the best in years.

The members of the Milwaukee Automobile Dealers, Inc., left that city at 8.20 this morning and have traveled a circuit of enthusiasm ever since.

There are thirty-six cars, carrying 156 men, and they covered 105 miles to-day and made seven stops. At each stop the white-hatted and dust-covered army parked the cars in the center of the town, paraded the downtown section with canes and a little German band, and wound up with an appeal to the State's population by Mayor D. W. Hoan of Milwaukee. His theme was that there is benefit for all in the state fair, but that its success is due to everyone in the State. The response was gratifying.

But there is more than the mere fair at stake. There is the state fair automobile show. For this nearly 100 exhibitors have taken space and Machinery Hall will be filled. The Milwaukee dealers firmly believe in a state fair show; that is why they instituted this boosting tour last year and pulled the state fair to a successful basis.

Stops to-day were at Waukesha, Oconomo, Johnson Creek and Jefferson for dinner, Lake Mills, Deer Field and Madison. To-night the mayors of Madison and Milwaukee are speaking in the state capitol's senate chamber, while a band draws the crowd. To-morrow night's stop will be at Greenlake.

Exhibitors at the Show

MILWAUKEE, Aug. 26—The complete list of exhibitors at the second annual motor show under auspices of the Milwaukee Automobile Dealers, Inc., at State Fair Park, Sept. 11 to 16, has been announced by the show committee. It follows.

Frint Motor Car Co., Harry Newman, Inc., Curtis Auto Co., Hoppe-Hatter Motor Co., Olson & Pauly Auto Co., Kisselkar Co., Jesse A. Smith Auto Co., The Winton Co., Packard Motor Car Co., Sanger Automobile Co., Anderson Electric Car Co., Velie Motor Car Co., Osmond-Vogel Co., Ray D. Rockstead, Schreiber-Boorse Motor Car Co., Diener-Nelson Motor Co., Rademacher & Jaeger, Regal Motor Co., Marion Sales Co., Cole Motor Co., Mitchell Automobile Co., Hughes Motor Car Co., Lauson-Valentine Auto Co., Emil Estberg, Wisconsin-Oakland Co., Ford Motor Co., Buick Motor Co., Fowler Motor Sales Co., George W. Browne, Overland-Wisconsin Co., Pullman Auto Co., Jonas Automobile Co., Stephens-Adams Motor Co., John G. Wolleager Co., Saxon-Reynolds Auto Co., Bachman-Diener Auto Co., Stegeman Motor Truck Co., Diamond T. Sales Co., Holmes & Co., and Wells Garage Co.

The big Machinery Hall, near the main gate of the fair grounds, is again in the exclusive possession of the M. A. D. It has been laid out in seventy-two spaces, in which eighty-five makes of cars will be shown, together with twenty-five to thirty accessory and supply exhibits.

A 10-cent admission fee is charged by the M. A. D., the object being to confine the attendance to those who believe it worth a dime to gain entrance to an exhibition of this kind, and to keep out a horde of children. The receipts, after expenses are paid, are pro-rated among the exhibitors.

Electric Vehicles at Electrical Exposition

NEW YORK, Aug. 29—Electric pleasure and commercial vehicles, as well as accessories, will hold a prominent place in the New York Electrical Exposition at Grand Central Palace, Oct. 11 to 21. A test run is now being planned to be held during the exposition. The Electric Garage, New York, will have an exhibit representative of the work it is carrying on. Among the pleasure vehicles will be the Baker, R. & L. and Detroit cars. Among the exhibitors of commercial cars will be the General Vehicle Co., Walker Vehicle Co. and Ward Motor Vehicle Co. The Edison Storage Battery Co. and the Electric Storage Battery Co. will have exhibits.

Speedway for Colorado

DENVER, Aug. 28 — A $100,000 speedway is being planned by the Colorado Springs Athletic Club, which expects to push the project through by next summer.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

J. B. McMahon, Jr., manager of the New York branch of the Redden Motor Truck Co., has formed the Boston Sales Co., with N. J. Wallis of Boston, to control the Massachusetts territory.

Francis X. Coveney, for 6 years with the Studebaker and Chalmers agencies at Boston, has joined the sales force of the Alvan T. Fuller Co., Packard dealer.

W. W. Stillson, Portland, Ore., who for the past year has acted as Northwest manager for the Oldsmobile Co. of California, has been appointed general manager of Oldsmobile interests on the Pacific Coast north of Bakersfield, Cal., and including the Hawaiian Islands.

R. K. Haines has succeeded George Lewis as sales manager of the C. T. Silver Motor Co., Chalmers distributer in New York.

L. Meyrick, formerly of the Lavine Gear Co., Racine, Wis., has been made general superintendent of the Ferro Machine & Foundry Co., Cleveland.

Estau Llull, Santiago, Cuba., is in the United States arranging for the introduction of vulcanizing outfits in Cuba. He says the conditions are ripe for big American business in the West Indes. He has placed an order with the Tire Repair Equipment Co., Appleton, Wis.

Jack M. Brussel, formerly connected with the Ferro Machine & Foundry Co., Cleveland, as general superintendent, has resigned to accept a similar position with the Dayton Engineering Laboratories Co., Dayton, Ohio.

Daniel McLaren, formerly receiver for the Columbus Buggy Co., Columbus, Ohio, has been elected first vice-president of the Enger Motor Car Co. of Cincinnati, a $4,000,000 reincorporation.

C. A. Dunkelberg has resigned as treasurer of the C. F. Bowser Co., Fort Wayne, Ind., to take effect Sept. 1. He has been succeeded by W. G. Zahrt.

Otis C. Friend, general sales manager of the Mitchell Motors Co., Racine, has resigned. His successor has not yet been appointed.

A. K. Hebner, service supervisor of the Hyatt Roller Bearing Co., will relinquish his duties with that company on Sept. 1 to become general manager of the Bearings Service Co., the organization of which was made public last week. The concern will hereafter handle the joint service for the Timken, Hyatt and New Departure companies.

Gail Murphy, advertising manager of the Chalmers Motor Co., has resigned, to take effect Sept. 1. No successor has been appointed nor have Murphy's future plans been divulged.

L. P. Jones has been made sales manager of the Federal Brass Wks., Detroit. Jones was formerly connected with the American Bronze Co., being with this concern for 5 years, the latter 3 being in Detroit as western manager.

Oldsmobile Sells Detroit Branch

DETROIT, Aug. 28—An important change in local automobile circles is the purchase of the Oldsmobile factory branch by Wilbur H. Collins, son of R. H. Collins, former Buick sales manager and now a director of the General Motors Co., and F. J. Muellerschoen, who for several years was connected with the Philadelphia Buick branch. The Oldsmobile business will hereafter be conducted as a distributing organization, with a territory including all of Michigan and nine counties in Ohio immediately adjacent to Toledo. R. C. Lowrie continues in the Detroit organization in charge of retail sales and will retain the same selling staff.

GASOLINE PRICES STABLE

NEW YORK, Aug. 29—Gasoline prices throughout the country remained for the most part unchanged last week. Wholesale prices in this section were stable, and consumers are paying from 23 to 26 cents a gallon. Gasoline in New York, Long Island, Westchester and Connecticut is being sold by the Standard Oil Co. at 23 cents wholesale. In New Jersey the price is 21 cents. Retail prices there range from 23 to 25 cents a gallon. Texas and Gulf Refining prices remain the same as last week. Texas prices in this territory are 23 cents wholesale and 21 cents in New Jersey. Gulf Refining gasoline is selling wholesale in this territory at 23 cents and in New Jersey at 22 cents a gallon.

Chevrolet $490, Electrically Equipped—Baby Grand $50 Higher

NEW YORK, Aug. 26—The Chevrolet Motor Co. has raised the price of its Baby Grand model from $750 to $800, and hereafter the price of $490 for its small model, known as the Four-Ninety, will include electric lighting and starting equipment. Heretofore the Four-Ninety model equipped with electric lights and starter sold at $550. The model D roadster price remains unchanged.

Thirty-six to Race at Cincinnati

CINCINNATI, Aug. 29—Following is a complete list of entries for the first International Sweepstakes race at the new Cincinnati Speedway on Labor Day:

Driver	Car
Dario Resta	Peugeot
Ralph de Palma	Mercedes
E. V. Rickenbacher	Maxwell
Pete Henderson	Maxwell
Ralph Mulford	Peugeot
Josef Christiaens	Sunbeam
Charles Merz	Peugeot
John D. Aitken	Peugeot
Gilbert Anderson	Stutz
Howard Wilcox	Premier
Billy Chandler	Crawford
Dave Lewis	Crawford
Art Johnson	Crawford
Milton F. MacBride	Olsen
Ira Vail	Hudson
Aldo Franchi	Delage
Jules de Vigne	Delage
Wilbur D'Alene	Duesenberg
Jack Gable	L. C. Erbes
Frank Galvin	Sunbeam
E. O. Victor	Chadwick
Tom Milton	Duesenberg
George Adams	Adams
(No driver named)	Olsen
(No driver named)	Hudson Super Six
(No driver named)	Duesenberg
Omar Toft	Omar
E. E. Rawlings	West Duluth
E. D. McNay	Cino
Swan Osteweg	Osteweg
J. C. Hoskins	Hoskins
J. W. Oberting	Oberting
(No driver named)	Premier
W. J. Muller	Dans L'Argent
L. Chevrolet	Frontenac
Edwin A. Klein	Kleinart

Hupmobile Starts Tour Visiting All Capitals

Will Cover 25,000 Miles Going Through Capitals of Every State Urging Good Roads

DETROIT, Aug. 28—A 25,000-mile capital-to-capital tour in the interest of good roads, to be covered in a Hupmobile, was officially started to-day at Washington, D. C. The plan is to visit the capital of each state and to invoke interest nationally in good roads.

From Washington the car proceeds north to Annapolis, Md., and thence to Harrisburg, the capital of Pennsylvania. Following a visit to all of the Eastern and New England capitals, the route then proceeds down to Albany and across New York State to Buffalo, where the car swings southward to Columbus and Charleston, W. Va., then back to Indianapolis, Detroit and Lansing, Michigan's capital. Thence the route goes westward northerly to Seattle and down the Pacific Coast to Los Angeles and back to San Francisco. Then the car is driven eastward via Carson City, Ogden, Salt Lake City and Cheyenne to Denver.

The trip is in charge of J. S. Patterson and the car is driven by C. E. Salisbury and George Lipe, both of Detroit, and the fourth member of the party is W. A. Krohn.

As the reports to be made by the party are to be both written and photographic, a most comprehensive idea of American roads will be obtained. The Hupmobile making the run is painted a khaki color, and on the front doors appears the Detroit shield bearing the inscription, "United America Capital to Capital Tour."

Peacock Killed at Kalamazoo

KALAMAZOO, MICH., Aug. 27—Jack Peacock and Marion Arnold were killed and eight others injured to-day when eleven of fourteen cars piled up at the first turn during the 100-mile race on the 1-mile dirt track at Recreation Park, this city. The twelve-cylinder Sunbeam which Peacock drove skidded at the start of the race on the first turn and struck the fence. The car was overturned and thrown squarely across the track, and ten of the other machines plowed into it. The Stutz driven by Andy Burt, whose mechanician, Arnold, was killed, was the first to strike Peacock's car. Peacock was in partnership with Charles Hanson under the style Hanson-Peacock Corp., Brooklyn, N. Y., National car dealer.

Philadelphia Row Sees Changes

PHILADELPHIA, Aug. 28—A number of changes have occurred on Motor Row E. C. Johnson, distributer of the Reo, has sold his interests to J. R. Pierpont,

Digitized by Google

who was associated with Johnson. S. R. Blocksome, distributer of the Stutz, has entered into partnership with Pierpont, and the two firms will trade as the B. L. P. Motors Co., Inc. A new showroom and service station will be either leased or erected. J. H. Johnson has taken charge of the Mitchell agency, succeeding Richard Willard, who recently resigned.

The Owen Magnetic, handled here by the Carl H. Page Co. in connection with the Mitchell, has been transferred to the Baker R. & L. branch, at Twenty-second and Spring Garden Streets. Robert Wilkie of the Buick agency has gone with the Bigelow-Wiley Co., Paige distributer, and will have charge of the service department. His brother Thomas left the Buick also and has opened a service station on Wood Street, east of Broad.

Overland Capital Increased $15,000,000

TOLEDO, Aug. 29—The outstanding capital of the Willys-Overland company has been increased from $22,500,000 to $37,500,000 by the issuance of $15,000,000 new stock. A meeting of the board of directors to act formally on the plan was held and unanimous consent was given to the proposition. The issue of $15,000,000 additional common stock is made to stockholders of record Aug. 28 at $44 per share. New stock will carry 5 per cent stock dividend recently declared payable April 2, 1917, to stock of record of March 15, but will not carry the 5 per cent stock dividend payable Oct. 2 of stock record Sept. 15. The ratio of subscription for common stock is for two new shares for every three now held. Each share of the preferred stock is permitted to subscribe for one new share of common, par value of $25 at $44.

Bodies Coming From Walpole

WALPOLE, Aug. 29—The Standard Woven Fabric Co., which recently moved to Walpole, has sold its plant at Framingham and it is to be occupied by the Bela Body Co. of Amesbury, which will operate the whole property for the production of bodies.

Abbott to Build $150,000 Factory

CLEVELAND, Aug. 28—The Abbott Corp. has purchased six acres of land on 152nd Street, near the Nickel Plate tracks, and let the contract for a factory building to cost about $150,000, where the Abbott car will be made in the future.

Now Alliance Tire & Rubber Co.

ALLIANCE, OHIO, Aug. 29—The Alliance Rubber Co. has been reorganized as the Alliance Tire & Rubber Co. and its capitalization increased by $500,000. The output of the company will be increased about 200 per cent, the additional capital being used for the enlargement of the plant. A new three-story building will be built adjoining the present factory.

Factory News of the Week

Mack and White Star Form Metropolitan

NEW YORK, Aug. 26—The Metropolitan Motors, Inc., has been established with a capital of $1,000,000 to manufacture a light delivery vehicle and to take over the business of the White Star Motor & Engineering Co. W. C. Mack, one of the Mack Bros. who started the Mack truck, is the moving spirit. A ½-ton truck at about $695 will be added and the White Star trucks of 2, 3 and 5 tons capacity will be continued. Production is expected to start between Oct. 1 and 15.

ACME DOUBLES CAPITAL

CADILLAC, MICH., Aug. 24—The Cadillac Auto Truck Co., this city, maker of the Acme truck, has voted to increase its stock from $100,000 to $200,000. One-half of the new stock will be sold in the near future and the shares, having a par value of $10, will sell for $11.50. No date has been set for the sale of the remaining $50,000 of new stock.

The company will soon start the construction of a new building, which will be 200 x 65 ft.

Production is to be increased during the coming year and another model, a larger truck, is to be added to the company's line.

TO MAKE A FORD GO FARTHER

CHICAGO, Aug. 29—The Myle-Mayker Co. has been organized with a capital of $100,000 to market an attachment for Ford carbureters designed to reduce fuel consumption. Eugene F. Kline, formerly connected with the Mahin Advertising Agency, is head of the company. The device is a gravity operated flutter valve, controlling the richness of the mixture in inverse ratio to the speed of the motor.

Self-Oiling Bolt for Brown

SYRACUSE, Aug. 29—David Landau and H. G. Farr, spring engineer and chief engineer of the Knox company, respectively, have combined their experience in the production of an automatic lubricating bolt. This is to be marketed by the Brown Co., Syracuse, N. Y., which has taken an exclusive license. The bolt is intended for spring shackles, but can be used in principle in other mechanisms requiring a continuous feed of fluid oil for internal lubrication.

Perkins-Campbell Adding

CINCINNATI, Aug. 28—The Perkins-Campbell Co. has added 10,000 sq. ft. to its factory. A second additional building with over 8500 sq. ft. is being rushed by the contractors and will be added about Sept. 15.

Saxon to Share Profits

DETROIT, Aug. 28—The Saxon Motor Car Corp. will share a special bonus with its employees both in the office and factory departments, in accordance with a new plan just made public.

Office employees who have been with the concern for a period longer than 90 days will receive a bonus at the rate of 5 per cent of their yearly salary. Factory workers will share on a like basis, with the exception of those who have been paid a premium on the piece-work basis. These will get a bonus of 3 per cent. The payment of this bonus will be made Sept. 1.

Centering Bearings Service

DETROIT, Aug. 28—The Bearings Service Co. has been organized here to handle the service for anti-friction bearings for all types of motor vehicles and already has contracted with Timken, Hyatt and New Departure to conduct the service operations for these three large bearing manufacturers. The Bearings Service Co. in reality takes over the service operations of these three, and the idea is similar to that of the union railway station where competing lines enter a city. Instead of a station for each railway, one station takes care of all. It is the plan to eventually establish union stations in fifty or more automobile cities, thereby placing this service within reach of most motorists.

Parrett Moves to Peoria

WENONA, Ill., Aug. 28—The Parrett Machine Co., which has been engaged in the manufacture of the Parrett farm tractor for several years, has removed to Peoria, Ill., due to the necessity for enlarging the field and also securing better shipping facilities. Offices have been opened in the Port Huron Building, on Water Street, Peoria, and a factory will be opened later. The company has been handling automobiles as a side line for several years, but will hereafter handle tractors exclusively.

To Market Doble Steam Car

DETROIT, Aug. 28—Abner Doble's steam automobile is to be marketed by the General Engineering Co., which is incorporated at $200,000. Doble is vice-president. The president is C. L. Lewis, former head of the Consolidated Car Co., and the secretary-treasurer is M. J. Hammer, also of the Consolidated company.

New Office for Buick

FLINT, Aug. 28—The Buick Motor Co. plans the immediate construction of a four-story office building on the site of the present office structure. The new structure will be 242 x 50, fireproof, and will cost $240,000.

Fuller Output Increases

KALAMAZOO, MICH., Aug. 28—The output of Fuller & Sons Mfg. Co., parts builders, has been quadrupled within the last year. The July output was nearly as great as the entire 1914 output. In July, two and a half times as many men were employed as a year ago.

Dodge Bros. Are Building

DETROIT, Aug. 21—The Dodge Bros. plant is to be enlarged by the addition of a five-story carpenter shop to cost $40,000 and measuring 240 x 40 x 80 ft., a six-story core shop 425 x 60 x 102, to cost $300,000, and another smaller building, one story and 24 x 148.

Saxon to Make 60,000

DETROIT, Aug. 28—The Saxon Motor Co. plans an output for the 1917 selling year of more than 60,000 cars. Contracts for 50,755 cars have been closed within the past 3 weeks with Saxon dealers.

Indianapolis Prepares Big Show

INDIANAPOLIS, Aug. 29—The fall show, which will be given in a mammoth tent close to the Coliseum in the Indiana state fair grounds Sept. 4 to 8, is to be the biggest show ever staged by the Indianapolis Automobile Trade Association. More than fifty exhibitors will show nearly 200 products of seventy different factories. The accessories exhibit, which heretofore has taken up much space, will be quite limited to make room for the new models of motor cars.

National Expansion Is Started

INDIANAPOLIS, Aug. 29—Work was started last week on the new $150,000 addition to the plant of the National Motor Vehicle Co. Two new buildings are to be erected at once and, in order to expand its plant, one-half of a city block immediately east of the present site has been purchased. The old buildings occupy one city block. The ground just acquired is 410 x 140 ft. The first new building is to be completed by Nov. 9. It will be 380 x 60 ft. and three stories high. The second new unit of the plant will be 328 x 140 ft. and one story high. This addition is to be in operation before the first of the year.

From Everywhere

New York—The first shipment of Jordan cars to be made by the Jordan Motor Car Co., Cleveland, Ohio, reached this city by express and consists of one carload of three touring models, consigned to J. Dale, the New York agent.

Detroit—After an extended trip through Japan, China and Australia, Joseph R. Drake, vice-president of the Hupp Motor Car Co., is again in Detroit, accompanied by R. F. Cole, representative of the Hupp company in the Orient. Drake reports conditions very favorable for the extension of American car selling in the countries visited.

Philadelphia—The Rush Motor Truck Co. has been incorporated at $500,000 to manufacture trucks and cars by Charles L. Guerin and Joseph D. Morelli.

Philadelphia—George G. Meeley, of the American Auto Tire Co., Inc., 154 North Broad Street; Hugh B. Turner, secretary-treasurer of the company, and several others have purchased the old Patterson textile mills in Chester, Pa., which will be improved and enlarged for the manufacture of tires.

St. Paul—L. C. Erbes plans to move the Cutting and Clarke-Carter car factories from Waterloo, Iowa, to the former Duesenberg plant and to call the car the L-C-E. He plans $50,000 improvements to the factory in the way of additions.

Newark, N. J.—The H. J. Koehler Motors Corp. has been formed here with a paid-in capital of $425,000 to succeed the H. J. Koehler S. G. Co. and the L. E. Schlotterback Mfg. Co. H. J. Koehler remains the president of the new concern and the product and its price, $895, are unchanged.

Cleveland—The Big Four Tire & Rubber Co. has had plans made for a tire factory, but the site has not yet been announced. It is said the company will make a tire designed upon a plan different from anything on the market. The building will be 400 x 80.

Cincinnati—The Murray Auto Parts Mfg. Co. has been incorporated at $25,000 to manufacture car parts and accessories. The incorporators are Edwin J. Kennedy, William J. Murray, Victor E. Murray, S. E. Daugheter and J. H. Muman.

Swifts, Ohio—The Vincent Automatic Transmission Co. has been incorporated at $10,000 to make transmissions. B. E. Vincent, H. M. Middleswart, B. O. Middleswart, C. C. Middleswart and O. D. McPheron are the incorporators.

New York—The Redden Motor Truck Co. has secured an exclusive license on the Cook patent No. 1,180,475 for converting pleasure cars into commercial vehicles. It is said the company will proceed against infringing devices.

Coming Events

General Events

Sept. 25.....Indianapolis, Convention for the formation of Indiana Automobile Trade Association, under auspices of National Automobile Trade Association, Hotel Claypool.

Oct. 2-3-4-5.....St. Louis, Fall Meeting National Association of Automobile Accessory Jobbers.

Oct. 12.....Flint, Mich., annual convention of the Michigan Automobile Trade Association.

Oct. 16-17.....Rockford, Ill., Semi-annual Convention Garage Owners' Assn. of Ill.

Feb. .....Convention Minnesota Retail Automobile Dealers Association.

Races, Contests and Tours

Aug. 28-Sept. 1...Milwaukee, Wis. Booster Tour of Milwaukee Automobile Dealers.

Sept. 4.....Cincinnati, Ohio; speedway race, Cincinnati Speedway Co.

Sept. 4.....Elmira, N. Y.; track race, Elmira Auto. & Motorcycle Racing Assn.

Sept. 4.....Newark, N. J.; track race, Olympic Park Racing Assn.

Sept. 4.....Des Moines, Ia.; speedway. Price Speedway Co.

Sept. 4.....Indianapolis Speedway race.

Sept. 4-5.....Spokane, Wash., track racemeet, Inland Auto Assn.

Sept. 9.....Indianapolis, Ind.; speedway races, Indianapolis Motor Speedway

Sept. 16.....Providence, R. I., speedway racemeet, Narragansett Park Speedway.

Sept. 18.....North Yakima, Wash.; track race, Washington State Fair.

Sept. 29.....Trenton, N. J., track racemeet, Inter-State Fair. Horace P. Murphy, Racing Secy.

Sept. 30.....New York, N. Y., speedway racemeet, Sheepshead Bay Speedway Corp.

Oct. 7.....Omaha, Neb., Speedway racemeet, Omaha Auto Speedway.

Oct. 7.....Philadelphia Speedway race.

Oct. 14.....Chicago; speedway races, Speedway Park Assn.

Oct. 19.....Indianapolis, Ind.; speedway races, Indianapolis Motor Speedway.

Oct. 21.....Kalamazoo, Mich.; track races, Kalamazoo Motor Speedway.

Oct. 22-23.....Los Angeles, Cal. Commercial Car Reliability Run.

Tire Rate Book

September Edition

If you sell tires there isn't the slightest question but that you need a copy of the Tire Rate Book. The September edition is being made ready for the press now. It will be ready to mail within a few days. It will list the complete price schedules of about 100 of the leading pneumatic and solid tire manufacturers.

The September edition will also incorporate the following valuable features:

A complete list of tire and rim sizes for all American made cars from and including 1913 to date.

A standard telegraph and cable code—the value of which will be appreciated by every dealer who has occasion to telegraph tire factory, branches or jobbers.

The Tire Rate Book is the standard price guide for thousands of dealers and salesmen in all parts of the country. It is a neatly bound volume, 4¼x7½ inches. It fits the pocket.

It is published three times each year—January, May and September. Prices are brought up to date in each issue. Because of recent changes in tire prices the September edition will prove invaluable to tire dealers and salesmen.

Beginning with the January issue the yearly subscription price of the Tire Rate Book will be one dollar—single copies fifty cents.

Present subscription price fifty cents per year (including this September and next January and May issues).

Send your subscription NOW and take advantage of the present fifty cent rate.

More Than A Million Dollars Worth of Velie Cars Were Contracted for at the Factory In One Day

SUCH is the response which the announcement of the New 1917 Velie has brought. To date it has added more than 600 new dealers to the Velie Sales Organization—experienced and representative automobile men in every case.

This demand at once explains why A Mile of Velie Factory must triple its output. All due to *"Bigger, Better, More Power"*—at the Velie's low price. Velie combination of highest values in motor-car building is not matched by any other Light Six.

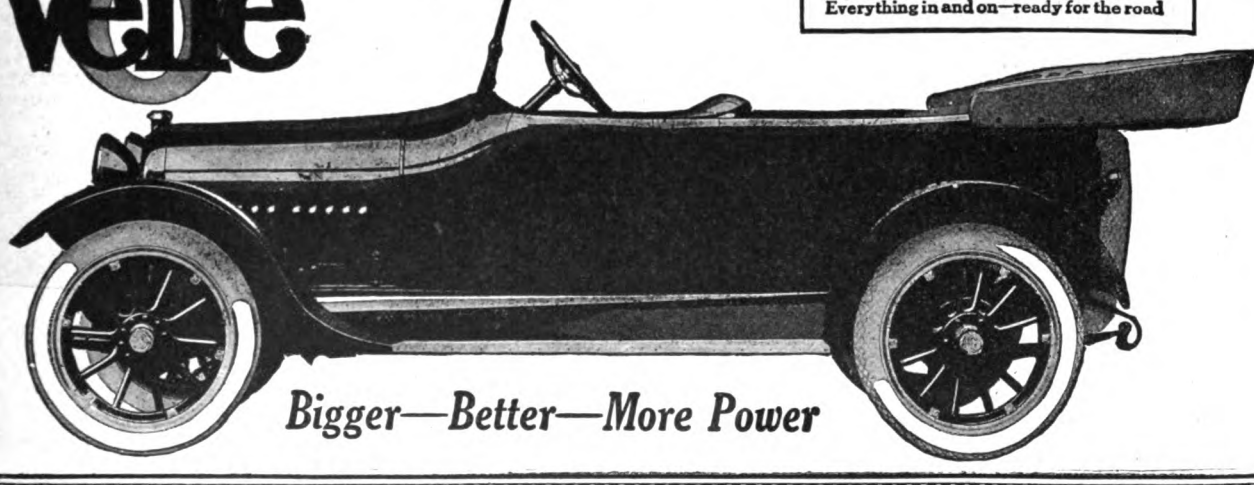
If Your Territory

is not closed—you are invited to get in touch with the factory, for the unprecedented opportunity which this car offers.

With the Velie's long, graceful, new body; deep-tufted leather upholstery; powerful Velie-Continental Motor; Timken axles front and rear; push button starting and corresponding *extra* values throughout, the Velie dealer meets the widest range of demand both in quality and price. Write or wire for our liberal proposition today.

Eight Body Styles A Complete Line

Model 28, five-passenger Touring, $1085; four-passenger Companionable Roadster (original and exceptionally smart type), $1085; two-passenger Roadster, $1065. Enclosed bodies exclusively designed: Cabriolet, $1485; Touring Sedan, $1685; four-passenger Sociable Coupe, $1750; Town Car, $2200. Wire wheels on any model $70 extra.



Model 27, seven-passenger Six, completes the line; 124-inch wheelbase, 45 h.p., 35x4½ tires, 4-speed transmission. The utmost in luxury and refinement. Price, $1550.

Velie Features

Six-cylinder Velie-Continental Motor
Timken Axles front and rear
Removable Cylinder Head for Inspection
Helical Gears in Motor—no chains
Enclosed Multiple Dry Disc Clutch
Hotchkiss Drive—no noisy torque arm
Spiral Gears in Floating Rear Axle
Remy Automatic Ignition—Push Button Starter
Double Bulb Headlights—Dashlight
All Wires Enclosed in Metal Conduits
Rear Gasoline Tank—Vacuum Feed
Simple Rocking Gear Shift Lever
Luxurious Body, 4 inches longer
Unusually Wide Doors—easy to enter
High-Grade Leather Upholstery
Cushions Deep Tufted—Real Curled Hair
Long, Flexible Underslung Springs
Expanding Tire Holder—no Straps
Mirror Body Finish—20 Operations Deep
Light of Weight—Economical of Fuel
Everything in and on—ready for the road

Taxicab Companies choose Raybestos for **WEAR.** Fire Departments equip their trucks with Raybestos — for **WEAR.** They've tested. They know. They prefer Raybestos. There's just one outstanding reason

—that's WEAR

Hills quickly prove brake lining **WEAR** — or the lack of it. Where hills are steepest Raybestos sales are strongest. The reason is — Raybestos **WEAR.** Frequently, Raybestos serves for 50,000 miles before requiring replacement.

—that's WEAR

Continued brake safety demands brake lining **WEAR.** Continued high service demands **WEAR.** Every brake lining quality leads back to the one big one

—that's WEAR

Motorists are learning not to tolerate short-**WEAR**ing substitutes.

Careful garages and supply houses recommend Raybestos for **WEAR.** They rank it with the highest-grade gasoline, most efficient lubricants and best-mileage tires.

Announcement to Ford Owners!

Real driving economy at last, dealers making big clean-up!

My company guarantees ***to add 15% to 50% to the gasoline mileage of any Ford.*** **Guarantees that any Ford with the Myle-Mayker will throttle down to less than 4 miles per hour on "high"—practically be free from carbon deposits—will run smoother, have cooler engine and be more silent, more flexible and *easier to start*—will pull better on high gear.**

MyleMayker Co. Eugene F. Kline
PRESIDENT

GREENEBAUM SONS BANK & TRUST CO.
(Capital and Surplus $2,000,000)
Chicago, Aug. 17, 1916
Eugene F. Kline has been known favorably to the officers of this bank for many years, and is considered amply able to make good on every promise to customers.
GREENEBAUM SONS BANK & TRUST CO.

The MyleMayker

Copyright 1916, Myle-Mayker Company

Add the Myle-Mayker to any stock Ford carburetor and you add 15% to 50% to gasoline mileage. **The universal impression that the Ford car is the most economical of cars is a mistaken impression.** As you well know, other cars weighing 500 to 1000 pounds more, are delivering higher gasoline mileage. It's because the carburetor of the Ford is adjusted, normally, for a very rich mixture.

This is **necsesary** for starting and running at the low speeds, but results in **too much gasoline burned at the higher speeds.**

Cut down gasoline one-half turn —save practically 50%

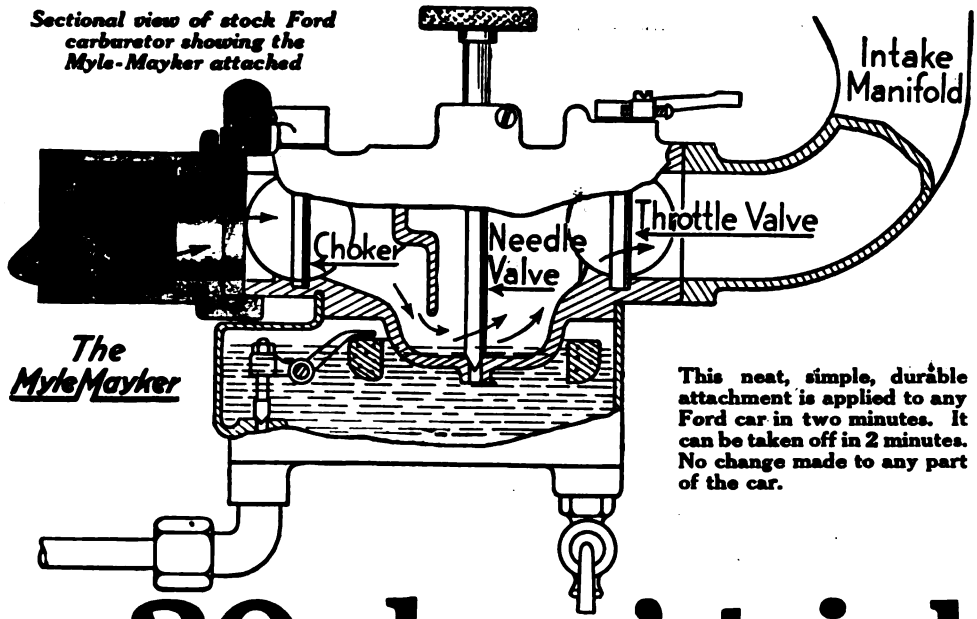
The Myle-Mayker gives to the Ford carburetor tne efficiency of a $25 instrument. Makes the Ford car the economical car it is supposed to be. **Automatically the Myle-Mayker regulates the quantity of air admitted.**

In starting and at slow speeds, just a little air is admitted, and the mixture is rich—as the engine picks up speed, more air is admitted, and less gasoline used.

Easier cranking—less noise—4 miles or less on "high"

You always get a rich mixture for starting, when the Myle-Mayker is on the job. You crank easily at all times. The usual noise is to a large extent quieted. Your motor becomes smooth, quiet and wonderfully flexible. **In one test with an eight-cylinder car** the Ford did everything the other car did except in throttling down. The eight got down to 2 miles—the Ford to 2½.

No hole to drill in manifold— no change of any part



To install the Myle-Mayker doesn't require laying up the car. It's put on with a screw driver in two minutes and taken off just as quickly, and without damage of any kind. No mark left to show it was ever attached. Can be put on one day, to test out the device, and taken off the next for comparison of results.

There is nothing about the Myle-Mayker to wear out, or fail. The position of the car does not effect it, neither does cold, dampness, dryness nor any other condition. It cannot get out of adjustment nor fail to work. It is the only device claiming to effect a gasoline saving, of which this can truthfully be said.

Read big announcement in double page advertisement in September "Motor"

Digitized by Google

This neat, simple, durable attachment is applied to any Ford car in two minutes. It can be taken off in 2 minutes. No change made to any part of the car.

Sold on 30 days' trial

Dealers having big repeat business—thousands sold—not one returned

The MyleMayker

Copyright 1916, Myle-Mayker Company

The Myle-Mayker is its **own best salesman.** That's why we make our guarantee so strong, and why we make it so easy for everybody to try it. To prove to your own satisfaction that the Myle-Mayker will do even more than we claim for it, and that your opportunity to make money on this instrument is even more attractive than it appears as you read this advertisement, do this:

Order a sample Myle-Mayker on your business stationery, so that we will know you are a garageman or accessory dealer, (the retail price is $5). As a dealer you get a liberal discount. We will send you a Myle-Mayker, prepaid, together with our price list.

Test it thoroughly in accordance with our instructions or any other way you like.

Make the Myle-Mayker prove to you that it will add 3 to 10 miles per gallon to a Ford car's gasoline mileage—that it will make the car easier to start, smoother running, able to be throttled down to less than 4 miles per hour. If you're not convinced it's a big winner, return it at our expense within 10 days.

If you agree with us that it is a big money-maker for you, send us your order for a dozen and we will send you the other eleven on our regular terms, as shown by price-list.

Don't wait, but test out and prove the Myle-Mayker, and start making money with it

Your chance to make a lot of money

Fill out this coupon, pin to a sheet of your business stationery. Mail today.

State agents—district agents—live dealers wanted everywhere!

Here's the biggest thing ever invented in the way of a gasoline saver. To test it doesn't require mutilating the car. Doesn't require the laying up of the car. Doesn't call for an expensive installation. It is put on by anybody in two minutes and taken off as quickly. Talk about easy sales! This device is the limit! Dealers order second and third lots inside of three weeks or a month.

Just think of it—the Myle-Maker not only wonderfully increases the efficiency of the Ford, but **saves its own cost in a month or two!** It's backed by our **guarantee to do everything we claim for it.** Here's the biggest chance to make a lot of money that has come your way in many a day. You'll be assisted in your sales by powerful national advertising and live dealer co-operation. If you want territory, jump on the first train and come to see us.

Write, phone or wire for representative to call.

FEDDERS QUALITY

—is best exemplified in Trucks.

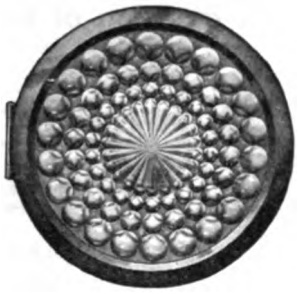
The Truck Owner wants but one thing—lowest ton mileage cost. But that one thing he **needs**—and invariably demands.

The Truck Manufacturer knows this need and he builds to fill it. He equips his product with parts selected solely for their ability to render long, unremitting Service—Service that is unvarying and absolutely dependable.

Fedders Radiators

—are standard equipment on most of the leading makes of American Trucks—those that lead in quality as well as quantity of production. They have been standard equipment on some of these makes since Fedders Radiators were first brought out—19 years ago.

There is—there can be—only one reason for this—and that reason lies in the ability of Fedders Radiators to deliver



Unequalled Service

Announcing the
PITTSFIELD

The keynote of the new Pittsfield Battery Ignition System is in the breaker mechanism of the distributor.

By virtue of its design, an open circuit is permitted, which means that you are using current only when it is required to produce a spark. In addition to that, both the making of the circuit and the breaking of the circuit are positive mechanical operations, neither depending upon the rapidity of the action of the spring.

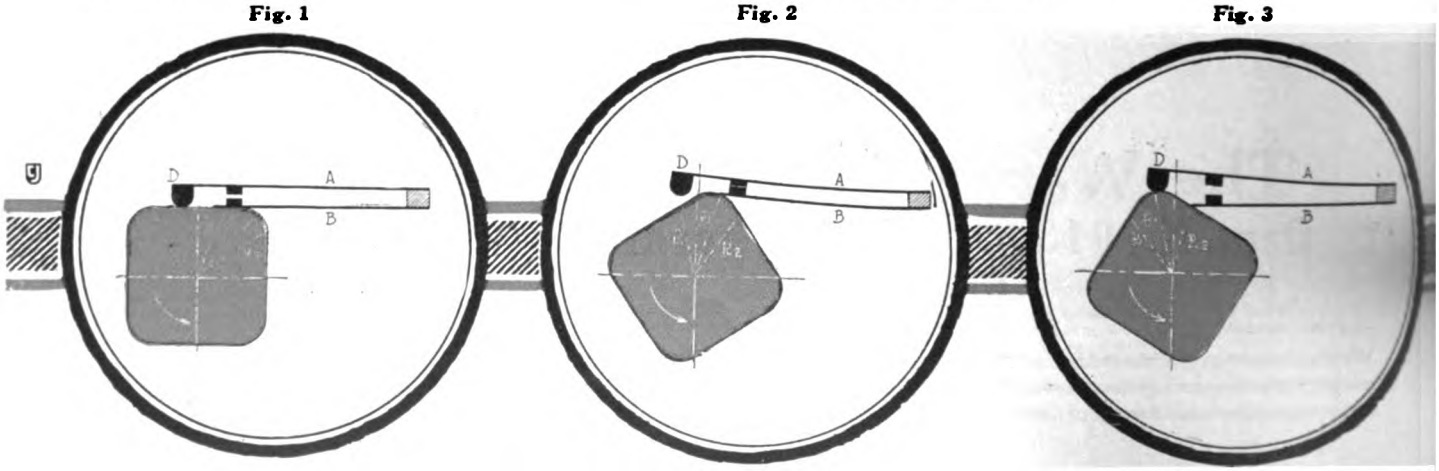
In this connection, it should be emphasized strongly that trips, hammers and light springs are done away with and a positive unfailing fool-proof action is provided.

Briefly,

The Action of the Breaker Mechanism

is this: As your breaking cam is revolved it first pushes two contacts together, as illustrated in the diagrams, and makes your current, and then in the same cycle the action of the cam breaks the current, the point being that the actions of making and breaking are not dependent at all upon the spring, but rather on the positive mechanical cam action.

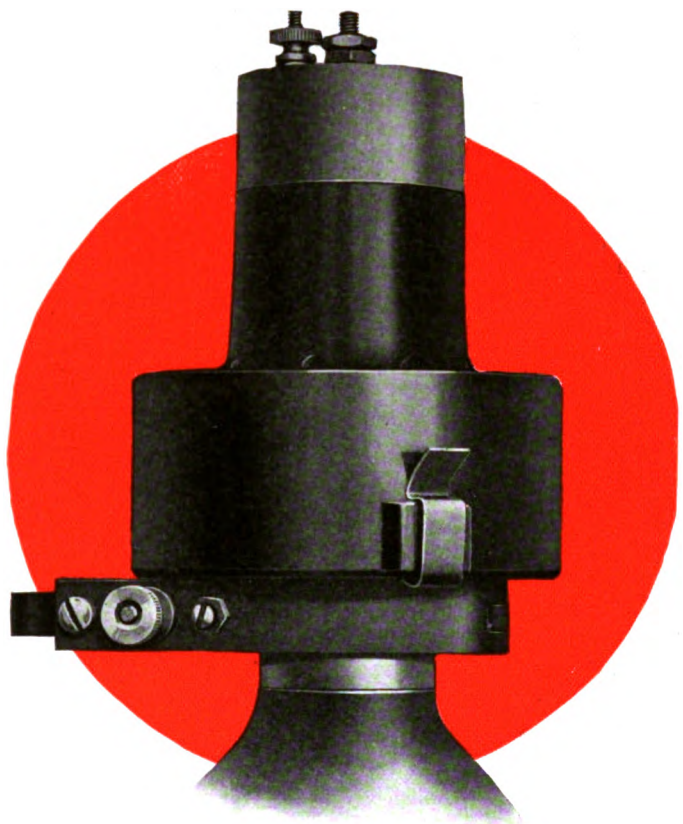
Referring to the diagrams again, it will be seen that in Fig. 2 the platinum point attached to lever "B," which is in contact with the platinum point attached to lever "A," is in firm contact, and that even if the spring "B" failed to drop back and break the connection as the cam continued to rotate to the position of Fig. 3, the shoulder of the cam would still raise the spring and platinum contact "A" away from spring and contact "B" so that, as stated above, the action of the mechanism is in no way dependent upon the spring action.



Owing to the short duration of the contact

The Current Consumption Is Exceedingly Small

and the duration of contact is ample to insure a complete building up of the current with consequent hot sparks at speeds greatly in excess of the highest engine demand.



Owing to the simplicity and positive action of the breaker mechanism both electrical and mechanical lags are practically eliminated and the synchronization of the timing is as nearly perfect as is humanly attainable.

Fig. 1 Fig. 2 Fig. 3

Digitized by Google

DISTRIBUTOR

SIMPLE, DURABLE, FOOL-PROOF

The whole ignition outfit is exceedingly compact and is made into a single unit, including the coil, so that only one external wire, aside from the spark plug leads, is used. This, of course, is the lead to the battery.

By its very nature the Pittsfield Ignition System assures the most efficient sort of spark, positively and continuously, without the slightest danger of failure, either mechanically or electrically.

PITTSFIELD SPARK COIL CO., PITTSFIELD, MASS.

Lexington "Minute Man" SIX $1185

BIG production facilities that merely produce greater quantities of inferior cars are meaningless. But big production facilities that serve the purpose of higher quality at reduced cost are of greatest significance to all car owners and all car dealers. It is in this way, and in this way only, that the automobile industry can make progress—that the owner can get more car per dollar—and that the car dealer can grow and prosper.

When we say that Lexington is one of the big factors in the industry today, we measure the importance of this by what *results* Lexington obtains from its bigness, and not alone because of the number of cars built. You know the advantages big factories have. You know the majority of the cars sold come from the few big factories and the small minority from the many little factories.

Would you consider 5000 expert skilled workmen and an aggregate floor space of scores of acres a big factory?

How many of the big factories you know of *are* this big?

Would you consider an automobile factory *big* that has *close to* it ten large factories devoted exclusively to manufacturing automobile parts?—as close as under one roof?—with aggregate capital of several million?

Do you realize that such a condition exists right here in Connersville? And that this concern is now offering you the chance of a lifetime?

You can appreciate the tremendous buying power of an organization like this—the tremendous saving in *every* part of the car and its manufacture.

And we have only modestly stated the magnitude of our case. We promise a genuine thrill—a big surprise—when we take you into our confidence and explain the powerful forces behind the Lexington car.

Here is a rare business opportunity that successful men will be quick to grasp—appreciating the advantage of marketing a motor car backed by unrivaled facilities, both financial and manufacturing.

The Lexington name—its reputation and its history—is 100 per cent good. But it has been lifted from the crowd of small factories and placed in the front ranks with the few biggest.

The new Lexington is a better car than ever before—but, due to the resources now behind it, it is *selling at a very modest price.*

Lexington-Continental Engine
Six Cylinders En Bloc
40 Horse Power
Moore Multiple Exhaust System
Five Passenger
Aisleway Between Front Seats
Left Drive
Center Control
Genuine Leather Upholstery
116″ Wheelbase
Convex Mud Guards
Over-Size Tires

Price includes full ventilating weather-stripped windshield, speedometer, ammeter, engine-driven tire pump, oil pressure gauge, motometer, electric horn, double-bulb head lamps, trouble lamp, and spare demountable rim.

It means sales like wildfire in every community where we get the right kind of dealer.

Are you that man?

If so, we have many good things to tell you. Just write, or wire, us at once. You will be obligated in no way. Or get on the train and come direct and we promise to "open your eyes" no matter how many big automobile factories you have seen.

And remember this—the Lexington dealer is going to be a bigger money-maker this year than ever before! Our sales methods are as up-to-the-minute as our manufacturing methods.

Rie Nie Products

The Most Complete, High-Grade Line of Chemical Accessories Made for the Trade

We Make Every Requisite You Will Ever Need, and Are Equipped to Make Any Special Item for You

The Rie Nie Line is especially desirable both to the Automobile Accessory Jobber and Dealer—First, because every article bears an excellent profit. Second, because each and every Rie Nie product is a rapid seller, giving both dealer and jobber a quick turn-over. Third, the high quality of every article results in a satisfied user, which stimulates confidence in the customer for the dealer, thus bringing him more business. Fourth, the name Rie Nie Products means completeness, simplification of bookkeeping. If there is any article the jobber wants, it is in the Rie Nie line. He does not diversify his orders, but simplifies his bookkeeping by ordering his requirements under one name and from one house.

4 Big Leaders

RIE-NIE
German Radiator Compound

Only one tablespoonful necessary to permanently repair any ordinary leak in any radiator or cooling system. *We guarantee it will not clog the system.* A demonstration has proven that a mend in a water jacket will stand 250 lbs. air pressure after three years' service. Prevents rust and scale formations.

Attractive tins, each...$ .75
Twelve in Carton..... 7.50
Dealer's discount 40%

RIE-NIE
Valve Grinding Compound

Always uniform. Not affected by climatic conditions. Cuts rapidly sticking to the valve seat, but does not grind grooves. Contains no glass or emery. For shop use, three grades—Coarse, Medium, Fine.

Duplex cans, two grades $ .25
Shop size, one grade.... .50
Dealer's discount 40%

RIE-NIE
Auto-Patch

Three ply and fabric. The best patch made. For immediate use without heat or tools. Self Vulcanizing. Layer of cured rubber between layers of raw rubber prevents any possibility of leakage. Mends largest blowout or smallest puncture. Easy to apply and durable.

Patch contains 36 square inches $.50. Dealer's discount 33⅓%.

RIE-NIE
All-In-One Dressing

A black dressing which softens, preserves and water-proofs leather, pantasote and mohair, renews rubber goods and refinishes metal surfaces. Does not form a crust and crack. Sun, heat and dampness do not affect it. Dries in 15 minutes.

GOODRICH AUTO SWITCH WITH YALE LOCK For Fords

Get This Display For Your Counter

It's Free

With every shipment of a dozen or more Goodrich Lockswitches we are now including an attractive display stand printed in colors, suitable for counter or window.

The stand measures 11 by 13¼ inches and is so designed that an actual Goodrich Lockswitch can be attached to it and operated to show just how the lock works and to demonstrate just how easily it is attached.

It Makes Sales

Many sales which you will never otherwise make can be put across by this counter display. Every Ford owner is interested in a safe, dependable lock which cannot be picked, bridged or removed. This counter demonstrator will attract attention and enable customers to make their own investigations, without any effort or attention on your part. Let customers sell themselves—you ring the cash register.

No Better Lock Made

We have reason to believe that the Goodrich Lockswitch with Yale Lock (formerly known as B. M. Ford Switchlock) is the most popular selling switchlock for Fords made.

A great many thousands are in use and each week our sales grow larger and larger.

The reason for the constantly increasing popularity of this Lockswitch must be attributed to its patented construction, which makes it utterly impossible for thief or joy rider to pick or remove it from the metal coil box to which it is attached.

If you want to handle the best lock—get the Goodrich. Buy from your regular jobber or direct. Send in your order now for your first dozen. The counter demonstrator will sell them for you at a handsome profit in double quick time.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

The Springfield Type

In our new line of closed bodies we include the Springfield Type.

That is a Sedan with seats for seven, and with all the closed-car luxuries. But the plate-glass windows disappear. Then the sides are entirely open, and you have a Touring Car.

This type of car, for all months and all weathers, is a coming type, we think. So is the Mitchell Cabriolet—a fine coupe which changes quickly to an open Roadster.

John W. Bate's Idea

The Mitchell bodies, like the Mitchell chassis, are directed by John W. Bate. They all represent his ideas of efficiency.

In the Mitchell closed bodies his idea is this: These are luxury models, bought by folks who look for elegance, and who know good taste.

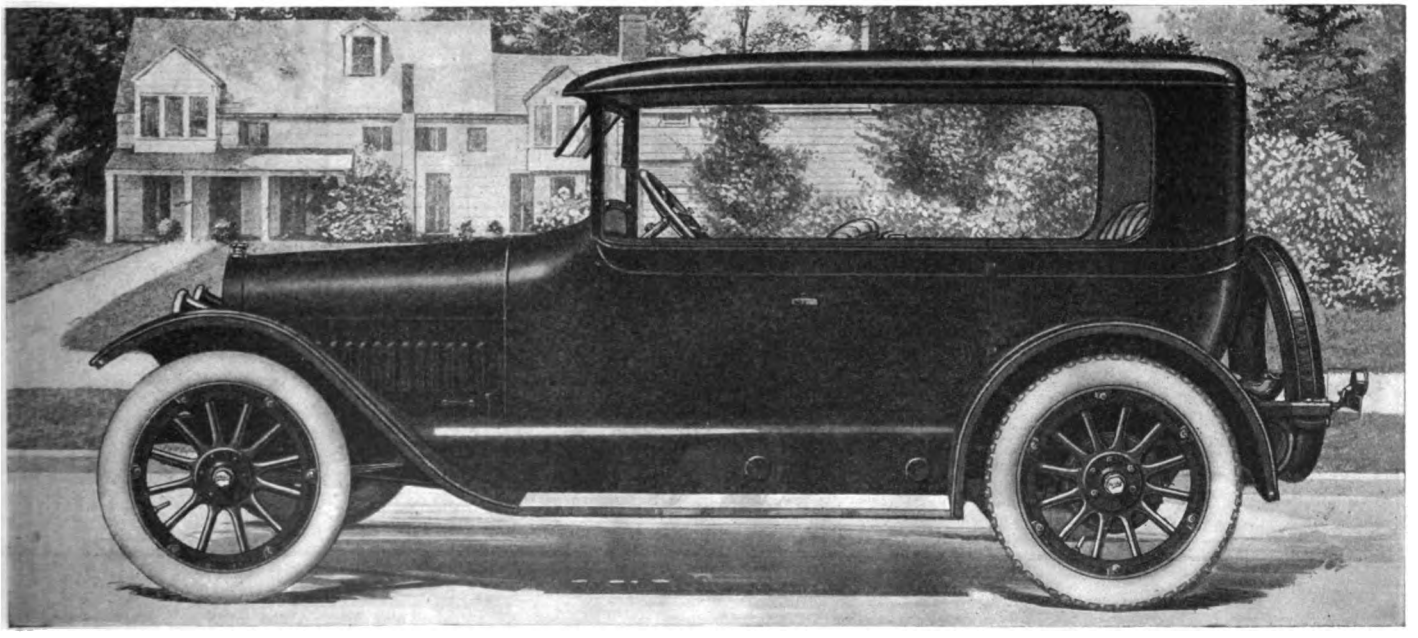
The Mitchell is as fine a car as these folks can buy. So the bodies should include all that daintiness demands.

In the Mitchell luxury models —the Limousine, Coupe, Sedan and Cabriolet — you will see that idea carried out to the limit.

Things Others Omit

The Mid-Year Mitchell has 26 extras, most of which all other cars omit. It has 73 new conceptions, all added within a year.

It has more drop forgings and steel stampings than any other car in the world.



The same liberal ideas are carried out in our closed cars. Nothing is skimped. No attractive idea is omitted. We carefully watch the costliest cars in the world to miss no dainty touches.

We afford all these at the Mitchell price because of our factory efficiency. John W. Bate, in this model plant, has cut factory costs 50 per cent. And the savings pay for the things that buyers want.

$1325 F. o. b. Racine
For 5-Passenger Touring Car or 3-Passenger Roadster
7-Passenger Touring Body, $35 Extra
High-speed economical Six—48 horsepower—127-inch wheelbase. Complete equipment, including 26 extra features. Also five types of closed bodies.

The more you know of the Mitchell the more you will want this car. The more you know of the policies behind it, the more you will applaud them.

PALMER SERVICE PM DEPENDABILITY MOORE TRUCKS

The Truck of Proven Quality

—is the Palmer-Moore.

It fills to a "T" the need that is at once the largest and most pressing in the truck field. It

MEETS THE BIG DEMAND FOR A TRUCK OF ONE TON OR LESS CAPACITY

The Palmer-Moore is built in 2 models—¾-ton and 1-ton—it sells at a very reasonable price considering the unusually high character of its design and assembled parts.

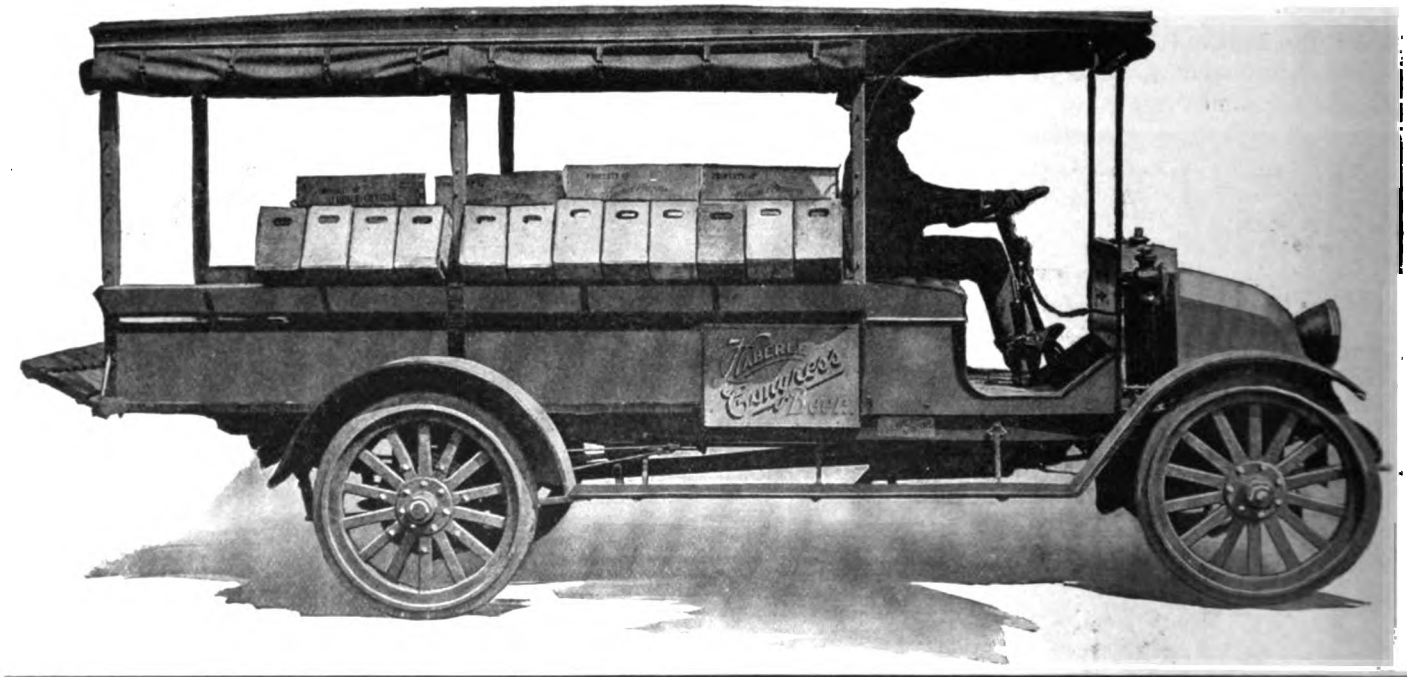
The Palmer-Moore, with its exclusive Rear Spring Suspension guarding the most fragile loads,

EXACTLY SOLVES THE MERCHANT'S DELIVERY PROBLEM

and gives the Dealer a selling opportunity not to be denied.

This applies not only to Truck Dealers (who are already reaping a rich harvest with this truck), but also to the Pleasure Car Dealers, who find the Palmer-Moore an ideal vehicle for their entrance into the truck field.

IF YOU DO NOT KNOW



just how *very* good the Truck Field looks these days write us for information that will open your eyes wide.

Our particular distributing proposition is most attractive.

¾-ton Model K Chassis.....$1150
1-ton Model M Chassis..... 1350

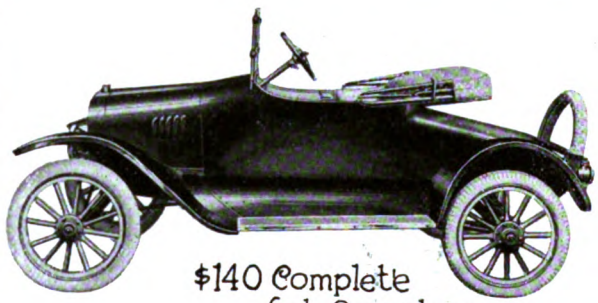
Amesbuilt 3-Passenger Cloverleaf Body For Ford Cars

The Body That Goes With the Year

Five years ago you did not need AMESBUILT Bodies for Ford cars—because in those days Ford bodies were in style. Today the basic lines are out of date—all but Ford mechanism has lost its individuality.

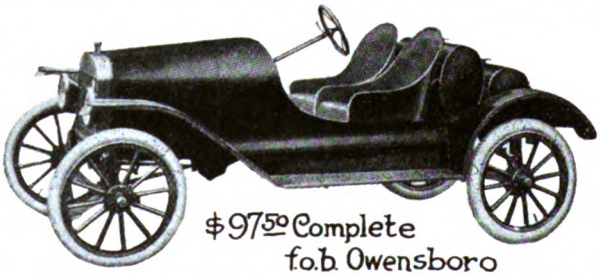
The AMESBUILT 3-Passenger Cloverleaf Body is the latest 1916 style throughout. Most up-to-date roadster body supplied for or with any car selling within several hundred dollars of the combined price of Ford mechanism plus AMESBUILT Body. It is big and roomy, standardly equipped with:

One-man silk mohair top and Jiffy curtains; **Cowl fitting, folding, rain vision,** ventilating windshield; aluminum bound running board; gasoline tank; streamline hood; bull nose radiator shell; crown fenders, and all necessary attachments. Deep Brewster green or glossy black.



The AMESBUILT Streamline Roadster Body (Cut No. 2) is big, comfortable, roomy. Plenty of leg room. Deep, quality upholstery, 20-gauge steel streamline construction. Complete, $140, f.o.b. Owensboro, Ky.

The AMESBUILT Lotus Racer Body (Cut No. 3) is built for speed. Belongs on the Ford car of every true sportsman motorist. Complete, $97.50, f.o.b. Owensboro, Ky.



Write for AMES list of commercial, roadster, touring and racing bodies for Ford cars **ready to put on at home.**

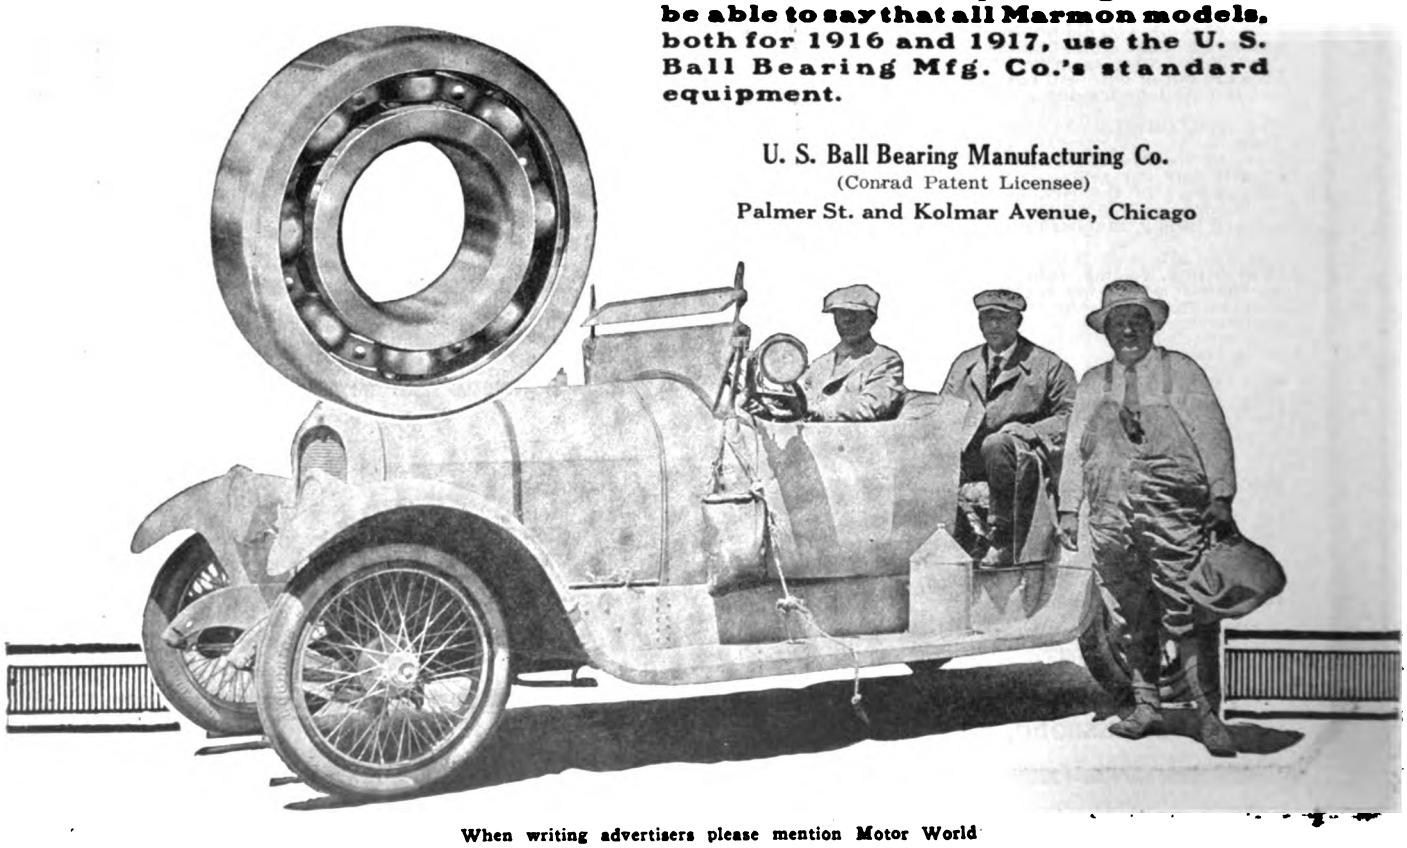
ALL MARMON CARS NOW EQUIPPED WITH

U. S.



BALL BEARINGS

Ball Bearings again played an important part in setting up a new speed and endurance record when a stock Marmon 34 established a new trans-continental record of 5 days 18 hours and 30 minutes from New York to San Francisco.

For this reason it is pleasing for us to be able to say that all Marmon models, both for 1916 and 1917, use the U. S. Ball Bearing Mfg. Co.'s standard equipment.

SHALER

Electric

Shop Vulcanizers

$60

Subject to Trade Discount

A Money Maker for Every Garage

Your garage, where every part of the automobile is repaired and cared for, is the logical place to mend tires. Thousands of ambitious garage owners realize it and are increasing their revenue as a result. They utilize the spare time of their help thereby reducing their overhead expense.

Every car you store, repair or adjust means eight prospective tire repair jobs because every car means eight tires per year on the average. These tires need daily attention because they blow out or puncture constantly.

Wrapped Tread Method

This simplifies tire repairing and makes every casing and tube repair perfect and permanent. It is the same method that is used and indorsed by the big tire makers. The Shaler is acknowledged to do better work than the high priced complicated machines.

It is so easy to repair tires the Shaler way that anybody who can clean or wash a car can operate a Shaler the first time and make perfect repairs. It heats from city electric light—uses very little current and requires little bench room.

Automatic Temperature Control

This, together with thermostat attachment, is an exclusive Shaler feature that controls and maintains the temperature of the Vulcanizer exactly at the right point for every type of repair without watching or regulating and without fear of overcuring or undercuring the tire.

Tubes can be repaired simultaneously with casings yet each unit is complete in itself and may be used independently. In casing repairs the Shaler retains the original pattern of any non-skid tread and makes the repair the strongest part of the tire.

Write Today for Complete Catalog

Send at once for the new Shaler Catalog of Shop Vulcanizers and investigate this extra avenue of profit for garages. You'll be surprised how easily and quickly you can add to your revenue. Steam heated vulcanizers furnished if you have no electric current. Mail your letter tonight.

THE government mail carrier, crossing the Syrian Desert from Bagdad to Damascus on his racing camel, wraps himself cocoon-wise in dozens of yards of linen, to act as shock absorber against the jouncing of his mount. And the camel has velvety padded hoofs and travels in the softest of sand.

Don't Let Your Ford Car Ride Like a Racing Camel

If it jolts and jars over roads that are rough, profit by the experience of the desert mail man, and wrap yourself up in the smooth running qualities of

THE ORIGINAL

W & C

Double Arm Shock Absorbers

that give the final touch of easy riding to rubber shod Fords, traveling on boulevard or country road.

W & C Shock Absorbers are cantilever springs, with action like cantilever suspension on high-priced cars. They transform sharp jerks and bounds into undulating swells that give your Ford the restful motion owners of heavy cars like to boast about.

Get acquainted with the resiliency of W & C Shock Absorbers by equipping your Ford today. No other shock absorber will give you the same results.

We grant exclusive territory to thoroughly high-grade dealers. Write or wire today.

FOSTER
OWL LIGHT

Why?

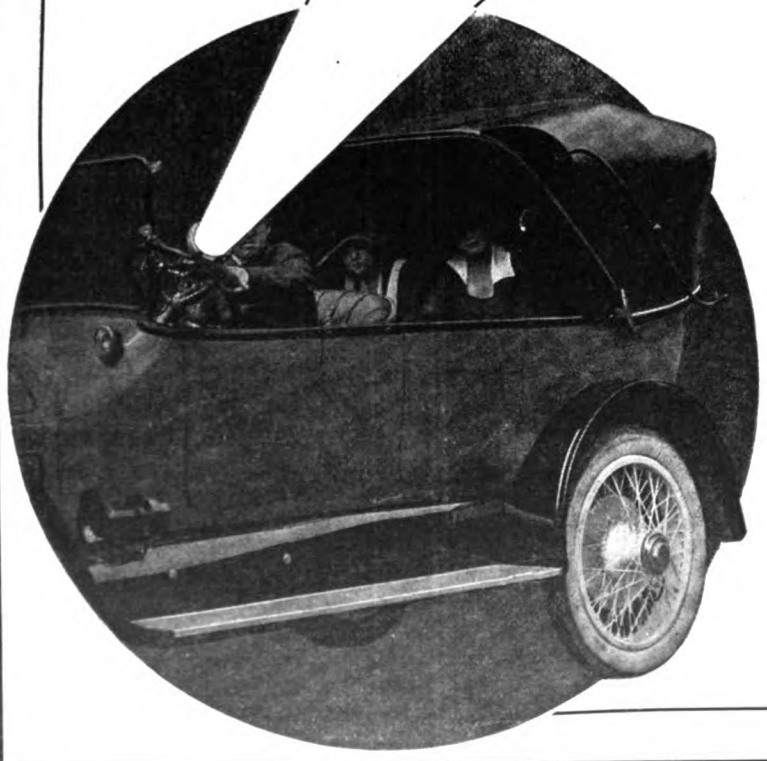
Why do the finest American and foreign cars use OWL Lights almost exclusively?

Why are more OWL Lights used on such cars than all other makes of searchlights combined?

Why are the personal cars of the country's society leaders OWL Lighted?

Why are the cars of America's most prominent business men OWL Equipped?

The answers to these questions immediately suggest themselves, the first time you *see* and *use* an OWL Light.



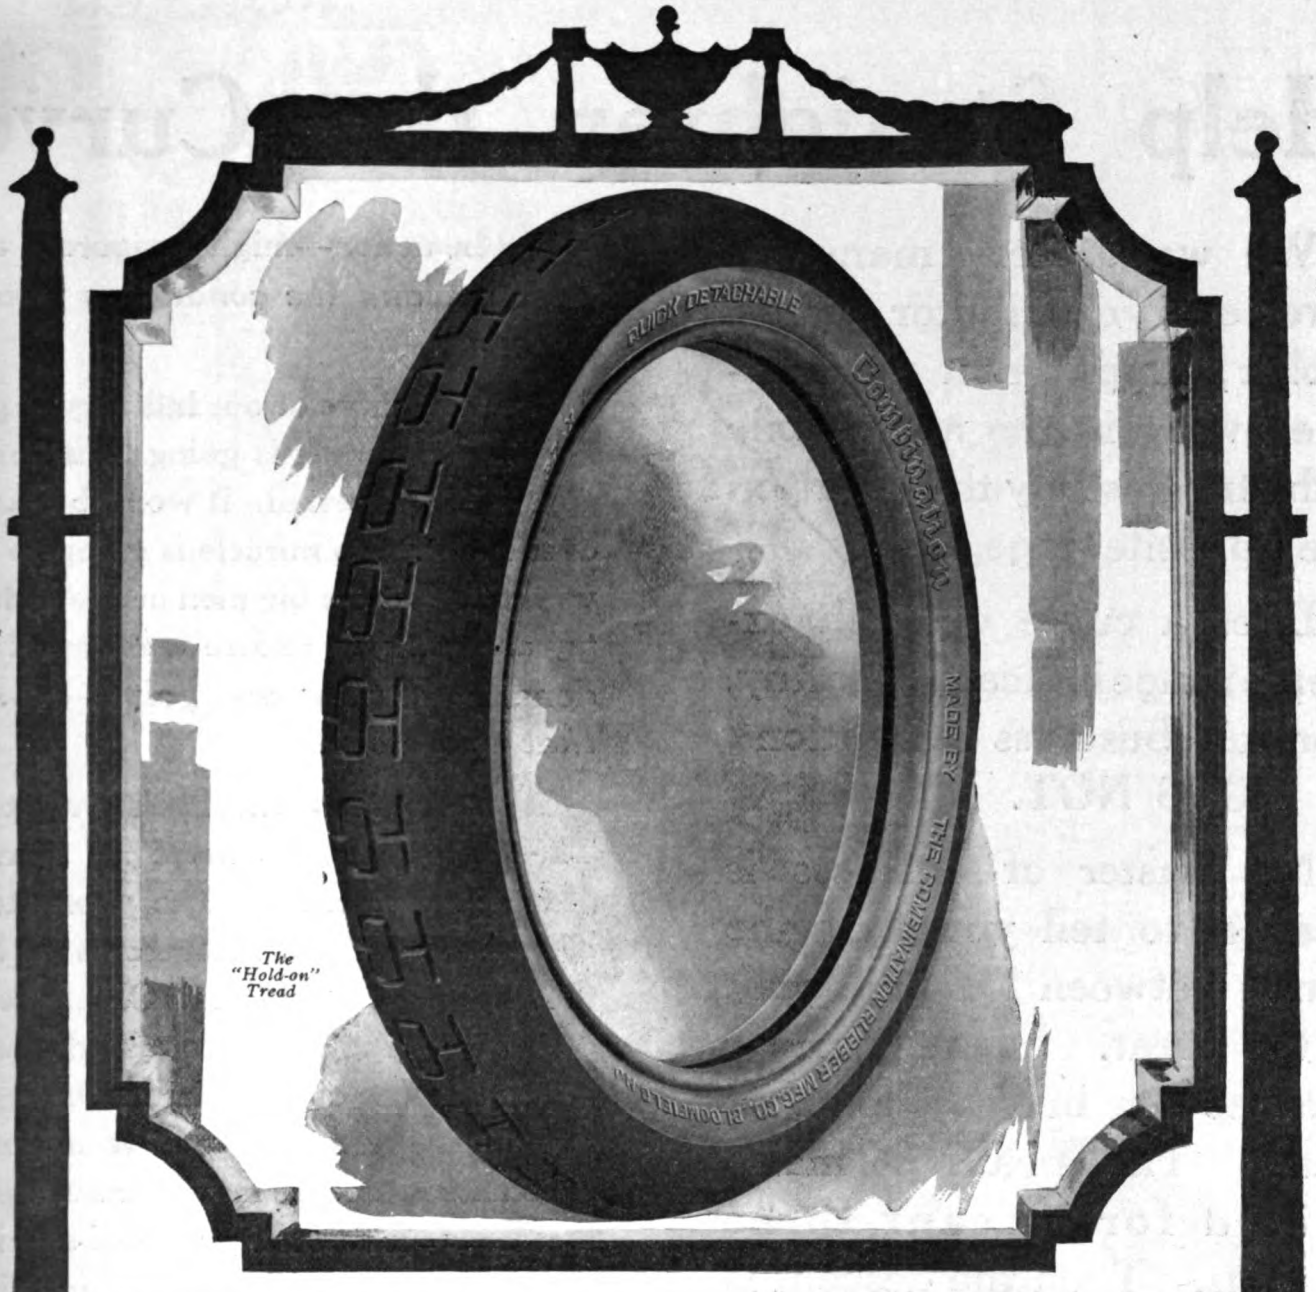
Our 10 day money-back trial gives you the opportunity to investigate the superior features of the OWL Light with no obligation on your part. Ask your dealer, or write direct for full information. Handsome descriptive booklet sent free on request.

NOW ONLY $5

BETTER THAN EVER

Sold on 10 Days' Trial—*Write*

Consider that the new OWL Light at the new price is in many respects a more powerful if not a more handsomely fitted searchlight than the $7.50 model which last year set the quality standard in the searchlight field.



The OWL Light adds to the appearance of any make of car. By means of its clean-cut, positive action swivel the OWL Light stays in any position you put it. This patented Foster Universal Swivel can be obtained on no other searchlight. Look for this exclusive feature—demand it.

In ordering, state make and model of car, also battery voltage.

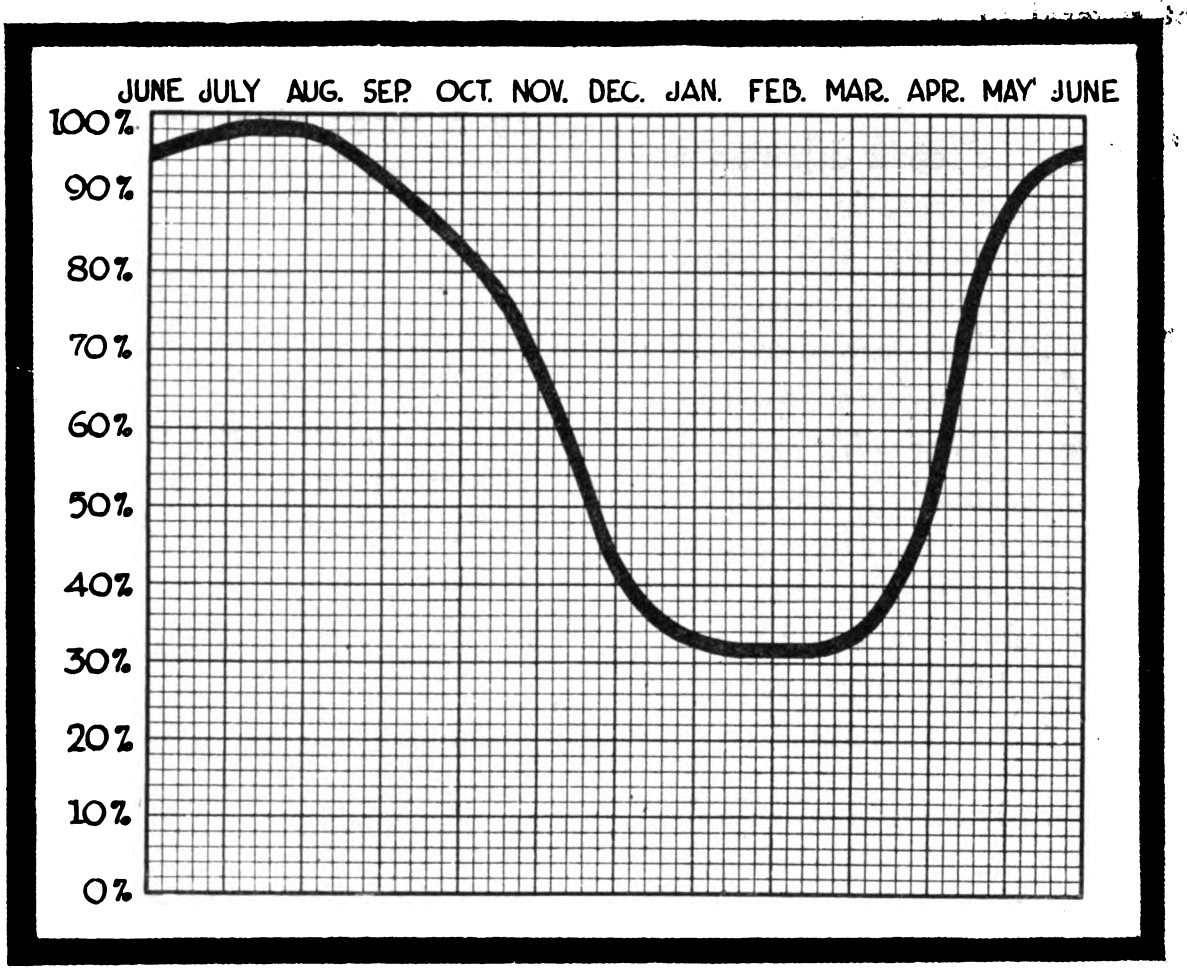
Help Straighten the Curve

We want every manufacturer, every distributor, dealer, jobber, supply man and garage owner in the automobile industry to study the chart on the opposite page.

Does a curve of such extreme range indicate a healthy, normal business condition? IT DOES NOT.

No master of business is needed to tell you that the range between low and peak is too great. In the summer months the business is at its peak. The peak is maintained for a scant three months. Then the descent is rapid—alarmingly rapid. It means disorganization and loss of efficiency in thousands of agencies, garages and supply stores throughout the United States—*and at the expense of the industry.*

If the business curve of the steel, the railway, or any of the other big industries, showed as grotesquely as does this automobile business curve there would be action—mighty vigorous action, too, *and the conditions would change.*



And the curve of our industry is going to change. It is going to become more nearly normal. It won't be done over night. No miracle is going to be worked. But the big men in this industry are going to realize what must be done, *and they are going to see that it is done.*

Winter business must be stimulated. The deficit months must be turned into profit months. The promotion of volume winter business is a big thought, and MOTOR WORLD welcomes the opportunity to take the lead in the building of a sentiment throughout the industry that will result in a substantial increase in winter business. It is a big step in our policy of serving the trade we represent in a practical and sound way.

We announce a WINTER BUSINESS NUMBER. This special issue will be but a start for the accomplishment of an important object in which every member of the trade (from the biggest manufacturer to the smallest dealer and garageman) is mightily interested.

The date upon which this issue is to appear will be October 11, 1916—just in advance of the winter season, so that

Digitized by Google

the initial stimulant to keep the wheels turning and all hands working can be taken up and carried forward by every member of the industry.

One of the big features in this issue will be a complete report of the National Association of Automobile Accessory Jobbers convention at St. Louis.

For months we have been planning this campaign for winter business. We have been in direct communication with leading manufacturers, jobbers, retailers, garage and repairshop owners, district managers, road salesmen, etc. Have obtained records of valuable winter business experience and success enjoyed by these men in different parts of the country.

And we are going to tell every other dealer in the country how he may keep going during the winter months—how he can keep his organization intact—how he may *turn deficit months into profit months.*

The dealer will be shown how to sell cars, both new and used, for winter or spring delivery—and how to get his money, or most of it, in the winter time. In this connection a very interesting presentation of successful financing methods will be made.

Dealers can get all the money they need to carry cars for spring delivery. How? We are going to tell them the

Digitized by Google

details of several successful financing plans.

How to keep the repair department fully organized and operating to profitable advantage during the winter months has been another serious problem for the dealer and garageman. It can be done. It is being done in ever so many instances. It is possible in nearly every instance. *How?* Thousands of dealers will get the answer in the forthcoming Winter Business Number. The answer is not only in favor of the repairshop owner, but it also promotes an advantage to the car owner.

Of course, a big section will be devoted to the successful selling of accessories in the winter season. The manner in which this important subject is to be handled will be of absorbing interest.

Manufacturers who use the advertising section of this issue are particularly requested to feature winter merchandise thoughts. For instance: a shock absorber is especially desirable when snow makes the streets and roads bumpy, but has anybody ever seen this point brought out in winter advertising by a shock absorber manufacturer? The point illustrates the general tone of all copy.

Not only will MOTOR WORLD'S big Winter Business Number show the dealer how to make more money during the winter, but it will be one more step in the mission of making him *a better merchant, a better business man.*

We ask every manufacturer, jobber and dealer in the country to continue their co-operation with our efforts so that the first annual Winter Business Number may score one hundred per cent success for the industry. Let's all work together. Let's straighten the business curve of the automobile industry.

If you have a message for the trade we invite you to use representative space in this issue. Fill in the coupon below and mail it now to:

Extraordinary Lift and Overhang

—has the Hilite Portable Floor Crane

With light steel superstructure and heavy cast iron base, its center of gravity is near the floor, preventing top-heaviness and giving it the high lift and deep overhang required in Garages and Shops. The only crane possessing these features, it is lighter, easier to handle and stronger than other cranes. Its trussed Cantilever (bridge type) construction is the strongest known. It is a necessity and a big labor saver in every garage.

No.	Cap.	Lift	Over-hang	Base high	Base wide	Wgt.	Price
66	1-ton	6 ft. 6 in.	38 in.	6 in.	30 in.	425	$64.00
76	1-ton	7 ft. 0 in.	33 in.	6 in.	30 in.	445	$66.00
80	2-ton	7 ft. 6 in.	36 in.	7¼ in.	36 in.	575	$82.00

THE Manley EQUIPMENT

Give Your Motor a Chance!

Practically all motors are good, but certainly you know that a good motor without good ignition cannot do itself justice.

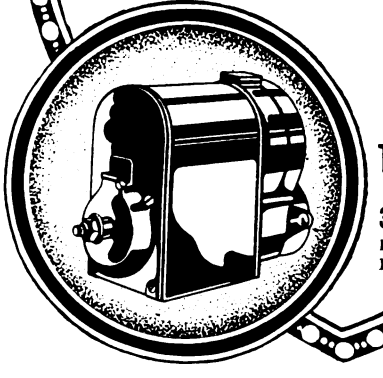
You may have noticed a hesitating miss or skip, or hard cranking, or slow pick-up, or just plain cussedness somewhere in the firing chamber.

It's the ignition! You're wasting gasolene and losing power, time, money and patience.

You certainly need an

EISEMANN MAGNETO

It will give you those full, deep-throated, never-failing explosions which mean power.



It will make your motor crank easier. It will give you that quick "pick-up" and "getaway" you so much desire.

And it will restore your confidence in your motor!

If you are not now Eisemann-equipped, you're missing something!

Write us about it.

Eisemann Magnetos are the most powerful made. They deliver a hot spark at all speeds. Durable, too—finest material and workmanship. Fully enclosed—waterproof, oilproof, dirtproof, trouble-proof!

Haywood's

Nationally Advertised

Tire Repair and Vulcanizing Service

In these days of high tire prices, the tire repair business is getting bigger and better than ever, as motorists learn the method of true tire economy. Why not cash in on this opportunity? Put in a Haywood Tire Repair Plant. Link up with a nationally advertised tire repair service. Six years of Haywood's advertising has standardized the Haywood method.

The Sign of the Man and Machine

—is the connecting link between the tire repair man and the automobile owner. It chains the established trade of hundreds of customers to your business. It connects your shop with a national tire repair service—a standardized service—a service that motorists know absolutely to be economical, practical and efficient.

The Haywood System

—is scientific—a true system of conservation of tires—a system that saves motorists thousands of dollars on tire bills. It means repairs that are lasting—vulcanizing that holds—repairs that are solid as the original tire itself, insurance to motorists of no regrets on the road.

Haywood's Tire Repairing and Vulcanizing Plants

The Haywood Plants are complete, all in one unit—are easily operated—no experience necessary. Here is your opportunity to make big money—to add hundreds of dollars in profits a year to your business. Occupies only a small part of your shop—can stand right out in the open where your customers can see it—a constant reminder to keep their tires repaired. Your shop equipped with a Haywood Plant is the motorist's logical haven for tire repairing. It completes your service—a service that customers like—a service that brings and holds business at big net profits.

Write for New Catalog

Use a letter, or post card or simply send the coupon below. This brings the big book of facts—tells all about tires and how to repair them—shows outfits in use—gives proof of successes—shows how we co-operate with plenty of advertising and plenty of help—how you link up with a national service. Book gives complete details. Write today. Don't delay.

Needed by over 600,000 FORD OWNERS

Every owner of an electrically-lighted Ford car (1915-16 Model) wants a VAN SICKLEN Concentrator the minute he realizes it will ensure him a safe, certain, brilliant light at lowest engine speeds.

The tremendous demand for the Concentrator is shown by the fact that over 20,000 of these little devices have been sold in less than 2 months.

VAN SICKLEN AUTOMATIC HEAD LIGHT CONCENTRATOR FOR FORD CARS

At all speeds below 15 m.p.h. the VAN SICKLEN Concentrator automatically disconnects the right headlight, shunting double current into the left headlight. At 10 m.p.h., for instance, the left headlight is burning as brightly as it ordinarily would at 20 m.p.h. Above 15 m.p.h. the regular Ford two-light system automatically reasserts itself.

$2

Price, complete, $2, ready to put right on. Installed under hood, on dash. Compact, ornamental. Full instructions with each order. Guaranteed not to injure magneto nor bulb. Absolutely automatic.

50% of the cars in this country need and can be sold a Concentrator. Some desirable territory open to thoroughly high-grade dealers. Immediate action necessary. Wire or write today for interesting proposition.

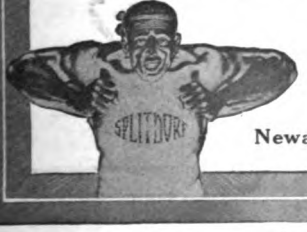
NOTICE!



Splitdorf Electrical Co. is the owner of numerous patents covering the DIXIE Magneto, the numbers and dates of same being stamped on every machine leaving our factories. These patents together with the known financial responsibility of Splitdorf Electrical Co. fully protect every user of DIXIE Magnetos.

It has been brought to our attention that certain persons are notifying our customers that DIXIE Magnetos infringe a patent issued in 1903. Splidorf Electrical Co. is fully aware of said patent, which in the opinion of the Splitdorf Electrical Co.'s experts and attorneys does not relate in the remotest degree to the DIXIE Magneto, and in their opinion is invalid.

The patent has lain dormant for over 12 years, and is only resurrected now after the remarkable success of the DIXIE. The owners of the said patent, so far as we can learn, are not now or never have manufactured magnetos and seem to be writing DIXIE users in the hope of forcing Splitdorf Electrical Co. to recognize their claim. The address of Splitdorf Electrical Co. is well known to these people and if they honestly believe their patent is infringed they should immediately sue Splitdorf Electrical Co.

Splitdorf Electrical Co. wish to notify their customers to ignore notice referred to, and to promptly forward same to them so they may take proper steps to protect their customers from further annoyance.

We respect the valid patents of others, operate under our own valid patents, and fully guarantee our product free from all infringement.

ELECTRICAL CO.
Newark New Jersey

HI-LO

JACK

IT has long been recognized by leading mechanical experts that the toggle joint is the simplest method of applying power.

Here is a toggle joint jack that gets under the lowest axle and GROWS STRONGER THE HIGHER IT LIFTS.

It will start lifting at 5 inches and raise its load to a height of 17 to 19 inches.

Each part of this jack is subjected to rigid test at Worcester Polytechnic Institute, and carries our guarantee.

Specially constructed handle keeps applied lifting power always central with travel of jack, assuring even and easy lift at all times.

Auto Jacks—Truck Jacks — Construction Jacks
Prices gladly given on inquiry.

A New, Complete Book for Every Ford Owner, Dealer, Salesman and Repairman

The Model T Ford Car

Its Construction, Operation and Repair

By VICTOR W. PAGE

Member of the Society of Automobile Engineers
Author of "The Modern Gasoline Automobile," etc.

300 (5x7) pages. Over 100 specially made engravings and two large folding plates

Price $1.00

This is the MOST COMPLETE and PRACTICAL instruction book ever published on the FORD CAR. A high grade cloth bound book printed on the best paper, illustrated by specially made drawings and photographs. All parts of the Ford Model T Car are described and illustrated, in a comprehensive manner—nothing is left for the reader to guess at. The construction is fully treated and OPERATING PRINCIPLE MADE CLEAR TO EVERYONE. Complete instructions for driving and repairing are given. Every detail is treated in a non-technical yet thorough manner.

This book is written specially for FORD DRIVERS and OWNERS, by a recognized automobile engineering authority and an expert on the FORD, who has driven and repaired Ford Cars for a number of years. He writes for the average man in a practical way from actual knowledge. All parts of the Ford Model T Car are described. ALL REPAIR PROCESSES ILLUSTRATED AND FULLY EXPLAINED.

Written so all can understand. No theory, no guess work

Authoritative—Unbiased—Instructive—Complete

FORD CAR WRENCHES

NO. 78 SET
Stock and Display Board Special Wrenches Ford Car.

WALDEN WORCESTER WRENCHES

Sell Wrenches the New Way

The Walden Worcester Wrench sales plan not only stimulates wrench sales but cuts the jobber's stock in half. It eliminates 75 per cent. of the usual investment and keeps the stock moving.

It affords the dealer or jobber a complete line and gives the customer the greatest variety of sizes and combinations to select from. It supplies every requirement of the car owners, garage, repair or machine shop man.

This Display Board One Example

The Walden Worcester Wrench Company supplies its dealers with this display board containing wrenches that will fit any nut or bolt on a Ford car and to reach the work from any position.

No Other Wrenches Are Needed

They will take care of any job on a Ford to the satisfaction of the owner or the professional repairman. It is not necessary to stock other makes of different grades and prices when Walden Worcester Guaranteed Ford wrenches are sold by dealers.

The display board is a silent, ever-working salesman, an ornament in any store. It will save the clerk's time and can be placed anywhere.

We have a special storage cabinet for other lines of Walden Worcester Wrenches. It is given free to live dealers and it is highly valued. All of our different display boards for special wrenches make sale wonders in any place of business.

Our new wrench catalogue with revised lists of jobbers' and dealers' discounts is now ready. The complete lines are shown and information is given that will be valued by every buying and selling interest in the trade.

WALDEN WORCESTER WRENCHES

WALDEN WORCESTER WRENCHES are guaranteed; they are made by specialists. Our trade mark protects our goods and assures satisfaction. It will bring the wrench trade to your store.

McQUAY-NORRIS

LEAK-PROOF PISTON RINGS

LEAK-PROOF is the trade mark name of a piston ring.

LEAK-PROOF is not a descriptive name which can be applied to any make of piston ring. LEAK-PROOF belongs to this particular piston ring just as "Uneeda," "Gold Dust" or "Ivory" belongs to a particular biscuit, washing powder or soap.

The success of the LEAK-PROOF Piston Ring has bred many imitations which are sold as "leak proof," the name being used as a description only. Sometimes it's a case of deliberate substitution; sometimes it's simply ignorance.

Wherever this has happened the result has been the same—disappointment, dissatisfaction and money wasted on the part of the dealer or owner. For no other make of piston ring, whatever it is called, can give the same service as the true LEAK-PROOF

BE CAREFUL. When you order LEAK-PROOF Piston Rings be sure you get the Genuine, made by the McQuay-Norris Manufacturing Co., of St. Louis, the inventors and owners. Look for the name LEAK-PROOF stamped on every ring. Insist on seeing it. Examine the ring; make sure it is made of two sections equal in size, fitting around one another angle to angle. That's the exclusive LEAK-PROOF design—vitally necessary to true LEAK-PROOF service.

Send for FREE booklet—"To Have and to Hold Power"—the standard handbook on gas engine compression. It tells what LEAK-PROOF efficiency means. Write Dept. K.

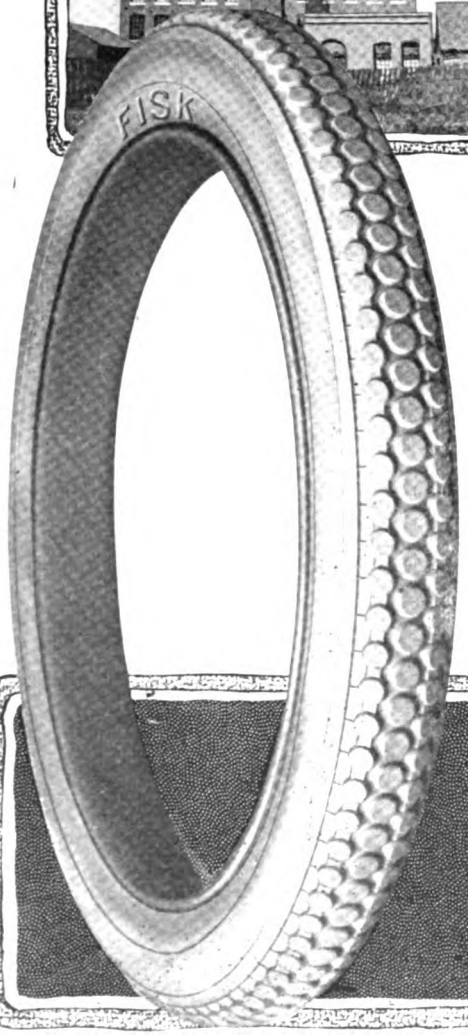
Today 1916

Yesterday 1899

An Illustrated Story of Remarkable Progress

Yesterday In 1899 the factory of The Fisk Rubber Company consisted of a single building, three stories high, on a plot 100 x 50. There was an ell 50 x 75, making a total floor space of 18,750 square feet.



Today To keep pace with the constantly increasing demand for Fisk Tires, factory after factory was added. Today the Fisk Plant is comprised of "29 acres of floor space devoted solely to the manufacture of pneumatic tires," and more than 125 Direct Service Branches in the principal cities throughout the United States. In this group of buildings is one of the largest structures in the world used for manufacturing purposes. It is of five stories and basement, each floor containing 65,124 square feet or a total floor area in this building alone of 390,744 square feet.

One small room, tucked away in a corner of the original factory, served as the office headquarters back in '99. Today the administration building of the company is of seven stories and is devoted exclusively to the offices for the various departments, the dining-rooms, rest rooms, emergency hospital, and so on.

The steady and remarkable growth of the Fisk plant is one of the most fascinating romances of modern business. From the modest beginning in 1899 to the monster plant of today is a long step. Yet it is only a natural consequence—and a fitting monument to an honest manufacturing idea. From the very beginning there has been only one policy—to give the buyer of a Fisk Tire his full money's worth. That that policy has been a success is evidenced by the growth of the plant and the ever-increasing demand for Fisk Tires.

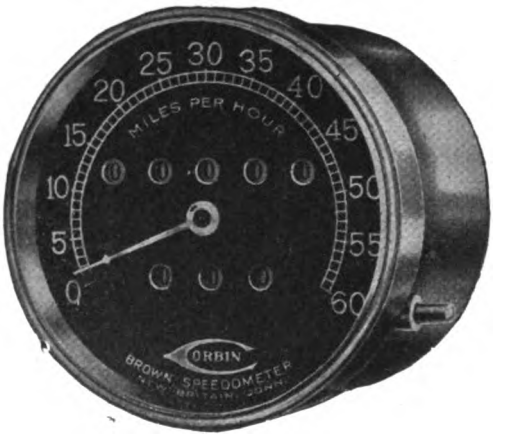
It's Good Enough For Uncle Sam

More striking or conclusive evidence of the superiority of the Corbin-Brown Speedometer could not be advanced than the fact that in the placing of a recent order for 63 motorcycles the United States Government specifically stated that all machines be equipped with this instrument or equal. The order has been placed with us.



The CORBIN-BROWN SPEEDOMETER needs no stronger endorsement than this.

If it is efficient enough to handle the work cut out for it by the War Department it is efficient enough to warrant its being equipped to your automobile. Do this at once.

Investigate for yourself.

STREET MEETINGS were held in every little town into which the caravan of boosters entered. The scene above is typical

Milwaukee Dealers Boost Wisconsin State Fair

Tradesmen of Wisconsin's biggest city make a tour of the state in motor cars and preach the Gospel of State Fair throughout a territory of nearly a million people. The motor car show is a big state fair feature. It will be held September 11-16.

By Ray W. Sherman

MILWAUKEE, Sept. 2.—The motor car dealers of Milwaukee to-day concluded their second annual state-fair-boosting tour, which is one of the greatest pieces of dealer enterprise in the United States.

The object of the tour is to put the state fair—September 11 to 16—on the map. Incidentally the object is to make the motor car show at the fair a success.

But since the show is but a part of the fair and since the boosting concerns the fair and not the show the tour is ratable only as civic enterprise.

The tour lasted six days. There were 37 cars and between 150 and 160 members of the motor trade. They left this city at 8.20 last Monday morning and between then and this afternoon covered 555 miles, not including side tours. They visited 44 cities, villages and hamlets, with a population of a quarter million. In each one of these they preached the gospel of state fair.

THEY PARADED, THEY SANG, THEY BRASS-BANDED. THEY SCATTERED LITERATURE AND THEY YELLED AT EVERY FARMER THEY SAW ALONG THE ROAD AND VOCIFEROUSLY INVITED HIM TO COME TO THE STATE FAIR.

That they made an impression on the State of Wisconsin cannot be denied. Their coming was expected, the boosters were warmly greeted and their departures were enthusiastic.

MAYOR D. W. HOAN of Milwaukee was the official speaker for the boosters through most of the tour

Tour Is Spectacular

Much of the impression is due to the spectacular manner in which the tour was staged. Each booster wore a regulation gray duster, white hat with blue band, and carried a bamboo cane. Each car was numbered and labeled. At the front rode a little German band. The long line of cars—carrying no women, and with every driver a skilled automobile man—shot across the country at from 30 to 50 miles an hour.

A procession like that can't go across any state and not be noticed.

The Tour Well Planned

Also, the tour was well arranged for beforehand. Pathfinding had been done, the country newspapers were enlisted, and the event received much valuable publicity before and after.

The chief spokesman for the boosters during most of the run was no less a personage than Mayor D. W. Hoan of Milwaukee, whose mere presence lent prestige to the enterprise. He spoke at every stop, and after Hoan left the boosting was taken up by State Commissioner of Agriculture C. P. Norgord and F. A. Cannon of the Wisconsin Good Roads Association.

How They Did It

The program in each town was much the same. The cars would slow down in the outskirts and close up the gaps. They would then shoot into the town and park in a square or main street. The

Digitized by Google

Seven Views of the Milwaukee Booster Tour

1—*Captain "Heinie" Osmond and the little "Cherman Bandt" led the parades at all the stops*

2—*In Lake Mills the crowd that listened to Mayor Hoan was mostly boosters; the townsfolks were shy*

3—*After the parade and speeches the boosters flocked back to their cars and were on their way*

4—*In Johnson Creek the boosters "beat it" hurriedly for the far end of the parked row to get free buttermilk and cheese*

5—*The parade was quite an exhibition as it swung down through the main square in Ripon*

6—*Every time the boosters entered a town the population lined up upon the curb to watch the spectacle.*

7—*Some of the little towns had public bandstands and these were quickly taken advantage of by the speakers*

little German band would start down in front of the line of cars, with the boosters falling into line all along.

Then the Mayor

Then would follow a parade of the downtown section, after which the boosters would Indian-file into a circle around the band and a professional quartet would mount a car and sing. The crowd —oftentimes shy at first—generally gathered to hear the songs.

About this time the Mayor or some other principal personage in the town would mount a tonneau and welcome the boosters, ending with an introduction of the Mayor of Milwaukee or Commissioner of Agriculture. Next came the boosting speeches, and in conclusion the quartet often sang again. Then, with a noisy, hand-waving farewell the boosters piled into their cars, fell into line with precision, and dashed out of town and off across the country to repeat the program from 8 to 30 miles farther on.

When the cavalcade made a night stop it literally took possession of the hotels,

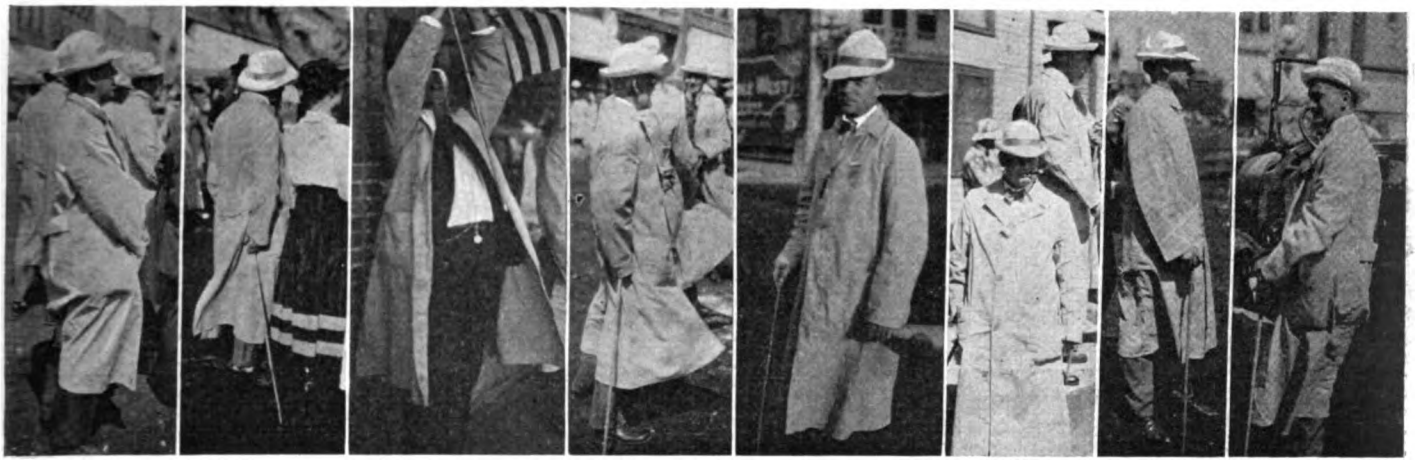
for generally no one hotel could care for the crowd. With the grime washed off —in part—the boosters sauntered about in the evening and the populace had its answer to the oft-repeated question, "Have the boosters come yet?"

Interested Though Quiet

The question, really, was often asked. The proprietor of a little haberdashery in Markesan said the boosters' tour was one of the events of the month. Country people seldom are effervescent, but they are interested in things that concern them, and this haberdasher said the tour was a topic of conversation.

The Markesan haberdasher said that out of that little town of 900 about 300 people would journey to Milwaukee to the fair. And Markesan is not unlike scores of other rural centers.

The station agent in a little wayside stop below Sturgeon Bay, in northern Wisconsin, through which the tour did not pass, chatted with the train conductor about the arrival of the boosters in Sturgeon Bay. The station agent said he "guessed he'd have to go up to see them." If a man will go to the next town or so to see the boosters, doesn't he seem interested enough to go to the fair?



Appeal to the Farmer

The whole appeal throughout the tour was on a rural basis. It was of the educational and development value of the fair. The Mayor and other speakers told

how the offering of prizes and the exhibit of products led to the development of stock and produce, and they said each fair was of wonderful value from an instructive standpoint, with its best and new in everything from stock and produce to farm and household machinery. They also said the fair was FOR Wisconsin, but that it couldn't be a success if it didn't have the support OF Wisconsin's people.

Last Year's Results

The booster tour does help the fair. That was demonstrated by the first tour, held last year. A normal increase in attendance is 5 to 10 per cent, but after the first booster tour the gain in attendance was 20 per cent.

Also, the motor car show at the state fair has become a big drawing card. It is a bigger show than Milwaukee's midwinter exhibition. Last year 840 dealers registered at the state fair show, and the

Mostly Comedy

1—The noisy man in the Ripon band. 2, 3 and 4—N. E. Osmond, Osmond-Vogel Motor Car Co., Milwaukee, used to be in burlesque and he hasn't forgotten it all yet. 5—Ed Otte was a cop comedian and the more than six feet of Case Sanger made a fine Uncle Sam. They led the parades. 6—He's FOR the fair. 7—F. J. Chlupp, the only "female" in the tour, was much in love with George Niegelsen. 8—Chlupp "swiped" that bottle in Ripon. 9—This happened "anywhere in Wisconsin." 10—Why bother with a cup. 11—The tour boasted a professional quartet, W. Grisham, C. Grisham, Ben J. Ealy and W. Kempen. 12—The Overland outfit had an organ in the tonneau. 13—This happened everywhere late in the day. 14—The constibule by heck!

winter show registration is only about 900.

At the state fair show an admission of 10 cents is charged to the exhibit to keep out the disinterested, and of the 124,000 who entered the fair's gates last year 71,000 visited the motor car show.

Biggest Show of Year

Last year eighty-two factories were represented at the fair show; at the midwinter show there were but seventy-two.

The show receipts on Milwaukee Day at the fair are donated to good roads. They should be from $3,000 to $5,000 this year.

And the motor car men help swell the attendance by other means than the tour. Tickets are sent to business men to be purchased by corporations and given to their employees. The movement proved popular last year and will be repeated.

Idea Proved Popular

The tour idea has taken hold with the dealers. Last year but seventeen cars were in line; this year there were thirty-seven. It also has taken hold in the country. Last year, on the first tour, a route was laid out as an experiment. This year it was altered to permit boosting in a new section, and there were twenty-five towns which wanted the boosters but which couldn't get them because the schedule was full.

Boosters Well Received

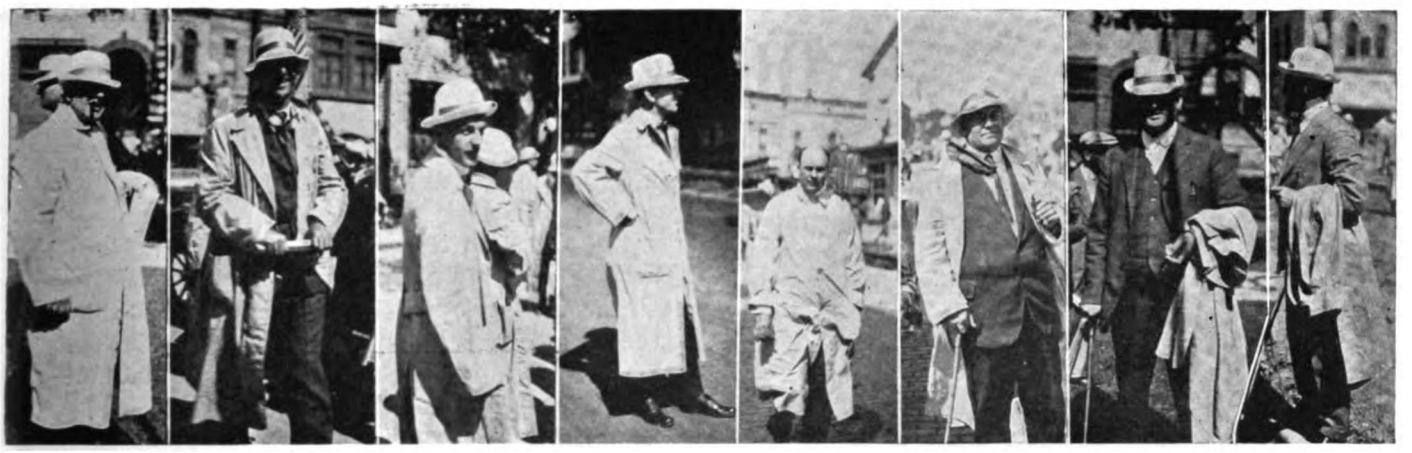
The receptions along the route were gratifying. Sometimes the shy country population didn't say much, although it listened, but often lunches were served. In Johnson Creek buttermilk and Danish cheese were dispensed. In Jefferson were two tubs of beer. In Luxemberg the town gave away a dry, non-alcoholic champagne, which it manufactures, and the mayor gave away a big, red paper key to the village.

The boosters bought out a bologna shop in another little burg, and generally the commercial associations in the larger cities welcomed the boosters.

May Become Trade-Promotion Tour

Bart J. Ruddle, assistant secretary of the dealers' association, says he believes the event may become a Milwaukee trade-promotion tour, not unlike those promoted by the Twin Cities in the Northwest.

The motor car dealers, he states, get good results in a business way from the tour, although it is not held for that purpose. Often retail sales are made en route, and generally there is an after-business that is worth while.



The Tour Management

The tour is managed by a committee of the Milwaukee Automobile Dealers, Inc. Edgar F. Sanger is chairman, and much of the detail is handled by Bart J. Ruddle, the association's assistant secretary. Work on the plan is begun 2 months before the run is held.

The Route of the Tour

The tour did not cover the whole State of Wisconsin. The boosters concentrated in the section from which greatest results might be expected. The route led west to Madison, 105 miles, and then ran northwest to Sturgeon Bay, 247 miles, and south to Milwaukee. This took in the more thickly populated southeastern half of the state and that which is tributary to Milwaukee. The northwestern corner of the state is, from a motor car standpoint, hitched onto the Twin Cities, and it is in many respects unattached to Milwaukee. The bulk of the state fair

The Leedle Cherman Bandt

The little German band was successful as an attention-getter. It played all the time and never seemed to tire. It was abducted en route a year ago, and when Bart J. Ruddle, assistant secretary of the association, wanted the band this year he couldn't find it. So he sent 300 letters, general delivery, to 300 small towns, addressed to Otto Schulz, the band leader, and one of these letters located Otto in Sioux City, Iowa. Otto came.

Otto was a German officer and he accepts orders from only one man in the tour. Last year it was George W. Browne. "What time shall we show up in the morning?" asked Otto one evening. "Five o'clock!" said Browne, "and play 'Tipperary' in the lobby until I come down."

And Otto did. And clerks, guests, bellhops or police couldn't stop him. Said Otto: "Dose are my orders."

Planned to Meet Strike

BOSTON, Sept. 1—In anticipation of the railroad strike, Boston dealers, particularly those handling large cars and trucks, were besieged with inquiries relative to what could be done in the way of getting vehicles if the railroads were tied up. Men representing big corporations hastened to the dealers to get some idea of vehicles available. From Worcester, Manchester, Providence, Lowell, Lawrence, Portland and elsewhere that have big manufacturing plants came telephone inquiries and personal visits to get options on machines.

The truck dealers were asked to hold certain types in readiness for delivery in case of a strike. Indications pointed that it would be impossible to get a motor truck, new or used, or a motor car in Boston 1 week after a strike was declared.

Men were giving options on the better lines of vehicles. These were a 10 per cent deposit, to be forfeited in case they were not taken within a few days after Labor Day. Big dealers were taking care of their regular customers, who had bought from them for years, by accepting options but not demanding cash deposits.

Speculators entered the market and tried to get options on some of the big trucks throughout the city. They offered blanket options on everything. One of the big dealers nearly fell into the trap, until he made an investigation of who was behind the deal. He then realized that when his vehicles were turned over to the speculator the latter would sell to some of the dealer's customers the trucks secured, and, of course, at an increased cost, so that it would be a bad bargain, for in future the dealer would have a hard time retaining such customers, who would feel that they had been victimized.

Gasoline Down Another Cent

NEW YORK, Sept. 5—Gasoline prices in this city, Long Island and Connecticut have been lowered 1 cent a gallon wholesale to 22 cents by the Standard Oil Co. Texas gasoline sells at 23 cents wholesale. Quotations for other localities are as yet unchanged, though prices are expected to drop on account of the large expansion in gasoline-manufacturing capacity, the improvement in refining methods enabling a larger gasoline yield and a corresponding increase in the production of crude oil.

SOME JOKE!

COLUMBUS, Sept. 1—Some jokester played a trick on the gasoline-buying public in Columbus and central Ohio, when he called up local papers and informed them that gasoline had taken a drop from 22 to 19 cents per gallon. All of the papers published the alleged information, with the result that gasoline distributers and dealers were busy the few following days explaining that the publication was a mistake. Up to Sept. 1 the price of gasoline in Columbus remained at 22 cents.

1,000 Do

TO-DAY 1,000 garages and dealers are using Motor World's Simplified System of Accounting. There are 36,000 garages and dealers in the United States. This means that to date Motor World system is used by one out of every 36 dealers and garages.

This is an unprecedented adoption of a new system in 9 months. No other standardized system has been adopted in numbers to compare with this.

The Motor World Simplified System of Accounting is in use in every state in the United States and in many foreign countries.

Systems are in use in Ireland, Belgium, France, Scotland and Manila. Yesterday came an order from New Zealand.

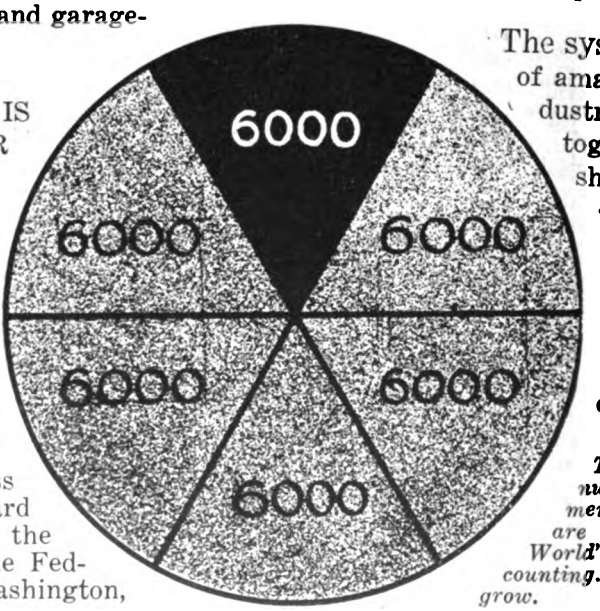
Motor World's Standardized System of Accounting has the distinction of being used in greater numbers than any other system of accounting designed for a special class of retailers.

Five thousand complete instruction books covering the Motor World system have been secured by dealers and garagemen.

Add to this the 1000 *dealers using the system in its entirety and we have* 6000 *dealers and garages all thinking along the same channel of Better Business efficiency.* These 6000 dealers and garages constitute 16 2/3 per cent or 1/6 of the entire dealers and garagemen of the United States.

ONE IN EVERY SIX IS THINKING MOTOR WORLD'S METHOD OF ACCOUNTING.

The work of the Motor World Simplified System of Accounting already has spread beyond the confines of motor car dealers and garages. The Graduate School of Business Administration of Harvard University has requested the system for its library. The Federal Trade Commission, Washington, D. C., has approved it and now carries it on file.



The Associated Advertising Clubs of the World is now preparing to standardize retail accounting for the hardware trade, the shoe trade, the drug trade and the grocery trade. In this connection it is working in conjunction with Harvard University and the Federal Trade Commission.

T. W. Snead, of the Accounting and Business System Department of Motor World, who developed Motor World system, is a member by invitation of the Committee of the Associated Advertising Clubs of the World, which has these new systems in charge.

These are days when business success requires up-to-date business systems. Six thousand dealers thinking along the same channel of business accounting are learning to talk in a single business tongue. These 6000 men understand each other better in talking their business. They are brought closer together by virtue of Motor World's System. *The business cost figures that this system produces from these* 6000 *will accomplish greater results toward standardizing business methods than any other single factor.*

If these 6000 men met at conference to talk Better Business, they would understand each other better and accomplish greater results because they have a common conception of the meaning of such business terms as "earnings," "expenses," "profits."

The system is doing its work of amalgamating this great industry, which must get close together to develop as it should develop; to handle adequately the big problems it must handle; and to give each man or woman in it that share of profit which his or her intelligent effort deserves.

This diagram shows the total number of dealers and garagemen in the United States who are vitally interested in Motor World's simplified system of accounting. Watch the black section grow.

Dealers Who Have Made Good

TOM SILVER is a product of the country. He was born in Little Silver, N. J., thirty-two years ago. He is a slender, quiet man, somewhat retiring and shy of the limelight.

But you can always reach him. No barriers in the Silver organization. When you want him you say so—and he's always ready to see you. He is an inveterate fight fan, chases the little pill around the links and puts in an appearance at a fair percentage of ball games.

There is no better known motor car merchant in the Metropolitan territory than C. T. Silver. Yet he has been in the automobile business only 6 years. Which speaks volumes for his personality and his business methods.

He got his first taste of the trade in 1909 under a Brooklyn, N. Y., Buick dealer. A year later he became a subdealer for the Overland in the same territory and opened a store.

The first season he sold 125 cars. Before that there were only 35 Overlands in the whole territory. Then, the following year, the Willys-Overland Co. selected him as distributer for the Metropolitan district, Long Island and the state of New Jersey. The first year he sold 550 cars and by 1913 the business had grown to such proportions that new quarters were needed.

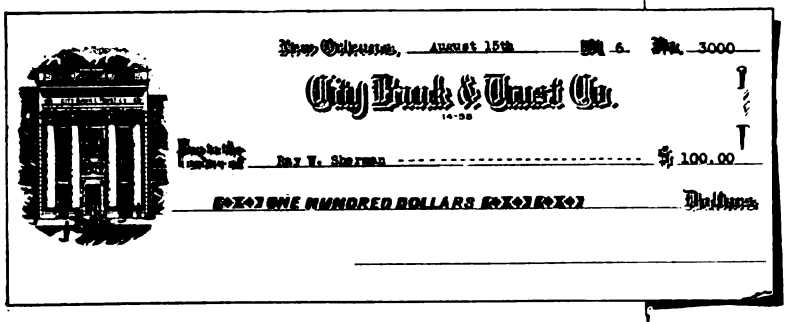
Toward the end of 1913 the Peerless company gave up its New York branch and Silver became Peerless distributer in addition to handling the Overland. Jan. 1, 1914, the beautiful Peerless building became Silver's. It represents an investment of $1,800,000.

Just recently he relinquished the Overland business and closed a contract with the Chalmers Motor Co., calling for $6,250,000 worth of cars, the biggest of its kind ever closed.

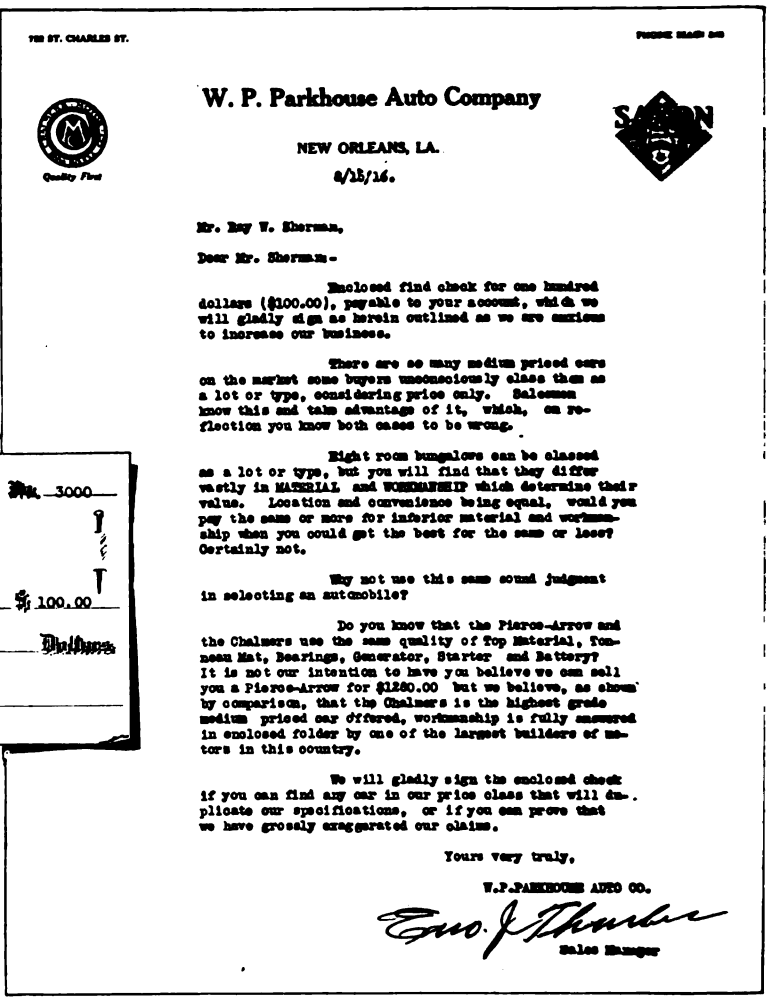
The Why

SILVER has surrounded himself with a nearly perfect organization. He has made a STUDY of merchandising motor cars and works accordingly. Special bodies that reflect the personality of the Silver organization and a sterling brand of service are his long suits. With a chassis in the popular-price class, he has attracted New York's elegant trade.

Conover Thomas Silver



President



C. T. Silver Motor Co., New York

Is This Idea Good?

This sales idea was sent to MOTOR WORLD *with the request that the idea be discussed as to its sales effectiveness. The story is the answer to Mr. Thurber's letter.*

W. P. Parkhouse Auto Company

NEW ORLEANS, LA.

8/15/16.

Mr. Ray W. Sherman,

Dear Mr. Sherman-

Enclosed find check for one hundred dollars ($100.00), payable to your account, which we will gladly sign as herein outlined as we are anxious to increase our business.

There are so many medium priced cars on the market some buyers unconsciously class them as a lot or type, considering price only. Salesmen know this and take advantage of it, which, on reflection you know both cases to be wrong.

Eight room bungalows can be classed as a lot or type, but you will find that they differ vastly in MATERIAL and WORKMANSHIP which determine their value. Location and convenience being equal, would you pay the same or more for inferior material and workmanship when you could get the best for the same or less? Certainly not.

Why not use this same sound judgment in selecting an automobile?

Do you know that the Pierce-Arrow and the Chalmers use the same quality of Top Material, Tonneau Mat, Bearings, Generator, Starter and Battery? It is not our intention to have you believe we can sell you a Pierce-Arrow for $1280.00 but we believe, as shown by comparison, that the Chalmers is the highest grade medium priced car offered, workmanship is fully assured in enclosed folder by one of the largest builders of motors in this country.

We will gladly sign the enclosed check if you can find any car in our price class that will duplicate our specifications, or if you can prove that we have grossly exaggerated our claims.

Yours very truly,

W.P.PARKHOUSE AUTO CO.

Sales Manager

This check and letter are sent to the prospect who has had a demonstration and a catalog and is thinking of buying. With them goes the chart on the opposite page

By Ray W. Sherman

YOUR letter asks for an analysis of your follow-up letter, including an unsigned check and a sheet on which the prospect is invited to compare the Chalmers with any other car or cars.

We have given this matter great consideration and question whether very great results will be secured from it. It is possible that your sales record for the season may be good, but we believe a minute analysis of your sales will not show a high degree of effectiveness for this letter.

To begin at the beginning: We believe you are sending it at the right time, which is after the prospect has received your catalog, has had a demonstration and has expressed himself as being interested in cars in your price class. Were the letter to be sent any earlier than this, it would be useless.

Consider the effect upon THE PROSPECT who receives this letter:

When he opens it he sees a check made out to himself, and for an instant he does not notice that it is not signed. His own name and the amount are the biggest things on it. The first sight of the check brings his interest up to an extremely high point and your letter gets his undivided attention. The check causes him to forget everything else for the time being.

Having sustained this shock, due to finding himself the recipient of $100, he begins to read the letter, and as he reads he finds that he really doesn't get $100, but that you believe firmly in the Chalmers car and are willing to back up any claims you make with your good money.

As he continues through the letter, his interest begins to fall, and by the time he has finished the letter it is back somewhere near normal. It is like a plotted curve which rises abruptly and then falls gradually.

The effect is that of anti-climax.

It is all right to assume that his interest should not be so highly aroused because the check is unsigned, but we cannot get around the fact that a check is a check and that when we receive one in the mail the psychological effect is much the same whether it is signed or unsigned; a second look at it tells us that it is unsigned, but the effect, nevertheless, is there.

We do not believe any man ever would go to the trouble of trying to earn this $100 in the way you suggest, and do you not think he is likely also to have, away back among his mental processes, a perhaps subconscious suspicion that there must be something the matter with your arguments if it is necessary for you, as a business man, to back up your statement with a bet?

There is also the element of comparison:

Do you believe comparison is ever valuable in selling goods?

Does it have a good effect upon you when a salesman for an overcoat tells you the lining in it is just as good as that in some well-known brand that sells for twice as much?

Are we not pretty well educated to the fact that goods are worth the price and not much more? And are we not prone to disbelieve any statement to the contrary no matter how well it is backed up? The prospect is a very peculiar animal and his actions are governed generally by very little things.

In your letter you mention the Pierce-Arrow, and you must remember that the man who reads your letter doesn't always get the impression you attempted to convey to him. While you may mention certain parts specifically, and while these may be identical with those on the Pierce-Arrow, do you not think the prospect is likely to get the impression that you are endeavoring to convince him that there isn't much difference between a Chalmers and a Pierce-Arrow? You yourself, will admit there is a difference between the Chalmers and the Pierce-Arrow; in fact, are we not all agreed that there is considerable difference between all cars, regardless of how high the ratio of value may be in each?

Digitized by Google

After the prospect has seen the check and read the letter, has it made any great impression upon him?

Whether it has or not, he turns then to your folder, labeled "Why," and while this idea of comparison may not prevail in the minds of all prospects, I believe the folder is weakened at the beginning by the word "comparison" at the top. I believe this part of the folder would be greatly strengthened if instead of the word "comparison" you said, "Be Your Own Salesman," and if you, in this first paragraph, under the word "comparison," told the man that he should investigate carefully and base his purchase upon his own opinion. While the comparative nature of the page would still be there, we believe it would be largely eliminated for all practical purposes.

At the bottom of the page you again mention the names of other cars, and I do not think it is a strong argument.

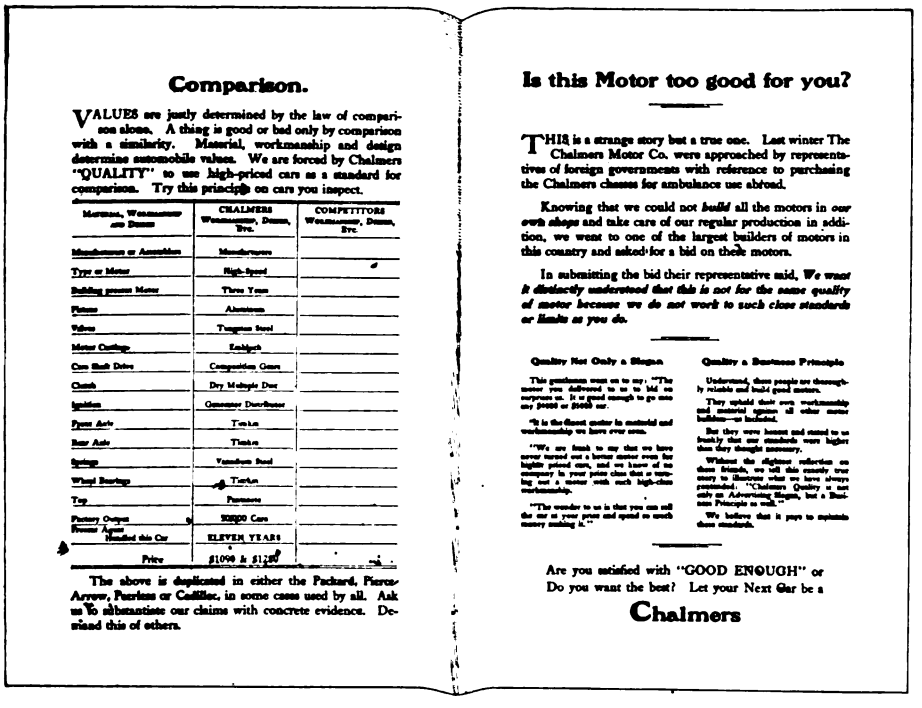
The heading on the right-hand half of your "Why" folder says, "Is this motor too good for you?"

Do you think anything is too good for yourself, or do I think anything is too good for myself? Do we not all believe that nothing is too good for us, even though we are unable to buy it? This right-hand page, we believe, could have been better worked in if the prospect had been invited to make it a part of the evidence upon which he was going to base his purchase.

The second page mentions a man who said the Chalmers was good enough to go into a $5,000 or $4,000 car. Let us conceive that this is true, and then let us imagine ourselves trying to make the average prospect believe it. It would be a difficult job.

This condition is well illustrated by the story of a manufacturer of a number of years ago whose car really had exceptional value in performance. His advertising manager insisted upon putting this seemingly extravagant claim into the advertising, despite the protestations of the manufacturer. *The manufacturer's contention was, that while a story and demonstration might convince the prospect, the claims if set up in type or put into a letter sounded so absurd that they were not believed.*

The tendency to-day with the average public is to discount advertising claims, and no matter how true they may be, the effect of the claim is lost if it seems extravagant.



I also think there are certain detracting features in this proposition. To go back to the beginning: Your desire is to so convince the prospect of the value of the Chalmers that he will buy it, and in order to convince him you must present him with your selling points.

Do you not think this idea of comparison and the check are disturbing features and serve to draw his mind from a fair consideration of your claims?

Ever since this letter was received, I must confess I have thought of little except the check.

Another point is that there are a number of misspelled words in the comparative table in the folder, which may be intentional or may be due to careless proofreading in the print shop. For instance, instead of saying type of motor, you say "Type or motor." Tungsten ends in ten and not "ton." It is "en bloc" and not "enbloch." Timken ends in "ken," not "kin."

We appreciate your having requested a criticism of your plan and we have endeavored to base this criticism upon psychological principles entirely. We might ask you what success you have had with it, because, in the end, results are what count, regardless of principles. We should very much like to know what success you have had with it, but request that your reply on this point be very analytical, because, as we said at the beginning, while your sales may have been good, the part the letter played may have been very small; in fact, it may have been a detriment.

Comparison.

VALUES are justly determined by the law of comparison alone. A thing is good or bad only by comparison with a similarity. Material, workmanship and design determine automobile values. We are forced by Chalmers "QUALITY" to use high-priced cars as a standard for comparison. Try this principle on cars you inspect.

Materials, Workmanship and Design	CHALMERS Workmanship, Design, Etc.	COMPETITORS Workmanship, Design, Etc.
Manufacturers or Assemblers	Manufacturers	
Type or Motor	High-Speed	
Building present Motor	Three Years	
Pistons	Aluminum	
Valves	Tungsten Steel	
Motor Castings	Enbloch	
Cam Shaft Drive	Composition Gears	
Clutch	Dry Multiple Disc	
Ignition	Genuine Distributor	
Front Axle	Timken	
Rear Axle	Timken	
Springs	Vanadium Steel	
Wheel Bearings	Timken	
Top	Permanent	
Factory Output	30000 Cars	
Present Agent Handled this Car	ELEVEN YEARS	
Price	$1090 & $1295	

The above is duplicated in either the Packard, Pierce-Arrow, Peerless or Cadillac, in some cases used by all. Ask us to substantiate our claims with concrete evidence. Demand this of others.

Is this Motor too good for you?

THIS is a strange story but a true one. Last winter The Chalmers Motor Co. were approached by representatives of foreign governments with reference to purchasing the Chalmers chassis for ambulance use abroad.

Knowing that we could not *build* all the motors in *our own shops* and take care of our regular production in addition, we went to one of the largest builders of motors in this country and asked for a bid on their motors.

In submitting the bid their representative said, *We want it distinctly understood that this is not for the same quality of motor because we do not work to such close standards or limits as you do.*

Quality Not Only a Slogan

This gentleman went on to say, "The motor you delivered to us in '14 is everywhere on. It is good enough to go into any passenger car.

"It is the finest motor in material and workmanship we have ever seen.

"We are frank to say that we have never turned out a motor equal to the highest priced cars, and we know of no company in your price class that is turning out a motor with such high-class workmanship.

"The wonder to us is that you can sell the car at your price and spend so much money making it."

Quality a Business Principle

Understand, these people are thoroughly reliable and build good motors.

They upheld their own workmanship and material against all other motor builders—in England.

But they were honest and stated to us frankly that our standards were higher than they thought necessary.

Without the slightest reflection on these friends, we will this morning scan closely to illustrate what we have always contended: "Chalmers Quality is not only an Advertising Slogan, but a Business Principle in truth."

We believe that it pays to maintain these standards.

Are you satisfied with "GOOD ENOUGH" or Do you want the best? Let your Next Car be a

Chalmers

Columbus Holds Show at Ohio's Fall State Fair

COLUMBUS, OHIO, Aug. 31—The annual fall show, held in conjunction with the Ohio State Fair, opened Aug. 28, to continue 6 days. The show is held under the auspices of the Columbus Automobile Show Co., composed of dealers of the Buckeye Capital, and was in the South Machinery Hall. No admission fee was charged.

In all, about seventy-five cars of about forty different makes were on display. All the local dealers participated. Of the thousands of State Fair visitors annually a large proportion are from the rural sections. Thus the fair is considered an excellent occasion to show the new models of cars, as the farming population is the best buyer of automobiles in the Buckeye State.

Despite the hot and dry summer, conditions among the farmers of Ohio are excellent in every way. High prices for all farm products have placed thousands of dollars in the bank accounts of the ruralites. They are spending their money more liberally than ever before.

The cars and dealers showing them follow: Oscar Lear Motor Car Co., Buick; Columbus-Cadillac Co., Cadillac; Kissel Service Co., Kissel; F. E. Avery & Son, Packard, Jeffery and Detroit electric; Standard Motor Car Co., Hudson; Ohio-Saxon Co., Saxon; Twyman Motor Car Co., Inter-State; Winders Motor Sales Co., Velie and Chevrolet; Willys-Overland Co., Columbus branch, Overland and Willys-Knight; Broad-Oak Automobile Co., Studebaker; Ohio Metz-Elcar Co., Metz and Elcar; O. C. Bolt Co., Franklin; Curtin-Williams Co., Cole and Dort; Snyder Automobile Co., Allen; Owen Magnetic Motor Co., Owen Magnetic; Cruikshank, Son & Robinson, Pathfinder, Argo; Central West Motor Car Co., Oakland; Ohio Auto Sales Co., Dodge; J. Renner, Davis; Campbell-Fisher Sales Co., Madison; Capital Motor Car Co., Reo; Westcott Motor Sales Co., Westcott; Everitt Auto Sales Co., Maxwell. In addition, quite a few motor trucks were on display, including the Indiana, Federal, Buick, Cadillac, U. S., Sternberg, Service, Jeffery, Packard, Reo, Republic and Smith Form-a-Truck.

Accounting and Business Systems

By T. W. Snead

Accounting Car Cost

Editor Motor World:

I do not see in your system where we can keep the cost of cars to owner of garage. This I call my maintenance account. Our repairshop does work on cars taken in trade. What shall we do, call this car we have taken in trade a customer's account?

For example: Salesman A sells John Brown a 1916 Reo for $1,300 and allows Brown on the old car $650.

John Brown will take his new car in March and pay us the balance of $650. We take Brown's old car now and call it the Brown Reo. We cannot sell the Brown Reo until it goes into the repairshop. The expense for labor and new parts amounts to $68. The demonstrator works 5 days to sell the car and then sells it for $650. How do we show the profit on this sale in December when the new car will not be delivered until next March?

The following is a list of the departments I want to keep:

(1) Automobile sales; (2) Tires and tubes and rubber stock; (3) Vulcanizing department; (4) Repairshop; (5) Bicycle accounts; (6) Proprietor's personal expense; (7) Livery; (8) General merchandise account; (9) Gasoline and oils; (10) Storage account; (11) Expense account; (12) Freight and expense.

Can I keep all these in your one book and with my 500 customers and purchase ledger accounts? Would you send me a sample of the bill for customer account and ledger leaf; the rest of the book I presume is like Forms 1 and 2 which I have received.—E. D. Walker, 25 Main Street, Nashua, N. H.

Story of the Business

We believe that by using the system as outlined in our articles you will be able to tell the "Story of your Business" as you have outlined it and with no increased expense in your office. On the other hand, we believe that the amount of labor and time will be considerably lessened.

The "Cost of Cars to the Owner," which you call a maintenance account, we take to mean the expense of maintaining a demonstrating car, or else the cost of rebuilding a purchased used car. As long as you have given us an example, let us take your case and work it out on our system. You will find on Form 1, which is for Sales and Incomes, and on Form 2, which is for Expense, etc., a Department for Car Sales. It makes no difference whether you are selling used cars or new cars, every car you sell would come under this department of your business. In this department, the Income, or earnings, would be from Sales of Cars only, either old or new. The expense of this department would be as follows for the average dealer:

Wages or salaries
Supplies
Cost of demonstrator (upkeep, etc.)
Depreciation of demonstrator
Entertainment
Free service
Miscellaneous
Advertising
Cost of rebuilding

and any other division that is large enough to make it a real expense. Now that we have a rough outline of this department, let us take your example and make the entries on our system.

This Is How It's Done

We sell John Brown a 1916 Reo for $1,300 and agree to deliver the car to him in March. We agree to take his old car *now* for one-half of the amount, or $650, and he is to pay the balance, $650, in March when the new car is delivered.

The sale is made and Brown delivers his old car, which we will call the Brown Reo, Factory No. —. We have received something of value, or we have received a benefit, and any such transaction should be shown by a debit on our books. Debit means to receive a benefit. What department received that benefit? The Car Stock account received the benefit, for it was put into it, or it will be after we have brightened it up in the repairshop, into stock to be sold, just the same as we buy gasoline and put it into stock ready for sale. So, we must debit our Car Stock account.

We turn to Form 2, and under Column 1 on the debit side we write $650, and after that we would write in the "name" column—Car Stock, Brown Reo No. —. Now we have made our Debit entry.

A credit means to give benefits. Who, or what, gave that benefit? The business has given nothing in return as yet for the $650 car, and John Brown has delivered the car. It is obvious, then, that we owe John Brown for the car until we fulfill our agreement and deliver the new car.

Then John Brown gave the benefit, so we must credit John Brown, which we do by turning to the Credit side of Form 2, and under All Other Accounts, Column 9, we write John Brown. Now at the end of the month, when we separate the various accounts in this column, we would not include this amount under Accounts Payable, for that we mean, generally, the Current Accounts. We would show this as a separate liability on our Statement; we would show that we owe John Brown $650, but by not including it among our Current Accounts Payable we call attention to this particular debt. And we do so because, while we owe the money it has a "string tied to it"; it is a contingent debt—contingent upon our performing some agreement.

When we have performed that agreement we will no longer owe him this amount; but until we perform the balance of the agreement we must show that we are indebted to him for that amount.

Summing up, then, the first part of the transaction would leave the $650 in Car Stock on the Debit side of our books, and on the Credit side we would show our liability to John Brown.

Charging Up Repairs

Now you say that the car we took from Brown is turned over to the Repair Department to be rebuilt, etc., and the cost of doing so amounts to $68, being divided, we will say, into $50 for labor and $18 for new parts. The parts were taken out of the Parts and Accessories Stock.

We will assume that the Repair Department uses a job ticket for every car that is taken for repair, etc. The car is finished and the ticket comes back to the office, just the same as if it was a customer's car.

On the ticket, the cost of the labor is shown as $50, and in another column is shown the various parts taken from stock, amounting to $18.

This repair job we should enter, just the same as any other, on Form 1, as follows:

Digitized by Google

What received the benefit? The Car Sales Department, for by spending $68 we were able to sell the car for $650.

What gave the benefit? The Repair Department and the Parts and Accessories Department, for they did the work and gave the parts.

So we debit the Car Sales Department $68 and credit the Repair Department $50 and the Parts Department $18, and the second phase of the transaction is finished.

One point should be remembered in transactions of this kind between one department and another: the figures should always be at cost; no profit should be added to the parts or the labor, for it obviously is foolish to charge yourself with added profit. You will not find on Form 1 a Car Sales Department on the Debit side, for, as a rule, such items would come under this department on Form 2, so we make the entry on the the Debit side of Form 1 under All Other Accounts, as $68 Car Sales Expense, cost of rebuilding, and, if the information would prove of any value, you may add the name and number of the car rebuilt.

Now at the end of the month this expense is added to the various expenses of this department found on the Expense Sheet, Form 2. Now bear in mind that all this time we are still showing our liability to Brown for this car, also that the Repair Department has performed a job and they have been credit for it, and the Car Sales Department has been charged with the cost of the job.

Suppose, for example, that we did not succeed in selling the car. What would our statement show? It would show this: That we owe Brown $650 for his car; it would show that the business owns a car for cale (Car Stock); it would show that the Car Sales Department made no sale and had no Income; and it would show that the Car Sales Department had an expense of $68.

Story It Should Tell

Right away, then, you say we lost money in the Car Sales Department. You certainly did, and *that is just what you accounting system should show you.* The big mistake made in this kind of a transaction with most garagemen is that they do not give credit to their Repair Department for the labor, etc., given to an old car in order to make it salable, and they do not charge the Car Department for this labor, consequently the Repair Department is the one that shows the loss, when all the time the loss is in the Car Sales Department. The garageman does not find this out until he has abolished his Repair Department and is still losing money at the old stand—the Car Sales Department.

The root of the transaction is a Straight Sale all the way through. When we sell the old car, it goes on Form 1 as a Cash or Charge transaction and credited to Income—Car Sales. When we deliver the new car, we receive $650 in cash and wipe out the debt we owe Brown and credit the Car Sales with $1,300. Let us assume that this car cost us $1,000, and when we paid for it, on Form 3 we Debited it to Car Sales—Cost of Cars Sold. Then our Income and our Expense Account in this department would be as follows:

Income—		
Sale of cars.....	$650	
" " "	1,300	$1,950
Car Sales Expense—		
Cost of cars sold.....	1,000	
" " " "	650	
Wages	....	
Supplies	....	
Advertising	....	
Etc., etc.....	....	
Cost—Rebuilding	68	$1,718
Profit Car Sales Department for Month of		$232

Accounting All Departments

You have given us a list of the various departments that you would like to open in your business.

The system is designed to care for all such items and accounts. The ruling of the forms will show you some of these departments directly. Taking your departments and accounts by numbers and they would be shown on the system as follows:

(1) All Income of Automobile Sales, and all expense of Sales Department would be entered under Car Sales Department on Form 1 and Form 2.

(2) Tire Sales Income and the expense of selling these would be entered under Parts and Accessories Department on Form 1 and Form 2. If you desire to separate your Income from Sale of Parts and Accessories, and show Tire Sales, Etc., separate, this could be done by analyzing or picking out all tire sales from one column. And just so with every other part or accessory.

The idea is that in making this one of the departments we aim to separate the business into departments according to the expense of running the department. For example, the same salary that you pay the man that sells tires goes to paying him for selling horns, or spark plugs, etc., and this all comes under the head of Sale of Parts and Accessories. The total from this column you can separate at the end of the month by any plan that you may desire.

(3) Vulcanizing would come under the head Repair Department, as the same money spent in the repairshop goes to help pay the vulcanizing end of the business. Remember that after the various columns, are columns for explanations, in which the memos can be made, and from the total in the Repair Department at the end of the month you can very easily separate vulcanizing income from Car Repairs, etc. But, possibly, you could not separate the expense unless you ran an elaborate cost system in connection with your accounting system.

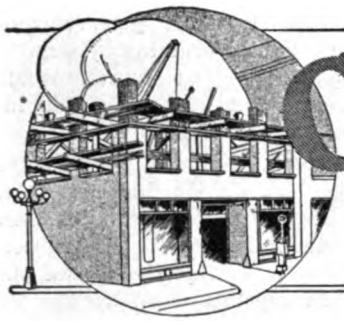
(4) Repair work, of course, would come under that head, both on the Income sheet and the Expense sheet.

(5) Bicycle Account.—If by this you mean sales, etc., I would place all sales and expenses either under the Car Sale column or the Parts and Accessories column and separate it at the end of the month. The expense of selling bicycles is, in all probability, shared by either one of these departments. Bicycles would, of course, be carried in Stock For Sale, just as Gasoline or Cars.

(6) Proprietor's Personal Account is simply the name you give this account to which all moneys drawn out by the proprietor is charged. If it is a proprietorship, this should be written off once a year to Profit and Loss. All such entries are made in the All Other Account columns. (See supplement of Forms 1 and 2 for example.)

(7) Auto livery, if only a small income, you would include under the miscellaneous column. If this end of the business amounts to very much you would enter it under the same column as Storage, and, if need be, separate it from the Storage Income at the end of the month.

(8) We cannot determine just what you mean by General Merchandise Account, unless you mean merchandise carried in stock, which has been explained in previous paragraphs.



(9, 10, 11 and 12) Gasoline and Oil have a separate column both for Income and Expenses in the system, likewise Storage. Expense accounts of all freight and express, if paid for by you, are simply one item of Expense to be charged to whichever department it is benefiting. That is, if you are shipping a horn, it would be Parts and Accessories Expense, called Freight and Express. If you were paying the freight on a car coming to you, it would be Car Sales Expense—Freight and Express. If the customer is to pay this, it would be charged to him when you paid the bill on Form 2.

Customer's Account Ledger

We believe that you can carry all of your accounts in the one binder, and there is no transaction that occurs in the garage and dealer business that cannot be accounted on the system. If you should find that your Customers' Accounts make the binder inconvenient, it would be a simple matter to separate them by putting them in another binder.

We are sending you a sample of the Customers' Account Sheet, which you will note is punched to fit the same binder as Forms 1 and 2. These sheets stay in your binder until filled up and your bills and statements to your customers are made up from this sheet. If we can be of further service to you do not hesitate to call on us.

Scientific Construction

GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

GARAGE, SALESROOM AND ACCESSORY STORE 55 X 130

Fig. 1

Editor Motor World:

I am figuring on building a garage of cement, 55 x 130, and wish you would send me a floor arrangement and about what a garage like that would cost from the following description and drawing showing basement and two streets:

It will have a 10-in. wall and rough finish on the outside as common to garages. I want a fairly good sized showroom so that I can stand one or two cars, also to display accessories, parts and tires; a private office, lavatory and repairshop.—Louis De Witt, Buena Vista Garage, Buena Vista, Col.

The arrangement, Fig. 1, is compact and convenient. The reason for placing the garage entrances at the side is to allow full use of the valuable frontage space for the display of cars and accessories.

We believe that the features of this plan will instantly appeal to you; but if there are any points about it that you are doubtful about and you would like to have us explain in detail why we did this or that just the way we did, why, please call upon us.

ADDITION TO GARAGE

Figs. 2 and 3

Editor Motor World:

We have a garage 50 x 120 and contemplate building an addition at one side according to the attached sketch. The size of the proposed addition is approximately 30 x 50, but it could be a few feet wider if it could be shown that the storage capacity could be much increased by a few additional feet.

We subscribe to the Motor World, and notice that you help many people out who are about to build garages. We would appreciate any suggestions made by you as to the number of cars that could be stored in this extra space and the best location of the door, also any other information along these lines.—William Truscott Strehlow, Terrace Garage, Omaha, Neb.

The 30 x 50-ft. addition to your garage will allow cars to be stored with fair economy, providing entrance is on the alley. In this case eight cars, Fig. 1, may be accommodated, which makes the greatest space taken up by a car 187 sq. ft.

According to your plan, it seems likely that you would prefer to have the entrance in the side of this extension so that it connects with the main garage floor. If you do this it will be impossible to store the cars economically and, furthermore, there will be waste space in your main garage, because it will be necessary to leave the aisleway open from the aisle of the main garage to the extension.

However, if you can make this extension 40 ft. instead of 30, Fig. 2, you will find it more economical than the first plan, as fourteen cars may be stored. Including the space taken up by the aisle connecting the main garage and this room, the space required per car is only 160 sq. ft., as against 187 in the former instance; and if you consider only the area of the room itself, the cars take up only 143 sq. ft.

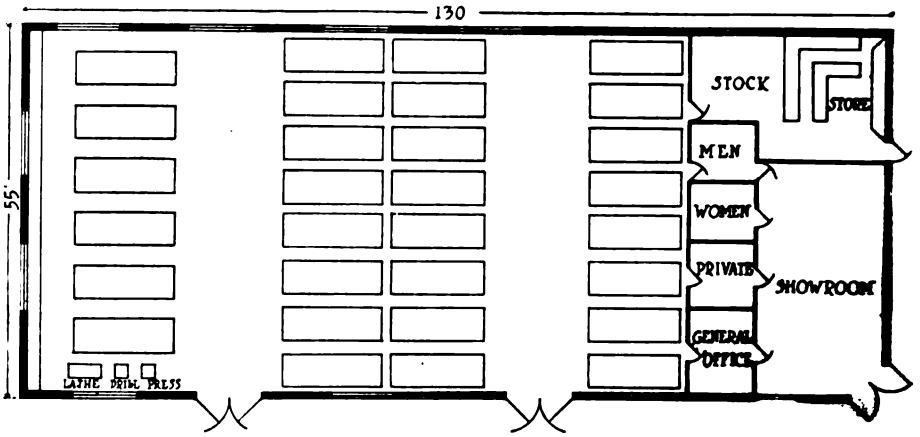

Fig. 1—The entrances are placed at the side and permits the entire front to be used for the display of cars and accessories

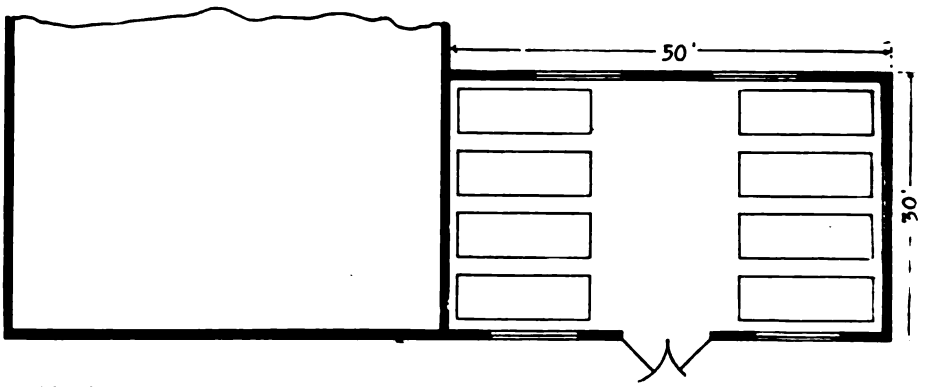

Fig. 2—This addition of 30 x 50 to the main garage will only permit 8 cars to be stored and is not connected to the main building

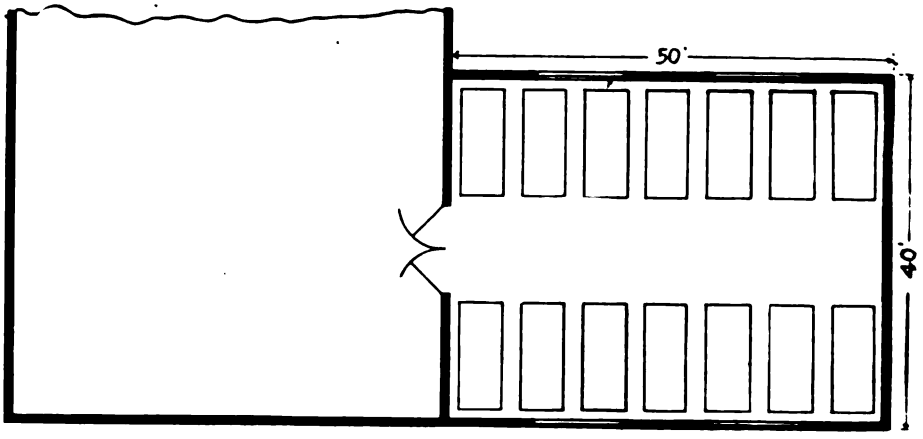

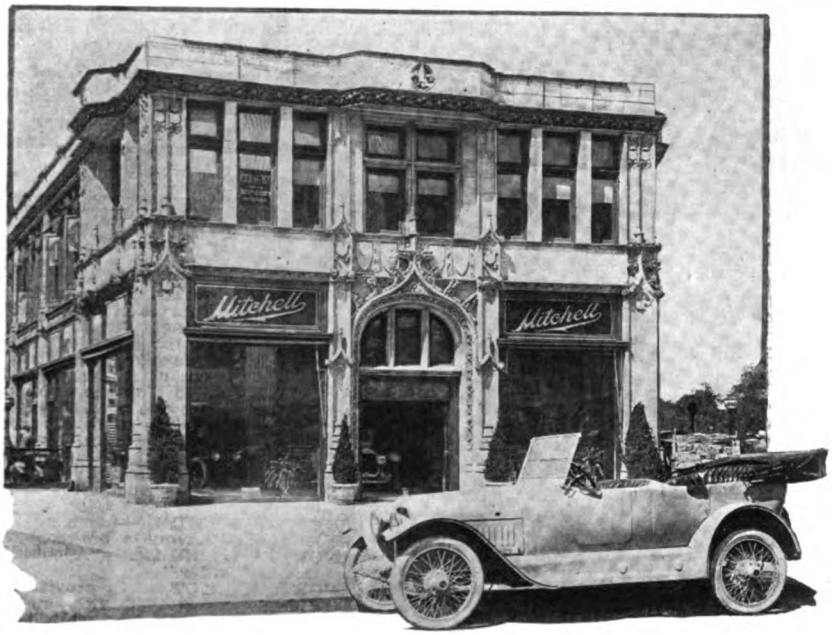

Fig. 3—An increase of 10 ft. in the width of the addition permits 6 more cars to be stored, bringing the total number up to 14. By making the total area 33 per cent greater, 75 per cent more cars may be accommodated

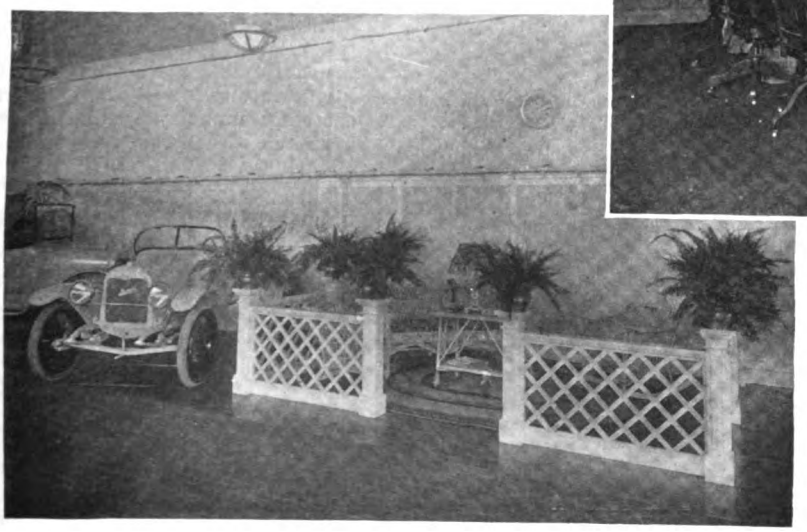
Beauty in Two Modern Salesrooms

The Mitchell "Place in the Sun"

The Maxwell "Oasis"



WHEN the Carl H. Page Motors Co. took over the distribution of Mitchell cars in the metropolitan district a distinctive salesroom was sought—something out of the ordinary, both from an esthetic point of view and for utility. The picture above almost tells the whole story. "A place in the sun," it is styled, and it is one of the most beautiful salesrooms in New York. It is what is probably the most prominent location in the city, being directly at the entrance to Central Park and yet right on Broadway. It is finished entirely in white outside and inside.

The view above shows the Mitchell salesroom in perspective. The stairs lead to a hanging gallery in which the salesmen have their individual desks. At the right is shown the arrangement of the desks in the gallery.

In the salesroom of the New York branch of the Maxwell Motors Co. there has been put up a light grill work "fence" enclosing a carpeted "Oasis" with wicker furniture. It serves as a resting place for prospects and also is used by salesmen in making sales.

ANGLES OF THE LAW

By George F. Kaiser

What About Brakes?

Editor Motor World:

Will you please advise me, by return mail, in the self-addressed envelope inclosed herewith, *whether any States have specific and definite laws as to brakes on an automobile*, such as to how many there shall be, or what kind there shall be?

The only one that the writer is familiar with is in the State of *Missouri*, which simply states that they *must have adequate brakes.* Inasmuch as this question has come up, I shall be very glad to get any information on this matter.

I was told by a gentleman in the trade that there was an article in one of the trade magazines covering this, but I have been unable to find same in any of the old issues in our possession, three or four of which we are subscribers to.—Woods Electric Vehicle Co., Ralph K. Drake, general manager, 437 North Euclid Avenue, St. Louis.

Nearly all the States have specific and definite provisions in their motor vehicle laws regarding brakes on motor cars, as, for instance, the Missouri statute—with which you say you are familiar—provides that brakes must be "adequate, in good working order and sufficient to control such vehicle at all times when the same is in use." As I know of no article in any of the trade magazines covering this matter, I have drawn up the following:

SUMMARY OF PROVISIONS IN THE DIFFERENT STATUTES WITH REGARD TO BRAKES ON MOTOR VEHICLES

ALABAMA—No provision.
ARIZONA—"Good and efficient."
ARKANSAS—"Adequate."
CONNECTICUT—Same provision as New Jersey.
COLORADO—No provision.
DELAWARE—"Good and sufficient."
DISTRICT COLUMBIA—"Every vehicle engaged in carrying loads on the streets and highways within the fire limits, shall be equipped with an effective brake, where the load, including the vehicle, weighs ten tons or more, on hills having a 4 per cent grade or more."
FLORIDA—No provision.
GEORGIA—No provision.
IDAHO—"Adequate."
ILLINOIS—"Good and sufficient."
IOWA—"Adequate."
INDIANA—"Good and adequate."
KENTUCKY—"Good and sufficient."
KANSAS—"Good and sufficient."
LOUISIANA—No provision.
MARYLAND—"Adequate."
MAINE—"Two efficient brakes—foot brake and emergency lever brake."
MICHIGAN—"Adequate." . . . "Sufficient to control the vehicle at all times."
MINNESOTA—"Adequate."
MISSOURI—"Adequate—in good working order and sufficient to control said vehicle at all times when the same is in use."
MISSISSIPPI—No provision.
MONTANA—"Adequate brakes."
NEBRASKA—"Good and sufficient brakes."
NEW JERSEY—"Automobiles of more than 10 horsepower shall be provided with at least two brakes powerful in action and separated from each other, of which one brake must act directly on the drive wheels or on the parts of the mechanism which are firmly connected with the wheels; each of the two brakes must suffice alone to stop the automobile within a proper time; one of the two brakes must be so arranged as to be operated with the foot, provided, however, that on automobiles not exceeding 10 horsepower one brake will be sufficient."
NEW MEXICO—"Adequate—in good working order."
NEW HAMPSHIRE—Same as New Mexico.
NEVADA—"Adequate brakes."
NORTH CAROLINA—"Adequate—in good working order."
NORTH DAKOTA—No provision.
OHIO—Failure to provide sufficient brake punished by fine not more than $25.
OKLAHOMA—No provision.
PENNSYLVANIA — "Good and sufficient brakes."
RHODE ISLAND—"Adequate brakes."
SOUTH CAROLINA—"Good and efficient."
SOUTH DAKOTA — "Adequate—in good working order."
TENNESSEE—No provision.
TEXAS—"Adequate."
UTAH—"Adequate."
VERMONT—"Adequate."
VIRGINIA—"Good and sufficient brake or brakes."
WASHINGTON—"Good and sufficient."
WEST VIRGINIA—"Good and sufficient."
WISCONSIN—"Efficient."

YOU SHOULD BRING SUIT ON THIS CONTRACT

Editor Motor World:

You will find inclosed our contract with the —— Auto. Co. We have demanded our money back and they have refused to return it. We could have sold two cars last fall, but they didn't have them and we lost the sales. I would like you to advise if you think it would be best to start suit.—Fred Collenbaugh, J. M. Collenbaugh & Son, Rock Valley, Iowa.

The Contract

THIS AGREEMENT, Made and entered into the.....day of....., 19.., by and between....., of ....., County of..... and State of....., distributers of the automobiles, party of the first part, ... and..... of....., County of..... and State of....., party of the second part,

WITNESSETH:

Said party of the first part grants unto the said party of the second part the right to sell.....automobiles in the following territory, to-wit: ..... for the season of 19.. and terminating..... ....., 19... Further, the said party of the first part agrees to furnish said second party, upon his order, as soon as possible thereafter, automobiles at a discount from the catalog lists thereto affixed, of..... per cent, f.o.b. factory at.....

The party of the first part guarantees its automobiles the same as the factory to be free from defects of labor and material for one year from date of factory shipment to the extent that defective parts will be repaired providing they are returned to the factory, charges prepaid. This guarantee does not apply to tires, as we use only standard make, subject to guarantee of the manufacturer.

The party of the second part agrees to deposit $100, of which the sum of $50 shall apply on the purchase price of each automobile as delivered to the party of the second part. Said second party agrees to purchase of said first party..... automobiles during the life of this contract.

In consideration of the above the said party of the second part agrees to prosecute the sale of said automobiles with all reasonable diligence and is liable for his deposit money only. Any verbal or written agreements other than above are null and void in this contract.

It is understood that this contract may be terminated by a written notice of..... days by the distributers.

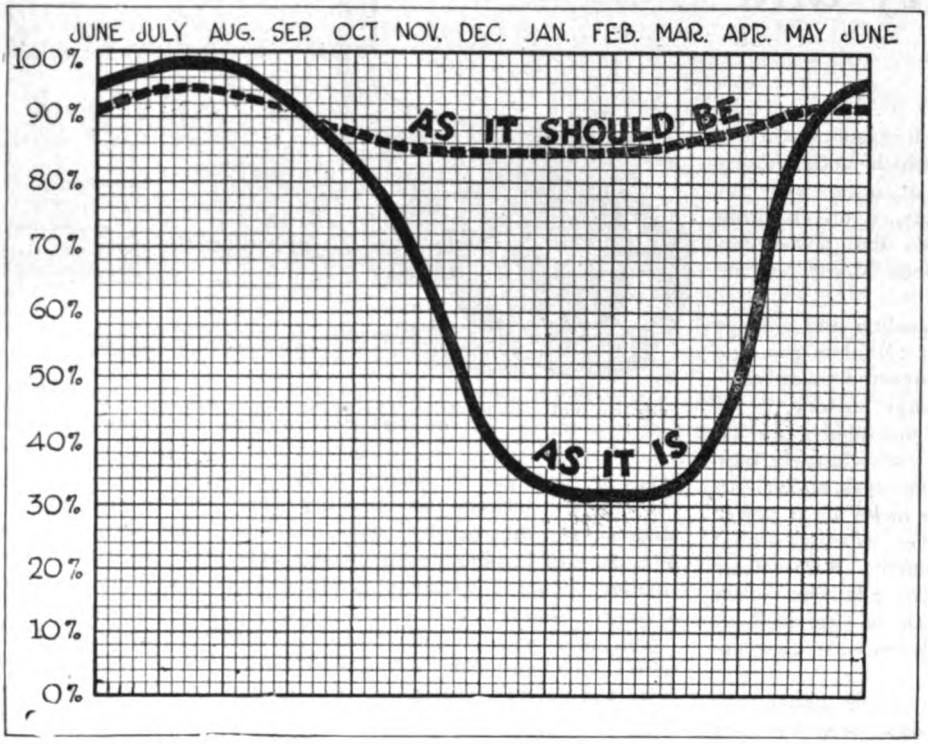
The party of the first part agrees to furnish such printed matter, cuts and photographs as are furnished by the factory, as may be needed to successfully prosecute sales.

.....
By.....

Witness:
.....

If the contract was broken by the other party's failure to deliver the cars to you, you were undoubtedly entitled to a return of your deposit money; if there was no clause requiring that you should keep a demonstrating car, there was no obligation on your part to keep one.

The contract you inclose is the usual form, providing for a penalty in the event of breach on the part of the dealer, but not providing for any penalty in the event of breach on the part of the distributer. I am inclined to doubt whether or not it is a good and valid contract as it stands.



However, if I were you, I would not hesitate to bring suit for the deposit money, as, if you were ready and willing to sell the cars which your contract called for and were prevented from doing so through fault of the distributer, it certainly cannot be said that there was a breach of contract on your part.

Anonymous Requests

ALL requests for information are answered direct by mail prior to their publication. Some inquiries have been received, signed only with the initial of the sender, and hence have received no attention. Motor World will not publish the name of the writer, if a request be made to that extent, but all communications must be signed with the name and address of the writer.

Digitized by Google

Help Straighten The Curve

THE sag in the business curve during winter months is dead wrong. It is a valley of despair to dealer, garageman, repairman and supply man.

But it can be improved. The two high peaks will remain. And the dip that has meant death to many in the trade can be cut out.

There is just one way that it can be done:

1—Concentration.
2—Hard work.
3—Interchange of ideas.

Motor World will issue a WINTER BUSINESS NUMBER Oct. 11 which will be *the first step ever taken by a business trade paper* to HELP STRAIGHTEN OUT THIS CURVE.

For months we have been in close communication with the best dealers, garages, repairshops and supply houses in the United States on this important question. From them we have been collecting their best ideas for taking this discouraging dip out of the curve.

Many of these men already have solved this trouble in part. Others admit that they have never been able to see a way out of the difficulty.

By publishing the methods that brought success to the successful ones, Motor World will directly benefit all the others. More than that, it will directly benefit the jobber and the manufacturer, because to straighten the curve you must

SELL MORE GOODS

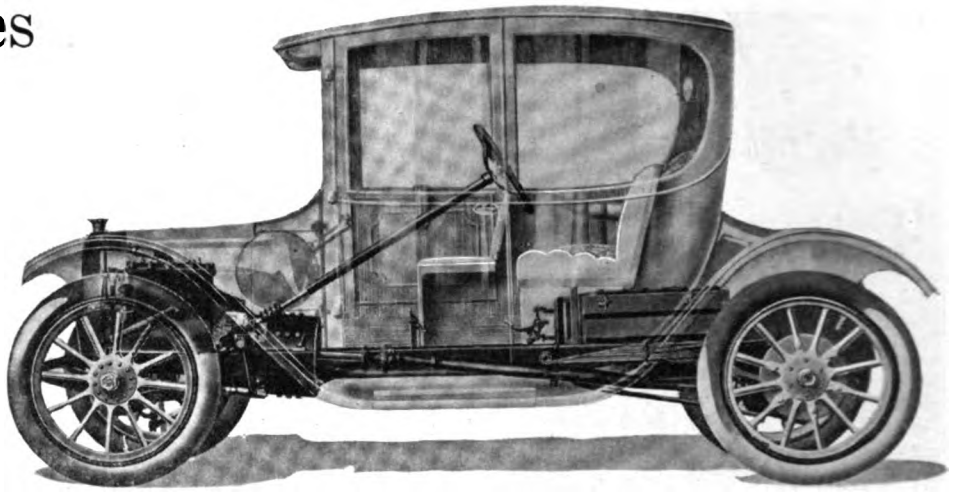
during the winter months, when business ordinarily is slack.

It can be done. Motor World will show in minute detail exactly how it is being done. No mere generalities. That is not the Motor World Way.

Now for your part of it: When we write you asking for suggestions and information regarding YOUR methods, please let us have a prompt reply. Do all you can for the other fellow, because he is doing all he can for you. Be a benefit to the industry.

Send us right now your best thoughts on increasing winter business.

From a Manufacturer and a Jobber



We want to say that we think your winter business campaign is an admirable one. Of course, we jobbers who are located in the East in large cities do not suffer so badly from the winter falling-off as some of our Western contemporaries. We believe, however, that the analysis of conditions which you are attempting will help us all to make a big improvement in the present conditions.—George B. Shearer, President Gaul, Derr & Shearer Co., Philadelphia.

We want to take this opportunity of assuring you how much we appreciate Motor World. The many instructive business items you have been carrying in your paper have done and are doing a world of good to the dealer who is apt to be careless in his business as well as to the business man who tries to be up to the minute.

All manufacturers should take particular note of your winter campaign and further show their appreciation by patronizing your advertising columns. You can depend upon our giving you our best co-operation in this direction, and, with our best wishes for your continued success, we remain. —J. G. Swindeman, President the Union Supply Co., Toledo, Ohio.

Woods Combines Electricity and Gasoline

The gasoline motor is mounted under a forward hood, magnetically connected to an electric motor-generator. The battery is at the rear. Either gasoline or electricity may be used alone, or they may be used together

AN electric car, a gasoline car, or a vehicle in which both powers may be used at once, with the elimination of dependence on charging stations, is the Woods dual power car, produced by the Woods Motor Vehicle Co., Chicago.

It is a combined gasoline and electric vehicle, with a four-cylinder gasoline engine electrically connected to an electric motor and a storage battery.

It is made in but one model, an attractive combination of characteristic gasoline and electric car types, and selling for $2,650, this figure including a power tire pump, motor-driven warning signal and other usual equipment. Wire wheels or slip covers are $25 additional each and special colors can be provided at $100 additional. Deliveries are now being made.

The body is an aluminum panel construction, with wide doors and windows which may be lowered. The seats will accommodate four passengers comfortably, the driver's seat being staggered ahead of the wide seat for two; the third passenger is accommodated on a folding auxiliary seat.

Three Units in Car

In the mechanism of the car there are really but three units, irrespective of the driveshaft and rear axle. The gasoline motor is located conventionally under the hood. Directly behind this is the electric motor, a unit in the same drive line. Located under the front seat is the storage battery set. The connecting unit between the gasoline and electric motors is in the form of a magnetic clutch, which is simplicity itself. When the gasoline control lever is raised about an inch from full retard, the flywheel of the gas motor becomes magnetized. The magnetic force pulls a copper disk against the face of the flywheel and the electric and gas motors are connected.

The gasoline motor is block-cast, with 2½-in. bore and 3½-in. stroke. Because of its small cylinder sizes and its high-speed operation, the motor is unusually smooth running; in fact, is nearly as quiet in operation as the electric motor. The lubrication is effected by a gear pump which lifts the oil from a lower chamber to a compartment around the valve tappets, from where it flows by gravity to the various bearings. Ignition is Atwater Kent, automatic spark advance. Cooling is thermo-syphon through a honeycomb type of radiator.

A one-piece gasoline tank with a capacity of 9 gal. is located under the cowl. The battery is specially constructed for this car by Exide and has 24 cells with 11 plates each, considerably smaller than the batteries required for driving all-electric cars.

The rear axle is semi-floating type with Baush hour-glass type of worm gear.

At the driver's foot there is a pedal, the pad of which may be oscillated forward and backward. On the steering wheel are two levers located in the conventional manner in which spark and throttle levers are applied. On the dash before him is a large meter which tells just what is happening to the electricity.

To start the car he either moves the outside lever as he would to apply more gas, or he releases the foot pedal, raises the same hand lever an inch or so, takes his foot off the pedal and glides away with the characteristic smoothness of an electric.

Driving on electric power alone, he can bring the car to a speed of 20 m.p.h. Acceleration is accomplished by pushing the hand lever up on the quadrant, not by notches, but any amount he desires. There is no jerk as more power is fed to the motor, just a gradual, smooth acceleration. During such driving the electrical meter will show him that a full charge of current is passing from the battery into the electric motor.

Now let him move up the other hand lever slowly. There will be an almost imperceptable breaking effect on the car and the electric clutch engages the gasoline motor, which is started by the electric motor. He is now driving on both powers. There is now a variety of operating options before him. If he wants to speed up to 35 m.p.h. he can open wide the electric and the gasoline control levers. If he wants to use both powers and still maintain a fair speed, he can open the gasoline motor wide and cut down on the supply of current fed to the electric motor. The excess current created by the generating action of the motor will then be turned back into the batteries and the electric meter will show that these batteries are being charged at the same time the electric motor is transmitting power to the rear wheels. Or he can fully retard the electric control lever and run on the gasoline motor alone. Under these conditions the electric motor has become a generator and all of the current created is charging the batteries.

Simplicity of Operation.

Now the driver comes to a street crossing and is obliged to stop, gasoline motor giving all the power. A pressure of the pedal, and the clutch is released and brake applied at the same operation. He is again ready to start. The throttle lever may be advanced, the pedal released, and the car will start like an ordinary gas car. Or he may move up the electric control lever an inch or two, thus throwing in the electric power, and start off with both powers, insuring himself against stalling the engine. There is yet another option. He may stop the gasoline motor by merely setting the throttle lever at full retard, and start on electricity alone.

The oscillating movement of the pedal is for the purpose of opening and closing the switch of the electric motor. Of course, this same operation can be performed with the hand control lever. With the hand lever set at an operating position and the pedal pad oscillated forward there is no current passing to the motor. A movement of the foot and the switch engages and the car starts.

The gasoline motor drives one way only, there being no gearset, and so the electric motor must be called on to run the car backwards. Oscillate the pedal pad forward, place your heel on the small lever against the heel board under the driver's seat, oscillate the pedal backward, and the action of the electric motor is reversed, and consequently the car starts backward.

Six Major Tractor Problems

Reliability, Efficiency, Weight, Drive, Control, and Size

THERE are six major problems of farm-tractor engineering which must be solved before these iron horses reach the stage of development of the modern passenger or commercial motor vehicle. These are:

(1) Reliability is not good enough yet, not nearly good enough. This is partly due to poor engineering that can be recognized as such, and partly to the peculiarly difficult conditions of a tractor's work.

(2) The efficiency of the machine as a whole can be improved very greatly; must be improved, in fact. At present, the horsepower at the drawbar and the horsepower at the flywheel are too widely different.

(3) The weight is usually out of proportion to the horsepower. Weight is an essential in order to permit a sufficient drawbar pull, but it can be applied scientifically so that every ounce tells, or otherwise. Frequently the amount of waste weight is as great as the amount of useful weight.

(4) The question of drive is unsolved. We have one-wheel, two-wheel, three-wheel and four-wheel machines, all track-laying machines and machines which are combinations of the wheel and the track-layer. They cannot possibly all be right, yet there is not enough experience to-day to enable any one system to be named as the best for all purposes.

(5) The trouble of rapid turning is important. There are some machines which can turn in their own length, but to do it they require mechanical features regarded as revolutionary by the more conservative builders. The advantage of a square turn is very great, and it must be decided whether this advantage can be given without any drawback.

(6) Then there is size. We have now every conceivable size and power, from very little to very much. There are too many sizes. The biggest machines will always have a market, but a limited one. The very small machine will also have its uses, but it will have to be decided just what size the great big majority of farmers will find most efficient. This is best stated in terms of drawbar pull, and the ideal size for general work is variously estimated at anywhere from 1500 up to 6000 lb. This is a matter for experience mainly, but study can help to solve the problem.

Automobile engineers are going to take up the tractor, and men trained in the automobile industry are going to make possible 13 years of progress in 5 years or less. They are going to do this largely apart from any business reasons.

They are going to enter the tractor field as individuals, because of the immense fascination of the machine. There are many passenger-car engineers who have never been able to work up much enthusiasm over the motor truck, probably because the truck is rather like a passenger car shorn of many refinements, but the tractor has a different appeal.

Even among tractor engineers it would be difficult to find a man who would contend that the gasoline tractor has reached more than an early stage in its development. To make a comparison with the automobile or motor truck is far from easy, the conditions of service and the requirements being so greatly different, but it is fairly close to the truth if we say that the gasoline tractor to-day is at about the same stage of its development as was the passenger automobile in 1903.

This does not mean that the tractor is going to need another 13 years to reach a stage equal in development to the 1916 automobile. Probably what took 12 years for the passenger car will be done in 5, or fewer for the tractor, general accumulated experience now being so much greater; but the amount which remains to be done will provide sufficient work to give the tractor engineers a very full 5 years.

An automobile engineer, in approaching the problems of tractor design, must first clear his mind completely of all prejudices. He must manfully resist the natural impulse to compare tractor features with, for instance, motor-truck convention.

In many ways it would be possible to draw a closer parallel to the motor boat than to any road vehicle. Really, though, the tractor is not comparable with any other self-moving machine. While it is more difficult a problem than the automobile, in some ways, it is easier in others, but is essentially different. A most successful truck engineer could easily make a very bad tractor if he took on the job with a light heart.

None the less, the automobile is going to benefit by reason of what will be learned in developing the tractor. To give an example, the kerosene carbureter is essential to the tractor, and already experience is being gained which will be valuable throughout the whole range of internal-combustion engineering. Another thing which is as yet imperfect for tractors is the ignition system, and a curious little thing which comes to light in this respect is a growing demand from the tractor men for a smaller spark plug, the engineers quoting all the arguments recently advanced by aeroplane-engine builders in favor of the metric size of plug shell.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 842) TIME-CARD HOLDER

The time-card holder shown herewith is always in sight and keeps the card flat and clean. The back of the holder is leather, with a transparent front of celluloid. It may be fastened to the windshield or door handle, and being soft will not injure the varnished surfaces. Much delay may be avoided by having a pencil fastened to the holder, and the holder may be used as a support when filling out the card.—M. Marc (Maxwell), Boulevard, Jersey City.

(No. 843) SLOTTING BOLT HEADS

The removal of many inaccessible bolts is facilitated by slotting the heads to permit the use of a screwdriver. A single hacksaw blade is too thin for this purpose, but if two blades be fastened in the saw frame the resulting slot will have the proper width. The slot should not be made over ⅛ in. deep or it will impair the strength of the head. —W. R. Davis, Worcester, Mass.

(No. 844) SLIP-COVER FASTENER

The retaining straps of the top slip-cover may be securely anchored in place by tying a ball of waste on the end of each strap and placing them beneath the cushion in the manner shown. To remove, it is only necessary to slide the cushion forward and pull the straps out, which is much easier than when buckles are used.—C. B. S., New York.

(No. 845) GARAGE DOOR LATCH

A door latching device for a double swinging garage door is illustrated. Ordinary draw-bolts are fastened at the top and bottom of the inner edge of one door and fit loosely into sockets in the door frame. These may be operated simultaneously through ¼-in. iron rods fastened to a horizontal strap iron member controlled by turning the door knob. The other door is held shut by an overlapping strip fastened to its inner edge. The feature of the device is that the door may be opened from the outside and may be locked from the inside without the necessity of a separate lock. To lock, the cotter pin is removed from the squared rod and the cross-member drawn back, thus disconnecting the draw-bolts from the knob. A small side door, however, must be provided.—Frank Mankowski, Old Bridge, N. J.

(No. 846) CROWNED FENDER ANVIL

An anvil to be used in conjunction with a rubber mallet for straightening crowned fenders may be made in the manner shown. A block of hard wood about 7 in. square is placed in the lathe and turned to a mushroom form, after which it is sanded to a smooth finish. The upper surface should not be that of a section of a sphere, but one of a solid with a gradually increasing radius, so that some part of it may always be found that will fit the curve of the fender. To straighten a bent fender the anvil is pressed up against the under side of the damaged part and the fender worked back to shape by means of a rubber mallet.

(No. 847) FILE HANDLE

A universal file handle in which the file is held by means of a clamp and thumb-screw may be readily made and will accommodate any file or scraper. The steel centerpiece is ⅛-in. flat steel plate and fitted with wooden handles and notched at the end to hold the clamp in place. The clamp is slipped in place and pinched into the notches by means of a vise, after which the handle is ready for use.—Frank Mankowski, Old Bridge, N. J.

(No. 848) TESTING CONNECTING-RODS

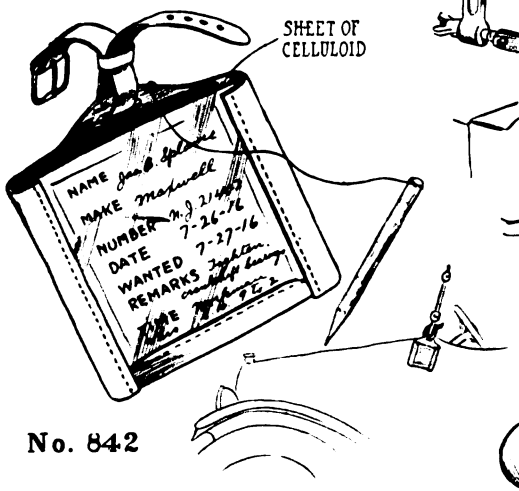
Any misalignment of the connecting-rod bearings may be determined by the testing stand shown herewith. The base supports a stud, on which the crankshaft bearing is fitted, and the upright is drilled and reamed to a running fit for the main test-plate. A similar test-plate is placed in the wrist-pin bearing and the two surfaces of the test-plates brought together. In case of misalignment of the bearings, light will be seen between the plates, and may be corrected by the use of a heavy wrench. The entire construction is of cast iron with the exception of the crankshaft arbor, which is of steel. The two test plates should be brought to a flat surface in the same manner as employed in making a surface plate. It is essential that all parts of the apparatus be made very accurately and by a toolmaker, if possible.—Dodge Bros., Detroit.

(No. 849) SIGNAL WHISTLE

The sound of a whistle is more penetrating than that of a bell and hence it is a more suitable instrument for signaling above the din of a repairshop. An electrically controlled whistle operated from the compressed air line may be readily made for this purpose. A low-voltage circuit with convenient push buttons is connected to a magnetic relay that makes the connection between the lighting circuit and the solenoid operating the whistle cord. The relay is simply a U-magnet connected to dry cells. The solenoid consists of several layers of fine wire wound onto a hollow cardboard core containing the steel rod connected to the whistle rod in the manner shown.—Bemb-Robinson, Detroit.

(No. 850) REMOVING CYLINDER-HEADS

Detachable cylinder-heads may be forced off without injury to the gasket by means of a bolt and collar threaded to fit the spark plug hole. This device is also valuable in holding the valve down so that the retaining washer may be pried up when removing the valves.



(No. 851) CYLINDER LAPPING FIXTURE

Where there are many cars of one cylinder bore to be overhauled, an old piston split and mounted in the manner shown offers a ready means of lapping the cylinder to a fine finish. The handle is made of strap from 1½ x ¼ in. and is held by the cross-member made from a piece of 1-in. pipe. Pressure on the sides of the cylinder is obtained by tightening the screw in the handle.—Dodge Bros., Detroit.

Accessories & Supplies

UTILITY LOCK

The Backus Novelty Co., Smetheport, Pa. PRICE, $1.

Luggage may be locked to the robe-rail or foot-rest by this lock. Two steel fingers may be closed together and locked. Gloves or coats may be clamped to the steering wheel, a suitcase may be locked to the foot-rest, or the control levers may be fastened to the steering-wheel quadrant. Two keys are supplied with each lock.

BADGER SPRING BUMPER

Auto Parts Mfg. Co., Chicago. PRICE, $12 with 2-in. nickel bar, $10.50 with black bar.

A two-piece spring steel bumper that may be fitted to almost any car. The cross-bar is high quality spring steel, specially tempered, though resilient to cushion shocks, and sufficiently stiff to protect the car. The bar may be adjusted to any angle.

KENNEDY AUTOMOBILE SIGNAL

Nu-Way Tire & Rubber Co., 1004 South Michigan Avenue, Chicago. PRICE, $12, complete with wiring and switches.

Two signals, one on each of the rear fenders, are electrically controlled from the driver's seat, indicating by night or day the driver's intentions. Each signal is controlled independently and turns in the direction the car is to be turned, showing two red lights, an arrow and the word "Turn," and remains a signal until the turn is completed. A pilot light attached to the switch shows that the signal is in working order.

TAROF TAR REMOVER

Cooper & Osterhout, Watertown, N. Y. PRICE, per pint, 50 cents; per quart, $1. Dealers, in case lots of 12 pt. or 6 qt., 30 per cent, plus 5 per cent for cash.

A liquid for removing tar or road oil from varnished car surfaces. After washing the car with soap and water and removing grit, cotton waste is saturated with the liquid and applied. Allow it to stand for a few minutes, and then rub thoroughly with the same waste. Polish with cheesecloth.

INSYDE TYRES

American Automobile Accessories Co., 621 Main Street, Cincinnati. PRICES, 3 in., $4; 3½ in., $4.75; 4 in., $5.75; 4½ in., $7.25; 5 in., $9.

Insyde Tyres are a secondary casing, without bead or tread, to be cemented inside the outside casing. They are made from several layers of tough fabric vulcanized together over tire molds and shaped to fit the inside of the casing for which they are made. The outside is coated with a self-vulcanizing cement that secures it to the casing, and the inside is treated so that the tube cannot stick. When the outside casing is worn out, the Insyde Tyre may be removed with gasoline and put into another casing.

MACHINIST'S VISE

The Fulton Machine & Vise Co., Lowville, N. Y. PRICE, No. 295, with 3-in. jaws, $7.50; No. 31, with 4-in. jaws, $10.50.

A light-weight swivel-base repairshop vise. The jaws are cast steel welded to the face of the vise. The vise may be swiveled to any desired position and locked by a taper-head bolt.

COMBINATION GASOLINE LOCK

Turner Brass Works, Sycamore, Ill. PRICE, $3.50, for cars with cowl boards; $3 for straight dashboards.

The gasoline supply may be shut off from the driver's seat and can be turned on only by one knowing the proper combination. The locking mechanism consists of three disks revolving in a chamber and engaged with each other in the same manner as the disks in a combination lock. Each disk is pierced by holes that may be thrown into alignment, permitting the gasoline to flow, and may be thrown out of alignment by one turn of the control. Any desired combination may be had, and the lock may be opened in the dark by feeling the notches instead of watching the numbers. The installation may be made by the owner.

BREATHER PIPE FOR FORDS

Auto Parts Co., Providence. PRICE, 50 cents.

A breather pipe for the crankcase of Ford cars. An upright pipe, containing a fine screen, is secured to the oil intake by a hooked bolt that fastens around the timer retaining bolt. The device facilitates renewal of the oil supply and prevents oil from spraying. The cover is easily removed or replaced and the screen prevents the entrance of dirt.

AXLE TRUSS FOR FORDS

Hoyt's Auto Supply Co., 370 Fairfield Avenue, Bridgeport, Conn. PRICE, $1.50.

The Ford rear axle is strengthened by a steel rod passing under the differential housing and clamped at each end to the axle. The device is intended to take much of the strain from the central retaining bolts and promote the life of the rear end assembly. It is easily installed and may be bolted in place by the owner.

SPECIAL PISTONS

Butler Mfg. Co., 1124 East Georgia Street, Indianapolis.

Standard cast-iron, semi-steel or aluminum alloy pistons are made for all cars. The semi-steel and aluminum alloy pistons are made extremely light and provided with supporting ribs for strength. All pistons are drilled in a groove below the rings to provide a return for excess oil. Cylinders are reground and oversize pistons fitted by this company.

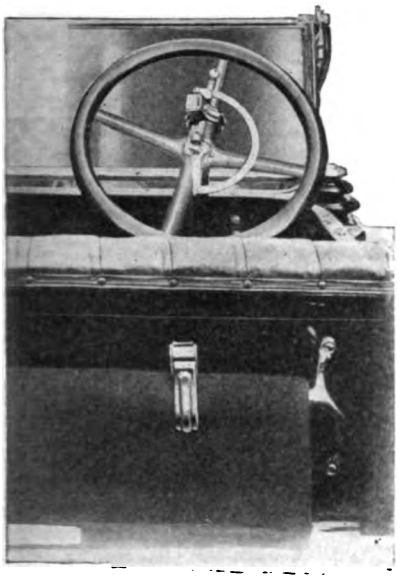
SEBRING EFFICIENCY TIRE

Sebring Tire & Rubber Co., Sebring, Ohio. PRICE, 30 x 3, $18.10; 30 x 3½, $23.60; 32 x 3½, $27.20; 33 x 4, $35; 35 x 4½, $43,20; 34 x 4½, $42.40; 36 x 4½, $47.75.

A seven-ply tire impregnated with pure gum rubber and having a non-skid tread. This gum friction coat is built between the fabric and the tread and is said to promote easy riding and to require a low tractive effort. Straight-side tires are offered and are applicable to any type of rim. The tires are retained on the rim by twenty-three strands of piano wire. The Ford-type tire is the only exception to this form of rim and is a regular clincher.

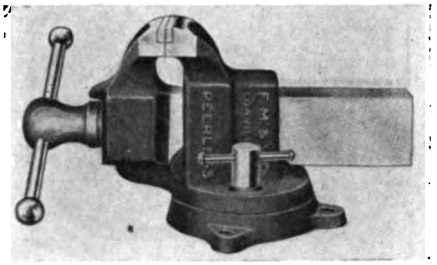
SAVIDGE STEERING DEVICE

The Savidge Co., Indianapolis. PRICE, $4.90.



A graduated resistance is applied to the tie-rod of Ford cars, tending to act as a shock absorber on the steering column and steady the front wheels. It is attached to the front axle and the tie-rod. An oil-tight case contains a cam acting under pressure of a heavy coiled spring, and gives an accurate graduated tension on the tie-rod in proportion to the turning radius.

GEARSET BAND CLAMP FOR FORDS



The New York Motor Car Device Co., 200 Eleventh Avenue, New York. PRICE, 50 cents.

A device known as the Premo transmission band clamp for assistance in replacing the gearset bands in Ford cars. The bands are held firmly around the drums with the ears in position permit of slipping the three shafts in place as the cover goes down, and the clamp is then removed through the small door in the gearset case cover.

Editorial Observation

More Speed

FROM time to time, the general public is moved to an outburst against the garageman, and while many of the reasons for such outbursts have been eliminated there are still some which are plainly apparent and which must be corrected.

A motorist drove up to a fairly large garage in a small city close to New York. He wanted a 6-volt, 2-candlepower double-contact lamp bulb and he described it in just that way to the garageman.

It took the garageman 12 minutes by the clock to locate the lamp bulb!

He had first to locate his stock of lamp bulbs. They were piled on a shelf behind a row of cans of metal polish.

Then he had to go over all the various boxes of bulbs to find the particular box with this size lamps in it. This took 10 minutes.

In the meantime, the motorist was becoming more and more impatient. It was evident that he was in a hurry. Yet, here he was waiting while the garageman wasted his time pawing over his stock to make a 25-cent sale.

The garageman made a 25-cent sale—eventually. But how many more 25-cent sales will he lose. It is certain this particular motorist will never go back for more lamp bulbs, or for anything else, if he can help it. And think how many motorists will NOT wait while the garageman goes over his stock.

This garageman will go over exactly the same procedure one hundred times again. The next motorist and the next will have to wait for their lamp bulbs.

In brief, the garageman has no sense of order and system. He cannot see the dollar signs in $y$tem. He is not sufficiently awake to see the profits that come from quick service.

If this same motorist went into a haberdasher's to get a collar, the clerk would turn around and reach directly for the particular size and style wanted. That's what the motorist expects when he goes to buy supplies for his car. The service in other stores has educated him to expect service as good from a garage.

And if the motorist cannot get service as good as this, and as quick, at one garage, he will go to the next one—and maybe he will go still further to the next one.

But he WILL get the service—somewhere.

Keep Them Posted

ASSOCIATION work is discouraging during the summer months. Some associations of dealers and garagemen manage to keep interest alive through the selling and touring seasons, to accomplish some definite results. But they are the exception rather than the rule.

The summertime is work time for the dealer and the garageman—and it is also vacation time for many of them. Those who fret under the inactivity of dealer bodies at this time should bear this in mind. They should not say "The association is dead; it is doing nothing." Very likely it is only resting, getting ready for the big fall and winter drive.

It is a time for secretaries and presiding officers to be patient. But it is also a time for them to plan.

If every secretary would PLAN now to make each coming meeting a real meeting, a gathering with a purpose, an object, there would be some real results this fall.

"If I were an association secretary," says a dealer who really should hold such a position though he does not, "I would begin now to send out a little advance publicity on coming meetings."

One reason why the National Association of Automobile Accessory Jobbers is so successful is that it has a live secretary, one who keeps all the members posted all the time on exactly what the association is doing and what it has in store for the future.

A little more work of this kind would be a good thing.

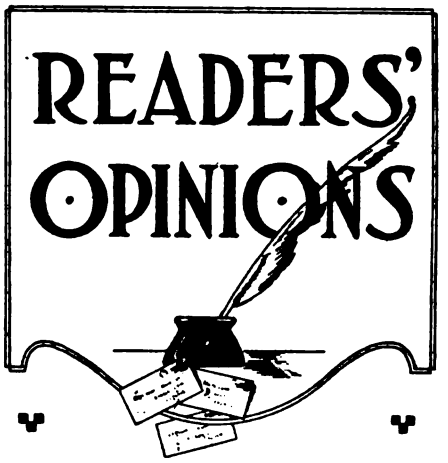
Local Automobile Trade Association and the Association of Commerce

J. C. Thorpe—National Automobile Trade Association

Editor Motor World:

"Success through co-operative effort," is the slogan, either expressed or implied, of all modern business development. It suggests a principle for promoting and safeguarding the interests of every branch of industry of the day, and upon this principle is builded the substantial effort for bigger and better business; for increasingly higher efficiency—and greater service.



As this great principle has been applied in the consideration and solution of problems of local, State and national importance in other branches of industry, so it is being adopted and applied by trade organizations in the retail branch of the automobile industry.

The purposes of the local, State and National automobile trade association are so parallel to the purposes of general business organization that great good may result from the consideration of the points of contact of the Association of Commerce and the Automobile Trade Association.

Wave of Enthusiasm

During the past 5 years a wave of enthusiasm for municipal betterment has swept our country to such an extent that nearly every city of 10,000 population or more now prides itself on its Commercial Club or Association of Commerce, an organization of its merchants, professional men and artisans, banded together for the consideration and solution of civic problems affecting the life and welfare of the community. As a matter of fact, many centers of population, small towns that could hardly be dignified by the name city, have felt the call to bigger and better business methods; for cleaner and more attractive communities, for greater efficiency in administration, etc., to the extent that they, too, boast of commercial clubs, and in many respects have put neighboring cities to shame by their achievements.

This movement has become a tremendous constructive force in the development of civic interests and is marked by constant improvement in the financial and industrial life of the country. It is striving for business integrity, stability, efficiency, and understanding, and, by the co-operation of business men, is achieving what could never be thought of by individuals as such or by isolated groups of individuals without a common purpose and bond of helpfulness and unity. Without this unity, this common understanding of a great ideal, new work in the greatest hopefulness and sincerity, but with misdirected energy and at cross purposes, without attaining that for which they seek.

That the retail branch of the automobile business has a marked influence upon the life and welfare of any community is apparent. In its relation to mercantile interests, it provides means of economical transportation, that increases volume of business, the goal of every wideawake merchant; makes possible more intensified exploitation of the present market, and increases the radius of activity that was beyond consideration before the commercial motor vehicle became an established factor in business.

The automobile service station gives assurance of the continuous use of the investment. In its relation to the professional men of the community, physicians and surgeons, for example, it provides a means of prompt and increased service that is of vital import to the physical well being of the community and conserves time for personal study and investigation to a degree unthought of before the automobile became a necessity in the practice of medicine and surgery. As a means of increasing opportunities for recreation and social enjoyment, the automobile has universal approval.

A Material Asset

If the business of the retail automobile dealer, the garage operator and the retail automobile supply store touches the welfare of the community so intimately, is it not true that a business-like organization of these interests may be of a material asset in the consideration and solution of problems of civic improvement and business development? Who can be more concerned in a clean and orderly city than the enterprising automobile merchant? Who can appreciate the need of street and highway directories and markings more than he? Who is in better position to promote highway improvement, a recognized asset to the local merchant and industrial interests? Who can be of greater service in the entertainment of visitors, whether they be individuals as such, industrial committees or conventions? Who can be more interested in city ordinances affecting traffic and transportation problems?

With a unity of purpose, the group of men engaged in the retail automobile business, organized primarily for bigger and better business whereby they may extend more satisfying service, should constitute a bureau of the association of commerce in any community, whose influence would be a strong factor in municipal betterment. Their usefulness in this respect would be measured by their co-operative effort and would be much greater than would be possible were they associated as individuals in the Association of Commerce activities. The properly directed and crystallized sentiment of a group of business men engaged in the same industry develops greater power than the summation of the sentiment of the individuals.—J. C. Thorpe, National Automobile Trade Association.

Motor World Cartoons

Editor Motor World:

In reference to the subject of cartoons, I feel very sure that you are wielding a strong influence by this method of education. It is very clear that this is attracting a lot of attention, as I hear very frequent discussions of it as I go about from place to place in connection with our association work.

The cartoon subject, "Plan," appearing in your issue of July 5, made a more lasting impression upon my mind than others which you have shown. It seems to me that this is the most vital word relating to the business of the automobile dealer, garage operator or retail supply store. If I were writing to someone who had not given this subject the mature thought that you have, it is probable that this letter would be several pages long, but there is no need of discussing conditions that are familiar to both of us and applying the lesson taught by your "Plan" cartoon. I think that I will take a little time at the first opportunity and write an article for you on this subject.

In thinking over the future of the automobile industry to-day and trying to forecast the condition of the retail branch of the industry as it may be 5 years from now, when the saturation point of the market will have been reached, this cartoon which I have mentioned came again with great force to my mind. I am going to use it in my talks to associations from this time on.

National Automobile Trade Assn.,
Chicago. J. C. Thorpe.

The RETAIL NEWS

MIDDLE WEST

The Laurence Motor Co. is the name of a new concern, organized at 165 North Fourth Street, Columbus, Ohio, to handle Republic and Vim trucks in nine counties in central Ohio. Y. B. Jones is general manager. It is the intention to operate a service department in connection with the sales departmet.

Caleb L. McKee, Columbus Ohio, plans the erection of a five-story fireproof garage at Fourth and Spring Streets to take care of cars during business hours. There is a strong agitation to prevent parking of automobiles on the downtown streets and the plan is to provide a place for cars which will be forced off the streets. In anticipation of the passage of an ordinance preventing parking of cars, many available sites are being optioned for the purpose of erecting garages.

The Craig Motor Co., Cleveland, headed by R. E. Craig, has taken large space in the new H. F. Neighbors Building at Chester Avenue and East Thirtieth Street, for a Ford retail agency.

The Central Illinois Motor Sales Co., Springfield, Ill., has taken over the business of the Chas. L. Bradley Motor Co. of that city. Samuel C. Hardin will be general manager of the consolidated firms.

G. J. Wallace, Decatur, Ill., manager of the Starr Garage on North Main Street for the past year, has resigned to become manager of the wholesale department of the Overland-Broadhead Co. of Springfield, Ill.

Frank and Joseph Kiep, Joliet, Ill., have let the contract for a garage at the corner of Chicago and Jackson Streets, to be 132 x 120, two stories in height and fireproof. There will be storage capacity for seventy-five cars. A display and salesroom will be 60 x 22. The repairshop will be 58 x 22. It is hoped to have the plant ready for occupancy Nov. 1.

R. B. Shaw, Decatur, Ill., has leased the garage at 242 North Franklin Street, that city, formerly occupied by the Decatur Taxicab Co., and will operate a service station and sales agency for the Paige.

Harry W. Brewster of Goshen will open a garage in that city. Livery stables on West Lincoln Avenue will be converted into a garage. He will handle the Studebaker.

The Lincoln Highway Garage Co., Ligonier, Ind., has been incorporated with capital stock of $20,000 to do a general garage business. Directors are James W. Smith, Frank P. Wood, Samuel J. Williams, Leo Kerner and George Bryan.

Westrate & Brouwer, Holland, Mich., have recently opened their new Overland salesrooms and service station.

The Holland Battery Shop has been opened in Holland, Mich., as a distributer for the Willard storage batteries.

Floyd Reynolds, Ithaca, Mich., has bought out the interest of Fred Bolyard in the Reynolds & Bolyard firm. Reynolds will continue to handle the Dodge and Hudson.

The Auto Garage Co., Manistee, Mich., has taken over the business of the National Garage & Sales Co. and will handle the Hudson and Dodge cars. New arrangements are being made for the selling of the Chevrolet, Buick and Overland, which were handled by the National company.

Clyde and Clarence Montague, Caro, Mich., have opened a garage in the Campbell Building.

Charles Tennant, Caro, Mich., has taken over the repair department of B. H. Smith's automobile business.

The Western Michigan Oakland Co., Grand Rapids, Mich., has taken over the distribution of the Maxwell. Headquarters are at the Bond Street garage of the company.

H. C. Hall and Earl Anderson, Clare, Mich., have opened a garage and are catering especially to Ford owners.

The John Ott & Co., Traverse City, Mich., has been purchased by the Grand Rapids Overland Co. and John Ott will be the resident manager of the company. From now on only the Overland will be handled. Through the deal, seventy-four service stations in western Michigan are now controlled by the Grand Rapids Overland Co.

The Chandler Motor Sales Co., Grand Rapids, Mich., is a new sales organization which will handle the Chandler in west Michigan. The members of the firm are Fred H. Peck, who until recently was in charge of the Peck Auto Sales Co., Studebaker distributer; George Van Every and Amos Gezon, the latter two also formerly connected with the Peck company and later with the Barkwell Buick Co. The new company has taken temporary quarters at Division Avenue and Pleasant Street, S.

William Noyes and Charles Harman, Wakefield, Mich., have opened a garage.

John H. Campbell, Manton, Mich., has sold his garage business to Earl Judd.

Clyde Montague, Caro, Mich., has disposed of his interest in the Ford Garage.

Webb & Stowell, Brighton, Mich., are the proprietors of a new garage located in the Henry Rohn Building.

The Spalding Garage, Menominee, Mich., has been completely remodeled and greatly enlarged. About $2,500 was spent for this purpose by Carl Grapel, the owner, it is said.

John Van Loon, who was manager of the Cadillac Motor Car Co., Kalamazoo, Mich., for several years, and who has been prominent in all matters relative to the growth of the automobile business in that city and vicinity, has resigned to become connected with the Cadillac Motor Car Co., Detroit, in the latter's sales division.

Will H. Peck and William Wooden, Kalamazoo, Mich., have formed a partnership and will sell the Elcar. Headquarters have been opened at 532 Portage Street.

The Auto Garage Co., Bear Lake, Mich., has bought out the National Garage & Sales Co.

Elmer Knapp, Lapeer, Mich., has bought out Arthur Harrison's business and will install a large repairshop. Eventually Knapp will erect a new garage.

John Renshler, Caro, Mich., has sold his garage to A. B. Huffman.

R. V. Allen and Harvey McCrum, Jackson, Mich., have become partners and will sell the Oakland and Reo.

A. Miller, Marquette, Mich., has sold his interest in the City Garage. The business of the latter will be continued under the firm name of Erickson & Bloom.

The Hubbell Auto Sales Co., Bay City, Mich., has broken ground for a new garage, 100 x 100 ft., which is being erected at Fourth Avenue and Saginaw Street

The Munkwitz Realty Co., 431 Milwaukee Street, Milwaukee, is preparing plans for the erection of a three-story garage and service station, 60 x 120 ft., on Broadway, Milwaukee. The exact location and name of lessee is withheld for the present. The investment in building will be about $27,500.

The Weyauwega Oil Co. has been organized at Weyauwega, Wis., by local business men to wholesale and retail gasoline and other petroleum products and kindred lines. Tanks will be installed at once. The supply will come from independent refiners. W. W. LaBudde is secretary.

John C. Heitman, Sparta, Wis., has taken the agency for the Pathfinder in a large territory in western Wisconsin, including LaCrosse, and has established headquarters in the M. Savage & Co. garage, 419 State Street, LaCrosse.

E. A. Glab has retired from the Enger Motor Sales Co., Milwaukee, and will devote his entire attention to the Pathfinder Sales Co., 163 Eleventh Street, Milwaukee, of which he is president.

The Hoppe-Hatter Motor Co., Milwaukee, the new State agent for the Paige, will move into its new two-story garage, 60 x 120 ft., at 486-490 Milwaukee Street, on Sept. 1. Adolph C. Hoppe, president, will continue as general manager; Roy P. Bond is the new sales manager; J. P. Meehan is retail sales manager; Edward V. Oehler, traveling representative, and Michael Muller, service manager. Mr. Bond comes from Minneapolis, where he was with the Oldsmobile for 4 years.

The Northwestern Motor Car Co., Milwaukee, has been incorporated with $5,000 capital. A Ford agency and garage has been established at Twenty-ninth Street and Fond du Lac Avenue. Fred Boddenhagen, Jr., Louis A. Smetcamp and Julius O. Roehl are the owners.

Paul L. and H. G. Wegner, Sparta, Wis., new agents for the Ford, have opened a garage and service station in the Roberts Building, Bangor, Wis. Paul Wegner will handle the sales department.

Ben Larson, machine shop and motor repairs, Rhinelander, Wis., has purchased the business and equipment of A. C. Velton and is consolidating the two shops.

The Ritter Automobile Co., Henry and State Streets, Madison, Wis., has purchased adjoining property and will extend its already large garage and service station to Dayton Street, which will provide a building 256 ft. long and 66 ft. wide, all two stories high. The elevators will be abolished and a system of ramps built into the old and new structures. The garage will accommodate 200 cars when enlarged. The Ritter company represents the Franklin, Hudson and Paterson.

The Zorn Auto Co., Osceola, Wis., moved into its new garage and repairshop Sept. 1.

The S. & S. Motor Car Co., Green Bay, Wis., has leased the Rahr Building, Walnut Street, and will make improvements at once. The floor space is 70 x 106, with room for sixty cars. The company handles the Paige and Oakland and the Detroit electric and will make special provision for the care of electric cars.

The Suburban Garage Co., 26 State Street, Wauwatosa, Wis., has broken ground for a two-story shop addition, 20 x 40 ft., and will also build a full second story, 55 x 144 ft., on the old garage.

T. F. Schmitz, Harrisville, Wis., is contemplating the erection of a fireproof garage and repairshop, which will include an implement warehouse.

The Rattunde Auto Co., Necedah, Wis., has taken possession of its new garage and repairshop.

Edward Kroll, Lake Geneva, Wis., has purchased the oil and grease business of Fern Batchelet at that point.

Carl Grapel, Spalding, Menominee county, Mich., has completed the work of installing $2,500 worth of equipment in his new garage and repairshop, erected last spring. All tools are operated by electricity from a private power plant.

Digitized by Google

The Prothero-McGinnis Auto Co., Baraboo, Wis., has taken the district agency for the Cadillac, but will continue the Buick agency.

O. A. Jasperson, Burlington, Wis., district representative of the Ford, has placed Howard Newell in charge of the Burlington station as manager and will continue to reside at North Cape, Wis., handling the eastern end of his territory.

R. E. Gibbons, Elroy, Wis., has taken occupancy of his new garage and service station on Main Street. The garage accommodates 30 cars.

H. A. Ernst, Oconomowoc, Wis., broke ground Aug. 28 for his new garage and repairshop, to be 70 x 90 ft. in size, two stories and basement, of brick and mill construction.

The Green Bay Avenue Garage, 1459 Green Bay Avenue, Milwaukee, owned by Otto Ludwig & Sons, will build a fireproof shop addition, 30 x 30 ft., two stories and basement.

Charles H. Lohr, Hartford, Wis., Ford agent, will enlarge his service station and repairshop by a fireproof addition 25 x 72 ft.

George Brietbach, South Milwaukee, Wis., will build a fireproof garage, 48 x 48 ft., at Twelfth and Michigan Avenues.

PACIFIC COAST

George Laffaw, Bangdon, Ore., proprietor of the Bangdon Garage, has just moved his business into a new frame building on the main street.

L. G. Barker and **F. A. Auger**, Arcata, Cal., have opened a garage and repairshop on the International Highway, known as the P. M. G. Garage. They also have the Maxwell agency for the territory.

Harvey M. Harper, Arcata, Cal., has opened a garage.

J. C. Phelan, Fresno, Cal., has opened a tire store and has the agency for the Kelly-Springfield line.

Rabau & Baumgartner, San Jose, Cal., have opened headquarters as Santa Clara distributors of Diamond tires at First and Divine Streets.

Hermanson & Green, Eureka, Cal., have moved into a new building.

F. H. Lundblade, Eureka, Cal., has opened an accessory store at 520 Second Street and put in a $4,000 stock, specializing in Diamond tires.

The Ford Garage, Roseburg, Ore., is being completely remodeled.

Phil. Harth, Roseburg, Ore., has purchased Jack's Garage on Oak Street and changed the name to the Chevrolet Garage.

The Oakland Garage, Oakland, Ore., has just been completed and is now open for business.

Woodson Bros., Cottage Grove, Ore., have just completed remodelling their plant and painting the building.

J. L. Laird, Myrtle Point, Ore., has opened Myrtle Point's second automobile establishment.

E. A. Lindberg, Port Orford, Ore., has just completed a new frame building on the International Highway and is putting the machinery and stock for historic Port Orford's first garage.

American Taximeter Co., Seattle, Wash., has opened a branch station at 908 East Pike Street.

Paige Motor Sales Co., Seattle, Wash., has been incorporated by V. C. Foree and George M. Price and have opened permanent headquarters at 903 East Pike Street. This firm will handle the entire territory west of the Cascades.

Wood & Co., Starbuck, Wash., will soon erect a new building in that Junction city. Their garage is the only service station between La Crosse and Pomery, a distance of 80 miles, over which there is considerable automobile travel.

Winton Motor Car Co., Seattle, Wash., will move into their new home Oct. 1 at Eleventh Avenue and East Pine Streets. The building will be of brick, decorated with terra-cotta, and will cover an area of 120 x 120, representing a total value of land and buildings of $100,000.

The Endicott Drug Co., Endicott, Wash., Ford and Buick dealer, has taken possession of a new brick garage building costing $10,000.

Smith Bros. Garage, at Pine City, Wash., is one of the latest additions to the number of modern garage buildings recently erected in the Inland Empire. The Studebaker is handled.

Schuster Bros., Ford dealers at St. Johns, Wash., have erected a new brick garage, accommodating over 100 cars.

NORTHWEST

Millberg Bros., Dassel, Minn., are making extensive improvements to their garage.

Nicholas Theien, St. Martin, Minn., will erect a garage.

C. C. Kassabaum, Wabasha, Minn., has opened a vulcanizing shop.

N. J. Almeter & Sons, Mazeppa, Minn., have bought the Tuttle Bros. garage.

L. F. Nelson has bought the Ford agency from Neil Nelson.

Hoof Bros., Plato, Minn., have bought the Plato Garage from Albert Olson.

Anderson Bros. & Baker, Osakis, Minn., have taken the Saxon agency.

Popple & Cummings, Preston, Minn., are erecting an addition to their garage.

L. J. Holub, Preston, Minn., has rented the Munkel Garage.

I. S. Smith, Buffalo, N. D., is erecting a garage, 50 x 80 ft.

M. L. Jones and **Idris Jones**, Lake Crystal, Minn., will erect a garage, 50 x 100 ft.

W. W. Savage, Janesville, Minn., has moved into a new garage.

F. C. Paskie, Grand Forks, N. D., has opened an accessory business.

The Hillsboro Auto Co., Hillsboro, N. D., has begun work on a new garage.

A. H. Leet and **S. C. Leet**, Forbes, N. D., have bought the interest of their partner, F. F. Hixson, in the North Side Garage.

F. O. Kingery and **F. M. Weber**, Forbes, N. D., will erect a garage, 25 x 100 ft.

F. Ferguson, Smithwick, S. D., has opened a garage.

The Whitefish Auto Co., Whitefish, Mont., has passed to the management of E. G. Smart.

The Wright Garage, Mahnomen, Minn., has opened.

Henry Jensen, Red Lake Falls, Minn., has opened a garage and implement business.

William Richards, Morris, Minn., has bought the McCanney interest in the Ford agency.

The Bluff City Auto Co., Stillwater, Minn., has moved into its new garage.

Dondelinger & Seitzer, St. Peter, Minn., have finished an addition to their garage.

Butler & Johannsen, Echo, Minn., have opened a new shop.

Kurvinen & Vance, Duluth, Minn., have opened a garage. They are from Ely, Minn.

SOUTHWEST

R. W. Immasche, St. Louis, until recently State distributer, has taken the agency for the Jordan. He will open temporary showrooms at 4130 Olive Street until he can find suitable quarters on Locust Street.

James Perdue, Greensburg, Kan., has secured the agency for the Dodge Bros. and will build a garage.

L. E. Meyer, Rockville, Mo., has installed an oxy-acetylene welding plant in his garage.

The Dorris Motor Co., St. Louis, will open showrooms on Locust Street, for the first time taking a place on the Row. The former Chevrolet showrooms at the Locust-Lindell cutoff have been leased from the Chevrolet Co. of Missouri, Inc., which took over the distribution from the Triangle Motor Co. The building is a triangle with plate glass on two sides and consists of two floors and basement. Bernard A. Purcell will be in charge.

C. B. Hollister, St. Louis, has been promoted by the Efficiency Oil Co. and has charge of the company's plant at 2100 North Kings' Highway. C. C. Thurston becomes salesmanager at the branch at 3219 Locust.

Curtis Van Antwerp, St. Louis, has been placed in charge of the service department of the Supreme Motor Co. of that city. Tom Herbert, formerly salesman for Peerless distributers, has joined the force of the Supreme Motor Co.

Packard Missouri Motor Co., St. Louis, has opened used car showrooms in the recently leased building at Eighteenth and Pine Streets. Ralph E. Dillard is in charge.

The Broderick-Bolte Electric Co., East St. Louis, Ill., has opened an electric repairshop at 105 Collinsville Avenue and will sell supplies.

R. W. Kilburn, **J. Mallory** and **W. F. Stagg**, Carthage, Mo., have bought the Lanpher Brothers Automobile and Carriage Shop and will operate under the name of the Carthage Auto Carriage and Auto Repair Works.

Giles & Francis, South Haven, Kan., will move their Ford agency to Caldwell, Kan. Their territory has been extended 4 miles into Oklahoma, and this will be a more central location.

The Kansas City Oakland Automobile Co., Kansas City, has incorporated at $5,000 to deal in automobiles. Directors are E. W. Arrasmith, Alta M. Arrasmith and W. H. Meyers.

The New Era Mfg. Co., St. Louis, has increased its capital stock from $150,000 to $200,000.

G. W. Pope and **L. A. Pangle**, Oklahoma City, formerly salesmen for the Ford Motor Co., have secured the agency for the Ford and opened salesrooms at 204-206 West Second Street. The firm will be known as the Oklahoma City Auto Co.

Jesse F. Branham, Albany, Mo., has gone into business in the new Hardin & Branham garage.

W. T. Stevenson and **F. M. Becker**, Oklahoma City, have taken over the Auto Service & Storage Co. on West Second Street.

W. E. Magruder, Joplin, Mo., has just completed a new $15,000 garage on First and Webb Streets. In Joplin $30,000 has been spent on garages within the last 3 months. The Empire Auto Co., East Main and Tom Streets, and the Overland showrooms for W. R. Dunham make up the remaining $15,000. All the buildings are of brick with Carthage stone trimmings, and will total nearly 25,000 sq. ft. of floor space.

The Overland-Irwin Co., Hannibal, Mo., has incorporated at $20,000 to handle the Overland and Willys-Knight. Directors are Leaton Irwin, M. E. Lusk, Jr., F. R. Lusk, C. H. Wood, Albert Wilber and A. B. Grubb of Quincy, Mo., and L. G. Wilhelm, Ethel Wilhelm and Fenton B. Morris of Hannibal.

Jack Craig, Fayette, Mo., will open a new repairshop. Mr. Craig was formerly in the repair department of the Fayette Garage.

Mutti & Brown, Hopkins, Mo., have secured the agency for the Overland.

W. L. Shively, Eureka, Kan., has purchased an interest in the C. F. Grant Garage. The new firm will be known as Grant & Shively.

C. R. Guthrie, Wakita, Okla., traded his garage to J. H. Hamilton. Guthrie will retain the agency for the Overland.

Digitized by Google

J. Case Van Scholack, Garden City, Kan., has opened a new garage at 321 Eighth Street. The new concern will be known as Case's Garage.

Charles Beaver, Hewins, Kan., will erect a garage there in the near future.

Ralph Bloom, Hutchinson, Kan., is erecting a brick garage which has steel beams instead of posts to support the roof.

The Glen J. Le Master Building, Ottawa, Kan., is being remodeled into a storeroom for automobile accessories and supplies.

Melvin and **Bert Breon**, Crystal Plains, Kan., have secured the Ford agency at Kensington, Kan.

Radcliff & Hunter, Barnett, Mo., have opened a new garage.

Coverty & Sansom, Powhattan, Kan., have bought the Powhattan Garage.

Hiram Mills, Drexel, Kan., has sold his garage to J. R. Myers.

Carl Konantz, Arcadia, Kan., has opened a new garage.

Everett Waller and **Emmett Dittemore**, St. Joseph, Mo., have purchased the O. K. Garage from Edward Esser and Tony Komer.

A. Bradbridge, Hutchinson, Kan., has opened a new garage.

Ed Errickson, Ridgeway, Mo., has purchased his father's garage.

Eugene Canton, Hutchinson, Kan., has opened a repairshop.

Hardin & Branham, Albany, Mo., have opened a garage.

William Koelzer, Seneca, Kan., has purchased the garage business of the Buser Auto Co.

Frank Joyce, Altamont, Kan., has moved to Little River, where he will open a garage.

EAST

The Kent Motors Corp. has removed its executive offices for wholesale and export to the suite formerly occupied by the Sterling Motor Car Co. in the United States Rubber Building, 1790 Broadway, New York.

The Henshaw Motor Co., Boston, has opened a salesroom on Exchange Street, Lynn, for a new agency under its control.

The Cadillac Motor Car Co., Boston, has made C. E. Grimes manager of its used-car department.

The Philadelphia Gear Works, 1120 Vine Street, Philadelphia, is erecting a two-story tool house adjoining the plant.

The Chester County Motor Co., Coatesville, Pa., has leased the two-story building at 5740 Cherry Street, Philadelphia, which will be used as a garage and service station.

D. A. Thrall, Ollie Thrall, E. H. Richardson and **C. M. Colton**, Hartford, Conn., have formed the Thrall-Colton Motor Car Co. and have taken quarters at 1283 Main Street. The firm will represent the Kissel Kar. C. M. Colton until recently was associated with the Colonial Auto Co., at 1279 Main Street.

Earl C. Boardman, Hartford, Conn., has taken over the repair business of the Kenney Garage, 120 Allyn Street.

The Overland-Hartford Co., Hartford, Conn., has removed the parts department from the downtown salesroom to the temporary service building on Lawrence Street, formerly the Billings & Spencer machine shop.

FORD CHANGES

Nashville, Tenn., Sept. 1.—The new Ford plan of retail agencies promises to be a success in Nashville, as one of the concerns already established has sold thirty-six cars in the first 5 days of its existence. This is the Blackwood Automobile Co., and H. O. Blackwood, the proprietor of the agency, states that he expects to dispose of 500 Fords during his first year as a dealer. The local Ford branch sold about 400 cars in the city in the past 12 months. Another agency, the Hippodrome Automobile Co., will remodel the Hippodrome, which is 32 x 325 ft. The Wilson-Lawrence Co. will operate an agency in East Nashville, concentrating its sales efforts in this territory, which is cut off from the city proper by the Cumberland River.

Denver, Col.—The Denver branch has established seven limited agencies in this city and intends to contract with two, or possibly three, more agents here within the next few days. The firms so far under contract are located in the central, southern, eastern, western and Capitol Hill districts, and two of those to be added will have headquarters in North Denver and the Five Points district. Every one of these sales agencies will maintain a well-equipped service station in the same building with the salesroom. Some of the agencies are already in new buildings with plenty of space, and at least two of them intend to put up large buildings right away. The agencies established are: O'Meara-Green Motor Co., 1439 Cleveland Place; United Motor Sales Co., 153-155 Broadway; Scully-Norris Motor Co., Griffith Building, Fourteenth and Lawrence Streets; Clark-Gibson Motor Co., Colfax Avenue and York Street; Kempter Motor Co., 1811 Glenarm Place; Turner-Deigle Motor Co., Broadway and Fifth Avenue; McCarty-Sherman Motor Co., West Eighth Avenue and Santa Fe Drive.

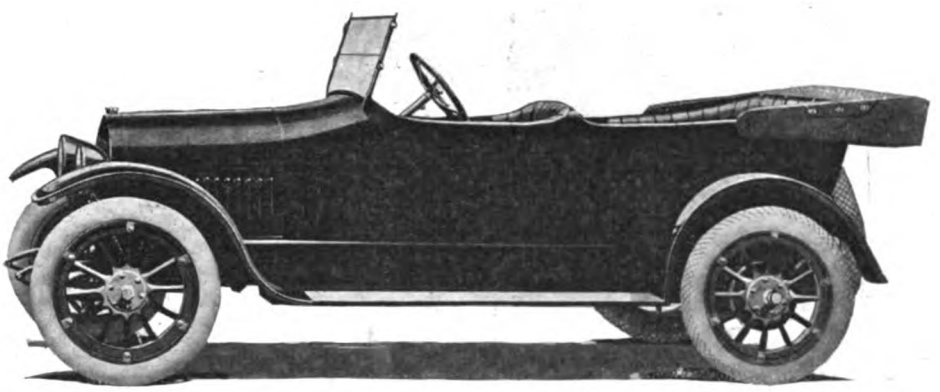
Boston—Ford agencies are being placed, with employees being given the preference by the New England branch. At cambridge, Richard B. Horne, William T. Gill and George M. Cushman, all from the factory forces, have formed the Cambridge Ford Co., with headquarters in Lafayette Square. In Boston, Herbert M. Snow, who was manager of the retail branch; Arthur Coombs and J. R. C. McBeth, salesmen, formed the company, to handle the car as an agency, with salesrooms on Boylston Street.

Winnipeg, Canada—No arrangements have been bade by the Ford Motor Co. of Canada to change its selling organization at the present time, but all managers of Ford branches throughout Canada are seriously considering the advisability of adopting the same scheme of service stations as are coming into effect in the larger towns and cities of the United States. Should the scheme be finally adopted, it would mean the opening of service stations at different points in the larger cities, such service stations being under the control of the local Ford executive, and their service work inspected and their establishments reported on from time to time by a service superintendent sent out from the Ford headquarters. Any man taking up a Ford service station would be required to sign a contract, undertaking to maintain the service station up to the standard as set out by the Ford company, and he would have the privilege of also acting as a selling agent for the Ford car, but would have no restrictions as to number of cars handled. The Ford Motor Co. of Canada has already completed its 1917 contracts covering Manitoba, Saskatchewan and Alberta, so there is very little possibility of a change being made before Aug. 31, 1917.

St. Louis, Mo.—W. C. Anderson, manager of the Ford assembly plant here, has revised somewhat the agency plans. After a thorough canvass of the city he has decided to admit a total of thirteen agencies and has assigned the locations. H. L. Bagley, recently announced as sub-branch manager in East St. Louis, Ill., will conduct an agency in that city. A supervisor of agencies will be named within a few days and he will keep close watch on all selling stores to see that the Ford plan is strictly enforced. All agents must attend weekly meetings at the assembly plant. Samuel Breadon, president of the Western Automobile Co., was interested in two of the new agencies with former Ford salesmen, but was compelled to withdraw from one. He retains interest in the Ayres Automobile Co. Breadon's company is distributor of the Pierce-Arrow cars. He was formerly a Ford distributor before the assembly plant was built here.

Tacoma, Wash.—The Ford Motor Co. will maintain its wholesale department in Tacoma at Seventh and Broadway, and will also take good care of the two Ford retail agencies, namely, the Universal Motor Car Co. and the Manley-Thompson Bros. Co. President Walter Baldwin of the Universal Motor Car Co., has contracted for 500 Fords for Tacoma. He will continue to operate his five subagencies in Pierce County. R. A. Mueller will supervise the mechanical end of the business, while George Davis and L. W. Harkins will manage the sales department. The exclusive Ford agencies under the supervision of the Universal Motor Car Co. are located at Puyallup, Sumner, Eastonville, Buckley and Dupont. Manley-Thompson Bros. Co. has also been named Ford dealer in Tacoma, at 906-908 Tacoma Avenue.

Grand Rapids, Mich.—Ford cars are now sold in Grand Rapids, Mich., by the following dealers: C. D. Miller, Ottawa Avenue and Louis Street; the Standard Auto Co., 648 Bridge Street; the Madison Square Garage and the Burton Heights Garage.



Omaha—Ford agencies are springing up over night in Omaha since the new order of sales methods went into effect. Already there are five such, where there was but the central office. W. C. Sample and B. W. Hart, both former salesmen, have organized the Sample-Hart Motor Co. and secured temporary quarters. F. E. Hughes, former manager of the Council Bluffs branch, with G. M. Irons, a retail salesman, have formed the Hughes-Irons Motor Co. of Council Bluffs, having purchased this branch of the Ford company outright and set up shop in its former quarters. V. D. Benedict, former retail sales manager for the Ford Motor Co.'s branch house here, is now manager for the Universal Motor Co., Twenty-seventh and Leavenworth Streets, which will handle Ford cars. In addition to these firms, there are the Holmes-Atkins Co. of South Omaha, and the Coad-Marsh Co., temporarily located in the Industrial Garage Building at Twentieth and Harney Streets. Insistence of the Ford Motor Co. that dealers shall be provided with suitable quarters, not only for stock, but for service as well, is the reason temporary quarters are being occupied by some firms, because they must make arrangements for these before their contracts are signed. All present firms will probably be in permanent quarters within a month. It is required of each agent that a two-story building not less than 60 x 120 be occupied, that individual service stations be provided, and no central station counted upon, that yearly contracts and monthly shipping or delivery instructions be agreed upon, and that ample part stocks be carried.

Indianapolis—Six retail Ford agencies have been established in Indianapolis and Marion County to take the place of the retail sales and service recently discontinued by the Ford Motor Co. Perhaps two or three more will follow. For the most part, men formerly connected with the Indianapolis branch of the Ford Motor Co. will be at the head of the agencies. John Burke, head of the John Burke Co., was assistant manager of the Indianapolis branch; Walter Olin was formerly superintendent, while H. L. Holcomb, Harry Stone, A. W. Bower and A. Herbert Smith, all at the head of sales agencies, were formerly connected with the sales department.

Two Jackson Eights and Two Fours

lew Eight Has Ferro Motor —Four Open Bodies

The tilted windshield, double cowl and rolled body rim combined with maroon body finish and black running gear make the new Jackson very attractive

A NEW EIGHT, with 48-hp. valve-in-head Ferro motor, and supplied in four attractive open body tyles, will lead the Jackson line for next ear. Other than the change in power lant the car is characteristic and has ne well-known full-elliptic springs. The hree present models, two eights and a our, will be continued without change.

The price of the new model is $1,295 s a two- or five-passenger. The four-assenger is $1,395, and the seven $1,370.

The bodies for the new chassis are de-idedly modern and are attractively ainted, the color combination being light naroon with black running gear and enders.

All have tilted windshields; five- and even-passenger cars have a double cowl nd the body rim is rolled in. Divided ront seats and a sloping deck character-ze the four-passenger, which has wire wheels as standard equipment.

The chassis is built of standard parts and the design is mainly conventional. The motor is combined with a Borg & Beck plate clutch and a three-speed Co-vert gearbox. The clutch is a departure in Jackson construction in that the other models have leather-faced cones.

The motor is a 3 x 3½ in. and develops its maximum of 48 hp. at 2400 r.p.m. Both blocks of cylinders and the upper half of the crankcase are cast in one piece, and the cylinder-heads are detachable. Intake manifold and water outlet header are combined, the latter forming a jacket around the former. The manifold is arched and the carbureter is suspended from the center. Condensation cannot settle in the manifold, but must run to one cylinder block or the other, thus loading is prevented. The generator is placed at the front of the V and the ignition distributor at the rear. The exhaust pipes are on the outside.

A feature of the design is that although the valve-in-head construction is used, the valves are completely inclosed, yet they may be adjusted or the rockers may be oiled without removing the covers. This is due to the peculiar valve construction. The rocker is a steel-pressed and has a cup at its center which fits over a ball-ended stud mounted in the head, which is adjustable from the outside, and by moving it in or out, the proper clearance between the rocker and the valve may be obtained. The ball-joint is oiled by a wick, which is placed in a hole drilled in the center of the stud.

The carbureter is a Zenith duplex, to which gasoline is delivered by a Stewart vacuum system. Starting and lighting are supplied by Auto-Lite units and ignition by a Remy distributor. The generator is driven by a 2-in. flat belt from a pulley on the crankshaft and adjustment is obtained by raising the hinged platform which carries the generator.

A two-blade fan is mounted on the front end of the generator shaft and cooling is by thermo-syphon in conjunction with a vertical tubular radiator.

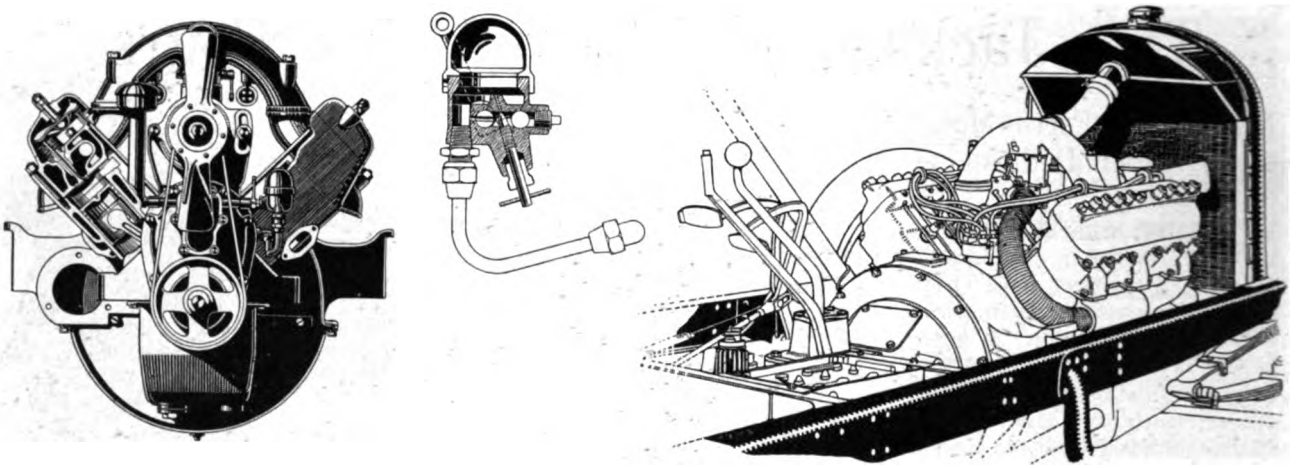
The crankshaft has three main bearings of 1 9/16 in. diameter, the lengths varying from 2¼ to 3 in. The connecting-rod bearings are 1 9/16 in. diameter.

The forked type of connecting-rod is used. The wristpins are bronze bushed.

Pistons are cast-iron and have three Wasson rings. The pistons are slightly relieved on the wristpin sides. The wristpins are held in place by a set-screw and cotter pin. The clearance between piston and cylinder is 0.003 in.

The camshaft carries an independent cam for each valve and is mounted on three bronze bearings. It is driven by helical gear and roller valve-lifters are used. Valves have a mean diameter of 1⅝ in., with a total lift of 0.326 in.

Lubrication is combined pressure and splash feed. The crankshaft and connecting-rod bearings are pressure fed. The gear oil-pump, mounted on the front of the motor, pumps the oil through a regulator and thence through the hollow crankshaft to all the bearings. The suction line of the pump is on the right side of the motor and feeds the oil through a screen in the bottom of the pan directly to the pump. In case it is desired to wash out the pan this screen may be readily removed.



The pipe line on the left side of the front engine gear cover leading to the oil regulator is the main oil pressure line. In order to prevent excessive pressure in the system, a relief valve is interconnected with this line, which starts to open at a comparatively low pressure and throws the oil on the engine gears. This valve is on the top of the gear cover, and in case the oil gage does not register it may be found that dirt is interfering with its operation.

The clutch may be reached for inspection or adjustment through a handhole in the flywheel housing.

FOUR JACKSON MODELS

Hyatt roller bearings are used throughout the gearbox. The shifting lever is a ball and socket type, mounted in the gearbox cover. Carried on one side of the gearbox is a single-cylinder Stewart air-pump, thrown in action by a lever in a pocket in the floor boards. This pocket also carries the air-hose.

The driveshaft has two universals and both torque and driving strains are transmitted through the springs.

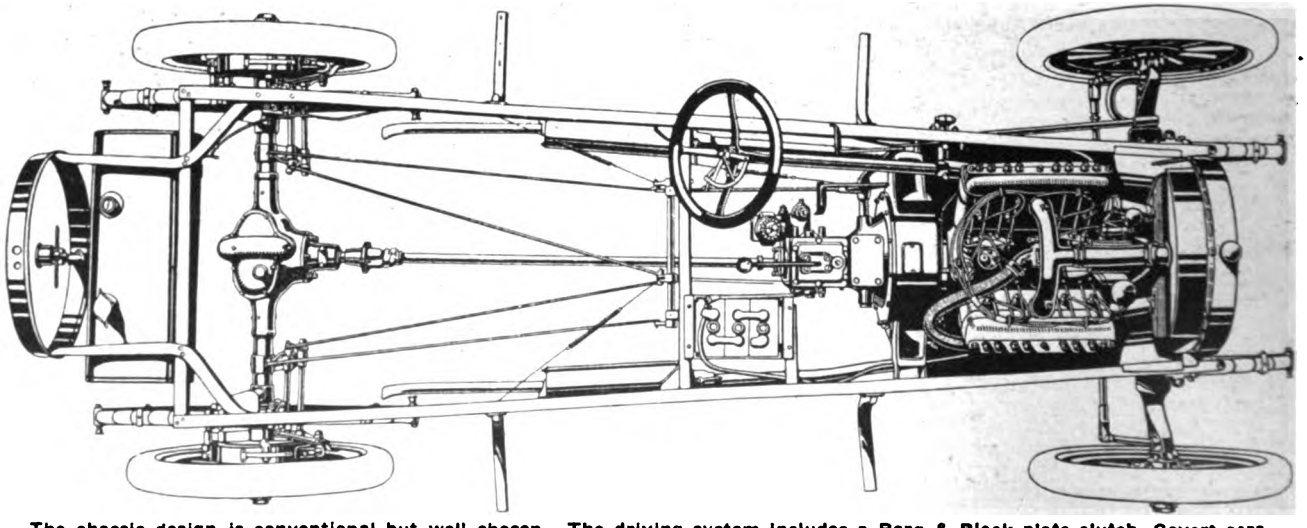
The axle is a Salisbury floating design, with spiral-bevel drive, giving a 4¾ to 1 ratio. Brakes are internal and external, 12 x 2 in. Bearings are Hyatt, New Departure and Gurney. The front axle is an I-beam type, made by the same concern.

The steering gear is a full worm and gear type, made by the Foster Gear Co.

A new support for the spare rim and gasoline tank has been devised. It consists of two horizontal channel members overhanging the rear cross-member. The tank is suspended from these and the rim carrier is bolted to their ends. They are solidly anchored in the frame, extending forward to form diagonal reinforcing or gusset members for the frame.

A new door-lock has been designed which is extremely easy to operate under all conditions and yet is simple in construction. It is operated by a button, which is flush with the upholstery and consequently cannot catch the clothing of passengers getting in or out. An advantage is that pushing the button and opening the door is one movement, and it takes very little pressure to operate the button.

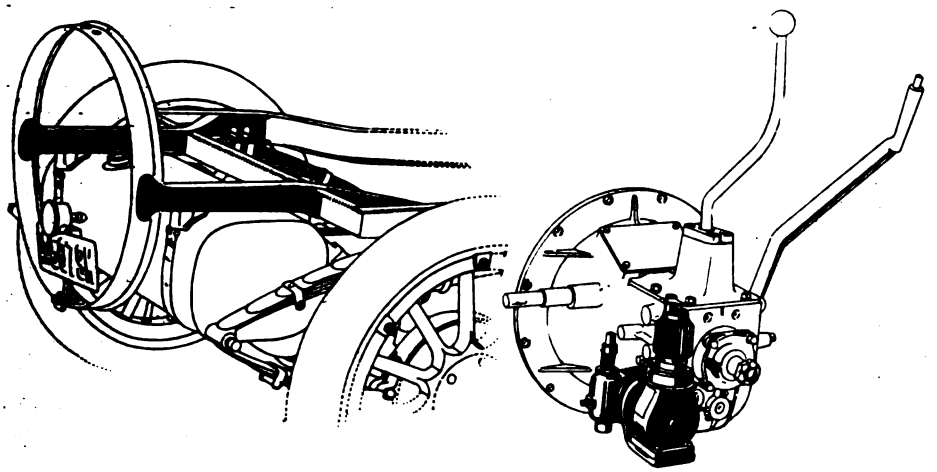
The catch on the lock rotates instead of sliding, as is usually the case. It is pinned to a short rod and the position of these two members is such that they are just over dead center and the catch cannot be moved. When the button is pressed, these two members are thrown off dead center and the catch opens. The door must be locked by a different action, inasmuch as there is no give to the catch except when the button is pushed. Consequently the give has been provided by designing a spring keeper.



The four-cylinder car, known as Model 34A, is made as a five-passenger touring or two-passenger roadster. It has a unit power plant, consisting of a 3½ x 5-in. L-head motor, cone clutch and three-speed gearbox.

Schebler carbureter and Stewart vacuum system are used, ignition is supplied by a Connecticut distributor, and starting and lighting are Auto-Lite units. A centrifugal pump is used for circulating the cooling water. The wheelbase is 112 in. and tires are 32 x 4, with the non-skids in the rear. Steering gear is a worm and gear and the rear axle is full-floating.

The smallest eight is also made with a two- or five-passenger body and the largest eight with a seven-passenger body. The former has a 2⅞ x 4½-in. motor and the latter 3½ x 4½-in. The specifications are the same as for the four, except that the largest eight has 124-in. wheelbase and 34 x 4½ tires.



The stock color for the four is Brewster green with black enamelled hood and fenders. The smallest eight is dark green and the largest eight dark blue, both with black enameled hood and fenders.

The equipment is complete, consisting of one-man top, Collins curtains, with curtain openers on the doors; rain-vision windshield, Stewart speedometer, driven from the transmission shaft, etc. All three eights are equipped with a tire pump and the four is designed so that a pump may readily be attached.

The chassis design is conventional but well chosen. The driving system includes a Borg & Black plate clutch, Covert gearbox, two universal drive shaft and a spiral bevel drive axle

How I Get My Prospects

I FIND that the daily newspapers can be used to very good advantage in getting the names of prospects. This is a source of information which I know that dealers are not using to full advantage, and for this reason I believe are not cashing in on all the opportunities at hand.

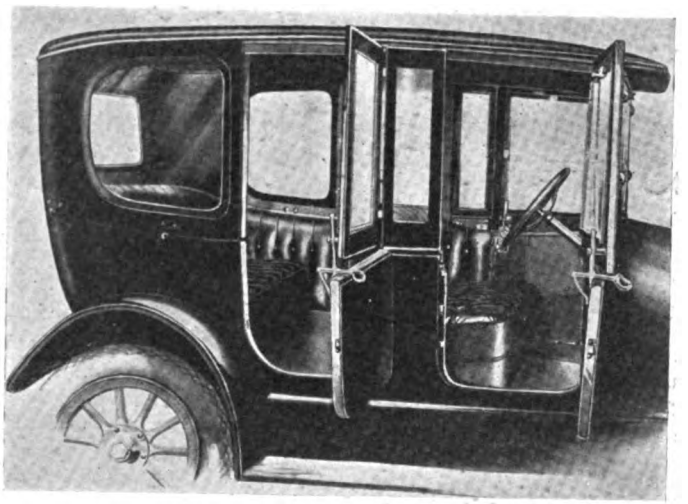
From every newspaper that you pick up you see the names of at least a half-dozen prospects.

For instance, in the news columns there is a story of So-and-So who has just been promoted in the big department store downtown. Along with his new position he will probably get an automobile, and why not a Hupmobile? Then there is the hotel list of people from out in the territory who come to the city on business—why not see them and show them the Hupmobile? There is also the news items of prominent people who have come to the city—some doctor who gets a new appointment. An article on politics, stories of social organization appointments; there are the letters which men write to editors of the papers giving their ideas on certain public issues, and above all, the "Want" columns, listing the "For Sale" automobiles. Many of these I have been able to interest in the Hupmobile.

Also, there is the society columns in the papers. One of the debutantes has a birthday party next week. Why not a Hupmobile for a present?

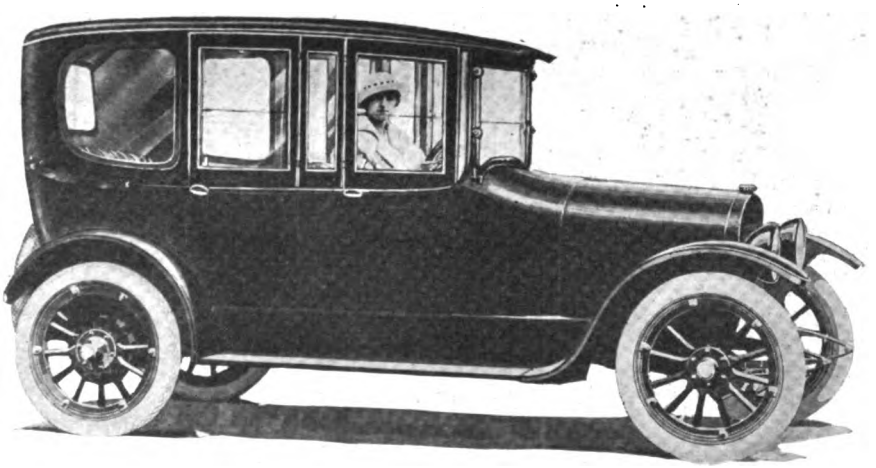
A list for mailing purposes can also be made up from the advertising columns, although great care has to be exercised here in not getting any names on the list which would not be interested.

From our experience of over a year and a half of using the newspapers to get prospects, we have found the idea very profitable.—C. R. Constant, of Constant & Groves, Springfield, Ill., in Hupmobile Sales Bulletin.



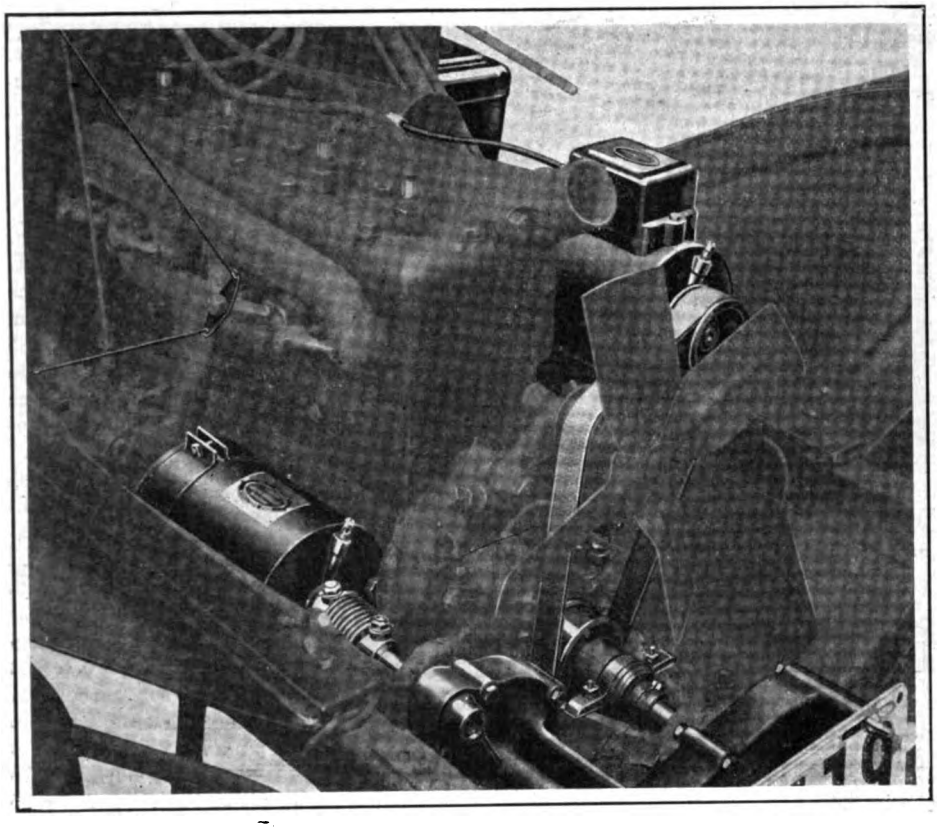
Studebaker Garage for South Bend

SOUTH BEND, IND., Aug. 28—The Studebaker Corp. will erect a large service garage, which will handle the product of the concern's factories, according to plans now being considered. The structure will be approximately 100 x 165 ft.; plans and specifications will be prepared soon.



Boston Labor Rate Now 85 Cents

BOSTON, Sept. 1—Following a meeting of the Board of Directors of the Boston Automobile Dealers Association, held this week, a uniform rate of 85 cents an hour for repair work will be charged in practically all of the service stations of the members beginning today.



Several months ago, when the question of increased rates came up, the directors did not care to place the association on record in the matter. At that time, the Henshaw Motor Co. raised its price to 85 cents, and other dealers later followed suit. President MacAlman said that wages were going up so much and good men were getting so scarce that he thought $1 an hour would have to come eventually, and he was willing to quote such a price. Now, however, so many of the dealers have gone to 85 cents an hour that the association feels it is possible to make the suggestion that such a rate be made uniform.

The touring body of the eight-cylinder Jackson may be fitted with a detachable top, making it suitable for either summer or winter driving

Appearance of the A. B. C. electric lighting and starting system as applied to a Ford

A. B. C. Electric Lighting and Starting System Easily and Quickly Attached to Fords.

SEVERAL marked advantages are claimed for the two-unit, six-volt starting and lighting system for Fords made by the A-B-C Starter Co., Detroit, and selling for $85, installed. It is the design of Alexander Churchward, well-known starting and lighting expert, who is vice-president and engineer. Special importance is attached to the fact that the system does not interfere with the accessibility of the engine and is itself accessible. It takes only a small amount of the engine power, as the generator is only ⅛ hp. The supporting brackets are so designed that they do not put an undue strain on any of the motor parts. Another important feature is that no changes in the Ford construction are made; the motor and all its accessories remain exactly as they are.

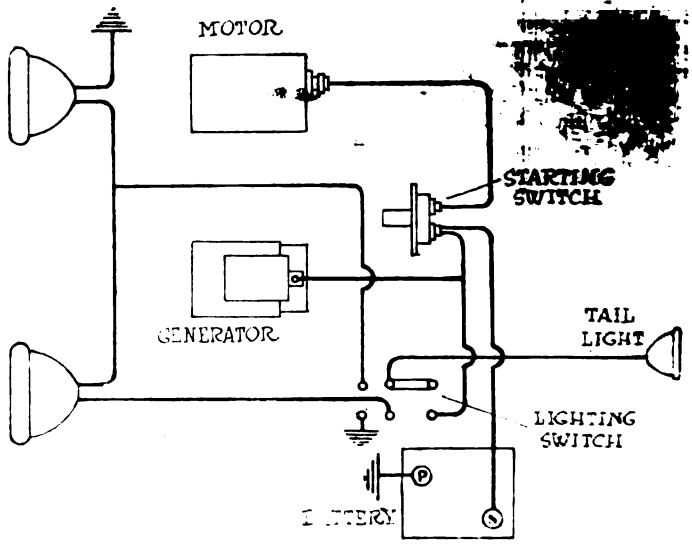
The generator is at the left front of the motor on a bracket supported from the crankcase, longer crankcase bolts being used. It is driven by a broad, flat belt from the regular crankshaft fan driving pulley. The fan pulley itself acts as an idler and the spring keeps the belt taut. A Ward Leonard current regulator is mounted on the top of the machine.

The starting motor, on the right side forward of the carbureter, is carried on a cradle which is bolted to the crankcase flange on one side and which is supported on the other side by a lip which goes around the edge of the frame.

A double reduction is used, the first being through spur gears and thence through a roller chain which drives through a shaft which connects with the front of the crankshaft.

This whole mechanism is carried in a rigid casting which is anchored to the front spring clips.

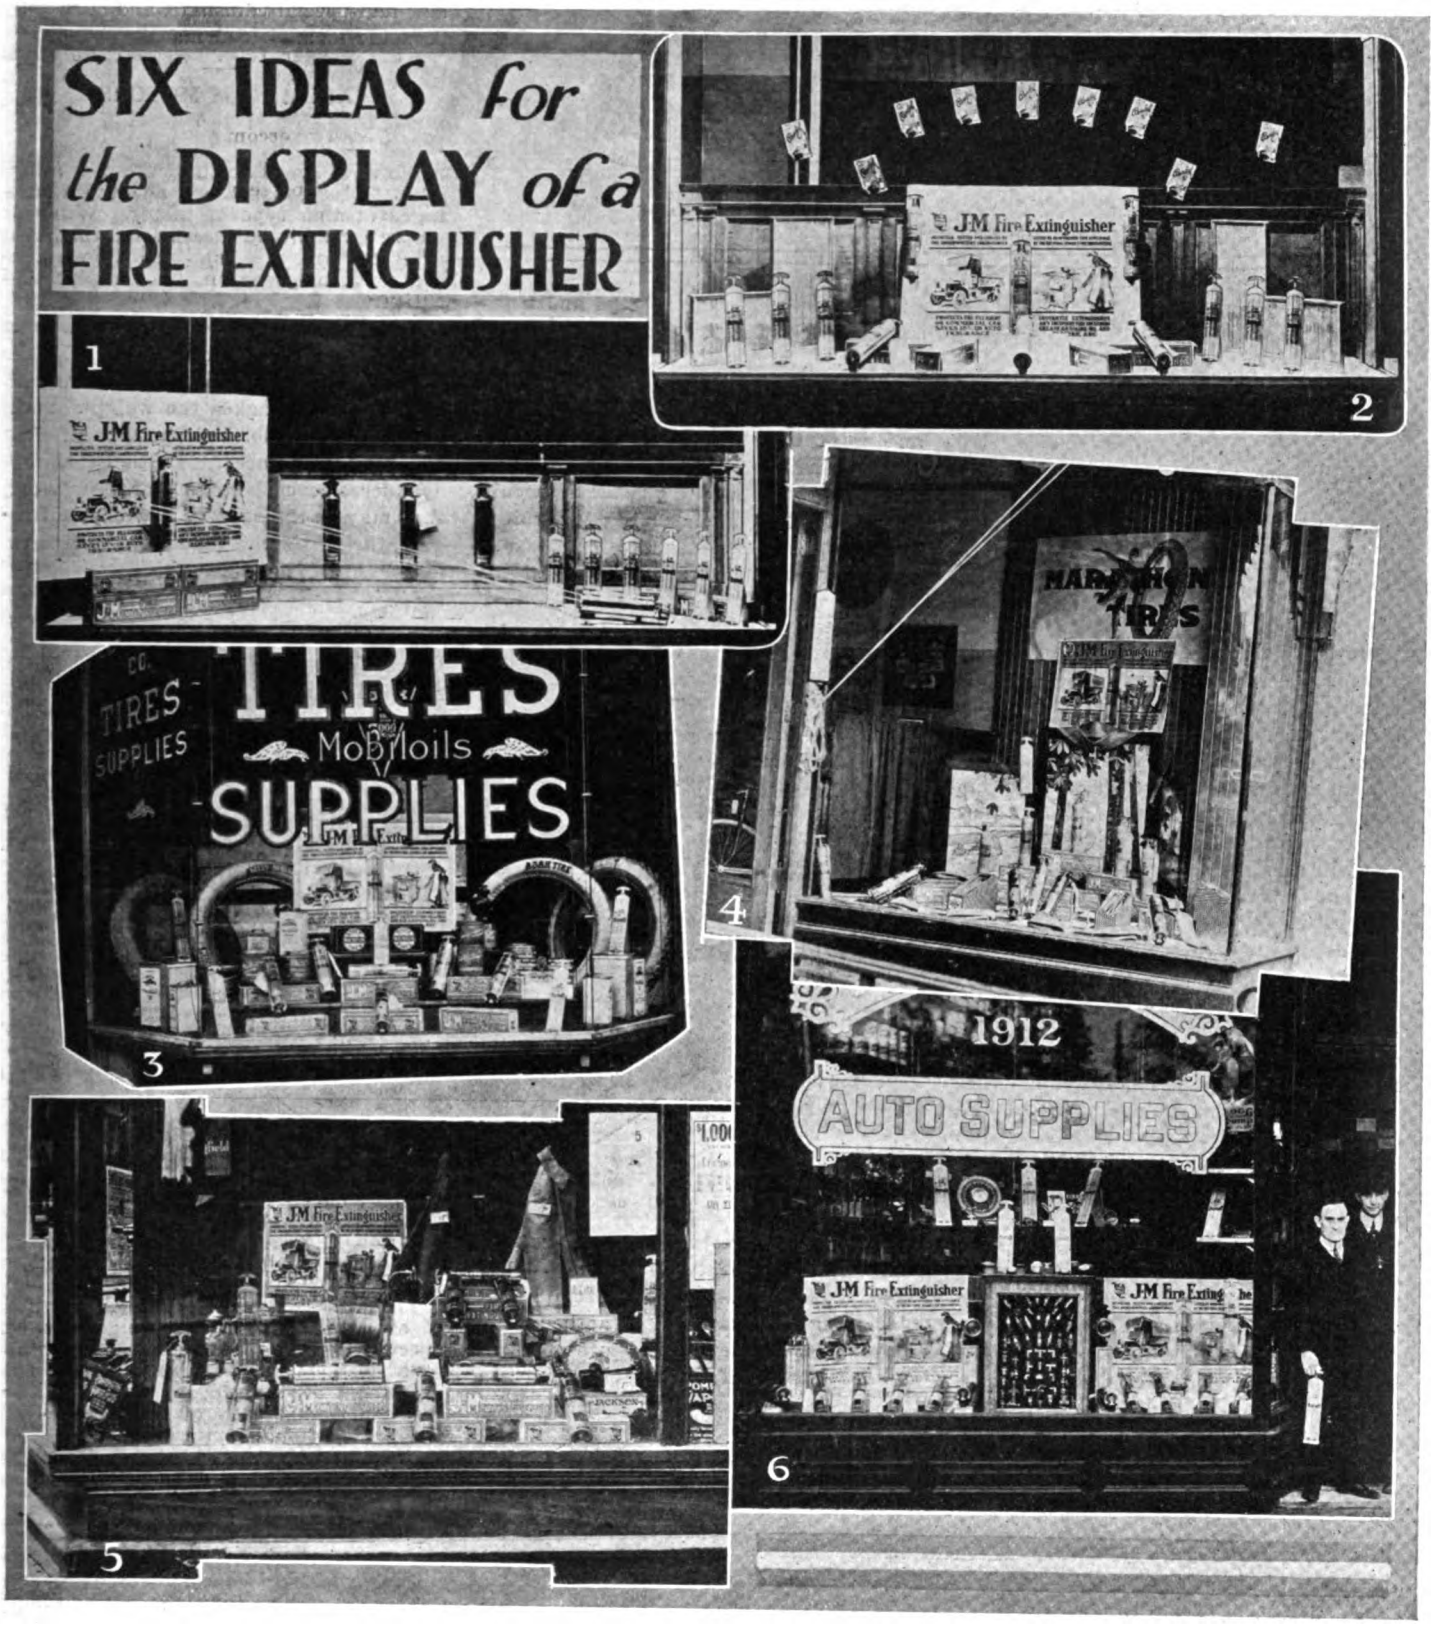
There are two innovations in the design of the starting apparatus; one is the use of a cushioning spring interposed between the ends of the armature shaft and the starter reducing gear, so that the actual inertia of the armature may be used to give the high initial pull requisite to overcoming the high starting friction. The result is that the initial draw on the battery is much less than if the armature were solidly connected.



The second point of interest is the method of engaging and disengaging the starter clutch, which, by the way, occupies about the same position as the starting crank does in the ordinary car. The principle is somewhat similar to the Bendix drive. When the starter begins to rotate the driving member of this clutch slides forward and engages the crankshaft.

This sliding motion is obtained by cutting a spiral thread on the outside of the sleeve and having meshed with it another sleeve or nut which is held from sliding by a loose-fitting collar. This sleeve is free to rotate, yet the collar produces sufficient friction so that when the starter begins to operate the inner sleeve is held back enough so that the outer one is screwed forward into engagement.

The vise is disengaged automatically, the motor running away from the starter and thus drawing it out of engagement.



The installation is extremely simple; it usually does not require over 3 to 5 hours and is included in the price. To attach the generator, three short bolts are removed from the crankcase flange and longer ones are substituted. The motor requires the removal and replacement of only two bolts and the gear housing is attached to the front spring clip after removing the radiator. Except for the wiring, this is all there is to the installation. The lighting switch is placed on a panel at the left of the dash and the starting motor is thrown into operation by a small pedal in the floor board.

The complete equipment includes ammeter, starting switch, lighting switch with dimmer attachments, and all necessary parts for installing the system.

This is the wiring diagram for the A. B. C. electric lighting and starting system for Fords

Do It This Way—

···QUERIES ANSWERED···

REGRINDING CAMSHAFT FOR SPEED

Figs. 1, 2 and 3

Editor Motor World:

In the Aug. 2 Motor World there was an article giving the address of a company making a racing type of camshaft for Ford motors.

We have a Maxwell camshaft that we would like to have reground so as to give the valves more lift, also so the valves would open and close quicker.—Rogers Garage & Light Co., Jackson Center, Ohio.

Motor World knows of no practical method by which a standard camshaft may be reground to give the valves more lift and a quicker opening and closing. Grinding down the lower part of the cam and adjusting the tappet length to again bring it to a seat on the cam will, of course, cause the valve to be lifted higher and will give a quicker opening and closing, but is very harmful to the performance of the motor.

Exactly what this regrinding will do is best explained by diagrams. Fig. 1 shows the standard cam as furnished by the makers, having a normal lift and a shape that permits easy action and a minimum side thrust on the cam. Fig. 2 shows the cam ground away at the low part only, and while giving the greater lift desired, has made the angle of cam so great that in operation there would be an excessive side thrust, with its attendant wear and tear on the parts. At high speeds this cam would be very noisy and it is doubtful if the motor would show any great increase in power.

Fig. 3 shows the same cam still further ground away on the sides, thus increasing the angle of the cam and making it again the same as that of the standard cam shape. This requires that the top of the cam, or the "dwell" point, be made smaller, and while easy acting and quiet, the valve would be held open for too short a period. Hence all that might be gained by the greater lift would be lost by the short period of opening.

Although these diagrams are exaggerated to illustrate the point, and it might appear that there was a middle point between the two extremes shown in Figs. 2 and 3, it will be found that regrinding will have no great beneficial effect. Any change in the rate of opening and closing of the valves requires a new and special camshaft, and such may be made in any good machine shop.

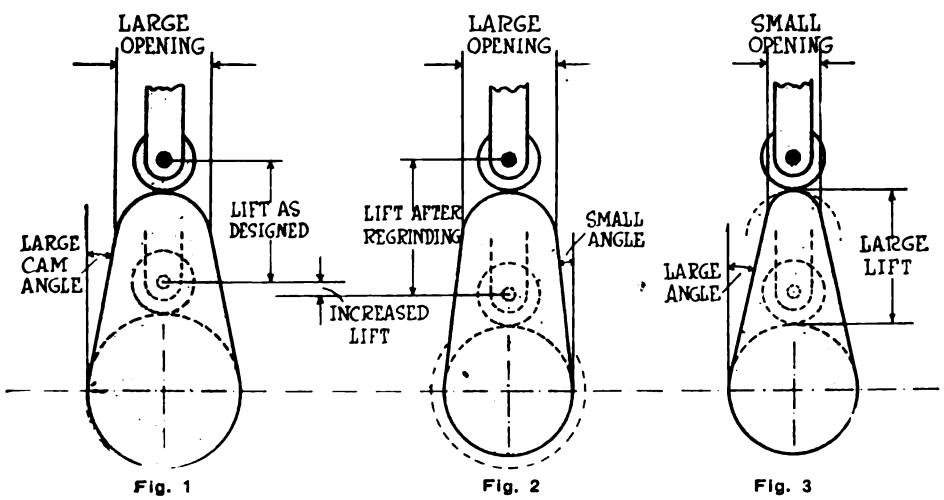

Fig. 1 Fig. 2 Fig. 3

Showing on an exaggerated scale the fallacy of attempting to regrind a cam to a shape suitable for speed work

ALUMINUM MOTORS

Fig. 4

Editor Motor World:

We have heard much of the new aluminum motor construction and the advantages of this type of motor. Will you please explain the manner in which the cylinders are cast, and tell us whether the cast-iron liners may be replaced.—Reader.

The illustration shows the aluminum casting of the new Premier motor. The chief advantage of this type of construction is that it makes the weight of the car about 250 lb. lighter than if iron castings were used. If the cast-iron cylinder sleeves become scored or worn, they may be replaced by new ones. However, the job is one that requires a service station to do the work.

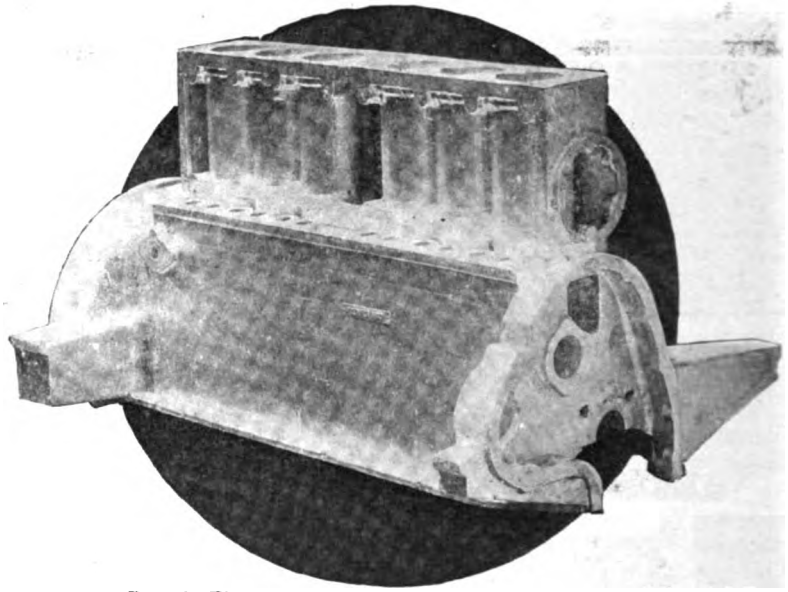

Fig. 4—The aluminum cylinder and top crank case casting of the new Premier motor

BOOK OF CAR SPECIFICATIONS

Editor Motor World:

There is a handbook published which gives data as to price, weight, motor specifications of automobiles manufactured in the United States and some few prominent foreign makes.

When a 1917 copy of this book is off the press, should you publish this, mail us one and charge it to us, or mail it C. O. D., parcel post.—Valley Motor Car Co., Memphis, Tenn.

The National Automobile Chamber of Commerce, New York, N. Y., publishes a book which gives complete details on all machines which are produced by its members. All the principal specifications are given and the cars are illustrated. The price of the book is 25 cents, but the supply is at present exhausted and no more will be published until next year.

The Autocar Year Book, published by Illiffe & Sons, Ltd., 20 Tudor Street. London, E. C., gives complete specifications of practically all the cars manufactured in the world.

Enger is Convertible From Twelve to a Six

Intake Valves on One Block Held Open and Manifold Cut Off —One Model at $1295

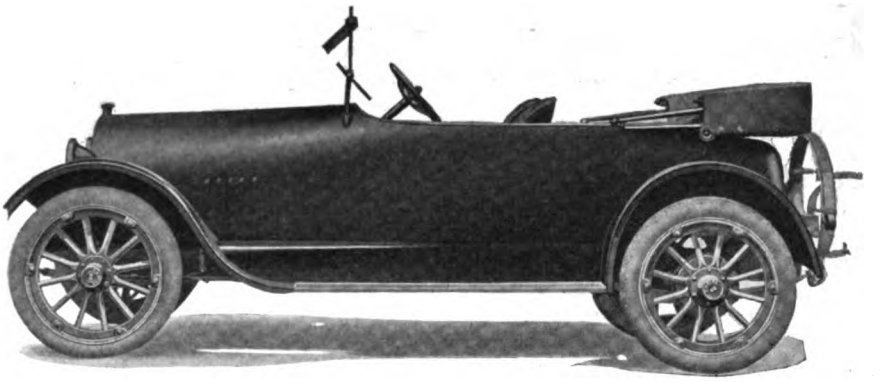
WHAT amounts to an innovation in standard motor car construction is found in the Enger, Twin-Unit Twelve for 1917, made by the Enger Motor Car Co., Cincinnati. Through the shifting of a lever the Enger may be changed from a twelve to a six. This is the first time that this has been found possible in a stock car. The Schebler, one of the early twelve-cylinder experiments, used some such similar device, but none of these cars ever were marketed, only one having been built.

But one chassis is being built and this, a five-passenger touring type with streamline body and hood and double cowl, sells for $1,295. This is an increase of $200 over the previous twelve of last year, but the 1917 model is greatly improved in appearance over its predecessor. With a wheelbase of 116 in. and cantilever springs in the rear the car rides easy. The rear axle is of the floating type with double row ball bearings throughout and the drive is taken through spiral bevel gears.

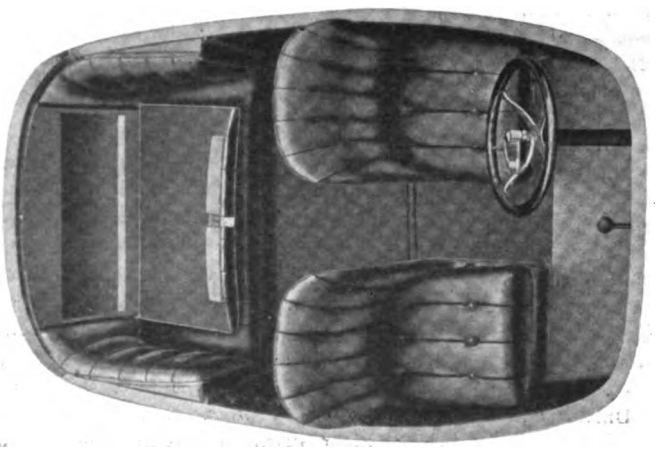
The principle involved in changing the motor from a twelve to a six is extremely simple. A rod having six cams is placed over the push rods of the intake valves on the left block of the V and by throwing a lever placed on the steering post and under the wheel, this shaft with the cams is turned sufficiently to act upon the pushrods and open the intake valves and hold them in an open position until the lever on the steering wheel is thrown back. At the same time the cams open the intake valves the turning action of the shaft carrying the cam closes a butterfly valve in the intake manifold to the left block. Thus the six cylinders are cut out, but they act as a compensator for the other six, which of course are off center.

The motor, which is of Enger's own construction, has a very small bore and stroke, being 2 11/16 x 3½ in. This gives it a N. A. C. C. horsepower rating of 36.77, and a displacement of 245.75 cu. in. Enger's claim for great economy when the car is used as a six seems well taken since it stands to reason that with six cylinders having a total displacement of 122.9 cu. in. the motor must be more economical as to fuel than the car with a much larger displacement. The Enger has the smallest piston displacement of any twelve on the market to-day and from a flexibility standpoint it may be said that all speeds from a point where the speedometer rests at zero up to 60 miles per hour are possible in high with the twelve cylinders in action.

A representative of MOTOR WORLD rode in the car over hills and on level stretches and found 40 miles per hour possible with the use of six cylinders and up to 60 with the twelve cylinders in action. On level ground starting was easy with the gearshift lever in high and under the same conditions, with the clutch in and the gears in high, a touch of the starter pedal was sufficient to start the motor and accelerate to 40 miles within a city block. There was no bucking to the motor when starting in high.



The motor is of the valve-in-the-head type and the cylinders are of semi-steel. The main crankshaft bearings, of which there are three, have bronze backed bushings and unusually large bearing surfaces. Enger has seen fit to line the valve machanism covers with felt to give greater quietness. Adjustable pushrods operating on ball bearings in ball socketed rocker arms with felt oil retainers also make for quietness. Three thousand revolutions a minute is the maximum motor speed, and at this point it is said to develop 55 horsepower.



A Stromberg carbureter placed in the V takes the fuel by gravity feed from the tank in the cowl, while the ignition is Remy and the electrical equipment two-unit Westinghouse. Lubrication is by pump, the oil being forced through the hollow crankshaft to the connecting rod bearings. This pump is located at the bottom of the oil pan and it is in this pan that another departure from regular practice is found. Longitudinal tubes are cast in the lower half of the crankcase, which is the oil reservoir, and the air rushing through these tubes helps to keep the temperature of the oil lower. It also is contended that the oil passing into the cylinders not working is further cooled, since these cylinders are doubly cooled through the absence of explosion and the fact that the water from the radiator is not siphoned to that block as it becomes cold.

The clutch is a multiple disk, Raybestos lined, and the housing is partially open to keep it cool. The clutch and gearset run on double annular ball bearings with the exception of the counter gears, which have bronze bearings. Two universals are used in the final drive.

Brakes are of the internal expanding and external contracting type. Tires are 32 x 4, non-skid in rear and plain in front.

Empire Adds Four-Passenger Model

DETROIT, Sept. 5—The latest of the four - passenger body designs is the new Empire touring about which is fitted on the six-cylinder chassis. The front seats are individual, with a wide aisleway. A roomy rear compartment for luggage is accessible by dropping down the back of the rear seat. The color scheme consists of green for the body proper, with black hood, fenders and running gear.

Digitized by Google

Two colors are offered in the 1917 Enger, a light cream and a black and green combination, the latter having the hood, fenders and chassis black and the body and wheels dark green. Other colors can be had at small additional cost. The upholstery is genuine leather over curled hair and coil springs. The running boards and floor boards are linoleum covered and aluminum bound.

There is a remarkable absence of square corners in the Enger. The body rolls in a little at the top and the doors have a new design of fastener. When they are opened and the small lever pulled up sufficiently to allow the door to open, a spring-operated stud projects from the door toward the jam and holds the catch up. As the door is closed the jam strikes this stud, which releases the catch and it springs into place. The catches are set inside the door so as not to catch the clothing.

Equipment includes motor-driven horn, speedometer, robe rail, foot rest, one demountable rim and carrier, mohair one-man top and Jiffy curtains, rain vision ventilating windshield set on a slant, tools, etc. There is ample leg room both in the front and rear compartments, and the cushions are lower in the back than in the front to give better riding qualities. At present the production is about ten cars a day, but several lots adjoining the present factory have been purchased, and it is hoped that production on a basis of fifty a day will be realized within a year.

WESTON, OUT OF U. S. TIRE, MADE MITCHELL VICE-PRES.

NEW YORK, Sept. 2—J. C. Weston, general sales manager of the United States Tire Co. since 1914 and connected with that company since its inception, has resigned to become vice-president in charge of the sales of the Mitchell Motors Co., Racine. He thus takes up the duties of O. C. Friend, former sales manager of the Mitchell-Lewis company, who resigned last July to become vice-president and general manager of the United Motors Co.

Weston has been in the tire business since 1896, when he became a salesman for Morgan & Wright. In 1906 he became secretary of the company and stayed with it when it became a member of the United States Tire Co. At that time his duties were confined to the Pacific Coast district, which he organized. From there he took charge of the central district in Chicago, and in 1913 came to New York as head of the contracting department, handling all of the automobile makers' business. The next year saw him in the position he has just vacated. No successor to Weston has as yet been named by the United States Tire Co.

Million A Week Profit Made by Ford Company

And the Total Assets Top $132,000,000 All on a Capitalization of $2,000,000

Total output 13 years, 1,406,997 cars.
Employed 311 men first year.
Total of employees at home plant now 34,489.
Total of employees all plants 49,870.
Total of employees getting $5 a day or more, 36,626.
Largest 1-day output, 2430 cars, Feb. 29, 1916.
Sales value of 1916 output, $206,867,347.47.
Sales value of 1903-1904 output, less than $2,500,000.

Year	Cars Sold	Increase	Daily Average
1916	533,921	225,708	1816
1915	308,213	59,906	1027
1914	248,307	83,855	827
1913	164,452	95,908	545
1912	68,544	30,078	228
1911	34,466	15,802	115
1910	18,664	8,057	62
1909	10,607	3,209	35
1908	6,398	2,025*	21
1907	8,423	6,284	28
1906	1,599	96*	5
1905	1,695	13*	5
1903-1904	1,708	..	5

*Decrease.

DETROIT, MICH., Sept. 5—The annual statement of the Ford Motor Co., just issued, shows a net profit for the fiscal year ending July 31 of $59,994,118, indicating that more than a million a week was made during the past 12 months.

The total number of cars produced was 508,000, and the total business done reached the stupendous figure of $206,867,347. The total assets amounted to $132,088,219, made up principally of cash on hand of over $52,000,000, merchandise and supplies totaling over $31,000,000, buildings and fixtures valued at $17,000,000, machinery and power plant worth $8,000,000, and other lesser items.

The liabilities are insignificant in comparison, totaling only $18,000,000, leaving a surplus of $111,960,907. This business was all done on a capitalization of $2,000,000. The report shows further that 34,489 are employed at the home plant and of this number 27,000 get $5 a day or more; the total employees in all plants reach 49,870.

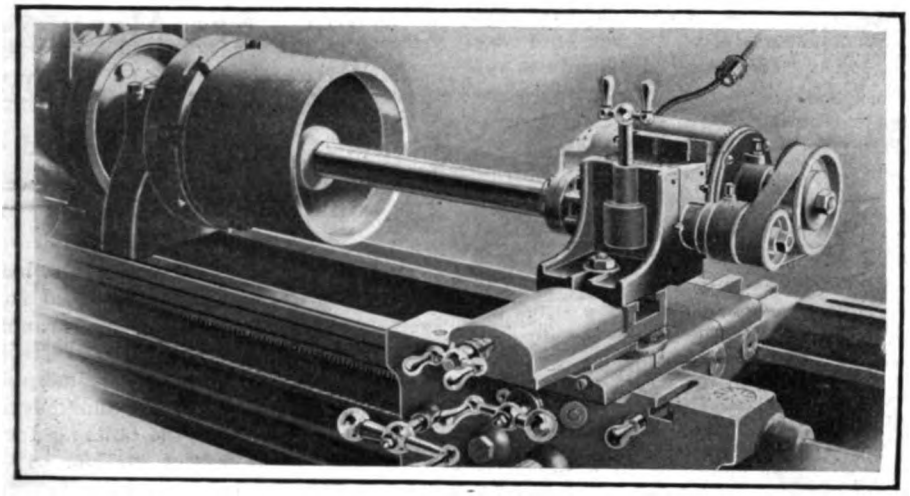
Since 1912 the cash balance has grown from $6,400,000 to $52,000,000. Last year's cash item, amounting to $43,788,000, is an indication of the wonderful strides made in a single year. At the time the statement was dated there was 35,650 cars in transit and at branch plants, leaving 472,230 actually sold during the year, the number on hand representing about 2½ weeks' output.

One very significant statement was made by Henry Ford in giving out the figures. He said: "If you expect a man to give you his time and energy you must fix his wages so he will have no financial worries—it pays. Our profits this year, after giving our employees all a big share in them, show that to pay good wages is the most profitable way to do business."

He also announced that work on the new blast furnaces to be located on the newly acquired property at River Rouge, on the west side of Detroit along the river, will commence at once. Julian Kennedy, foremost blast-furnace designer, has been retained to design and superintend the work. One hundred and thirty-four acres of land will be needed to accommodate the furnaces, docks, coke ovens and buildings of the plant, which will furnish all the iron used in the Ford car.

Hinchcliffe a Jordan Dealer

CLEVELAND, OHIO, Sept. 4—The Jordan car, manufactured in this city, has secured a Boston agent, which is rather unusual in that those back of the new agency handle other makes of cars. These include J. H. MacAlman, Stearns dealer and president of the dealers' association in Boston; J. W. McGuire, Pierce-Arrow dealer and treasurer of the association, and J. H. Johnson, Buick, who is a director. F. Arthur Hinchcliffe, who has been manager of the Winton branch in Boston since 1909, has resigned to take the management of the Jordan agency.



Victor Cars from Wilmington

WILMINGTON, DEL., Sept. 4—The Gooden Realty Co. has sold to the Victor Motor Co., chartered under the laws of Delaware, Aug. 16, 1916, with a capital of $2,000,000, 12 acres of land on the Delaware River at Grubb's Landing, 4 miles north of Wilmington, on which a plant is to be erected for the manufacture of automobiles. It is said the plant will have a capacity of 50,000 cars a year. The Victor Motor Co., according to the Gooden company, has acquired the business of the Victor Car Co. of Philadelphia and has located its executive offices at 1530 Chestnut Street, that city. The officers of the Victor Motor Co. are: Charles P. Grandfield, president; C. Victor Stahl, vice-president; H. H. Skerrett, treasurer; Regnault Johnson, secretary; William H. Dischoff, director. The company has a new model car which it expects to manufacture at moderate price, according to the announcement.

Hisey-Wolf grinding attachment and driving motor mounted by means of angle plate on the tool carriage of an ordinary lathe. It is shown on an internal job but will do external grinding equally well

Making a Grinding Machine of a Lathe

Hisey-Wolf Electrically-driven Attachment Enables Any Lathe to Do Accurate Grinding on Either Internal or External Work

The grinder illustrated in position on a lathe is made by the Hisey-Wolf Machine Co., Cincinnati, and is suitable for both internal and external work. The motor is mounted on an angle plate which is bolted to the tool-post slot of the carriage. The wheel spindle is carried in long bearings and is driven by a belt from the motor. A vertical slide permits the raising of the motor with relation to the spindle carrier for tightening the belt, and a second slide permits the vertical movement of the whole grinder to adjust the position of the wheel.

For external grinding the extension carrying the wheel spindle is removed and the motor placed in the slide in the angle plate. The grinding wheel is attached directly to the motor spindle and it of larger diameter than the wheel for internal work, so that the peripheral speed is correct.

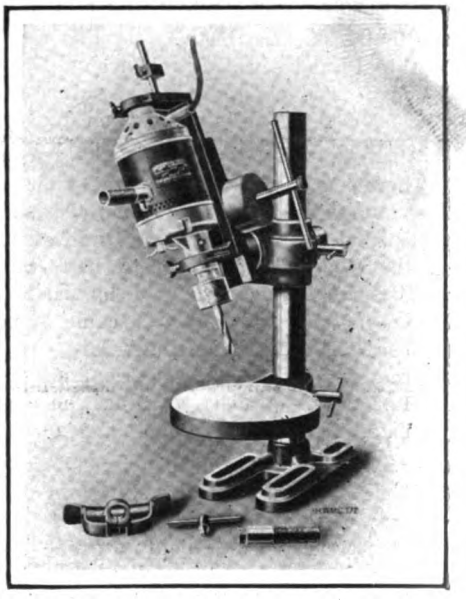
Type of portable electric drill made in sizes from 3/16 to ½-inch

Taper Bearing Adjustment

The bearings at the wheel end of the motor shaft and of the extension spindle are of bronze of large size and have a taper adjustment which permits wear to be taken up with the utmost nicety. The adjustment is made from the outside without removing any part—not even the wheel. By removing the wheel and one protector cap the bearing can be removed, leaving the shaft in position. At the commutator end of the motor and at the pulley end of the extension spindle imported ball bearings are used; these are combination thrust and annular radial of the self-aligning type.

Direct and alternating current motors are designed to run equally well in either direction; the direction of rotation can be changed by transposing the lead wires, which are held by spring snap binders, no soldering being required. A quick-acting switch is placed in the cable about 6 inches from the motor. The machine can be operated in any position.

The tool-post grinder, which is made in 10 sizes and models, carries its grinding wheel directly on the motor shaft and has a shank which is clamped in the tool-post in the place of the lathe tool. A slide parallel with the shaft provides traverse movement and is operated by a small crank.



For internal grinding a shaft extension is fitted to the motor shaft and carries a small wheel suitable for the work. The external wheel is 4 inches in diameter and ⅜ inch thick; the internal wheel is of the same thickness and 1½ inches in diameter. Motors are made in ¼ and ½ horsepower, for operation on direct or single-phase alternating current, 110 or 220 volts. The smaller size is suitable for grinding work up to about 2 inches in diameter and the larger sizes for work up to about 4 inches in diameter.

Drill of Many Uses

Portable drills are made in sizes from 3/16 to ½ inch. The ⅜- and ½-inch sizes can be used in a drill stand, which is a particularly convenient device which permits the portable to be used as a sensitive drill for drilling at any angle. A vertical column, with feet slotted for bolts, carries a table and a head to which the motor is attached. A slide operated by a double-armed lever gives the motor the necessary traverse and, with the motor, it can be swung so as to present the drill to the work at any angle.

Both table and drill-carrying head can be swung around in a complete circle on the column. Work which cannot be placed on the table because of height, for example, can be placed on the bench and the drill swung over it.

The motor is held in place by thumb nuts and so can be attached and removed in a short time and without the use of tools. An adjustable depth gauge is fitted at the top of the motor. The vertical travel of the slide is 9 inches; the range of adjustment on the column 16 inches; the range of adjustment of the table on the column is 16 inches; the diameter of the table 9 inches; the height to the top of the column 26 inches, and the net weight of the stand alone is 91 pounds.

Portable electric drill in stand, showing adjustment for angle drilling

Dallas, The Southwest's Detroit, Is Prospering

There is Money for Buying Cars and the Farmer of Texas is Opening His Purse

DALLAS, TEX., Sept. 4—Visitors to Dallas from the North and East usually are pleased to call this city the Chicago of the South. Recently, however, a capitalist from the East, after seeing Dallas' automobile activity, dubbed the town the Detroit of the South. Had this visitor just gone a little further and investigated the amount of automobiles distributed through Dallas, he would have unquestionably seen that his assertion was not paying too much tribute to Dallas; for it is truly the Detroit of the Southwest, and destined yet to be a greater automobile distributing point.

Last year it is estimated that Dallas did $25,000,000 worth of automobile business. In the city there are 178 buildings which are exclusively occupied by the automobile industry. There are 108 wholesale and retail motor vehicle and accessory concerns located here. There are also seventy top, body and repair concerns doing business. More than 2600 employees are directly dependent upon this industry. It is estimated that these employees draw annually in salaries the amount of $28,000,000.

But, of course, such a business could not be produced if Dallas and the surrounding territory did not justify it. The State of Texas produces about one-fourth of the world's cotton crop, and 60 per cent of this crop is financed at Dallas. That is the principal inducement that secured for Dallas the Federal Reserve bank and which has caused the automobile concerns of the United States to center their Southern business at this city. Within a hundred-mile circle around Dallas farm products annually are valued at $450,000,000, which is based upon figures recently obtained through census work.

There are 2500 financially rated business houses in Dallas, more than 400 factories and 275 wholesalers. One-fourth of the $400,000,000 worth of bank resources of Texas are held by Dallas banks.

The average per capita wealth of the farmers within the charmed hundred-mile radius is $7,500. The construction of good roads in Texas has perhaps received the greatest stimulus in this circle. Many of these farmers have already taken advantage of the auspicious conditions and own motor vehicles. This, to a great degree, is the result of the well-versed and efficient automobile distributing agencies at Dallas.

But new farmers are daily moving into this charmed circle; young ones are growing up, and those who have not yet been converted to the wisdom of investing in automobiles are becoming converted. It is one of these inviting fields that the astute sales directors in Detroit like to talk about. It is one of those fields which has been so responsive that during the last year it has in many cases shown an increase of more than 500 per cent, but which some of these sales directors believe is susceptible of absorbing twice or thrice that amount of motor cars. It is a field that they believe will buy its full share of the 1,200,000 automobiles they propose turning out during the new fiscal year. With a potential buying power of $450,000,000 from its farm products alone, it is not likely to prove disappointing.

Business Efficiency

IN a large jobber's place of business in a Texas city, a stenographer each morning delivers lead pencils to clerks who need them. The pencils are unsharpened. The clerks must then mount a flight of stairs to a mezzanine gallery, where the pencil sharpener is located in order to point their pencils.

How much better it would be if the stenographer were instructed to sharpen all the pencils before handing them out.

Packard Demonstrators Going Out

DETROIT, Sept. 5—The motoring public will have opportunity within the next few days to see in operation the first cars of the new series of Packard Twin Six cars. Demonstrating cars are being shipped in increasing numbers to dealers. Some of the dealers already have their first cars on exhibition. Fifty more cars are in transit. By Sept. 10, provided factory expectations are realized, all the dealers will have the new model before the public.

Dealers to Exhibit at Maine Fairs

AUGUSTA, ME., Sept. 2.—Dealers in Maine are planning to take advantage of the country fairs throughout the State by placing motor exhibitions at some of the larger ones. Some idea of the great vogue of the country fairs in Maine is shown by the publication of the list of those planned for this fall. There are fifty-four. They all run for 3 and 4 days.

Daniels Price Raised $200

NEW YORK, Aug. 31—The price of the Daniels Eight will be increased on Sept. 1 $200, to $2,800. This increase will affect all models.

Changes Are Many in Boston's Motor Row

Growth of Business Makes Added Room Necessary for New England Distributors

BOSTON, Aug. 31—The Metz Co. has made some changes, due to a need for better service facilities. The sales branch on Boylston Street and the factory branch in Waltham have been merged into one sales organization and moved over to Cambridge, to the building formerly used as a service station. The service department has been moved to the factory at Waltham, as all the space in the service building was needed for the sales department. As Waltham is but a few miles from Boston, the service work can be handled there as well as Boston.

The Velie company has reorganized its wholesale organization and has moved from Cambridge to Boston, taking a room temporarily in the building occupied by J. W. Bowman, the Boston dealer. Later the company will move to new quarters on Commonwealth Avenue that is being built for it. W. F. Aldrich of Providence, R. I., has been elected president of the new company, and Amos R. Shorey, for a long time with the company, is now sales manager.

The General Vehicle Co. also moved over from Cambridge this week and the company has a general opening at its quarters on Commonwealth Avenue, presided over by Manager George M. Hudson. Some of the officials came over from New York to attend the housewarming.

The Coburn-Draper company, that had the agency for the Maxwell for about 6 months, has been dissolved and Draper has returned to Providence. The Maxwell is now handled as a factory branch, with Ralph E. Coburn, who has been with the Maxwell for a dozen years, as manager. It still retains its salesrooms on Beacon Street in the Peerless Building.

The Chandler Motors Co. of New England recently celebrated its third anniversary and has signed a contract for space in a new building being erected on Commonwealth Avenue. The company has placed 1100 Chandlers here in 3 years.

McQuay-Norris Gets Sales Engineers

ST. LOUIS, Sept. 1—The McQuay-Norris Mfg. Co. has added three mechanical engineers to its sales force in the field. Herbert H. Cummings will be located in Chicago, Russell B. Pratt in Milwaukee, and Fred L. Stevenson in Detroit.

Aitken Gets Cincinnati Race at Better Than 97

Peugeot Pilot Leads D'Alene (Duesenberg) Home—Gil Anderson in a Bad Wreck

Driver	Car	Time	M.P.H.
Aitken	Peugeot	3:05:27.22	97.06
D'Alene	Duesenberg	3:09:56.00	95.05
Galvin	Sunbeam	3:18:35.58	90.06

CINCINNATI, Sept. 4—Driving at more than 97 m.p.h., J. D. Aitken won the 300-mile Labor Day race on the new $750,000 Cincinnati Speedway before 27,000 spectators. D'Alene was second and Galvin third. Gil Anderson, in a Stutz, drove too close to the inner wall, crashed into it, and both he and his mechanician were badly hurt, Anderson sustaining injuries to his spine and a broken leg and arm.

It was confidently expected that Resta would win the race, in view of his previous victories on speedways all over the country, but he was forced out.

At the end of the first hundred miles Resta was averaging 100.55 m.p.h. and he did not stop until the end of the 168th mile, when he had a lead of 1:22 over Aitken, who was second.

George Buzane, in a Duesenberg, was fourth in 3:23:19; Art Klein, in a Crawford, was fifth, time 3:34:15; Devlin finished sixth in a Duesenberg in 3:46:06. Haibe's Kleinart was flagged at 270 miles and given seventh money, being the only car running at that time, although there were ten prizes to compete for.

Resta took the lead in the first lap, closely followed by De Palma, and while the Mercedes lasted these two rivals fought for position. Resta was headed by De Palma at the end of 8 miles and held his position two laps, then gave way to Resta for one lap, taking the lead again for three laps, Resta taking the lead at 10 miles and De Palma going out with a broken connecting-rod at the end of 22 miles, Aitken moving up to second place. Mulford's Peugeot was third and Wilcox's Premier fourth at the end of the 28th mile.

Resta and Aitken ran one-two until 165 miles were reached; then Aitken took the lead and held it until the finish, although there were times when his margin was very narrow. By the time 200 miles were covered Resta had taken third place, D'Alene holding second. There was a constant fight between Resta and D'Alene for second place, reversing once or twice every 20 miles until Resta went out at 288 miles with an overheated motor due to a balky radiator. Resta made four stops, but only changed one tire, which shows how his car was going.

With a field of twenty-eight cars it is surprising that so few finished. The speed during the early part of the race was around 105 miles per hour, but the terrific pace told on motors and tires. One by one cars dropped out, the majority of them with broken rods or burned bearings, which seems to indicate that the track is faster than the cars could stand. Nine cars had not made any stops until they went out.

As to tires, the track seemed fairly easy, only thirty casings having been changed, or an average of a little over one to each car starting.

Buzane, who took fourth money, was a surprise. He was a last-minute qualifier. His car was wrecked at Kalamazoo a week ago, and it was only by night and day work that he got it rebuilt. He reached the track at noon Sunday, fitted a new block on his motor and qualified late in the afternoon.

It is felt that Anderson's accident might not have happened had he had sufficient rest. He burned out a center crankshaft bearing in practice Saturday and had to go to Indianapolis to get another. He practically tore his car down last night and worked on it nearly all night. D'Alene asked for and was given No. 13, and it seemed to have a charm, his winnings for to-day being $6,000.

Aitken won $12,000 and an extra $1,000 for leading at 200 and 250 miles. Resta got the Gibson trophy given by the Hotel Gibson for being first at 50 miles and $500 for being first at 100 miles. Galvin won $3,000, Buzane $1,500, Klein $1,300, Devlin $1,200 and Haibe $1,100.

Nichols New York Ford Dealer

NEW YORK, Sept. 5—J. C. Nichols, who operates one of the largest accessory businesses in New York, has taken a Ford dealership. With William H. Webster, a former Ford salesman, he has opened a salesroom at Amsterdam Avenue and Seventy-third Street under the firm name of Nichols & Webster.

Editor Motor World:

The Dean and Faculty of the Graduate School of Business Administration desire me to thank you for the complete System of Accounting for Automobile Dealers and Garagemen, together with the Instructions, which came to hand a few days ago. I am referring your inquiry relating to the gathering of statistics to Professor Melvin T. Copeland, Director of our Bureau for Business Research and in charge of our statistical courses.—Walter M. Stone, E.M., Special Librarian, Graduate School of Business Administration, Harvard University. Cambridge, Mass.

Tenth National Used Car Report Is Issued

Contains Names of Several New Cars—139 Gasoline and 14 Electric Cars Listed

CHICAGO, Sept. 2—The tenth edition of the "National Used Car Market Report" has been issued by the Chicago Automobile Trade Association. The book is much the same as the ninth edition; zone 11, centering in Dallas, is still missing, the co-operation of dealers in that section not having yet been arranged.

The H. A. L. and Liberty are new names. The Marion-Handley supplants the Marion. The Crow has been dropped, but the Crow-Elkhart remains. There are 139 gasoline cars and 14 electrics listed.

The Liberty, Madison and Saxon factories are now co-operating in the distribution of the report to dealers, making twenty-one co-operating car manufacturers.

The pocket edition accompanies the larger edition, containing in abbreviated form the data in the larger book.

Owen Magnetic Tour Sept. 9

NEW YORK, Sept. 2—The second annual Owen Magnetic tour will start from this city Sept. 9 and will embrace a 4-day trip through the Berkshires and the White Mountains. A dozen or fifteen cars, provided by the company, will carry over fifty invited guests. The route will include Pittsfield, over the Mohawk Trail to Greenfield, first night; thence along the Connecticut Valley to Hanover, N. H., for lunch, and to the Profile House, White Mountains, for the night. The third day will be to Boston and the fourth home.

Prominent Tradesmen in New Positions

Ward Foote has succeeded H. A. Lozier as president of the H. A. Lozier Co. Lozier resigned last week because of ill health.

P. L. McKinney, for several years in charge of sales for the Peerless line under Manager John L. Snow of the New England district, Boston, has taken the Maine and New Hampshire territory for that line, with headquarters at Manchester, N. H.

Lon R. Smith, for seven years Western manager for the Eiseman Magneto Co., has gone to Chicago to become sales manager for the Buda Motor Co.

W. L. Landreth, Indianapolis, has been appointed manager of the Hoosier Haynes Co., Kokomo, Ind. He assumes his duties this week as manager of Howard county territory.

C. B. Rice has been appointed retail sales manager of the King Motor Corp., New York. He assumed his new duties Sept. 1.

J. E. De Mar has been made sales manager of the Chas. E. Reiss Co., Hupmobile distributer in New York.

Sterns Tubes Guaranteed 20,000 Miles

ST. LOUIS, MO., Aug. 31—Ground will be broken Sept. 10 for a four-story plant for the Sterns Tire & Tube Co., a subsidiary of the Efficiency Oil Corp. The structure, which will have a capacity of 1600 casings and 3200 inner tubes daily, will be 120 x 200. The product will be known as Sternwear and the tubes will be sold under a guarantee of 20,000 miles without puncture, blowout or rim cutting.

Haynes May Have "Haynes Junior"

INDIANAPOLIS, Aug. 29—By a deal made last week the stock of the Haynes Automobile Co. of Indiana will be taken up by the Haynes Automobile Co. of New York, a holding corporation, a consideration of $4,500,000 being paid to the stockholders of the Indiana corporation in addition to receiving half of the stock of the holding company. Plans already are under discussion for placing a cheaper car on the market, to be known as the Junior Haynes.

Horace C. Stilwell, a promoter of Anderson, Ind., who represents New York financiers, signed an agreement with the stockholders of the Haynes company on Aug. 23. The agreement provides that 90 days shall be given the New York group to consummate the deal. The holding company is to have 600,000 shares of stock. Each stockholder in the present Haynes company is to receive six shares of the holding company's stock for each share of the present stock. It is proposed to place the other half of the holding company's stock on the market. The agreement provides that the present stockholders are to elect half of the board of directors.

According to announcements coming from Kokomo, A. G. Sieberling, who has been manager of the company for the last 3 years, and his assistants will remain in charge should the deal be consummated.

White Leaves N. Y. Motor Row

NEW YORK CITY, Aug. 28—Another break is about to occur in Motor Row. The White Co., for 10 years located at Sixty-second Street and Broadway, has leased a large plot at the northwest corner of Park Avenue and Fifty-seventh Street, where it will construct a five-story building to house all the branches of its passenger car and truck departments. The plot has been leased for 21 years.

The impending removal of this company will mark the second important deflection from that district, the first having been that of the Simplex at the beginning of this month, when it located at Fifth Avenue and Fifty-eighth Street.

Motor World Artist Dead

NEW YORK, Aug. 31—Leonard Lowson, of the editorial art department of Motor World, died at the French Hospital yesterday of intestinal trouble. He was 30 years old.

Torbenson Axle Co. Now

CLEVELAND, Sept. 1—The Torbenson Axle Co. is the new name of the Torbenson Gear & Axle Co., commencing to-day.

New U. S. Light & Heat Directors

NIAGARA FALLS, Sept. 1—At the recent annual meeting of the stockholders of the U. S. Light & Heat Corp., the following Board of Directors was elected:

Egbert H. Gold, J. Allan Smith, Ralph C. Caples, Henry W. Farnum, A. Henry Ackermann, Chauncey L. Lane, Keene H. Addington, James A. Roberts, Conrad Hubert, George G. Shepard, Edwin K. Gordon.

The new
FRANKLIN
Sedan
(*air-cooled*)

The Waltham Automobile Clock is standard equipment on the following cars:

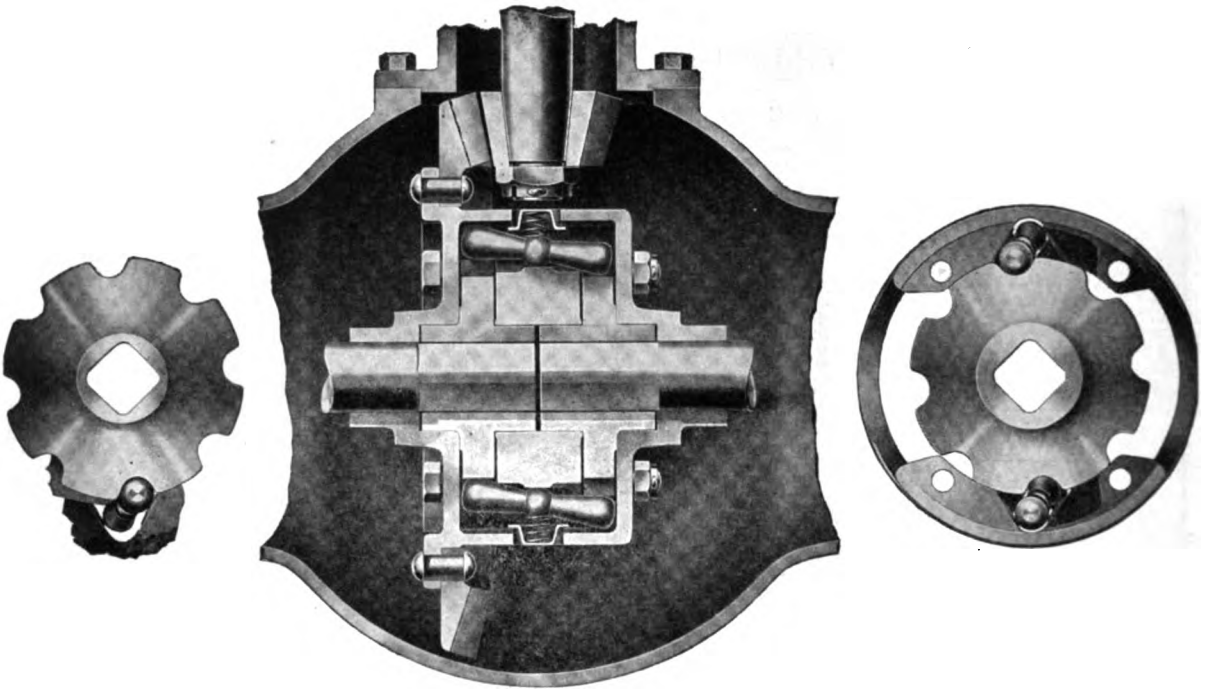
Brewster	Haynes	Pierce-Arrow
Cadillac	Locomobile	Rauch & Lang
Cole	Lozier	Rolls-Royce
Crane	Mercer	Simplex
Detroit-Electric	Marmon	Stearns
Franklin	Owen Magnetic	Winton
	Packard	

This car is a model of efficient equipment—and it equips with the

Waltham Automobile Clock

It is not necessary for us to dwell upon the remarkable success and popularity of the Franklin. The car itself and its hosts of loyal owners speak louder than any mere words of ours.

We are, however, entitled to no small measure of pride when a car of the Franklin's class adds its name to the list of those using the Waltham Automobile Clock as a regular part of their standard equipment.



The Franklin Company has just placed with us an order of flattering proportions. Henceforth all Franklin Cars will be Waltham equipped.

This is another indication of the fact that manufacturers of cars of the better grade—and their owners also—consider a car incomplete without a clock.

Read the list of makers equipping with Walthams and determine whether you would not like to be associated with them in the matter of equipment.

WALTHAM WATCH COMPANY, WALTHAM, MASS.

THE NEW PROCESS DIFFERENTIAL

CAR AND AXLE BUILDERS:

How much longer can you afford to close your eyes to the benefits of the New Process Gearless Differential?—the correct operating principle that lessens noise, wear, swerving, skidding, useless grind and side thrust on the tires.

Careful investigation of the New Process Gearless Differential would convince you that it offers decided improvement over the gear differential and has a simplicity and strength that assure constant and continued satisfaction.

You can make the change without altering your present axle housing and bearing layout, and we will back you with any reasonable service guarantee.

CHEVROLET

CHEVROLET MAKES GOOD ITS PROMISE

When the Chevrolet Motor Company first offered its Model "FOUR-NINETY" Touring Car to automobile dealers and the public at the New York Show in January, 1915, with electric lights and starter, at the then sensational price of $550, the management stated frankly that the name "FOUR-NINETY" really meant something and that, whenever the company's manufacturing facilities and production justified it, the price on this car, electrically equipped, should be $490.

Since the above date, the Chevrolet Company has completed the best motor plant in this country; has built and equipped an up-to-the minute axle plant; has acquired a complete transmission plant, and has in operation seven large assembling plants. The Chevrolet Company has now reached a volume of production which enables it to make good its original promise.

We are pleased to advise that the 1917 contracts, which are now going out to Chevrolet dealers, present the Model "FOUR-NINETY" to the public at $490, fully equipped, with a standard, two-unit electric lighting and starting system built into the car.

THIS MAKES THE MODEL "FOUR-NINETY" THE LOWEST PRICED ELECTRICALLY LIGHTED AND STARTED AUTOMOBILE IN THE MARKET TODAY.

LIBERTY SIX
Makes Good in New York

New York Dealer Gets Interesting Testimony From Discriminating Car Owners

JOHN F. PLUMMER is placing a remarkable number of Liberty cars in New York among the most discriminating buyers—car experts—men whose 6, 8 and 10 car garages see only the best.

Libertys are going out from the New York showrooms on tours all over the country—through the White Mountains, the Catskills, Bar Harbor—and not a complaint comes back.

The box of parts shipped by the factory for the purpose of making any adjustments that might be necessary has not been opened. Mr. Plummer has telephoned his customers asking them to bring the cars back and let him look them over. They won't do it.

This phenomenal performance on the part of the Liberty car is due simply to the fact that it is manufactured by men whose experience dates back to the beginning of the automobile industry. Before they started to build the Liberty they knew all the troubles which were to be avoided and added many exclusive features for the owner's comfort and convenience not found in any other car on the market.

Mr. Plummer reports that his most enthusiastic endorsements come from men who know most about motor cars—men who have owned from 2 to 28 cars during the past 15 years. They say the Liberty is a revelation in dependability and performance.

Liberty's success is based upon absolute dependability and a detailed and careful regard for owners' requirements. This combination of performance and comfort together with the sterling reputation of the company behind the car is making it one of the most rapidly selling cars which has ever been placed on the market. Dealers say the Liberty sells itself. John Plummer's experience is being duplicated by prominent representatives all over the country.

Territory is fast being closed. Dealers who have a regard for the character of the car they sell and the company they represent should communicate with us quickly. We are giving our representatives a square deal and we propose to stand by them to the limit.

Dominant Liberty Features:

1—Ease of steering.
2—Light operating balanced clutch.
3—Powerful brakes—but easy operating.
4—Silent and smooth gear shift.
5—Cradled comfort of spring suspension.
6—Wide doors.
7—Comfortable, wide and deep seats—genuine leather.
8—Plenty of room.
9—A windshield weather tight all around.
10—Simplicity of chassis design.
11—Beautiful body lines, long and low.

Continental - Liberty motor, 3⅛ x 4½; Timken axles and bearings; Delco equipment; wheelbase, 115 inches; 32 x 4 tires.

Five-passenger touring car and four passenger close coupled car, $1,095. Distinctive types of enclosed cars.

ALLEN CLOSED CARS

Make a Good Dealer Proposition a Still Better One

The Allen dealership has always been a money-maker.

This can be proved and there are sound reasons why it is so.

The Allen Touring Cars and Roadsters are among the very biggest values in cars selling under $1000—$795 for Model 37 and $850 for the Classic model.

And now come two closed cars, bigger values than ever before offered—a convertible Sedan at $1095, and a Coupe at $1075. These are 112 inch wheelbase cars with 33″x4″ tires.

Look over what the market offers and you'll find no closed cars that sell for so little additional charge for closed models, in proportion to the price of open models.

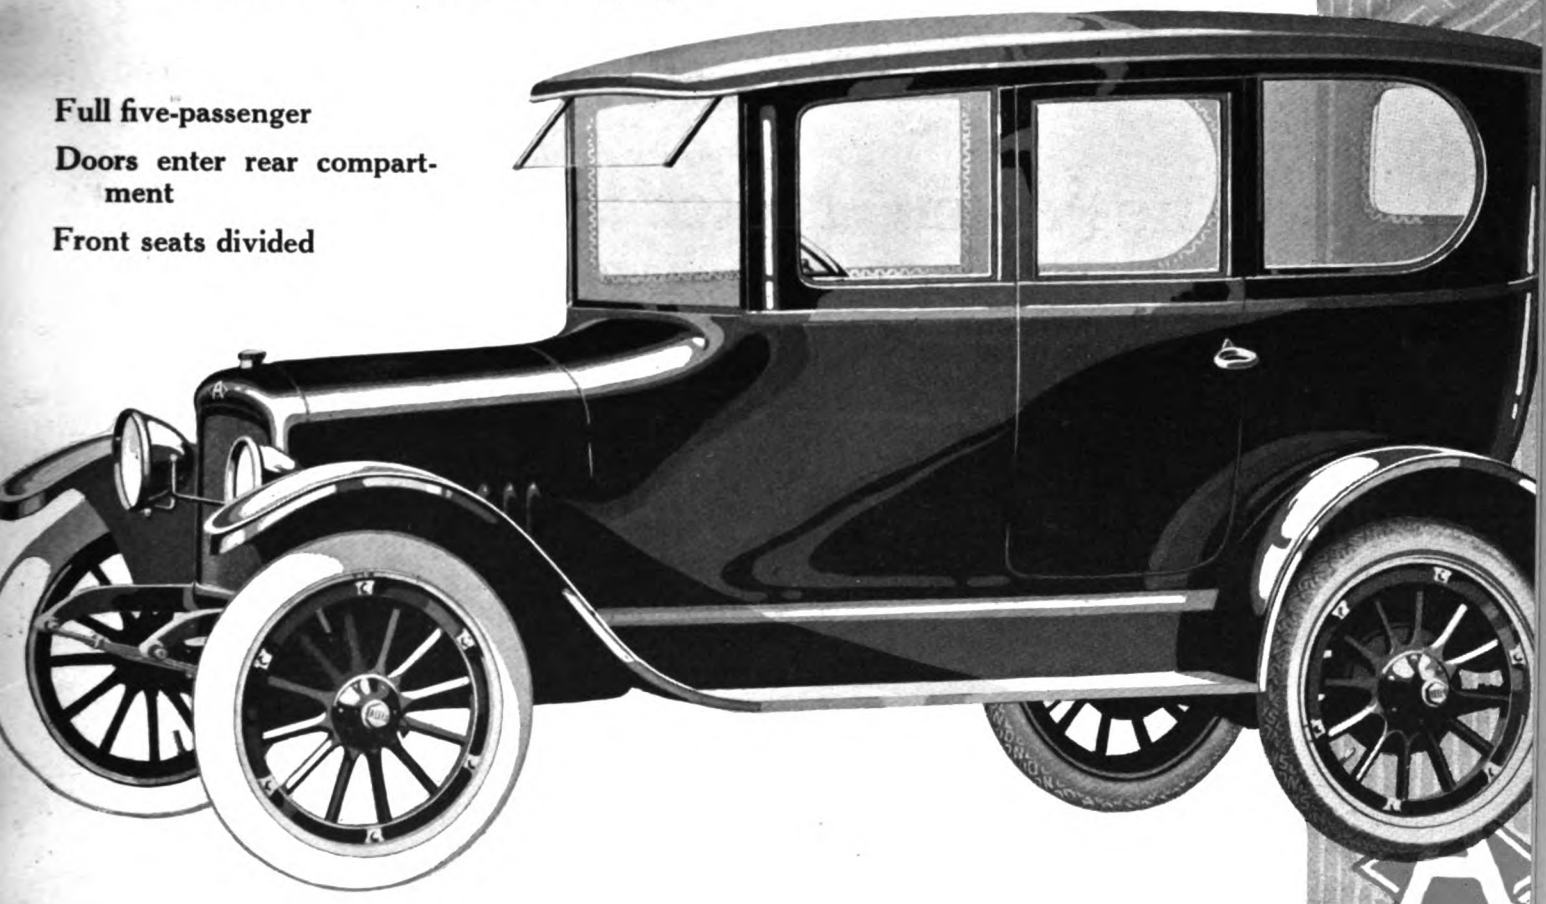
We are talking now of full fledged closed cars, not about cars with the semi-rigid closed tops offered by some makers.

Digitized by Google

Distinguished in Appearance

And these Allen Closed Cars are beauties. Their lines have dignified grace and charm.

In appointments, in upholstery, in finish they measure up to a high standard. They are, in fact, much finer than you would expect in cars of so moderate price.



Both Coupe and Sedan satisfy the open car requirements for occasions when freedom of view and greater air circulation is desired.

In the Coupe all side windows lower out of sight. In the Sedan the side windows lower and upper door frame and pillars are quickly removable, making an open car as shown in the illustration on the next page.

A Brand New Pennsylvania Product—

BAR CIRCLE TIRES

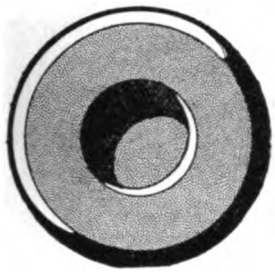
A *QUALITY* tire at the price asked for ordinary grade makes and a fair profit to the trade.

The *high quality* which determines the standard of real tire value—established by Vacuum Cup and Ebony Tread Tires—is extended to include BAR CIRCLE TIRES

This rounds out the Pennsylvania Line with a really serviceable but low-priced tire backed to the limit by a manufacturer best known for strict adherence to *quality*.

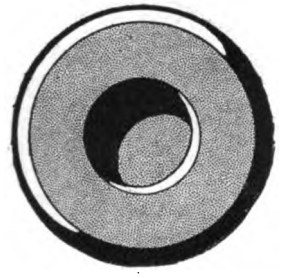
The BAR CIRCLE Tread

The design of the tough black rubber tread is indicated by the name—BAR CIRCLE—a combination of bars and circles. This special construction puts the *thickness* and *wear-resistance* where most needed. It enables these new tires—like Vacuum Cup and Ebony Tread Tires—to far exceed, under normal conditions of service, the mileage basis on which they are sold.



Backed by a Guarantee which Insures Protection to both Dealer and User.

Digitized by Google



Complete Dealer's Line

With BAR-O CIRCLE TIRES we have completed the dealer's line of quick-selling tires, cover the whole demand situation, and enable our dealers to successfully compete for the popular as well as the higer priced classes of business.

Trade Prices

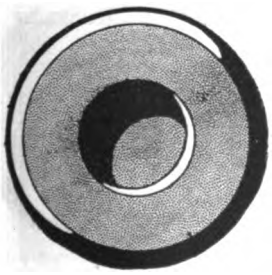
The price of BAR-O CIRCLE TIRES to the trade has been figured on a basis of cost of production with a very modest margin of profit, with the idea that we will look to volume for our ultimate return, as we now are prepared to produce in our new factory approximately 3,000 tires a day. The schedule of prices on BAR-O CIRCLE TIRES will at all times be in keeping with the market.

Most Important Selling Policy

Like Vacuum Cup and Ebony Tread Tires, BAR-O CIRCLE TIRES will be marketed under a policy that will absolutely insure

A Fair Profit for Both Dealer and Distributor

Exclusive territorial arrangements—inaugurated with such wonderful success for 1916 season—will be continued as one of the fundamental features of our selling policy. Under this arrangement, absolute protection will be granted the trade handling BAR-O CIRCLE TIRES.



Immediate Action Necessary

If you are looking to the future and wish to put effort behind a line of tires on which you will be thoroughly protected in securing fair profit and on which you can build a substantial business, investigate the Pennsylvania proposition; it is most liberal and offers real opportunity.

After 13 years of careful preparation, the Mitchell has come into its own.

This year the demand has trebled.

But our sales are largely to men wise in mechanics. Or to men who get expert advice. A very large number of famous engineers are now owners of Mitchell cars. Our Chicago dealer, in one week, sold to five bank officials.

The knowing, careful people are buying Mitchells now. But next season, as you all know, the multitude will follow.

Our Advantages

We have here now the model factory of America for building high-grade cars. It was built and equipped by John W. Bate, the great efficiency engineer.

It covers 45 acres—represents an investment of $5,000,000. But it has cut our factory cost in two. It gives us, we figure, at least a 20 per cent advantage.

We have the only car in which 440 parts are either drop-forged or steel-stamped.

We have the only car which embodies more than three or four of our 26 extra features.

We have the only car which has been developed under John W. Bate's efficiency methods.

We have the only car of which seven have averaged 175,000 miles apiece.

We have the most complete car on exhibit. And we have at least 20 per cent extra value over other cars in this class.

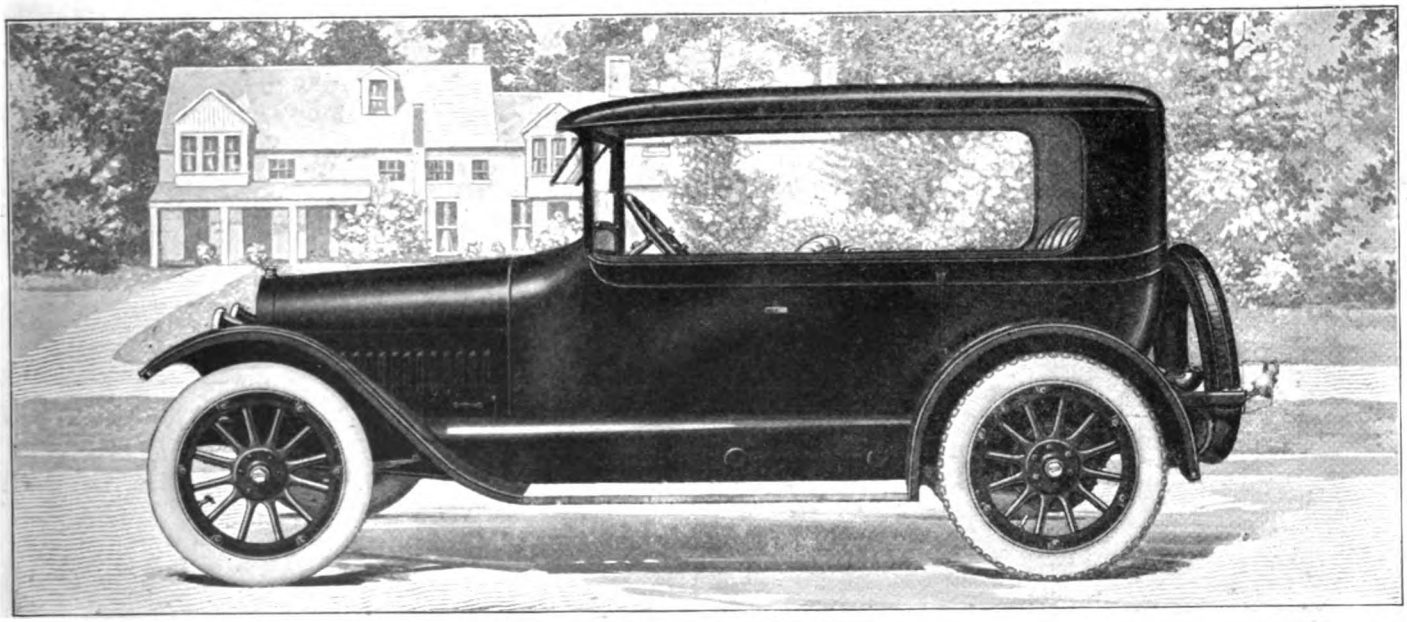
All Men Will Know It

These cars, in owners' hands, are bringing home to tens of thousands a new conception of motor car value.

We are spending this season over $500,000 to advertise the facts. Next season we shall spend about $800,000.

We are equipping these cars with seven styles of bodies, each of which will add to Mitchell prestige.

The sort of customers you want will more and more come to Mitchell cars.



The right sort of dealers, in unoccupied territories, are invited to write for facts.

This Bronze Bearing

Between the Leaves of Your Springs

Gives You Easy Riding or Your Money Back

This is our guarantee — you are the judge and you have 30 days in which to prove to yourself that Dann Insert makes your car the easiest you ever rode in—and in addition, gives perfect spring lubrication, increased tire mileage, reduced car depreciation, no spring squeaks and practical freedom from spring breakages.

DANN INSERT

The Lubricated Spring Bearing

What It Is

Dann Insert is a SELF-LUBRICATING BRONZE BEARING that fits between the leaves of the springs in your car. It is packed with a special graphite compound which will not flow liquid and which insures maximum efficiency at all times. This BRONZE BEARING allows spring leaves to slide freely over each other—to do the work they are expected to do. It keeps the springs continuously, permanently lubricated—eliminates rust—makes springs act freely, flexibly, easily. Your car will ride as easily as though it were floating on air. We guarantee easy riding—or, your money back after 30 days use.

Results Proved by Owner—Engineer—Manufacturer

Dann Insert is a time-tried, road tested, owner-proved product. It has had three years of big success. It has been standard equipment on every Winton car that has left the factory in the last two and one-half years. Thousands of users, including every make of car on the market, are getting greater efficiency, greater pleasure, greater economy from their Dann Insert equipped cars every day.

Dann Insert users are practically through with spring trouble—they have eliminated spring squeaks from their cars—they have obtained a riding ease they have never had before — they have secured the perfect spring that every manufacturer wants to supply, but cannot until he uses Dann Insert as regular equipment.

Put Your Name on the Coupon

WANTED EXCLUSIVE DISTRIBUTORS AND DEALERS — Dann Insert is selling like wildfire to every car owner. Exclusive contracts for distributors and dealers. Everything is ready for you to go ahead—ready for you to start sales. We will back you with one of the largest accessory campaigns in the industry. We will produce big business right in your territory. Prove to us that you are the best equipped distributor to handle Dann Insert. Write, wire, phone or jump the first train for Chicago. Get this rapid selling accessory—a comfort builder and money saver for any car owner and a money maker for you.

Put DANN INSERT in your old car— Demand it in your new car

$425,000 in Sales Past 60 Days

Avalanche of Orders from All Parts of the Country—Quick, Easy, Profitable Sales

The remarkably low prices for this NEW BRONZE LUBRICATED BEARING for springs set a record for business. Every make of car represented in thousands of orders coming in. It proves that the universal demand for easy riding has found its solution in Dann Insert. Everybody wants it NOW. YOU cannot afford to do without it another day. NOW is the time to put it on YOUR car. If you want to know what real, solid riding comfort is, with no squeaks, no driving fatigue, get this wonderful lubricated bronze bearing TODAY for YOUR car. Remember, you take no risk — you get easy riding or money back.

Here's What This Bronze Bearing Does

Bearings between the leaves of the springs are just as essential as bearings for the working parts of your motor. Dann Insert brings your springs up to highest efficiency — gives them flexibility—cuts down frictional resistance.

When we tell you what Dann Insert does — how it keeps springs continuously lubricated — stops springs from drying out, rusting, squeaking — breaks up and smothers road shocks — reduces vibration — makes cars ride wonderfully smooth — cuts down tire and upkeep expense — retards depreciation — it sounds almost too good to be true. But we BACK our claims with this straight out-and-out guarantee — proved comfort or your money back.

Get the Price of Dann Insert for YOUR Car TODAY

You Know from Experience You Need Dann Insert — Send Coupon TODAY

We don't have to devote any space to prove to you that you want this wonderful comfort builder and money saver for you car — especially when we offer it to you at our risk. Accept our money-back-if-not-satisfied offer here and now—you simply can't afford to pass it by. At the remarkably low prices, you no longer have any excuse for not enjoying the greatest comfort an automobile can produce. Put Dann Insert in your car — drive it over the roughest roads — if, after a 30-day trial you decide you can do without Dann Insert, simply send it back and we will refund every penny of your purchase price. Without Dann Insert, you are losing pleasure, comfort and money every day. It comes ready packed for every make of car — get the price for your car today. It can be attached very readily—full instructions will be sent you—so why delay? Fill out and mail coupon NOW — TODAY, for the price of Dann Insert for your car.

BUILD YOUR TIRE BUSINESS ON A FIRM, ***LASTING*** FOUNDATION—ONE THAT WILL NOT CRUMPLE UNDER YOU LATER ON

A "CARSPRING" TIRE AGENCY OFFERS YOU THE BIGGEST OPPORTUNITY TO CASH IN TO THE FULL EXTENT OF YOUR OWN INDIVIDUAL EFFORTS

¶ "CARSPRING" dealers are doing wonders right now. They have already sold us out to our full manufacturing capacity, forcing us to enormously increase that capacity.

¶ But their biggest asset is in the **future** business this means to them.

¶ "CARSPRING" Tires will be bringing them in larger and larger profits every year. And "CARSPRING" methods absolutely insure those profits to the man who builds them up.

¶ We give our dealers the widest possible latitude in making adjustments, and we give them their territory with no strings tied to it, either now or in the future.

¶ As our representative, you appoint your own sub-dealers and organize your territory to suit yourself. We help you in every way, but we do not **interfere** with you.

¶ We want real live **men** to represent us, and we treat them as such.

IT IS IMPOSSIBLE TO SAY WHETHER OR NOT YOUR TERRITORY IS STILL OPEN, BUT IF YOU ARE THE MAN FOR THE PLACE, THE SOONER YOU WRITE US THE BETTER. APPLICATIONS ARE COMING IN MIGHTY FAST.

THE WESTCOTT MOTOR CAR CO. SPRINGFIELD, O. U.S.A.

The Westcott Six

SERIES 17

Plenty of leg room and real comfort for all passengers.
Adjustable Gemmer steering gear and foot pedals.
Unusual steadiness on road.
Cool even ventilation in front and rear compartments.
Large Stewart-Warner Vacuum Gasoline system with fuel supply on rear of car.
Upholstery of best grade No. 1 long grain dull leather without buttons. Very comfortable, clean, sanitary.
Unusual attention to finish of both painting and trimming.
Very short turning radius.
Jiffy curtains on all open cars.
Water-tight wind-shield. Top glass overlaps lower 1¼". Sides water-tight with rubber strippings. Lower glass ventilates, upper glass rain visioned.
Antique mahogany instrument board, with large compartment under lock and key for small personal effects. Handsome instruments and within easy reach.
Warner electric clock and speedometer.
Automatic Thermostatic control of engine temperature.
Westcott Continental Motor, 3⅛" x 5¼".
Delco two unit lighting, starting and ignition system.
Timken axles with Timken bearings throughout.
Worm bevel differentials.
Heavy Brown-Lipe transmission with Timken bearings.
Vanadium Springs. Dry Plate Multiple Disc Clutch.
Tubular Drive Shaft with two Spicer Universal Joints.
Pantasote one-man top. Flush Tonneau Lamps, Boyce Motometer, Power Driven Tire Pump. 125" Wheel Base, Rayfield Carburetor, Single or Double Tire carrier. Improved Auxiliary seats.

For the Man who Wants a Better Car

IN YOUR search for a better car you will find nothing more worthy of your serious consideration than the Westcott Six, Series 17—an automobile that establishes new standards for sixes of the light-weight tendency.

Intelligent scrutiny of the Westcott Specifications will satisfy you that here is one case in which the benefits resulting from increased output have been utilized for the improvement of the best that has gone before, rather than for reduction of the price. This fact alone is significant.

Power, speed, luxury, beauty—all the essentials of motor car satisfaction are here to a degree that you had not thought possible in any but the very heavy cars. The acceleration is instantaneous; the range of speed is elastic from one mile upward to the limit of sane driving; the control is instinctive; the element of safety is predominant.

If you aspire to a car of these characteristics write for our catalog containing complete specifications in detail and for the address of the Westcott Dealer in your locality.

Four Passenger Cloverleaf Roadster, $1590
Five Passenger Touring Car $1590
Seven Passenger Touring Car $1690
Complete line of closed bodies to be announced.

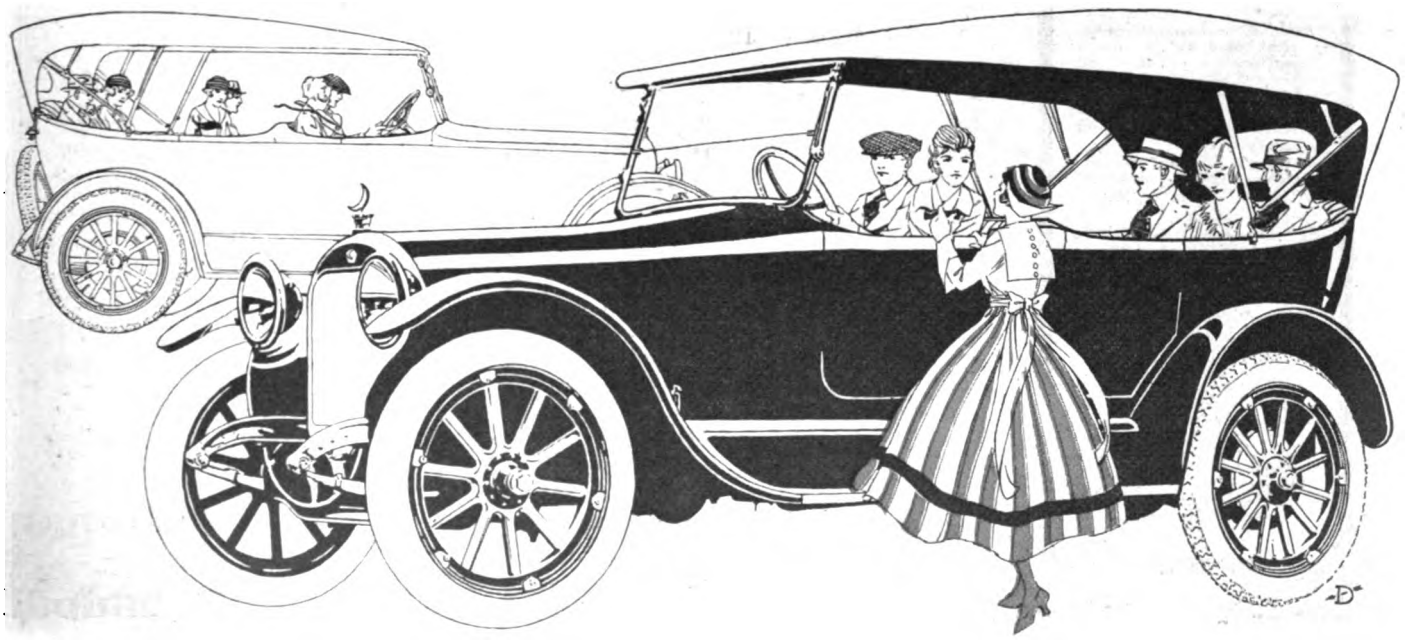
MOON
REG. U.S. PAT. OFF.
MOON MOTOR CAR CO.
ST. LOUIS, MO. U.S.A.

Individuality

The fact that the thoroughfares are alive with cars whose coming and going conveys little or nothing beyond an impression of passing automobiles, makes *individuality* a trait well worth the seeking.



Look for it — from the viewpoint of good taste, see if you don't find its emphasis most thoroughly expressed in the new 1917 Moon.

The Moon characteristic — its smart, racy appearance — has been heightened — notably by the adoption of the Delaunay-Belleville type of body — long, double-cowled, with the trim lines of a cruiser and a rakish slant to the windshield. Both models are upholstered in genuine tan Spanish leather.

The Moon for sheer beauty; and, beneath, is an ensemble of such substance, power, comfort and responsiveness as can only be attained as a result of designing and workmanship of the highest order, backed by a policy that tolerates no skimping.

Prest-O-Lite Storage Battery

The two important factors in storage battery value are: *the battery itself and the service back of it.* Science makes storage batteries quite similar in basic principles of construction, but—

Only one make of battery is backed by *Prest-O-Lite Service.* Thousands of motorists are now realizing what this universal, expert battery service means to them in increased efficiency and satisfaction in their electric starting and lighting systems.

The Prest-O-Lite Co., Inc., maintains more Direct Factory Branches than all other battery makers combined. They form the nucleus for the largest amount of actual service obtainable in the storage battery field.

There is a Prest-O-Lite Battery of correct shape, size, voltage and capacity for every make and model of car, and for every starting and lighting system which is or ever has been in general use.

Every automobile dealer—whether he can repair and charge batteries or not—should know the details of the Prest-O-Lite Storage Battery proposition. Write for it.

Judge Investigates Headlight Device

Makes First Bonafide Decision in Mass., Stating Warner Lenz Complies with Law

BOSTON, MASS., Aug. 19—The first judicial decision on the headlight law where a judge went out for himself and made an inspection of a device was rendered in the Boston courts yesterday when Judge John Perrins, Jr., stated that the Warner lenz complied with the Massachusetts law.

The importance of the decision lies in the fact that a judge has really passed upon the matter after a demonstration. Heretofore the judges sat in court and heard policemen say a light dazzled even if it had a device on it, and the officer's word was accepted, and the motorist fined or his case filed. But no judge would take the trouble to investigate the claims of the motorists. They seemed to hedge on the question when attorneys tried to fight the cases.

The Highway Commission refused to approve any device because the devices were so made that improper focusing defeated the purposes of the inventor. When the case of the Warner Lenz came before Judge Perrins the attorneys laid much stress upon the fact that the judge should investigate the facts rather than rely upon the policeman's word. Judge Perrins said it seemed fair, and a trial was made one evening. The judge was convinced the Warner was not a lawbreaker.

In his decision he said: "The fact is that a certain space must be illuminated, according to the law, and a certain strength of light must be used for this purpose. When space 150 ft. away must be made light, the illuminating source must be accordingly brilliant. But I find this light not to be dazzling."

From the Automobile

and Warner Lenz Wins!

look at this

This page pictures only one of many indorsements of Warner-Lenz. Here a Judge gives his O.K.

Police officials in one city after another are issuing certificates of approval.

WARNER-LENZ

Automobile engineers and illumination experts claim Warner-Lenz solve night driving problems forever.

And thousands of owners driving by Warner-Lenz under all conditions—send unsolicited approval.

and this

This universal approval helps dealers. It means all the above influences are working on car owners and making them your prospects.

Already 200,000 pairs of Warner-Lenz have been sold. But there are 3,000,000 prospects. For Warner-Lenz are bound to become universal.

We need more good dealers throughout the country. Write today for our **very** liberal terms. Will co-operate with you to the limit.

The Warner-Lenz Co.

The Dixie Flyer

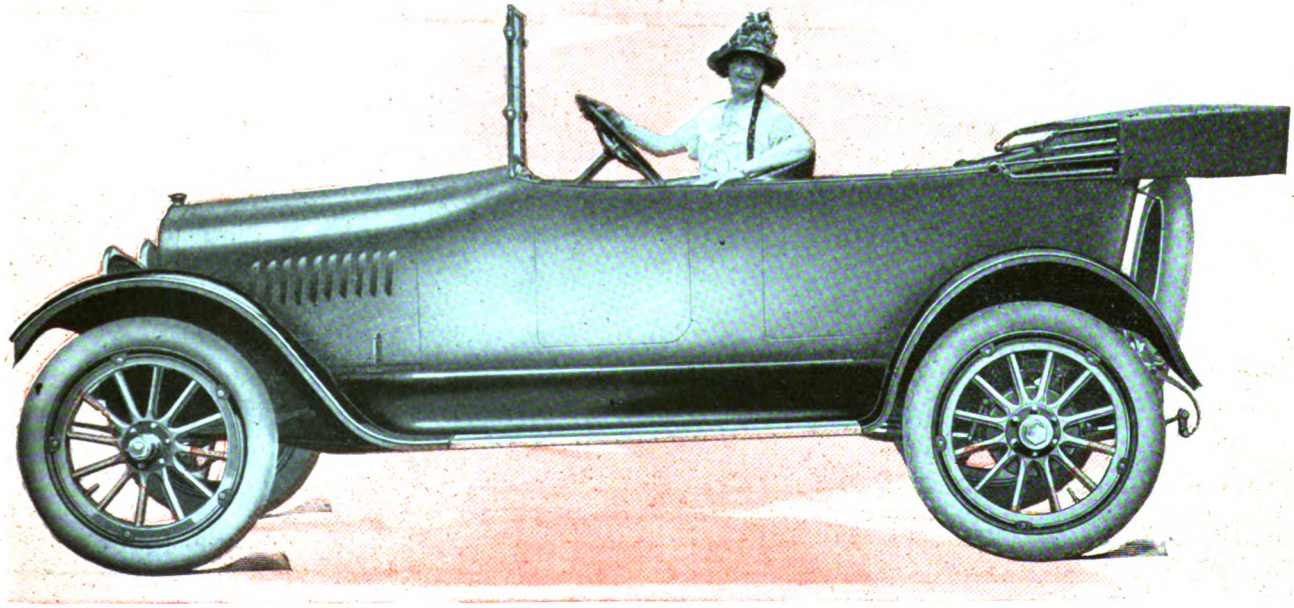
DIXIE MOTOR CAR CO. INCORPORATED — DIXIE FLYER — LOUISVILLE, KY.

Takes Its Place in the Sun

Since the day it was first placed on the market the Dixie Flyer has made an enviable sales record.

Setting a new standard for fuel economy, power availability and motor car performance in its price class, it instantly flashed into the light of public approval.

Today the 1917 Models, including a four passenger Cloverleaf Roadster and a five passenger Touring Car, present practically the same mechanical structure plus touches which make for added refinement and individuality.



Some territory is still open to substantial dealers prepared to handle the cream of the "less than Thousand Dollar class" trade. Write, wire or phone.

CONDENSED SPECIFICATIONS

4 cylinder enbloc motor, 30 H. P., Grant Lees transmission, Dyneto 2-unit Electric starting and lighting, Connecticut ignition, Williard Storage Battery. Single, flexible universal, Stewart vacuum feed, self-lubricating springs, full floating rear axle, Bower roller and S. K. F. ball bearings throughout. Spiral bevel drive. Tires 32x3½. Wheelbase 112 inches.

With Modern Equipment $795 f.o.b. Louisville

Model F, 2000 pounds capacity
$1500 (chassis) cash, f. o. b. factory

The new line of International Motor Trucks, two models of which are illustrated on this page, is seeking live distributors and wide-awake dealers in all unoccupied territory.

Can we do business with you on this basis?

International Motor Trucks are strictly modern, up-to-date in every respect, the best built motor trucks in America, regardless of price.

This new line is built in sizes that meet the requirements of over 80 per cent of motor truck buyers.

No truck gives the buyer more value for his money, or is easier to sell.

The Company that makes them is responsible and dependable to the highest degree.

International Motor Trucks are extensively advertised, both generally and locally, in the dealer's territory. No company could possibly co-operate more fully with the dealer than we do to make his work successful and profitable.

Our dealer arrangements are extremely liberal.

This year we have sold every truck the factory could turn out, without taking a single war order. Next year the factory output is to be more than doubled. By coming in with us now, you will share in the profits of our best year so far.

The best territory is being taken rapidly. Later on the opportunities will be limited. Now is the time to come in and grow with us. Please wire or write us so that we can lay our whole selling plan before you.

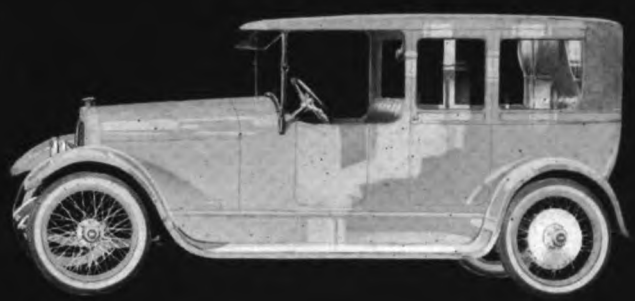
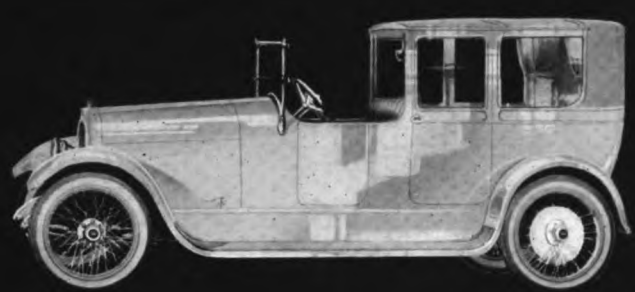
MARMON 34



Light in weight, low, easy riding, luxuriously finished, there are many points of advantage that are found *only* in Marmon 34 closed cars. Scientific design and the extensive use of Lynite Aluminum make these cars lighter by 1100 pounds than other closed cars of equal size and power. The over-all height is several inches under the average, yet there is the usual head room inside. A low hung body, with low center of gravity and a new rear spring suspension, provides easy riding without side-sway.

NORDYKE & MARMON COMPANY
INDIANAPOLIS, IND.

Digitized by Google



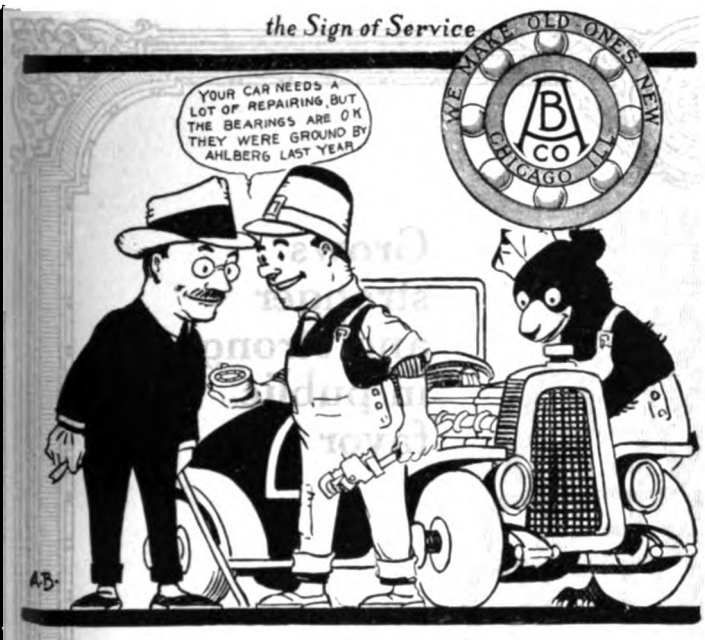
Marmon 34 Closed Bodies

Unlike the usual car of this type, the Marmon 34 Limousine is not heavy nor is it high. It weighs only about 4000 pounds and the over-all height is only six feet nine inches, yet there is the usual head room and abundant passenger space.

With floor boards several inches lower than in the usual car, weight perfectly balanced, extra wide doors, abundant room inside, and deep upholstery, the Marmon 34 Landaulet is a car which gives "easy chair" comfort on the road.

Style and distinctiveness feature the Marmon 34 Town Car. Rapid acceleration, extraordinary power, quick acting brakes, and a short turning radius, make this Town Car ideal not only for crowded traffic but for the open boulevards as well.

The Convertible Sedan is a fine family car. All the seats are enclosed, entrance is by a rear door on either side and front seats are separate. It can be used as a closed car or easily changed to an open car with only windshield, top, and rear portion in place.



"Holbrook," New York; "Kimball," Chicago; "Thompson," Pittsburgh; and "New Haven Carriage Co." are "Closed Body" names that need no emphasis. Experienced buyers of closed cars know them, and the class of work they represent. It is interesting and important to note, therefore, that each of these houses has produced exclusive designs for the Marmon 34 chassis, which will be furnished this season as regular Marmon closed car models.

The demand for the Marmon 34 chassis so equipped undoubtedly will equal that of the open car, for the closed models equal the now famous open Marmon in distinctive features and highly advanced design.

Ahlberg users all have found Ahlberg bearings rightly ground

The Super-Efficiency of Ahlberg Reground Bearings

MOST satisfactory to you is definite assurance of efficiency in reground bearings. To know that Ahlberg reground bearings give equal or better service and carry the same guarantee as new bearings.

No one else can give you these perfectly ground outer and inner rings, with the smooth, flawless raceways. For we are the owners, inventors, and sole users of Ahlberg grinding machines, completely covered by United States Letters Patent.

No one else can give you equal assurance of accurate balls. We use only new oversize balls, made especially for us, the largest users. Every ball in each bearing is measured by experts to 1-10000 of an inch and for that specific bearing. The utmost in ball bearing accuracy.

No one else can give you the Ahlberg retainer. We invented it to overcome the imperfections we saw in thousands of retainers sent to us. This retainer is the final element—together with the smooth, flawless and time tested raceways, and micrometer tested balls—that makes Ahlberg Bearings super-efficient.

No one else can give you the instantaneous exchange service. In each of the following cities, in our own direct factory branches, we carry all makes, types and sizes of reground bearings to exchange for your worn ones. The only charge is a small one for regrinding. Yet we make our guarantee on Ahlberg Reground Bearings equal to a manufacturer's guarantee on New Bearings.

The cost to you for Ahlberg Reground Bearings is about one-fifth.

In the following cities you will find this sign.

So write or call for any information and assistance you desire.

"The Goods"

You dealers who are selling tires have got to promise pretty good service to get your share of the business.

The tire buyer of today knows what he should get out of his tires and is past the stage where he will be fooled by flowery talk about "unequalled manufacturing facilities," "large output" and "highest grade materials."

To get your share of the business you must deliver "the goods"!

WOODWORTH TROUBLE-PROOF // TIRES //

will back you up in every claim you make for them. Look at this cross-section, and see why.

These tires must make good. They are built to make good. They do make good. You want the agency for a tire like this. It means a fine big business that will increase each season. If you are a live dealer in an open territory we want to talk to you. It will mean good business, a profitable business and an established business for you.

A Thief-proof Lock for Fords

Price $3.50

AN Ignition Lock that can be attached permanently to any Ford Car in two minutes time and with no special tools—that requires no change whatever in the standard wiring arrangement—that eliminates forever the bother of carrying a switch key and can be opened in one-half the time required by any combination or key lock—such is the **Thiefoil Ignition Lock.**

Thousands of automobiles were stolen in this country last year. It is probably easier to steal a Ford than any other car and ninety-five per cent. of the Ford owners in your territory will buy a **Thiefoil Ignition Lock** on sight. The opportunity is yours. There's a good profit on every one and sales come faster than on any accessory you have ever handled.

Thiefoil Ignition Locks are sold through all jobbers, but write us direct for details of our plan to co-operate with our dealers to the limit. Don't delay—some one is going to sell the Ford owners in your community and it might as well be you. Write us now.

NO MORE CARBURETORS AT $10., $20., $30. and $40.

THE TIME OF FANCY PRICES IS OVER

Sunderman's Remarkable Vacuum Carburetor

$5.00

$6.50 with Elbow for Attachment to Engines where Manifold is not Cast in Head. (Ford Cars do NOT need an Elbow.) Prices f. o. b. Newburgh, N. Y.

DEMAND a SUNDERMAN on your New car—INSTALL a SUNDERMAN on your Old car. SAVE Money and Troubles.

ULTIMATELY all cars will be Equipped with a VACUUM CARBURETOR. THOUSANDS OF CAR OWNERS have already replaced the Carburetors furnished by the Car Manufacturers with a SUNDERMAN VACUUM CARBURETOR (Patented).

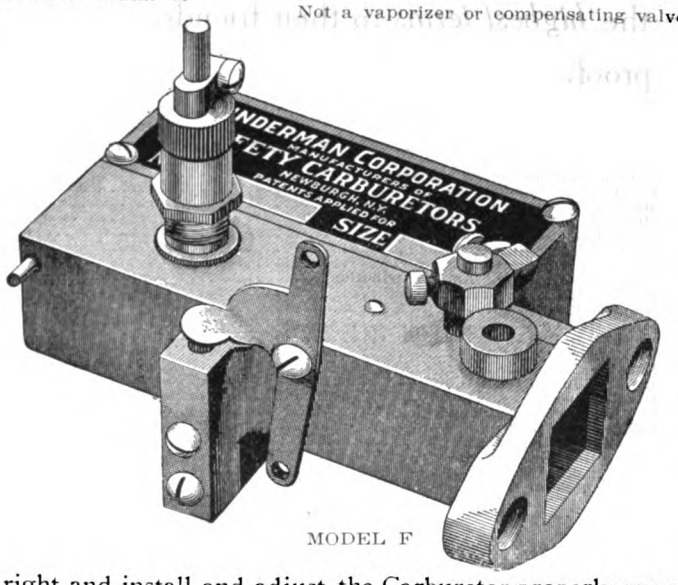
WHY?

1st: BECAUSE IT IS MORE EFFICIENT:
It produces a pure dry gas (no vapor or spray), therefore leaving no carbon deposit, eliminating valve grinding, gas pound and foul spark plugs.
Gives uniform mixture and unvarying results at all times.
Works automatically under changing climatic conditions.

2nd: BECAUSE IT IS MORE ECONOMICAL:
Costs only $5.00.
Has no wearing part, thereby saving all troubles of replacements.
Is composed of 25 parts only, while all other Carburetors have from 100 to 150 parts—necessarily costing 4, 5 and 6 times more to produce.
Will decrease your gasoline bill from one-third to one-half.
Increases the mileage of any car, of any make, of any number of cylinders.
Can be installed within an hour.
"FORD" installation can be made within 30 minutes.

Private car owners have installed the SUNDERMAN VACUUM CARBURETOR on the following make of cars:

Alco (Truck)	Empire	Little	Paige
Allen	Everitt	Locomobile	Pierce Arrow
Abbott	Flanders	Marathon	Premier
Beaver	Franklin	Marion	Pilot
Briscoe	Ford	Marmon	Peerless
Buick	Garford	Maxwell	Rambler
Cadillac	Haynes	Mercer	R. C. H.
Cartercar	Hudson	Metz	Regal
Chevrolet	Hupmobile	Michigan	Reo
Cole	Jackson	Mitchell	Saxon
Chalmers	International	Moline-Knight	Speedwell
Chandler	Interstate	Mora	Studebaker
Dodge	Pope-Hartford	National	Scripps-Booth
DeLuxe	Kroxton-Keeton	Oakland	Stoddard-Dayton
Detroiter	Koehler Truck	Oldsmobile	Warren
E. M. F.	Kissel	Overland	Welch
			Winton



Send for "Expressions" of recent date from Satisfied Users of

Sunderman's Vacuum Carburetor

Not a vaporizer or compensating valve, but a CARBURETOR

FEATURES

Enormous gasoline saving
Greatly increased mileage
More power
Great flexibility
Fast get-away
Quick pick-up
Easy starting
Positively no back-firing

MODEL F

MODEL F DIMENSIONS

4½" x 2½" x 1⅞". Suitable for any engine up to 45 H. P. Subject to different size nozzle, according to bore and stroke of motor.

Weight: 1¾ pounds.

See that your motor is right and install and adjust the Carburetor properly as per directions sent with each shipment.

No Weak Links

The old thoroughly established axiom that no chain is stronger than its weakest link is just as applicable to ball bearings as it is to chains.

No ball bearing is stronger than its weakest part.

If raceways are sacrificed in thickness in order to enable the carrying of more balls there is no gain because of the added carrying capacity of the greater number of balls. For it is entirely possible to get a ball carrying capacity that will not be sustained by the raceways in which the balls are mounted.

The ideal ball bearing is the bearing in which ball capacity is identical with race capacity.

Such are U. S. BALL BEARINGS. They are what we call balanced bearings, in that both in design and manufacture every component part is designed with relation to its other fellow parts. This balancing, combined with high quality materials and the highest type of manufacturing methods, give to U. S. BALL BEARINGS an exceedingly great carrying capacity and endurance.

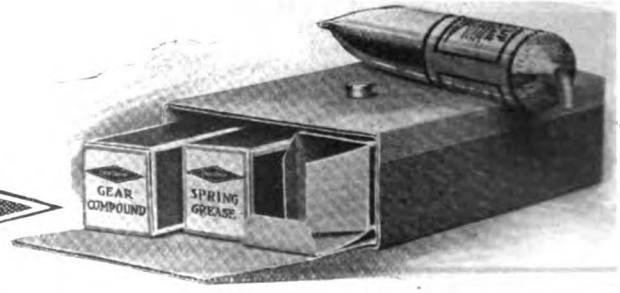
GREASE-in-TUBES

—for economy
—for cleanliness
—for speed

FOR on-the-road emergencies, or for ordinary use, the LINCOLN HIGHWAY KIT of *clean* GREASE-in-TUBES is the most convenient means for refilling cups and lubricating springs or transmissions and rear axles, with a special grease for each.

After removing the screw-cap, just the *right* amount of grease can be squeezed just *where* it is wanted—and this quickly, without muss or smear, and to the last particle in the tube.



The compact form makes it convenient to carry on *any* car.

GREASE-in-TUBES is sold in cartons of three tubes each at a dollar a carton. There are separate cartons of cup grease, spring grease and gear compound, and then, of course, the LINCOLN HIGHWAY KIT, which contains one tube of each grease.

Your dealer or garageman can supply you, or if he has not yet stocked GREASE-in-TUBES and other Crew Levick high-grade motor specialties, send us his name and we will see that you get quickly whatever you want.

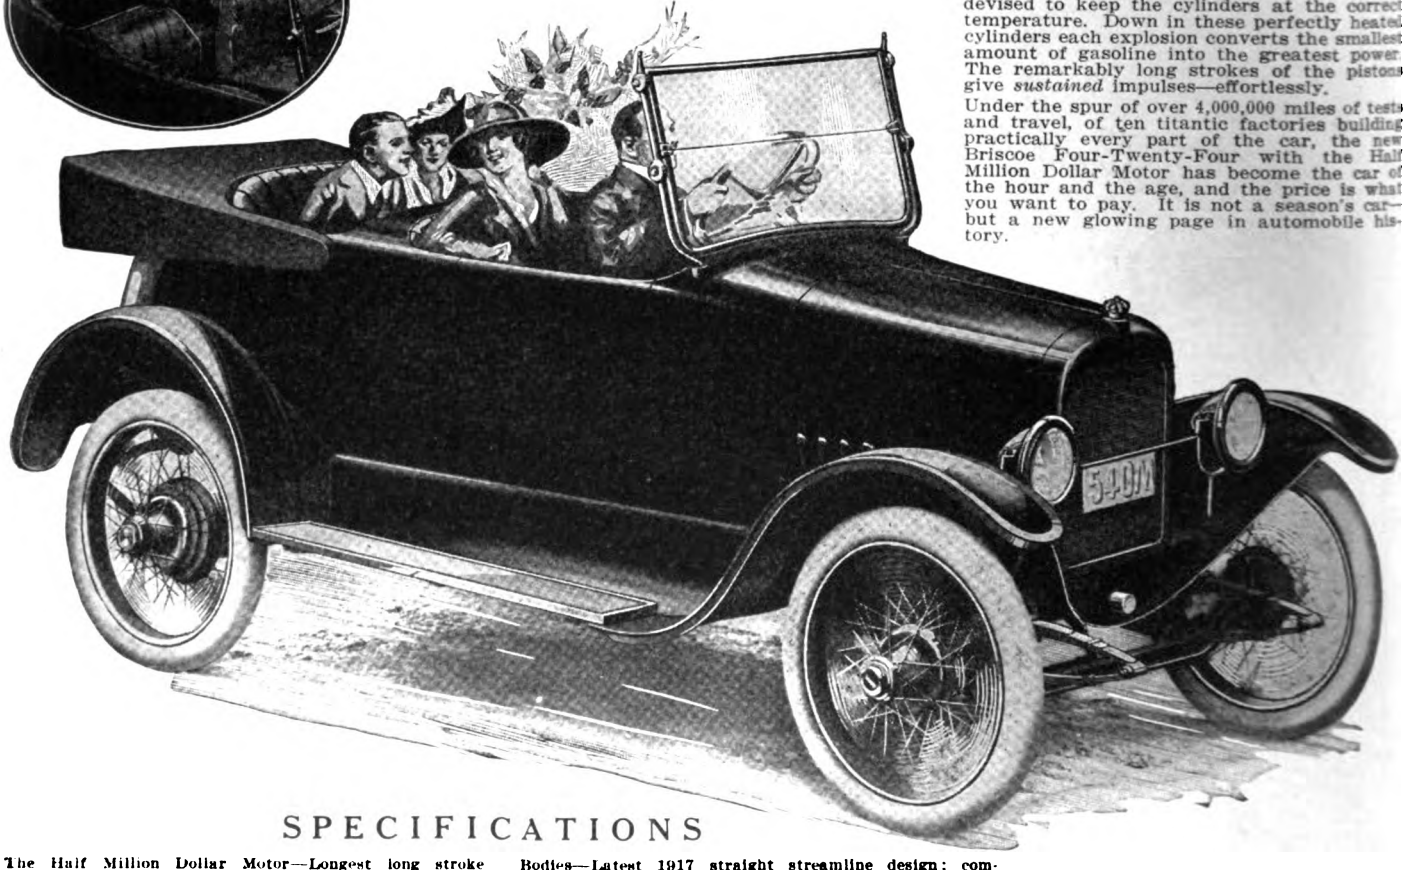
BRISCOE $625 FULLY EQUIPPED

BUILT BY A FOUNDER OF THE INDUSTRY

It is a glorious morning in sunny France. The road is melting away under the silent speed of a new marvelous motor. The environs of Paris, the motor car vortex of the world, are left behind. The big studious man at the wheel turns into the verdant hill country, past high smiling chateaux and rumbling peasant carts.

A new principle, a new progress in automobiledom is being born. Thousands of miles fade away under the thrill of the car—the French Salons acclaim it the Internationally Accepted Masterpiece of motor construction—then it is announced to America!

—And *this* man said, "I will build *such* a car!"



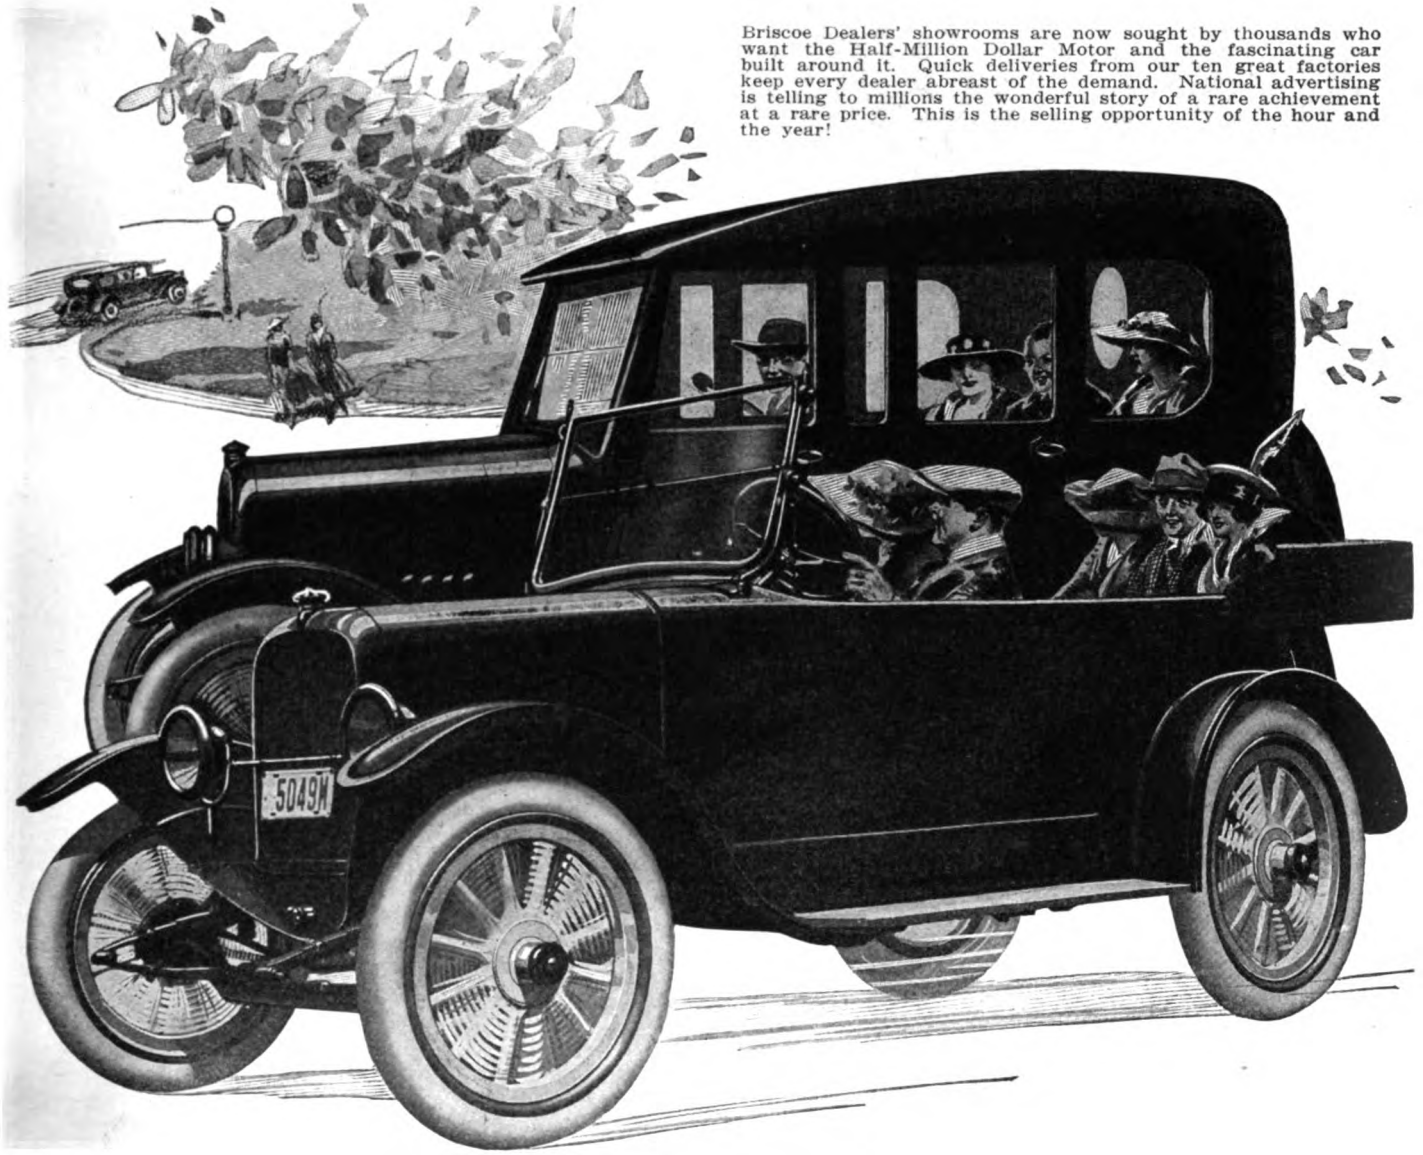
In the automobile center of the world—Paris—Benjamin Briscoe welded the world's most eminent creative engineering into the Half Million Dollar Motor. He had been a founder of the industry—had originated the modern principle of radiation—had taught men how to produce devices for cooling systems in quantities. His genius had been represented in more than a million cars!

Now—with fourteen great European engineers—German, French, Swiss—and at a cost of $500,000, he had realized his lifework's masterpiece. From Paris to Jackson, Mich., over a span of four years, he attained his object—to place within the purse-reach of every family an automobile of jubilant power, luxury and remarkable economy, fully equipped at $625.

The Half Million Dollar Motor is America's longest stroke motor. Gasoline cost 50 cents a gallon in France when it was originated there. Consequently it was built for supreme economy—now gives 25 to 30 miles on a gallon of gasoline, with other economies in the same proportion. A unique combination of water-cooling and air-cooling was devised to keep the cylinders at the correct temperature. Down in these perfectly heated cylinders each explosion converts the smallest amount of gasoline into the greatest power. The remarkably long strokes of the pistons give *sustained* impulses—effortlessly.

Under the spur of over 4,000,000 miles of tests and travel, of ten titantic factories building practically every part of the car, the new Briscoe Four-Twenty-Four with the Half Million Dollar Motor has become the car of the hour and the age, and the price is what you want to pay. It is not a season's car—but a new glowing page in automobile history.

SPECIFICATIONS



The Half Million Dollar Motor—Longest long stroke motor in America; 3⅛ inch bore by 5½ inch stroke; bore and stroke ratio 1.64; four cylinders cast en bloc integral with crank case, having a detachable cylinder head plate; lower crank case forms oil reservoir; valves on the right side, 1 7-16 inch diameter in clear and completely enclosed.
Wheelbase—105 inches.
Lubrication—Oil pump and splash system.
Carburetor—Automatic.
Drive—Left. Control—Center.
Front Axle—I-beam section drop forged with special Briscoe fixed king bolts.
Rear Axle—Floating type.
Bodies—Latest 1917 straight streamline design; comfortable room for five passengers; leg room in tonneau and front of car for a six foot man; extra high grade quality of upholstery; 46 inch rear seat; Roadster—Four Passenger.
Springs—Full elliptic front and rear.
Tires—30x3½ inches all around; anti-skid tires in rear.
Equipment—Two electric head lights with dimmers; one man top with envelope and adjustable storm curtains; tilted eye-saver windshield; speedometer; oil-gauge; gasoline gauge; demountable rims, one extra.
Prices—Five-passenger touring car $625. Four-passenger roadster $625; f.o.b. Jackson, Michigan. In Canada, $825; f.o.b. Brockville, Ont.

Briscoe 4-24 Four Passenger Roadster and View of Door Arrangement Between Front and Rear Seats.

THE CAR WITH THE HALF-MILLION DOLLAR MOTOR

Briscoe Dealers' showrooms are now sought by thousands who want the Half-Million Dollar Motor and the fascinating car built around it. Quick deliveries from our ten great factories keep every dealer abreast of the demand. National advertising is telling to millions the wonderful story of a rare achievement at a rare price. This is the selling opportunity of the hour and the year!

The Upper Car is the Briscoe 4-24 Coachaire, the Standard Touring Model Equipped with All Year Top, $750
The Lower Car is the Standard Briscoe 4-24 Touring Model, $625, fully equipped.

Benjamin Briscoe, himself a big man physically, supervises the construction—makes it **roomy.** If you are as tall as Abraham Lincoln you'll stretch out with ample leg room in front and rear seats. Your wife or daughter will drive the Half Million Dollar Motor with ease because she can shift gears with her finger tips and operate clutch and brake with slight pressure on foot pedals. Further, the Briscoe is radiantly beautiful, because the maker has the soul of an artist. It has high sides, long, yachtlike lines, upholstery like you find in $1000 and $1200 cars. Briscoe himself has put into it all the love of the work that a great painter spreads on canvas—it is fascinating to the eye and to the eye it tells its wonderful story.

Dealers—Here are more superlative selling points: *Briscoe modern advancements in equipment, if added to another light car, would cost* $200 *more.* Your purchaser need not spend an extra penny on the Briscoe Four-Twenty-Four at $625, fully equipped with all conveniences, with speedometer, gasoline gauge, demountable rims, one-man top, electric headlights, eye-saver ventilating windshield, electric starter, linoleum running boards and other up-to-date features.

Profit for the Dealer

Here is a device which, when properly installed, means

LESS GASOLINE—MORE POWER
NO CARBON

Deitz VAPOR System

"A Rainy Day on a Dry Road"

Read this proof

"At sea level"

We have recently equipped our cars with the Deitz VAPOR System. This appliance has reduced our average daily gasoline consumption from 7.75 to 5.55 gallons per car—a saving of 2.20 gallons. We get 39% more mileage out of each gallon with the appliance than we did without it. Refer any skeptics to us.

Union Jitney Bus Co., Norfolk, Va.

"Mid the mists of Niagara"

The DEITZ System which you put on my Ford Runabout has more than paid for itself as it increases mileage better than one-third to the gallon, gives more power and eliminates carbon. We have also installed your device on our 3-ton motor truck with similar results. I unhesitatingly recommend the DEITZ to any one who is interested in cutting down gasoline bills.

Christian Flierl, Pres.
Christian Flierl Co., Buffalo, N. Y.

"Along the lake shore"

The Deitz VAPOR System which you recently installed on my Ford Tonneau has proved the best investment I ever made. Since attaching your device I have reduced my gasoline consumption from 30 gallons every two weeks to 20 gallons. Furthermore, I haven't had to clean a spark plug. If I couldn't buy another, I wouldn't sell my DEITZ for $50.

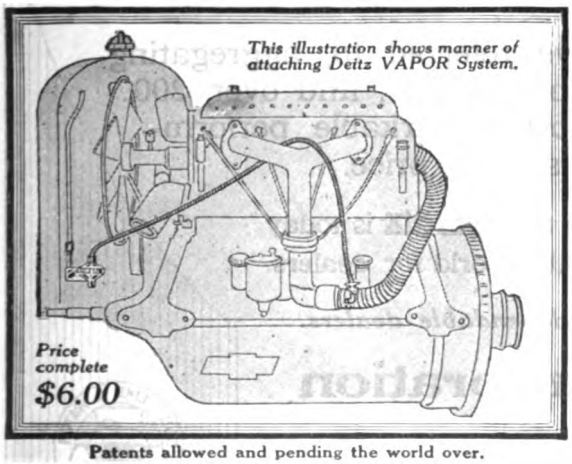
Dell Stephans, Chicago.

"On the Texas prairies"

After making a thorough test of the wonderful Deitz VAPOR System on 300 miles running with our Twin-six Packard, we installed the device on our various delivery cars. It is giving entire satisfaction in every instance and we unhesitatingly recommend it to be as advertised.

Elihu A. Sanger,
Sanger Brothers, Dallas, Texas.

"One mile high"



I have had your Deitz VAPOR System on my 1916 eight-cylinder Cadillac for about two thousand miles and I want to say that I am very much pleased with the results. I find that it eliminates carbon, gives about 20% more mileage and causes the motor to run smoothly and quietly on hot days; in fact gives about the same effect as driving after sundown. I can highly recommend it to use on all cars.

G. G. Pickett, Denver, Colo.

"Up in the clouds"

I recently made the most wonderful run on the least gasoline in my Ford that I have ever heard of—thanks to the DEITZ installed on my car recently. With four friends I went from Denver to Morrison, Evergreen, Bergen Park and back over Lookout Mountain to Denver, a total of 63 miles, with an actual consumption of 1 3-4 gallons of gasoline. I was getting about 18 miles to the gallon before the DEITZ was installed. At the above rate I am saving at least 50% with the DEITZ.

F. J. Lynch, Denver, Colo.

Patents allowed and pending the world over.

Conducts water vapor from Radiator to Carburetor

Watt discovered Steam Value rising from a Tea Pot.

Deitz discovered Vapor Value rising from an Auto Radiator.

The Deitz VAPOR System is designed for any type of water cooled car. It can be attached by any man in 15 to 30 minutes, without driving a screw or boring a hole in radiator, manifold or engine.

When you have properly installed our Deitz Air Valve in the radiator cap—our Deitz Automatic Water Trap in the radiator overflow pipe—our Deitz Hydrator in the carburetor and connected these with our specially made asbestos packed Flexible Hose, the suction of the engine will draw pure water VAPOR from the top of the radiator, continuously moistening the mixture of dry hot air and gas—causing three easily apparent economies—LESS gasoline—MORE power—NO carbon. The action is automatic and positive—nothing to get out of order—simply install and then forget it.

Price to Car Owner

Complete system in brass with steel tubing - - - $6.00

Money back if dissatisfied after ten days' trial.

Write for liberal proposition

The Deitz is not a "makeshift"—thousands of car owners testify it is not an experiment—it is a genuine VAPOR system. You sell it on TEN DAYS' TRIAL—it never comes back—your profits are liberal and assured. Write quick for our liberal dealer's contract, also illustrated descriptive booklet "Vapor Now Escaping from your AUTO RADIATOR Turned into Golden Dollars for You." Address nearest office—don't let some one else beat you to the exclusive agency for this wonderful device. Distributors stock everywhere.

Three-Passenger Clover Leaf Roadster

Elgin Economy

You have read in other **Elgin** advertisements of—

Elgin Character and **Elgin Endurance**

That combination of Style, Size, Beauty and general impressiveness that sets the **Elgin Six** apart in a class of its own.

The wonderful performance of the **Elgin Six** in two of the most gruelling reliability contests of the season, seven Elgins in the contests referred to coming through with perfect scores and without a mechanical adjustment. The trips were made over the roughest roads, worst hills and deepest sand in the country

This brings us to a subject close to the heart of every motorist and dealer—

Elgin Economy

The seven cars participating in the trips above referred to, aggregating 825 miles, averaged 25.5 miles to the gallon of gasoline, and over 200 miles to the quart of oil—probably the most remarkable performance ever made by a motor car of any size or price.

Ask us to send you proof and tell you why the **Elgin Six** is today the biggest and quickest money-maker in the world for dealers.

Some desirable territory still open for dependable dealers.

A HEART OF ADAMANT

MODERN engines demand a Plug that will stand the wear and tear of hard service unflinchingly. These motors must have an indestructible Plug — in other words, the

GOLDEN GIANT

Our special **Blue Adamant Insulation** is **one** of the big reasons for Golden Giant quality. It will stand hard knocks, never yielding, and it laughs at the greatest heat that any motor can give it.

Compression upon this insulation has as much effect as the slapping of the waves on the face of the Gibraltar. It doesn't even annoy it.

In order to announce to every man that the only perfect Plug made for any motor is the Golden Giant, we plated this plug with 24-K. Gold—and we back it with the strongest guarantee ever written.

Mr. Dealer, travel the Benford way. It is the way that leads to *bigger* Spark Plug sales, *bigger* Spark Plug profits, and *more satisfied* customers.

SHALER

Electric

Shop Vulcanizers

$60

Subject to Trade Discount

A Money Maker for Every Garage

Your garage, where every part of the automobile is repaired and cared for, is the logical place to mend tires. Thousands of ambitious garage owners realize it and are increasing their revenue as a result. They utilize the spare time of their help thereby reducing their overhead expense.

Every car you store, repair or adjust means eight prospective tire repair jobs because every car means eight tires per year on the average. These tires need daily attention because they blow out or puncture constantly.

Wrapped Tread Method

This simplifies tire repairing and makes every casing and tube repair perfect and permanent. It is the same method that is used and indorsed by the big tire makers. The Shaler is acknowledged to do better work than the high priced complicated machines.

It is so easy to repair tires the Shaler way that anybody who can clean or wash a car can operate a Shaler the first time and make perfect repairs. It heats from city electric light—uses very little current and requires little bench room.

Automatic Temperature Control

This, together with thermostat attachment, is an exclusive Shaler feature that controls and maintains the temperature of the Vulcanizer exactly at the right point for every type of repair without watching or regulating and without fear of overcuring or undercuring the tire.

Tubes can be repaired simultaneously with casings yet each unit is complete in itself and may be used independently. In casing repairs the Shaler retains the original pattern of any non-skid tread and makes the repair the strongest part of the tire.

Write Today for Complete Catalog

Send at once for the new Shaler Catalog of Shop Vulcanizers and investigate this extra avenue of profit for garages. You'll be surprised how easily and quickly you can add to your revenue. Steam heated vulcanizers furnished if you have no electric current. Mail your letter tonight.

Different

The newest and most improved type of one-quart extinguisher, readily distinguished by its exclusive two-way method of operation.

The J-M Fire Extinguisher may be discharged by pumping, like other types—or in cramped quarters, where there's no room to pump, by opening nozzle and releasing the air pressure previously created; this discharges contents in a steady, non-pulsating stream, and leaves both hands free to aim.

Liquid is harmless to skin, fabric, or metal, but kills fires quick—whether originating from gasoline, oil, grease, kerosene, or electrical arcs.

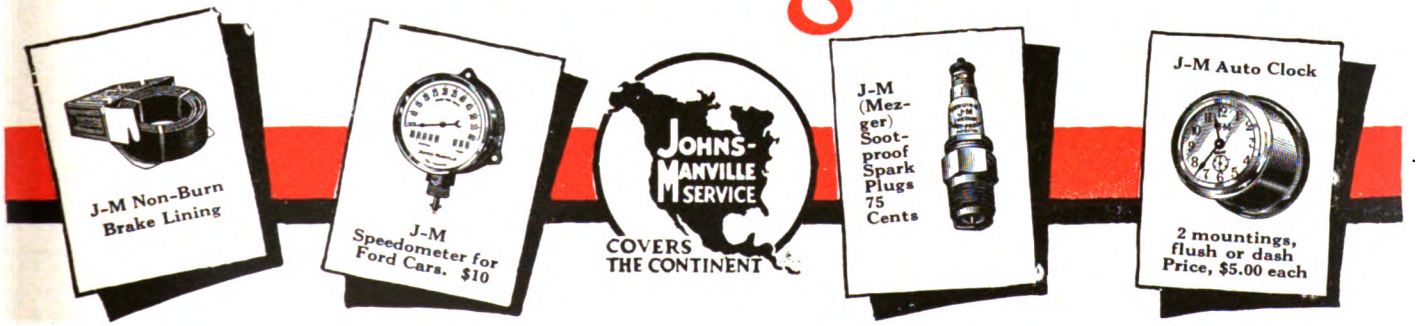
SAVES 15% ON AUTO FIRE INSURANCE

The J-M Fire Extinguisher retails for $8.00, brass or nickel finish, bracket included. J-M Fluid, sold in sealed cans, is the only liquid recommended and guaranteed for re-charging J-M Extinguishers.

If your dealer hasn't stocked the J-M, write our nearest Branch.

As a result of the tests made under the direction of the National Board of Fire Underwriters, the J-M Fire Extinguisher has been approved by and bears the label of the Underwriters' Laboratories Incorporated. To motorists this means a 15% reduction on automobile insurance.

TO THE TRADE



Our trade policy is "different," too, and on a par with the machine. Regardless of the size of your order, discounts are liberal and strictly maintained. Jobbers and dealers everywhere are finding our proposition a profitable one. Why not write for details?

National REDWALL Speedway Type

Now-a-days you hear a great deal about why this tire or that one is better.

Yet building tires is no different from building most any other commodity that must give service.

The grade of materials used and the grade of workmanship used invariably determine the service to be rendered.

All other selling features shrink into insignificance when looked at from this viewpoint.

"Speedway" Tires deliver more than average mileage and successfully withstand more than average punishment *because they are well made of excellent materials.*

To be sure there are other tires equally well made, but there the comparison ends, for such tires invariably sell for a higher price than *"Speedways."*

This is a strong statement to make. It is paramount to claiming that National REDWALL "Speedway" Tires, in spite of their price, are similar in quality and performance to tires selling for a much higher list.

Yet facts speak for themselves. Performance convincingly bears out the truth of this statement.

At no time since the introduction of this tire have we been able to supply the demand for it.

For it has all the qualifications necessary to meet the demand for tire luxury at a popular price.

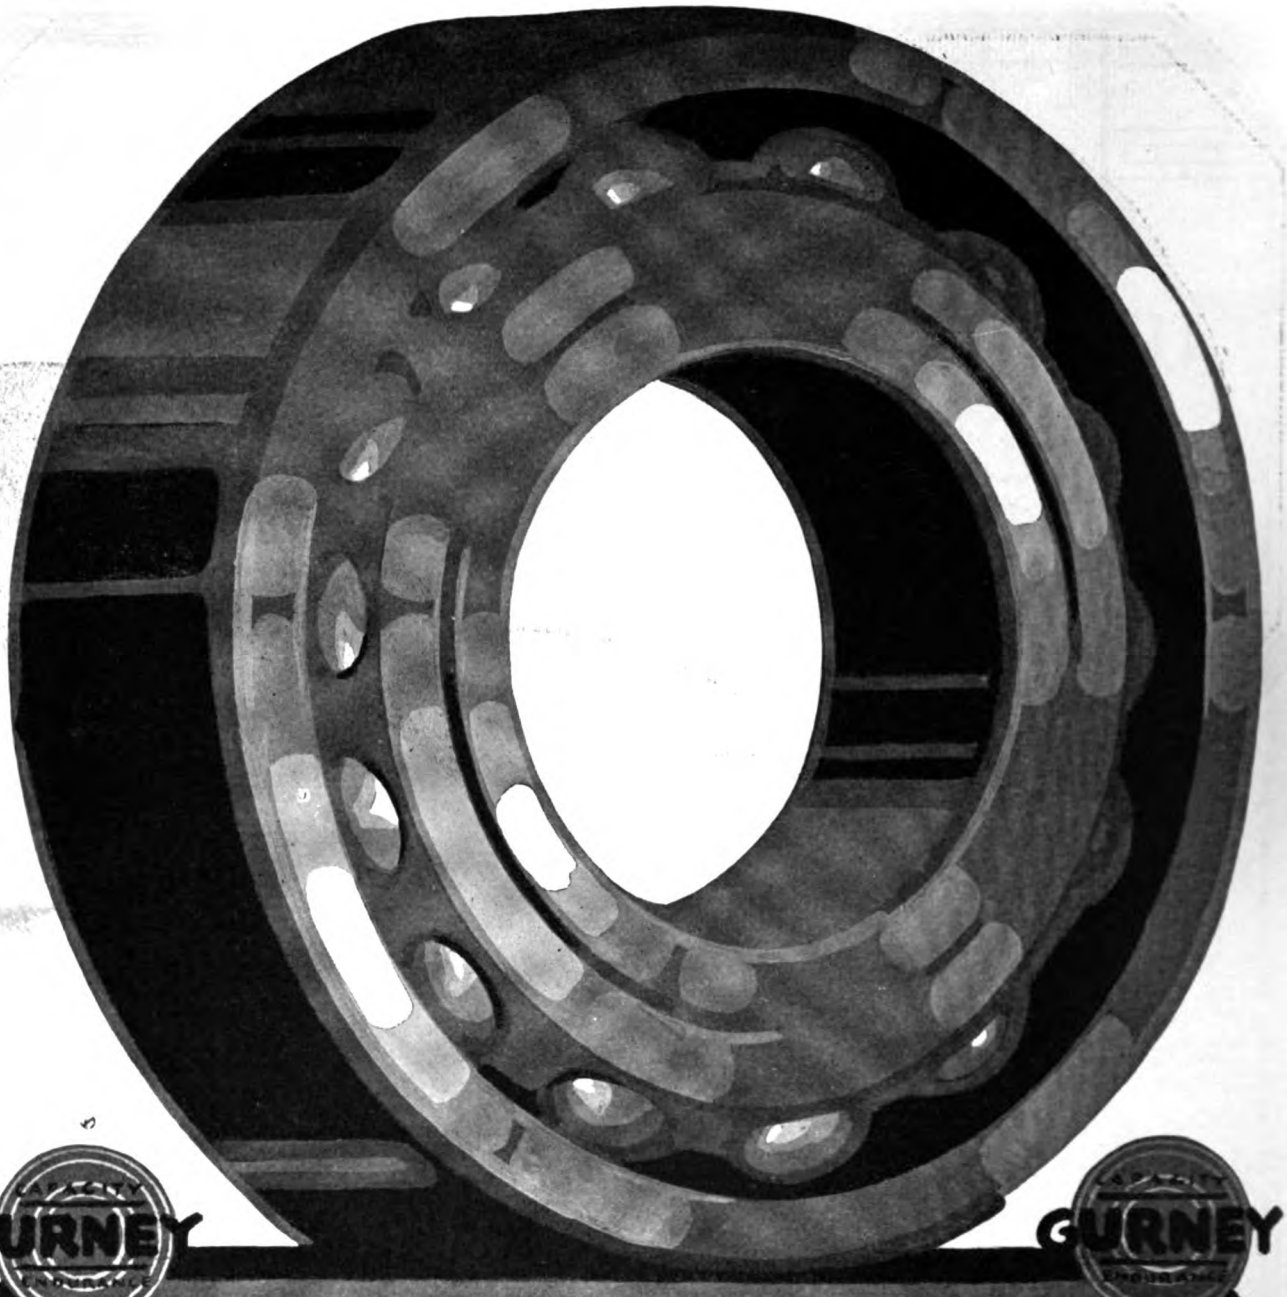
It is rich and distinctive in appearance. It outstrips other tires in mileage and all round satisfaction.

It has a new type of *smooth riding* non-skid. This one feature alone is sufficient to distinguish it from all other tires selling at anywhere near the price.

For this new type of *smooth riding* non-skid has many advantages. It is extra thick, like an added or double tread. There are no lumps, nor knobs nor depressions. Inside fabric wear, such as develops in most non-skids, is impossible because of the continuous unbroken contact of the tread with the road.

Yet these are merely extra features, to insure extra satisfaction. We repeat, the big important reason why SPEEDWAY Tires are good is because *"they are made well of excellent materials."*

TO DEALERS



By early Fall our present capacity will be greatly increased.

Dealers and Jobbers who are looking for a high quality tire to sell at a popular price, on an exclusive territorial basis, to be backed by a generous national advertising campaign, should investigate our proposition at once.

More complete details will be forwarded upon application.

NATIONAL RUBBER COMPANY, Pottstown, Penna.

GURNEY

GURNEY

Unequaled Exactness and Accuracy of Race Contour

It is this feature of Gurney construction that enables Gurney Ball Bearings in actual practice to live up to their great theoretical possibility.

For, no matter how many balls, and of what size, you assemble in your bearing, and no matter how full depth or uninterrupted the raceways may be, the whole unit fails if there is the slightest inaccuracy or inexactness in the contour of the raceway.

By the term "exactness of race contour" we mean the degree of closeness with which the contour of the raceway may approach the contour of the ball. If the contour of the raceway be too great in its relation to the contour of the ball, then capacity is sacrificed, for the ball bears upon the raceway with too little surface.

If the contour of the raceway approach too closely that of the ball, excessive friction offsets the carrying capacity.

There is a happy medium in which contour of raceway and contour of ball so approach each other as to give the minimum of friction with the maximum of capacity. Faithful adherence to this condition of exactness insures both capacity and efficiency in Gurney Ball Bearings.

By the term "accuracy" we mean, of course, the machining and grinding, within size limitations, that approach as nearly to perfection as is humanly possible. Through the use of specially designed machines the Gurney Ball Bearing Company is able to hold these operations to such microscopic limits as are commercially impossible in any other bearing.

A New, Complete Book for Every Ford Owner, Dealer, Salesman and Repairman

The Model T Ford Car

Its Construction, Operation and Repair

By VICTOR W. PAGE

Member of the Society of Automobile Engineers
Author of "The Modern Gasoline Automobile," etc.

300 (5x7) pages. Over 100 specially made engravings and two large folding plates

Price $1.00

This is the MOST COMPLETE and PRACTICAL instruction book ever published on the FORD CAR. A high grade cloth bound book printed on the best paper, illustrated by specially made drawings and photographs. All parts of the Ford Model T Car are described and illustrated, in a comprehensive manner—nothing is left for the reader to guess at. The construction is fully treated and OPERATING PRINCIPLE MADE CLEAR TO EVERYONE. Complete instructions for driving and repairing are given. Every detail is treated in a non-technical yet thorough manner.

This book is written specially for FORD DRIVERS and OWNERS, by a recognized automobile engineering authority and an expert on the FORD, who has driven and repaired Ford Cars for a number of years. He writes for the average man in a practical way from actual knowledge. All parts of the Ford Model T Car are described. ALL REPAIR PROCESSES ILLUSTRATED AND FULLY EXPLAINED.

Written so all can understand. No theory, no guess work

THE THREE GREATEST RECORDS OF AUTOMOBILE PERFORMANCE

ARE ALL BACKED BY

OAKES FANS

PATHFINDER '12'
HIGH GEAR RECORD
4889 Miles—Coast-to-Coast

MARMON '34'
COAST-TO-COAST RECORD
3476 Miles—5 Days, 18½ Hours

KING '8'
NON-STOP RECORD
10850 Miles Without Stopping Engine

Efficient, Reliable Cooling

Oakes Fans Prove 100% Perfect

Each of the three greatest records of performance ever made by an automobile is backed by the reliable, cooling efficiency of Oakes fans.

The Pathfinder with a twelve-cylinder engine ran 4889 miles from coast to coast in high gear—mounting the stiffest mountain grades of the Rockies—pulling through miles of sand and mud—averaging over 60 miles per hour at the finish. Against such tests as 8 miles of hub-deep sand—in 5 days of temperature above 100 deg.—over desert and mountain in high gear this car used but 24 gallons of water.

The King with an eight-cylinder engine covered 10,850 miles in two weeks, running without stopping the engine, making a world's record for Non-Stop performance.

The Marmon with a six-cylinder engine broke all time records from coast to coast, covering the 3476 miles in 5 days, 18½ hours.

And in every mile—in the face of the hardest tests—on each of these three types of engines—Oakes fans registered 100 per cent perfect. The detailed records of each test show gasoline and oil economy and absolute freedom from overheating.

Backed up by their wonderful service records on hundreds of thousands of cars, using both poppet and slide-valve motors, these new records stand as conclusive proof of the value and efficiency of Oakes fans.

The new Oakes factory, doubled in size within a year, has a capacity of half a million fans annually. Already a big proportion of the best automobile engines are using Oakes fans to guarantee freedom from overheating and save gasoline and oil.

Oakes fans back up the radiators of the best cars in the world.

Submit your engine-heating problems to the Oakes organization. Our experts, guided by years of experience, can successfully solve YOUR problems—put them up to us.

STEVENS & CO. NEW YORK

"Right Here is the Inside 'Crust' That Means Permanent Resiliency"

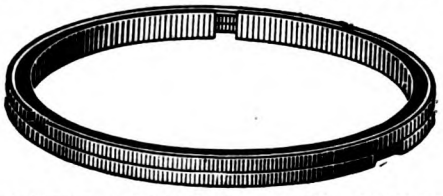
The Stevens Non-Set Piston Ring

retains its "spring" indefinitely

An individual casting of best grey iron, it has a tough skin or crust, which is allowed to remain on the inside circumference. ***Therein lies the secret of its everlasting springiness.***

NONSET

THE RING WITH THE PERMANENT SPRING

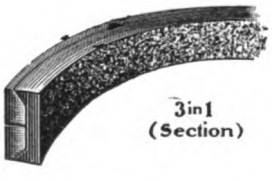


The outer surface is a soft, close-grained metal, exquisitely machined to a velvety smoothness so that while exerting a steady, even pressure against the cylinder walls, it slides along them with the least possible friction and no danger of scoring.

In all other essentials the equal of any other single ring, the Stevens Non-Set Ring is their superior in point of lasting flexibility. **It is the most profitable piston ring proposition that is anywhere offered the trade. The dealer can get a good price, defeat any competition, and yet make a real profit.**

Write your jobber for quotations—and be **surprised!**

STEVENS & CO.



375 BROADWAY NEW YORK

A staff constantly employed in providing a better way for doing work connected with the automobile can many times "cut the corners" on cost, and at the same time assure full efficiency. Our men are always at work with this end in view—they make our hundreds of tools and accessories essential to the trade and owners.

Louis Stevens

STEVENS "THREE-IN-ONE" NON-SET combines the principle of the "ring with the permanent spring" with the compression-saving advantages of the multiple ring, at a price that takes multiple rings out of the luxury class.

IN REPLY REFER TO
HHR

Aug. 31,

The Motor World Publishing Co.,
239 West 39th St.,
New York City.

Gentlemen:-

We wish at this time to offer just a word of appreciation of the wonderful instructive work you have been doing for the automobile industry through your articles in your magazine the past year in which you have strived to make better business men of the garage men as a whole.

We feel that the entire trade is deeply indebted to you for the campaign you have been carrying out. Not only has the dealer himself been wonderfully benefitted by the suggestions, instructions and guidance you have given, but this in turn reverts to the benefit of the jobber, the manufacturer of accessories and the manufacturer of automobiles. The entire industry in every line accordingly is benefitting by the improvement made in the financial and more business-like condition in which we find the garage man at the present time as compared to his condition several years ago.

We know of numerous instances where the garage men previous to the educational campaign you undertook was living and conducting a business in quarters and under conditions which would hardly be tolerated in the worst slums in this country. No accounting system, no method of keeping track of the merchandise and repair work sold from day to day, walking in the mire and filth up to his knees and today these same merchants are operating places of business which have neat clean show rooms and shop in such a condition of order and cleanliness that they are a pleasure to go into. We know that such improvements are due directly to your wonderful work and want to add our thanks to the thanks of the multitude whom you have benefitted.

We realize the lack of appreciation sometimes in return for efforts such as yours, but we trust that the expressions of appreciation will compel you to continue in your good work and wish you every success and prosperity, and beg to remain,

Yours very truly,
REINHARD BROTHERS COMPANY,

H. H. Reinhard

"Almost every dealer with whom we have taken up this matter (Motor World's Winter Business Number) is convinced that this campaign will increase their business during this dreadful period. To show our appreciation of your efforts we have instructed our salesmen to advise all customers to subscribe to your publication, which we feel will result to our mutual benefit."

The above is from a letter dated Sept. 1st from the Phoenix Auto Supply Co., St. Louis, over the signature of J. F. Shuford, vice president and general manager.

It is one of the many to reach us since the big Winter Business number (to be out Oct. 11th) was announced in last week's issue.

Thousands of business men in the industry will aid Motor World to improve conditions during the forthcoming winter months. They feel that we have inaugurated a big work, and are willing to help by putting their shoulder to the wheel.

The business curve of the automobile industry must be improved. To improve the curve means that the business and the profits of every dealer, jobber, garageman and manufacturer will benefit.

The forthcoming big Winter Business number will be the most interesting special issue ever gotten out for the advantage of the merchandise and maintenance branches of the trade.

Advertising space reservations are being filed now. There will be no rate advance on account of increased circulation. We will be glad to send rate card to any manufacturer who is anxious to make successful appeal to the worth-while dealers, jobbers and garagemen throughout the United States.

The reproduced letter on the opposite page is evidence of Motor World's standing in the trade it represents.

FOSTER OWL LIGHT

NOW ONLY

$5

AN avalanche of orders from all parts of the country followed the announcement that the famous FOSTER Owl Light had been reduced in price from $7.50 to $5.00. Constantly increasing demand, coupled with a resultant increase in production, made possible the reduced price. And the FOSTER Owl Light at the new price is in many respects superior to the higher-priced model.

In point of construction, finish, power and far-carrying ability the FOSTER Owl has never been equalled. That is one reason it is

Seen on America's Finest Cars

The searchlight has become a necessity to every motorist, more so since the dimming of headlights has become compulsory. The OWL LIGHT adds to the appearance of any make of car. Its patented FOSTER UNIVERSAL SWIVEL, which enables the user to place the light in any position desired, cannot be found *on any other* searchlight. This clean-cut, positive action swivel assures the searchlight staying in any position it is put.

FOSTER Owl Lights can be obtained from the highest-grade dealers everywhere. If your dealer cannot supply you, write us direct.

In ordering, state make and model of car, also battery voltage.

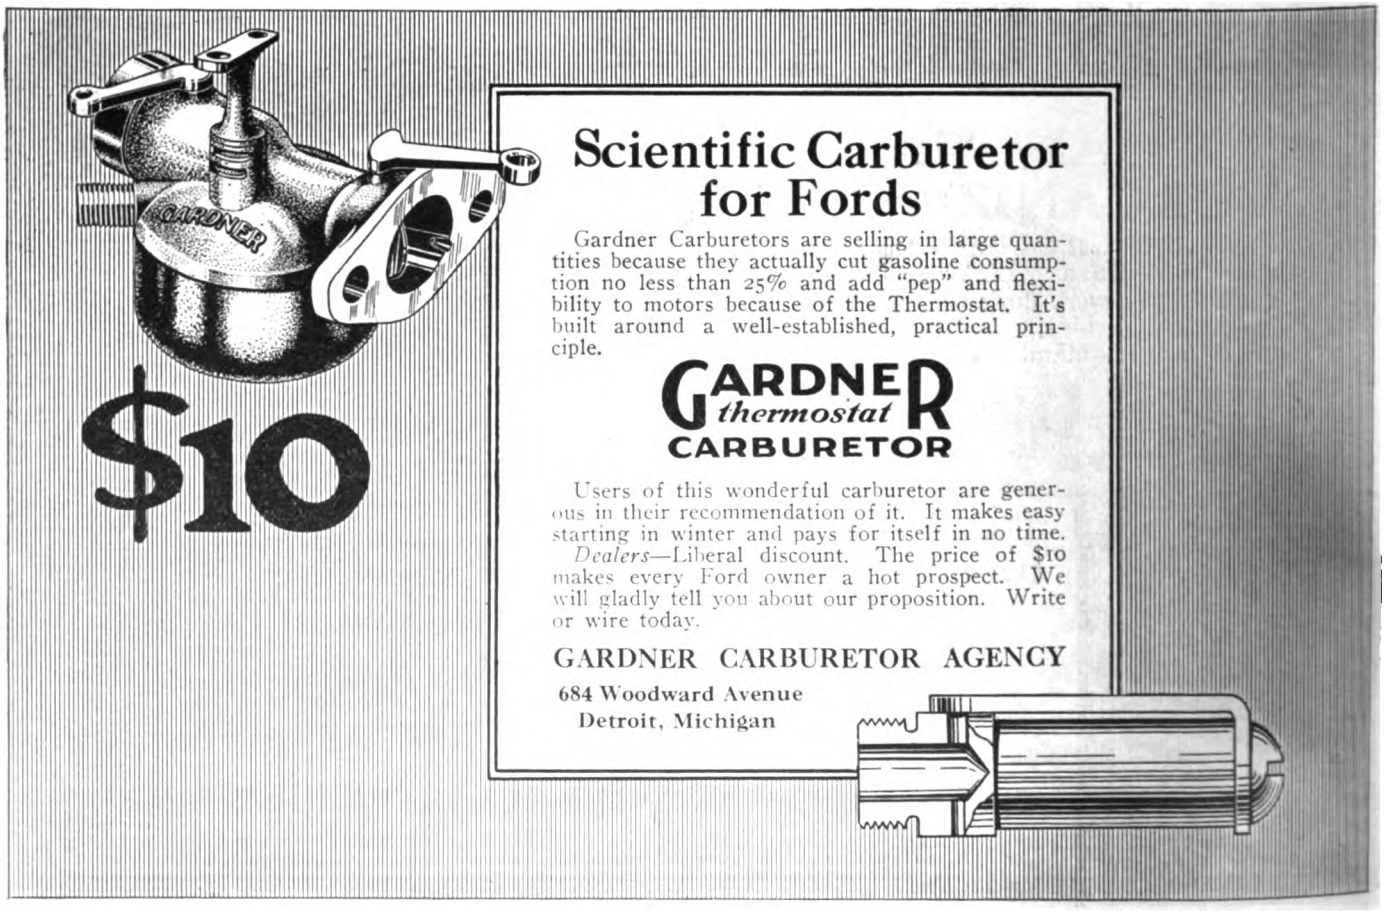
A Brunner Automatic Air Compressor Outfit in Your Garage, and a Brunner Air Sign on Your Garage Would Bring You the Trade of the Brunner Wise Motorist

Mr. Garageman, you cannot afford to overlook the trade of the Brunner wise motorist. He has been following the Brunner Sign for three years and patronizes the garages displaying the Brunner Sign for the reason that Brunner Service means just as much to him as clean gasolene or reliable tires.

The Brunner Automatic Is a Money Saver and Will Return You Full Value for Your Investment with Interest

because it takes just about ten minutes of one man's time to care for and operate this machine a week—figure up just how much time your men lose now starting and stopping your air compressor and keeping their eye on the gauge to see if there is sufficient pressure for your customers' needs. Then figure how much time you could save each week with an automatic outfit that would keep the air pressure in your tank up between 115 and 140 lbs. day in and day out with absolutely no attention aside from an occasional oiling. The Brunner Automatic would save that difference for you.



Mr. Garageman, the Brunner Air Compressor has been making good in the garage ever since the garage business has been a business. When the Brunner was first put on the market the garage air compressors could have been counted on the fingers of one hand—today they could not be counted on the legs of a centipede. The fact that the Brunner has survived competition without end and that there are more Brunners going into the garages today than there are compressors of any other make should be convincing proof that the Brunner is **right.**

Let us send you our No. 13 catalogue, also our Garageman's Handbook on Compressed Air and the name of the Brunner jobber covering your town.

The New FORD

—is at its best only when equipped with HOYT'S QUALITY TRUSS.

Ford owners are recognizing more clearly every day the greatly added strength and endurance given their cars by having a

HOYT'S QUALITY TRUSS

—solidly clamped to the rear axle, lending just the proper rigid support to the differential housing.
Sagless, stretchless, absolutely secure—the greater the strain upon it the tighter it holds.
Far superior to any other Ford axle support on the market, HOYT'S QUALITY TRUSS is in greater demand every day and at the price asked for it,

ONLY $1.50

it is selling fast, in increasing quantities.

DEALERS are making good money handling this simple and necessary Ford accessory. Write for our business-producing terms.

Is Your Car Top Heavy?

Why buy a light weight car burdened with a heavy top?

A low weight center means safer, easier riding. Unnecessary top weight means waste—increased vibration and side sway.

You pay for every additional pound with gasolene, oil, tires and general wear.

At the best the most efficient top material can only be a waterproof layer supported by cloth—the lighter, the better—but strong enough to stand the strain when up, and flexible enough to fold without cracking.

Extra layers of cloth and combiners only add weight, diminish flexibility and increase the possibilities of cracking in folding. Mohair tops absorb pounds of water during a storm and accumulate dust when dry.

DU PONT FABRIKOID

RAYNTITE

SINGLE TEXTURE TOP MATERIAL

is ideal for the modern one-man top. It is made of a single thickness of light, strong cloth coated with a flexible, waterproof compound that sheds water like a duck's back. It can be easily washed, always looks well and because it is chemically inert will not oxidize nor disintegrate. *Guaranteed one year* against leaking but built to last the life of your car. Any top maker can replace your old dusty or leaky top with Rayntite.

Du Pont Fabrikoid Rayntite will duplicate the remarkable success of Du Pont Fabrikoid Motor Quality—The Standardized Automobile Upholstery—used on 60% of 1916's entire output.

Write for samples and booklets and latest list of cars equipped with this modern top material.

You Can Do Twice the Work in a given Time if You Use

Kester Crystal-Core Solder

Kester Self-Fluxing Solder is a seamless tube of solder the core of which is a soldering flux that flows as solder is used. CRYSTAL CORE being especially adapted for AUTOMOBILE work. Tube is a series of cells, each cell is filled with the proper amount of flux. Kester Crystal-Core Solder is cheaper to use than wire or bar solder, as no time is lost in preparing or applying the acid.

Cleaner, Neater, Quicker Results

Use it in your garage for battery terminals, gasoline pipe and tank joints, electric light connections, radiator leaks, cracked fenders, speedometer flexible shaft, spark plug terminals and general garage use. Sold in coils of 1 pound, and on spools of 1, 5 or 10 pounds.

The Ideal Hose Clamp

The only clamp that closes perfectly round over a hose. It cannot buckle or cut hose. Will always form back to the original shape by tightening screw.

Can be slipped over a pipe no matter in what position pipe may be.

THE OLD WAY
Note escape of water

THE NEW WAY
No chance for leakage

Manufactured by the
Ideal Clamp Mfg. Co.

Distributed by J. H. FAW, Inc.
41 WARREN ST., NEW YORK **Branch—ATLANTA, GA.**

Stop the Spring Breakage

It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING." Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

New Era Spring & Specialty Co.
879 Woodward Ave., Detroit, Michigan

JUMBO SPARK PLUGS

are built to stay on the job under the hardest conditions. We show here our big leader

Manufacturers' Opportunities

Opportunity for Manufacturer in Automobile Trade

OWNER OF FIRST-CLASS MANUFACTURING plant, consisting of 40,000 ft. floor space in substantial brick buildings with private switch connecting three railroads and good acreage for future development, wishes to retire from active business.

Plant could be readily adapted to the manufacture of automobiles, especially trucks, or many kinds of automobile parts.

Owner would retain considerable interest, if satisfactory.

C. H. BROWNELL
PERU, IND.

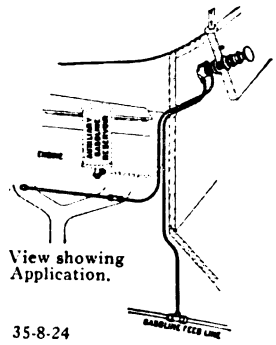
LUNKENHEIMER

Gasoline Engine PRIMER

It saves the starter battery.
It lessens the labor of hand cranking.



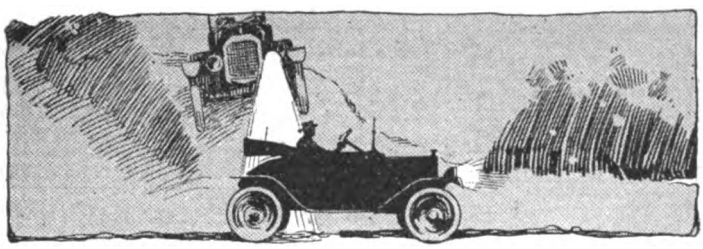
A stroke or two of the plunger forces a gasified charge to points which positively insure its entrance through the intake valves to give a power impulse on the first turnover.

The convenience of this device leads the operator to prime the engine before each start, resulting in a saving of battery energy, or time spent in cranking by hand.

All necessary fittings and tubing for attaching are furnished. No extra parts required.

A profitable accessory for dealers and garagemen.

Write for booklet No. 513.



View showing Application.

A Safe, Certain, Bright Light at Slow Speeds for FORDS

The VAN SICKLEN Concentrator assures such a light at slowest engine speed, when you need it most.

At 5 m. p. h., 10 m. p. h. or 15 m. p. h. with a VAN SICKLEN Concentrator you always have sufficient light for every driving purpose. $2.00—the price of the Concentrator—is a very small price to pay for so necessary a convenience.

$2

VAN SICKLEN
AUTOMATIC
HEAD LIGHT CONCENTRATOR
FOR FORD CARS

The VAN SICKLEN Concentrator at all speeds below 15 m.p.h. automatically disconnects the right headlight, shunting double current into the left headlight. At 10 m.p.h., for instance, the left headlight burns as brightly as it ordinarily would at 20 m.p.h. Above 15 m.p.h. the regular Ford 2-lamp system automatically re-asserts itself.

Price, $2.00 complete, ready to put right on. Easily installed. Full instructions with each order. Installed under hood on dash. Guaranteed not to injure magneto or bulb. Neat, compact, handsome.

Obtainable from most good dealers or sent prepaid direct upon receipt of price.

Dealers: Some desirable territory still open. Over 600,000 prospects. 40,000 sold in last two months. Wire or write.

MANLEY "QUICK ACTION" PORTABLE BENCH

Are you moving the big car to your work-bench or are you moving the light, portable Manley bench to your car?

By using this "Quick Action" bench you can finish a job in the time it takes to move the car.

This bench is specially made to hold exactly the tools needed. Wheels can be locked, making bench immovable when using vise. It is just the right size to slip between cars and get anywhere in the place easily, quickly and conveniently. It is invaluable when tearing down a car, to keep all parts together.

A glance at this illustration tells you where the right tools are kept, convenient to the hand at all times.

A convenience no garage should be without, it is sold at a price to justify its purchase for any shop.

Top 13 x 44 inches. Height, 33 inches.
Bottom Width 22 inches.
Price, $27.50; with vise, $31.50

THE Manley SHOP AND GARAGE EQUIPMENT

Digitized by Google

Studebaker

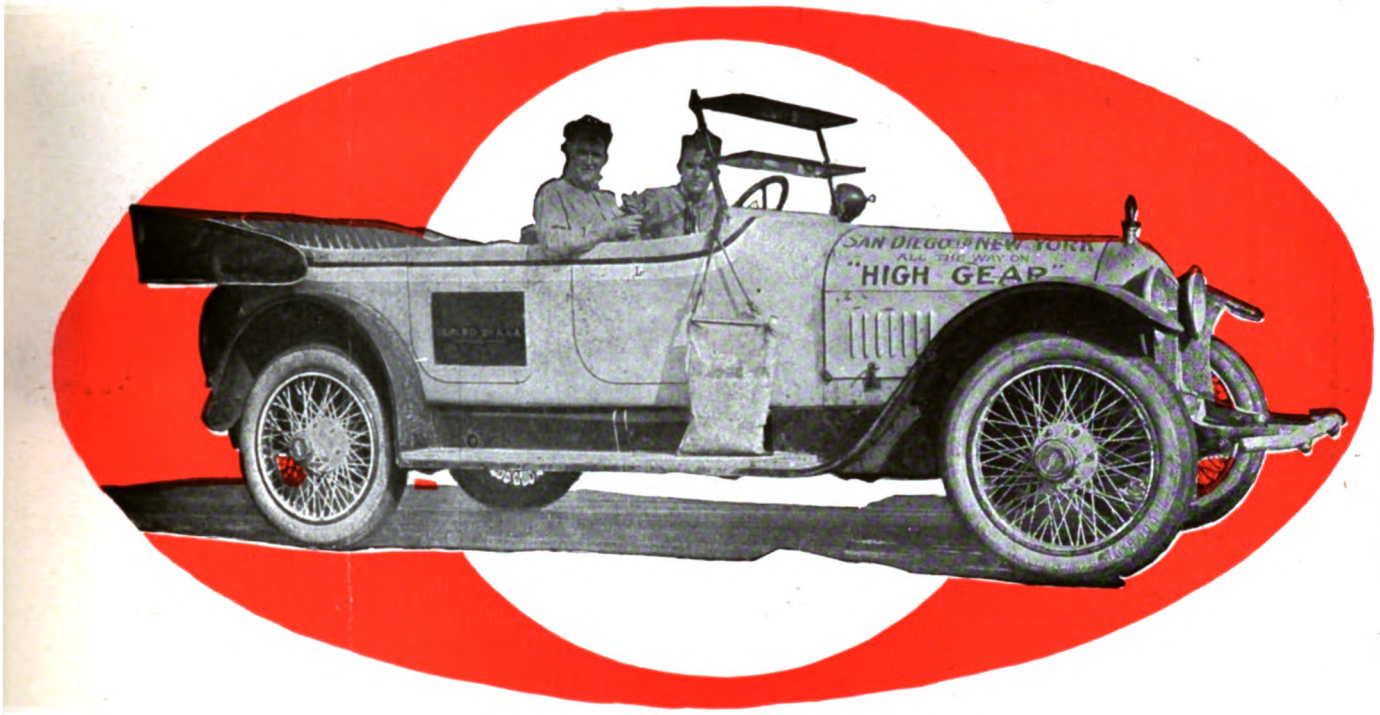
Opportunities

Read about this one in Indiana

A city located on the Ohio River opposite Louisville, Ky., with a population close on to 11,000.

Three big railroads run through the place which is noted for its ship and car building industries closely followed by the production of oils, trunks and lighter grade of lumber. A government supply station is also maintained at this point giving employment to many in the production of clothing and army equipment.

In spite of its prominent location this city has never yet been the objective point for a vigorous campaign of selling on behalf of the Studebaker line of motor cars. With the exceptional values offered in the Studebaker line contrasted as they are by prices that are remarkable to say the least, this opportunity bids fair to become one of the most lucrative in the middle west to the man who will take advantage of the cooperation that Studebaker has to offer.



Write for the facts.

DURING this high gear test you are aware of the fact, of course, that we used Houk wheels and that the equipment consisted of 5 wheels. However, it was not necessary for us to use a spare wheel at any time. The tire changes which we made were not made by using the extra wheel—we always changed tubes. The Stamina of these wheels was demonstrated by the manner in which we were forced to hit the bad places and hills in order to negotiate all the mountains on high gear.

HOUK
QUICK CHANGE
WIRE WHEELS

After having the car washed in New York, from the condition and appearance of the wheels one would never know but what they were new. Any further particulars of this trip I will gladly furnish you upon request at the Pathfinder Company of Indianapolis, Indiana.

Yours very truly,

(signed) W. A. Weidely.

USL

US LIGHT & HEAT CORPORATION

DURING the past year the demand for the USL Machine Pasted Plate Batteries increased so much that for several weeks during the early summer we were unable to fill all orders promptly.

We have, consequently, so increased our factory facilities by the addition of new machinery and additional floor space that we are now making prompt deliveries of Machine Pasted Plate Batteries in any quantity.

As we have closed large new contracts with automobile manufacturers and lighting and starting systems for their 1916-1917 productions, far seeing dealers will be quick to realize the profit-making possibilities of the U S L service station agency.

HUDSON SUPER SIX

Are You Running A Circus Lemonade Stand?

Some automobile men have had that kind of business this year.

They have had a rushing, profitable business, limited only by the number of cars they could get.

The public has been thirsting for cars and, like the circus crowd, have gone to whatever stand that could give them the earliest delivery.

They haven't been very particular about the kind of a car they were to get.

But the lemonade stand at the circus ground went out of business when the circus moved away. Some automobile dealers will be like the lemonade stand and will also disappear when the keen buying season is over.

The permanent automobile dealer is he who has a real organization, who is operating his business on the basis of tomorrow and next year. And of course to do this he must have a car for which there is a standard demand.

The Hudson Super-Six is a car of that type.

HUDSON SUPER SIX

HUDSON MOTOR CAR COMPANY
DETROIT, MICHIGAN

If you are of the other kind perhaps sometime our acquaintance may be of mutual advantage. We do not advertise for dealers to make up the Hudson organization. We are too particular in our choice to rely upon such a manner of recruiting the kind of men we want in this organization. But we do want to meet real automobile merchants. We have no place for the circus-refreshment kind.

Why I Am a Studebaker Dealer

In five years experience as a distributor I have been forced by one condition or another to change lines three times during that period.

Realizing the importance of selecting a connection that would be permanent, I began a careful comparison of various cars. After several weeks of thorough investigation I decided upon Studebaker—because, with their experience and unexcelled manufacturing facilities coupled with their vast financial resources, I was convinced that the Studebaker Corporation is in position to produce a car, not only of matchless value, but at a price that would make a competitor bite his tongue when Studebaker was mentioned.

I am proud to say since handling your product eleven months, I have not had one single cause for regret.

Capital City Auto Co., Inc.
New Orleans, La.

by

Fred Perkins

President

Studebaker

THE experience of Mr. Perkins and his associates is by no means unusual. Oftentimes, of course, this shifting about from one make of motor car to another is nothing more than short-sightedness on the part of some dealers; but there will always be exceptions and the Capital City Auto Co., Inc., seems to be one of them.

Likewise there are other members of the Studebaker dealer organization who came into the ranks with anything but pleasant recollections of former business connections, but under the influence of the Studebaker policies of service and co-operation have not only increased their profits materially but their efficiency and enthusiasm as well.

And what we have done for these men, we can do for you too—that is if you are interested in Studebaker cars and profits present in their sale.

DEALERS, STOP!

Don't Stock any Auto Polish or So-called Mist until you have considered *The Leader of Them All—*

AUTO LIQUID VENEER

The SPRAY Your Customers Will Demand

In choosing a polishing preparation to offer your customers, pick out from the confusing number of preparations now on the market *the leader,* the polish which you know will be the *big seller,* manufactured by the biggest, best known and most reliable polish concern in the world.

Here are the reasons why Auto Liquid Veneer is the leader and why you will sell *ten times* as much of this product as you will of any other on the market.

1. It is now and for years has been used by millions of Americans for cleaning and polishing the finest surfaces, *including automobiles.*

2. It is nationally advertised and is the best selling polish on the market.

3. Now, especially prepared as a spray for automobiles, it is without question the most wonderful polish and cleaner the world has ever known.

4. The Liquid Veneer Spray treatment saves washing, dissolves dust and dirt, removes road tar, preserves the beautiful glossy finish, leaves no oily film to catch the dust, and imparts a brilliant, spotless lustre—*all this in five minutes' time at a cost of less than 5 cents.*

5. It will be most extensively advertised to the 3,000,000 motor car owners in this country, all of whom *already* have confidence in Liquid Veneer, and who will want nothing but Liquid Veneer!

6. It will pay you a good big profit, and will turn over more rapidly than any other preparation.

Get started right. Hook up with the leader. Liquid Veneer will be selling when all the rest are down and out. Send the coupon below for full particulars.

The Automobile Liquid Veneer Outfit consists of one $1.00 quart bottle of Auto Liquid Veneer and a 50c. brass finished L-V Sprayer, packed in a handsome display carton, to retail at $1.25.

The Straight-Line Business Way

ADVERTISED GOODS

SELL ADVERTISED GOODS

Here are the Four Principal Reasons

1—Advertised Goods Are Easier To Sell
2—Advertised Goods Bring Bigger Profits
3—Advertised Goods Stay Sold
4—Advertised Goods Are Guaranteed

A STRAIGHT line is the shortest distance between two points.

Advertising is the straight line of business. It is the force that makes the buyer go in a straight line to your shop and to the advertised goods in your shop.

Advertising is more: It is the suggestion that starts the buyer's mind working. It starts his mind working in a straight line that leads to the advertised goods in your shop.

The buyer is thinking of some advertised article on your shelves before he enters your door.

That is why it is easier to sell advertised goods.

1. Easier to Sell Advertised Goods

THE manufacturer of an advertised article has done all the preliminary sales work. He has put his product before millions of prospects in its best light. He has illustrated it. He has described it. He has told what it will do. He has kept it in the limelight. He has put its name in the buyer's mouth. He has made the buyer think of it, want it, demand it.

A person must know of a thing, think about it before he can want it.

Advertising makes the prospect know about a product. It is his introduction to the product. It is the suggestion that makes his mind start working in the straight line that leads to your door.

When you want chewing gum the chances are ten to one that you ask for "Spearmint." Why? Because you know about it. You are thinking "Spearmint," not chewing gum, when you enter the store. It is an advertised product. The manufacturer has introduced it to you and kept it everlastingly in front of you. You simply can't help saying "Spearmint" to the clerk when you want chewing gum. "Spearmint" has become YOUR name for chewing gum.

It is easy for the clerk to sell "Spearmint."

And so it is with spark plugs, horns, the hundred and one other devices on your shelves.

The buyer is thinking of one particular brand before he enters your store. He has seen that brand advertised.

Analyze your sales: When a prospect comes in and wants spark plugs he asks for them by name. He does not simply say, "Give me four spark plugs," and leave it up to you to hand him anything you like.

He asks for an *advertised* brand and he expects you to have it in stock for him.

If you have that brand, it is already more than half sold. The buyer knows about it. You don't have to introduce it to him, tell him all about it—sell it to him. He's sold before he comes in.

Suppose you haven't got the plugs he wants. You try to sell him something else—perhaps something "just as good."

Digitized by Google

Immediately there arises a conflict of ideas and thoughts in the buyer's mind. Unconsciously he becomes antagonistic. He feels like fighting for what he wants. This makes it doubly hard for you to sell the unadvertised, unknown product.

Take the easiest path—sell advertised goods—the straight-line way.

2. *Advertised Goods Mean Bigger Profits*

BIGGER profits follow bigger sales. The rate of turnover is what determines profit. *Because it is easier to sell advertised goods, you sell more of them.* The margin of profit on each article may be a little smaller, but the number of sales is much greater.

"How many packages of A. B. C. Wheatlet will you sell to-day at 10 cents a package?" asked a grocery salesman recently of a retail grocer. He mentioned a well-known, advertised brand.

"About a dozen," the grocer replied.

"And what does it cost you?"

"Eight cents."

"Now, how many packages of D. E. Wheat will you sell in the same time?" continued the salesman, mentioning an unadvertised, almost unknown brand.

"Perhaps half a dozen."

"What does that cost you?"

"Seven cents."

"All right—twelve times 2 cents, the profit on A. B. C. Wheatlet, is 24 cents. And six times 3 cents is 18 cents."

"There's more money in advertised goods, isn't there?" asked the salesman.

The salesman hit the nail squarely on the head. This grocer, any grocer, will sell more advertised goods than he will unadvertised goods, and sell them easier.

But the extra penny a package he makes on the unadvertised goods has blinded him. He forgets, overlooks, perhaps never thought of TURN-OVER.

So in the motor car trade: A cheap, unknown, unadvertised spark plug may cost you less. But think this way:

"How many do I sell?

"How hard, how long, must I work to sell one?

"In selling one am I not undoing all the work that has been done for me by the makers of advertised plugs?

"With the same effort I could sell three or four sets or half a dozen sets of KNOWN, ADVERTISED BRANDS."

3. *Advertised Goods Stay Sold*

CONSIDER a cheap, unknown, unadvertised body polish. You buy it on the salesman's say-so—not because it has a national reputation and is in demand.

But will your customers buy it from you on your say-so?

They have never heard of it. It has no regular brand or name—just so-and-so's polish.

Now, when your customer comes in and asks for a regular, advertised, known brand, and you try to sell him the unknown brand, you will have to do all the work of:

(a) Introducing it.

(b) Telling what it is for.

(c) Telling why it is better than half a dozen advertised, known brands.

(d) Selling it.

And then it probably won't stay sold. This cheap body polish may catch dust after all—it may even ruin the finish.

The advertised brands do or don't do what the advertisements say.

The manufacturers stand back of them. They are responsible. They can afford to be responsible.

The unadvertised product is an orphan. No one is responsible for it—except the dealer.

If the purchaser is dissatisfied and demands his money back, who is the goat?

The dealer.

The advertised product is right before it is advertised. It stays right because it is made right. It stays sold because it stays right and does what the advertisements say it will do. No comebacks.

But if it should come back? you say. Why then the manufacturer is right there to make good.

4. *Advertised Goods Are Guaranteed*

UNADVERTISED goods are cheap, poorly made, shoddy. The manufacturer rushes them on the market to meet a demand created by a legitimate, well-made, well-advertised product. But generally he carefully neglects to put his name on them.

He can't afford to stand behind them because he has shaved his selling price to you too close to his production cost as an inducement to you to buy. He does not have to stand behind them because his name is not on them—the product is not advertised. He has nothing to lose. He has made his sale to you. The rest is up to you.

The manufacturer of these cheap, unadvertised, shoddy goods can't afford to make good when his cheaply made, cheaply put together product falls down in ordinary service. That is up to the dealer—provided he values his reputation for fair dealing.

The dealer's reputation is built on the merchandise he sells. If the manufacturer can't or won't make good, the dealer must.

THE DEALER'S SALVATION IS ADVERTISED GOODS.

NEXT WEEK

Watch Motor World for something that vitally affects you in your relation to

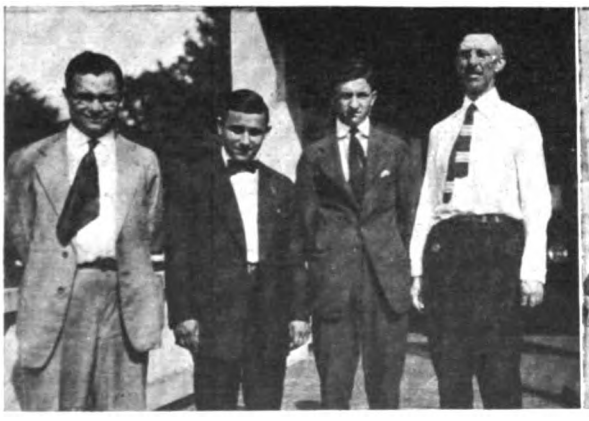
Hartford Dealers Show Cars at State Fair

Fine Exhibits at Connecticut Fair Excellent Means of Advertising

HARTFORD, Sept. 8—Hartford dealers do not look for direct results from the State Fair show which closed here to-night after a run of 5 days. They view the exhibition as an excellent advertisement, but they do not expect to do much business. Sales are the exception rather than the rule, though several subdealers were appointed.



Hartford is in the center of Connecticut's tobacco growing industry. Crops this year have been excellent and the tobacco farmer is the Hartford dealer's best prospect. Tobacco crops, however, are not sorted until along in February, and farmers are not ready to purchase until they have disposed of their crops. But they are looking now and that is why the State Fair is a good advertising medium for motor car dealers.

The show is held in a building about 140 ft. square. It is not run by the dealers' association, which has nothing to do with the affair. A man not connected with the trade stages the event each year.

The Show was given a building all to itself. The exhibition floor measured about 140 ft. square.

Dealers are charged for space at the uniform rate of 20 cents per square foot and are permitted to do whatever decoration they deem necessary. Most of them were content to place a few potted palms in their spaces. The show management decorates the building with flags and strips of colored bunting and furnishes

a three-piece orchestra, piano, violin and drum; there was also a young lady who sang at intervals.

The Hartford Buick Co. and Russell P. Taber, Reo dealer, both made noteworthy attempts to inject merchandising flavor into their exhibit spaces. The Hartford Buick Co. rented from a theater a garden drop for the rear of its space, with a forest border and forest wings and two sets of strip lights. This made a nice stage setting and cost about $50. A brass rail inclosed the space.

The exhibit was pleasing in appearance, but the brass rail tended to give an air of exclusiveness. Dealers in this territory believe that they must get close to their prospects, fraternize with them, in fact, but the brass rail made this difficult. It made prospects stay outside and look in instead of circulating among the cars and giving the salesmen a chance to talk with them.

Russell P. Taber put no rail around his space. His cars were well arranged and there were a number of really clever signs. For example, on the windshield of each six there was a sign which read, "ONE OF THE WORLD'S GREAT SIXES." Another sign gave a tabulation of the exact number of fours, sixes and trucks sold by Taber since the beginning of the season.

Few dealers exhibited closed cars, though most of them are frank to admit that closed car business bids fair to be better this fall and winter than ever before.

During the 5 days of the show, attendance was good only 1 day—Labor Day. Other days the attendance was poor, and the dealers lay this down to lack of sufficient advertising. Some of the dealers carried ads in the daily papers, but the fair itself was advertised very little. There were no advertisements calling attention to the motor car show; they were all general in nature. It is proposed next year for the dealers to get together and advertise the show exclusively of the fair advertising.

What Good Is Milwaukee's State Fair Boosting Tour?

By Ray W. Sherman

DURING the week of Aug. 28 the Milwaukee Automobile Dealers, Inc., left their business and made a tour of the state of Wisconsin, boosting the state fair, which is being held this week. It is one of the biggest pieces of dealer enterprise in the United States. It cost a lot of money. It took a lot of time. It cut in on business at a busy time of the year. Some salesrooms were practically closed that week. Dealers elsewhere are likely to ask: "What good did it do? Was it worth what it cost?" And because of these questions an analysis of the tour may be interesting. Before going further let us say the tour seems to be worth all it costs.

Why Is It Held?

THE tour is called a "State fair boosting tour." That is its big object. On that score the event is purely civic enterprise, undertaken because of interest in the city, the State and their welfare.

Why should a single class, such as the motor car men, take upon their shoulders the boosting of something that concerns the whole people? Why shouldn't others participate?

The answer is, that the motor car industry is the livest thing in America. It it full of snap and spizz. It moves—and it moves things. Give a bunch of car dealers an excuse for doing a thing and it is half done. If there is any advertising value in the proposition, if it will in any way help the car industry and the dealers, these dealers will get out and whoop! Not only whoop, they'll spend money at so much per whoop!

The Real Reason

Therefore, the real excuse for this tour is the motor car show at the fair. This show differs from most fair shows. It is bigger and better than Milwaukee's midwinter show. It is held in Machinery Hall, a mammoth building, which is decorated with electric lights and scenery and made to look like a regular show.

To this show come farmers from all over the State. They are potential buyers. They are the buyers in the field to which the Milwaukee dealers distribute. It would not be possible to get them in for the midwinter show. The fair is a great territorial opportunity.

Unless the fair is successful the show cannot be successful; therefore the fair must be boosted, and if the farmer visits the fair he will visit the show. Ten cents admission is charged to the show and last year 75 per cent of the fair visitors went to the show.

Considerable business is done at the fair show and much foundation work is laid for future business. As many dealers attend the fair as attend the midwinter show.

What Does it Cost?

To start with, each entrant has to put up $25 to cover general expenses, such as labels for the cars, numbers, hats, canes, and a deposit on the dusters, which cost $3 each unless they are turned in at the finish. Some of this $25 is refunded. There is also the band and singers to be paid.

In addition, each man pays his own expenses, and ordinary traveling expenses range nearly $5 a day, making $30 for the week. Gasoline for the nearly 600 miles cost probably $15, not counting the oil. Wear and tear on the car and absence from business are not included in this estimate. The cost for the week to each dealer is something like $65 for himself and car, and if he takes any of his men along their hotel expenses must be added. The Overland had three cars in line, each carrying four and five men. The association's funds covered much of the general and preliminary expense.

What Do the Dealers Get out of It?

1. Primarily the benefit accruing to the dealers is a successful show at the State Fair. That statement requires no detail explanation.

2. En route some business, but not much, is done. A few sales are made. Last year one man is said to have made so many sales in towns where he had not yet placed dealers that the factory took the agency away from him for failure to work his territory properly. And always there is the arousing of interest and the securing of prospects, both retail and wholesale.

3. The motor car business is stimulated throughout the territory. The farmers are made to think about motor cars and they get an excellent opportunity of seeing a bunch of different makes, from Fords to Packards and Pierce-Arrows. The tour is a demonstration of the runableness of the modern motor car. There were few accidents—and all trivial.

4. The country dealer and the distributer are brought closer together. Each distributer had opportunity for a social call. Some of the local dealers entertained their visitors at dinner. Necessarily there was added a germ of enthusiasm for business.

5. The dealer himself gets closer to his merchandizing problem. He meets owners all along the route. He has a better understanding of his field, no matter how well he understood it before. Owners frequently were found looking at the model of the car they owned and would greet the dealer: "I own one of these little boats." Oftentimes a good word paved the way to the adjustment of a complaint.

6. Salesmen who accompanied dealers got a broader understanding of things as they are. They saw the country, they got full of fresh air, they were burned and tanned, they met the men who buy the cars, they saw cars perform at all speeds over all kinds of road, they got a week's strenuous vacation.

7. Some mechanics were on the tour. They saw all makes of car at work on typical roads. They saw how the cars stood up. They got away from shop routine for a week. They should be better mechanics. They should have a better spirit.

8. The City of Milwaukee necessarily must have a higher opinion of its motor car tradesmen because of the whole-

Digitized by Google

hearted manner in which they took hold of this civic propaganda.

9. The feeling of harmony and unity has been increased. The dealers worked in harmony for 6 days under conditions which made the results of and need for harmony apparent.

Why Was It Successful?

1. The spirit of co-operation prevails throughout among the dealers. There was no knocking. Every one co-operated with the man they had chosen as manager.

2. The affairs of the Milwaukee Automobile Dealers, Inc., are well managed. Bart J. Ruddle, the assistant secretary, handles most of the detail. He works in harmony with the dealers. Every association requires a paid manager of some kind and a great trouble with these secretary-promoters is that they are more promoters than they are association secretaries. While the promoter element is essential, a good combination of the two is ideal—and hard to find—but in Ruddle the Milwaukee dealers seem to have found a man who can run their affairs with full satisfaction to them, and this means that his services are worth something.

3. The association officers work. Edgar F. Sanger, chairman of the tour committee, was very much on the job.

4. The dealers made it what they said it was, a State fair boosting tour, and not a car boosting tour. There were no car speeches at all, and very little effort to make it a business trip.

What Made It Effective?

1. The most effective point about the tour was its bigness. There were thirty-seven cars and 160 men. The line-up was impressive. It included big business men from the State's biggest city, and it was significant that these men should desert business for a week and devote themselves to the fair.

2. The appearance added to the effectiveness. The cars were kept in good condition. Every man was dressed alike, in duster and hat, and with a cane.

3. Things moved with snap and dash. The cars traveled at high speed across country, entered towns with a dash, ran off the brief program like machinery, shouted a vociferous farewell and sped away. The absence of a reception committee never mattered, for the boosters took possession of the town and ran things just as well.

4. The Mayor of Milwaukee and the State Commissioner of Agriculture are big dignitaries, and their presence added prestige.

5. A small band and a professional quartet added considerably to the pretentiousness of the tour. The boosters carried their own band and it helped amazingly.

6. The speeches were generally short, snappy and to the point. They appealed to the people.

7. Pistol and whistle novelties were distributed by the Milwaukee newspapers and were cherished by the kiddies. There probably are still in some Wisconsin homes these toys, each of which bears a message about the fair. A special State Fair section of a newspaper was scattered broadcast.

8. The tour was well advertised in advance and the country papers gave good co-operation.

Chances for Improvement

1. Hotel reservations were badly handled. The dealers thought Bart Ruddle was going to make reservations in advance for the whole party, but this was left to the dealers, with the result that baths were a scarcity and there was much inconvenience.

2. Near the close of the tour one of the State officers became rather long-winded. There should be a fairly accurate time limit for every speech.

3. A standard form of novelty might be distributed by the boosters. Some of the newspapers gave away whistles and paper pistols bearing booster talk, but if several thousand of these were prepared by the association and scattered broadcast it would keep the message alive in thousands of homes until fair time.

4. Some of the hotels are alleged to have raised their rates on the boosters above the regular rate. This should be prevented.

5. Some of the boosters went astray, due to too high speed on the part of the pilot car when leaving town. The pilot should go slower for a couple of miles.

6. Some of the dealers wanted to sing a pretty farewell song as the cars left town, but they couldn't think of one. That certainly would make an impressive and pleasant departure.

7. There should be a speed limit. Speed helped make the tour spectacular, but 50 miles an hour over some Wisconsin roads in some of the light cars is not safe.

Wisconsin is Buying Cars

MILWAUKEE, Sept. 11.—Wisconsin is absorbing motor cars at an unprecedented rate and the most optimistic predictions are being fully realized. The report of owners' registrations, on the morning of Sept. 1, showed 110,350 cars in the hands of owners have been registered since Jan. 1. On the same day a year ago, the total was 75,600, a gain of nearly 35,000 cars for 1916. At this point last year, the gain was 25,500 over the corresponding period of 1914.

On Sept. 1 Wisconsin registered 30,559 more cars than the total for the entire year 1915, which was 79,791. The gain represents more cars than were registered in Wisconsin during the entire year of 1912, when 24,578 cars were licensed.

The 100,000 mark was passed before July 15, and the 110,000 mark was reached Aug. 29. Applications are coming at the rate of 150 to 200 a day, and it is reasonable to suppose that before Dec. 31, 1916, 5000 more cars will be added, for a total of 115,000, inasmuch as 4200 cars were registered between Sept. 1 and Dec. 31 last year.

The decided increase in the number of dealers is a feature of the situation. In 1915 the state licensed 1583 dealers. This year, up to Sept. 1, the number was 1,936, a gain of 353. Inasmuch as the practice of using dealers' licenses on privately-owned cars has been almost wholly discouraged, the license figures would indicate that Wisconsin has nearly 2000 motor car dealers at this time, or just twice as many as it had in 1912.

Comparative figures on Wisconsin registration follow:

	1912	1913	1914	1915	To Sept. 1, 1916
Motor cars	24,578	34,646	53,160	79,791	110,350
Dealers	1,052	1,393	1,202	1,583	1,936

D. D. SHEERIN

President and Manager of Wheeler-Sheerin, Inc., Accessory Jobbers, Indianapolis, Ind.

Says:

"We have always favored Motor World ourselves as being the publication more generally read than any other trade paper, and more carefully gotten up. They have done a lot of constructive work among the trade and have earned a standing with jobbers and retailers that should prove valuable to advertisers."

Dodging the Prospect's Heavy Left

By Ray W. Sherman

"I KNOW our car is a darned sight better than the Colt," contended Tommy Trumbull, "but I know just what Whedon is going to say. He's going to start in telling me that the Colt motor has a detachable head and overhead valves and he's going to harp on that point until he's blue in the face."

"I know," replied Reilly, the Sennett dealer in Callawassa, "Whedon has all sorts of ideas. He has owned a Colt for 2 years and naturally he is inclined to believe that if his judgment was good then it ought to be good now. He's due for another car and he probably has an idea in his noodle that he ought to buy another Colt."

Just Likes to Talk

"That's all that ails him," retorted Tommy, Reilly's junior salesman. "He really doesn't know what he does want, but he likes to hoot about that overhead valve business because he knows his car's made good with it and we don't have it."

"Evidently, Tommy, you feel like a prize-fighter who knows the other man has a heavy left and that if it ever connects the count will go away beyond ten. You at least have the advantage of knowing what to watch out for. The only thing you can do is imitate the pugilist and dodge that heavy left."

"Sounds well," chirped Tommy.

"It's the best way I know to handle these strong-arm gents. You don't accomplish anything by standing up in front of your man and letting him hammer away at you with his strong point. What you must do is duck it and get in some good work of your own.

Dodge It!

"If you let him have his way about it he'll soon beat you down and wear you out and have you licked before you're due. The only way you have an even chance with him is to leave his strong point out of the fight entirely until he has run down a little and you don't need to be so much afraid of it."

"Sure! But how?"

"Just this way," continued Reilly. "In comes Whedon, all full of overhead valves—and you know it. Naturally, the first chance he gets he's going to begin a technical dissertation on motors in general and the merits of overhead valves.

"What you must do is get him away as diplomatically and quickly as possible from this motor stuff and pull him over to the other parts of the car. On the other parts of the car we have the Colt backed off the map. We ride easier, we look better and we can beat them on almost every point. Whedon doesn't consider all these things in his mental picture of a car; in fact, I doubt if he has much of a mental picture. Therefore, some of the things we can show him about the Sennett, its looks, its easy riding, its comfort and quality, will be in a way a revelation to him and surely should make considerable impression on him.

Use Your Own Left

"By the time you have taken him over the rest of the car you should have him admitting that the Sennett—thus far—is about the best thing he has seen."

"But those valves!"

"Yes, those valves. Whedon is coming back to them soon. We haven't them, we admit, and we also admit they're good, although if we thought they were the best thing on earth we'd put them into the car. We have perfectly good arguments on our motor as it is, and we go at Whedon like this:

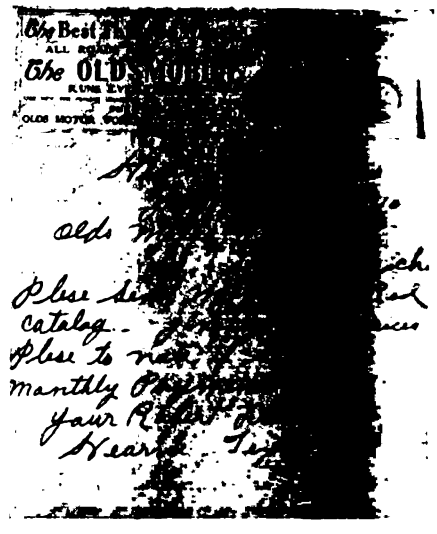
Do It This Way

"We tell him that since he is exceedingly well versed in motors and is an expert on the overhead valve construction, he naturally will be interested in the story of our motor, which differs a little from the type with which he is most familiar. Get him coming along thusly, and you have made a start. Then, by catering to the knowledge he thinks he has, the way is easy to get in our story. You certainly will get his attention, which is what you couldn't get if you had tried to argue with him about valves when he first came into the salesroom.

Performance Counts

"And then, even if he does believe the overhead valve motor performs better than anything else in the market, he is bound to admit that the only thing that counts is performance, and we should get a chance to show him what the car can do. And we ought to shoot him up some of the hills he has been in the habit of blatting about with his Colt.

"By the time we get through we have at least gotten our story before him despite his original determination to concede nothing except that the Colt is the greatest car in the world. I don't believe, Tommy, that a man is always so sewed up with one car that he can't be induced to switch when he buys a new one.



"Some owners are in the habit of buying the same car year after year, but I believe many of them could be pulled over to another make if gone after properly. Certainly because Whedon is full of overhead valves is no reason he shouldn't get our story.

He Just Plain Blats

"Furthermore, we have just as many valves as the Colt and they are just as good. And when Whedon sits at the wheel he can't see them. What he means is that his car has power, and we can easily meet him there. He really doesn't know what he is talking about. All you've got to do is dodge that heavy left in his argument and the first thing you know he'll hit himself in his own eye."

Hears from an Old Ad

The Olds Motor Works recently received the above letter, asking for its "new red catalog" that was advertised many moons ago. Has advertising a permanent value? Give your own answer

Charles W. Price

Overland Motor Co., Chicago

The fourth in a series showing

Dealers Who Have Made Good

CHARLES W. PRICE, who distributes 5000 Overlands in and about Chicago, was born 45 years ago in Monticello, Ia.

In the early years of the present century he was a bicycle racer, and won professional championships in the United States and Europe.

In 1905 he entered the employ of the old Maxwell-Briscoe Co., Tarrytown, N. Y., and two years later became associated with the Willys-Overland Co. through his acquaintance with John N. Willys.

The first year with the Overland he managed an agency employing two persons. Then he persuaded Willys to invest with him in the Chicago distributing company. In 1910, Price bought the Willys interest and is now owner of the Chicago Overland business.

About a year ago he opened one of the most modern salesrooms in Chicago and also has a wholesale station and service building in another location, covering 3½ acres, and 3 acres more are to be added. There are 450 people in his organization.

Sixty-five per cent of the 5000 cars he sells is retail sales.

The Why

PRICE is successful because he dreams—and then works like —— to make his dreams come true. His success, he asserts, is nine-tenths plain work.

Four years ago he realized that Willys was detsined to do mammoth things in car manufacture. Said Price to himself: "If he can do that MAKING the car why can't I do big things in SELLING the car?"

Then he went to work on this dream and has had only 10 days' vacation since.

When he saw the necessity for moving cars in the winter he drove a car hundreds of miles on a personal tour through the snows of Illinois — and moved cars "immediate delivery, sight draft."

Personal observation of his business is his hobby. Every now and then he goes through departments of his business, remedying weak spots. Efficiency follows.

Courtesy is a rigid rule. Organization building and betterment are his aims. Cooperation and sales unity are effected through close contact and organization meetings.

He charges for service and gives value for the money.

He spends money to get money. He repaints, retops and revamps new Overlands, puts a "coat of arms" on the front and sells them to critical owners. He utilizes advertising of many kinds.

He works, works, works—and dreams—and works.

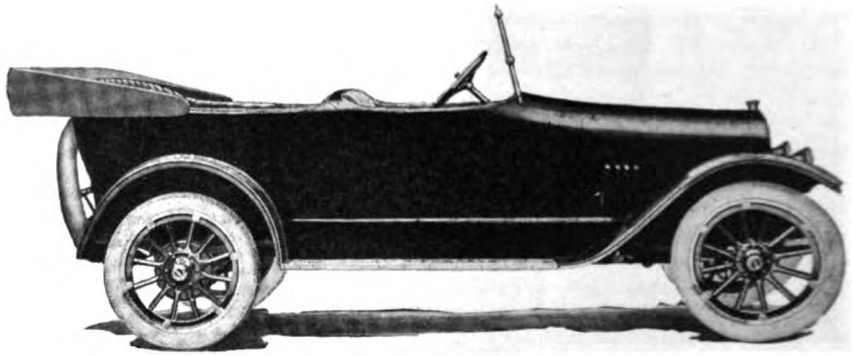
Refinements of Design Mark the New Paterson

A Sociable Roadster or Close-coupled Body Now Included

THE 1917 Paterson line is changed in several respects. In addition to the touring model heretofore marketed, the line now includes a sociable roadster, or close-coupled body.



In the chassis a Hess floating axle supplants the type used last season, and the new models have a Hotchkiss type of drive, wherein the driveshaft back of the gearbox is open and fitted with two universal joints; the drive and torque are taken through the rear springs. Heretofore the drive has been inclosed, with a single universal at the front. The newer construction is lighter and is considered more efficient.

This drive without torque members lightens the shaft considerably. Besides the driveshaft the only parts running back from the front are the two brake rods. The brake equalizers are attached to the axle housing with the control rods just ahead of the axle tubes.

In addition to the new roadster body the lines throughout have been changed. The touring body is longer and wider and straighter lines have been secured by raising the radiator and hood 1½ to 2 in. Another detail of appearance is a double cowl, and the windshield has been tilted backward at a pleasing angle.

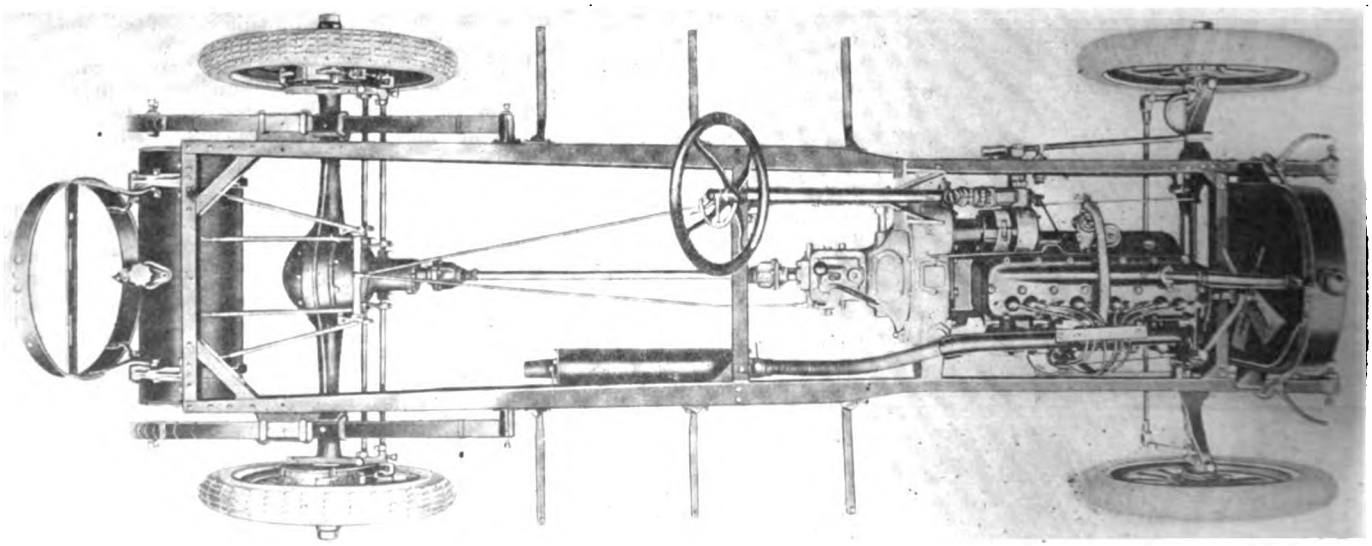
The front seat has been moved back a few inches and the upholstery throughout is in parallel plaits instead of tufting. Auxiliary seats, making the car seven-passenger, are fitted if desired. The touring model sells for $1,065.

The Paterson company has always been conservative in its output and the car is conventional throughout, utilizing standard units. The unit power plant includes a 3¼ x 4½ Continental motor, a Warner gearset and a leather-faced cone clutch, which has an easy pedal movement.

Straighter lines have been obtained by lengthening the body and raising the radiator and hood and are further carried out by the double cowl and tilted windshield

1917 Paterson

W. A. Paterson Co., Flint, Mich.



Price—	
Touring	$1,065
Make of motor	Continental
Number of cylinders	Six
Shape	L-head
How cast	Block
Bore	3¼
Stroke	4½
S. A. E. horsepower	25.4
Ignition	Delco
Carbureter	Stromberg
Engine starter	Delco
Lighting system	Delco
Clutch	Cone
Gearset	3-speed Warner
Wheelbase	117
Front tires	32 x 4
Rear tires	32 x 4 non-skid
Wheels	Wood
Steering	Left
Control	Center
Make of axles	Hess
Type rear axle	Floating
Equipment: Stewart speedometer, Stewart vacuum feed, electric horn, universal-acting slanting windshield, one-man top, extra demountable rim, quick-adjustable side curtains, pump, jack, tire repair kit, Willard battery.	

The cylinders and upper half of the crankcase are a single casting with the cylinder-head detachable as a unit. Nothing is carried on the left side except the carbureter, which is the new type of Stromberg and which bolts to the casting well up in the center. The distribution of the mixture within the casting itself affords heat for the gas and eliminates the necessity for an elaborate carbureter jacket.

Gasoline is fed from a tank at the rear through a Stewart vacuum feed system.

The crankshaft and camshaft have three bearings, and flanges on both sides of the main shaft bearings at the front take thrust. The bearings are kept at a low temperature, because they are made of nickel babbitt and are bronze-backed, the material being a good heat conductor. A plunger pump feeds oil through copper tubes within the crankcase to the main bearing and also to the helically-cut timing gears, which are housed at the front.

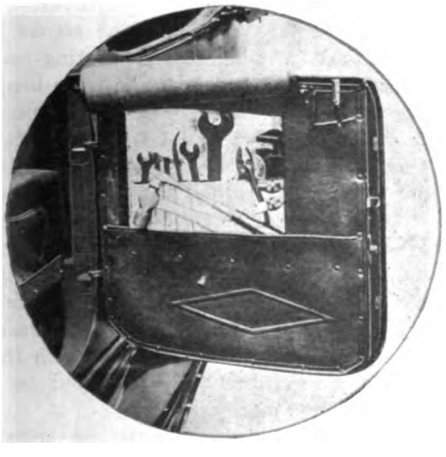
The pump and generator shaft on the right is also utilized to drive the fan by

The addition of the Hotchkiss type of drive has eliminated the torque tube with its single universal joint. An open driveshaft with two universals is now used

Digitized by Google

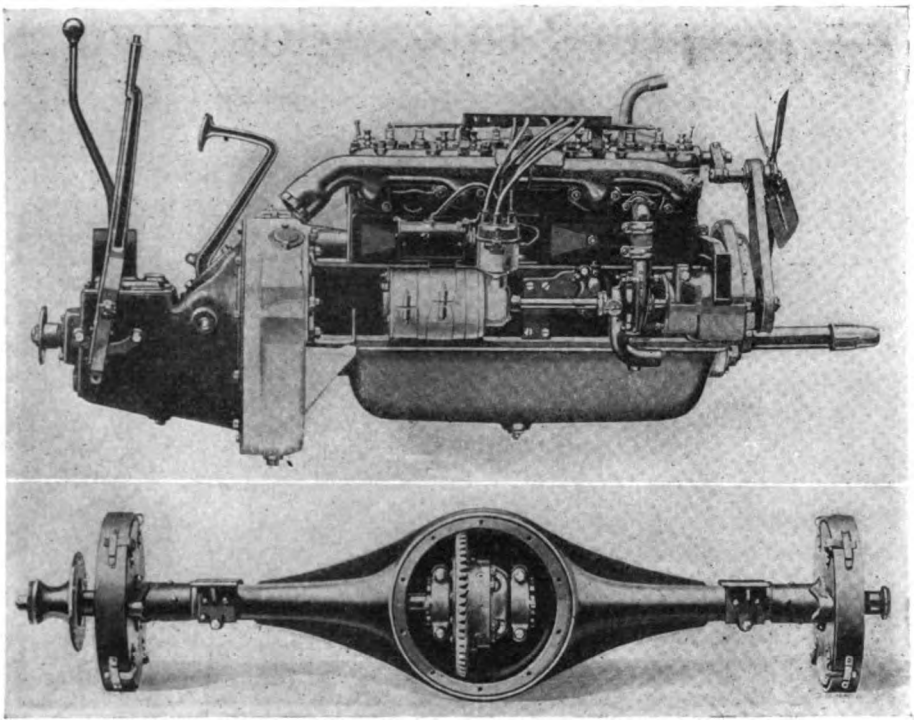
a flat belt. The four-bladed pressed steel fan is supported by a rocking bracket which seats in a hole cast in the front end of the cylinder plate and by moving this bracket up or down the belt tension can be adjusted. A centrifugal water pump, located ahead of the generator unit, delivers water to a single opening in the cylinder block directly above the pump, thereby shortening the supply pipe and making it a straight passage.

The rear of the engine is suspended on arms extending from the flywheel housing and the front end hangs on a forged crossed member which is bowed upward to allow the front end of the motor casting to pass beneath it. While this is not strictly a three-point suspension, three-point advantages are obtained and the engine is solidly carried.



Separate Delco starting and lighting units are used, with the ignition distributor mounted at the forward end of the generator.

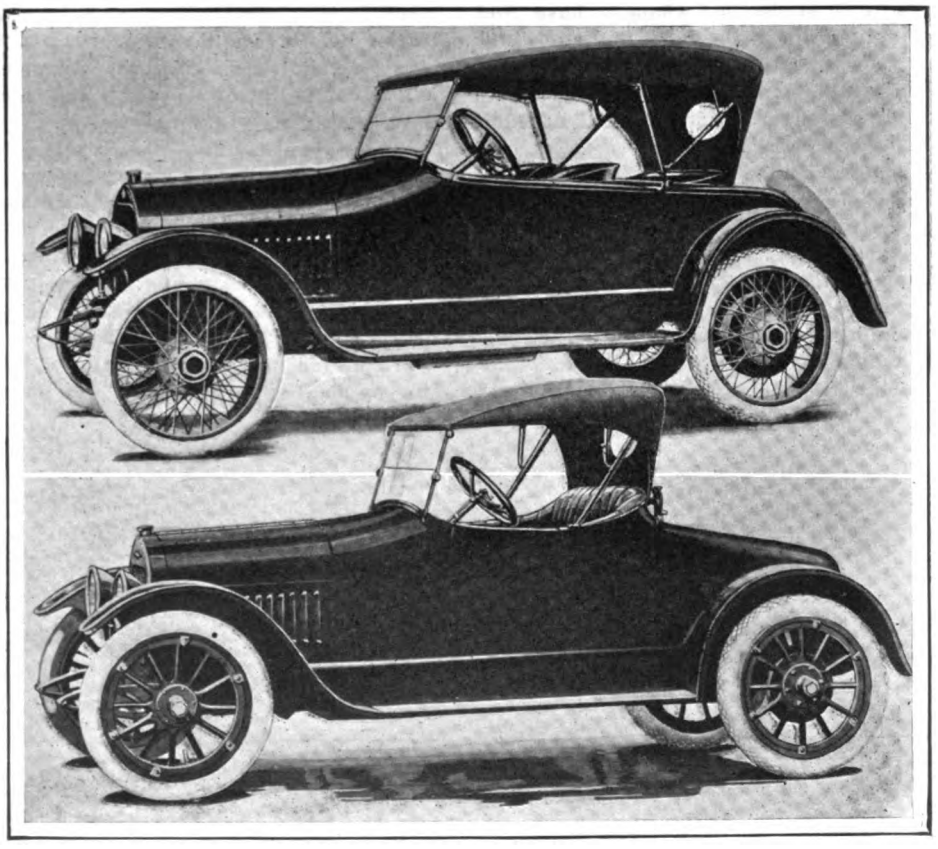
The frame is slightly tapered from back to front, and while very sturdy and strengthened by wider flanges at the center, it is quite light and indicates engineering skill. There is a single cross-member midway between the rear end and the motor. Brackets at the rear serve the double purpose of supporting the gas tank and the spare tire and rim carrier.



The new axle is demountable, with a one-piece pressing, webbed outwardly, serving for the differential housing and the axle tubes as well. It is fitted with spiral bevel driving gears.

Rear springs are three-quarter elliptic. Tires are 32 x 4, on demountable rims, with non-skids in the rear. Upholstery is of leather.

The tools are handily arranged in a compartment in the left front door, close to the driver's hand. Each tool has its own pocket, which makes it easier to keep them in order than in disorder and is much handier than an under-the-seat arrangement. A flap with spring fasteners covers the compartment.

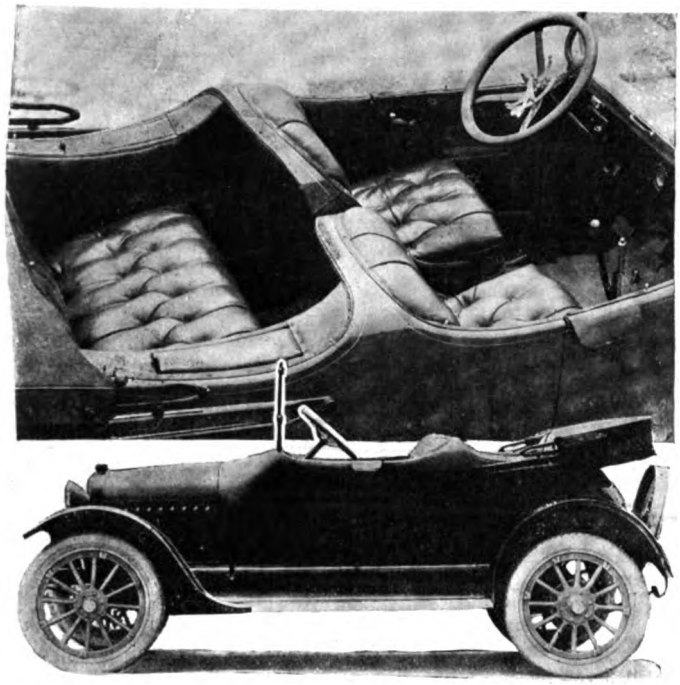


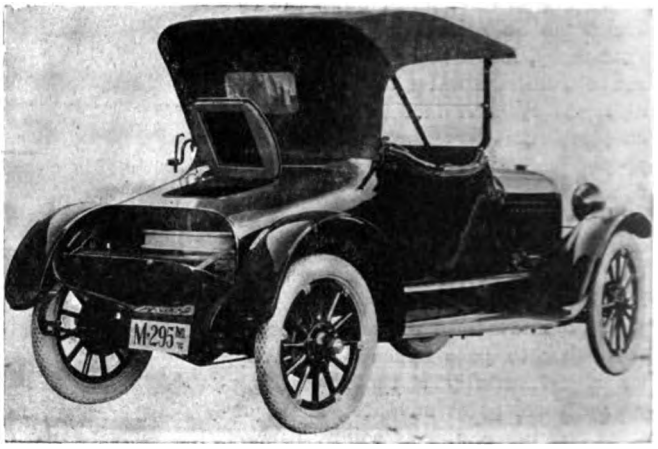
Compartments in the left front door carry the tools and make them very accessible to Paterson drivers

Upper—Exhaust side of the Continental Paterson motor. It is made a unit with the Warner gearset and the cone clutch
Lower—The Hess floating axle with a spiral bevel drive is demountable and mounted in a one-piece pressed steel housing

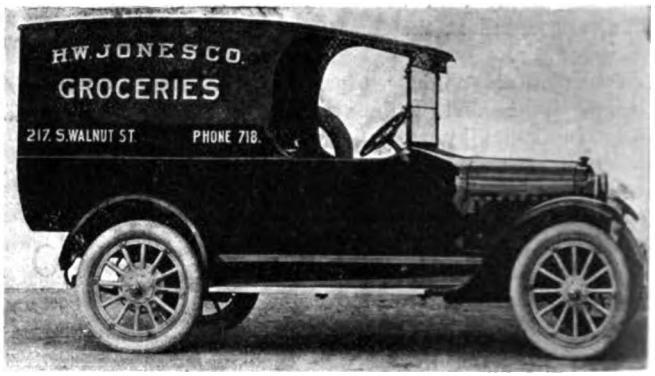
Two New Jackson Roadsters

Both Have Tilted Windshields and Rolled in Body Rim





Upper—The four-passenger roadster is characterized by divided front seats and sloping deck. Wire wheels are fitted as standard equipment on this model, and it lists at $1,395
Lower—The standard two-passenger roadster, selling for $1,295. The sloping turtleback joins smoothly onto the body lines and forms a large compartment for storing luggage



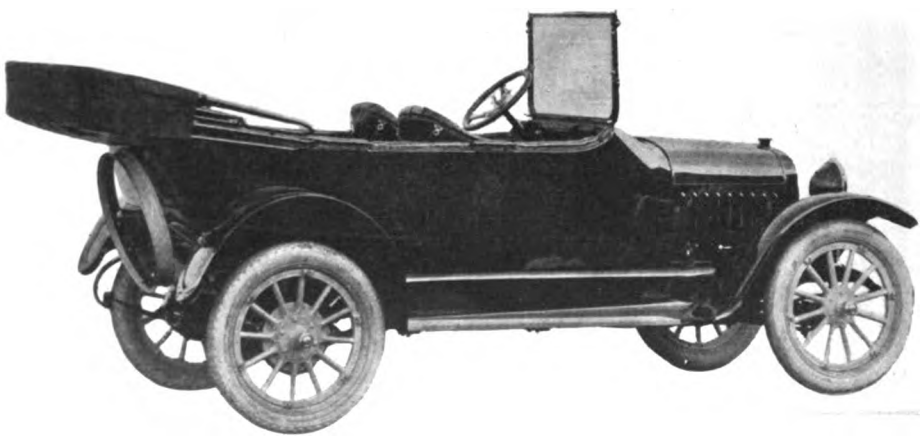
Digitized by Google

Inter-State Adds Two New Models

Commercial Car Also Is Added to Line

Upper right—The standard roadster model remains unchanged except that another door has been added to the top of the turtle back

Lower right—A commercial job has been added in the form of an 800-lb. delivery car listing at $850



Upper left—Side view and body details of the new four-passenger roadster

NO mechanical changes have been made in the Inter-State for 1917, the only addition to the line being a divided front seat touring car and a four-passenger roadster listed at $895. There is also a de luxe delivery car, mounted on the same chassis, priced at $850.

Distinctive finish features the two new bodies, the divided front seat touring car having for its standard colors a dark green body with cream wheels and the running gear finished in black. The four-passenger roadster is furnished in a gun-metal gray body with battleship gray wheels and upholstered in brown Spanish leather. Both cars have the modern low long lines and the Inter-State Company has made a point of roominess and comfort in the seating arrangement.

In the five-passenger divided seat job, the driver's seat can be moved backward or forward to suit the height of the driver, giving an arrangement which will be suitable for anyone to drive. As the adjustment is quickly and easily made, two people of different statures can drive the car with little inconvenience.

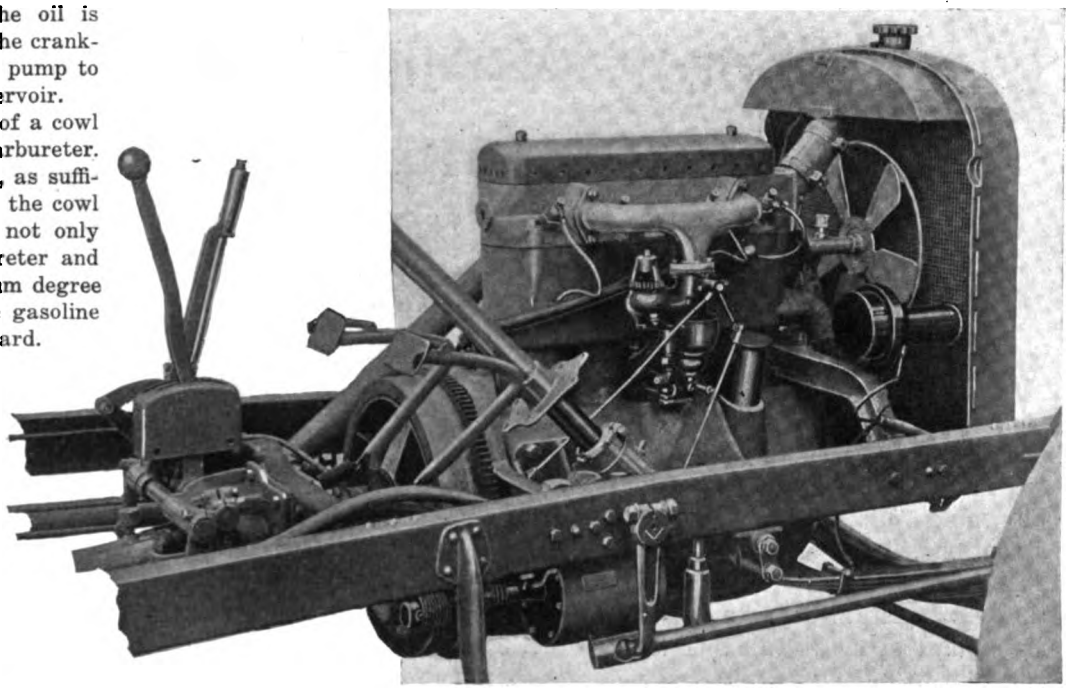
In addition to the cars mentioned, the Munsey plant will shortly bring out some inclosed bodies. The standard series T five-passenger touring car, which is a conventional design with continuous front and rear seats, remains unchanged. It sells for $850, as does also the series TR roadster body, which is a continuation of the design of last season except that a door has been added on top of the turtle back. This new feature permits of ready access to the large baggage compartment immediately behind the front seat and renders it possible for this space to be used without removing the tires.

The divided front seat touring car has the modern low lines coupled with roominess and comfort in the seating arrangement. It is finished with a dark green body, black running gear and cream wheels

The engine is a specially-built Rutenber job, having the four cylinders cast in a block, with the valves located overhead in a removable cylinder cover.

The bore is 3½ in. and the stroke 5. Drop-forged I-beam connecting-rods having a length of 9¼ in. between bearing centers are used. The rod bearings are 2 in. in length and 1¾ in. diameter. They are lined with babbitt, as are also the bearings for the 2-in. carbon steel drop-forged crankshaft. The dimensions of the main bearings are 2 in. diameter and 2¾ in. length for the front, 2 in. diameter by 2 in. length for the center, and 2 in. by 3⅜ in. length for the rear. The bearings are steel, backed with the babbitt lining, accurately scraped to a finish fit.

Lubrication is by circulating splash system operated through a gear-driven



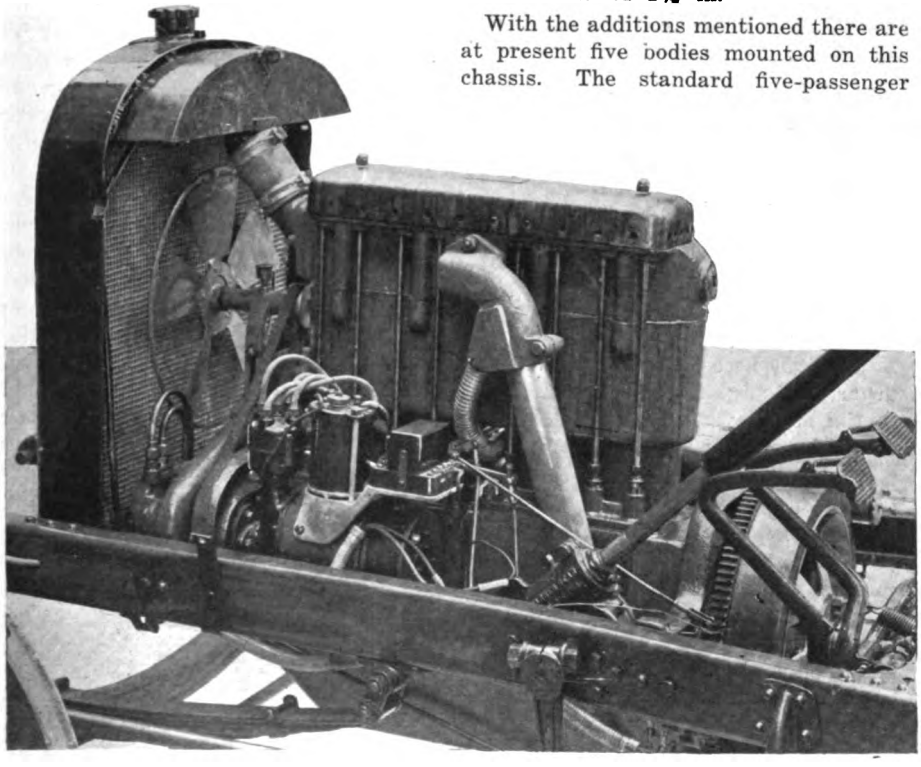
Digitized by Google

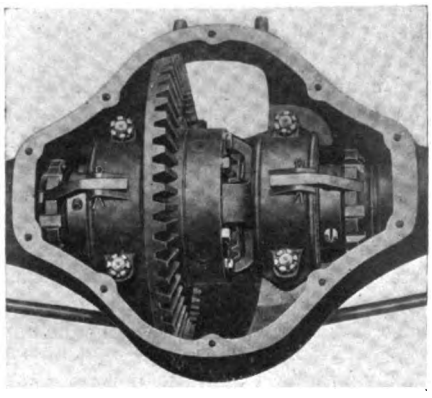
pump from the camshaft. The oil is contained in the bottom pan of the crankcase, being carried by the gear pump to the bearing leads from this reservoir.

The gasoline system consists of a cowl tank and a Schebler 1-in. carbureter. The gasoline flow is by gravity, as sufficient hydraulic head is given by the cowl location of the tank, which is not only high but is close to the carbureter and hence affected only to a minimum degree by variations in gradient. The gasoline gage is mounted on the cowlboard.

Electrically, the Inter-State car is Remy equipped, having this system for starting, lighting and ignition. The distributor is mounted on the left side of the motor block, with the coil just behind. The ignition distributor drive is taken by bevel gears directly off the generator shaft, which is connected by a flexible coupling to the same shaft which operates the oil pump. The starting motor is at the rear right and engages with the flywheel, which is equipped with a ring gear on its forward face. The heavy wiring is inclosed in flexible metal conduits.

From the engine the drive is taken through a leather-faced cone clutch to a three-speed gearbox. There is a cross-frame member just behind the clutch, supporting the clutch shaft and the forward universal and torque yoke. The gearbox itself is mounted on the rear axle with the face of the box bolted directly against the rear axle housing. A direct ratio of 4 to 1 is secured through the bevel gear axle, which is supported on Hyatt roller bearings. The axle shafts are floating.





Carbureter side of the valve-in-head motor showing the mounting of the Remy starting system

A pressed steel bottleneck frame is used, with the side channel members 3½ in. deep with a 5/32 in. section. The wheels are wood, artillery type, having twelve spokes each 1⅜ in. in diameter. They are equipped with Firestone demountable rims, carrying 33 x 4-in. tires and with non-skids fitted as standard equipment in the rear. The make of tire employed is the Goodyear. Three-quarter elliptic rear springs are used, the length of these being 46 in. and the width 2 in. The front springs have a length of 36 in. and a width of 1¾ in.

With the additions mentioned there are at present five bodies mounted on this chassis. The standard five-passenger touring, known as series T, has the continuous front and rear seats. The TR is the standard roadster with rear deck, having a two-passenger capacity. The TD is the divided front seat job with the adjustable driver's seat feature. Series TR Four is the new four-passenger roadster, and TC is the parcel delivery wagon of 800-lb. capacity. It is especially adapted for the use of florists, confectioners, clothiers and grocers. There are double doors in the rear and the loading dimensions give a width inside of the body at the top of 46 in. and at the bottom 42 in. The height is 51 in. and the length from the back of the seat to the doors is 65 in.

In finishing these bodies all the fenders and dust skirts are black enameled and baked in the ovens of the Inter-State factory. Selected natural wood wheels will be furnished on any of these cars at $5 extra per set.

Upper—The rear axle is unchanged. Left—Exhaust side of the motor showing the accessible mounting of the Remy generator and ignition system

Is the Motor World Simplified System of Accounting Too Simple?

Or Isn't It Simple Enough?

By T. W. Snead

WHEN this system was designed it was devised with the idea that it must be so simple that the small garageman, with no bookkeeper, could run it if he would follow a few simple instructions.

It was also borne in mind that there are certain departments that are found in nearly all businesses and that in some garages there will be more departments than those shown and in some garages less. An effort was made to cover the departments that generally are found. It was desired to serve the greatest number.

There have been criticisms of the system, and we welcome them. We welcome them because we always welcome criticism and because it shows people are at least studying and thinking system, something many never did before.

So far as criticism is concerned the system is not in a unique position, for there is criticism of the President, of Theodore Roosevelt, Ex-justice Hughes, the Kings, Kaiser and even the milkman; no one is exempt from criticism. Nor is any man, or any system, perfect.

But on these pages we have two criticisms. One says the system is too simple; another man says it is not simple enough. One man makes a study of his accounting; the other says he is so busy on the garage floor that he doesn't have any time for such things as accounting.

Disregarding the fact that some 1000 of these systems are giving excellent satisfaction, Motor World wishes to present these two criticisms and its answers. It believes its readers are entitled to this information. Furthermore, it asks its readers to study the forms that were devised by the Motor World Reader. We do not think this man is quite fair to the system for he admits that he did NOT read the system booklet.

And once again, as was asserted many times when the system was first presented, six months ago: Motor World doesn't care WHAT system the dealer and garageman uses, so long as he uses SOME system.

If you can get up a system of your own that suits you better than the Motor World system, fine business! Go to it! And we'll give you any help we can!

But GET A SYSTEM OF SOME KIND and then USE IT. Don't kid yourself into thinking that work on the garage floor is more important than your accounting.—EDITOR.

Too Simple

Says This Man

System Editor, Motor World:

Believing the sheets of the Motor World Simplified System of Accounting were not exactly suited to my needs, I have made some alterations in them and have had some printed for my own use. I would like an expression from you regarding these.

I cannot help but notice in the Motor World of May 17 the answers to several questions pertaining to your accounting system. In answer to one question in particular, you advise throwing storage and wash rack all into one account. You advise throwing some other items into one account that some one else wants to separate. Instead of offering the excuse for this of not having columns enough for distribution in your system, you told him to bunch these accounts and if necessary make separate separations. If one is going to do this, why go to the trouble of keeping the system at all? Why not bunch all of them into one account and make separate separations, the same as other accounting systems?

It is just as necessary to keep a separate department of your wash rack and storage as it is for any one of the five departments that you speak of in your system. In my garage business I always knew what my storage and wash rack were doing, but I had to separate them to do it. The storage usually takes care of itself. If there is a loss, it is likely to appear in the wash rack. This is why it is necessary to keep these two departments separate, and even more essential as the wash rack is usually conducted by a night force.

On the other hand, a car agency maintaining a stock of automobile parts should be kept entirely separate from the rest of the parts and accessories, and occasionally it might be well for a man to keep his tires separate, and in view of these things why is it necessary to tell Mr. Wehrstedt of Winnetka, Minn., to bunch his different departments into five when you could just as well print sheets like mine and give him his different departments? It would not be necessary to give all the departments a heading, but I would suggest heading six or seven of them and leaving the other three or four blank, and if you would do this you would give a man some sheets that he could work with.

Personally, I cannot conceive of why the parties responsible for this system are so determined to force those sheets on the public when they could just as well give them something that they could work with. This, I explained previously in my letter, pointing to the width of the dollars and cents columns, etc. I do not expect any compensation from you people for these improved form sheets, but I do expect you or someone else to put them to use, as the system is too good to let lay idle.

Another suggestion is this: Instead of taking off separate statements from the books at the end of the month and dividing this department and that department and drawing this conclusion and that conclusion, I post the monthly footing of each department account to a department account in the ledger. If

Digitized by Google

there is no inventory, I post the difference of this account directly into the loss and gain account in the ledger. If there is an inventory in a department account, I add the amount of the inventory to the amount this account produced for the month and then take the difference as my profit in this account for the month and enter it into the account itself and post the same over into the loss and gain account.

This then shows that the difference of this particular department account an asset to the amount of the inventory shows in the account itself, while when all the department accounts are likewise closed off into the loss and gain account, you then have your monthly statement recorded in your loss and gain account.

Previous to posting the cost of these departments, I distribute my general account into them in proportion to the amount that I think each account should bear; then, when these postings are all done, my books are balanced and my statements are all recorded in the ledger automatically, and the whole transaction requires less bookkeeping than is necessary to keep an ordinary set of books and take a trial balance each month. If I had the time I would like to sit down and dictate complete working instructions for handling this system the same as I have applied it to my garage.

MOTOR WORLD READER.
Detroit, Mich.

Motor World's Answer

ANSWER—This is in answer to your letter of May 24, in re the accounting system that you have worked out for your garage, using as a base the idea which we use in the Motor World Accounting System.

To prove our contention, Mr. ——, that this department, and Motor World in general, has no prejudiced interest in the sale of systems, we have decided not only to publish your letter and to illustrate your forms, but also to publish the letter of a fellow townsman who, we believe, feels entirely different in regard to systems of accounting.

Motor World's one idea in this system work and accounting was and is to create interest and to show the business man, in the industry which we represent, a picture of his business. **We do not care what system he uses as long as that system produces this picture.**

A statement of any man's business never is and never will be a statement of fact, but is simply the expression of that man as to what his business is and what his business is doing.

If you can accomplish this, then your system has accomplished the desired results; if you can accomplish it with less labor than any other system, you are certainly to be congratulated, but at the same time we want again to remind you that you are probably a little more advanced in the art of accounting, or that you appreciate accounting, a little more than the average business man in your trade.

As an explanation of why we divided our system into its various departments, we can only say that the departments as itemized in our system seem to us to be the absolutely necessary ones, and if by chance some garagemen requires additional information, he could work out an idea along the same lines as you have.

The departmental idea of accounting is in a way what you might call a new idea; that is, to some of us, and if we had attempted to give as a standard system of accounting a system consisting of a great many departments, we would have failed in what we were trying to accomplish; and if you will compare the forms used in your system you will find that in this respect you differ from ours only to the extent that you separate tires and tubes from parts and accessories and your wash rack from the storage.

You have eliminated the explanation columns on the credit side of Form 1, thereby enabling you to use three blank columns. This will necessitate your using a symbol of some kind to indicate what account is being credited when you write an amount in the All Other Accounts column. All the time remember, Mr. ——, that Motor World is trying to reach and show better business to the large number of garagemen and dealers rather than to one class of garagemen and dealers.

On the debit side of Form 1 in your system you have simply reversed the two columns and transferred the sales number column to this side of the form. On Form 2, in your system, you have eliminated the account columns under each department, again necessitating an expense symbol in order to designate the particular expense to which an item is being charged. This would be most confusing to a large percentage of garages.

We might suggest, as an advance further along the lines that you have worked out your forms, that you use one of the columns on Form 1, Credit side, and one of the columns on Form 1, Debit side, to figure the cost of goods sold, for your parts and accessories, tires and tubes stock. In other words, as each sale is made that sale is priced and the cost of the article noted on the sale slip by the use of a code, and when each sale is entered in your system a corresponding entry is made, charging the cost of the goods and crediting your inventory. This would give you the first profit each day and would tell you the value of your stock at all times.

We want again to take the opportunity of complimenting you on what you have done and to thank you for the opportunity of allowing us to publish your letter and show your forms. If you will kindly advise us as to just what these sheets cost you, we will endeavor to reduce this as much as possible in the event that we can be of service to any garageman, dealer or supplyman who may wish to follow your idea.

It may be interesting to you to know that over 1000 complete Motor World systems are in use to-day and in the neighborhood of 5,000 instruction books are in the hands of dealers and garagemen. We hope before the year is over to see 2000 systems in use, and we believe that if we had many such representative business men as yourself, who know the value of accounting in any business, to push things along as you have done, then we would have no trouble in reaching that goal.

If this department, or any other department of Motor World, can be of any further service to you, or your business, we feel sure that you will call upon us.

Too Complicated
Says This Man

Editor Motor World:

In reference to your Simplified System of Accounting: We have had this system in practical use since Jan. 1, and I most frankly state that to a person of ordinary public and high school education, like myself (I have always taken care of the office work), the system is a difficult one, necessitating a great increase in work and trouble out of all proportion to the needs of our business.

I find that in order to follow the system in all its details it will be necessary to engage an accountant, or at least a person with some knowledge of bookkeeping, or some one who can give all his time to the work. But for the garageman himself to run your system properly, **I tell you frankly that the average garageman is a mighty busy man, spending most of his time on the garage floor and with very little time to follow the routine of office work.**

I have no difficulty in doing the daily posting of all business done, the Expense and Accounts receivable; my difficulty is with what comes after, or the Recapitulation, analysis of Profit and

Loss, Assets and Liabilities, Analysis and Comparison, Income and Expenses itemized.

It seems to me that a great deal of this can be eliminated for the small garage, thus making the system more practical and less complicated for us. You should also furnish blank forms for making these various statements at the end of the month, so that we can easily fill them out and refer to them easily. To rule paper for the purpose seems very crude, to me, at least.

I would like to make a suggestion, viz.: Why not have one of your men who understands the system thoroughly come to Detroit and inspect, correct, instruct and advise the users of this system? It will be expensive for you at first, but will pay in the end through increased satisfaction felt.

I know positively that the majority of users in this city are very much dissatisfied with the system, and I have not been able to find one man who follows the system all through as you have built it.

I also know many cases where garagemen have refrained from buying the system owing to the advice of those who have it, and I personally would not advise the installation of the system where the garageman does his own office work.

—GARAGEMAN, Detroit, Mich.

Motor World's Answer

ANSWER—In answer to yours of April 12, we would like to emphasize one paragraph in your letter. We quote as follows:

"I tell you frankly that the average garageman is a mighty busy man, spending most of his time on the garage floor

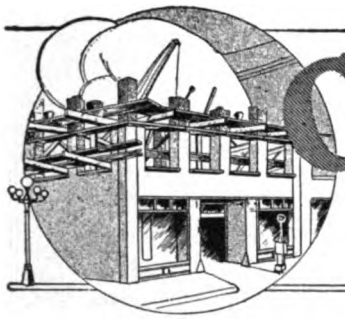
and with very little time to follow the routine of office work."

In our opinion, if he were to attend more to office work his garage would be a better paying proposition, and if our Accounting System has gone this far in getting you to pay more attention to the dollars and cents end of your business, then we feel that we have done you a service indeed.



We have yet to advise any garageman to use the Motor World Simplified System of Accounting without first thoroughly investigating it and proving to himself that it will be adaptable to his particular business. We will say, however, that there are over 1000 of the systems in use to-day, all of which have been installed in a period of a little less than 8 months.

You speak of no one in Detroit being pleased with the system. The writer personally has in mind anywhere from twenty to thirty systems, each of which has in some one point or other been changed or altered simply by calling a certain department by a different name, or some particular expense a different name from that shown in the instruction book, which was done in order to suit the requirements of the particular business in which it was installed. The system was made to fit the business.

If your business is worth accounting at all, it is worth spending a small amount to see that it is accounted correctly, and while we cannot suggest any one in particular in the city of Detroit, we would suggest that you engage a a local accountant; for example, the young man that handles your account at your local bank, to come in once a month, open up your books and show you an Income and Expense statement. We

Scientific Construction
GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

RAMP CONSTRUCTION

Figs. 1, 2 and 3

Editor Motor World:

We have a garage 75 ft. x 126 ft. deep and occupy the ground floor. We desire information as to how best, in your opinion, to construct a ramp from the first to the second floor, the grade best suited to reach the second floor, which is 13 ft. above the ground floor, the materials necessary to comply with building regulations, and the approximate cost of such an installation.

We would also like your suggestions as to what to do toward making the second floor suitable for storage of automobiles. This floor was built to sustain a weight of 75 lb. per square foot. By the addition of cement or concrete would it reduce the sustaining powers of the floor, and do you think the floor would sustain sixty cars safely? The floor is supported by ten 12 x 12 yellow pine posts.—Walter H. Price, Utility Garage Co., Brooklyn, N. Y.

Figs. 1 and 2 show the plan with a ramp. The ramp is about 85 ft. long and has a grade of 15 per cent.

The ramp may be constructed the same as a floor would be; that is, with longitudinal supporting beams on each side, the two being connected at intervals of about 18 in. by joists and the whole covered with concrete.

You might use the present floor joists for this construction. It is necessary to saw an opening in the second floor so that the ramp may be constructed, and the joists cut out can all be used for building the ramp.

The cost of constructing a concrete floor similar to the one described in Motor World for June 28 (page 25) would probably be about 25 cents per square foot. This is a conservative figure, and includes the removal of the present floor. This would bring the total cost to about $2,300. It is quite likely, however, that you can get a contractor to do the work for less than this.

Whether the building department will allow you to put in a concrete floor, in view of the fact that the present floor is only designed for a load of 75 lb. per square foot, is a question. A concrete floor consisting of 4 in. of cinder concrete with a 1-in. granolithic finish will weigh about 30 lb. per square foot. This will reduce the live-load capacity of your floor to 45 lb.; and while this is ample for the storage of touring cars, it may not suit the building department.

The cost of the ramp itself depends on just what method of construction is used; but if you follow the method described the cost will be anything from $250 up, depending on circumstances.

KAHN STEEL BUILDINGS FOR GARAGES

Figs. 4 and 5

Trussed Concrete Steel Co., Youngstown, Ohio.

Steel buildings for garages have been erected in many styles and sizes recently with complete satisfaction to their owners. The increasing popularity of this type of building is due, chiefly, to the fact that they make it possible to build a garage of fireproof construction and pleasing appearance at a reasonable cost. Composed of compact steel units, steel windows and roofs, specially designed hardware fittings, their construction makes for permanence and at the same time permits them to be readily taken down, moved to a new location, and re-erected without any deterioration to the building itself. Many are coming to realize the convenience afforded by this feature of steel portable garages.

The steel units composing these buildings, when put together with the patented locking device illustrated in Fig. 5, make the building absolutely weather-tight and substantial. This construction is not to be compared with the flimsy style assembled with wire and rivets, which have been attempted in the past. Each unit is connected with the others by means of lock and wedge, which make them absolutely permanent and substantial.

Fig. 4—The steel construction is readily adapted to the courtyard type of construction

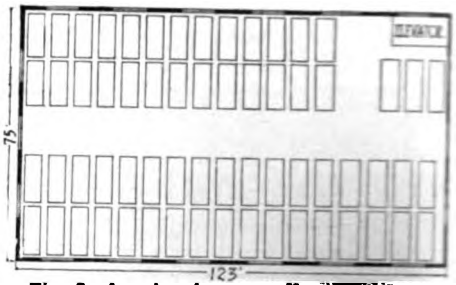

Fig. 3—An elevator permits [illegible] to be stored on the second [illegible] but is not as convenient

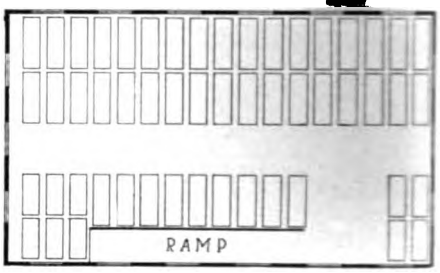

Fig. 2—Arrangement of cars on second floor when ramp is used

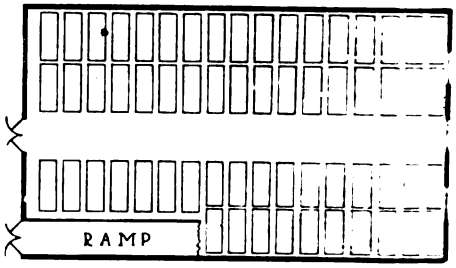

Fig. 1—First floor plan with ramp

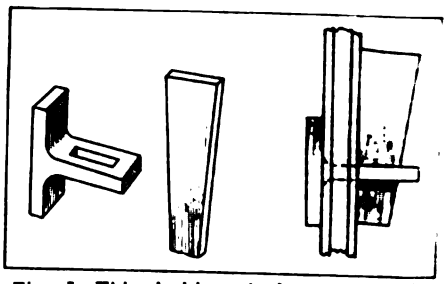
The only tool necessary for assembling these buildings is a hammer, and the only engineering knowledge necessary is good common sense. They are



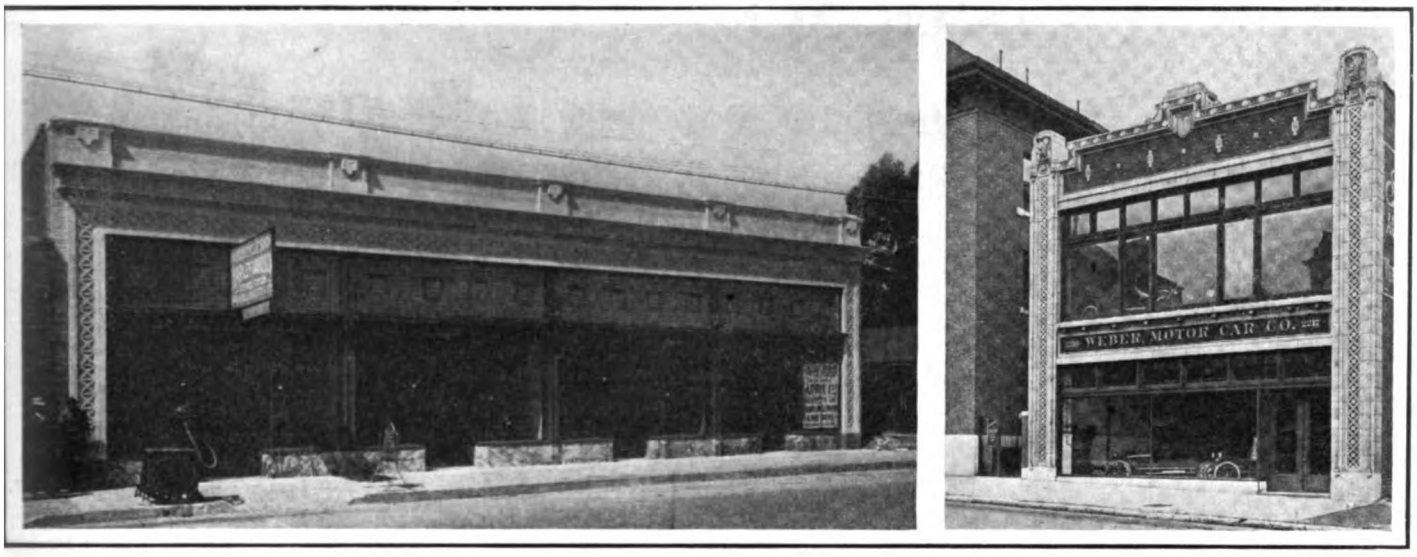


Fig. 5—This locking device makes the building weather-tight and substantial

shipped ready for assembling and can be had in various sizes to meet any reasonable requirements. The steel roofs present an appearance not unlike to the higher grade roofings now in vogue among better builders. The steel windows, with their specially made hardware fittings, afford perfect ventilation and protection. The steel doors, equipped with Yale cylinder locks, knobs and Stanley hinges, completes an absolutely fireproof, permanent building, which, with its panelled sides, makes a very sightly structure.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 852) TIME-CARD BOARD

A system whereby the foreman can see at a glance the amount of work before each man and assign a new job to the proper workman. As each car comes into the shop, the work to be done is noted and typewritten on a work-card. The foreman then snaps this card into the clamp of the workman that is to do the work. The workman, having finished his last job, comes to the board, gets his card and goes to the work without further instruction.—Charles Coon (Drenco Machine Co.), New York.

(No. 853) TORQUE TUBE REPAIR

It is difficult to re-rivet a torque tube to the flange holding it to the rear axle. A simple and effective repair may be made by removing the rivets, drilling the holes to take a ¼-in. plug tap, and screwing in a threaded rod in the manner shown. After sawing off the rod it should be headed over to prevent loosening. In the case of a badly abused tube, melted spelter should be poured in between the tube and the housing to give a good bearing.—Charles Coon (Drenco Machine Co.), New York.

(No. 854) TOOLROOM SYSTEM

The special tools for each make of car are kept together on the toolroom shelves and are marked and indexed so that they may be readily found when needed. Tools that may be used on several makes of cars are each listed in the column provided for each car. The list is fastened at the end of the shelf and is protected by a coat of shellac. The small insert shows the method of listing the tools.—Charles Coon (Drenco Machine Co.), New York.

(No. 855) BUMPER BAR

The strain provided by a puller is often insufficient to remove a stuck taper fit, such as that on a rear wheel or a drive sprocket. The removal is facilitated by the addition of a heavy blow to the strain of the puller. The bumper bar shown herewith has sufficient weight to give the blow required, and the brass heads prevent injury to the shaft end.—Charles Coon (Drenco Machine Co.), New York.

(No. 856) PARTS BOX

Repair work is accelerated by the isolation of relative parts, and the arrangement illustrated offers a convenient method. Three packing boxes of the same size are fastened one above the other by means of side strips and placed near the car being repaired. All motor parts, for example, are placed in the lower compartment, the transmission parts in the middle and the rear axle parts in the upper compartment.—Charles Coon (Drenco Machine Co.), New York.

(No. 857) FIXTURE FOR REBORING CYLINDERS

Any cylinder having a detachable head may be rebored while on the base by the fixture shown. A rigid upright, secured to the adjacent cylinder by means of taper plugs, carries the brackets and bearings that hold the boring spindle. Drive is effected through a spiral and spur gear train driven from an overhead shaft. This spindle is hollow and slotted to carry the boring head. A feed screw, controlled by a hand wheel at the top of the spindle, runs through the internal arm of the boring head, thus permitting the head to be fed up or down. To use, the cylinder head is removed, the pistons and connecting rods taken out, and the fixture clamped on in the manner illustrated. The boring spindle is lined up by careful adjustment and a very light cut taken, feeding from the top down. Too heavy a cut will cause the tool to chatter, though it must be deep enough to cut all the way around.—Charles Coon (Drenco Machine Co.), New York.

(No. 858) EXPANDING LAP FOR CYLINDERS

After reboring, the cylinders should be lapped to a perfect finish. The expanding lap shown offers a ready means for doing this. Four lead quadrants are held in an adjustable head with their inner surfaces tapered and resting on a tapered plug. Each of these quadrants is charged with an emery and oil mixture, forming an abrasive that quickly brings the cylinders to the required finish. By having several sets of quadrants the device may be used on almost any motor.—Charles Coon (Drenco Machine Co.), New York.

(No. 859) VALVE-CAP WRENCH

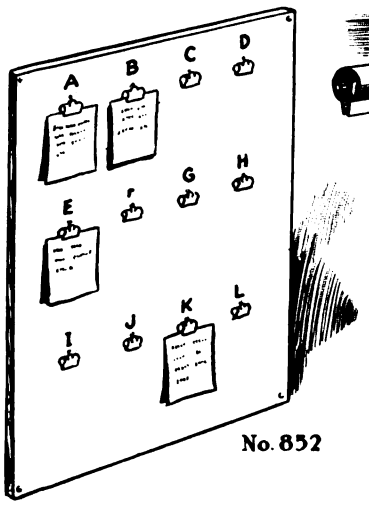
Removal of slotted valve caps is facilitated by the use of the device illustrated. It is very similar to a spanner wrench in form, except that it is made heavier and one arm is adjustable. The teeth are made from tool steel, hardened and ground to a screwdriver edge and threaded to fit the tapped holes in the arms.—Charles Coon (Drenco Machine Co.), New York.

(No. 860) WELDING TABLE

A welding table forms a valuable addition to an oxy-acetylene welding outfit, as the welding is made easier by its use. A cast-iron plate rests in an angle-iron frame supported on iron pipe standards. The joints of the frame and the connection with the standards are all welded. Slots are provided in the top for fastening the work to the plate.—Charles Coon (Drenco Machine Co.), New York.

(No. 861) SPRING LEAF SPREADER

The clamp illustrated renders the lubrication of the springs a comparatively simple matter. It may be made from the ordinary machinist's clamp by grinding down the fixed jaw to a sharp edge and fitting the screw end with a conical point. A stronger spreader, however, may be made by forging the frame from a steel bar.—Hudson Motor Car Co., Detroit.



(No. 862) ADJUSTABLE ENGINE STAND

This engine stand, with the exception of the steel end-members, is constructed from 3 x 4 in. wooden joists bolted together. It is made about 30 in. high, as that is the most convenient height for working on the motor. An adjustment from 20 to 30 in. in width permits any motor to be handled. The stand is equally convenient in overhauling transmissions or rear axles.—Charles Coon (Drenco Machine Co.), New York.

Accessories & Supplies

THIEFOIL IGNITION LOCK

Caskey-Dupree Mfg. Co., Marietta, Ohio. PRICE, $3.50.

A combination ignition lock that is applied to the face of the standard Ford switch without making any changes in the wiring arrangement. Three buttons project from the top of the lock and each must be pressed the correct number of times to complete the circuit. Pressure on one of the buttons throws the switch off. Each of the buttons operates a notched disk that must be rotated until the notches come in line. A trip-pin then falls into the groove and the lock mechanism is released. More than a thousand working combinations are possible and the entire installation may be made by the purchaser.

PENNSYLVANIA BAR-CIRCLE TIRE

Pennsylvania Rubber Co., Jeannette, Pa. PRICE, 30 x 3, $10.35; 30 x 3½, $13.45; 32 x 3½, $15.45; 34 x 4, $22.50; 36 x 4½, $31.80.

A non-skid tire having a tread of tough black rubber formed into a combination of cross-bars and circles. This construction is claimed to put the rubber where it is most needed and to enable the tires to exceed their mileage guarantee under normal conditions.

THE AEROFRAM

Aerofram Co., Inc., 107 Massachusetts Ave., Boston. PRICE, $1.

An auxiliary air valve in the intake manifold, operated automatically by suction. A metal plug houses the valve, and is screwed into a ⅛-in. tapped hole in the manifold just below the spread.

PREMO TRANSMISSION COVER FLANGES

New York Motor Car Devices Co., 200 Eleventh Avenue, New York. PRICE, 75 cents per set.

A flange for the Ford transmission designed to facilitate the removal and replacement of the cover. It is fitted to the crankcase under the transmission and is tapped to receive the retaining bolts, which are screwed into it instead of into nuts. The retaining bolts are put in from the top and may be tightened up, making an even pressure the whole length of the gasket. The advantage of the flange is that no one is required to hold the nuts from below.

MISCELLANEOUS PARTS

Detroit Screw Works, Detroit. PRICE, $4 per 100-lb. assortment.

An assortment of parts for repairshop work that have been rejected because of some slight imperfection that in no way affects the strength and usefulness of the piece. It comprises set and cap screws, studs, taper pins, bolts, nuts and

all manner of special pieces, different shapes and sizes, and bar ends.

PARAMOUNT SPRINGS FOR FORDS

Detroit Engineering Products Co., Detroit. PRICE, $6.

Retards the upward motion of the body when recovering from a shock. One is installed on each end of the rear spring and consists of a resilient compression spring anchored in castings that are held in place by two cantilever springs. A strong webbing strap which buckles around the axle is fastened to the casting at the top of the compression spring. The lower casting is attached to the car spring by a tie-plate and two bolts. The installation requires that the snubber be bolted to the rear spring, and the strap fastened around the axle, which may be done in a few minutes.

HYTORK STARTING AND LIGHTING BATTERY

Heissler Storage Battery Co., Chicago. PRICE, 6L-80, 13 plates, $27; 12-40, 7 plates, $34; 18-40, 7 plates, $44; 24-27, 5 plates, $45. Dealers, 33 1/3 per cent.

The plates of this storage battery are designed and constructed for high efficiency and durability. The grids are an alloy of lead and antimony so proportioned as to produce a rigid and workable grid. After filling with the plate-composition, they are placed on an electrical charging board and given the positive or negative charge. It is claimed that the resulting plate may be bent until the grid breaks without disturbing the active material. Buckling, abnormal sulphating and the shedding of active material is eliminated by this construction, it is said.

TRUCKFORD ATTACHMENT FOR FORDS

Robinson Machine Co., Detroit. PRICE, $350.

Converts a Ford into a 1-ton truck, leaving the chassis intact. The Ford rear axle becomes the jackshaft and carries the sprockets for the chain drive, the attachment bolting on over the frame. The lengthened frame gives a loading space of 8½ to 11½ ft. back of the driver's seat, making the wheel-base 128 in. Solid rubber tires are used on the rear and carry almost the entire load. The Truckford may be attached by two men in a short time, and may as readily be removed and the original body replaced.

SEARCHLIGHT LITTLE GIANT TORCH

Searchlight Co., 415 Karpen Bldg., Chicago. PRICE, $1.50, complete, with hose and connection.

A brazing or soldering torch that may be attached to any acetylene tank. An extremely hot flame is produced immediately and may be regulated to suit the requirements of the work. The device is small, provided with a convenient handle and may be used in a limited space.

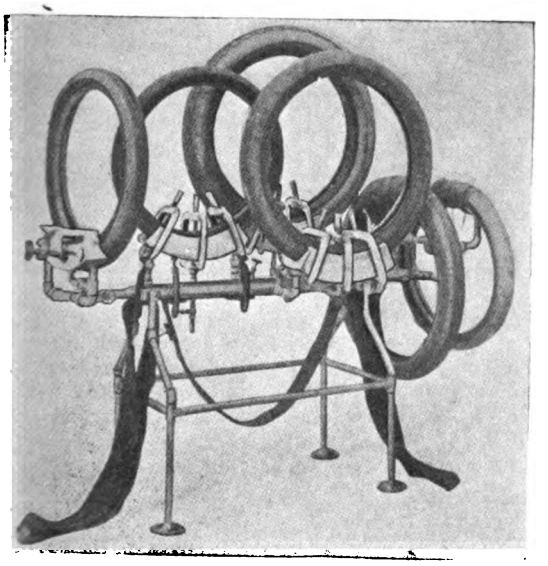
BATTLE CREEK VULCANIZER

Battle Creek Vulcanizing Equipment Co., Battle Creek, Mich. PRICE, Model B, $250, with all bench tools and special clamps. Boiler not included.

A large, light machine for the repair of casings or tubes. Steam is generated in a convenient boiler and circulated through the hot-plates in a manner that keeps it dry and live. Six casings and several tubes may be treated at one time, and though held so as to occupy a minimum of space are still accessible to the workman. The vulcanizer is capable of handling all general repair work. Each unit is controlled by a globe valve and one or all may be heated at the same time.

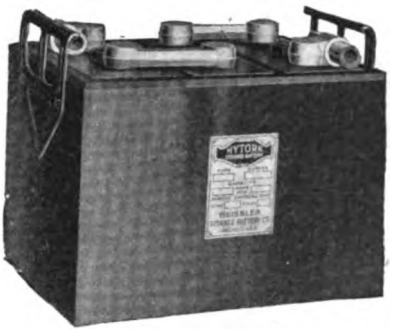
LUNKENHEIMER ENGINE PRIMER

Lunkenheimer Co., Cincinnati. PRICE, $6.



A pump located on the dash permits gasoline to be forced into the intake manifold. A ⅝-in. hole is drilled in the dash and the pump mounted, after which ⅛-in. holes are tapped in the manifolds as near to the valves as possible. These holes and the pump are connected by the tubing provided, and the pump is connected to the gasoline supply. If a vacuum system, this connection is made to the auxiliary reservoir, otherwise it is made directly to the supply pipe. A disk at the end of the plunger shuts the gasoline from the manifold when the motor is running.

SUPERLUSTRE POLISHES



Jas. J. Ferro, Inc., 792 Seventh Avenue, New York. PRICE, per can of 20 oz., $1.50. Dealers, 35 per cent and 5 per cent for cash.

A polish for cleaning the surfaces of car bodies without injury, and is said to leave a glass-like finish upon which dirt and dust cannot accumulate. A scratch and stain remover is also supplied that is to be used only when the surface is such that no polish will give satisfactory results.

A General Letter to a Certain Man

If any one wants to know if this is his garage and will ask for that information it will be given.

Mr. ———,
——— Avenue,
B———.
Dear Mr. ———

We are sending you this letter because we believe you want to improve the service that is given at your garage.

Your location, on one of the main arteries of travel in B——, is excellent. Your sign attracts trade.

It was because of your sign that we drove into your garage last Saturday evening at eight thirty. We wanted 5 gallons of gasoline.

We drove directly into the garage because we did not see either a curb pump or a portable gasoline tank.

Directly inside the door we noticed the portable tank, but before we could ask for gasoline your night man shouted to us that we could not stop there, that we would have to back out to the curb so as not to obstruct the entrance. This despite the fact that we might have driven in a little further and the portable tank was right handy.

So we backed down to the curb and your night man then trundled the portable tank out and pumped 5 gallons into our tank. In doing so, however, he slopped quite a little over the cushions. Our wife objects very strongly to this as it loosens dirt from the upholstery and it gets on her clothes.

We handed the night man a five dollar bill but he had no change. He sent someone to the saloon on the corner for change. He came back in 9 minutes by our watch, smoking a cigar. This led us to believe that he may have stopped for a friendly chat.

While he was gone, we inquired the location of the toilet. It was pointed out but it was impossible to get to it because there was a large car directly in front of it. The night man did not offer to move the car the few inches necessary.

So when the man came back with our change we drove away and you can't blame us, can you, if we feel a little bit sore?

We would suggest, Mr. ——, that the portable tank be at the curb because hundreds of transients pass your door all day and half the night.

It would also be a good idea if you were to provide your night man with change for five dollars and instruct him to see that he always has change instead of forcing your customers to wait for it.

It would also be well to have that big car about 2 feet from the rear wall—this would not obstruct your entrance—so that your customers can get at the toilet.

If you will do these things we believe that you will profit, that you will be able to give better service and that customers will continue to patronize your garage.

We hope you will find these few suggestions valuable, Mr. ——.

Advertise Your Fall Fair Show

IT is noticeable in connection with some of the fall shows at fairs that there seems to be a lessened attendance because the show is not properly brought to the attention of the public.

The fairs generally are advertised and mention oftentimes is made that "automobiles will be shown," but when it comes to a united boosting of the show itself by the car interests there is much that could be done.

If the show is run by a dealers' association this organization should take good space in the daily newspapers and give wide publicity to the fact that the show is a big part of the fair. Advertising can impress upon the public that the show is one of the biggest features of the fair—and such it should be if it is to be held at all.

AN ANSWER TO THE "SERVICE" QUESTION

Editor Motor World:

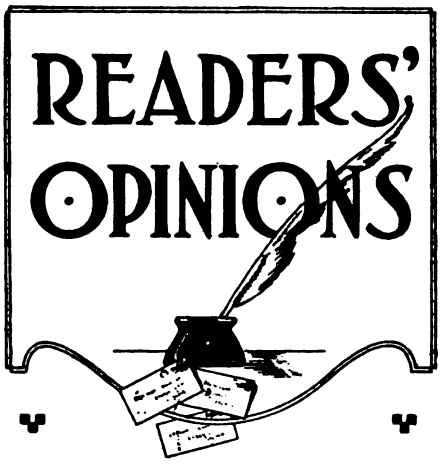
One of our customers kicked on the charge of 20 cents for labor for placing a bolt in a fender and 5 cents for the bolt, saying that the same should be done gratis on account of the good feeling which it would engender. This customer was formerly in the hardware business and said, whenever anyone came to his place of business and asked for a small bolt, screw, or such, the same was given away and caused the people to have much respect for him and brought considerable business to his place.

I called his attention to the fact that this was a very bad practice and very expensive and asked him the following questions:

"When you entered the garage you called the foreman and told him that you wanted a bolt placed in the fender. He, in turn, called a workman, who was called to the car and ascertained the kind and size of the bolt wanted, went to the stock room and drew the same from the stock man and placed it in the car."

He admitted to me that it took the following time:

At least 5 min. of the foreman's time, valued at $6 per day, or 1 cent per minute, or 5 cents; at least 5 min. of the stock man's time, valued at 30 cents per hour, which would be 2½ cents, and at least 15 min. time of the workman at 70 cents per hour, including overhead cost, which would be 17½ cents.



This would be a total labor cost of 25 cents, and with allowance of 5 cents for a bolt, would make a total cost of 30 cents, showing a loss.

When he saw these figures on paper he said he never realized what it costs to do these trifling little jobs, and said he could plainly see why it was that so many garagemen were not making any money and did not know where their profits were going.

He also stated that a garage doing any business at all would probably have fifty or sixty calls for little jobs of this kind every day, and said he did not realize that same would amount to what they do, which amount would be from $15 to $18 per day, or from $450 to $540 per month of 30 days.

Fifty jobs per day like the above would show a net loss of $2.50 per day, or $65 per month. Small jobs should be charged for at a rate of $1 per hour.

He could readily see from these figures, and from his past experience in the hardware business, how a garage having men and material for the use of the people should be entitled to receive pay for the actual cost of the labor and material used, plus a small profit, and said he was willing to stand his share of the burden whenever he called upon them. Service consists of having the material and men ready to serve, and should be paid for, and under paid-for conditions should produce the best feelings of satisfaction and friendship.—Joslyn Automobile Co., Herman L. Frohmader, Chief Accountant, Rockford, Ill.

Four-Cylinder Motor for Tractors

MILWAUKEE, Sept. 2—The four-cycle, four-cylinder motor, with the cylinders in one or two blocks and the valves at the side, is the most suitable type for agricultural tractors, according to H. L. Horning, engineer and general manager Waukesha Motor Co. Horning read a paper before the Midwest Section of the Society of Automobile Engineers in which he gave this as his opinion:

Piston pin—Hollow.

Material—0.20 carbon steel, case-hardened, ground and polished.

Type of bearings—Bronze.

Valve tappet—Mushroom or roller-type.

Timing gears—Crankshaft gear 0.30 carbon steel. All others, semi-steel. Teeth not less than 8 pitch helical.

Crankcase—Aluminum with 8 per cent copper.

Bearings—High-tin babbitt alloy.

Flywheel—Stored energy of 30 per cent.

Connecting rods — 0.35-0.45 carbon steel, heat treated for an elastic limit of 70,000 lb. per square inch.

Camshaft—0.20 carbon steeli, case-hardened and ground.

Give One-Year Service

INDIANAPOLIS, Sept. 11. — A novel service policy has been started by the Fisher Automobile Co., Reo dealer. This company has advertised that all parts broken in normal service within 1 year from delivery date will not only be replaced promptly free of charge for material and labor, but it will, in addition, pay to the customer an amount equal to the price of the new part as shown in the price list as compensation for the annoyance and loss of time caused by the breakage.

Help Straighten The Curve

Below are comments from Motor World Readers on the Winter Business Number that this paper will issue October 11

We think this is an excellent idea, as the accessory business is not evenly divided throughout the year. It is either too much in a few months or not enough in the balance of the year, that makes it anything but profitable as an average business.

If the trade can be educated to make this an all-year business it will be a very great benefit to the accessory business.

We hope you will be successful in your endeavor to stimulate the buying of accessories during the dull months of the year.—F. A. Hamilton, the Tracy-Wells Co., Columbus, Ohio.

We wish to express to you our appreciation of the great work you are doing in educating the garageman and dealer to go after the winter business.

We believe that you are on the right track and deserve the co-operation of every man in the business.

Any time that we can assist you we will do so with pleasure.—Talman Auto Supply Co., Inc., Richmond, Va.

We have received the article entitled "Help Straighten the Curve."

We have a force of twenty-five salesmen and we intend to carry this entire force through the winter and do our best to "straighten the curve" if we can.

It would assist us greatly in this work to have twenty-five copies of this article, and we'll hammer a little story into the heads of our boys that will give them some good reasons why the trade should buy in the winter months just as readily as they do in the summer months.—D. Levin, Benford Mfg. Co., Mount Vernon, N. Y.

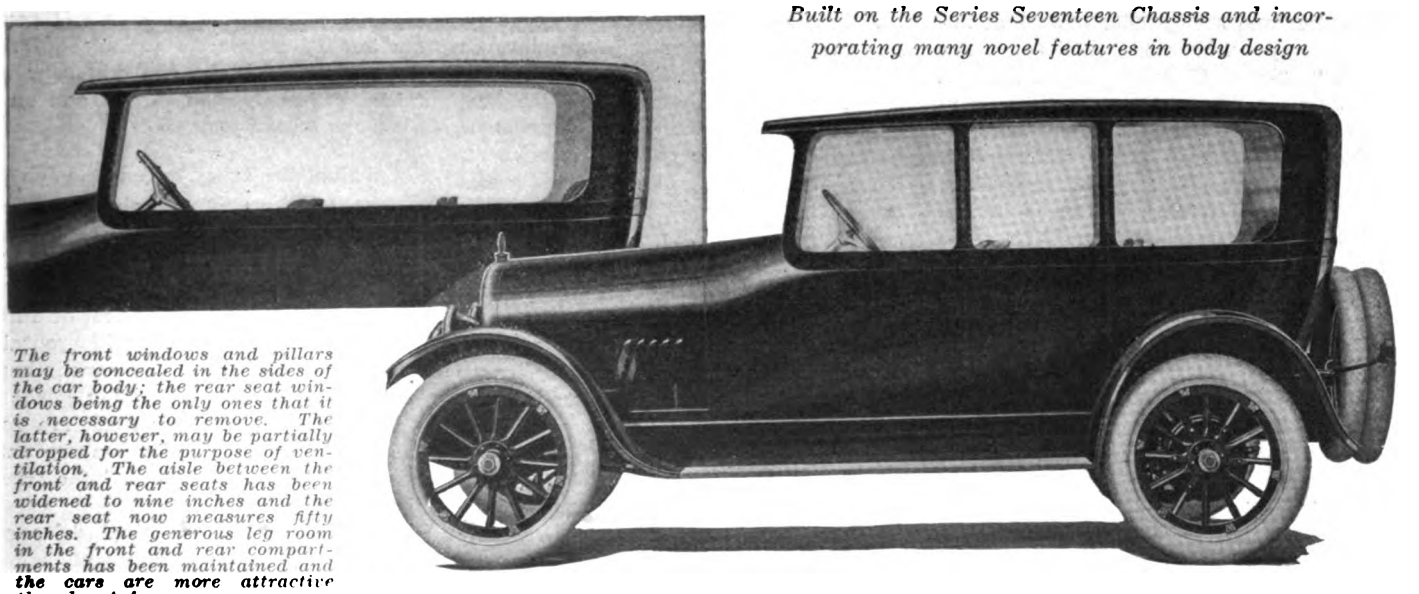
Smart Bodies for Mitchell's New Four-Season Cars



Upper—The new Limousine is a model in luxury cars
Lower—The coupé seats four and is finished and upholstered like the Limousine

Upper—Mid-year Touring-car with demountable top
Lower—The Cabriolet is particularly a professional man's car

The Mitchell Springfield type Touring Sedan with seats for seven passengers

Westcott Adds Springfield Touring-Sedan Body

Built on the Series Seventeen Chassis and incorporating many novel features in body design

The front windows and pillars may be concealed in the sides of the car body; the rear seat windows being the only ones that it is necessary to remove. The latter, however, may be partially dropped for the purpose of ventilation. The aisle between the front and rear seats has been widened to nine inches and the rear seat now measures fifty inches. The generous leg room in the front and rear compartments has been maintained and ***the cars are more attractive than heretofore***

How Does the Truck You Sell Check Up on These Points?

By Henry Farrington
Of the Thomas B. Jeffery Co., Kenosha, Wis., read before the Mid-West Section of the Society of Automobile Engineers, at a recent meeting.

The business man who has made up his mind to adopt commercial motor vehicles for the first time, is confronted with a maze of conflicting practice in engineering, body design, load-carrying capacity and prices, as well as the more or less successful and seemingly contradictory experiences of the business man in general and of those in his own line in particular.

He is certain to meet a lot of motor-truck salesmen whose reasoning and arguments agree only on the advisability of using motor trucks, and differ largely on the other essentials. He will meet salesmen who will tell him the worm drive is the only thing. Others will insist that the double-side-chain drive has never been improved upon. The internal-gear drive and the double-reduction axle also have their champions. The men who are selling motor trucks with power applied to all four wheels will claim that the rear-drive truck is doomed and is already obsolescent. And here and there will pop up another type of final drive differing from any of the others and which will be stated in all apparent sincerity to be the last word in motor-truck design.

The merits and demerits of two, four and six cylinder motors of numerous types will receive their fair share of attention. Clutches, transmissions, differentials, brakes, wheels, tires, governors, radiators, and numerous other details of design will be freely discussed, and the various designs will be praised or condemned according to the beliefs of the contending salesmen, or their anxiety to make a sale.

Engineering Details Unessential

The truth of the matter is that these things are absolutely unessential except insofar as they may affect the applicability of the truck to the job in question, and the profit the machine can make in comparison with other modes of transportation it is intended to displace.

There is not an automobile engineer in the business who can prove definitely that in efficiency and operating economy, any one of the recognized and approved forms of final drive is appreciably better than any of the others. The best point he could make would be to show that the particular type he is advocating is more in accord with the general design of the rest of the machine than any of the others, or that it was cheaper to buy or manufacture, or weighed less, or had more ground clearance, or was easier to obtain under the present conditions, or was easier to inspect and repair, or had longer life, or was cheaper to replace, either in whole or in part, when worn out.

A Place for Each

Some of these things can undoubtedly be proved under many conditions. Others cannot be proved at all. All of the various types have or have had their place, and every one of them is fulfilling or has fulfilled a useful function in the development of motor truck practice.

Limitations of Certain Designs

The various types of worm and double-reduction axles undoubtedly have less ground clearance than the internal-gear axle or even the chain, and on the face of it, trucks using axles of these types are primarily intended for use on good roads. They are not particularly applicable for use on rough or broken roads, in mud, snow or sand, on high-crown roads, or in country where high axle clearance is necessary or desirable.

In the writer's experience considerations of this kind limit the field of application of the various types of motor trucks roughly as follows:

1. *Trucks with low clearance, to good roads.*
2. *Rear-drive trucks with high clearance, to good and fair roads.*
3. *Trucks with power applied to all four wheels, to good, fair and bad roads, and steep hills, where it is comparatively easy to obtain traction on all four wheels.*
4. *Trucks with power applied to all four wheels and a positive drive to each wheel (through the use of automatic locking differentials), to good, fair, bad and very bad roads, where traction can be had on at least one of the four wheels.*

Selling the Truck to Suit the Job

Considerations of this kind bring one back to the necessity for selling a motor truck to suit the job in question. The engineering features and design of a truck do not make a great deal of difference as long as the truck will profitably and uninterruptedly do the work in hand. If a business man is hauling goods in a territory where all the roads are good all the year around, he has an unrestrained choice of almost all the trucks that may be offered him.

The types of motor, final drive and other details are not so essential.

The Check-up

The buyer will be wise to check up one truck against another on each of the following points:

1. *Actual developed horsepower per pound of total weight carried at given maximum speed.*
2. *Total weight carried per inch of tire width.*
3. *Proved gasoline, tire, repair and maintenance costs per mile under given conditions.*
4. *Accessibility of the various parts of the truck for inspection and repair.*
5. *The cost of repair parts.*
6. *The capacity of the dealer or manufacturer for supplying repair parts indefinitely and without loss of time during the probable life of the truck.*
7. *Workmanship and quality of materials in the units of the truck, considered in regard to the work they have to do.*
8. *The total weight of the truck chassis to carry a given load, including the body weight allowance.*
9. *The type, design and quality of the body to carry the goods in question, including the effect these have on the safe carriage of the goods and the ease and quickness of loading and unloading.*
10. *The commercial worth and reputation of the truck manufacturer.*
11. *The price of the truck.*

ANGLES OF THE LAW

By George F. Kaiser

Note Is No Good

Legal Editor:

We inclose herewith copy of a note on which we sell Ford cars on time payments. We would like you to advise whether we can still hold title to our machines with a note of this kind.

Republic Ford Agency,
Republic, Mo.

Republic Ford Agency,
Republic, Mo.

.....

$..... .....1916.

On or before.....1916, for value received, I, the Subscriber, of ..... P. O., residing in Township of..... County of..... promise to pay to the..... or order ..... Dollars, with interest at ..... per cent per annum from date until paid, payable at.....

The express condition of the sale and purchase of the ..... machine No. ..... for which this note is given is that the title or ownership to the same does not pass from the ..... until this note with interest is paid in full.

No..... .....

Due..... .....

(If name is foreign or illegible, write it out in plain English.)

.....

I have examined the note which you inclosed and have also looked carefully into the law of Missouri on this question.

I am of the opinion that your note is valueless for the purpose for which you used it.

Section 2887 of Chapter 30, Article 5, of Revised Statutes of Missouri provides:

> No sale of goods and chattels where possession is delivered to the vendee shall be subject to any condition whatever as against creditors of the vendee, or subsequent purchasers from such vendee in good faith, unless such condition shall be evidenced by writing, executed and acknowledged by the vendee, and recorded as now provided in cases of mortgages of personal property.

There is no doubt but what your lien note does not meet these requirements. Section 2889 of the same further provides that:

In all cases where any personal property shall be sold to any person to be paid for in whole or in part, in installments, or shall be leased, rented, hired or delivered to another on condition that the same shall belong to the person purchasing, leasing, renting, hiring or receiving the same whenever the amount paid shall be a certain sum, or the value of such property, the title to the same to remain to the vendor, lessor, renter or deliverer of the same until such sum or the value of such property or any part thereof shall have been paid, such condition in regard to the title so remaining until such payment shall be void as to all subsequent purchasers in good faith and creditors unless such conditions shall be evidenced by writing executed, acknowledged and recorded, as provided in cases of mortgages of personal property.

Under this section your lien note would be void as to people who bought the motor car from the persons to whom you sold it. Section 2890 of the same further provides that:

Whenever such property is so sold or leased, rented, hired or delivered, it shall be unlawful for the vendor, lessor, renter, hirer or deliverer, or his or their agent, or servant, to take possession of said property without tendering or refunding to the purchaser, lessee, renter or hirer thereof, or any party receiving the same, the sum or sums of money so paid after deducting therefrom a reasonable compensation for the use of such property, which shall in no case exceed 25 per cent of the amount so paid, anything in the contract to the contrary notwithstanding, and whether such condition be expressed in such contract or not, unless such property has been broken or actually damaged, and then a reasonable compensation for such breakage or damage shall be allowed.

Under this section the rights of a conditional vendor are set out clearly and need no further explanation.

The best thing for you to do would seem to be to sell your cars and take chattel mortgages on them. You must remember, however, that chattel mortgages are invalid UNLESS THEY ARE RECORDED, and they must be acknowledged in the county where the mortgagor resides.

The property must be given into his possession. The mortgage must then be filed in the office of the Recorder where the mortgagor resides. Chattel mortgages in Missouri hold good for 5 years and if any mortgaged property is done away with it is a misdemeanor if it is less than $50 in value and a felony if it exceeds $50 in value. The first is punishable by not more than 5 years imprisonment and a fine of not less than $100, while the latter is punishable by imprisonment for not more than 6 months and a fine of not more than $100.

Devising "Stop" Signals

ST. LOUIS, Sept. 9.—Director Talbot of the City Streets Department is drafting specifications for devices that may be used on the front and back of automobiles to show the words "stop," "straight ahead," "right," "left" and "back." The use of such devices recently was authorized in an ordinance that amends the traffic signal ordinance. The use of signs is not compulsory, but such as are used must meet with certain requirements and must be illuminated at night and be visible for 100 feet. Talbot will insist that the "stop" signal be operated automatically with the foot brake.

K. C. Tour Starts Oct. 9

KANSAS CITY, Sept. 11—The fourth annual Trade and Road Booster Tour of the Kansas City Motor Car Dealers Association will be held during the week of Oct. 9. There will be at least forty cars in the tour and the route will include northeastern Kansas, returning through central Kansas, and arriving at Kansas City Saturday evening, Oct. 14. The tour will include a truck division with about six light motor wagons entered. These will carry supplies, baggage, etc. There will be a twenty-piece brass band.

Findlay Dealers Get Together

FINDLAY, OHIO, Sept. 11—An organization of garagemen, repairmen and dealers was organized here at an enthusiastic meeting last week, when twenty members pledged themselves to aid in the organization. The organization did not adopt a name, debating whether it is to be called the Findlay Automobile Trade Association or the Hancock County Automobile Trade Association. The association was immediately affiliated with the Ohio Automobile Trade Association. Frank J. Collingwood was elected president; Dr. W. G. Cook, vice-president; Earl Rummell, secretary-treasurer, and Pearl Rice and W. C. Treece, members of the board of directors. All of the officers are also members of the board of directors.

Do It This Way—

QUERIES ANSWERED

LOCATING RATTLES

Editor Motor World:

1. What is the easiest method of locating rattles and squeaks on a new car? I have oiled and tightened everything that seems to need it and still the trouble persists.

2. What is best to put on a copper cylinder-head gasket to prevent it from leaking?

3. Can I charge any kind of storage battery with a Gray & Davis generator? What will I need to do this, and how long, about, will it take?—Charles Neuson, Augusta, Ga.

1. A road test on a rough road, with one man driving and another watching and listening, is the common method of locating rattles and squeaks. This, however, subjects the car to unnecessary abuse and is often inexpedient.

Many repairshops have a bump about 6 in. high in the floor and the rattle or squeak is located by running the car back and forth over the bump. Squeaks may also be found by having one man stand on the running-board and sway the car while the other listens. We would suggest that you force the leaves of the springs apart and lubricate them thoroughly with graphite and grease.

2. Heavy steam engine oil, thin white lead, or shellac, are the three substances best suited for a setting for copper cylinder-head gaskets and are to be recommended in the order given. The oil and the white lead, although preventing leakage, do not stick the gasket to the head so that it will be injured in removing.

3. A Gray & Davis generator can be used for charging storage batteries in the manner you suggest. It is not, however, a very efficient proposition. The connections should be made the same as on the car, and only one battery may be charged at a time. If the generator is of the new type it should be run at 600 r.p.m.; if of the old, at 1000 r.p.m., and should give 10 amp. current. It should be driven in the same direction as it was on the car. To properly charge a battery will require from 12 to 16 hr.

FLASHING ELECTRIC SIGN

Figs. 1 and 2

The construction of a flashing electric garage sign is not difficult nor particularly expensive, outside of the cost of the sign itself. Various lighting combinations may be obtained and a good one is that in which the letters in the word "Garage" light one after another, until the whole sign can be read, and then it goes out for a few seconds before the cycle is repeated. Assume that the total time of the cycle is 16 sec. and that it is entirely dark for one-fourth of this time, or 4 sec., and that the six letters are lit at equal intervals during three-fourths of the period. Thus, the first one is lit during the whole time, or 12 sec., and the others light at intervals of one-sixth or 2 sec.; thus the letter "G" has been lit for 2 sec. before the first "A" shines, and 2 sec. later the "R" flashes up, etc. Such a flashing sign may be controlled by a simple switch mounted on a drum which is rotated by a small water motor or an electric motor. Each letter is on a separate circuit and is connected to the drum by a copper brush, as shown. A sheet of copper is then cut so that at one end its height is three-quarters of the circumference of the drum, and then six steps are cut, as shown, each step representing a distance on the circumference of the drum equal to three-sixty-fourths of the circumference; thus the rotation of the drum will cause the completion of these circuits as described.—Carl Muller, Hexamer Auto Co., Hoboken, N. J.

Did You Know?

That a reamer a few thousandths too small may be made to cut the desired size by laying a narrow strip of cloth on one of the cutting edges?

That a wire scratch wheel mounted on one end of the grinder is excellent for cleaning carbon from valves and valve cages?

That a tap can be made to cut larger by placing a V-shaped piece of tin in the hole and making a second pass with the tap?

That paint remover facilitates the removal of rusted brake levers or steering gear parts?

That a broken spring leaf about 18 in. long makes a very good tire tool?

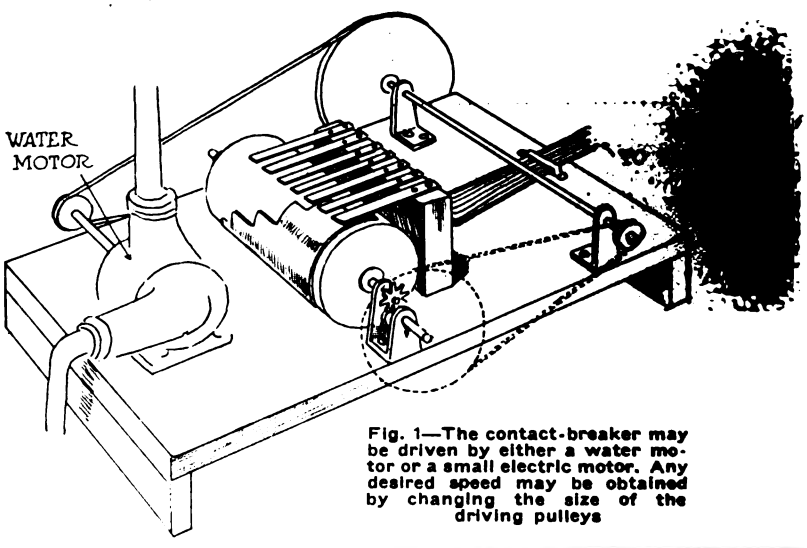

Fig. 1—The contact-breaker may be driven by either a water motor or a small electric motor. Any desired speed may be obtained by changing the size of the driving pulleys

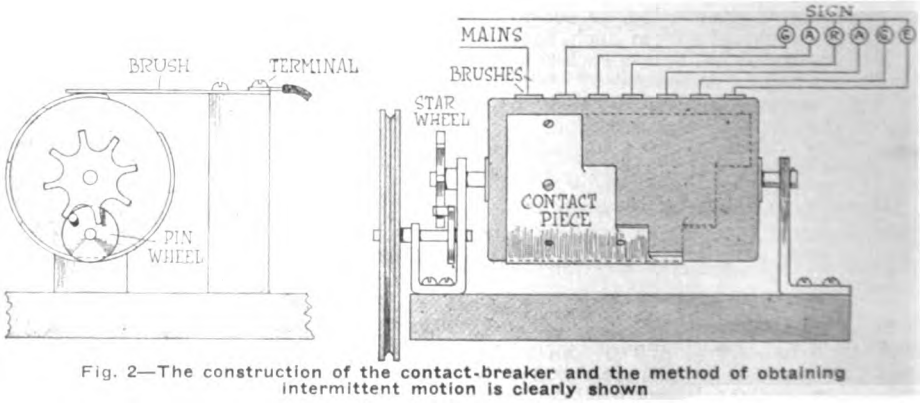

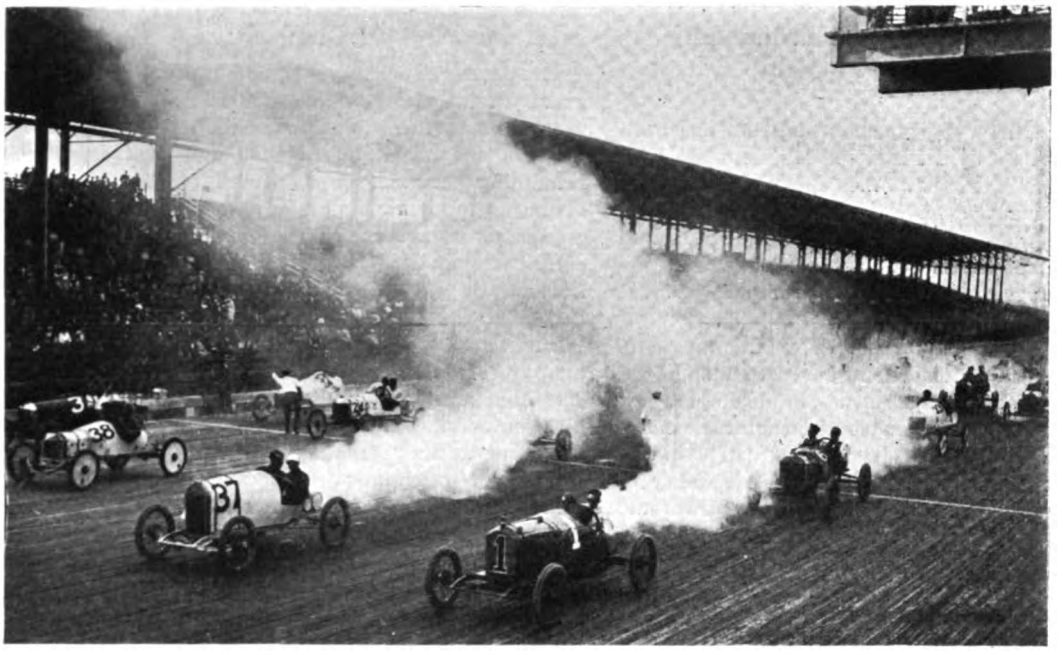

Fig. 2—The construction of the contact-breaker and the method of obtaining intermittent motion is clearly shown

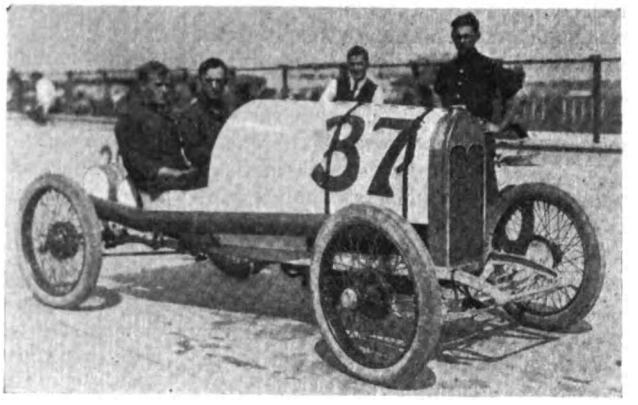
Ford Cars Battle in Speed Test at Chicago

Some Had Few Ford Parts—But All Were Fast



CHICAGO SPEEDWAY, Sept. 10—Hay wire, binding twine, trunk straps, junk parts and mechanical ingenuity, combined with more-or-less semblances of Ford cars, went to make up the creations which took part in the Ford race to-day, and a more motley assortment of reconstruction has never been seen. The springs were underslung and overslung—two cars were entirely without springs. There were distributors, special magnetos and ordinary Ford magnetos, cast-iron pistons and aluminum pistons, skeleton bodies and streamline racing types. Even that which was previously considered impossible

The start of the preliminary of the Interstate Championship Ford race on the Chicago Speedway, Sunday. No. 1 won.

PAUL HARVEY in his No. 1 Ford, who won the Interstate and Chicago Championships. The car as it stands cost $2,000 and the late Bob Burman helped design it

B. F. DAVIS won the Illinois Championship of 30 miles with a Ford that comes nearer being a remodeled Ford than many of the others

was accomplished. Fords were disguised so that all evidences of their birthright was effaced.

The greatest interest hinged on car No. 1, which took first money in two of the races and showed close to 80 miles an hour in practice. It is a Bob-Burman-and-Jack-Gable-designed replica of a Peugeot, built in his father's garage at Oak Park, Ill., by Paul Harvey, the driver. It was this garage in which Burman and Gable kept their cars prior to the 1915 Chicago race and credit is given them for much of the car's design. The car got into the race because it has a Ford block, gearset and axle. Otherwise it was a special racing job all the way through. A sum amounting to well over $1,500 is said to have been spent on its construction. More credit should be given the entries who had limited capital and spent their sums on alterations which gave their Fords the most speed.

Harvey's car was a masterpiece of workmanship and is prophetic of what may come in cars with small motors capable of attaining high speeds. In action it was like a Schubert symphony—smooth and harmonious. The block bore the Ford stamp. Internally, however, the motor had more bore and stroke, larger valves, racing camshaft—in fact, is so altered there was little Ford left.

The frame is hung low on heavy cantilevers. The exhaust is carried out through four straight pipes into a exhaust tube on the side which is large enough to take care of a 300-cu. in. motor. The magneto is Bosch, there is a Master carbureter, Rudge Whitworth racing wheels and Goodyear cord tires.

If any of the 10,000 spectators came with any doubt as to Fords doing a mile in a minute or less, they went away with rebuilt minds, relieved of that feeling. They saw 20 miles run at an average of 63.83 m.p.h., 30 miles at 60.4, and 50 miles at 62.5 m.p.h.

The first race, 20 miles, was for the Chicago championship and was won by Harvey in 19 min., 6 sec., an average of 62.83. The second race, 30 miles, was for the Illinois State championship and was won by B. F. Davis, 29 min., 47.3 sec., an average of 60.4. The Interstate championship, 50 miles, was won by Harvey in 48.10, an average of 62.5. The prizes were: 50-mile, $500, $100, $50; 30-mile, $125, $75, $50; 20-mile, $125, $75, $35.

New Simplex Magneto of High-tension Type

Frame Die-Cast in Single Unit Accessibility and Simplicity Are Features

A new high-tension magneto has been put out by the Simplex Magneto Co., Inc., New York. The men making up this organization have been connected with the manufacture of parts for European and American magnetos and have now organized to produce a complete instrument.

One of the features of the magneto, which in general is designed along conventional lines, is the simple interrupter which is so constructed that the centrifugal force of its moving parts is absorbed, thus maintaining an equality of pressure between the contact points and giving the same working conditions at high and low speeds. Another feature of the instrument is the ready accessibility of its vital parts, and the ease of disassembling to make minor repairs.

An additional point of originality is the cast-in-pole piece which is a laminated structure but so arranged that it does not have to be pierced by pins or bolts which would tend to increase the magnetic reluctance. The pole pieces and housing being integral, the air gap between the armature and field poles is very small. This tends to increase the intensity of the spark at low speeds, and furthermore since the poles and housing are integral they can be bored together to insure their alignment, and also renders the construction inherently waterproof.

As an example of accessibility, in removing the armature it is only necessary to turn a check nut and unscrew the armature ball-bearing cage. This allows the armature to be taken out of the frame without removing any of the parts. In connection with the armature an interesting feature is the construction of the condenser which is arranged with specially prepared insulating sheets between the individual foil laminations. This permits of a large number of sheets of useful foil as the insulating sheets are very thin, giving an efficient indenture which tends to prolong the life of the points.

The low and high-tension windings are carried upon the armature. The core is of laminated iron and on each side is a pole piece of the same quality of iron as is used in the armature. Holding this whole construction together are two bars which are firmly riveted into the pole pieces.

The details of wiring, etc., do not differ greatly from standard practice in high-tension magnetos. The low-tension winding has one terminal grounded and the remaining terminal is connected to an insulating plug allowing the path of the circuit to pass through the interrupter contact. The cam plate allows the spark advance to travel through an arc of 30 deg. and the interrupter mechanism is spring actuated, giving a quick and snappy break of the primary circuit. The high-tension wire is attached to the distributor ring on one terminal and on the other to the ground by a brush. The distributor mechanism is arranged for either four or six contact pieces, depending on the number of cylinders.

Show Space on Sale

NEW YORK, Sept. 12—Application blanks for space and floor diagrams for the Seventeenth Annual National Automobile Shows have been issued by the National Automobile Chamber of Commerce, Inc. The shows of 1917 are to be held in Grand Central Palace, New York, Jan. 6 to 13, and in the Coliseum and First Regiment Armory, Chicago, Jan. 27 to Feb. 3.

Applications to be considered in the first allotment must be received at the Chamber of Commerce headquarters, 7 East Forty-second Street, New York City, not later than Sept. 30, and must be accompanied by a deposit of 25 per cent of the value of the maximum quantity of space applied for. Separate checks must be drawn for each show application and made payable to S. A. Miles, manager.

The price of space per square foot, including equipment, is as follows: At New York—Section A, $1.50; Sections B and C, $1.35; Section D, $1.10. At Chicago—Coliseum and armory main floor center, $1.25; Coliseum annex basement, 75 cents; all other space, 90 cents.

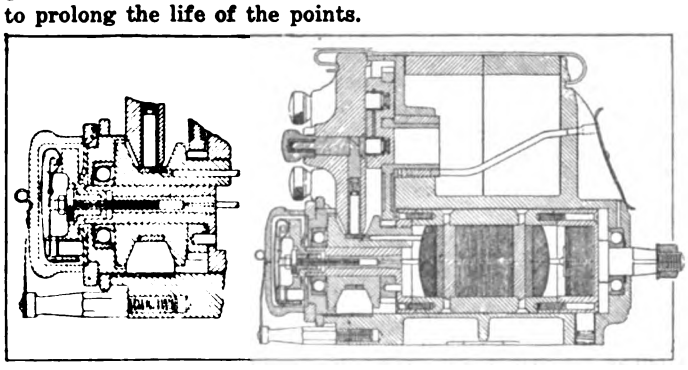
Gasoline Still Keeps on Its Downward Path

Drops of a Cent Are Recorded in Many Sections—Independents Generally Meet Standard

CHICAGO, Sept. 9—The Texas Co. and other independent oil concerns met the Standard Oil Co. of Indiana's 1-cent reduction in gasoline throughout the West by making Chicago tank wagon basis 16½ cents a gallon.

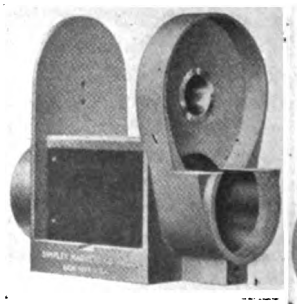
The Standard Oil Co. in Kansas City, Mo., has reduced gasoline 1 cent a gallon, to 15.8 cents tank wagon basis, and independents have cut prices 1 cent to 16.8 cents tank wagon basis.

The Texas Co. has met the 1-cent reduction of the Standard Oil Co. in the East, covering New York State, Connecticut and New Jersey. Texas gasoline in New York and Connecticut is quoting at 22 cents tank wagon basis and in New Jersey at 20 cents. The Standard Oil Co. brought its price down to 22 cents on Sept. 7.

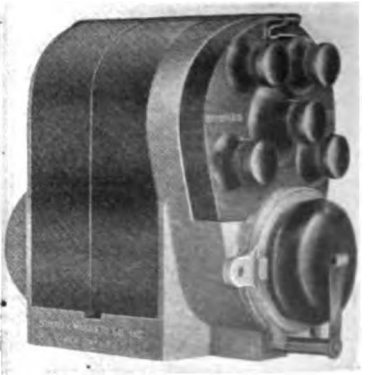


Other reductions are: Colorado, Montana, Wyoming and New Mexico, 1 cent, range 21 to 25 cents; St. Louis, Standard oil, 1 cent, 15.9 cents; Detroit, Standard, 1 cent, 17 cents; Milwaukee, Standard and independents, 1 cent, 16.6 to 26 cents for varying tests; Minneapolis and St. Paul, 1 cent, 17½ cents.

Bland to Get New Eyes



EVANSTON, ILL., Sept. 11—Robert Bland, president of the National Automobile Trade Association, hopes to receive improved eyesight through operations now being performed. For several years Bland has been troubled with cataracts, which have made it extremely difficult for him to read or recognize persons at any distance. The surgeons performing the operations state that there is every possibility of success.



Dallas State Fair Show Oct. 14-29

DALLAS, Sept. 11—Signed reservations for more than 55,000 ft. of floor space at the Dallas, Tex., automobile show, Oct. 14 to 29, have been placed.

Section through the Simplex high-tension magneto

Unit frame casting and exterior view

Hupmobile on Its Way to All State Capitals

Has Been Over Atlantic Seaboard and New England, and Now Is on Way West

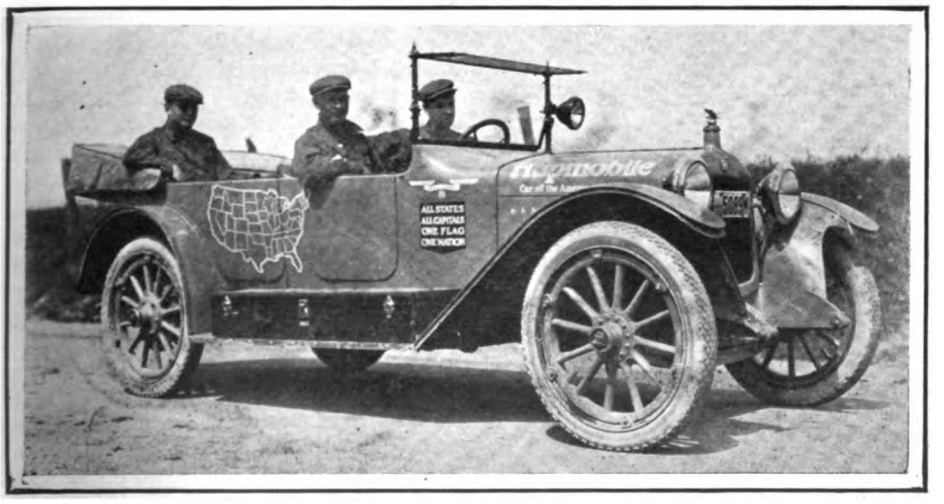
DETROIT, Sept. 8—The capital-to-capital Hupmobile, which is making a "United America tour in the interests of good roads," has now covered the North Atlantic seaboard and is heading west.

Good weather and fair road conditions so far have been encountered, and, although much time is taken up by conferences with governors, receptions and the taking of motion pictures, the tenth day found the party well on its way, having reached the tenth capital, Montpelier, Vt.

Bearing credentials from the National Highway Association, and with L. W. Page, United States Good Roads Commissioner, acting as official starter, the tour left Washington Aug. 28. Annapolis, Md., was the first capital visited, and after covering the New England States the party proceeded to Albany, now being on its journey across New York State to Buffalo, and thence to Cleveland on the way to Charleston, W. Va. After visiting the capitals of Kentucky and Indiana, the tour car will come to Detroit by way of Toledo, Ohio. At Detroit a reception has been planned to bid the party Godspeed on the Far Western lap of its long run.

Through the courtesy of the Department of the Interior the capital-to-capital pilots carry permits to enter and take motion pictures in all national parks. On the route are the Yosemite and Yellowstone parks, and a detour will be made to include the Grand Canyon.

The tour is so planned that by cold weather the tourists will be on the Pacific Slope, from which they will return to Washington, D. C., by a southerly route.



Owen Magnetic Makes Tour

NEW YORK, Sept. 12—The 5-day tour of Owen magnetic cars through New England was a most successful and unique tour. R. M. Owen invited approximately fifty of his friends, including dealers, private owners and newspaper men, to be his guests on this 5-day trip. Eleven Owen Magnetic cars were employed and the route selected through New England was one of the most attractive, embracing a circuit through the Berkshires, the trip over the famous Mohawk Trail, one of the greatest mountain roads in New England, and a run to the White Mountains and thence to Boston and New York.

Owen has for years been a great enthusiast of motor touring, and the object of this invitation tour, as well as three shorter ones a year ago, at all of which he played the rôle of host to the entire party, was to create renewed interest in touring. The Owen Magnetic car, with its electric gearshift and its consequent freedom from gearshifting and clutch operation, adds a simplicity to car driving that affords an opportunity of greater enjoyment in a country trip. No better means could have been taken for demonstrating the real merits of the car than a 5-day personally conducted tour of this nature. During the tour many of the invited guests were given the opportunity of driving the different cars.

Picard and Stern Ford Dealers

NEW YORK, Sept. 12—A. J. Picard and E. Joseph Stern have opened a Ford agency at 1659 Broadway. Picard is the principal in A. J. Picard & Co., an accessory jobber and dealer and distributer of the Genemotor electric system for Fords. Stern is associated with Picard in the Picard company.

The Capital Hupmobile that is making a tour of the United States, visiting all the capitals. It is now on its way West

Milwaukee State Fair Show Has 76 Exhibits

Event Staged on an Elaborate Scale —Decorations Rival Midwinter Show Season

MILWAUKEE, Sept. 11 — Fifty-two dealers are exhibiting pleasure and commercial cars and twenty-four accessory houses are showing supplies, accessories, oils and parts at the Second Annual State Fair Motor Show conducted by the Milwaukee Automobile Dealers, Inc., in Machinery Hall, State Fair Park, West Allis, Milwaukee County, this week. The show opened promptly at 10.30 o'clock this morning and will close with the fair on Saturday afternoon, Sept. 16.

The motor show, as well as the fair, is being conducted on the most elaborate scale ever known. Although the M. A. D. systematized its exposition at the fair last year and handled it in much the same manner as its big winter show in the Auditorium, this year's fair show is much more elaborate in every way from number of displays to decorations. A lot of money has been expended in dressing up the gaunt concrete walls and pillars of Machinery Hall, and the autumnal effect has been carried out to an exact nicety.

An admission fee of 10 cents is charged to keep out undesirables and children. To-day, the opening day of the fair, was Children's Day, and all school children were admitted to the fair grounds free. While many of the pupils paid 10 cents to see the motor show, there was an absence of those "kids" who love to do damage in a spirit of fun.

As already noted, the state fair and the show were advertised this year, as last, when a monster booster tour, covering nearly 600 miles, during the week of Aug. 28 to Sept. 2. The M. A. D. sent out thirty-seven cars and nearly 175 "boosters," who talked nothing but state fair and motor show for a solid week.

The building in which the show is housed is 140 x 340 ft. in size, of solid concrete and entirely fireproof. It is advantageously located near the grandstands and easy of access from the main gate. The state fair board, taking further cognizance of the importance of the motor car, has provided ten times the usual parking space and special gates for cars and the jitney buses. There will be motor-car racing on the last 2 days of the fair, when motor cars will be admitted free.

Bube Wins $100

ST. LOUIS, MO., Sept. 11.—E. H. Bube won $100 for selling the most Chandler cars during August for the Lewis Automobile Co.

Digitized by Google

Indiana Association Soon to Be Organized

Schedule Meeting for September 25 and 26 in Indianapolis—Will Join N. A. T. A.

INDIANAPOLIS, Sept. 11—The organization convention of the Indiana Automobile Trade Association will be held at the Hotel Claypool, Sept. 25 and 26. The body probably will affiliate with the National Automobile Trade Association. Following are the subjects outlined for discussion by men who are prominent in the trade: Organization, Purposes, Plans and Results; Cost Keeping: an Aid to Better Business; Price Maintenance and the Stevens Bill; a Garage Lien Law; the Used-Car Problem; a Standard Service Policy; Commercial Reports, Collections and Credits. Indianapolis factories will co-operate with the association in entertaining delegates; several of the factories will be inspected.

K. C. Dealers Resume Luncheons

KANSAS CITY, Sept. 11—The Kansas City Motor Car Dealers Association has resumed its fall luncheons with a large attendance and interest that promises strong co-operation this winter. Luncheons will be held at the Baltimore Hotel every Wednesday. The association is making its final preparations for its trade trip. The annual meeting and election of officers will take place Sept. 18. Several new members were elected at the last meeting, the association continuing to maintain its nearly 100 per cent organization of the dealers of Kansas City.

Allen County Association Formed

LIMA, OHIO, Sept. 11—The Allen County Automobile Trade Association was organized at a meeting of a score of garagemen, dealers and repairmen, held Sept. 6. Much enthusiasm was shown in the meeting and many of the dealers in the country towns attended. It is the intention to secure dealers and garage owners in all parts of the county as members. The organization has taken steps to affiliate with the Ohio Automobile Trade Association.

Oakland County (Mich.) Organizes

PONTIAC, MICH., Sept. 11—A number of dealers and garagemen of Oakland County met at the Board of Commerce in Pontiac last week for the purpose of forming a local organization under the direction of L. C. Steers, secretary of the Michigan Automobile Trade Association. The Oakland County Automobile Trade Association was organized and affiliated with the Michigan association. The following officers were elected:

President, G. R. Williams; vice-president, H. M. Fawcett; secretary, Chas. Grossbeck; treasurer, F. S. Milman. Directors: J. A. Boughner, J. H. Collins, C. W. Harris, A. S. Widrig.

The association proposes to hold its charter open for a few days so as to give the special committee an opportunity to get every eligible garageman and dealer in Oakland County to join. The association now has twenty names on its membership roll.

Truck Makers Draw Together

NEW YORK, Sept. 11—The Cook Attachment Patents, Inc., has been formed here with $10,000 capital for the purpose of bringing into closer relationship the various manufacturers of attachments for converting pleasure cars into commercial vehicles. Albert E. Cook, whose patent on such devices now is in process of litigation in Chicago, heads the company, the other officers elected so far being, president and treasurer, Mark W. Norman, a New York lawyer, and secretary, B. H. Barber. The organization will issue manufacturing licenses under the Cook patents, the Redden Motor Truck Co. at present being the sole licensee. It is stated that six manufacturers are preparing to become affiliated with the organization.

Is the Motor World System too Simple?

(Continued from page 21)

suggest this, Mr. ——, because we believe you will find it will be well worth the money spent.

We note the last paragraph of your letter, in which you state that many garagemen in Detroit will not buy the system owing to the advice of others who have purchased it. In this connection, Mr. ——, of your city, not being quite satisfied with the forms as laid out in our system, worked up a set of forms, using the basic idea of our system for his own particular garage.

His knowledge of accountancy is a little further advanced than that of the ordinary layman and he has altered our system considerably, but in order to understand such a system, as I have said before, he needs to know accountancy. I simply give you this example to show you that where you complain that the system is not simple enough, there are others who complain that it is too simple.

However, if there is any point that we can help you on, or if we can assist you in any way in getting started right, please feel free to call upon us at any time.

They're Going to Give Party to "3400 R.P.M."

All the Chalmers Dealers Are Going to Hold Open House All Day September 30

DETROIT, Sept. 12—A nation-wide birthday celebration, in which over 1500 Chalmers distributers and dealers will act as hosts, will be held Sept. 30. The occasion for the celebration is the first anniversary of the announcement of the 3400 r.p.m. Chalmers Six-30. Just a year ago, Chief Engineer Hinkley turned over the thoroughly tested model car to the Chalmers manufacturing department. Since that time, 25,000 Chalmers Six-30's have been delivered.

On Saturday, Sept. 30, Chalmers salesrooms will be decorated and open house for Chalmers owners and the public will be the order of the day. Music, refreshments and other features of a regulation birthday party will take place.

In addition to the reception, the visitors in the larger cities will have their first opportunity to inspect the latest Chalmers closed car models, which have just been announced, including the touring sedan, limousine, town car and cabriolet, all fitted to the 3400-r.p.m. chassis.

Kissel Dealers to Have "All-Year Car Show Week"

NEW YORK, Sept. 11—The Kissel Motor Car Co., Hartford, Wis., has scheduled an "All-Year Car Show Week" for its dealers during the period from Sept. 23 to Oct. 1, inclusive. During these days new models of the All-Year car will be especially displayed at the various salesrooms throughout the United States. Special invitations will be sent out, and a concerted effort made to induce as many prospects as possible to visit the showrooms during the special show week.

Let Rivals Into Salesroom

ST. LOUIS, Sept. 9.—A spirit of unusual co-operation is being shown by dealers of this city in dividing their salesrooms with other dealers for the "automobile open week" which will be held some time in October.

It is desired to have the show on Locust Street, but not all the dealers are located on that thoroughfare, wherefore their brother members in the association have agreed to divide the space with non-competing lines. The showrooms will be kept open until 10.30 at night. Dealers not on Locust Street will maintain transportation service from Locust Street to their salesrooms to show models that cannot find room on Locust Street. A parade and decorated places of business will be features.

Klaxon Becomes Part of the United Motors

Plant to Be Doubled—Lovell To Give up Active Connection—Big Overland Contract

NEW YORK, Sept. 12—The Klaxon horn business has been taken over by the United Motors Corp., which was formed several weeks ago as a merger of five parts companies. The Lovell-McConnell Mfg. Co. of Newark, N. J., which built the horn business, will become the Klaxon Co., and F. Hallett Lovell, Jr., president and principal owner, will retire from active connection with the company, although he will remain a director.

The Lovell-McConnell plant will be doubled at once to provide for increased production. Simultaneously with the consummation of this merger comes a statement from the Willys-Overland Co. that it will discontinue the manufacture of horns and will close a contract with Klaxon for its output for a term of years.

Contracts are also being executed for the use of the Klaxon horn on the Cadillac, Buick, Oldsmobile, Oakland, Scripps-Booth and Chevrolet. It is used on many other cars.

D. A. McConnell, who has been vice-president since the concern was organized, about 9 years ago, will become president; Otis C. Friend, who recently retired from the Mitchell to join the United Motors, will be the new vice-president, and Walter P. Coghlan, who has been secretary, will become secretary and treasurer. While Lovell will remain a director, his time will be chiefly devoted to other concerns in which he is interested, among them F. H. Lovell & Co., Arlington, N. J., makers of marine and railway supplies, of which he is president and principal owner.

The history of the Klaxon horn is one of the interesting chapters in the story of the motor car industry. Nine years ago, when Lovell was a manufacturer of electrical and railway supplies, an inventor approached with a primitive noise-making device which he had covered by patent. It operated from the flywheel of the engine. Its distinctiveness was that it created a terrific shriek, from which has developed the Klaxon warning sound.

Against the advice of his friends, Lovell took over the crude device, changed its motor power to electricity, and started to market it. When sales had reached a few thousands adverse legislation set in. States and cities refused to allow the use of the "diabolical noise-maker." A long campaign of advertising and publicity, with demonstrations before automobile associations and officials, was necessary to break down this opposition, and in the end legislation was enacted which, instead of prohibiting a loud and abrupt signal, required this type of warning.

Patent litigation played an important part. One of the bitterest fights of the Klaxon company was against the Automobile Supply Mfg. Co., Brooklyn, which makes the Newtone horn. This terminated not entirely favorably to Klaxon, despite the fact that it won a great many preliminary victories. There was other litigation, practically all of which has now been settled, and the horn industry has begun to move more smoothly and regularly.

The Klaxon is recognized as the pioneer in its type of horn, and now makes both electrically and manually operated models.

The capitalization remains $1,000,000 preferred and $1,000,000 common.

The United Motors Corp. includes, besides Klaxon, the Perlman Rim Corp., Remy Electric Co., New Departure Mfg. Co., Hyatt Roller Bearing Co. and Dayton Engineering Laboratories Co.

100,000 at Indianapolis Show

INDIANAPOLIS, Sept. 12—More than 100,000 persons attended the annual fall show of the Indianapolis Automobile Trade Association, which was held in conjunction with the Indiana State Fair Sept. 3-8. The exhibit, which was free, was held in a large tent which occupied a prominent location on the fair grounds. Despite the fact that the exhibit place was inconvenient, the display was about the most attractive that has ever been given by the association.

Excellent weather conditions prevailed during the entire week, and a majority of the persons who visited the show were from small Indiana towns and rural communities. The farming population being the heaviest buyers of motor cars at the present time, the fact that the attendance was limited greatly to this class gave the different agencies an opportunity to get in touch with live prospects.

The show was notable for the absence of exhibits pertaining to mechanical construction. "Style" was the dominating note of the show, and it was style that the visitors seemed to want to see. All the latest models of about seventy different makes were on display.

It was the belief of Indianapolis agencies following the show that excellent business prospects await the opening of the winter season. Many of the agencies have announced that the displays they had at the show will be continued at their city salesrooms during the current week.

300,000 Overlands the Plan for Next Season

Plant Expanded and Everything Is Ready for Enormous Output—Expansion Now Ended

TOLEDO, Sept. 12—By the end of the present year the Willys-Overland Co. will be in position to manufacture 300,000 cars annually, according to a statement by John N. Willys, president of the company.

The total outlay for this construction and additional equipment will be less than $5,000,000 and will terminate, temporarily at least, the company's policy of expansion which has made Overland the second largest car manufacturer in the world.

From this time on, Mr. Willys states, the energies of the organization will be devoted to reducing costs, increasing efficiency and improving production.

The recent sale of 600,000 shares of common stock has placed the company in such financial position that no further increase in preferred or common will be required for its expansion. The statement of assets and liabilities as applied to the balance sheets of June 30 last shows that upon payment for the new stock the company will have more than $20,000,000 cash on hand and more than $25,000,000 of other quick assets.

Mr. Willys owns a majority of the common, and states that it is his intention to continue personally to control and direct the affairs of the company.

Connell & McKone Open New Salesrooms

BOSTON, Sept. 12—One of the largest salesrooms ever opened for the retail sale of motor cars was thrown open to the public this morning when the Connell & McKone Co., eastern Massachusetts, New Hampshire and Vermont distributer of the Overland and Willys-Knight lines, welcomed the public to their new building. It is located at the corner of Massachusetts Avenue and Beacon Street. The frontage is 60 ft. and the depth 125 ft. There is not a post in the building.

More than 5000 invitations were sent out for the opening. At 10 o'clock everything was in readiness. An orchestra played and the place was decorated with flowers and flags. The salesrooms were kept open until 10 this evening. The opening is to continue throughout Wednesday and Thursday until 10 each night. John N. Willys inspected the building a few days ago and he pronounced it one of the finest motor salesrooms that he had ever seen.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Put Workers in New Places

A. G. Cameron, Dallas, for several years manager for Goodyear Tire & Rubber Co., has been transferred to the Kansas City branch. He is succeeded by R. S. Brace of the Oklahoma City branch.

Charles Potter, Dallas, formerly with Sacksteder Potter Co., has been appointed assistant sales manager for the Rose Fosdick Co., distributers in Texas of Hudson cars.

W. E. Finney, St. Louis, manager of the Goodyear Tire & Rubber Co. agency, has been notified that he will be assigned within a few days to a western point in charge of the mechanical goods department. W. G. Cameron, recently branch manager at Dallas for the Goodyear company, has succeeded Finney as manager in St. Louis.

C. F. Batcheider has been appointed assistant general sales manager for the Dort Motor Car Co., Flint. He was for 10 years general sales manager of the John Deere Plow Co.

W. H. Kirkpatrick, for 9 years head of the sales department of the Peerless Motor Car Co., Cleveland, has been elected vice-president of the Wallace C. Hood Service Bureau, Detroit.

Wm. J. Davidson, of the engineering department of the Cadillac Motor Car Co., has resigned to take up other lines of activity in the industry not announced as yet.

Thomas Bradley, for 5½ years with the Paige-Detroit Motor Car Co., as assistant in the purchasing department, has been elevated to the position of purchasing agent, following the resignation of P. E. Stroup, former purchasing manager.

Harold Hemenway, East Moline, Ill., has been appointed general superintendent at Beloit for the Stewart-Warner Speedometer Corp., to succeed A. E. Moon, who is promoted to an executive position in Chicago.

C. S. Pike has been appointed manager of the efficiency and sales promotion department of the Paige-Detroit Motor Car Co. He was formerly connected with the Burrough Adding Machine Co.

C. C. Cook succeeds Elliott Higgins as sales manager of the Wright Truck Attachment Co., Seattle. U. S. G. Cundy and F. A. Hawks have joined the sales force.

C. A. Gilbert has resigned as general sales manager of the Gibney Tire & Rubber Co., Philadelphia.

E. E. Arnold has been appointed manager of the automobile accessories department of the H. W. Johns Manville Co., New York.

C. H. Dunlap, export manager of the Hupp Motor Car Corp., has resigned to become interested in another enterprise. He has headed the Hupp export business for several years.

Greenfield Gives Up Detroit Office

GREENFIELD, Mass., Sept. 11—The Greenfield Tap & Die Corp. has discontinued its Detroit office. All business hereafter will be handled directly from the main offices here.

Elcar Now in Two Styles

ELKHART, IND., Sept. 8—The 1917 Elcar, selling at $795, has been announced by the Elkhart Carriage & Motor Car Co., Elkhart, Ind. There are two body types, the clover leaf roadster, seating four passengers, and a five-passenger touring car. The specifications include a 3½ x 5 unit power plant, three-point suspension, 114-in. wheelbase, full-floating rear axle, Delco ignition, Turkish style upholstering.

Mutual Takes Imperial Plant

JACKSON, MICH., Sept. 11—The Mutual Motors Co. has taken over the plant formerly owned by the Imperial Auto Co. The buildings are brick, 900 x 440 ft., mostly two stories; included in the purchase is a plot of land of about 17 acres. This gives the company facilities and room to produce 100 cars a day.

Four More in M. & A. M.

NEW YORK, Sept. 11—At a meeting of the executive committee of the Motor and Accessory Manufacturers, held Sept. 8, the following were elected to membership: Dann Products Co., Chicago; Master Carbureter Corp., Detroit; Otis Elevator Co., New York; Parry Mfg. Co., Indianapolis.

Reo Truck and Reo Car to Be Merged Into One Unit

LANSING, Sept. 11—The Reo Motor Truck Co. and the Reo Motor Car Co. are to be formally consolidated by an exchange of the shares of the truck company for an equal number of shares of the car company. According to an announcement sent out to stockholders, the directors of the Reo Motor Car Co., who are also directors of the truck company, after careful consideration believe the interests of both corporations will be best served by such a move. The same executive, selling and office organizations have endeavored to handle the business of both, and up to this time the same motors and many parts manufactured by the Reo car company have been used by both companies. However, changes in design and further development of the business will make such an arrangement impractical, it is stated.

Increased business, it is pointed out, has correspondingly increased the difficulties in handling the affairs of the two corporations separately, and makes it impossible to secure the results that the directors are convinced can be obtained through one well-organized corporation.

Accordingly, the Reo Motor Car Co. will purchase all Reo Truck stock delivered to the Capital National Bank, Lansing, or to Secretary D. E. Bates of the Reo Motor Car Co. on or before Sept. 20, and pay for these shares with car stock.

Ralph De Palma to Make Racers

DETROIT, Sept. 8—The DePalma Mfg. Co., composed of Ralph DePalma and Frank Book, the latter a Detroit capitalist, have acquired a factory building on East Woodbridge Street for about $23,000, it is stated. The plant will be utilized for the manufacture of racing automobiles under the direction of DePalma.

Aitken Wins Three on Indianapolis Speedway

Takes 20-, 50- and 100-mile Events —Rickenbacher Has Bit of Hard Luck

100-MILE EVENT

Car and Driver	Time	Speed	Prize
Peugeot, Aitken	1:07:05.04	89.44	$2,500
Hoskins, Hughes	1:07:24.96	89.01	1,000
Duesenberg, D'Alene	1:07:43.73	88.60	1,200
Duesenberg, Buzane	1:08:37.66	87.44	1,000
Premier, Lewis	1:09:07.30	86.81	600
Omar, Toft	1:12:40.80	82.56	400
Maxwell, Henderson	1:12:43.45	82.51	300
Peugeot, De Palma	1:13:12.62	81.96	
Maxwell, Rickenbacher	Wrecked 38th lap		
Ostewig, McNey	Flagged 36th lap		
Premier, Wilcox	Out 8th lap; quit		
Duesenberg, Milton	Out 8th lap; ignition tr.		

50-MILE EVENT

Car and Driver	Time	Speed	Prize
Peugeot, Aitken	32:40.33	91.83	$700
Hoskins, Hughes	32:40.61	91.81	500
Sunbeam, Chevrolet	32:41.10	91.79	400
Duesenberg, D'Alene	33:25.85	89.75	300
Premier, Lewis	34:05.46	87.99	100
Premier, Wilcox	35:24.89		
Duesenberg, Buzane	35:32.87		
Peugeot, De Palma	Out, dirty plugs, 7th lap		
Duesenberg, Klein	Out, dirty plugs, 7th lap		

20-MILE EVENT

Car and Driver	Time	Speed	Prize
Peugeot, Aitken	12:37.35	95.08	$400
Premier, Wilcox	12:37.68	95.03	200
Sunbeam, Chevrolet	13:12.88		200
Hoskins, Hughes	13:36.90		100
Premier, Lewis	14:03.85		
Peugeot, De Palma	14:04.62		
Duesenberg, Buzane	14:11.34		
Ostewig, McNey	15:52.18		
Henderson and Klein both out early.			

INDIANAPOLIS SPEEDWAY, Sept. 8—Johnnie Aitken won the 20-mile, 50-mile and 100-mile races to-day in a Peugeot. His average speed in the three races respectively was 95.08, 91.83 and 89.44. His prizes total $4,600.

In the 100-mile, Rickenbacher in a Maxwell gave Aitken a close run, but his right rear wheel collapsed on the thirty-eighth lap, and while he escaped injury and succeeded in keeping his car upright, he was put out of the run entirely. In the 100-mile, another interesting contest was between D'Alene in a Duesenberg and Hughes in a Hoskins, the latter winning out by 19 sec.

Despite the fact that the races were good and the finishes close, the attendance did not seem to be over 12,000, the public apparently wearied by the State Fair, which closed yesterday.

Ralph de Palma made a poor showing with Mertz's Peugeot, his Mercedes having been badly damaged Monday at Cincinnati. Christaens did not start his Sunbeam because of a crankshaft broken in practice.

Lozier Motor Plant Is Sold to Motor Products

Deal Said to Involve Consideration of $1,000,000—Lozier to Use Rands Plant

DETROIT, Sept. 8—A deal said to involve a $1,000,000 consideration has been closed here between the Motor Products Corp. and the Lozier Motor Co., whereby the large modern plant of the Lozier company comes into the possession of the Motor Products Corp. The Lozier company does not go out of existence by this move, however, for it will take over the plant now used by the Rands Mfg. Co., one of the subsidiaries of the Motor Products combine.

The Lozier plant is a large group of up-to-date factory buildings located on Mack Avenue on the west side of the city and covering about 62 acres of ground. There is a very attractive administrative building in front of the factory structures, and a power plant for supplying ample power for all machinery. It was occupied by the old Lozier company prior to the reorganization and has since been used for the manufacture of Lozier cars by the new Lozier concern.

Motor Products Corp. was organized in May of this year with a capitalization of 100,000 shares of no par value, as a holding company for several large parts manufacturers located in Detroit and vicinity. The Rands Mfg. Co., maker of windshields, tops and steering wheels; the Vanguard Mfg. Co., specialist in windshield manufacture; the Diamond Mfg. Co., producer of automobile metal stampings, and the Universal Metal Co., maker of metal parts and possessing a large tube mill, are all parts of the Motor Products Co. and located in Detroit. Besides these, the combine includes the Superior Mfg. Co., Ann Arbor, Mich., which is also a windshield and metal parts producer.

The acquisition of the large Lozier works is the first step towards the concentration of the activities of the consolidation, and it is pointed out by one of the officials that the new plant will allow Motor Products to realize at once the fundamental purposes for which the company was formed. By means of this concentration in one plant it will not only enable the concern to put in effect some great economies in manufacturing, but will also enable the securing of managerial co-operation such as could not be attained while a number of plants were operating as separate units.

Motor Products is headed by well-known men in the industry. W. C. Rands is president; C. F. Jensen, vice-president; H. H. Seeley, vice-president; D. B. Lee, treasurer and general manager; M. L. Brown, secretary, and R. R. Seeley, director and production manager.

In addition to concentration in the new property, it is the intention to make large additions to the tube mill to keep pace with a growing business and to continue the Ann Arbor plant on special work, besides the expanding of the Walkerville, Ont., plant to care for an increasing Canadian business.

The plant that goes to Lozier, and up to this time has been occupied by the Rands subsidiary, was formerly the home of the Warren Motor Car Co., now out of business. Being constructed primarily for the making of automobiles, the Lozier people expect to effect economies in manufacture of their car. The buildings are of brick and occupy a site covering 6 acres. This property is said to be valued at $300,000. The cash received from the sale of the Lozier plant will be utilized as working capital by the Lozier concern, and plans for refinancing will bring new money into the business, according to Samuel Frank, secretary of the concern.

Morgan Heads the Abbott

CLEVELAND, Sept. 8—The Abbott Corp., which was formerly the Consolidated Car Co. prior to the moving of the concern to this city from Detroit, has elected G. W. Morgan to the presidency, succeeding C. L. Lewis, who retired at the time of the reorganization to head the General Engineering Co. in Detroit. Morgan was formerly connected with the Mitchell-Lewis Motor Co., having charge of the purchasing.

Vail, Formerly of Maxwell, Goes Into Tractor Business

With Others Will Make and Market a Small Tractor to Run on Either Kerosene or Gasoline

HAMILTON, OHIO, Sept. 9—The Vail-Rentschler Tractor Co. has been organized with an authorized capital of $100,000 to build and market a medium-weight tractor which will operate with gasoline or kerosene. The incorporators and stockholders are: G. A. Rentschler, chairman of the Hooven, Owens, Rentschler Co.; Col. C. B. Wing, of Cincinnati; J. A. Vail, formerly chairman of the board of directors of the Maxwell Motor Co.; Gordon S. Rentschler, vice-president of the Hamilton Foundry & Machine Co., and Samuel C. Vail, of Chicago.

The Vail tractor will be manufactured by this company as a specialty. A plant is now being equipped in Hamilton, Ohio.

W. Miller Is Wanted

Motor World has a letter from the trenches in Europe for W. Miller, formerly sales manager of the Pullman Motor Car Co., York, Pa. The letter for Miller is from Lieutenant Spencer Freedman. If Miller will let us know where he is the letter will be forwarded at once.

Fall Tractor Show for Dallas

DALLAS, Sept. 11—Indications are that the tractor demonstration during the Texas State Fair will be of greater interest than even the National demonstration in July. Ten acres of land within the State Fair Grounds has been secured for the October demonstration. There probably will be more than fifty demonstrators on the ground.

H.A.L. Plans to Build 2000 Cars Next Year

Merchandise Orders Already Placed —Foote Made President and Plans Are Reorganized

CLEVELAND, Sept. 11—Following the elevation of A. Ward Foote to the presidency of the H. A. Lozier Co., plans have been made for an increased production. The company was formed last winter, made first deliveries of the H. A. L. in May, and plans to have delivered 1000 by the end of the present year. Merchandise orders have been placed for material for 2000 cars for the 1917 calendar year. A change in the corporate name is contemplated. The company as now constituted includes:

President, A. Ward Foote, president of the Foote-Burt Co., machinery makers; vice-president, Charles C. Homan, former Overland purchasing agent; secretary, Frank H. Ginn, attorney; treasurer, E. G. Tillotson, of Tillotson & Walcott, bankers. The directors are the officers and the following: George E. Randles, vice-president Foote-Burt Co.; Amos N. Baron, general manager National Carbon Co.; Morris Towson, president Elwell-Parker Co., machinery maker, and also director in Anderson Electric Car Co. George H. Bowler is general sales manager. Jay Lee Cross has gone with the company as manager of the advertising department. Practically all of the stock is owned in Cleveland. The capitalization now is $700,000.

Studebaker Plans Big Expansion

DETROIT, Sept. 8—Plant expansion to cost $1,500,000 will be made by the Studebaker Corp. at the factories here and in South Bend, Ind.

Contracts have been let for a large foundry and machine shop to be erected in South Bend. The foundry will be 1100 x 150, with four cupolas and 250 tons daily melting capacity, and it is to be completed by July 1 next. The machine shop is to be about 900 x 300 and will double the present machine shop facilities at South Bend.

Detroit contracts are now being let for a one-story building with about 25,000 sq. ft. of floor, adjoining plant No. 3. It will be devoted to final assembly work. Another floor, 50 x 300, is to be built on one of the three-story buildings now used as a warehouse for materials.

Few persons really realize the extent of the automobile operations now carried on at the South Bend factories, the public generally regarding this part of the big corporation as being devoted to carriage, wagon and harness business entirely. Prior to 1912, the South Bend works were devoted exclusively to the manufacture of horse-drawn vehicles and harness, but in the latter part of that year the making of automobile springs and some castings was commenced. In 1914 the automobile body factory was installed, and last year some light stampings were first manufactured in South Bend. Now the plants in that city are manufacturing automobile parts for the Detroit plants to the value of over $10,000,000 per year, and the average number of employees has increased from 2701 in 1912 to 5023 at the present time.

Orr Enters Tractor Trade

DETROIT, Sept. 11—Glenn L. Orr, prominent in the garage trade here and first president of the Michigan Automobile Trade Association, has invaded the tractor field. The Wayne Tractor Co. has been formed, with a capital stock of $300,000, and has acquired a factory 260 x 60 ft. The company will produce a light-weight tractor designed to be entirely dust-proof. It will have a four-cylinder, 4 x 6 valve-in-head motor, and all working parts will be completely inclosed. The machine is also to be entirely rust-proof. A feature will be a new type of duck-foot wheel, which can be substituted easily and quickly for the ordinary wheel for use on soft ground. Alfred Violette of Edmundton, Canada, land owner, is president and general manager of the company; Peter Wiederhold, for 10 years with Michigan Sugar Co., is vice-president; George I. Wicks, formerly engineer in charge of the Buick Motor Co.'s No. 12 plant, is treasurer. Executive offices are at 221 Stevens Building, Detroit.

Five Bid for Four Wheel Drive

CLINTONVILLE, WIS., Sept. 9—The Four Wheel Drive Tractor Co., originally organized at Antigo, Wis., and later by Clintonville (Wis.) capital, is considering propositions from six large Wisconsin cities for the location of the works, which is about to be undertaken. Among the bidders for the industry are Oshkosh, Appleton, Green Bay, Wausau and Fond du Lac. The Clintonville Commercial Club, however, does not intend to lose the industry and has put under way a strong campaign to raise sufficient funds to induce the tractor company, already financed by local capital, to build in Clintonville.

To Make Armstrong Red Tube

NEWARK, N. J., Sept. 7—The Armstrong Rubber Co., this city, is equipping its factory for the manufacture of the Armstrong red inner tube equipped with the Kahn valve. This company will manufacture specialties for the trade and also tubes under special brands.

Earle and Boggs Set Up

NEW YORK, Sept. 7—L. H. Earle and G. A. Boggs, who resigned from the Continental Motors Co. last July, have incorporated as Earle & Boggs, to act as manufacturers' representatives for materials. Offices have been taken at 1790 Broadway, and accounts have been opened with the Pierce Governor Co. and the Blood Bros. Machine Co.

Marathon Men to Meet

CUYAHOGA FALLS, OHIO, Sept. 8—The Marathon Tire & Rubber Co., this city, will hold its annual sales convention at its factory during the week commencing Sept. 11, under the direction of H. H. Replogle, sales manager.

Dividends Declared

Electric Storage Battery Co., quarterly of 1 per cent on preferred and common, payable Oct. 2 to holders of record Sept. 18.

Allis-Chalmers Mfg. Co., quarterly of 1½ per cent on preferred, payable Oct. 16 to holders of record Sept. 30.

Coming Events

General Events

Sept. 25-26.....Indianapolis, Convention for the formation of Indiana Automobile Trade Association, under auspices of National Automobile Trade Association, Hotel Claypool.

Oct. 2-3-4-5.....St. Louis, Fall Meeting National Association of Automobile Accessory Jobbers.

Oct. 12.....Flint, Mich., annual convention of the Michigan Automobile Trade Association.

Oct. 16-17.....Rockford, Ill., Semi-annual Convention Garage Owners' Assn. of Ill.

Feb. .....Convention Minnesota Retail Automobile Dealers Association.

Races, Contests and Tours

Sept. 18.....North Yakima, Wash.; track race, Washington State Fair.

Sept. 29.....Trenton, N. J., track racemeet, Inter-State Fair. Horace P. Murphy, Racing Secy.

Sept. 30.....New York, N. Y., speedway racemeet, Sheepshead Bay Speedway Corp.

Oct. 7.....Omaha, Neb., Speedway racemeet, Omaha Auto Speedway.

Oct. 7.....Philadelphia Speedway race.

Oct. 9-14.....Annual Trade and Good Roads Tour of the Kansas City Motor Car Dealers Assn.

Oct. 14.....Chicago; speedway races, Speedway Park Assn.

Oct. 19.....Indianapolis, Ind.; speedway races, Indianapolis Motor Speedway.

Oct. 21.....Kalamazoo, Mich.; track races, Kalamazoo Motor Speedway.

Oct. 22-23.....Los Angeles, Cal. Commercial Car Reliability Run.

Nov. 16-18.....Santa Monica; Vanderbilt Cup and Grand Prix races.

Nov. 30.....Los Angeles, Cal.; speedway races, Ascot Speedway Assn.

Dec. 25.....Los Angeles, Cal.; speedway races, Ascot Speedway Assn.

Shows

Sept. 11-16.....Milwaukee, Wis., Second Annual Fall Show, State Fair, Machinery Hall, Milwaukee Automobile Dealers, Inc.

MICHELIN TIRES

Success Assured!

"First give more for the money than any one else and then let people know about it." That was a great merchant's formula for success.

And it's the Michelin Proposition to a "T"—for

Michelin dealers offer *unequalled values*—tires of the highest quality at prices way below the market—and the Michelin Tire Company, through its advertising in magazines and in the dealers' newspapers, sees to it that the public *knows about these values.*

You know Michelin Quality. Study Michelin's prices; look at these Michelin advertisements; notice also the cut-outs and other Free selling helps—emblems of Michelin's Dealer Co-operation. Then write or wire for details of Michelin's proposition.

JOHNSON CARBURETOR *for Fords*

Works a Magical Transformation in the Operation *of* Any Ford Car

Dealers in every part of the country are finding this out to their everlasting PROFIT.

Such power, economy and quick pickup Ford owners never before experienced. The change a JOHNSON makes is nothing short of a revelation, so superior, in fact, that the JOHNSON dealer is in position to control practically the entire carburetor business for Fords in his locality.

This really wonderful little JOHNSON instrument for Fords is built along the same lines as the remarkable JOHNSON Carburetor used as standard equipment on some of America's foremost cars. It is especially designed to handle present-day fuel with marked economy.

A big feature is the ease of installation. No extra holes to drill, just put the JOHNSON on in place of the old carburetor.

List $12.00. Send for especially attractive dealers' proposition today.

Johnson Company
Makers of Superfine Instruments of Carburetion
Detroit, Michigan

The last element of danger removed from

Night Auto Driving

The solution of the problem of safe driving at night is finally found in the Osgood Deflector Lens. Not a dimmer—not a diffuser, but a prismatic glass lens that fits into your lamps in place of plain lenses and deflects the light downward.

It accomplishes the vital functions of automobile illumination, to wit: Lights ample distance ahead for highest speed—no blinding glare—places light where needed—avoids necessity of dimmers.

The Osgood Lens—because of its deflecting power due to its prismatic principle—casts the light rays exactly where you need them—along the ground far ahead, and to both sides.

OSGOOD Deflector LENS

Lights the Ground-Not the Air

The Osgood Deflector Lens is the only lens made on scientific principles.

Light experts found that the prismatic principle was the correct way to deflect the rays downward without loss of light and without causing a dazzling glare.

Instead of seriously diminishing the light, the Osgood Lens gives you light of full intensity along the ground where you want it most. With rays only 3½ feet high, they are below the eye level of approaching drivers and pedestrians.

Light cast from an Osgood Deflector Lens will penetrate the densest fog—the heaviest mist or thickest smoke, and is an ideal light for city driving in crowded thoroughfares.

For country driving this wonderful deflecting lens lights the road far ahead for greatest speed and avoids the need of constantly switching dimmers on and off when passing other cars.

It makes night driving absolutely safe anywhere, any time and under any conditions. Every road obstruction and depression is visible for 500 feet. No need to fear holes, rocks or other road obstacles when your lamps are equipped with Osgood Lenses.

If you meet a car at night and the driver ignores your signal and does not dim his lights, yet the lights do not dazzle you, do not accuse him of discourtesy—his lamps are equipped with Osgood Lenses.

On a Packard Twin Six, the lamps, equipped with the Osgood Deflector Lenses, threw the rays close to the ground and lit the road over 500 feet ahead.

Another night test—with two Packard Twin Sixes, both equipped with Osgood Lenses, passed each other on a narrow country road in opposite directions, each going 30 miles an hour, without hesitation or inconvenience on the part of the drivers.

The Osgood Deflector Lens can easily be attached in a few minutes. Simply remove the plain glass lenses and insert the Osgood Lenses in place and focus and point the headlights properly—no trouble—no bother and nothing complicated.

Good accessory and garage dealers sell them at $2.50 to $5.25 a pair, according to size.

Dealers, write to us or nearest distributor below for very attractive offer.

Endurance

In addition to producing balanced bearings—that is, bearings in which the load carrying capacity of the balls is identical with the load carrying capacity of the raceways in which the balls revolve—

U. S. BALL BEARINGS possess great endurance properties because of the design and material used in the construction of the separators.

These separators which are produced over our own patented design are made solely of steel.

So ingenious and novel is the construction of these separators that U. S. BALL BEARINGS contain one less than the full type, or 95% balls in the races. This balanced construction provides exceedingly high carrying capacity combined with extreme endurance and, of course, with the inherent low co-efficient of friction to be found in all high-grade ball bearings.

MINUTE-MAN SIX CONVERTIBLE TOURING CAR $1350

A CAR that sells—and cars to sell—That's the LEXINGTON proposition in a nutshell. The best car that ever ran on wheels will not make money for the dealer if he cannot get cars *when he wants them.*

And he wants them when people are buying—in the fall, spring, and early summer.

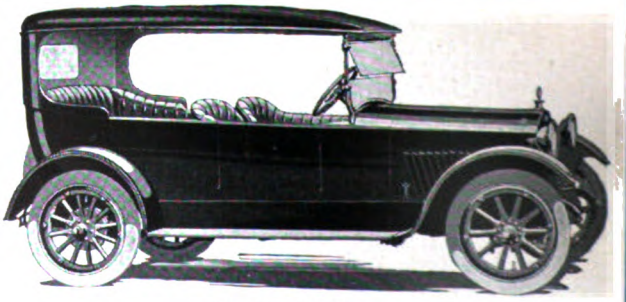
LEXINGTON facilities—ten big factories all related by a common interest—work together to deliver cars when the dealer can sell them.

The LEXINGTON season—August to June—does not leave the dealer high and dry by closing the production year at the very crest of the spring buying season. In other words, LEXINGTON policy is not based on what the dealer can be made to do by main strength, but is shaped *to give the dealer a square deal* and allow him to make *a satisfactory profit.*

A splendid car which gives a full dollar's worth of automobile value for every dollar of its cost—a car that makes an instant appeal to the discriminating buyer—backed by a broad-gauged selling policy that insures success—this is what the LEXINGTON dealership offers you.

The LEXINGTON contract is a contract with a future. LEXINGTON facilities, both manufacturing and financial, are an assurance of this, and the quality of the car itself makes every LEXINGTON owner an enthusiastic booster.

Where do you stand? Are you looking for a car that sells—and cars to sell? Are you looking for a car behind which you can put your whole heart, knowing that the business you build is a permanently profitable business? If so get in touch with us at once.



Let us reveal to you the real size of the LEXINGTON proposition, let us give you facts that will open your eyes. Come to the factory and see for yourself—and the more you know about automobile factories the better the LEXINGTON will look to you.

BUT ACT NOW!

LEXINGTON SALIENT SUPERIORITIES

- **Lexington-Continental Engine**
- **Moore Multiple Exhaust System**
- **Cut Steel Starting Gear on Flywheel**

EVERY car owner needs and wants this handy Shaler Tire Repair Kit to eliminate tire trouble on the road and double his mileage. It means many additional accessory sales and profits because the motorist is compelled to buy one from his dealer, as no car comes equipped with a tire-saving device. Every one of your customers is a likely prospect.

SHALER

Each sale gives you a liberal profit on the kit itself and besides gives you a continuous permanent profit on the sale of repair material and supplies that the motorist must buy from time to time, for use on the road.

Every Shaler user praises this handy Shaler outfit when he discovers how easily and safely it works and how much tire money it saves for him.

Tire Repair Kits

For motorists to carry in their tool boxes

He will praise it to his friends, which will result in more sales for you.

Because the Shaler Tire Repair Kit is such a practical, necessary accessory—especially in view of the increasing tire prices—every motorist is eventually going to buy one. And some dealer is going to make the sale. You might as well get the profit as let the next fellow have it.

The Shaler is advertised regularly throughout the season in the Saturday Evening Post and more than fifty other magazines. Motor car owners know the Shaler and call for it by name.

Write on Your Letter Head for Catalog and Dealers' Prices

Write today for complete catalog of Shaler Tire Repair Kits—dealers' discounts and full information about Dealers' Helps we furnish, including Counter Stands—Posters, Wall Hangers—Window Displays—Booklets, Circulars, Signs and Window Cards.

MAXFER

TON TRUCK MAKER

$350

IMMEDIATE DELIVERIES!

We can make deliveries—*right now.* And **Maxfer** deliveries are *bona fide* deliveries of **Maxfer** truck units *complete* —ready to put right on.

This important advantage of **Maxfer** service counts big with dealers who appreciate that they cannot expect to make sales unless they can deliver the goods—and do it promptly. Delays spell lost sales—lost customers—lost prestige.

The **Maxfer** factory has the capacity for meeting the full requirements of all its dealers all the time. It ships on the dates specified. It makes no promises it cannot keep.

Among other things, consider that

We Require No Deposits On Axles

The **Maxfer** salvage system is as liberal as it is simple. There is nothing complicated about it. Dealers have no capital tied up in it at any time.

Another noteworthy **Maxfer** feature is ease of attachment. The **Maxfer** dealers save considerable time and labor on every installation, due to the fact that the

Maxfer Is Shipped Assembled

There is no time lost trying to figure out how **Maxfer** installations are to be made. It is impossible to go wrong. Attachment is simple as A-B-C. Any one who can use a wrench can easily attach **Maxfer** in from two to three hours—a remarkably short time for converting a Ford car into a one-ton truck.

Here is another important feature—the **Maxfer** uses the Ford rear axle *just as it comes, full width and unchanged.* The Ford axle does not have to be shortened or a substitute provided—as our own invention, the Offset Bell Sprocket, makes change unnecessary.

Wide-awake dealers realize that today the opportunities in this remarkable, prosperous truck unit field are greater than ever. Make no mistake. Start right. Handle the **Maxfer** with the assurance that you have the best truck unit for Fords on the market, backed by a Company of unquestionable soundness.

If you want exclusive territory rights, show us you mean business. Wire or write today for the most liberal selling contract ever offered. Territory going fast. Immediate action necessary.

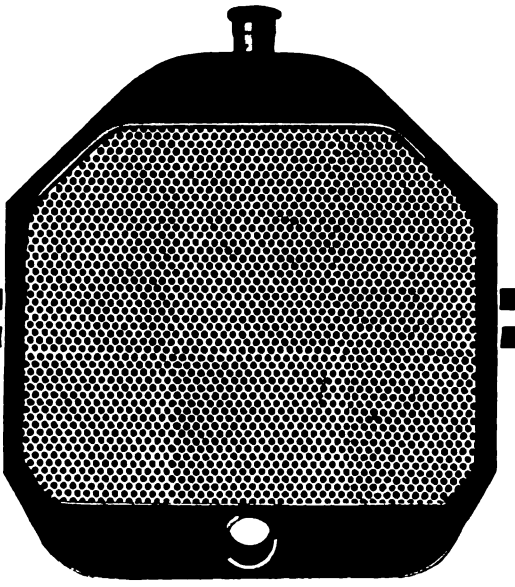
FEDDERS RADIATORS

A Logical Result

The Quality of FEDDERS "Is Not Strained"

It is not the result of miracles, or genius, or luck. It is the result of study, experimentation, elimination of the bad, segregation and preservation of the good.

You can be CERTAIN of your FEDDERS RADIATOR, for you know that we took no "chances" with it. Owing to increased demand, we have again doubled the capacity of our plant, but we have never sent out a "rush job" or overlooked one single precaution in the manufacture of our products.



The **PROOF** of **FEDDERS QUALITY** lies in the continued use of FEDDERS RADIATORS for many years by the makers of the very highest grade of cars.

The **REASON** for FEDDERS QUALITY lies in the selection of proper materials, the proper blending of metals, the painstaking care with which the parts are assembled, the checking up of each step as it is taken, and the DOUBLE TEST of EVERY RADIATOR before it leaves the shop.

The **RESULT** of **FEDDERS QUALITY** is your **COMPLETE SATISFACTION** in the CERTAINTY of your radiator's standing up and performing its functions perfectly **ALL THE TIME!**

FREE INTRODUCTORY OFFER ON

JOHNSON'S CARBON REMOVER

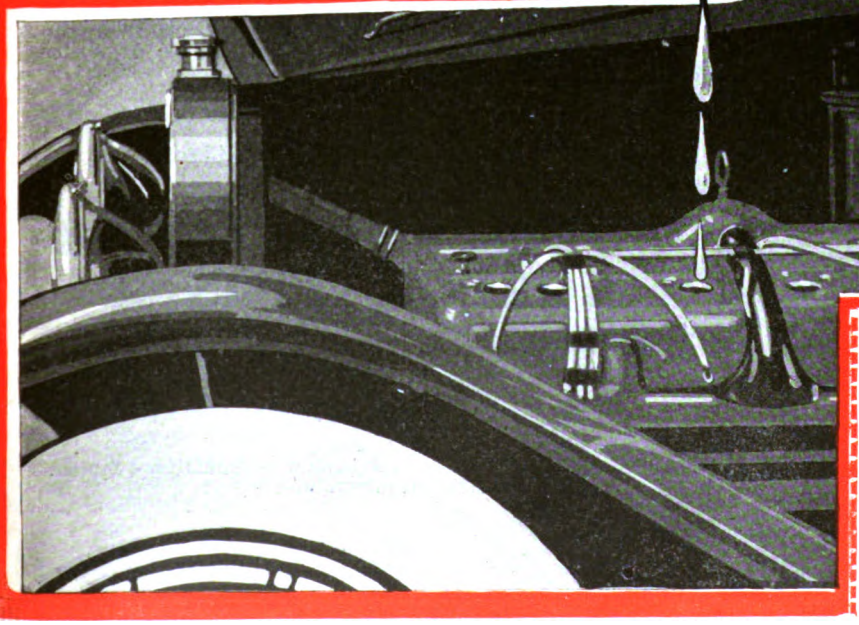
OUR new preparation — Johnson's Carbon Remover—is ready for the market. We have made exhaustive tests under all conditions and pronounce it "Perfect"—which it must be before it can go out under the name of "Johnson".

If you will sign and mail us the coupon—we will send you a **pint free by prepaid express**—this is enough for thoroughly cleaning a six cylinder car.

YOU CAN DO IT YOURSELF

Why pay from $3.00 to $5.00 for having the carbon burned out of your cylinders — when you can easily do it yourself for 85 cents—without laying up your machine—without even soiling your hands.

No matter how choked up your motor may be — Johnson's Carbon Remover penetrates, and softens the carbon so that it blows out of the exhaust as you operate your car.



UNCONDITIONALLY GUARANTEED

We guarantee Johnson's Carbon Remover without reservation. It is absolutely fool-proof—no matter how much you use or how you use it—Johnson's Carbon Remover cannot injure any part of your motor. You could soak your engine in it for days without the slightest injury.

IT'S OUR TREAT!

Accept our offer of clean cylinders without a cent of expense. We appreciate your co-operation in marketing our Prepared Wax and Cleaner —and want you with us on this new product too.

S. C. JOHNSON & SON, Racine, Wis.

Please send me a pint of Johnson's Carbon Remover free by prepaid express. I agree to try it and report results just as I find them and if your Carbon Remover gives me as good results as you claim — I will insist upon my jobber or dealer supplying me when next in the market.

Here Is Your Opportunity to Get Into the Big, New Business of Selling FORD Cars on the - - Installment Plan - -

Indications are that motor cars and trucks in the future will be merchandised largely on the same reputable installment plan as high grade pianos, furniture, Victrolas and investment bonds.

For over six months we have demonstrated the popularity of this deferred payment plan to the entire satisfaction of both dealers and car purchasers. Our "Pay-as-You-Ride" plan has met with instantaneous success wherever introduced. Dealers throughout the country who have adopted our plan have materially increased their sales and profits.

Ford dealers and others who appreciate the opportunity the new Ford retail plan affords them will be particularly interested in our new 8, 10 and 12 months' installment plan. Cash payment required from car purchasers only $100.

We are now in position to take on a few additional lines of other low-priced standard cars or motor trucks, and with that end in view invite personal interviews with officers of motor car companies desirous of increasing their business through our merchandising plan.

Responsible dealers who wish to establish themselves in this big and rapidly growing deferred payment business are invited to give our plan a trial. Call on us, or write for full information.

There Are Two Different Kinds of Genuine Graphited Oil-less Bearings

One is a hard wood bearing impregnated with lubricant and is known as "NIGRUM"

The other is a metal bearing made of "Graphite and Bronze" and is known as "BOUND BROOK"

NIGRUM bearings are made of hard wood carefully seasoned and then impregnated by means of a patented and exclusive process with our own special lubricating compound.

They are lighter in weight than metal, yet possess certain distinctive advantages not to be found in any other form of bearing.

They require no oiling to give efficient service. They never squeak, and once installed require no further attention.

For this reason they are used by a majority of the motor car manufacturers for use in bearing surfaces about a car that are difficult or impossible to keep properly lubricated even when the owner has the time and inclination to do so.

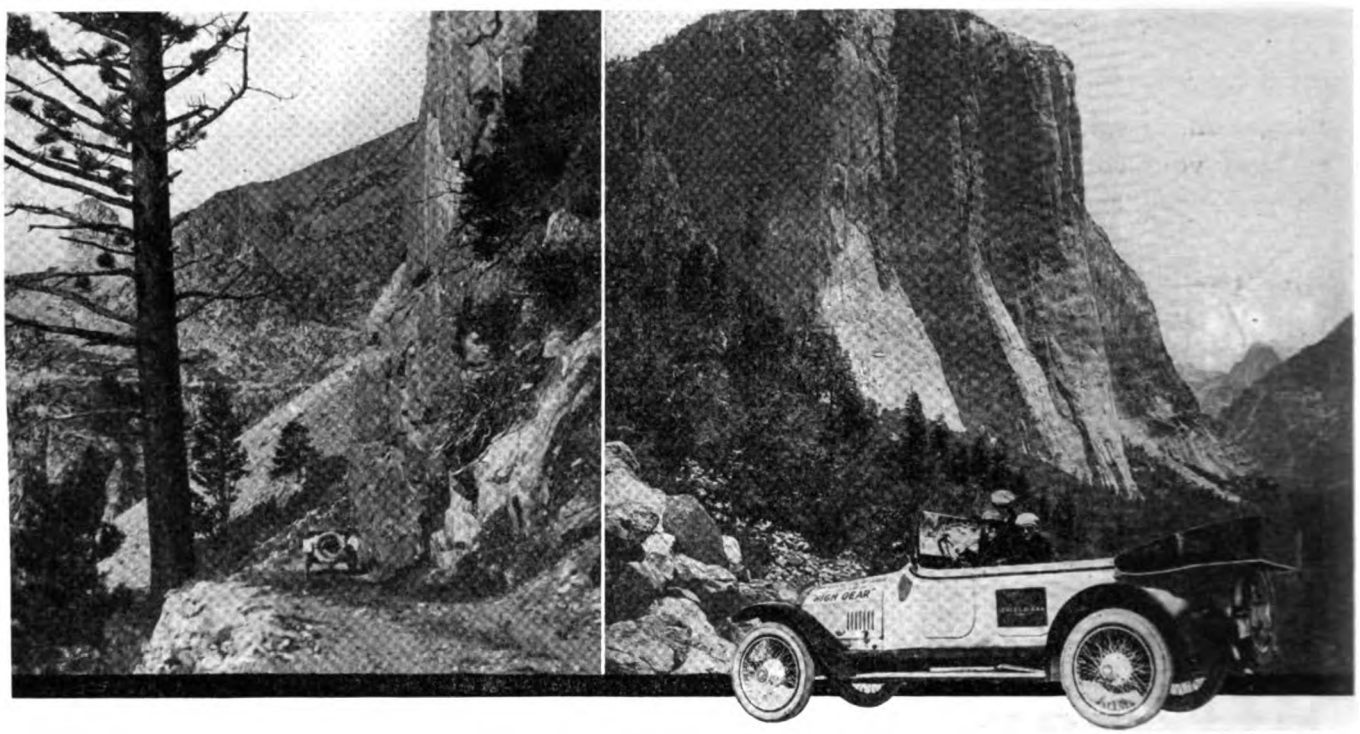
Motor car manufacturers who use NIGRUM bearings are saving car owners many thousands of dollars and much of the possible trouble and annoyance that would result through the use of ordinary bearings that require constant attention to give efficient service.

BOUND BROOK bearings are made of a high grade bronze, and are so designed and constructed as to retain lubricating graphite.

"Oil-less and Less Oil" is a good descriptive term for these bearings.

They have all the advantages of ordinary bronze bearings and have the added advantage of not requiring oil to give efficient service, although oil does not harm them. In other words the efficiency of these bearings is not dependent upon the constant attention of the owner.

They are used by a great many far-sighted manufacturers about a car where failure to keep the bearing properly lubricated would result in the ruin of the shafting. In this way, these manufacturers are insuring the long life of their product, even when it is neglected or abused by the owner.



Both "NIGRUM" and "BOUND BROOK" bearings are made only "to order." Manufacturers ere invited to take up their bearing problems with us. We have specialized in the production of Oil-less bearings for more than a quarter of a century.

World's Record Ocean-to-Ocean Pathfinder 12 on "AMERICAN" Axles.

Speaking About Brakes

The American Ball-Bearing Co.,
Cleveland, Ohio.

Gentlemen:

Pursuant to the telegram, which I sent you at the conclusion of the run, I am pleased to say that I experienced no trouble, either with the axles, brakes or bearings used on this car. You have every reason to feel enthusiastic about the twin internal brakes. During the 4,889 miles I did not have to adjust either the service or the emergency brakes. You must appreciate the fact also my not having a low or second gear in the transmission eliminated any chance of my using the compression of the motor as a brake in descending the hills.

As one mountaineer put it at Lucky Boy Mountain in Nevada, which is a 24% grade in places and has a very rough surface: "I don't doubt that the car will climb Lucky Boy Mountain because you have already come over some bad ones, but the drop on the other side of the mountain is 15 miles long, winding road and steep grades, which are very treacherous and you will have to use the compression of the motor on low gear to hold the car back."

However, in going down this hill I experienced absolutely no difficulty in holding the car. After disassembling the car in New York for the final A. A. A. examination made by Mr. H. A. Tarantous, member of the contest board, both the brake shoes were in perfect condition.

Yours very truly,
Walter A. Weidely.

If you gave your customers six, eight or ten quarts of gasoline for the price of a gallon, or sold "gas" that did 50%, 100% or 200% more work than the kind your competitor sells, who, do you think, would do the most business—you or "the other fellow"?

Now the same thing holds good with tires—it will be the dealer who handles the tires that give the most excess mileage who will do the bulk of the 1916-1917 selling.

Quaker Tires have made their reputation as big mileage makers. Let Quakers make big sales and quick profits for you.

If there is no Quaker dealer in your town, send the coupon, QUICK.

It's a Question of Your Future!

Will You be just Running a Shop, or Operating a Regular Business

Your future is up to you. If a big measure of success do not come to you—if you continue to manipulate pliers and wrench rather than fountain-pen and check book—you can of course blame it to conditions. But these "conditions" are of your own making. If your efforts land you in the ***success*** column take the credit for your own success. And if you ***fail*** don't blame others. *It's Up To You.*

Your business will not prosper unless it is founded upon a proper system—a process of accounting that tells you where you lose and where you gain. Many dealers and garage-men have not gone into business accounting as yet because existing methods have been complicated—too many books, too much red tape.

You need a simplified system, one that is easily understood and easy to work. Many demands for such a system came to Motor World. We tried to find something that could be recommended. None could be found. Therefore we devised an entirely new system. More than one thousand systems are now in use throughout the country.

Dealers and garage owners who have them installed are enthusiastic in praise of the system. It is a life-saver for the man or the company whose business is drifting in a systemless manner.

The full illustrated description of the simplified system has been printed serially in Motor World. These articles have been reprinted in book form—36 pages filled with careful instruction ("every day language") on how to install and operate the system.

This 36-page booklet, price one dollar, will be sent complimentary to new subscribers.

Send your subscription at once. Use the attached subscription coupon.

MOTOR WORLD,
239 W. 39th St., New York City.

Enclosed find two dollars (Canada and Foreign, $4) for which send Motor World for one year and a free copy of booklet that illustrates and describes Motor World's Simplified System of Accounting for Garages.

This shock absorber at this price has set up new conditions in the shock absorber game. It establishes a new standard in performance and price. No shock absorber at any price can do more for riding comfort. And no shock absorber that compares in price can compare in performance. This combination gives you a double chance. It draws business from high-priced shock absorbers, and makes men buy absorbers who never before felt that they could afford one that was worth having.

Note These Stone Features

A two-inch throw.

Double-bearing surfaces on moving parts—four contacts instead of two, preserving alignment and saving wear.

A lubricating method which feeds a film of oil to the moving parts, without any chance of leakage.

Increase the oscillating capacity of the leaf spring 10 to 30 vibrations per second and reduce the elastic duty by 90 per cent.

Prevent snappy rebound, the cause of broken springs, thereby almost entirely eliminating this form of trouble.

Made for cars of various weights.

Have an adjustment range of 1500 pounds.

Are built to fit any spring of the scroll end, elliptic, or platform type.

Are easily and quickly applied.

All parts guaranteed absolutely against breakage for one year.

There is a good profit for dealers in Stone. Write your jobber today. If he cannot supply you, write us.

Don't Take Chances WITH YOUR BRAKE LINING BUSINESS

There is good money for you in Brake Lining Renewals. And if you choose GARCO Asbestos Brake Lining for every job there is a big opportunity for you to build permanent, profitable business not only on renewals, but on other automobile accessories as well. Your customers depend on your judgment, and GARCO Asbestos Brake Lining will back your good workmanship to the limit.

GARCO will not heat or burn. It is solidly woven from high grade asbestos, and may be drilled instead of punched for the insertion of rivets.

GARCO is not affected by water, oil, grease or dirt. It costs your customer less per mile of use; and every renewal job brings you a **good, substantial** profit.

We also manufacture a special type lining for Ford Transmission Bands, put up in rolls and complete sets with rivets. The GARCO Line includes a complete line of Asbestos Automobile Specialties.

Your Jobber can supply you with GARCO Asbestos Brake Lining. We will gladly give you full information—tell you about our interesting dealer's proposition if you will write us direct.

The Contact Maker

This man, with over a thousand other Willard Battery experts, keeps alive the contact between battery owner and battery builder.

Storage batteries, like babies, need careful watching through their early life. The treatment you give a battery during its first ninety days' service on a car may determine its length of life.

Let the Willard man nearest you help you over that crucial period. Take advantage of the new free service plan. It affords the owner of a new Willard Battery whatever service is needed to keep that battery working properly—and costs him nothing.

Learn about your storage battery—how it works, its relation to starter, generator and lights, how to care for it yourself and get the most out of it.

Ask us to send you booklet P-5 about your electrical system, and P-6 about the Willard 90-day service plan, with the address of the nearest Willard Service Station.

Profitable Cars of Recognized Class Distinction Are Few

—Yet most dealers have opportunities for the sale of such cars —and they give character and standing to the dealer's business.

* * *

Peerless is ready now with the car and the production to supply more dealers.

* * *

The Peerless Eighty Horsepower Eight with its low fuel consumption and double power range is in strong demand—a worthy contender in the class field.

For nine months we have never turned out any unsold Peerless Eight — no chance under such conditions for extending our dealer organization.

* * *

The largest force we ever employed working at top efficiency is steadily increasing our output—has doubled it—will double it again in another half year.

* * *

This creates the best dealer opportunity in the established, recognized class field.

The car is all you could ask —its success completely established — production absolutely dependable — the organization back of it efficient and sound to the core.

* * *

Get in touch with us right now and we'll show you a real car, real cooperation, a real live money making opportunity — don't delay—it won't last.

Examine It Closely!

Take it apart and analyze it. We wish you would. It is an honest spring—through and through.

We realized years ago—when first we started—that there were opportunities for rotten rascality in spring making—and when we put the name

VULCAN QUALITY

on our product we determined that name should stand for the utmost in honesty and thoroughness.

Vulcan Springs represent years of constant effort directed toward Perfection—and we are proud of our product and the reputation it has made.

DEALERS

like to handle Vulcans, for they get this handsome display rack to start with, and they know that we stand ready to ship them immediately any one of our springs they ask for.

We keep CONSTANTLY IN STOCK springs to fit 90% of all American makes of cars, at our home plant and all of our branches.

We guarantee a perfect fit in each case.

We want every live, dependable Dealer, who is not already handling our Springs, to communicate with us. We have something mighty interesting to tell him.

Performance Too Phenomenal To Be Believed

Hupmobile is 99 Per Cent Efficient, Say 11,000 Owners

HUPMOBILE history—day by day—all over America, bristles with astonishing incidents.

With dealer and owner alike, the unusual is usual.

Thus, in Rochester the other day, the Hupmobile dealer was actually suspected of putting picric acid, or ether, or some other "stimulant," in the gasoline.

He Saw It Done—Yet Didn't Believe

It was the engineer of a public service corporation who recorded his opinion that the high gear performance of the Hupmobile was "impossible," even after he had seen it.

Like the rustic looking at the giraffe for the first time, he didn't believe there was any such animal. So he demanded a second test.

"This time," says C. E. Hartson, the dealer, "he even watched us fill the tanks with gasoline, oil and water. We went out and beat our first demonstration. He wanted a third test, driving the car himself. We gleefully consented.

"He gave his order, and," says Mr. Hartson, "you ought to hear him talk Hupmobile against sixes, eights and twelves now."

The Good Samaritan of the Sand-Patch

Down near Sherman, Mississippi, are two of the most unique road signs in America. They were erected by a farmer whose home faces the worst mile-and-a-half of sand in the state.

The signs at each end of the sand tell passing motorists that the farmer will gladly pull them through the sand stretch with his Hupmobile.

He erected the bulletin boards in a burst of enthusiasm after he had bought a Hupmobile which negotiated the mile and a half with ease on high gear.

On Kansas Hills and Nebraska Roads

People in Kansas City can learn how easily the Hupmobile goes to the top of Hospital Hill. The Eula street and Altamont Hills in Birmingham, Ala., are high-gear play for it.

Nebraskans don't boast much of their roads. But the Hupmobile finds no difficulty in covering 139 miles of them in 3 hours. Nor 389 miles of such roads as Iowa has in December, in less than 10 hours.

Hupmobile Owners Say: 99% Efficient

Eleven thousand Hupmobile owners have rated the Hupmobile 99% efficient.

Of these 50 8/10% buy one Hupmobile after another.

In other words, more than half of all Hupmobile owners keep on buying, year after year. They change the model, but not the make.

And while these have remained true to their choice—another 24 2/10% of Hupmobile ownership has come from those who have owned cars of higher price.

Isn't this evidence clinching, convincing and conclusive?

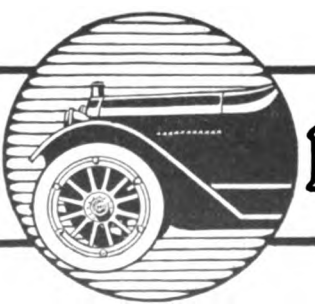
And doesn't it point the way to action on your part, with a view to becoming a dealer actively selling Hupmobiles, or a service station representative?

Hupp Motor Car Corporation
DETROIT, MICH.

The Mark of Superior — *Motor Car Service*

Five Hupmobile Points to Remember

PERFORMANCE—A high-gear performer in the usual low-gear situations.



COUPON SERVICE—Regularly each month for eight months free labor, inspections and adjustments, at more than 5000 authorized Hupmobile service stations in the United States and Canada.

ECONOMY—In line with the well-known Hupmobile repair cost record of ¼ cent per mile. This is real economy—maintenance economy. Car is easy on tires, fuel and lubricant.

EFFICIENCY—Eleven thousand owners report the Hupmobile 99 per cent efficient.

REPEAT SALES — Fifty and eight-tenths per cent of the Hupmobile output is sold to Hupmobile owners, because they are completely satisfied with Hupmobile Performance, Service, Economy and Efficiency.

A few of the magazine ads that have made Republic Tires the big success of the season.

The Tire Success of 1916

Republic Prodium Process Tires break all previous records

Five months ago we announced Republic Prodium Process Tires.

We demonstrated to the automobile public the wonderful service-giving qualities of this now famous tire—its wonderful toughness, its freedom from cutting and gashing, its resistance of destructive heat, the exceptional mileage it gives.

Dealers everywhere have been flooded with business. Even doubled production could not keep up with the demand at times.

Have you been reaping the rich harvest of this phenomenal sale of Republic Tires? We have an exceptionally attractive proposition to the right kind of dealers. Write or wire for particulars. The Fall season still has big possibilities for you.

The Rhythmic Swing of the Springboard Is the Easy Swell You Feel When Your Ford W & C Equipped Meets Rough and Bumpy Roads

Did you ever teeter at the end of your favorite springboard before trying to make up your mind that the sensation of diving is half as comfortable as the easy swell of the cantilevered plank?

And did you ever realize that the same rhythmic swing that puts the first thrill into your dive is at your command on rough country roads when driving in your Ford car?

The even undulation of the diving board is the same cantilever action that makes—

The Original W & C Double Arm Shock Absorbers Make Easy-Riding Fords

It takes all the sharp jolts out of the system of your Ford, and substitutes the most satisfying sensation of even swells you ever felt in a motor car. Built on the same principle as cantilever springs on big cars—and rides as well.

Equip your Ford today with W & C Shock Absorbers—the one shock absorber for Ford cars that gives you more comfort than you expect.

We grant exclusive territory to thoroughly high-grade dealers. Write or wire today

Tire Rate Book

September Edition

If you sell tires you need the Tire Rate Book. The September edition will be ready to mail within a few days. It will list the complete price schedules of about 100 of the leading pneumatic and solid tire manufacturers.

The September edition will incorporate the following valuable features:

Complete list of tire and rim sizes for all American made cars from and including 1913 to date.

A standard telegraph and cable code—the value of which will be appreciated by every dealer who has occasion to telegraph tire factory, branches or jobbers.

The Tire Rate Book is the price guide authority for thousands of tire dealers and salesmen. A neatly bound volume, 4¼x7½ inches. Fits the pocket.

Published three times each year—January, May and September. Tire prices brought up to date in each issue. Because of recent changes in tire prices the September edition will prove invaluable to tire dealers and salesmen.

Beginning with the January issue the yearly subscription price of the Tire Rate Book will be one dollar—single copies fifty cents.

Present subscription price fifty cents per year (including this September, next January and May issues.)

Send your subscription NOW and take advantage of the present fifty-cent rate.

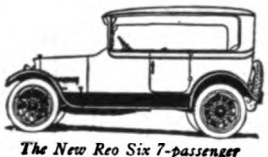
Reo

Oversold
—Always Oversold

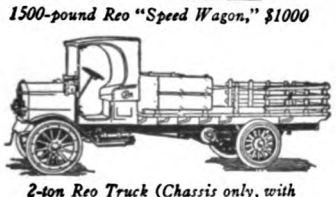
The New Four-Cylinder, 3-passenger Reo Roadster, $875

The New Reo the Fifth, "The Incomparable Four," $875



The New Four-Cylinder Reo Enclosed Car, $1025

The New 4-passenger Reo Six Roadster, $1150



The New 7-passenger Reo Six Touring Car, $1150

The New Reo Six 7-passenger Sedan, $1750

1500-pound Reo "Speed Wagon," $1000

2-ton Reo Truck (Chassis only, with Driver's Seat and Cab), $1650

All Prices are f. o. b. Lansing, Michigan

Wherever you see a Reo dealer you see one who has more orders than he can get cars to fill.

Oversold is a chronic condition with Reo distributors and dealers.

Has been so since the first Reo left Lansing.

Never since the first Reo was made and its quality shown, has it been possible for us to make enough cars to supply all who wanted Reos.

Of course it's aggravating to have customers waiting—begging—pleading—for more cars than you can supply.

But it's a mighty sight more aggravating to have a stock of cars on the floor you can't sell.

The last condition happens to most dealers—sometimes. To a Reo dealer—never.

Always there are more customers than cars.

And that is true also of Reo motor trucks.

That's the kind of automobiles and trucks dealers like to handle—all the profit is net. Selling cost low—maintenance lower.

Perhaps you can't now—but it behooves you to watch: some day you may be able to get the Reo line.

26 Extra Features
73 New Conceptions
7 New-Type Bodies

Mitchell
MID-YEAR MODEL

127-in. Wheelbase
48 Horsepower
$1325 F. o. b. Racine for Touring Car

Why Such Lavish Bodies?

Some have asked us why we go to such extremes in bodies. The new Mitchell closed cars—five styles of them—are the most luxurious cars of the day.

Our artists and designers, before completing this line, examined 257 new models, European and American. So no dainty touch is omitted. And a score of attractions are unique to the Mitchell.

The Reason Is This:

The Mid-Year Mitchell is a final development of John W. Bate, the efficiency engineer. It is the type of car which the leaders of Motordom are going to demand hereafter.

And these men who seek the maximum value want the height of luxury, too.

It is not Mr. Bate's idea of efficiency to let anyone, in any detail, excel the Mitchell car.

So you will find in the Mitchell line the most up-to-date bodies, with a matchless appeal to the artist.

Now It's Efficiency

The best class of car buyers now look for efficiency. And the Mitchell, with our enormous advertising, is coming to typify that.

That means a car which gives maximum value, due to minimum factory cost. The Mitchell, built in this model plant, offers 20 per cent more value—at least—than any other car in its class.

It offers 26 extra features.

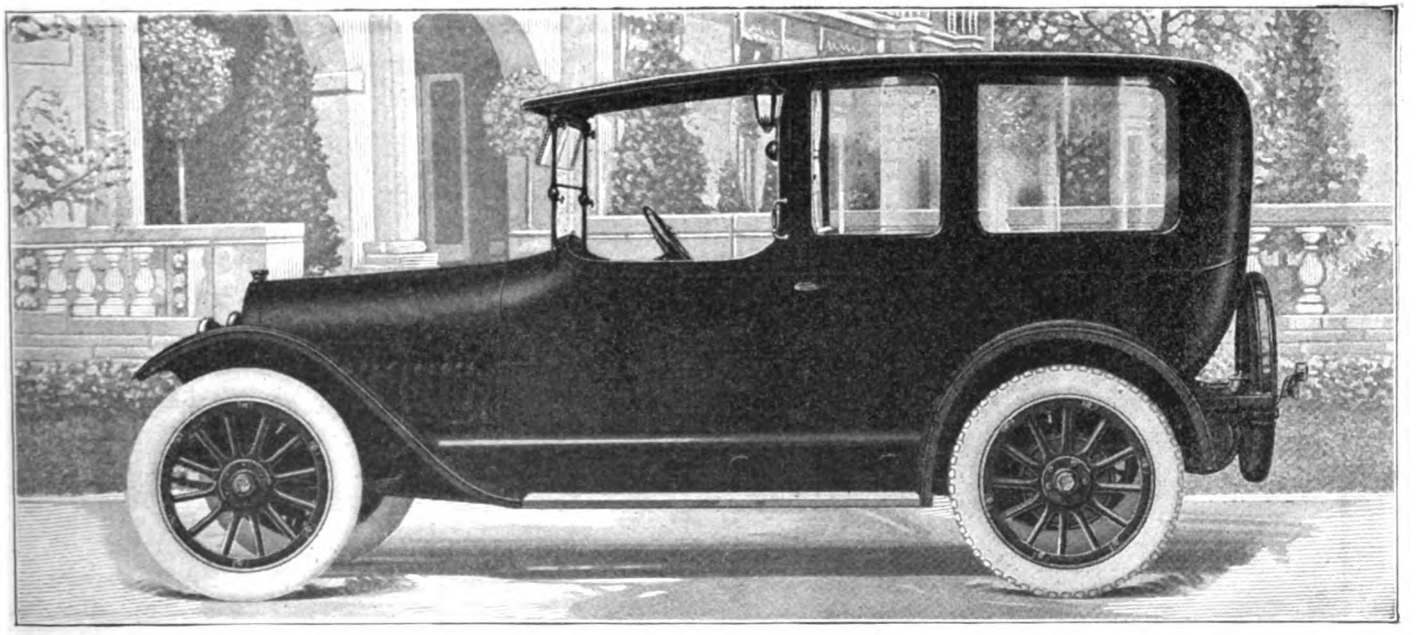
It offers the result of 700 improvements, made under John W. Bate.

It offers a car where every part has at least 50 per cent over-strength. Where 440 parts are either drop forged or steel stamped. Where all major strains are met with Chrome-Vanadium steel.

It offers a car which a very long list of the ablest engineers in America have selected for themselves. A car which has run 218,000 miles without wearing out. Seven of them have averaged 175,000 miles apiece. That means a lifetime car.

Men are awaking to Mitchell efficiency in a most amazing way. The demand for this car has trebled in a year. We are ordering materials to double our output next year.

The Mitchell is, and will be hereafter, one of the best advertised cars in America.



In unoccupied territories we are seeking the right sort of alliances.

Keep Your Lights Bright

When you slow down, the lights on your Ford car dim, and just when conditions force you to go slow is generally the time you want the most light. Connect a Waynelite to the headlights and they remain bright and practically steady whether you go slow or fast.

At high speeds, without the Waynelite the lamp bulbs are likely to burn out; the Waynelite prevents this.

Another point—the headlights on a Ford car are in "series"; if one light fails, the other goes out also. With the Waynelite the headlights are connected in "multiple"; failure by any chance of one lamp, will not affect the other light.

The Waynelite measures 3¾" x 4¼" x 3¼"; weighs about 4 lbs., is thoroughly waterproof and can be placed out of the way under the floor boards or hood. No tools or expert knowledge required for wiring up for Waynelite lighting.

The price of the Waynelite is low. Ask your nearest automobile dealer for the Waynelite for Ford Cars. Dealers write us for information.

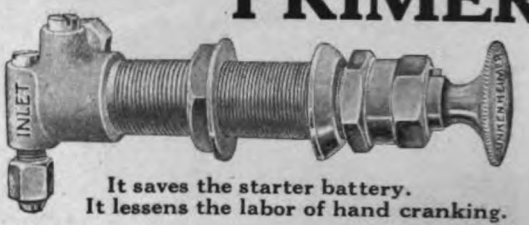
Wisconsin Bridge & Iron Co. Uses Sterling Trucks

THE Sterling 3½-ton truck, shown above, is doing the work it formerly required four teams to accomplish. It hauls ponderous loads of structural steel and stands up under the heavy strains because every part is engineered for maximum service. It saves the Wisconsin Bridge & Iron Co. 30 per cent of their former haulage expense.

Tremendous strength is built into Sterling Trucks. All complicated mechanism is eliminated — over 300 parts are done away with. Built in ¾, 2½, 3½, 5 and 7-ton units.

Catalog on request; also interesting figures on the cost of motor truck operation.

Sterling Motor Truck Co.



BUILDERS OF MOTOR TRUCKS EXCLUSIVELY FOR NINE YEARS

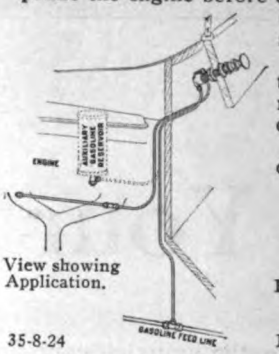
LUNKENHEIMER

Gasoline Engine PRIMER

It saves the starter battery.
It lessens the labor of hand cranking.



A stroke or two of the plunger forces a gasified charge to points which positively insure its entrance through the intake valves to give a power impulse on the first turnover.

The convenience of this device leads the operator to prime the engine before each start, resulting in a saving of battery energy, or time spent in cranking by hand.

All necessary fittings and tubing for attaching are furnished. No extra parts required.

A profitable accessory for dealers and garagemen.

Write for booklet No. 513.

View showing Application.

The Universal Automobile Record Book

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.

The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

Put the Team-work of the Batavia Boys to Work for You, Mr. Dealer!

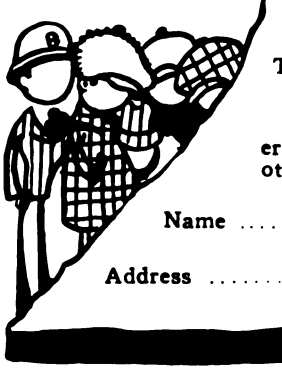
(Your customers know them from our magazine and newspaper advertising).

These are the good little goblins of tiredom—the spirits behind

BATAVIA
SECURITY NON-SKID TIRES

We have given them names and faces and bodies so that they will be as real to you as they are to us.

Look them over again and identify each one—SAMMIE SPEED, WILLIE WEAR, SIMON SURE, KID CARE and HI QUALITY—a great team!—all pulling hard for you!



Perhaps they have amused you in our messages here—but are they *working* for you? Can you tell a customer that the tire you sell him will help his engine instead of hindering it, that the tire will wear in the routine of every day and hold true in the emergency? Can you bank on the materials and workmanship?

These are the things represented by our quaint little figures. These are the characteristics of Batavias. These are the reasons it pays you to handle Batavias. Are you? If not—quick! The coupon!

Haywood's

Nationally Advertised

Tire Repair and Vulcanizing Service

In these days of high tire prices, the tire repair business is getting bigger and better than ever, as motorists learn the method of true tire economy. Why not cash in on this opportunity? Put in a Haywood Tire Repair Plant. Link up with a nationally advertised tire repair service. Six years of Haywood's advertising has standardized the Haywood method.

The Sign of the Man and Machine

—is the connecting link between the tire repair man and the automobile owner. It chains the established trade of hundreds of customers to your business. It connects your shop with a national tire repair service—a standardized service—a service that motorists know absolutely to be economical, practical and efficient.

The Haywood System

—is scientific—a true system of conservation of tires—a system that saves motorists thousands of dollars on tire bills. It means repairs that are lasting—vulcanizing that holds—repairs that are solid as the original tire itself, insurance to motorists of no regrets on the road.

Haywood's Tire Repairing and Vulcanizing Plants

The Haywood Plants are complete, all in one unit—are easily operated—no experience necessary. Here is your opportunity to make big money—to add hundreds of dollars in profits a year to your business. Occupies only a small part of your shop—can stand right out in the open where your customers can see it—a constant reminder to keep their tires repaired. Your shop equipped with a Haywood Plant is the motorist's logical haven for tire repairing. It completes your service—a service that customers like—a service that brings and holds business at big net profits.

Write for New Catalog

Use a letter, or post card or simply send the coupon below. This brings the big book of facts—tells all about tires and how to repair them—shows outfits in use—gives proof of successes—shows how we co-operate with plenty of advertising and plenty of help—how you link up with a national service. Book gives complete details. Write today. Don't delay.

DYKE'S MOTOR MANUAL A NEW BOOK

A Simplified, Detailed, Illustrated Treatise on MOTORCYCLES, MARINE and STATIONARY ENGINES

Automobile Repairmen and Owners are quite frequently called upon to diagnose or repair troubles on motorcycles, marine or stationary engines—are you posted? The DYKE Motor Manual will teach you—it is also valuable as a reference. DYKE'S Motor Manual is simplified in Mr. Dyke's usual manner and minutely detailed in illustrations—in fact the illustrations almost tell the meaning without use of the text.
If you want to know about all types of gasoline, kerosene and oil engines and be fully posted—you need this book.

224 Pages (6x9)
Over 500 Illustrations
Price $2.00

BRIEF TABLE OF CONTENTS of Motor Manual.

(1)—MOTORCYCLES—Types, driving, engines, firing order, valve timing, electric lighting and starting, magnetos, troubles, remedies—in fact everything you want to know—fully illustrated (fully treated).

(2)—LIGHT CARS—Types, specifications, etc.

(3)—MARINE ENGINES AND MOTOR BOATS—Every subject you can think of, from construction of the hull to explanation of all types of engines; gasoline, kerosene, oil—repairing—rules of navigation—meaning of marine terms, etc. (fully treated).

(4)—STATIONARY ENGINES—Gasoline, kerosene, oil; construction, operation, care; Diesel, gas producers, railroad motor cars.

(5)—AERO ENGINES, AIR CRAFTS, STEAM ENGINES (for automobiles); these subjects are only briefly treated, but the principle is clearly explained. (A submarine is also explained.)

(6)—DIGEST OF TROUBLES, REPAIRING—Covering troubles, remedies and repairs of motorcycle, marine and stationary engines.

The "Berkshire One-Piece" Spark Plug

PITTSFIELD TRADE MARK

A combination of all the good points a porcelain plug can possess. The result of long experience in designing and manufacturing spark plugs by skilled workmen, it embodies perfection of design, supreme quality and excellent service. The porcelain, imported Kaolin of a quality superior to any other clay obtainable, is proof against heat or cold. After-pressure expels carbon from porcelain and points, thus making it a *self-cleaning plug.* The steel shell and porcelain form one compact unit, exceptionally rugged and gas-tight, thus *eliminating necessity for check nut.*

The "Jewell" Mica Spark Plug

for strength and durability, cannot be excelled. It is, under working conditions, *indestructible.* It consists of heavy pure-mica tube covering electrode over which mica washers are assembled under heavy compression. If you prefer a Mica Plug, your logical selection is the "Jewell." *Specially suited to high speed engines and racing cars.* Single-point or double-point types.

Fitting up a FORD is like refurnishing your House—it's not necessary; you can get along with it the way it is, but there are several refinements that will greatly increase the pleasure of both. We live but once. It is well to get out of Life all we can.

A new FORD goes along fine, but we do not like the Steering arrangement, so let's take it off and in its place put an IRREVERSIBLE WORM STEERING GEAR, the same style gear that is used on all the High priced cars.

IT ONLY COSTS $12.00

With one of these Worm Steering Gears on your Ford, you are driving a different Car. That shock and jar you formerly took up with arms and shoulders is now taken up with the Worm. Through mud and sand and on roads that are crowned up in the center, your car steers the way you want it to.

Irreversible Worm Steering Gear attached to a Ford Car—$12.00

"Leaving the Road," is a common expression among Ford drivers and that's the cause of most of the accidents, but with a WORM STEERING GEAR, your Ford will hold the road.

If you cannot purchase the IRREVERSIBLE WORM STEERING GEAR in your city, write the

STANDARD FOUNDRY CO., of Omaha, Nebr.
Dept. MW926

who are Manufacturers, for name of nearest Jobber. Dealers: You will find every FORD owner interested. This is one of the best and most useful accessories. Our discount proposition will be mailed promptly upon request.

Will save ALL waste and add to your profit

If you are trying to do without these two outfits, you are actually paying for them in what you are losing. You're only getting a small part of the business you might get and you're not making the profit you should even on that.

If you have one and not the other, you're like a fellow who would buy a suit of clothes without the pants—your equipment is not complete.

NECESSITY

Automobile springs, designed as they are today, require control. Highly resilient and therefore highly sensitive to every change in load and road they need the steadying influence which the

Hartford SHOCK ABSORBER

affords. Leading car manufacturers have long maintained that the only car suspension capable of giving uniformly excellent results, whatever the road or the load, is active springs supplemented by Hartford Shock Absorbers. This explains why many well-known cars, Hartford-equipped at the factory, are famed for their easy-riding qualities and because of this very fact are preferred above others irrespective of price.

Automobile manufacturers are now using the finest springs that can be made. If you want more comfort, you must use Hartford Shock Absorbers.

Makes Every Road a Boulevard

The day is past when the Hartford Shock Absorber is to be viewed in the light of a mere luxury-contributing accessory. It is a **necessity** and the present trend of automobile spring design is such that you can't dispense with it if you want your car to ride smoothly and comfortably, whatever its load or whatever the road.

Trying is convincing. You cannot lose. Our guarantee is satisfaction or money back.

Studebaker

Opportunities

This one in Virginia is good

And now comes good old staid Virginia with a Studebaker "Opportunity" that some enterprising dealer is going to snap up and develop into one of the richest markets in the South for the sale of the Studebaker cars.

This "Opportunity" is in a city that lies about a mile southwest of Norfolk, on the Elizabeth River. The last census figures place the total of population at 37,000 though there are very likely more than 40,000 people living there now.

The manufacture of paper, cotton, hosiery and knit goods are the leading industries. Shipyards and railway shops add materially to the industrial activity while an excellent harbour and rail transportation facilities furnished by 5 big railroads give impetus to a prosperous export business in cotton, lumber, naval stores and pig-iron.

Something more than financial strength and a signed agreement are necessary to secure this opportunity. You know the Studebaker requirements—**Initiative, selling ability, and progress. If you believe you have it in you to measure up—write for the facts.**

Remarkable Growth of FISK

1899

Comparative Output of Fisk Tires

Yesterday and Today

ONE of the most interesting chapters in the story of the "Remarkable Growth of Fisk" is the comparative production of the plant today and during the first years of its establishment.

This phenomenal increase in the output of Fisk Tires is due to no other cause than the immediate demand which has been growing steadily and surely during these seventeen years.

In all this time the Quality of Fisk Tires has been maintained at its original high level—that "Quality first" principle was and still is the very foundation of our business, and the underlying reason for not only our selling success but the satisfaction of every one of our 35,000 dealers.

There are more than 125 Direct Fisk Branches throughout the country to serve our dealers promptly Write for location of Branch nearest you and for full information about our liberal dealer proposition.

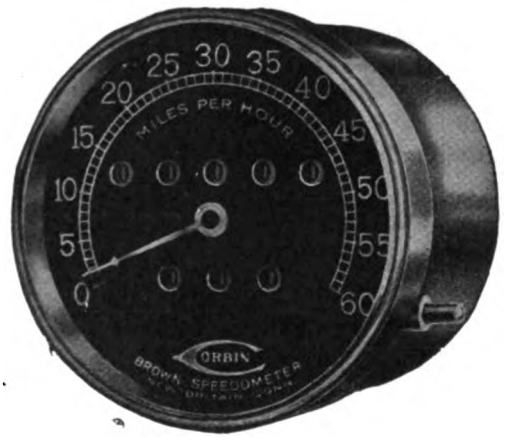
It's Good Enough For Uncle Sam

More striking or conclusive evidence of the superiority of the Corbin-Brown Speedometer could not be advanced than the fact that in the placing of a recent order for 63 motorcycles the United States Government specifically stated that all machines be equipped with this instrument or equal. The order has been placed with us.

The CORBIN-BROWN SPEEDOMETER



needs no stronger endorsement than this.

If it is efficient enough to handle the work cut out for it by the War Department it is efficient enough to warrant its being equipped to your automobile. Do this at once.

Investigate for yourself.

At all dealers.

SELL ADVE

The Straight Line

1. Display

THE buying public must see the goods. The manufacturer, through his advertising, has made the goods known, created a demand for them, and obtained the confidence of the prospect.

But the buyer must know the dealer has the goods. The goods must be displayed.

Give these advertised goods preferred shelf space. Get them out in front, where they fairly shout themselves at every person who comes in the store or garage.

Get the cheap, unadvertised, unknown goods down off the shelves and off the counters. Get these goods UNDER the counter and put the advertised goods in their place.

Here's an actual occurrence:

In a big accessory store in Kansas City there was a neat display of unknown, unadvertised body wax on the showcase in a prominent place. Under the counter was a stock of nationally advertised body wax, in every way superior to the cheap imitation on the counter.

Said a buyer, examining the wax:

"Don't you keep ——'s wax?"

The national advertising of the manufacturer of the GOOD wax had borne its fruit. It had BROUGHT A CUSTOMER TO THE STORE

But the dealer was blinded by the few cents extra profit he made on the inferior substitute.

This dealer deliberately turned his back when the manufacturer of the advertised wax said:

"I will spend thousands of dollars to help you sell my wax. I will bring customers to your store. I will make good if the wax does not."

But this is only one instance. The same can be said of almost any one of the hundreds of motor car accessories that every day are being sold by dealers, garagemen and supply houses.

Don't let the extra penny a package blind you.

Get the advertised goods out in front, on the shelves and on the counters, so those who come in the store may see them AND KNOW THAT YOU HAVE THEM.

Advertised goods sell themselves IF THEY CAN BE SEEN.

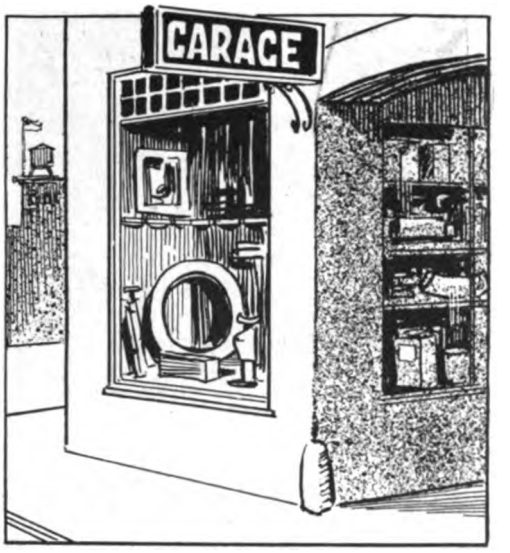
2. Suggestion

GOOD display is the best suggestion to buy, but should be supplemented by word of mouth.

One dealer in a small Long Island town goes even further. Every time a customer comes in his store he looks to see if the customer came in a car. If he did, the dealer serves the customer and then accompanies him to his car, on the way deftly picking up a bottle of nationally advertised body polish and a piece of cheesecloth.

At the car he calls the motorist's attention to the body polish and then proceeds to SHOW HIM RIGHT ON HIS OWN CAR WHAT THE POLISH WILL DO.

He generally makes a sale of polish.



The same method of demonstration is used by a New York garageman for selling nationally advertised lamp bulbs. This man slips open a headlamp, inserts a new nitrogen bulb, and

HOW can the dealer push the sale of advertised goods, sell more of them? Here are the three principal means at his disposal:

1.—Display
2.—Suggestion
3.—Advertising

Digitized by Google

[SED GOODS

Business Way

en asks the motorist to switch on his lamps and te the difference between the new bulb and the l one in the other lamp.

Demonstrating a product in this way is a valuable l to sales, but is not always practicable.

It is always possible to suggest the name of a oduct to a purchaser. When a motorist buys a ark plug wrench, suggest that he purchase a set nationally advertised spark plugs. Be sure to me out strong on the nationally advertised name. e may have forgotten it for the minute.

When you mention it to him it immediately brings ack to his mind all the advertising he has seen.

He says:

"Oh yes, Blank spark plugs, of course!"

Give him an advertised product whether he asks or it or not. He will not deliberately ask you for n unknown advertised product.

By selling him a known, advertised product, you re selling him the best of its kind. It is a good rticle. The manufacturer has sufficient faith in it o risk his reputation on it, to spend his money in ringing it before the possible purchasers of the ountry.

You are not taking any chances when you sell oods that are advertised and backed up by the anufacturer.

You will not be stuck with advertised goods. There is a steady demand for them that is created by the advertising. Such stock will not go dead on your shelves.

The strong advertising of reliable, reputable manufacturers will put the unadvertised, unknown, cheap, shoddy products into the discard. They will rust on your shelves, unless you work your head off selling them. And after they are sold, you still have cause for worry, for they will not be as satisfactory as advertised goods.

3. *Advertising*

WHEN your advertising appears in the local papers see that it carries the advertised names and brands of the merchandise you have in stock. Say in bold type: "You can get GENUINE Blank brake lining here." "We sell genuine Electric horns."

Make those who read your advertising realize that you are dealing in reputable merchandise, made by responsible manufacturers, who have been a long time building up their businesses along fair-play lines.

Use all the dealer help advertising matter that the factory will send you. This costs you nothing and will bring big returns.

A great many manufacturers of widely advertised products have special display racks and stands that are distributed to dealers without cost. Use them.

Manufacturers also supply wall hangers, stickers and envelope stuffers. These are sent to dealers without cost, too.

This is one way the manufacturer has of advertising. He cannot reach all your customers direct, so he asks you to help him.

The manufacturer wants you to sell advertised goods.

The buyer expects you to sell advertised goods.

You owe it to yourself to sell advertised goods.

AND you, Mr. Reader:—What do you think about Advertised Goods? What has been your experience with Advertised Goods? Are you selling them?

WE want a letter from you telling your experience with Advertised Goods. We want to print the letter.

A. L. Newton (Buick) wielding the "big stick"

Dunning, tire rolling expert

The whistling contest provided the most real fun

BOOSTERS MIX SYSTEM WITH THEIR PLAY

And the Program is Run off Like Clock-work—But They Have a Good Time in Spite of The System

NEW YORK dealers mix system with their play, just as they mix it with their businesses. Take the Motor Boosters' Outing, for example. On Tuesday last, 200 dealers dropped business cares and played all day by Long Island Sound. But there was careful planning back of the play.

First, a committee arranged all the preliminaries with Donnelly's Grove, College Point. Generally the outing is held at Fred. Wagner's farm at Smithtown, L. I., but owing to a death in Wagner's family a change was necessary.

The committee arranged for the use of the grounds, which include four baseball diamonds, for breakfast, which was served at noon, and for a genuine Rhode Island clambake, which was served at 6 p. m. The next job it had was to get up the program, see to the printing of the tickets and arrange for the prizes. Some of the prizes were donated by dealers and some were purchased with the receipts from the sale of tickets. Tickets were $5, and entitled the holder to everything on the program.

SOME STRENUOUS MOMENTS ON THE PLAYGROUND WITH THE NEW YORK MOTOR BOOSTERS

1—J. A. Scully (Scully & Brandt) breasting the tape in the 50-yard sprint. Because Scully already had won one first prize the race was given to Hugo Larson (Cutting, Larson & Co., Oldsmobile), who was second. 2—Jack Kirk just about to fall over the tape in the 42cm. class race; M. W. Walsh (Republic Rubber) did fall but Johnson, third, kept his feet. 3—R. A. MacMurray and I. Isaacson running away from the field in the three-legged race. 4—A. L. Newton, Buick branch manager, won the final of the sack race quite handily

STEWART'S MOTOR CLUB TEAM

Top Row, Left to Right—Chas. Jones (Buick), Bob White (Mitchell), H. S. Walters, H. W. Kurt (Buick). Lower Row—Chas Stewart (Automobile Dealers, Inc.), Harry Pike (Mitchell), E. Dirks (Buick), M. C. Carroll (Ross S)

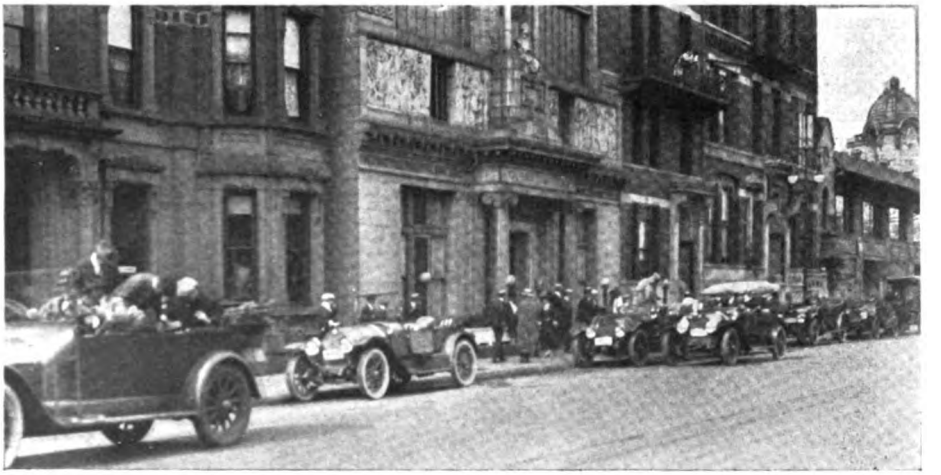
J. A. Scully threw a baseball further than any one else who tried

JOHNSTON'S WHITE SOX

Top Row, Left to Right—F. G. Hoyt (S. O. Co.), R. H. Johnston (White), H. E. Jennings, Wm. Sweet (M & A M). Lower Row—D. McL. Lay (Motor World). A. L. Newton (Buick), Dick Swander (Firestone), R. A. MacMurray, C. L. Dunning.

The meeting place in New York was in front of the Motor Club and the hour set for the start 9 in the morning. In all, about fifty cars made the trip, and by 10 o'clock the advance guard of the motorcade was on the grounds.

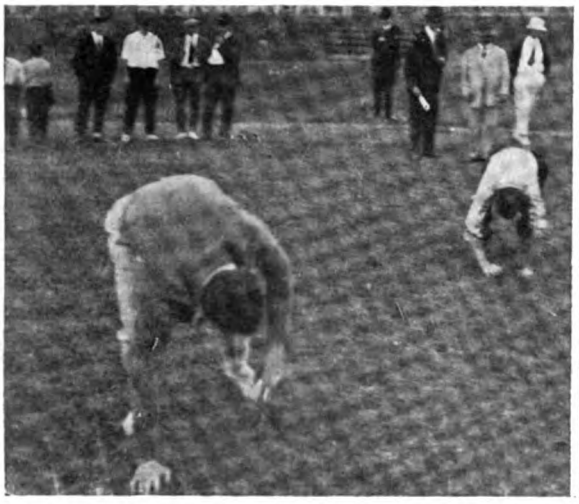
The time between the arrival of the crowd and breakfast was devoted to baseball, there being four teams in the field. These were Stewart's Motor Club team, Bill Hill's Staggards, Poertner's Bayside Burglars and Johnston's White Sox. Here is the lineup:



Stewart's Motor Club		Poertner's Bayside Burglars
Pike	p.	Queripel
Stewart	c.	Studebaker
Walters	1b.	Roe
White	2b.	Bastian
Derks	3b.	Scully
Bartlett	r.f.	Bestar
Kurt	l.f.	Reid
Benner	c.f.	Donnocker
Sterns	s.s.	Poertner

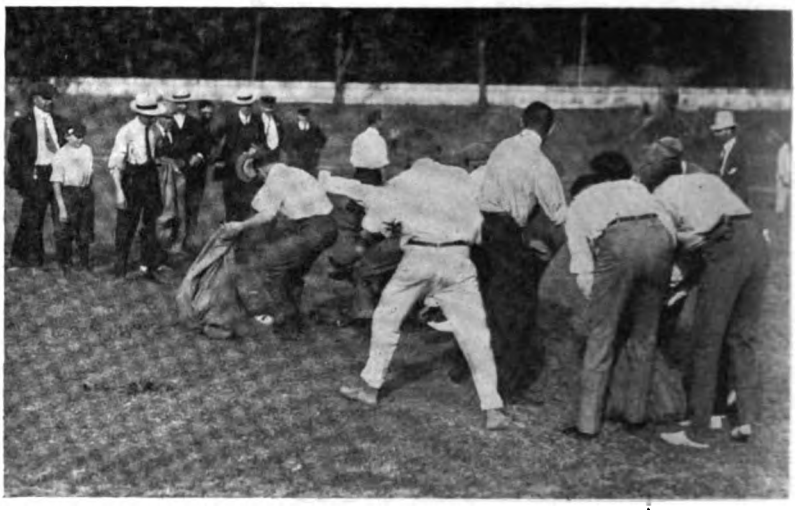
Johnston's White Sox		Hill's Staggards
McMurray	p.	Walsh
Dunning	c.	Englehart
Swander	1b.	Hill
Lay	2b.	Reagan
Jennings	3b.	Kirk
Sweet	r.f.	Quinn
Hoyt	l.f.	Dealy
Johnston	c.f.	Shortmeyer
Newton	ss.	Carpenter

After a hard struggle, Johnston's White Sox defeated Hill's Staggards 3-2. Poertner's Bayside Burglars, however, had a comparatively easy time subduing Stewart's Motor Club team by the score of 18-9. This left Poertner and Johnston to fight it out. Poertner's men overwhelmed the White Sox by a score of 11-5, and for their prowess every man on Poertner's team received a gold scarf pin, donated by Poertner himself. The sensational playing of A. L. Newton, Buick branch manager, was the feature of the game.



Practically all of the other events already are familiar to those who frequent outings. For example, there was a 50-yd. dash, and then another one for men in the 42 cm. class. This brought about a great (the word great is used advisedly) spill at the finish. The prizes in both events were gold scarf pins.

Followed a three-legged race, with two



More than fifty cars were needed to convey the 200 boosters from the Motor Club in Manhattan to College Point, where the outing was held. This shows the start

Joe Judge (Spring Valley Auto Co.) won the crab race, 50 yards backward on all fours

The shoe race was in two divisions, one for high shoes and the other for low shoes. H. P. Baran won the former and C. F. Seller the latter

steins as prizes, and a sack race, also with a stein for a prize. Newton proved the prize runner in this event. The tug-of-war provided the most merriment. Bill Hill's team of five men was all set and at the word "Go!" Charlie Well's team of five men, and others, ran away with the rope.

The shoe race was divided into two sections, one for those wearing low shoes and the other for those wearing high shoes. The shoes of each variety were put in separate sacks and the word given for the scramble. The prize was a stein. The potato race also carried a stein as a prize.

The tire-rolling contest proved the most strenuous of all the events. Contestants had to roll a 34 x 4 tire, fully inflated and on a rim, around an ⅛-mile track. There was a cigarette humidor for the winner.

The two events which provided the greatest enjoyment for those who looked on were the crab race and the whistling contest. In the former, the contestants had to race 50 yd. backward on all fours. There were several spills and the man who finished first received a copper stein. The other steins were china.

The whistling contest was brand new. Contestants were required to eat six Uneeda biscuits and then whistle a recognizable tune for a period of 3 min. The winner got a clock.

Immediately following the conclusion of the games, the crowd, headed by the band, marched to the pavilion provided for the purpose and sat down to the clambake.

The summary follows:

Baseball throw, won by J. A. Scully (Scully & Brandt, Inc.); second, C. D. Studebaker (Firestone Tire & Rubber Co.); third, Dick Swander (Firestone Tire & Rubber Co.).

Fifty-yard dash, won by Hugo G. Larson (Cutting-Larson Co., Oldsmobile); second, J. K. Bastian (Firestone Tire & Rubber Co.).

Fat man's race, fifty yards, won by Jack Kirk; second, M. W. Walsh (Republic Rubber Co.); third, R. H. Johnson (White).

Three-legged race, won by R. A. MacMurray and I. Isaacson (N. Y. Evening Journal); second, Harry Pike (Mitchell) and Gene Sullivan (Maxwell).

Sack race, first heat won by H. P. Baran; second, M. W. Colwell. Second heat won by Gene Sullivan; second, A. L. Newton (Buick). Final won by A. L. Newton; second, Jack Kirk.

Shoe race, high shoes, won by H. P. Baran; second, H. H. Brown. Low shoes, won by C. F. Seller; second, E. V. Derks.

Tire rolling contest, one-eighth mile, won by C. L. Dunning, time 43⅕ sec.; second, Otto Braunworth, time 44 sec.; third, Howard Walters, time 45 sec.

Tug-of-war, won by Hill's team, including Ed. Burman, J. M. Kirk, Harry Pike and M. J. Walsh.

Potato race, won by W. Caldwell; second, Joe Judge, Judge Auto Co. (Spring Valley).

Crab race, won by J. Judge.

Whistling contest, won by S. P. McMinn, Motor World.

Ever Hear of a Composite Motor Car?

EVER hear of a composite automobile? It had to come. They have composite pictures, composite movies, etc., so a composite motor vehicle is not so far out of line. No doubt one of the most interesting cars in the United States is the one shown herewith, which is made up of parts of some 102 orphan cars. The owner and builder is H. G. Gremel, general manager of the Puritan Machine Co., Detroit, which concern handles parts for over a hundred makes of machines not now manufactured. Gremel set to work to build a car from among the enormous collection of parts his firm handles. He has a steering gear that was originally intended for one make of car, a gearset from another, an axle that should have done duty in a third, wheels that were meant for a fourth, etc. The body was meant for a Krit machine. The car has given Gremel efficient service, having been driven over 15,000 miles thus far. It is a striking monument to the standardization of the American automobile, indicating how well the parts of various cars can be made to work together.

William Warren Barnett

Denver, Colorado

The fifth in a series showing

Dealers Who Have Made Good

WILLIAM WARREN BARNETT, Denver, was born in Dayton, Ohio, in 1865. He is 51. He engaged in numerous mercantile pursuits in the East and West and got the motor car idea one night in 1905 in the Bullfrog Mining Camp, near Death Valley, Nevada, while reading a letter from Arthur Brown, then master mechanic of the Stoddard Mfg. Co., Dayton, Ohio.

The letter said the home-town company was going to make cars and Barnett decided to get an agency. He left the desert the next spring and formed a Stoddard-Dayton agency in Denver with Charles M. Woods.

They had money enough to pay the rent for only 2 or 3 months and Woods soon wearied of the business and sold out for a promissory note.

Barnett stuck.

In 1911 he added the Alco truck and handled that and the Stoddard-Dayton as long as they were made. In 1912 he took on the Federal truck and in 1913 the Oldsmobile line and the Ohio electric. He has done well in all lines.

From his "shoestring" of ten years ago he has built an organization of 30 dealers, covering Colorado, Wyoming, New Mexico and part of Texas and Nebraska. He has 16 employees in Denver. Service is his keystone. This year's sales are already five times those of all last year.

The Why

BARNETT is an executive. He manages his business in a business way.

He believes the customer "on this particular occasion may be right and I may be wrong." The viewpoint of the customer is always in the foreground.

He gives careful personal attention to everything. He is accessible to the public. There is no barrier at the telephone or the office door. When his telephone rings he answers it himself, and no one ever has to explain all his business before an interview will be granted.

Keeping promises is his hobby. And he always plans to give all he promises—and then some.

Business has been built through conservative, truthful, straightforward advertising and salesmanship. It has won the confidence of the public.

His stationery says: "W. W. Barnett." "William" he regards as "entirely too formal for ordinary usage"—and to a goodly percentage of Denver he is "Billy."

Wisconsin's *Greatest* Show at Milwaukee Fair

More People Saw State Fair Exhibit Than Visited Annual Winter Show Last January—Event Proves So Valuable No Dealer Dares Stay Out of It—Primarily a Dealer Show Though Many Retail Sales Were Made.

MILWAUKEE, Sept. 16—More people saw the second annual motor show of the Milwaukee Automobile Dealers, Inc., at State Fair Park this week than visited the Milwaukee Auditorium last January to view the seventh annual winter show conducted by the same organization.

The record-breaking attendance was but one feature of what many claim to be the most pretentious exposition of the motor car industry that has ever been presented at a State fair in this country. Compared with the makeshift motor shows put on at some State fairs in the United States, that of the M. A. D. this week was like day to night.

84,000 Pass Ticket Takers

Nearly 84,000 people paid 10 cents to see the Wisconsin State fair motor show of 1916. In all, nearly 100,000 people were admitted to the mammoth concrete motor car building, devoted exclusively to this show. The official attendance at the fair for the week was 172,500, indicating that approximately one-half of the total number of visitors to the fair paid to see the motor show, and more than two-thirds of the persons who entered the big fair park actually saw the cars.

Motor car dealers of note from many parts of the country came to Milwaukee this week to inspect the exposition and get a line on the reasons for the great success achieved by the Milwaukee dealers' association in conducting a show at a State fair. Since the motor car became a factor it has been exhibited at State and county fairs, generally under canvas, or in an open shed not far from cattle and sheep, or in some corner of the fair grounds not needed for something else.

It was the same at the Wisconsin State fair until 1915, when the M. A. D., now recognized as the livest of organizations, took a long chance, leased the great concrete, shed-like Machinery Hall, spent several thousand dollars in walling in the four sides with steel and glass, and leased space to its members and other tradesmen on the same basis as it did for the annual "big show" held in the Auditorium every January since 1909.

When the fair was over and the show closed its doors there was enough left from the small admission charge so that every member of the association could receive a percentage return on his expense. Not only that, but every exhibitor was more than satisfied that his expenditure was well worth while on the basis of sales actually made and agencies placed.

The 1915 experiment was so big a success that as soon as the winter show in January closed its doors the M. A. D. started to prepare for the State fair show. This time the State Board of Agriculture, which manages the fair, recognized the venture as one of the most important features of the annual exposition. It readily leased the big Machinery Hall to the dealers, renamed it "Automobile Hall," and gave the association exclusive control of the motor car exhibits, at the same time appointing Bart J. Ruddle, assistant secretary and manager of the M. A. D., "superintendent of automobiles," which position heretofore was filled as a payment of political debts or to gratify the personal ambition of a supporter of the administration.

With characteristic energy the M. A. D. undertook a second "booster" tour, to advertise not only its fair show, but the State fair itself. This was done during the week of Aug. 28 to Sept. 2, 2 weeks in advance of the fair. This 555-mile tour, which was graced with the presence of the Governor, the Commissioner of Agriculture, the Mayor of Milwaukee and the heads of the good roads associations, as well as most of the prominent personages of the Badger commonwealth, more than made good. The show attendance record shows and proves that.

Cars and Trucks Shown

A total of 202 pleasure cars, two electric cars, fourteen motor trucks and thirty-one distinct accessory exhibits were crowded into Automobile Hall this year. Forty-two of the total number of exhibitors were active members of the M. A. D., compared with thirty-five a year ago. Approximately $2,500 was expended in decorating the great concrete building in appropriate style—a setting of autumn, depicting the harvest. It was an appeal to the city man as well as to the farmer.

The hall, 130 x 340 ft. in size, was laid out in six rows of spaces, running lengthwise. The center aisle, dubbed "Peacock Alley," was flanked by spaces measuring 20 x 17 ft. Adjoining these, and flanking the side aisles, were spaces

Digitized by Google

25 x 20 ft. in size—more space for the money because of less advantageous position. Along the west wall were arranged the accessory exhibits, each being 15 x 10 ft. in size. The car spaces brought $125 each and the accessory rooms $50 each. Those exhibitors who are members of the association will actually pay less, for the net profit is prorated.

M. A. D. Supervises Decoration

The M. A. D. took charge of the decorative plan, and no exhibitor had any option in elaborating thereon. The idea was to keep exhibits uniform. Dealers were allowed to go as far as they liked in color schemes of cars and chassis, but the ornaments supplied by the association had to suffice. And it did. The big hall is full of pillars to support the mammoth concrete roof. The main aisle pillars were covered with artificial decorations representing autumn leaves, and the inside pillars separating spaces were bound around with cornstalks and sheaves of grain. Signs for individual exhibits were painted in exact reproduction of the trade-marks of cars or accessories, just as at the Auditorium in January.

Some of the "big fellows," like Mitchell, Overland, Lexington, Reo, Chalmers, Hupmobile and Stearns, used three spaces for their exhibits. Fifteen other dealers used double spaces, and the remainder single spaces. All paid alike at so much per space.

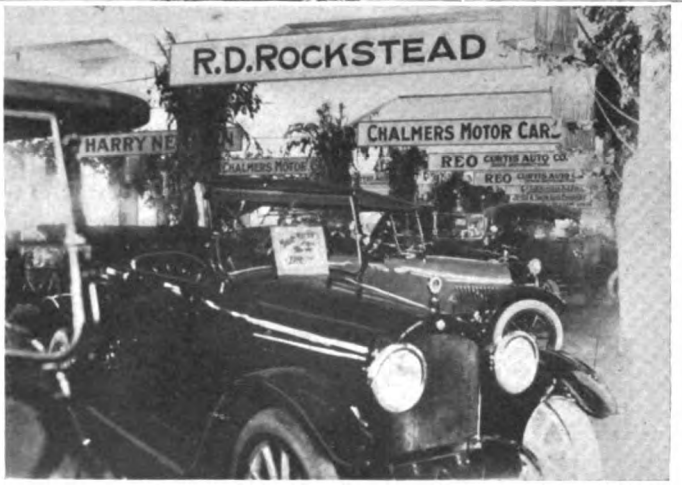
Although not scheduled to open until Monday, Sept. 11, at 10.30 a. m., the show was ready for inspection at 2 o'clock Sunday afternoon. This year's fair was a 7-day event instead of running only 5 days, as in former years. All exhibits were in place and the show ready when the gates of the park opened on Sunday, and they were the last to be taken down when the fair closed Saturday afternoon.

Poor Weather No Hindrance

The week's weather record was true to form. Temperatures ranged from 85 deg. above zero to within 15 points of freezing. It rained Tuesday, Wednesday and Friday, with showers on Saturday. Thursday, Milwaukee day, which brings the largest day's attendance each year, found the thermometer near 45 deg.; and exhibitors froze just as much as visitors, for Automobile Hall is not heated, because a Wisconsin September generally is one of the finest and most agreeable months of the year. In spite of the tremendous handicap of unfavorable weather, the fair and show alike exceeded all previous attendance records.

The number of paid admissions, approximately 85,000, was a surprise to all, considering the conditions. At the Wisconsin fair a fee of 10 cents is charged, because it is desired to keep out undesirables and children and the catalog fiend. Each exhibitor was given 100 free tickets for distribution among prospects and friends. Season passes were given to each exhibitor in liberal numbers for the use of officials and attendants. Demonstrators and cars used for transporting exhibitors and attendants from downtown to the fair and back were supplied with metal tags fixed at some point where the gateman could see them without effort, and represented car admissions. Each exhibitor also was supplied with 500 to 1000 show tickets to be sold in blocks or purchased by the exhibitor and given away by him as he saw fit to do. In this way the attendance doubtless was enhanced.

Boosting for Good Roads



On Wednesday, which was State and Good Roads Day, the M. A. D., as previously pledged, turned over the entire receipts of the show to the Good Roads Association of Wisconsin to further highway improvement propaganda. It is said that more than $3,200 was realized in this manner.

The "booster tour" took care of practically all the advance work of the association. It called the attention of from 750,000 to 1,000,000 people to the State fair and the motor show, and was probably the best method of advertising that could be devised. Some dealers sent special invitations to prospective customers, with free admissions inclosed.

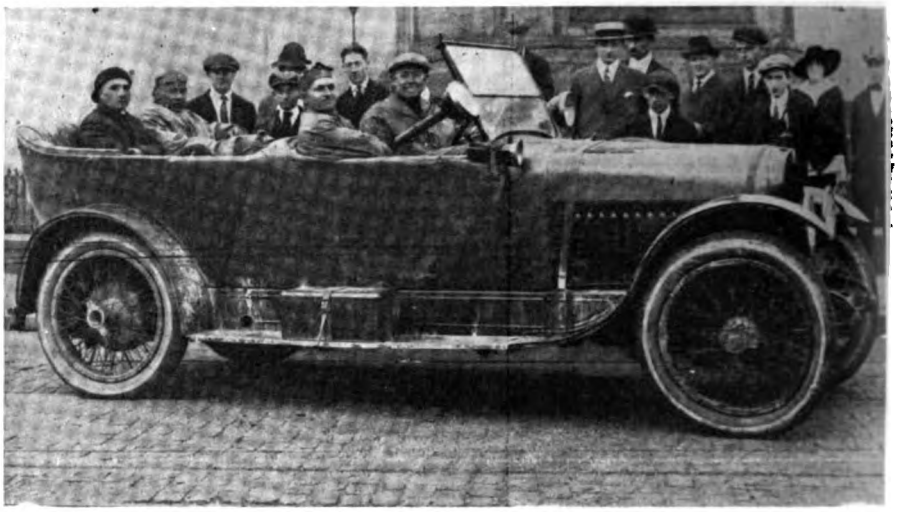
The attendance of women was probably as large as that of men. At the Wisconsin State fair show no visitor is obliged to step around in a muddy mess to get at exhibits. There is concrete underfoot and overhead and on all sides, making a visit to this exposition as safe and comfortable as going to the Auditorium in winter. As a matter of fact, it required no stretch of the imagination to feel that one was in the Auditorium; for it seemed that the big building had

The M. A. D. exercised strict supervision over the decorations and as a result there was uniformity and a pleasing effect

Digitized by Google

been transported to State Fair Park, so fine is the arrangement afforded and provided.

The men were glad of one thing in particular, and that was that smoking was allowed. At the Auditorium, at the winter show, cigars must be deposited in ash cans before one can enter the main arena.



Primarily a Dealer Show

The State fair is, primarily, a dealers' show. It is a retail-selling affair only secondarily. That it pays is proven by the fact that dealers fight for spaces. Although contract time is past, there are many agencies not yet closed, and the State fair show is the psychological moment for the State distributer to round out his organization. This year even one electric manufacturer made an exhibit—the Detroit. Two models were shown; and although no actual sale is reported, the Milwaukee branch has a fine list of prospects that it never had before.

No figures on actual sales are available. Exhibitors decline to state numbers. A careful canvass of all exhibitors revealed the fact that each one is fully satisfied. Show week brought more State dealers to Milwaukee than the winter show, and it is safe to say that more dealer contracts were signed than at the Auditorium. So far as retail sales are concerned, a good many sales were closed at State Fair Park, sales that have been hanging fire for several weeks or months. A show seems to have a peculiar effect—that of bringing enthusiasm to a climax, which means a purchase. That is true just as much, if not more so, of the State fair show as it is of the winter exposition. There were numerous instances this week of requests directed at the show committee for permission to withdraw exhibition cars so the purchasers might take them home with them. The sold cars were, of course, replaced from stocks.

No Dealer Dares Stay Out

To put the question of the value of the State fair motor show to a dealer conversely, it might be said that no dealer dares to stay out of it—excepting only those who deal in the highest priced cars, none of which ever is sold "over the counter," as it were. When 100,000 people, in round numbers, go out of their way to look over the latest models of the motor car industry, it seems worth while for every dealer handling them to be on the job. To miss out reduces not only prestige, but actually puts that car in a conspicuous place as being illy represented. It is "conspicuous by its absence." That is the condition wrought by the Milwaukee dealers' association in systematizing and organizing to the finest possible point the annual fall show.

The Hudson Super-Six which smashed the transcontinental record between San Francisco and New York. Ralph Mulford is at the wheels and with him in the car are: Chas. Vincent, W. Sturm and L. Kalinsky. Photo copyright Underwood & Underwood

Cross Continent Record Smashed by a Hudson

Super-Six, Driven by Mulford, Patterson and Vincent Lowers Mark 14 hr. 59 min.

Special to Motor World

NEW YORK, Sept. 19—A Hudson Super-six has lowered by 14 hr., 59 min. the transcontinental record between San Francisco and New York. The total distance covered was 3476 miles and the average speed was 27.14 m.p.h. The elapsed time was 5 days, 3 hr., 31 min.

The car left San Francisco, with A. H. Patterson of Stockton, Cal., at the wheel, at 12.01 a. m. on Wednesday last, and reached Columbus Circle, New York, the following Monday morning at 6.31. Patterson drove to Elks, Nev. Mulford took the wheel there and drove to Laramie, Wyo. Patterson again took the wheel and brought the car to South Bend, Ind. C. H. Vincent drove the last lap of 910 miles into New York. With these men in the car were W. Sturm and L. Kalinsky.

The trip was made on United States Royal Cord tires and came through without trouble.

Following is the check of Hudson Transcontinental car:

Left San Francisco, Sept. 13, 12:01 A. M., checked by L. J. Pinkson Automobile Editor San Francisco *Chronicle* and W. C. Kieffer, general agent Wells Fargo and Co.

Carson City, Sept. 13, 7:25 A. M., 253 miles, A. C. Cunningham, Blacksmith.

Ogden, Nevada, Sept. 14, 10:05 A. M., 842 miles, W. W. Fleetwood, clergyman and F. W. Wheeby, dentist.

Laramie, Wyo., Sept. 15, 5:39 A. M., 1395 miles, G. T. Glessner, dentist and E. W. Johnson, undertaker.

North Platt, Neb., Sept. 15, 2:45 P. M., 1560 miles, J. L. Souder and L. A. Spencer.

Omaha, Neb., Sept. 16, 2:05 A. M., 1844 miles, A. P. Ginon, lumber dealer.

Des Moines, Iowa, Sept. 16, 10:36 A. M., 2029 miles, Dr. D. Lecon, automobile editor *Register*, and H. E. Ward, newspaperman.

Joliet, Ill., Sept. 16, 8:25 P. M., 2331 miles, G. S. Jackson, manager Baskiel Motor Co.

South Bend, Ind., Sept. 16, 12 Midnight, 2491 miles, J. F. Cole, president National Co.

Buffalo, N. Y., Sept. 17, 2:30 P. M., 2971 miles, H. M. Wall, president New York State Motor Federation.

New York, Sept. 18, 6:31 A. M., James Hemstreet, American Auto Association.

HOW THE TRANSCONTINENTAL RECORD IS STEADILY BECOMING LOWER

Motor Truck Dealers Play for a Day

They Have a Whole Steamer to Themselves, a Baseball Game, Athletic Events and a Shore Dinner all for $4.

NEW YORK, Sept. 13—Held for the purpose of getting its members better acquainted and as a means toward securing a greater cooperation in its work during the coming fall and winter, the fifth annual outing of the Motor Truck Club of America, Inc., took place to-day at Karatsonyi's Hotel, Glenwood Landing, L. I. The total attendance was seventy-five, of whom fifteen were ladies. Karatsonyi's Hotel, on the north shore of Long Island, just this side of Glen Cove, was reached on a chartered steamer which cost $125. It was a delightful 3-hr. sail up the Sound from the starting point at the foot of East Twenty-third Street to the landing pier at the hotel. During the sail a light lunch was served by a steward hired for the occasion.

After the party had disembarked from the boat at the landing, a baseball game was staged on the diamond on the hotel grounds between a team composed of those members of the club who own or operate trucks and another formed of trade members. The former won by the close score of 8 to 7.

Meanwhile, some of the ladies and the men who did not play baseball enjoyed a swim from the club float, several hiring bathing suits at the pier. Then there was a 50-yd. dash for the men, won by C. D. Studebaker, manager of the New York office of the Firestone Tire & Rubber Co., who walked off with a pair of cuff links as a prize. A baseball throwing contest for the ladies was won by Mrs. W. S. Mears, wife of the manager of the Sterling Motor Truck Co.'s New York branch, the prize being an umbrella.

After this a delightful $2 shore dinner was served at the hotel. A dancing contest was held after supper, in which Mrs. A. C. Bergmann, wife of the manager of the local Perfection Spring Co.'s service station, won the first prize, a lady's leather handbag. Second prize went to Mrs. H. B. Carpenter, dancing with C. M. Smith, the Commercial Car Journal, the prize being an order for a $2.50 pair of silk stockings.

After the dancing contest had been decided two other prizes were awarded by drawing the ticket stubs from a hat. These were a $4 fountain pen, which was won by Mrs. A. C. Bergmann, and an order for a $3 hat, won by C. D. Studebaker, of the Firestone company. A gentleman's ticket was $4 and a lady's $2.

The committee of arrangements for the outing was headed by W. S. Mears, Sterling Motor Truck Co.; the reception committee, C. G. Bond, Coulter & Bond, counsel for the club; sports, Joseph Husson, Motor World; dinner committee, C. M. Geiger, Peter Doelger Brewing Co., and A. G. Taylor, chairman of the ticket committee.

Among the dealer and trade members present were: F. Nelson Carle, General Vehicle Co.; T. A. Aspell, B. F. Goodrich Co.; D. C. Fenner, International Motor Co.; Nat Mallouf, Harrolds Motor Car Co.; C. D. Studebaker, Firestone company; F. Morrow, Vacuum Oil Co.; W. S. Mears, Sterling Motor Truck Co.; A. C. Bergmann, Perfection Spring Co., and J. G. Maxwell and D. Schubert (Reo).

The outing was not a stag, by any means, and there were games for the ladies, too

Furthermore, even the ladies tapped the refreshments between moments of strenuous activity

—joined to this half shows the whole party together

Accounting and Business Systems

By T. W. Snead

Entering Inventories

System Editor:

Can you explain to me where to carry figures, like cash on hand, inventory of car stock, inventory of shop equipment, inventory of accessories and capital stock? In your supplement to Motor World, Form 2, the total of stock accounts is $837.50. How do you know that the gasoline stock is $750 and the accessories $87.50? It could have been $600 gasoline stock and $237.50 accessories stock.—READER, Shafer, Minn.

If you will turn to your System Pamphlet, describing the use of the accounting system, you will find on page 30 the illustration showing the making up of your Assets and Liabilities, and under the column headed "What We Started With" you will find listed such items as you have given us in your letter.

You will first determine the amount of cash you have on hand at the first of the month. Next, the amount of your car stock, the value of your shop equipment, such as machinery, and so forth, and the value of your parts and accessory stock. These items you would then list as Assets, placing the amounts on the charge side of Form No. 3, which is a customers' account sheet, and in place of the name of the customer, write the name of your Asset or Liability account, putting the name on the charge side and placing the leaves in the back of your system.

After you have ascertained the amount of all your Assets, such as we have itemized above, and in addition to this your total Accounts Receivable (due from customers) and any other amounts that your company can use in liquidating you paying your liabilities. These amounts, added up, would make your total Assets.

Next you would determine your total Liabilities, such as Accounts Payable, Notes Payable, Capital Stock Outstanding, and any other amount for which you are liable. This totaled up would give you your total Liabilities. If your total Assets exceed the Liabilities, then you would open an account for Profit. If the Liabilities exceed the Assets, you would open an account for Loss, and as you will see by referring to page 30, your statement will then balance.

These figures you will not need to touch until the end of the month, when you use the figures taken from Forms 1 and 2 in the system, which you will notice are headed "What Happened in January." These figures, or the difference between these figures, are added to or subtracted from what you started with, which will give you the result, as shown on page 30, "What We Have Left," or your statement for the following month.

In reference to your question, "How do you know that gasoline stock is?" etc. By referring to the illustration, the amounts $750 and $87.50 represent purchases of gasoline stock and accessories during the month in which we operated. The illustration shows one purchase of $100 for gasoline and $12.50 for accessories. On line Y you will notice that we have brought forward from the previous 30 days of the month an amount of $725 added to the two purchases made on the last day of the month. This totaled gives us a total to Gasoline of $750, a purchase of accessories of $87.50. In other words, our stock on these two items has increased by this amount.

Under the credit side you will notice that our gasoline stock has decreased $425.80 and the accessory stock decreased $295, which represents the amount that was sold during the month, figured on the cost. This increase and decrease of these two stocks is added to and subtracted from "What We Had at the Beginning of This Month," and the result would be what we started out with at the beginning of the next month, and if an actual account is made this should agree with the figures as shown by your books.

We are sending to you your statement, along with a revised statement made up as per the illustration in the System Pamphlet on page 32. In connection with this we wish to call your attention to your "Loss" and "Gain" columns, in which you have an income of $1,032.04 from automobiles, but as far as we can see, you have not charged yourself with the cost of this automobile that you sold. If you have not done so, then the net gain of $851.43 that you show is incorrect. The entry to correct this would be as follows:

Charge your Loss and Gain column on the Expense side with the amount that you paid for the automobile that you sold and credit your automobile inventory. We are going to asume that this machine cost you $750 and make up our figures accordingly.

We would be pleased to have you send us a statement of your business after you have taken the same from the Motor World Accounting System. We would like to have the privilege of publishing this, but if you so desire we will withhold your name, and if we can be of any further assistance to you, kindly advise.

Rises in Stock Value

System Editor:

I wish to cite to you a question and your answer in your March 14 issue in regard to the 10 per cent increase in the tire cost, and how to handle same in figuring profits.

I take it for granted that the party making this inquiry figures his profits monthly in the usual manner; if this is the case, then your solution of the problem is all right in theory, but it will never work out in practice.

When you suggest that he use up his old stock first and then start on the new, you overlook the fact that he must draw on his new stock before his old stock is all used up.

Tires, if sold according to list price, are best handled on a percentage basis.

The solution I would offer to this problem is to charge your inventory account with the 10 per cent raise—as that will then be the market value of the tires—and credit your tire profit account with a like amount.

This, I grant, will inflate your profit account for the month, but in reality it is money earned, just as much as though you had speculated on the board of trade and bought at a good price.

We carry from $14,000 to $20,000 in tires and this was the only practical solution we could make at the time of the raise.

This letter is not meant as an unfriendly criticism, but merely to offer my solution of the problem, and I will be glad to read your criticism on my solution.—SWANEY AUTOMOBILE CO., Carroll, Iowa.

We are glad to hear your criticism, but we must disagree with you.

Although it may make no difference in a year's time, you really have no right to charge the 10 per cent increase as you have described. You see, you really do not make this profit until the

Digitized by Google

goods are actually sold, and if the price dropped again or the goods were stolen or burned or sold, or something else happened to them, this profit would be wiped out. In other words, in selling merchandise you cannot show your profit until the goods have been sold.

In figuring up the cost of accessories sold at the end of the month for your monthly statement, you charge the old price for the old tires and the new price for the new tires actually sold.

DAILY RECORD SHEET

Editor Motor World:

What I am in need of and want, and will devise something myself if you cannot supply, is a record sheet showing the result of each day's business—the income, expense and net profit. This I would close, or sub-total, each week end, and at the month's end it should agree with my profit and loss statement, a variance of a few dollars making no difference to me.—Midway Auto Co., by J. S. Harry.

Little Rock, Ark.

We have not the record that we believe you are after, nor do we know of any such printed form. In most cases, the form that we believe you wish is one that is made on the typewriter with five or six carbon copies and is simply to show the daily income from sales, the daily expense incurred on that day, and showing the net excess of sales over expense.

This is not necessarily your net profit, for in order to obtain your net profit you would have to deduct from your sales each day:

1. The cost of the goods sold during the day;
2. One day's rent;
3. One day's light;
4. One day's salary,

etc., etc., all of which would make your accounting system very cumbersome.

It seems to us that you could very easily have such a form made in your own office and the information that you desire could be placed upon these forms from your present accounting system. However, if we can help you in any way, send us the forms or a rough draft of the form and feel free to call upon us at all times.

ALL IN ONE BOOK

Editor Motor World:

Please furnish us your complete Motor World Simplified System of Accounting and advise us if there are special forms of books for this purpose, and if so, kindly quote us price.—Elwood Auto Co.

Elwood, Ind.

The complete Motor World System of Accounting consists of three forms, all under one cover in a loose-leaf binder. One form records all Incomes from Sales, by departments. The second form records all Expenses and Cash Paid Out, by departments, and the net difference between these two enable you to find your profit or loss for the entire business by departments. The third form is a Customers' Account Sheet—all of which sells for $12 complete.

We are sending you a 36-page pamphlet illustrating and describing every entry you can possibly make, with enlarged forms showing actual entries already made. This pamphlet is presented to users of the system, and to those not desiring the system it is presented upon the renewal of their subscription for 1 year, or it can be purchased at the cost of $1.

FOUR QUESTIONS

System Editor:

We are using your simplified accounting system and will appreciate your answering the following questions:

Should any percentage or amount be added to cost of merchandise sold by one department to another?

Where does loss or gain show up when a certain article is bought from different supply houses at different prices, but figured only at one price in the total cost of merchandise sold for month? This evidently would not give a true profit.

Is it necessary to keep track of the various cost prices of a certain article?

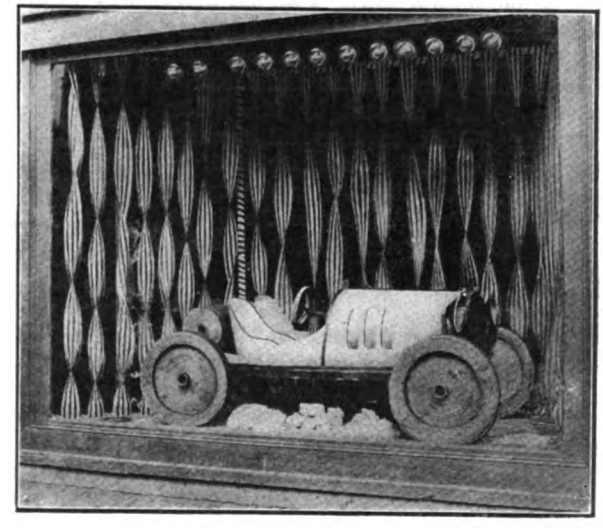
Please explain journal entries of credit memo received from a jobber on parts returned as defective and credit memo received from jobber on an overcharge.—WINNETKA MOTOR CO., Winnetka, Ill.

Merchandise sold from one department of the business to another should be charged to the expense of that department at cost. Where labor is performed by one department for another, this should also be charged at cost, and if the cost is not known accurately, it should be estimated as near as possible.

In answer to your second inquiry, profit or loss is shown at the end of the month on supplies sold that have come from different houses in this way: We assume that you use a system of sales tickets, and you should mark on these sales tickets the cost of the article sold, so that at the end of the day, or week, or month, the bookkeeper or whoever is handling the accounting can tell by adding up the cost price on these sales tickets the cost of the goods that have been sold in that period. The cost subtracted from the sale would give you your net profit. This is most essential, for in the first place your percentage of "mark-up" should be enough at all times to give you a reasonable profit over and above your operating expenses, and if you are not sure as to what your "mark-up" is, you may be operating at a loss.

If you lumped your merchandise bought from different supply houses and charged Cost of Merchandise Sold at one average figure, it surely would not give you your true profit.

This also answers your inquiry as to the necessity of keeping track of the various cost prices of a certain article. This can be easily done by use of an inventory cost card, which would give you the names of the concerns handling this article, their list price, their discounts, and their net cost to you. We are sending under separate cover a sample of this card for your inspection.



In answer to your last inquiry, when you return parts to a jobber as defective you would make an entry on your books charging Accounts Payable, blank jobber, with the amount of the parts, and you would credit your inventory parts stock. The sending of a credit memo by the jobber is simply an acknowledgement that the charge is correct. In remitting to the jobber for bills payable, this credit memo of course acts as a deduction from the total amount due. When a memo is received for an overcharge, a similar entry would be made, as the cost of these parts were originally charged to your stock account inventory of parts and accessories.

Made Motor Car out of Brake Lining

DURING the recent convention in Philadelphia of the Associated Advertising Clubs of the World the original display shown herewith was used in the window by J. H. McCullough & Son, supply dealer.

The car is made up almost entirely of the asbestos products of the Royal Equipment Co., Bridgeport, Conn. A striking feature is the radiator, which was made of a great many strips of brake lining so cut and put together as to resemble closely a real radiator.

The window was decorated with black and white crepe paper and in the foreground were a number of crude asbestos rocks, as they come from the mines, accompanied by a quantity of asbestos fiber separated and cleaned and ready for spinning into asbestos yarn.

Found Cash Plan Best

Some time ago a company about to open a garage in a southern city asked Motor World its opinion as to operating on a cash basis. Motor World expressed its approval of the plan and gave the company the names of several cash garages, among them the Euclid Square Garage in Cleveland. The proprietor of the new company went to Cleveland, saw the Euclid Square, and has adopted a cash system. Following his investigations, he has written the following letter to Motor World:

Editor Motor World:

We have definitely decided to adopt the same cash basis of operation as the Euclid Square Garage, Cleveland, which we went to see at your suggestion. Our decision was made after seeing the many advantages derived in Cleveland, and after a most thorough canvass among Washington's most representative business men regarding their opinion on such a plan adopted in this community. We have been invariably advised to do so.

The general opinion of bankers, merchants and professional men in this community is that we may have difficulty in building up our business in volume, but that we will succeed in securing a much more satisfactory class of business, and one that will prove more profitable to us in the end.

Will Eliminate Overhead

Our main idea in adopting this course is not a criticism of the credit of our patrons, but for *the elimination of overhead charges, thereby cheapening the cost of service to the patron and making an increased profit for the company.*

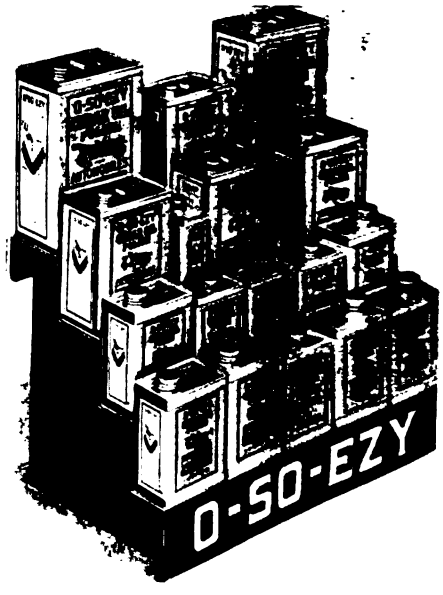
I have read with much interest your comments on the opinion of Mr. Haradon, president of the State Dealers Organization of New York. I do not think Mr. Haradon's reasons for conducting his business on a credit basis are such reasons that cannot be met satisfactorily by the system adopted by Mr. Wills. He (Mr. Wills) requires all monthly charges to be paid in advance, and, incidentally, I note that the same thing is done by Mr. Fred A. Bean of the Grosse Pointe Motor Service Station, Detroit, Mich.

However, Mr. Wills sells a book of coupons for the valuation of $10, this coupon book being in denominations of 20 cents, 10 cents and 5 cents. By the purchase of one of these coupon books the customer has established a credit with the concern for the purchase of any supplies or service he might require to the amount of the value of the book. These coupon books are generally left with the garage and seem to be much favored by owners of commercial cars or pleasure cars with chauffeurs on them. They also, to a certain extent, are used by owners who drive their own cars, as they can receive service at any time without the inconvenience of making cash payments at each time they purchase. As supplies are purchased, the corresponding value of coupons is torn from the book, and notation is made on the cover of the number of order slip, signed by the party receiving supplies, and the amount of the purchase. When all the coupons are used, the empty cover with this information on it is mailed to the owner.

By calling on the driver to produce the slip corresponding in date and amount with the entries on the coupon cover, the owner has an exact record of the cost of operating his car, and the bookkeeping has been done by the garage company in making the notations on the cover. It apparently has been found that this produces a satisfactory record for the owner.

Careful Records Kept

As the garage keeps a carbon of each order slip and each night posts its rereceipts to various departments, such as accessories, gasoline and oil, wash racks, repairs, etc., they are able to keep an accurate record of the income and cost of their various departments. The thing that appealed most to me about the Euclid Square Garage was that while they handle on the average 550 cars a day, their entire office force consists of a president, secretary and treasurer and one stenographer.



Mr. Willis also advised me that they never have any money owing them. That they started with a cash capital of $10,000 about 4 years ago; the first year they lost money, but since that time they had made money, paid dividends, accumulated a satisfactory surplus, and at this time have decided to declare a stock dividend of 150 per cent of their original capital.

Bear in mind that this business consisted entirely of storage and supplies. They do not maintain a shop, and their repair force consists entirely of one mechanic, who makes minor repairs and adjustments only. I am frank to say that I think this the best recommendation of the business policies pursued by the Euclid Square Garage.

I have been reading with much interest the articles in two recent publications of Motor World on the Grosse Pointe Motor Service Station, Detroit, Mich. Mr. Bean has certainly applied to his garage business high-class business tactics in the attitude he takes towards his customers. I am sorry I did not go to Detroit while in Cleveland to call on Mr. Bean. I have an idea that his garage must be conducted on a entirely different basis than is generally met with. I am taking the liberty of writing direct to Mr. Bean, asking him to send me copies of the booklets he published, and also asking him to allow me to adopt some of his ideas.

Our garage, in the character of its construction, is totally different and superior to anything else in this section of the country, and we deem it most important to adopt the most up-to-date tactics in conducting our operations, and I am, therefore, very glad to receive suggestions which are of as much merit as those I have been able to get through my visit to Cleveland and perusal of the articles mentioned in Motor World.—D. E. H., Washington, D. C.

DISPLAY HELPS FOR THE DEALER

To serve as a constant reminder for the motorist, the O-SO-EZY PRODUCTS COMPANY of Detroit is sending free to dealers who order its standard stock of O-SO-EZY Cedar Oil Polish, a handsome mahogany finished display stand of the Silent Salesman type.

The Story of a Man*

ot even the loss of both his legs discouraged Palmer. He has become a successful Cadillac dealer

A TALL young man, electrician by trade and ambitious by nature, stepped from a train in Chicago e January day in 1907. "S. A. Palmer" is the name on his suitcase; and "Optnism" was the name on his face. He is healthy, enthusiastic, and showed it. e hailed from Maquoketa, an Iowa town 3500 or so. He had come to Chicago attend an electrical show—to better mself in his business.

A little confused by the unfamiliar rroundings, he started off across the acks. He suddenly had the terrible nsation that a locomotive was bearing wn upon him. He jumped. This saved m from sudden death, but the cow tcher grazed him, throwing him across me parallel tracks.

Stunned by the physical blow and the ental shock, unable to arise, unable to ove, unable to cry for help, he exrienced a sensation even more terrible an the last one. In a daze he saw nother locomotive coming from the opsite direction, speeding down the track ross which he lay in a powerless conition. He made a vain effort to move. e felt the hot breath of the engine, ien its crushing wheels, then nothing.

At the hospital a spectacled physician nparted to him the superfluous inforation that the second locomotive had ken off both legs above the knees.

He was confined in the hospital for 7 onths.

Hospital nurses see so much suffering, much of every phase of human nature, at their emotions become less sensive than yours and mine. But one day in July, 1907, when a group of them stood in the drug-scented corridor and saw young Palmer leave the protective shelter of the hospital and go out into the world where he was handicapped to compete with his fellow men on anywhere near an equal basis, but with an optimistic smile and a world of grit in his lower jaw, at least half a dozen of them felt their hearts in their throats and went back to their duties with revised notions of heroism.

First he got a position to work nights in a theater box office. In the daytime he attended a business college. He gradually felt his way and got his bearings. Qualified as a bookkeeper, he went back to Maquoketa and obtained a position with a firm doing an automobile business. While taking care of the company's books he was always on the lookout for something bigger. It dawned on him one day that there was a field in Maquoketa for a good vulcanizing establishment. Renting a small room from the garage people, he started vulcanizing.

He prospered.

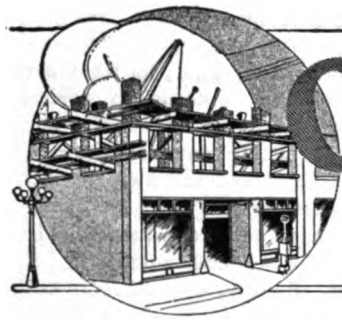
At the end of a year he combined his savings and the money which the railroad company had given him in settlement and bought out the garage people with whom he had served as bookkeeper.

He has been handling Cadillacs for 2 years and is a subdealer for the Wolfer Cadillac Co., distributer at Davenport. When he took the account, Jackson County, of which Maquoketa is the county seat, had but five Cadillacs, all models combined. Now there are sixteen eight-cylinder Cadillacs in the county.

The population of Jackson County, Iowa, according to the last census, is 21,258.

There are hundreds of counties of greater wealth, greater buying power and better roads in which there are not half a dozen eight-cylinder Cadillacs—and in which the Cadillac dealer has no handicaps except those which he has imposed upon himself. Such handicaps, unlike Palmer's, are removable.

Palmer is still working hard. He always has worked hard, and he always will. His initials are S. A. They stand Spunk and Ambition. It is the greatest object lesson Cadillac men have ever had.



Special contrivances had to be made so Palmer can drive his car

When the car door is closed there is nothing to indicate that Palmer is not as fully endowed as are other men

GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

TWO-STORY GARAGE, 100 x 100

Fig. 1

Editor Motor World:

We are now planning that we may change the location originally decided upon and build upon a corner 100 x 100 and two stories, with electric elevator, so we are inclosing a sketch of about what we want. We will put the repair-shop upstairs.

We have left a 5-ft. hallway leading from the general office into the garage, so that the office will be accessible.

We have decided that we want only one door into the garage from the street. This will enable one man to take care of the floor and also the storage space will not be broken up.

Please give us a general criticism of our plan and also advise how to finish the showroom.—Hubbell Auto Sales Co., Inc., Bay City, Mich., A. E. Hubbell.

We have drawn plans for your building, and perhaps we can best explain why we have selected the particular layout we have by criticising your plan, although we would like to say that it is one of the best plans we have had submitted to us.

We do not approve of your salesmen's room being in the corner of your showroom. It is better to have the desks out in the open, and practically all dealers follow this scheme. Having the desks right out in the showroom makes it easier for a salesman to approach a prospective customer, and in case he has any printed matter or data in his desk which he wishes to show this customer it is essential to have the desk as easy of access as possible.

There is a further objection to this room, and that is, that it interferes with the arrangement of the cars. One of the first principles in designing a large showroom such as this is to arrange it so that great variety can be had in the placing of the machines at the desks, tables, etc. For this reason a perfectly bare, square room is the best. It permits of greater variety in layout. The salesmen's desks can be put close to the side walls or at the rear, and the position of the cars may be changed at will. For the same reason it was found desirable to remove the ladies' rest room.

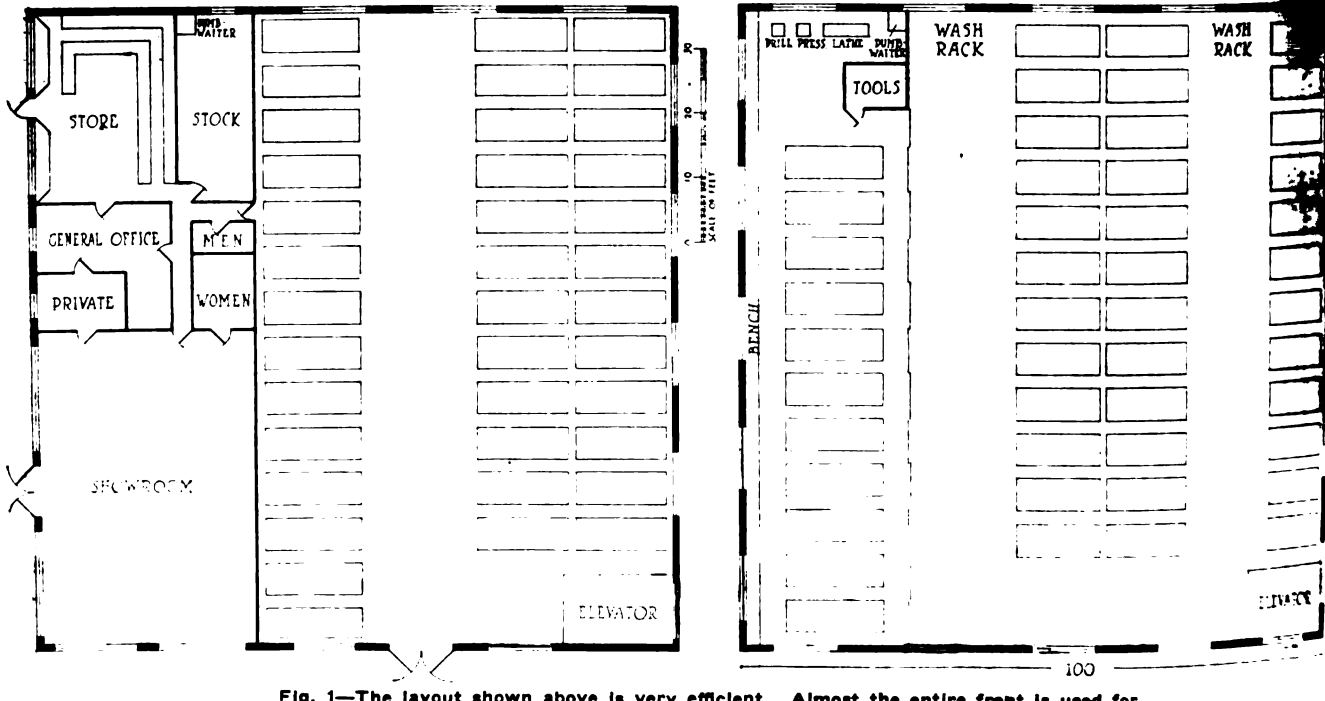
In your plan no provision is made for lighting the general office except by artificial light, and there is very little opportunity for ventilation. It is desirable to have both general and private offices with some street frontage, as shown in our plan, Fig. 1, which is on this page.

In your plan, in order to go from the showroom to the accessory store it is necessary to go through the general office, which is undesirable for two reasons, first, because it disturbs the clerks, and second, because the passing of patrons through this room, even if you would allow it, is objectionable, and there is the difficulty, also, that the more timid ones would hesitate to go through.

One of the most important things in store keeping is to make it as easy as possible for the buyer to buy. In your plan the buyer, if he is in the showroom, must open the showroom door, walk out on the street, and then open the accessory store door. This is only a little trouble, it is true, but when a man drops in your showroom only for a minute and is revolving in his mind whether he should buy a new tube to-day or not, for example, it might be just a little circumstance such as this that will prevent him from making the purchase, and when he is ready to make it some other store may be more convenient.

It is never desirable to place the entrance at the side of the garage space, as you have done, as this location gives a winding entrance to the garage proper, which results in waste of space. You will see the difference by inspecting your plan.

The most efficient layout for storing cars on the garage floor is to place two rows of medium-size cars on each side and a row of large cars on the center. It is not necessary to follow this plan exactly, but for the sake of as wide an aisle as possible we believe you will find it worth while, and it would mean little or no extra work in placing the cars.



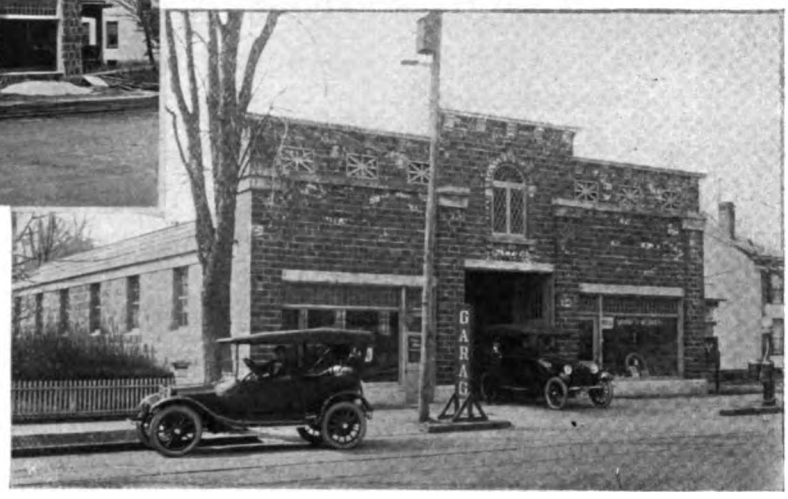


Fig. 1—The layout shown above is very efficient. Almost the entire front is used for display of cars and accessories and the accessory store may be readily reached from the showroom

The Fireproof Garage

Several Examples of Hollow Tile Construction

Upper—Doris I. Weeden's Garage, Asbury Park, N. J. This view shows the appearance of the building prior to the application of the stucco. The general dimensions are 60 x 118 ft. with walls 16 ft. high and built of Natco 8 in. XXX tile. The floor is concrete and the roof is supported on steel trusses placed 16 ft. on centers. The cost—Land, $6,000; building, $12,000; stock, $5,000; equipment, $6,000.

Upper — The Standard Garage, Patchogue, L. I. This building measures 50 x 100 ft. and is made of Natco smooth tile that requires no stucco finish. All floors are concrete except that of the office, which is of wood and built over the cellar. Roof is supported on wooden trusses resting directly on the tile wall. Cost, about $4,250

Left — The Newman Garage, Edgewater, N. J., is an excellent example of what may be done with the hollow tile construction. The building is 70 x 120 ft. with walls of 8 in. Natco XXX tile. The steel roof trusses with a span of 70 ft. are supported at intervals of 15 ft. on 18 in. hollow tile piers. The top of each pier has several courses of brick to distribute load over entire column. The exterior is finished in a combination of stucco with face brick trim and mosaic inlays. An abundance of light is furnished to the garage by large skylights. The repairshop is in the rear and lighted by windows that cover practically the entire end of the building. The cost, about $11,000

ANGLES OF THE LAW

By George F. Kaiser

CAN WE CANCEL?

Editor Motor World:

We have a case at this time with the —— Advertising Agency. Their order says it cannot be cancelled. At the time, it was agreed upon to use same for 1 month at rate of $6.50, and if not satisfactory we could return it. We asked agent to write this in the order, but he said, "Better yet, here are three men," and he explained to them, saying the $6.50 payment would cover expenses. The price was to be $39. Now they are trying to collect $32.50 from us, and we returned the cuts to them in good condition. What can we do?—Taylor & Beckett Garage, Golden, Ill.

If your contract contains a stipulation that it cannot be cancelled, the chances are that you will be unable to cancel it. As you have not forwarded a copy of the contract, I do not know whether or not there are are any other clauses in it which will operate to your injury, as, for instance, a clause providing that no oral agreements, stipulations, etc., will be recognized.

If that stipulation is contained in the contract, the fact that the agent made a warranty to you in the presence of witnesses will not greatly benefit you, as the contention which the company will set up that the agent was without authority to make representations or warranties will be upheld by the courts. As to the question, what can you do, you have your choice:

You can pay the claim; you can consult a local attorney, if they sue you, to defend your case, or you can forward me a copy of the contract, which I will be glad to look over for you. If you do the latter, I will, of course, write you again.

——

MUST SEE CONTRACT

Editor Motor World:

We wish to inquire, through your legal department, if a deposit made by a dealer with a motor car company can be collected legally where the company refuses to return the deposit at the expiration of the contract?—Myers Carriage Co., Franklin, Pa.

There are occasions when a deposit made by a dealer with a motor car company can be collected where the company refuses to return it. There are also occasions where the return of the deposit cannot be compelled through legal action. In order to advise more definitely on a question of this kind, it is necessary to examine the particular contract and know the facts and circumstances in each case. If you care to forward the contract or a copy of it to me, I will be glad to give you my opinion.

——

INJURED PASSENGERS

Editor Motor World:

I would like advice upon the following points of law. I presume they have been touched upon in some of your previous issues, but I do not happen to have them at hand, although I have been for years a subscriber to your magazine:

1. In case an automobile salesman, employed to drive cars for the purpose of selling same for a dealer, takes a car from dealer's store, to which he has key, after midnight, not for the purpose of demonstration, and while with two men friends indulges in a brush with another car, turning dealer's car over and injuring the man who sat next to him to the extent of many bruises and a broken arm:

(a) Can the injured passenger, who was a guest, not paying for his ride, recover damages?

(b) If so, from whom—dealer or salesman?

2. In case the salesman on joining a sales force agrees to purchase his demonstrator, payment to be deferred until end of season, or until car is disposed of, but has not fully paid cash for same, and should such an accident occur, what would be the status of the dealer in the case?—P. G. Spining, Chickasha, Okla.

If an automobile salesman takes his employer's car from the garage for the purpose of his own pleasure, and not for purposes of demonstration, a person injured while riding as a passenger would have no cause of action against the dealer. In the event of the salesman being guilty of negligence, however, the passenger would have a cause of action against him personally, if a passenger had taken due precautions for his own safety before the accident occurred. By due precautions I mean an attempt on the part of the passenger to leave the car or an attempt to have the salesman drive in a more careful manner.

If the salesman had agreed to purchase the demonstrator on a deferred payment plan, the liability of the salesman and his employer respectively would not be any different, providing always the car was being used for the sole use and pleasure of the salesman at the time the accident occurred.

80 PER CENT INSURANCE CLAUSES

Editor Motor World:

I figure that my business is worth about $10,000. I have an insurance on it for the amount of $6,000. I am told that if a fire occurs I won't be able to recover the full amount of my insurance unless the fire damages me $6,000 or more. Is that so, and why, as I am insured for $6,000? If I have a loss of $2,500, can I recover $2,500 from the insurance company?—A. H. D. Binghamton, N. Y.

The amount of your recovery depends entirely on what clause you find in your policy. If these is no co-insurance clause in your policy, you can recover the amount of any loss sustained by you up to the limit of the policy. If there is what is called an 80 per cent clause or 100 per cent clause, you will not be able to recover that much. The co-insurance clause reads something like the following:

"This company shall not be liable for a greater proportion of any loss or damage to the property described herein than the sum hereby insured bears to eighty (80) per centum to the actual cash value of said property at the time such loss shall happen."

They are used by the companies so that at least 80 per cent, or 100 per cent in some cases, of insurance will be carried on the property. Under the 80 per cent clause, if the property is valued at $10,000 and is insured for $6,000, and a fire occurs which causes the loss of $6,000, only $4,500 can be recovered by the owner from the insurance company. Under the 100 per cent clause, only $3,600 falls on the insurers.

Under the 80 per cent clause, if the loss is over $6,000, that amount can be recovered. When the loss is less than the amount of insurance, only a proportionate part can be recovered. As for example, $\frac{\text{6000 = (the insurance)}}{\text{8000 = (80\% of value)}} = \frac{\$}{\$}$ or 4500, of the loss falls on the insurers, and $\frac{\text{2000 = (the deficit)}}{\text{8000 = (80\% of value)}} = \frac{\$}{\$}$ or 1500, falls on the insured.

When the 100 per cent clause is found in the policy, 6/10, or 3600, must be paid by the insurance company, and 4 10, or 2400, must be borne by the owner of the property.

Digitized by Google

Motor Car Type Engine Ultimate For Tractor

Great, Massive Motors Less Suitable Than Lighter, Higher Efficiency Engines—Must Have Four Cylinders

THE motor car type of engine will be the ultimate type for agricultural tractors. Automobile experience indicates that the massive, heavy type of engine which a few years ago was found in such representative makes of cars as Olds, Reo, Cadillac and some others was not the most reliable or satisfactory type. It was the superior qualities of the vertical multiple cylinder engine which caused the abandonment of the large cylinder motor cars. And even in the stationary engine field there is a strong tendency toward more cylinders of a smaller size, according to A. Ludlow Clayden in The Automobile.

The most modern engines of the leading German Diesel makers have had many vertical cylinders, because they gave less trouble; in England the high-speed gas engine has been developed in recent years and has taken much from automobile practice. The automobile engine, the engine of the motor truck, the tractor or the aeroplane, is working under far more strenuous conditions than any stationary engine.

Low Efficiency Eliminates Big Engines

It was this fact that has led to the elimination of the old type for use on vehicles; it simply was not up to the demands of the service. Thus it is perfectly reasonable to assume that the old type will be still less able to cope with the heavy demands of tractor service than it was with the demands of the passenger car and truck to which it proved unequal.

No doubt this view will be strongly combated in many places, but it is a view that is shared by many in the tractor business, where the impression is strong that those who are fighting against the so-called automobile type of tractor engine are digging a pit for themselves and will soon find it necessary to climb out and start afresh.

To settle the proper size of engine for a tractor is very difficult. It is a matter of experience, and experience is not too plentiful. There is only one way to figure it successfully and that is to start at the drawbar, taking the pull required and the speed of pulling as the fundamentals. Then comes the efficiency of the machine and last the engine power necessary to give the required pull via the transmission. Having settled this there come the matters of piston speed and the best mean effective pressure, to be considered.

Now, there is no close agreement as to the proper draw-bar pull or horsepower. It may be reckoned conveniently on the basis of plows to pull. For one plow the average pull required is not a safe basis for calculation unless that average is taken from a vast number of experiments. It varies greatly with the soil and the condition of the soil and the depth of plowing. Now, there is not yet agreement as to the tractive effort that should be provided per plow, nor as to the best speed for plowing. A pull of 1000 lb. is apparently enough to take a plow through anything, and half or less than half this is sufficient under easy conditions. As to speed, 2 to 2½ m.p.h. is the rule, but the machines that exceed this speed certainly appear to have a more pulverizing action upon the soil. However, if we assume 2½ m.p.h. as the best speed, and take a mean value of 700 lb. as the tractive effort that should be available per plow at this speed, the results of calculations on these premises will not be far from the truth. Reducing the speed and traction to horsepower units, this means that the drawbar horsepower per plow allowed in the design should not be less than 4.7 or, say, 5 hp.

Now comes the efficiency of the transmission and the machine as a vehicle; gearing efficiency and power taken to propel the machine. Naturally this can vary greatly, but several of the most prominent manufacturers are content to take the drawbar horsepower as equaling half the brake horsepower at the flywheel. Some estimate less than half and others a trifle more. Taking the exact 50 per cent as the loss between flywheel and drawbar this gives us as a necessary allowance 10 b.h.p. of engine per plow.

Altogether it is hardly surprising that tractor engineers have found it impossible to agree completely as to exactly where the happy mean lines.

Engines Must Have Four Cylinders

There is one thing that can be stated positively, however. It is based on motor vehicle experience admittedly, but that does not weaken the argument, and this is that engines with less than four cylinders ought not to be considered. Even if the stationary gas engine type of power plant is chosen it ought to have four cylinders as the low limit. This is because the vibration from any lesser number is destructive. With a stationary engine, on a massive bed set deep in concrete, vibration can be combated, and in driving by belt vibration in the engine is not transmitted to the machine driven, but on a vehicle engine vibration must pass through every portion of the machine before it can finally be absorbed by

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 863) BENCH DRILL

A portable electric drill may readily be made into a bench drill in the manner illustrated. All parts entering into the construction were obtained from a plumbing shop and were put together with but little machine work. The frame is 1¼-in. pipe, the feed wheel an old gate valve, and the table a rough cast bridge washer. A United States electric drill was used, though almost any portable drill might be so mounted. Its use as a portable drill is not affected, as disconnection from the frame may be made in about 35 sec.—W. J. Burns, Pendleton, Ore.

(No. 864) GASKET CUTTER

A gasket cutter containing many valuable features is shown. It consists of a thin metal plate carrying four upright rods supporting the bearing plate of the cutter spindle. The knives of the cutter are tool steel, ground to a razor edge, and are readily adjustable. The depth of the cut taken on each revolution of the cutter is regulated by the depth screw, facilitating the cutting of soft material, such as felt.—Chas. Coon (Drenco Machine Co.), New York

(No. 865) QUICK-ACTING JACK

Cars may be quickly lifted and placed on an auxiliary jack by means of the device illustrated. It consists of a long wooden lever pivoted on a wooden frame. The height of the lever may be adjusted to suit the requirements of the various cars. The pivot pin bearings are protected by metal plates fastened to the uprights and to the lever. To use, the point of the lever is caught beneath the wheel hub, the car lifted and the auxiliary jack placed beneath the axle. The auxiliary jacks used are similar to the quick-acting jack, except that they have no lever. Several sets of these auxiliary jacks should be made to be used in conjunction with the quick-acting jack.—Chas. Coon (Drenco Machine Co.), New York.

(No. 866) VALVE LIFTER

Valves designed to be ground by means of a spanner wrench may be lifted from their seats by means of a valve lifter made from a spring steel rod. A piece of 3/16-in. round rod, about 14 in. long, is heated and bent in the form illustrated, after which the coil is spring tempered. The points are filed down until they are a snug fit in the holes in the valve top. Valves may be ground and readily lifted out for inspection by means of this device.—A. Somenberg (Capitol Auto Co.), Lansing, Mich.

(No. 867) WASH RACK PIPING

An inexpensive hose system having an automatic shut-off and permitting two men to work on the car at a time may be readily made. A T-connection is placed on the end of the water main above the center of the wash rack, and horizontal arms extending to a point above each side of the rack are fastened into it. An elbow and close nipple at the end of these arms permits the attachment of the valves. These valves are of the common gate valve type, having a special long handle counterbalanced with a lead ball and operated by a cord running to a point near the washer's hand. The initial cost is low and the saving effected by the automatic shut-off is well worth while.—Van's Garage, Asbury Park, N. J.

(No. 868) WASH RACK LAMP

This lamp provides perfect illumination for car washing and yet may be swung up out of the way when not in use. A board 12 ft. long, 6 in. wide and about ¾ in. thick is hinged, with the edge vertical at a point about 3 ft. above the floor. This board serves to carry the wiring and the lamps with their reflectors. Extra large reflectors and at least 50-watt tungsten lamps should be used. Both sides of the wash rack should be provided with lamps, and if two wash racks are adjacent the board between the two may be used to carry two sets of lamps.

Sell Advertised Goods

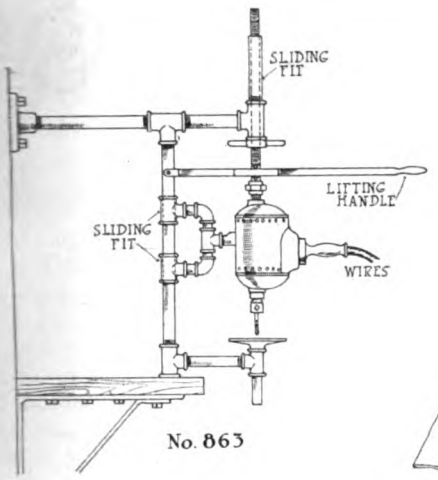
See Pages 6 and 7

(No. 869) RIVETING HAMMER

A hammer having a cross pene instead of the common straight pene is advantageous in many riveting jobs. Any blacksmith can readily make the hammer and it should be made somewhat heavier than the usual riveting hammer, as these are ordinarily made too light for the most efficient work.—A. Somenberg (Capitol Auto Co.), Lansing, Mich.

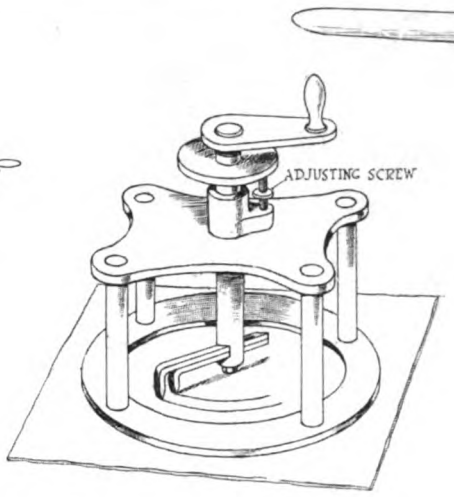
(No. 870) ROLLING STOCKROOM LADDER

Where the stockroom shelves are high and long, access to the goods is facilitated by the use of a rolling ladder. A common ladder may be made over into one of this type by the addition of grooved rollers running on a track at the top and plain rollers at the bottom. The track is made from strap iron screwed onto the top rail of the shelf. The grooved wheels may be made up on a lathe, and are held in an iron frame that may readily be made by any blacksmith. The ladder may be readily pushed to the desired position and is sufficiently strong to permit change of position while standing on the rounds.



(No. 871) VALVE GRINDER

The proper oscilatory movement may be imparted to the valve by means of the valve grinding tool illustrated. It consists of a cast-iron frame carrying an upright shaft. This shaft has a small spur gear mounted on it and resting in a recess in the frame. Motion is imparted to the gear and grinding spindle by means of a hand-operated rack. The advantage of the device is that the work is equally divided between the two hands of the grinder, and the valve may be quickly ground with a small amount of exertion.—Chas. Coon (Drenco Machine Co.), New York.



(No. 872) SPRING WINDER

Springs of various sizes may be wound on the spring winding outfit illustrated. A cast-iron frame supports two uprights that act as bearings for the spring winding spindle. These spindles are tool steel rod, having a diameter somewhat smaller than the inside diameter of the spring to be wound. One end is bent to form a crank and handle, the other being notched to receive the spring wire. As many spindles are made as the shop practise indicates to be necessary.—Chas. Coon (Drenco Machine Co.), New York.

Accessories & Supplies

GLARE-OFF LIGHTS

The Glare-Off Co., 1777 Broadway, New York. PRICE, $1 per pair; $6 per dozen pair; in gross lots, $4.80 per dozen pair.

An ornamental metal shield covering the upper portion of the headlight lens and causing the light rays to be concentrated on the road. The ascending rays are reflected by the polished surface of the shield, thrown back onto the reflector of the lamp and thence onto the road in a manner that does not blind the oncoming driver. The face of the shield carries either a club monogram or any ornamental design suitable to the purchaser.

WEAVER TOWING POLE

Weaver Mfg. Co., Springfield, Ill. PRICE, $10.

An adjustable-length pole that may be fastened to the front or rear axle of any car, enabling it to be towed with safety. The pole is of steel tubing, adjustable from 5 ft. 6 in. to 8 ft. by means of a key-pin. At each end are metal sockets carrying a 30-in. leather strap that permits attachment either to the axle, spring or frame. The towed car may be pushed backward, cannot jam into the forward car on hills, and all shocks are absorbed by the double-acting spring mounted in the pole.

FRANKLIN CONVERTOR FOR FORD

Franklin 2-Way Convertor Co., Herald Building, Chicago. PRICE, Model A2, $345; Model A3, with motor governor and jackshaft brake, $400. Dealers, 20 per cent; distributers, 20-5 per cent.

Converts the Ford into a 1-ton truck without damage to the chassis, permitting it to be converted back again into a pleasure car. The axle becomes a jackshaft and is bolted to the new channel frame by means of a special casting. A special bell-sprocket that telescopes over the brake drum carries the chain that drives the truck wheels, and permits the use of standard gage. The change requires only the removal of the rear wheels, rear spring and radius rods and the bolting on of the convertor. It is claimed that no skilled labor or special tools are required to make the change.

E AND S TOWING TRUCK

Ellis-Smith Mfg. Co., Buffalo. PRICE, $27.50.

A wrecking truck that may be clamped beneath the axle, supporting the car and permitting it to be towed in. Two 14-in. wheels with an 18-in. tread are mounted on a malleable iron frame that has an adjustable upright clamp that may be bolted to the axle. Two towing poles are included, one 10 ft., for a rear axle break, and one 5 ft., for front axles. All bearings have grease cups and the total weight is 160 lb.

ATLAS ARBOR PRESS

Atlas Press Co., Kalamazoo, Mich. PRICE, No. 24, $80; without legs, for bench, $70.

An arbor press designed for repair-shop work. Operating under a leverage of 160 to 1, one man is said to be able to exert a force of 20 tons. The frames are of special analysis iron, the pinions and rams from heat-treated alloy steel, and all other parts from materials chosen to meet the hardest service. Work measuring 20 in. in diameter and 18 in. deep can be handled, and the press will remove arbors measuring up to 5 in. The weight with base is 650 lb.

GARDNER THERMOSTAT CARBURETER FOR FORDS

Gardner Carbureter Agency, 680 Woodward Avenue, Detroit. PRICE, $10.

The gasoline supply is automatically controlled by means of a metallic thermostat. This thermostat is an integral part of the carbureter and requires no adjustment. It consists of a metal plug at the carbureter termination of the supply line and contains two openings, admitting the fuel to the mixing chamber. One of these openings is controlled by the thermostatic flap-valve actuated by the changing temperature. In starting when the motor is cold, the valve is open, giving a rich mixture. As the motor warms up, the valve closes, giving an economical running mixture.

TRUMP JACK

The Trump Products Co., Garland Bldg., Chicago. PRICE, per set of four, $5.

The car may be readily lifted from the floor by means of these jacks. By means of a compound lever caught beneath the hub the wheel is lifted free from the floor and locked in the raised position. The height of the jacks may be adjusted, and it is said that each jack will support 5000 lbs.

LOX-IT PATCH

Superior Fabric Patch Co., Midlothian, Tex. PRICE, 6 x 18 in., $1.50; 4 x 16 in., $1; 3 x 17 in., 75 cents; 2½ x 12 in., 50 cents.

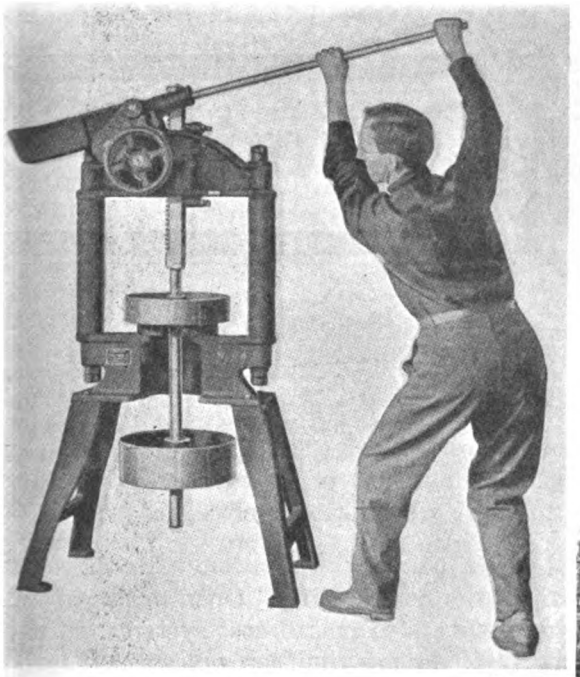
A strong canvas and rubber combination patch applied to puncture or blow-out cold, allowing ½ to ¾ in. around the hole. It is said the ordinary repair may be made in 5 min. and that the tube may be used immediately.

TRACFORD

Standard Detroit Tractor Co., 1506 Fort Street, W., Detroit. PRICE, $125.

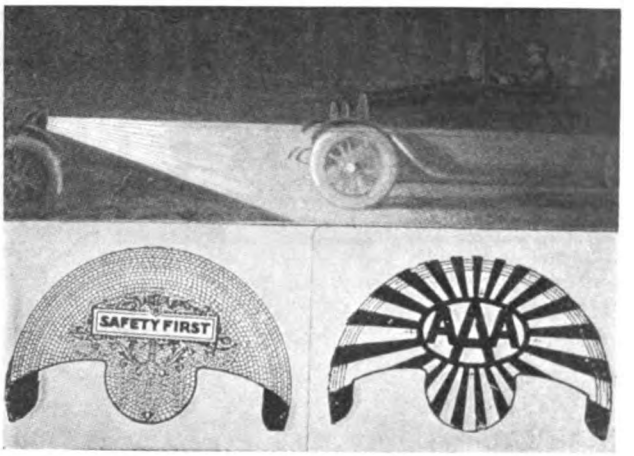
Any Ford may be converted into a tractor in 2 hr. time. The device consists of a rectangular subframe which bolts onto the rear of the Ford frame and which carries two heavy steel wheels which are driven by roller-tooth gears on the axle ends which mesh with internal gears on the wheels.

The ratio is 9 to 1, which gives a total reduction of 32.6 to 1. The machine is designed to operate on high gear exclusively; and since the reduction is 9 to 1, the speed of the motor at 2 miles an hour is equivalent to that of a Ford car running 18 miles an hour. The drawbar pull is normally about 1200 lb., and if low gear is used in an emergency the pull may be anywhere up to 2000 lb. The cooling efficiency is increased by adding a pump.



In attaching the Tracford it is necessary to drill only two holes—one in each side member of the frame. The machine is designed for all sorts of farm work, including drawing spring-tooth harrows, rollers, mowing machines, binders, corn harvesters, potato diggers and plows. In fact, it is designed to do all the work that any tractor will do.

WHITE'S OIL DISTRIBUTOR FOR FORDS



Evapco Mfg. Co., Detroit. PRICE, $3.

Catches the excess oil as it drips downward into the crankcase of the Ford and distributes it to the rear crank pockets and reservoir, keeping it at the same level in each pocket. It consists of a series of steel troughs combined to form a single unit and placed inside the crankcase on the right side. It is said that accumulation of oil under the cranks is prevented and the motor properly lubricated whether ascending or descending a grade. To install, the crankcase hand hole cover is removed, the distributor slipped in place and the cover replaced.

The Open Price

THERE has been much complaint about price-cutting—and Uncle Sam absolutely won't stand for price-fixing. So what are you going to do about it?

What seems to be a rather unique way of preventing price-cutting of the ruinous sort, without at the same time fixing prices in any way whatsoever, is contained in the "open-price plan," which was discussed at the Babson Conference on Co-operative Competition last week, in Wellesley Hills, Mass.

The idea is this: Give publicity to prices. Let your competitor know the prices you make and let your competitor do the same for you.

Then you will have something to guide you in making your prices, but there is not the slightest obligation to maintain any price. If you want to sell below cost, or give the goods away, you are not hampered by the open-price plan. Your business is your own. Run it your own way.

But it does seem that if one man knows he is selling so low there is hardly any profit in it while all his competitors are not selling so low, he would be inclined to cease working at such a low price.

Linked up in practical operation with the open-price plan is the cost system. Open-price associations urge members to install cost systems, so they may know just how low they can sell without losing money.

The open price is a radical idea, but it is not so radical as it was ten years ago, for since it was promulgated some twenty associations have been formed and are operating successfully on that plan.

Those who have adopted the plan are quite enthusiastic about it, and are as "open" about telling about it as they are "open" about prices.

If any association in the trade wants to know more about the plan, MOTOR WORLD will be pleased to refer them to those who are in position to explain fully.

Half-Hearted Dealers

TOO many dealers are half-hearted. They are in the business in a lackadaisical, happy-go-lucky, hit-or-miss sort of a fashion. They say to themselves:

"Well, I'm making a living out of it; I've got a car to ride around in, and I'm having a good time."

And that is about as far as their thoughts ever go.

They are living in the present, with no thought for the future.

The men whose pictures are appearing in the department in MOTOR WORLD, "Dealers Who Have Made Good"—see page 11 this week—are whole-hearted dealers. They are not in the business to have a good time, nor for their health, nor to ride around in a car.

They are in the business to SELL cars. Their every thought is to sell cars. All their energy is put forth to INCREASE business. They have no time for lackadaisical methods. They don't wait for a man to come in and ask for something.

They go out after that man and SELL him.

These men are successful because:

THEY ARE WHOLE-HEARTED DEALERS.

AMONG the essentials of efficiency in any business, correct and adequate knowledge of that business is the first. That is the foundation, and the corner-stone of a knowledge of business is a knowledge of costs.

—Edward N. Hurley,
Chairman Federal Trade Commission

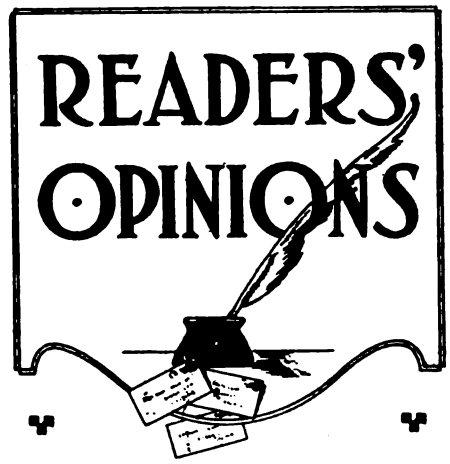
DEMANDS ADVERTISED GOODS

Editor Motor World:

The dealer owes it to himself to sell advertised goods, first of all, as an indication of character. If I drive into a garage and ask for —— oil and the dealer says he hasn't got ——, but just oil, why, I immediately look upon him with suspicion and wonder what kind of a business he is running. In my mind he is immediately a backward business man. *I feel that he is not alive to the situation and does not realize the amount of business he is losing by selling this unknown brand of oil.* The same argument applies to all sorts of commodities. If I want a —— spark plug I don't want him to tell me he hasn't got it but can give me a Wxyz or some other phony brand that no one ever heard of.

Aside from the question of whether it hurts his reputation or not to sell brands that are little known, he should sell advertised goods because it is easier. If I am in the market for graphite I want ——; or if it is spark plugs, I want ——, —— or some other plug that has established a reputation of quality via advertising; or if it is tires, I want one of the makes that I have read most about; and the same argument applies all through the business.

Simplifies Selling Problems



The idea is still more important when we get away from the things that are not bought every day. If I am buying demountable rims for my Ford I want ——, and not some unknown make; and the dealer who has the standard brand has the customers just about half sold the minute he says ——. In other words, he only has to sell the customer on the proposition as to whether he wants demountable rims or not, and not also on whether this particular make of demountable rims is worth purchasing.

The customer has been educated to feel that advertised goods are almost invariably sold at standard prices, and, consequently, he feels safe in going into an unknown garage and purchasing a standard article. He knows that there is little likelihood of his being overcharged, but if it is some unknown brand he never is sure whether he is being imposed upon or not.

Manufacturers Will Co-operate

The manufacturers of advertised goods co-operate with the dealers by furnishing various kinds of display stands and cabinets which may be used to advantage. This is a great aid in getting business. Many of them get up attractive window displays, which is another reason why the dealer should handle these goods.

Because of advertising these manufacturers are invariably large, better off financially and better organized than their competitors. Their size means that

they have better facilities for distribution, and it is possible for a dealer to obtain a new stock much quicker than if he were dealing with some small concern.—H. F. B., Detroit.

They Like Taber's Ideas

THE method by which Russel P. Taber, Reo dealer in Hartford, Conn., handles follow-up letters was told in Motor World of June 28 under the heading "Reserve Soldiers of Salesmanship," and following the appearance of the story Taber received numerous requests for further details and samples of his follow-ups.

These letters came from various points, including Panama City, Panama. They indicate the interest of the trade at large in keen, modern sales methods. Three of the letters follow:

Mr. Russel B. Taber,
Hartford, Conn.

The outline of your reserve salesmanship letters recently published in Motor World was very interesting to us and we believe that your method of distributing and handling these letters is the best that we have ever seen.

We are very curious to know just what the question, answer and story of Taber's service consists of.

We would appreciate it very much if you would mail this story to us. Thanking you in advance, we are.—The Forest City Garage & Sales Co., Cleveland.

Mr. R. P. Taber,
Hartford, Conn.

I have just finished reading an account of your sales methods in Motor World.

Ever since joining forces with the Curtis Automobile Co. I have been trying to induce Mr. March to let me use a follow-up system on the order of yours.

The peculiar thing about it, though, is, that I was remarking to him just a few days before the article appeared, about the complete and thorough system you had incorporated in your business; this piece of publicity topped it off fine, and now he is all for me putting it through. Consequently I am writing you for any assistance you can give me without too much trouble on your part.—C. O. Couniff, Milwaukee.

Russell P. Taber,
Hartford, Conn.

We have read your experience with follow-up letters and folders, as described in Motor World of June 28.

It proved interesting reading.

If you could favor us with a few samples of your letters and folders we would be very much pleased.

Assuring you in advance of our appreciation of your courtesy, we remain. —Smallwood Brothers, Panama City, Panama.

Asheville Association Elects

ASHEVILLE, N. C., Sept. 15—At the annual meeting of the Asheville Automobile Trade Association the following officers were elected for 1916 and 1917: President, E. C. Sawyer; vice-president, A. H. McCormick; secretary-treasurer, J. P. Hill. It was definitely decided to hold the second annual automobile show the first week in November of this year.

Help Straighten the Curve

Below are comments from a prominent jobber on the Winter Business Number that Motor World will issue October 11

Editor Motor World:

It is with a great deal of interest that we note your remarks entitled "Help Straighten the Curve."

By such publicity as you are giving through your magazine the jobber, dealer and garageman will become imbued with the necessity of doing something in order to keep up his winter business.

Ordinarily the garageman considers it a matter of fact that business will fall off in the winter and that very few take steps to make this decrease of a lesser importance than in previous years. By your publicity you are giving ideas to the dealer and garageman as to how he can improve his winter business and we heartily sanction the work you are doing.—THE MOTOR CAR SUPPLY CO., Calgary, Alberta, Canada.

The RETAIL NEWS

SOUTHWEST

John Crane, Clay Center, Kan., has sold his interest in the Watson-Crane garage to Walter Watson.

T. W. Wilson, Eskridge, Kan., is to build a new garage.

James L. White, Chanute, Kan., is erecting a two-story building to be used for a garage.

The White Way Garage, Waterville, Kan., is successor to the Merchants Auto Co.

Ed Hoover, Phillipsburg, Kan., will open a new garage.

E. L. Elsey, Kinsley, Kan., has bought the Kinsley Storage Battery Co.

The Smeltzer Batteries Co., Kansas City, Mo., is now located at 1711 Grand Avenue, with L. P. Smeltzer as manager. The new company takes over the B-R city business of the Gould storage battery.

H. B. Peatling, Talmage, Kan., will open a new garage.

G. G. McNee, Clay Center, Kan., has opened a repairshop.

A. D. Walker, Valley Falls, Kan., is going to erect a new garage.

H. A. Frier, Russell, Kan., is erecting a new stone garage, which will be used as a storeroom for Buick supplies and repair work.

Geo. Woodbury, Clay Center, Kan., will open a garage and repairshop.

Riggs & Dixon, Winston, Mo., have opened a new garage.

George C. Dahnke, Manhattan, Kan., will open a new garage.

Dell McCormick and Earl Morgan, Walker, Mo., have bought the garage formerly owned by Edward Gault.

The Walker Auto Co., Phillipsburg, Kan., has let the contract for the erection of a cement garage.

Wm. Koelzer, Seneca, Kan., has purchased the garage business of the Buser Auto Co.

Alphonse and Francis Gagnon, Zurich, Kan., have opened a garage.

The Clay Center Vulcanizing Co., Clay Center, Kan., is open for business.

P. L. Goins and Roy Collins, Okfuskee, Okla., have opened a new garage.

The Motor Instruction & Engineering Co., St. Louis, a new corporation, has taken the agency for Hollier Eight. A building will be erected at 4835 Easton Avenue and will be used also for an automobile school. The officers are: J. E. Phillips, a locomotive engineer, president; C. E. Brooks, vice-president and manager; Arthur Rudolph, secretary; J. T. Daniels, treasurer. The company also will handle Maxfer truckmaker and for the present will have offices at 4768 Hammett Place.

The Maxwell Motor Co. branch office, at Vandeventer Avenue and Olive Street, St. Louis, has been discontinued. District Manager L. A. Poundstone will make his headquarters with the Brinkman Motor Car Co., Maxwell distributer.

The E. R. Pirtle Co., El Paso, has begun the erection of a new building which, it is said, will be the finest in that city devoted exclusively to the automobile business. It is located at the corner of Montana and Florence Streets and will be ready for occupancy about Oct. 1. The shops and service rooms will have a floor space of 50 x 100.

The Toltelk Co., El Paso, has established an accessory and parts department in the basement of the Toltelk Building, which it occupies.

The El Paso Auto Sales Co. is refitting its garage and salesroom at El Paso.

The Buick Automobile Co. of Texas, headquarters at Dallas, Tex., is erecting a two-story building at Young and Browder Streets, at a cost of $26,000.

The White Motor Co., Dallas, has closed a contract for a two-story $18,000 brick building at Ervay and Lear Streets.

The Ray Rose Automobile, Dallas, has opened new quarters at 1715-17 Commerce Street.

A. H. Elmore has been appointed to the head of the sales department of the International Auto Co., El Paso.

The Wagner Electric Mfg. Co., St. Louis, has opened a branch and service station at 1430 Vine Street, Philadelphia, under the direction of N. A. McCoy of the Philadelphia office.

SOUTH

Richmond, Va.—During the summer there has been considerable improvement in the headquarters of the various automobile concerns in this city. The Harper-Overland Co. has just moved into a commodious and modern new home on West Broad Street; the Chevrolet Motor Co., the Maxwell Motor Co., the Alsop Motor Co., and R. A. Blenner, Chandler distributer, all are housed in new buildings. The Standard Motor Co. will soon occupy its new home on East Grace Street, adjoining the Murphy Hotel, wherein special provisions have been made for the care of tourists. Charles S. Clark, formerly with the Harper-Overland Co., has accepted the position of city sales manager for the Kaehler Motor Co., Saxon distributer. Jerome Fancuilli will have charge of the distribution and sales throughout Virginia and will soon tour the State in a Saxon Six to locate agencies and service stations. The Universal Motor Co., Ford dealer in Richmond, announces the adoption of plans for a modern structure on West Broad Street.

PACIFIC COAST

Matthews Motor Car Co., Seattle, distributer of Jeffery cars, has let the contract for the construction of a new garage building.

Williams Motor Car Co., Seattle, has been incorporated by C. R. Williams to handle the Liberty in the Northwest.

Overland Automobile Co., Portland, has leased the store at Savier and East Twenty-eighth, which will be utilized for a garage.

Gatsky Bros., Lents, Ore., are erecting a two-story garage.

Melvin T. Clark has purchased the interest of Geo. W. Banning in the Westside Auto Supply Co., of North Yakima, Wash., and will be associated with Edward E. Shenberg. The firm name has been changed to Valley Auto Supply Co. and a new garage building has been erected, which includes a well laid out salesroom and repairshop. The Stromberg line and Mohawk tires are distributed.

W. Ralph Ragsdale has taken the management of the Wapato Garage, Wapato, Wash., and will handle the Ford car and tractor.

R. S. McCarroll has purchased a half interest in the Independent Garage, Pendleton Ore., and is associated with Carl Himmelgarn.

Cast & Lucas, Granger, Wash., have taken possession of a new brick garage building. The Buick and Oakland will be their 1917 line.

E. A. Whittier, Baker, Ore., is erecting a concrete garage at the corner of First Avenue and Center Street. It will be known as the Ford Garage.

H. L. Ross, mining engineer, Baker, Ore., has purchased a half interest in the Fernald & Crandall garage. The firm name has been changed to Ross & Crandall. The Reo is handled.

J. R. Childreth, Pendleton, Ore., has secured the agency for the Chalmers and Chevrolet and erected a modern garage at 701 East Alta Street, which will be conducted as the Alta Garage.

M. C. Haines, Cle Elum, Wash., has become sole owner of the Reliable Auto Co and has renewed the contract for the Buick and Ford.

Harry G. Brown and Walter Hesse have incorporated under the name of H & B Repair & Accessory Co. and built a three-story garage in North Yakima, Wash.

G. I. Ladow, Pendleton, Ore., has disposed of his sporting goods line and will operate an accessory and automobile supply store exclusively. He has installed a complete vulcanizing plant and will job United States tires. Fred Ward is manager.

MIDDLE WEST

Paul Gee, Grand Rapids, Mich., has secured the agency for the Chalmers. He has taken a lease on the garage and salesrooms formerly occupied by L. Phelps, Michigan Street and Lafayette Avenue.

The Kenyon-Clark Sales Co., Grand Rapids, Mich., Jeffery and White distributer, has discontinued its service department, which has been turned over to the Oswald Motor Car Co., which has added several more men to its staff and will devote most of its time to the interest of White and Jeffery owner wants.

The Howard-Buchbinder Co., Detroit, has been organized by B. T. Howard, formerly sales manager of the Flanders Mfg. Co., Pontiac, Mich., and Herbert Buchbinder. The new company will handle the Pilot and has opened a showroom at 855 Woodward Avenue.

Charles A. Reynolds, Alpena, Mich., has sold his garage to Charles Jackson, Fred Habermehl and Robert Shenks. The distribution of Studebakers for Alpena, Alcona, Presque Isle, Montmorency, Iosco and Oscodo counties has been secured by the new owners.

A. E. Fuller and E. A. Chisholm, Ithaca, Mich., have secured the agency for the Elgin for Gratiot and Isabella counties.

The Hastings-Buick Garage, Hastings, Mich., has been purchased by Gard Bennett from Aben Johnson. From now on only Buick cars will be handled.

The Merritt Garage, Big Rapids, Mich., has been sold by M. Merritt to Moore & Rondahl.

The Anger Engineering Co., 301-303 Sixteenth Street, Milwaukee, a new Ford dealer, has increased its capital stock to $30,000. B. F. Anger is general manager.

David S. Childs, Flint, Mich., has pur-chased C. H. Bliss's interest in the Childs-Bliss Auto Co., which handles the Oakland and Milburn.

The Boomhower Auto Supply Co., Flint, Mich., has started in business at 615 North Saginaw Street. The members of the con-cern are Louis B. Boomhower and Lee W. Forncrook.

Adolph Berka, Saginaw, Mich., has opened a tire repairshop at 317 Lapeer Avenue.

The Saginaw Auto Sales Co., Saginaw, Mich., has been reorganized and is now Gibbs & Holden. F. E. Holden was for-merly manager of the Saginaw company. J. H. Gibbs comes from Edmore, Mich. The new firm will handle the Chevrolet and the Jeffery in Saginaw and Gratiot counties. Headquarters have been opened at 702 Genesee Avenue.

Thomas Goodreau, Ishpeming, Mich., has contracted for a new garage, to be located on Main Street.

A. M. Spaugenburg and J. H. Appelgate, Charlotte, Mich., have leased the Eagle Building and opened a garage Sept. 1.

The Union Sales Co., Grand Rapids, Mich., has recently been organized by G. A. Smalidge to sell accessories. Headquarters have been opened at 9 Oakes Street, S. W.

G. R. Austin, Grand Rapids, Mich., will enter the general garage business, having leased for that purpose the building for-merly occupied by the Barkwell-Buick Co. on Division Street.

The Reo-Oakland Sales Co., Jackson, Mich., is the name of the new company formed by Harvey G. McCrum and R. Z. Allen to handle the Reo and Oakland.

The Cadillac Co., Grand Rapids, Mich., moved into its new salesrooms, 210 Ionia Avenue, recently. The building has 17,000 sq. ft. of floor space.

Charles Smith, Petoskey, Mich., manager of the Overland Garage, has bought the property at Howard and Bay Streets, where a much larger garage will be erected.

C. B. Gannon, Brighton, Mich., Ford agent, will enlarge his garage and install an acces-sories department.

Mel Swackhamer, Port Austin, Mich., has opened a garage on Lake Street.

Edwin Wheeler, Coldwater, Mich., has contracted for a two-story garage. He is the Ford dealer.

Charles Hoppins, Manistique, Mich., has sold his garage business to Nels Johnson.

The Star Auto Co., Holland, Mich., has been incorporated with a capital stock of $25,000 and will conduct a general garage business.

C. W. Sharp, Imlay City, Mich., has bought the interest M. E. Jones had in the local repairshop and the business is now being conducted as Sharp's Auto Repair & Tire Shop.

The Utica Garage & Service Co., Utica, Mich., has been bought by Kraft Bros.

Henry Girzi, Ishpeming, Mich., has started in the automobile business and expects to take on a line of medium-priced cars.

The Fisk Rubber Co. has opened a new branch office and service station in Gales-burg, Ill., leasing a new building corner of Simmons and South Kellogg Streets. The Galesburg branch is one of a series being established throughout Illinois. The build-ing has a frontage of 60 ft. and a depth of 80. A vulcanizing department and repair-shop will be inaugurated.

Jay Conklin, Canton, Ill., has let the con-tract for a fireproof garage on the corner of Locust Street and First Avenue, 62 x 104, two stories. There will be a sales agency in front and repair and storage rooms in the rear. Supplies will be carried.

The Litchfield, Ill., Tire Vulcanizing Co. has opened for business on the north side of the public square. G. L. Dougherty of Jerseyville and Clark Hills of Franklin, Ill., compose the new concern. The former has been until recently one of the partners in the Jerseyville Tire Shop, recently retiring.

Frank Massing, Danville, Ill., has pur-chased the tire shop of Raymond D. Smith, 22 East North Street, that city, and has engaged the former owner as manager. The business will be enlarged and quarters ex-panded.

White Bros., Havana, Ill., have taken a long-term lease upon a lot on Main Street, between Broadway and Plum, and awarded the contract this week for a fireproof garage of two stories, 60 x 132. The building oc-cupied by the firm for the past year has been found too small and a larger and more modern structure becomes imperative. The new building will be ready for occupancy Dec. 1.

The Williamson Motor Co., Rockford, Ill., which has been conducting the Ford dis-tribution at Freeport, Ill., for the past year, has closed the garage and service station on Galena Street and will devote its entire attention to the Rockford trade. A number of Freeport garagemen are figuring upon opening a Ford agency in Freeport.

Laux Bros. and Frank Walden, Racine, Wis., have purchased the Ware Building at Waupaca, Wis., and are remodeling it into a service station for Buick and Oakland cars. The firm also will handle Delco elec-tric systems.

Quinn & Clark, Westfield, Wis., will en-large their garage by adding 40 x 80 ft. The present building will be used only for re-pairshop and service and the addition for salesrooms and storage.

The Quincy Garage & Supply Co., Han-cock, Mich., has awarded contracts for the erection of a large and modern garage, 60 x 110, of fireproof construction. It will have a storage capacity of fifty cars and a large repairshop.

The Munkwitz Realty Co., Milwaukee, closes bids Sept. 18 for the erection of its new three-story garage, 60 x 120 ft., on Broadway, near Mason Street, part of which will be occupied by Holmes & Co., Ford dealers, 803 Grand Avenue.

W. Heck, Kewaunee, Wis., will build a garage and service station on Clermont Street, Antigo, Wis.

The Motor Car Sales Co., 525 Jegerson Street, Milwaukee, has been appointed State distributer of the Liberty Six for Wisconsin and upper Michigan and will handle Mil-waukee retail business. The company also represents the Marmon and Jordan.

B. R. Owens, proprietor of the Quick Service Garage, East Troy, Wis., has moved to larger quarters provided in the remodeled East Troy Livery.

Wilke & Knopp, Forestville, Wis., have sold their garage and business to William Leege.

The Algoma Tire Repair Co., Algoma, Wis., has been sold by William McLaughlin to Leo Seiler, Forestville, Wis., who takes immediate charge.

The Oconto Garage, Oconto, Wis., is re-modeling and improving its building and adding more repairshop space.

The Peil Auto Co., Bloomer, Wis., will take possession of its new garage Sept. 15. It is 64 x 138 and accommodates eighty cars.

The Service Motor Co., Clintonville, Wis., has been formed by J. C. Freeman, a new Ford dealer, and is opening a garage and service station in the Kuester Building.

Lando L. Albert, Milwaukee, a new Ford dealer, has incorporated the business as the Lando L. Albert Sales Co., with $5000 cap-ital. The incorporators are Lando L. Albert, John B. Toner and F. J. Vebber.

J. F. Acker, Merrillan, Wis., has leased quarters at Owen, Wis., and is establishing a garage and repairshop.

N. M. Howe, Shawano, Wis., is preparing to build a public garage and repairshop, 44 x 150, of brick and tile.

The G. A. Gullikson Co., Stevens Point, Wis., Ford dealer, will build a new garage and service station at West Ellis Street and Strongs Avenue, to be 44 x 124 x 38 x 20, of fireproof construction, to be ready Nov. 15.

NORTHWEST

The Goodwear Tire Co., 506 Andrus Build-ing, Minneapolis, and not the Goodyear Tire & Rubber Co., as was stated in Motor World for Aug. 23, will erect a factory in Red Wing, Minn.

Josh Hatfield, Ellendale, N. D., has bought the Motor Inn.

Kingery & Weber, Forbes, N. D., have begun a new garage.

Digitized by Google

Roberts & Dixon, Devils Lake, N. D., are erecting a garage.

Henry Clark, Erskine, Minn., has opened the James Anderson blacksmith shop as a garage.

Odin Odegard, Princeton, Minn., has opened a garage.

Jungers & Johnson, Kilkenny, Minn., have rented the new Gregor garage.

Thelen Bros., Albany, Minn., will erect a garage.

E. L. Lander, Grand Forks, N. D., has begun construction of a fireproof garage, to be occupied by the Sims Automobile Co.

Chris Anderson, White River, S. D., will build an addition to his garage.

Fakton, Cihlar & Co., Winnebago City, Minn., has dissolved, Fakton taking the garage and automobile business and Cihlar the repair work. Robert Flemming retires.

The Cass Lake Garage, Cass Lake, Minn., is to be enlarged by an addition 50 x 130 ft.

Carle Farup and David Mills, Park River, N. D., have bought the Moore Auto Co. branch and take over the Ford agency and garage business.

H. P. Crandell, Hazleton, N. D., has sold his interest in the Crandell & Wood garage to Fred Asch.

Frank Blaha, Ravinia, S. D., is building a tile garage, 24 x 70 ft.

M. J. Osborn, St. Paul, representing the Overland car, has opened a branch in the Brunswick Building at Stillwater, Minn. H. C. Bliss is in charge. A service station is opened on Water Street in the rear. He will build a $35,000 sales building at South Stillwater.

H. A. Peterson, St. Paul, is manager for the Cadillac agency. He was formerly with the Barclay Auto Co., Minneapolis, selling Chalmers cars. E. A. Erkle has been transferred from Minneapolis to have charge of the Cadillac inspection department.

Will Paschke, West Union, Minn., has bought the Frank Harth interest in the West Union Garage.

M. L. Jones and Idris Jones, Lake Crystal, Minn., will build a garage, 50 x 100.

Erskine & Logan, Grand Rapids, Minn., will erect a brick garage.

Ralph and Guy Lande, Ellendale, N. D., will build a garage.

The Midwest Auto Co., Pierre, S. D., has been capitalized at $10,000 by Bernard McCallag, Winifred Ewert and Theodore Sheehan.

Christofferson & Larson, Cokato, Minn., garage, have dissolved, John A. Larson taking the garage and John Christofferson the sales end.

E. J. Letford, St. Cloud, Minn., will build a $5,000 garage on Broadway.

Ruff & Hoffman, Vergas, Minn., will erect a garage, 40 x 50.

J. L. Gibbons, St. John, N. D., will erect a concrete garage, 40 x 120 ft.

S. A. Louden, Fargo, N. D., will erect a brick garage, 50 x 125 ft., to cost $25,000.

Floyd Cooper, Scenic, S. D., is building a garage.

Poppen & De Vries, Estelline, S. D., have completed a new garage. They have bought the Gagnon Bros. garage machinery and supplies.

J. S. Miller, Como, S. D., will build a garage.

J. L. Gibbons, St. John, N. D., will build a concrete garage, 40 x 120.

The Kuboska Motor Co., Williston, N. D., has been organized and will open a garage at First Avenue E. and Second Street.

A. C. Berg, South Shore, S. D., has opened a repairshop.

L. D. Cochran, Elkton, S. D., is now sole proprietor of the Cochran garage.

Charles Climmer, Marion, S. D., has rented the Fred Austin garage and will use it for car storage.

Yeandle & Son, Highmore, S. D., are erecting a cement block garage.

Luy & Gieler, Beulah, N. D., have completed a garage.

The Lyons Auto Co., Grand Forks, N. D., has been incorporated at $25,000 by J. W. Lyons, T. A. Wamken, O. G. Wamken.

The Fargo Motor Sales Co., Fargo, N. D., has been organized by Harrison & Spaulding, formerly Aberdeen, S. D., and will build a $30,000 structure, three stories and basement, 50 x 130 ft.

Chadbourn & Son, St. Clair, Minn., formerly Amboy, Minn., have bought the Leo Hardware Co. garage and will open it for business.

J. A. Rossel, Flaxton, N. D., has bought the Flaxton Garage from A. O. Merrill.

Henry Bruns, Esmond, N. D., has opened for automobile business in the Hicks Building.

John Blake, Lamberton, Minn., is going into the automobile business.

The New Ulm Tire Hospital, New Ulm, Minn., has been opened by A. C. Stoltenberg, formerly Watertown, S. D.

Paul Guertin, St. Peter, Minn., has bought the Miller & Olson garage.

EAST

The Hartford Storage Battery & Supply Co., 14 Wells Street, Hartford, Conn., has sold out to the Electric Supply & Equipment Co. James H. Morris will manage the business. Charles Krohn, who has been with the organization since it was formed 3 years ago by George Gammack, remains with the new ownership. The old concern up to a short time ago handled the Stewart products. This branch of the business was taken over by the Stewart Products Service Station at 8 Wells Street, of which George Gammack is proprietor.

The Hartford Automobile Garage & Parking Space has completed a garage at 995 Main Street. There are also three entrances from Church Street. The east end of the building has been raised to three stories, the second of which is occupied by the repair department. The third floor is used for dead storage; the north end of the building is given up to day storage. There is space for 500 cars. An electric elevator is used to raise cars from one level to another.

The Fuller Storage Battery Co., 62 Ann Street, Hartford, Conn., Willard battery representative, has removed to the new three-story building on Church Street. The basement is given over to the battery department, the first floor to the office and salesroom. The other store, on the ground floor, has been taken over by Edward S. Clark, Paige representative, who is now moving in. Clark will now have his service and sales departments under one roof, having taken over the second floor of the Fuller Building for a service department, the third for a repairshop.

The A. C. Hine Co., Hartford, Conn., has segregated the service and sales departments. The sales will be handled from the downtown location, 314-316 Pearl Street, and the parts from the service department at 1329 Broad Street.

Sell Advertised Goods

Read Pages 6 and 7

The Thrall-Colton Motor Co., Hartford, Conn., has been organized to handle the Kissel and has just opened a new sales room at 1283 Main Street. C. M. Colton, formerly with the Studebaker agency, Otis and D. A. Thrall, and E. H. Richardson make up the organization. The actual sales are in charge of Messrs. Colton and Richardson.

H. S. Block, who for some years has been the Chandler distributer for Maryland, is now looking after the retail business for the Chandler in Baltimore at 1014 Morton Street.

The Colonial Automobile Co., 1779 Main Street, Hartford, Conn., has increased its sales department by three men. The allotment for 1917 is more than double that of 1916. The service department has also been enlarged to care for the increasing business.

The Beam Motor Car Co., 1114 [illegible] Street, Baltimore, former Chandler [illegible] are handling the Allen motor car [illegible] new Premier line.

H. Judd Stevens, Walbrook [illegible] burton Street, Baltimore, is the [illegible] for the Glide Motor Car Co. [illegible] Delaware and eastern Pennsylvania.

The Hurwitz Auto Sales Co., [illegible] Bond Street, Baltimore, is the [illegible] outer for the Little Giant truck [illegible] expects to announce a pleasure [illegible] a more central location. E. M. [illegible] and Michael Hurwitz form the company.

The Wilson Motor Co., 605 [illegible] Avenue, Baltimore, former [illegible] and Maxwell distributers, are now handling the Liberty and the Grant lines.

The Fisk Rubber Co., 258 North Broad Street, Philadelphia, is looking for a location in Reading, Pa., for a branch store.

G. Howard Bright, 506 Penn Street, Reading, Pa., is building a brick garage, 16 x 40 ft., at Lansford, Pa., costing $40,000.

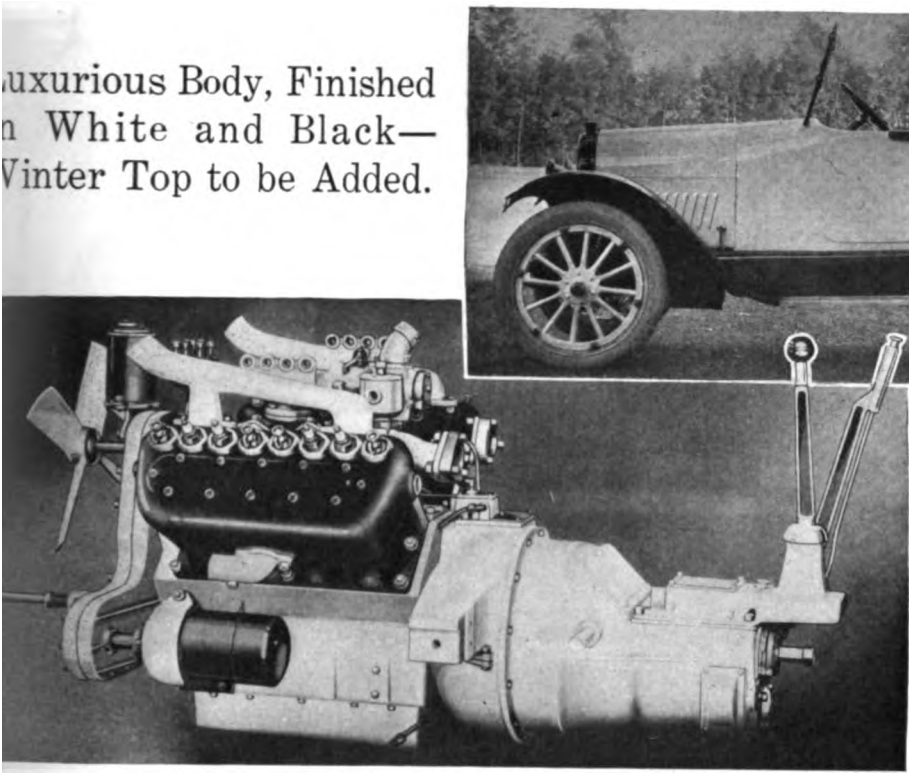
H. H. Ward and F. M. Bowers, of Chester, Pa., are building a brick and concrete garage in the western end of the town costing $10,000. It will have a capacity of sixty cars.

FORD CHANGES

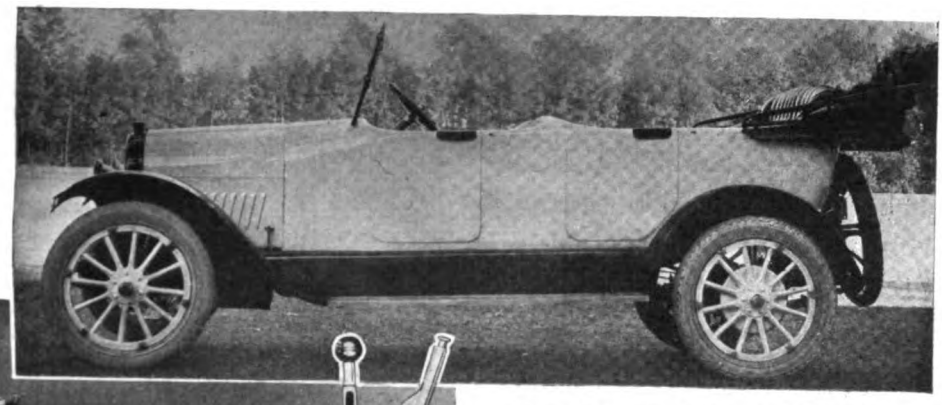
Baltimore, Md.—Thirteen agencies will handle the Ford in Baltimore, and throughout the State of Maryland there will be fifty-five additional agencies. The list follows: Motor Agency, Inc., Eutaw Street, Baltimore; Hosbash Motor Co.; Baltimore Motor Co., 8-11 North Central Avenue; William J. Tickner & Sons, North and Pennsylvania Avenues; J. G. Gorfine, 210 Madison Avenue; Butler Motor Co., Auto Sales & Service Co., 913 North Howard Street; Wilcox-Brown Co., 607 West North Avenue; Kline Motor Co., Northeast Baltimore; the Downtown Motor Co., Frederick and Water Streets; Oriole Motor Co., 1103 Cathedral Street; West End Motor Service Station, 1123-1125 West Baltimore Street; R. M. Stein Co., 408-412 North Calvert Street.

Philadelphia—Benjamin F. Hoffman, sales manager for the Ford Motor Co. of Philadelphia, will leave that company about Oct. 1 and open up the Hoffman Motor Co. at 235 North Broad Street, the quarters now occupied by the Buick agency. Mr. Hoffman will handle Ford cars under the new plan.

Reading, Pa.—The Windsor Motor Co., 1018-28 Windsor Street, has taken the agency for the Ford car and will handle a full line of accessories. J. H. Walborn and L. [illegible] Rothermel are the proprietors.



Tacoma—Peter Leonard has secured the Ford agency in South Tacoma and has opened a service station at South Tacoma. Auto Brokerage Co.



St. Paul—Felix Joswich has taken the Ford agency and has moved it back to Fifth and Market Streets, headquarters before the factory branch building was erected near the Capitol.

Standardized Parts in Yale Eight at $1350

ıuxurious Body, Finished n White and Black— Vinter Top to be Added.

Care has been taken to reduce wind resistance to the minimum in the Yale Eight. The motor is the conventional type of V Block

THE Yale Eight, which is produced by the Saginaw Motor Car Co., Saginaw, Mich, is characterized by ıe use of standardized products ıroughout. For the present it will be ıpplied only in seven-passenger form at ,350, though the addition of a winter ıp is contemplated. The standard color ivory white for the body and black ıders and trim. Yale blue and black optional without extra cost.

The attempt to reduce wind resistance the minimum is apparent in the body ısign. The hood is tapered to blend ell with the rather deep cowl and the des are perfectly smooth. The windıield is smartly raked. There is a cowl the back of the driver's seat which ırves to house the auxiliary seats. All ıors are fitted with pockets. The upılstery is leather and the backs of the ats have been molded to fit the back.

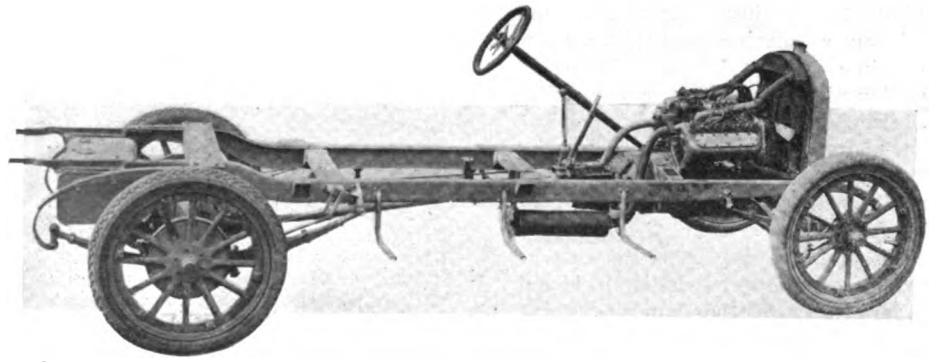
Great care has been taken to insure ccellent riding qualities, and to this end ıe weight has been proportioned over ont and rear axles only after long exeriment. The spring suspension is norıal in front, but in the rear there is ıodification of the three-quarter-elliptic lea, which, however, does not appear nusual to the eye. The springs are 3 in. long.

The motor does not depart from usual ractice, the cylinders being cast in two locks of four each. The Remy ignition nit is accessibly mounted directly at ıe front of the V. The electric lightıg and starting system is a unit outfit nd the battery is a Willard.

Lubrication is primarily by force feed, with auxiliary oiling by splash. Cooling water is circulated by thermo-syphonic action. The clutch is a multiple-disk type, transmitting power through a three-speed selective gearset in unit with the motor. The Hotchkiss type of drive is used.

The Saginaw Motor Car Co. has recently purchased the plant of the American Electric Wheel Co., which will be used to facilitate production. The E. B. Sutton Sales Co. has taken over the entire distribution of the Saginaw company. Headquarters have been established at the factory.

Yale Eight Specifications



Price—Touring, 7-passenger	$1,350
Color	White and black
Make of motor	Own
Number of cylinders	Eight
Shape	L-head
How cast	Blocks of four
Bore	3⅛
Stroke	4½
S. A. E. horsepower	31.25
Ignition	Remy
Carbureter	Rayfield
Starting-lighting system	2-unit
Clutch	Disk
Gearset	Muncie 3-speed
Wheelbase	126 in.
Front tires	34 x 4
Rear tires	34 x 4 non-skid
Steering	Lavine
Make of axles	Timken
Options	Color: Yale blue and black
Equipment	Stewart speedometer and motor-driven horn.

Farmack Becomes Drexel

Editor Motor World:

The change in the name of this company from the Farmack Motor Car Corp. to the Drexel Motor Car Corp. has not been clear to some of the firms in the trade, and we are therefore advising all those with whom we have had any dealings that the Drexel Motor Car Corp. is the same corporation as the Farmack Motor Car Corp., the only change being that of the name. All of the obligations of the Farmack Motor Car Corp. are continuing obligations, of course, of the Drexel Motor Car Corp.—Drexel Motor Car Corp.

Chicago.

The Hotchkiss type of drive is used and the rear spring suspension is characterized by three-quarter elliptic members with an angle drop

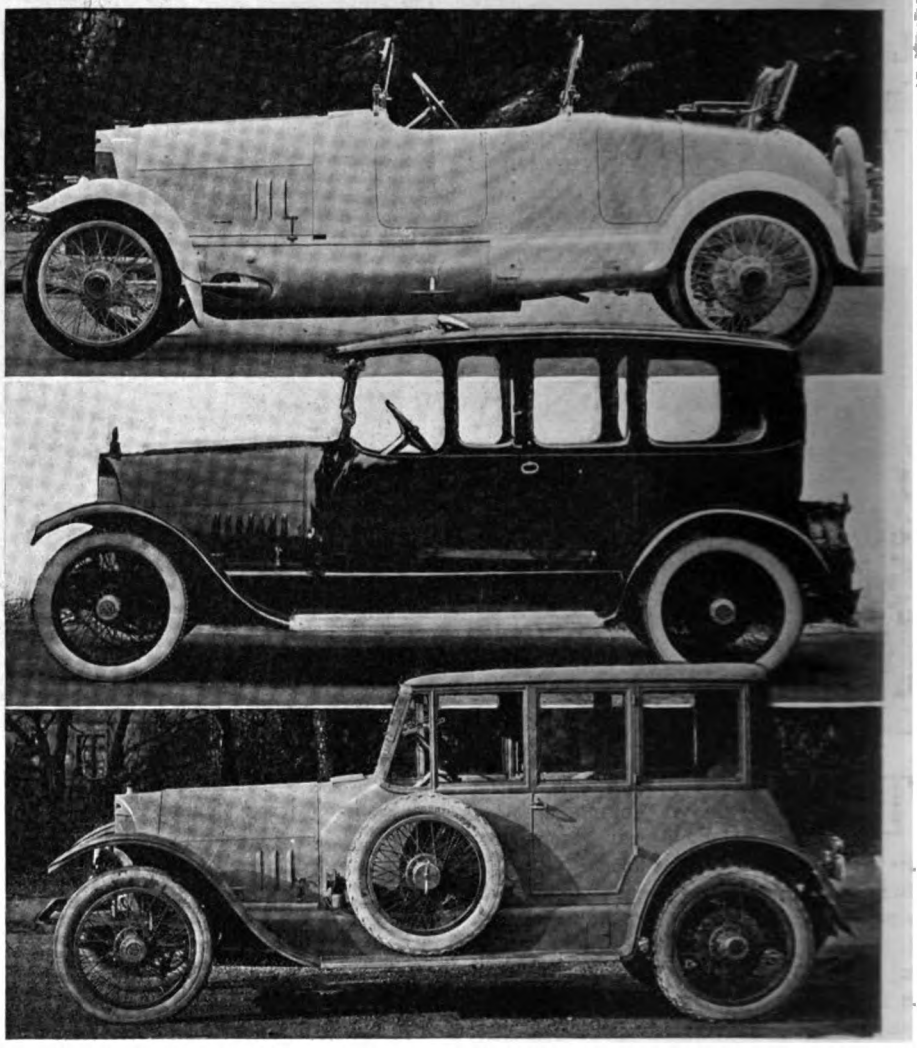
Singer Six Now Has Magnalite Pistons

This is Principal Change—Bodies Enlarged and Lowered

—



Chassis Price is $3000—Standard Touring Model $3500

MAGNALITE pistons are the most important change on the Singer six for 1917. This car, which sells for $3,500, is entering its third year of production with very few changes of a fundamental nature. There are, however, a number of detail improvements, which have rendered the car as a whole lower, of slightly better characteristics at high speed, and more nearly perfect in its suspension and control.

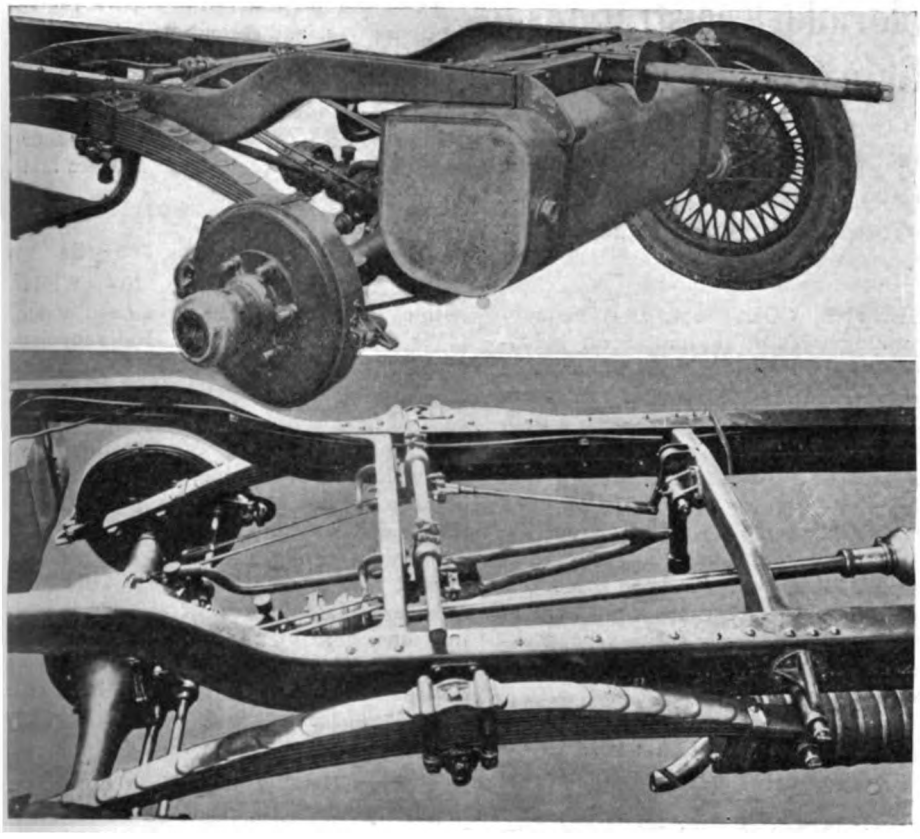
While the major percentage of bodies for the Singer cars are custom built, the concern is marketing a standard roadster, touring and closed bodies. The standard touring design is a seven-passenger type with the Belgian double cowl. The extra seats fold into the backs of the front seats and above them is located the mahogany cabinet, which is an innovation this season. This is made of inlaid wood and is ornamental as well as of practical utility. Any color that is desired will be given the body, so that the purchaser is allowed a very wide latitude in making his selection. The chassis alone sells for $3,000, and in case special bodies are ordered the prices of these must be added to the chassis price.

The only motor change other than the pistons is in the oiling system, which heretofore has fed lubricant to the connecting-rod bearings by splash. In the new cars, pressure feed, acting at 30 lb. per square inch, sends the oil positively to the required spots. This has necessitated a new oil pump.

Structurally, the Singer car is longer and lower, although the wheelbase is shorter. This condition is obtained by an increase in the length of the frame of 6 in. The wheelbase is now 136 in., instead of 138, giving a greater overall length on a shorter supporting span. The prime reason for the change in frame length is in a new type of gasoline tank, which, instead of being cylindrical, is now of rectangular section. The cylindrical tank was used because it conformed to the turned-over frame ends which formed the rear tire support. Since a spindle is now being mounted to carry two extra wire wheels, it is not necessary to curve the frame over any more, and hence the new form of tank and longer frame.

MOST OF THE SINGER BODIES ARE CUSTOM BUILT
Upper—This is a specially designed roadster type without running boards
Center—This, too, is a special—a limousine with cab sides
Lower—This type of touring sedan is becoming very popular

Singer Specifications for 1917



Price—	
Chassis	$3,000
Touring	3,500
Limousine	4,600
Landaulet	4,700
Color	Optional
Make of motor	Herschell Spillman
Number of cylinders	Six
Shape	T-head
How cast	Threes
Bore	4
Stroke	5½
Magneto	Bosch
Carbureter	Rayfield
Starting-lighting	Westinghouse
Clutch	Cone
Gearset	4-speed
Wheelbase	136 in.
Tires	35 x 5
Wheels	Houk
Steering	Gemmer
Make of axles	Timken
Type rear axle	Floating

This increase in frame length has given more body room because of the extra supporting surface which is now possible beneath the sills. The rear seat is also wider, having been increased from 45 in. to 47 in. The body is more comfortable also, because of deeper upholstery, which is now 10 in., and instead of tufting, French plaiting is used in its place. As far as decoration and convenience go, the body is improved, particularly in the fitting of a new mahogany case in the rear cowl behind the front seats.

The rear springs are now flatter under load than formerly. The flatter springs, combined with lower bodies, make the entire car 3 in. lower than it was a year ago.

In the front springs there has been an alteration in mounting. These are parallel to the center line of the car, but are tilted in their own vertical planes, so

Digitized by Google

Upper—The rectangular Singer gasoline tank is strapped to the frame
Lower—The rear springs are now flatter than before; the car is 3 in. lower

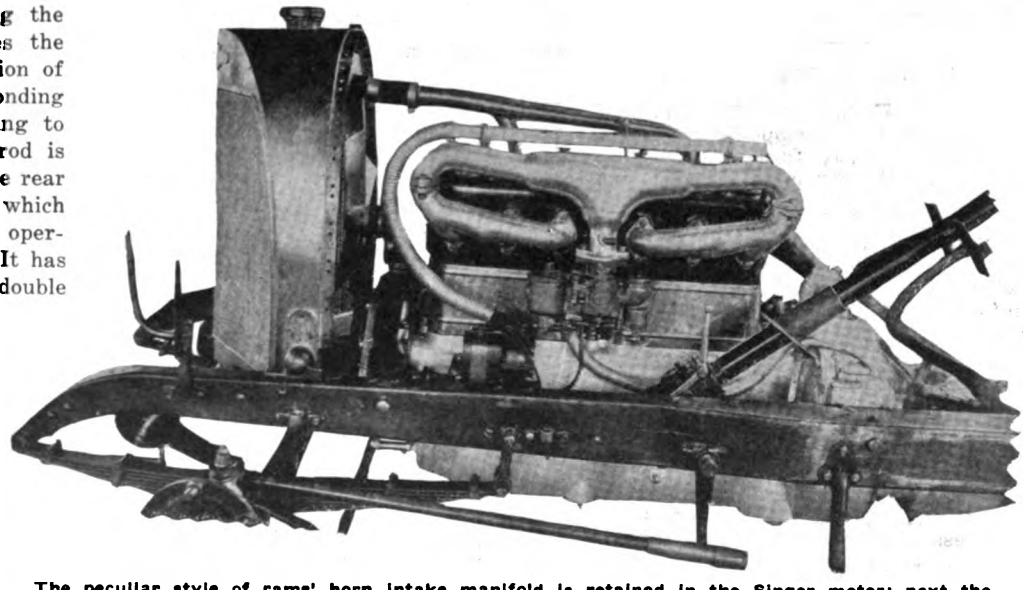
that the forward end of the spring is lower than the rear. This has been done owing to the belief of the engineering department that the shocks are better absorbed in this way. The front spring horn has been made steadier and of greater bearing space to compensate for this change. In addition, the Timken axle, which is used in front, is now the heavy-duty design, with full bearing support.

While the torque rod made up of welded Shelby tubing with cross-members forming virtual webs is still employed, it is 8 in. shorter. This change has been accomplished by moving the front cross-member, which carries the support for the forward termination of the torque arm, back a corresponding distance. The result is that owing to the decreased length the torque rod is more rigid. Another change in the rear linkage is in the braking system, which used to run continuously from the operating levers back to the brakes. It has now been broken in two, giving a double reduction.

There is a longer clutch pedal, which has increased the leverage to such an extent that a person standing beside the chassis has no trouble in disengaging the clutch with the hand. The steering gear has been changed and is now a Gemmer.

Fitted to the motor there are three attachments which are innovations for the 1917 model. These are a Rayfield carbureter, a Klaxon horn and a four-bladed cast aluminum fan.

The Singer power plant is made up of a specially-built Herschell-Spillman engine, a dry-plate clutch and a four-speed gearset with direct on fourth. While the engine is rated at 50 hp., it has developed in excess of 100 at more than 2000 r.p.m., and with the aluminum pistons there has been an increase in power output due to a higher maximum speed. Probably the most notable point of the power plant is the unique system of manifolding. It is to this that a large part of the power and flexibility is credited.



The intake manifold has a sort of ram's horn effect, taking the gases from the carbureter, carrying them upward to the branches of a Y-shaped waterjacketed pipe, from where each branch divides into a loop to the three cylinders.

On the exhaust side there is a dual manifold in which each set of three cylinders is taken care of independently, thus avoiding conflicting or overlapping exhaust. The manifold is in one piece, but there is a wall between, which separates the flow from each block of three cylinders. The timing is arranged so that the exhaust of two cylniders are never open at the same time.

The engine dimensions are 4 x 5½. The cylinders are T-head, cast in threes with integral waterjacket spaces closed by caps on the top. The manifolds are separate. Both sets of valves are thoroughly inclosed, giving a clean exterior. The carbureter and magneto are mounted on the left, the latter being a Bosch high-tension instrument with the wire lead carried in conduits to the spark plug. On the right side is mounted the electric generator and water pump, and also the starting motor. The generator and pump are carried on the same shaft, while the starting motor engages with the flywheel at the rear right of the engine.

The remainder of the electrical equipment is Westinghouse. There is a two-unit starting and lighting system, operated on the single-wire system, and the storage battery is a Willard.

In the new oiling system the gear pump is driven off the camshaft and the oil reservoir is in the bottom of the crankcase. The oil is fed under pressure to the main bearings and through the hollow crankshaft to the remaining bearings under pressure. Under ordinary

The peculiar style of rams' horn intake manifold is retained in the Singer motor; next the carbureter it is waterjacketed

Digitized by Google

running the oil feed is up to 30 lb. per square inch, but this will vary according to the work performed by the engine. The oil is recirculated and screened on its course through the lubricating system.

Power is transmitted from the motor to the gearset through a dry-plate clutch consisting of steel disks faced with fiber. The clutch is held engaged by a double concentric helical spring. This clutch is in a unit with the four-speed gearbox.

Two Spicer universals are used. The axle is a Timken floating design. The drive is taken through cantilever rear springs, but the torque is taken care of by a special member assembled and welded together in the triangular form of Shelby steel tubing. The axle gears are spiral bevel and provide a ratio on direct of 3½ to 1. The wheels are Houk wire and carry 35 x 5 tires, which have been continued.

One of the noteworthy features of the Singer construction is in the rigidity of its frame layout. As is conventional practice, the individual members are of channel section, with a 5-in. depth of web and 4-in. flanges. The frame is amply provided with cross-members, which stiffen it against racking stresses. The cross-members are fitted with large gusset plates, which give them a capability of withstanding distorting tendencies.

As would naturally be expected with a chassis of this price, the equipment is of the best throughout. The radiator is a V-shape of exceptional size and capacity and throughout the actual fittings are large and sturdy. The top is a one-man design, provided with Jiffy side curtains and connects with a special built-in ventilating windshield. The car also has a Warner 100-mile speedometer fitted with an electric light, Klaxon horn, 8-day keyless clock, electric trouble lamp with extension cord, tools, jack, motor-driven tire pump and a full supply of nickel fittings.

Booth Heads Scripps-Booth Corp.

NEW YORK, Sept. 18—The board of directors of the Scripps-Booth Corp., which was recently formed to acquire and operate the Scripps-Booth Co. and the Sterling Motor Co. of Detroit, is made up of the following: C. H. Booth, president; W. H. Little, N. J. Miller, W. L. Scripps, F. J. Senenbrenner, Alfred P. Sloan, Jr., and T. P. Warner. Up to the present time the production of Scripps-Booth cars has reached approximately 6000, about one-third of which has been sold in foreign markets.

Colorado Registrations Gain 66% for Half Year

First Six Months of 1916 Show 14,405 More Cars Than Last Year —Total Registration 36,231 Cars

DENVER, COL., Sept. 16—The substantial growth of the motor car industry in the Rocky Mountain region, and also the rapid development of Colorado's scenic highways, are indicated by a gain of 14,405 cars, or 66 per cent, for the first half of 1916 over the same period last year.

Practically complete returns from the sixty-three counties give a total registration of 36,231 cars for the 6 months, as against 21,826 for the first half of 1915 and 28,254 for the entire year, making a gain of 7977 cars, or 28 per cent, over last year's total.

Secretary of State Ramer estimates that the total registration for 1916 will pass the 45,000 mark, making an increase of more than 50 per cent over last year, and that it has already reached 40,000, which would be one car for every twenty of Colorado's 800,000 people.

These estimates are based upon partial returns received for July and August, upon the calls from county clerks for more license tags, and upon the continued heavy sales reported by State distributers of cars.

To the 1913 registration of 13,624 cars, 1914 added 4809 cars, or an increase of 35 per cent, while 1915 showed a gain of 9821 cars, or 53 per cent, over 1914, and this year promises a gain of 15,000 to 18,000 cars, or more than 50 per cent, over last.

The registration has been so heavy this year that the returns from the counties to the State house have been exceptionally slow. Many counties did not report until along in August upon the last 2 to 4 months of the half year, while some held their returns for the entire 6 months until in August. One small mountainous county, San Miguel, has made no report at all, except that it had used up its original seventy tags and would need fifty more. Only one county is recorded as having no cars at all. That is Dolores, highly mountainous and thinly settled, and located in the extreme southwestern corner of the State. And there is an unofficial report that two residents recently bought cars and registered them in an adjoining county, Dolores having no tags.

The total revenue from the motor vehicle license fees last year was $120,000 in round numbers, and the receipts for 1916 will likely be between $150,000 and $175,000.

The Ford is first, with 15,727 registrations; Overland second, with 2926, and the Buick third, with 2369. The Buick held second place a year ago by a lead of 54 cars ahead of the Overland. The Maxwell has 1707, while the Studebaker combination of Studebaker, Flanders and E. M. F., totals 1850.

To Revive Indianapolis 500-Mile

INDIANAPOLIS, Sept. 19 — While nothing authoritative has yet been done, it is expected that the Indianapolis Speedway will ask a sanction for a race of 500 miles with a purse of $50,000, to be held next Decoration Day. The original speedway contest was for this distance, but it was reduced to 300 miles because of the seeming unpopularity of the longer event.

Some time ago the speedway managers agreed not to offer more than $100 per mile, and since a purse of $50,000 is being considered by the Indianapolis management, it necessarily follows that the distance must be increased if the $100 per mile agreement is to be kept.

Ryan Heads Gibson Branches

INDIANAPOLIS, Sept. 20—The Gibson Co., Indiana Overland distributer, has appointed P. J. Ryan supervisor of its six branches. He has been identified with the Gibson Co. for many years. He will have charge of branches and branch managers at the following cities: Muncie, W. B. West; Lafayette, W. A. Veerkamp; Logansport, Earl Freese; Vincennes, Sol Allman, and Danville, Ill., J. F. Ryan.

Loewe Made General Manager of Brunswick-Balke-Collender

MUSKEGON, MICH., Sept. 18—F. J. Loewe has been appointed general manager of the Brunswick-Balke-Collender Co., billiard and bowling alley fixture maker, which entered the automobile tire-manufacturing field last April.

Abandon Signal-Commerce Merger

DETROIT, Sept. 19—The merging of the Signal Motor Truck Co. and the Commerce Motor Truck Co. here under the name of Signal Commerce Motor Truck Co. has been abandoned. It had been the plan to take over the two properties and incorporate under New York State laws, with capital stock of 600,000 shares of no par value. Thomas Neal, president of the Signal concern and one-time head of General Motors Co., was to have been president of the merger, and W. E. Parker, president of the Commerce company, was to have been vice-president of the proposition. The two motor truck manufacturing concerns involved in the negotiations will revert to their original individual identities, and each will continue to operate separately as heretofore.

Urge "Open Price" as An Aid to Cooperation

Price Publicity, Aired at Babson Conference, Would Curb Price Cutting

WELLESLEY HILLS, MASS., Sept. 15—The Third Babson Conference on Co-operation was held here Wednesday, Thursday and to-day. Its object is the promotion of co-operative competition, which includes the open price and profit-sharing.

The open price is the most radical part of the plan, for profit-sharing is quite extensively practised and is generally understood.

The open price means "price publicity," and in those associations which are founded on this idea the members freely exchange the prices they make on different articles, the bids they submit on contracts and even the cost of production.

It is opposed to price maintenance, and yet it tends to reduce price cutting. The element of futurity is eliminated. No member tells what his price shall be, but instead tells what it HAS BEEN or IS NOW. This prevents unscrupulous buyers from playing one manufacturer against the other and beating down prices by false statements. But there is nothing to prevent any man making any price he wishes. He can sell below cost if he wants to. The big idea is that if all the prices are known to all there will be less tendency to cut ruinously than if all work in the dark and slash dangerously low to make sure of getting the business.

The open-price plan is operated through associations, which exchange the information through a bureau. There are about twenty associations to-day and the plans vary in detail. In some all the data connected with a sale are given—price, customer's name and cost. In others less is given, running down to the price alone.

Were the open-price idea applied to the retailing of motor cars it might work out like this:

If Smith went to the Jeffery dealer to get a price on a used car the Jeffery dealer would quote a price and would pass the information along to the trade association, which would in turn notify all the other members. This would check Smith in his dickering.

At meetings of the association members would freely state what they have been charging for repair work, whether by the hour or by the job. This would by no means be price-fixing, for any man would be permitted to charge what he wished. The association would, however, recommend the installation of cost systems so each man could know his hour costs as opposed to his hour charges.

Carried to a logical conclusion, the plan would include the exchange between association members of any cuts made in the price of cars. There would be no rule against price-cutting, but each member would be expected to tell of any cuts he made. As the trade stands to-day, most dealers believe that most of the other dealers cut—but nobody knows; and this condition alone is responsible for much of the uncertainty in price among dealers.

The open-price part of the conference was devoted principally to an explanation of plans now in effect. The speakers were: D. B. Doremus, Salt Producers' Association; Ernest H. Gaunt, Optical Manufacturers' Association; W. V. Spaulding, Leather Belting Exchange, and H. S. Wales, Pressed Metal Association.

Another phase of the work of these associations is that of cost finding. Efforts are made to have manufacturers install systems that will tell them the exact cost of the product, which information will be of assistance in making prices. The speakers stated that cost systems disclosed some startling facts to manufacturers.

In the employees' profit-sharing part of the conference three plans were described:

1. Simple share in company's profits. Described by Everett Morss, president Simplex Wire & Cable Co., Cambridge, Mass.

2. Share in profits and stock interest in business. Plan used by Dennison Mfg. Co.; described by Mr. Dennison.

3. Share in profits under fraternal interest of company without interest in company. Plan of Ford Motor Co.; described by Dean S. S. Marquis, head of the educational department of the Ford Motor Co.

Most of the conference was quite informal, and facts and figures pertaining to corporate internals were passed back and forth in a truly "open-price" way.

Keating Wins Contest

BROOKLYN, Sept. 18—Joseph Keating, of the Studebaker branch in this city, has won the 1000-point contest for the branch and is spending the week at the Studebaker factory at the expense of the company.

Hudson Building Service Station

NEW YORK, Sept. 18—The Hudson Motor Car Co. of New York, Inc., has let the contract for a service station, 203 x 239, four stories, between West Sixty-eighth and Sixty-ninth Streets and the North River.

Banner Selling Season Assured for Kentucky

Corn, Tobacco and Hay Crops All Strike New High Levels—Prices Are High

LOUISVILLE, KY., Sept. 16—Kentucky dealers will have a banner selling during the next 12 months. Dealers and factory representatives are elated over the latest report of the United States Department of Agriculture, forecasting for the State a corn crop of more than 114,000,000 bu., which is equal to the crop of 1915, which, in turn, was the largest crop ever raised in the State; a tobacco crop of 472,000,000 lb., which is 115,000,000 lb. larger than the crop of last year, and is a new high record, and a hay crop of 1,240,000 tons, an increase of 15,000 tons over 1915, and also a new high record.

Crops falling short of 1915 include wheat, with an estimated production of 8,190,000 bus., as compared with 9,900,000 bu. in 1915; oats, with a yield of 4,540,000 bu., a decrease of 920,000 bu. from 1915, and apples, with a yield of 2,470,000 bbl., as compared with 4,170,000 bbl. in 1915.

The large crops of corn, tobacco and hay more than offset the decreases in the other crops, and the sharply advanced prices for all farm products give the crops of the State a substantially higher value than the crops of 1915.

This means prosperity in the Blue Grass State, and there is no question but what big corn, tobacco and hay crops will result in a greater demand for cars. Farmers and people out in the State are buying more machines than ever before.

It is pointed out by local automobile men that in a crop year marked by extreme fickleness of weather, from which the country as a whole has suffered severe losses in the principal crops, Kentucky has been conspicuously fortunate.

Kentucky farmers are assured of remunerative prices for their corn, whether they sell it or feed it to livestock, and prospects are favorable for the realization of good prices for tobacco in view of the exceptionable quality of the crop and the general prosperity of the country. Domestic consumption of tobacco is at the highest point ever reached, and it is not unlikely that considerable tobacco will be exported, notwithstanding the many obstacles in the way.

2000 Motor Trucks in Wisconsin

MILWAUKEE, Sept. 15—The State of Wisconsin now has upward of 2000 motor trucks. Less than 7 years ago there were only 122 trucks in the State. International trucks head the list, with Buick second, Stegeman third, Kissel fourth and Chase fifth.

Car Show Building at Brockton

BROCKTON, MASS., Sept. 18—A $25,000 motor car exhibition hall is to be erected on the Brockton Fair Grounds. It will have display space for 108 cars and will be completed the latter part of September. It will be 200 x 125 ft., with only two rows of posts, and will be electrically lighted.

Texas Fair Show Oct. 14-29

DALLAS, Sept. 15—With the completion of the large annex to the already big automobile building on the Texas State Fair grounds, drawings will be made for the annual Texas Automobile Show, Oct. 14 to 29, in connection with the Texas State Fair. It is expected that more than one million people will witness the automobile show. It has not yet been determined whether the admission fee of 10 cents will be charged. It is very probable this will not be done, as it is pointed out that many more people will witness the exhibition than would otherwise. The rules and regulations adopted by the Dallas Automobile Dealers' and Accessories Association were drawn by W. G. Langley, Texas representative of the Franklin Automobile Co., and M. F. Sterrett, manager of the Electrical Appliance Co.

Speedway Men to Confer

NEW YORK, Sept. 18—Representatives of speedways in Tacoma, Indianapolis, Chicago, New York, Cincinnati, Providence, Des Moines, Omaha, Kansas City and Sioux City will meet in this city Sept. 29 to fix the speedway racing dates for 1917. Some of these tracks are represented by three or four men, which brings the gathering up to twenty-five or thirty.

New Goodyear Fire Truck Tire

AKRON, Sept. 16—The Goodyear Tire & Rubber Co. has just brought out a new hand attachable cushion fire truck tire which supersedes the cushion demountable type largely used in commercial and fire service. This tire is designed for motor truck and fire apparatus use also, but is stated by the Goodyear company to be tougher, more resilient, and able to resist road punishment better than the previous design.

Ford Distributes $860,000

DETROIT, Sept. 18—The Ford Motor Co. has distributed $860,000 as bonuses among 1600 heads of departments, superintendents, foremen and other employees in sums of $100 and up. This is $125,000 greater than the 1915 bonus and it is distinct in the profit-sharing plan.

J.W. Packard Purchases Packard Buffalo Agency

Maker of First Packard Car in 1899 Re-enters Trade—Will Also Handle Liberty

BUFFALO, Sept. 18—J. W. Packard, who founded the Packard Motor Car Co. of Detroit, and who gave his name to the car, has re-entered the motor car industry and with the same company. He has purchased the Buffalo interests of the Packard Motor Car Co. of New York and will conduct the Buffalo branch as an agency.

Mr. Packard is president of the new business, which is called the Packard Buffalo Motor Co., Inc. B. C. Day, former manager of the branch, is vice-president, and the other directors are: W. D. Packard, capitalist, a brother of the president; E. C. Sutton, president of the Wheat's Ice Cream Co., and L. R. Davidson of the Davidson Ore Mining Co.

The first Packard car was built in Warren, Ohio, by J. W. Packard in 1899, and the present business has grown from that beginning. While it was still in its infancy, J. W. Packard sold his interest to the group which now controls it and has not been actively connected with the motor car industry since.

In addition to the Packard the new company will handle the Liberty.

Dodge Bros. Dealer Stages Parade

PROVIDENCE, R. I., Sept. 16—Fred E. Howard, manager of the Broadway Sales Co., Dodge dealer, staged a motor parade here last week, when the annual convention of fire chiefs was held in the city. When it was planned to give the feminine members of the convention a motor ride about the city, Howard promised to take care of the matter. He went to owners of Dodge cars and about thirty of them responded. These, with the twenty that he secured from his service station, made a line of fifty machines, which attracted a great deal of attention.

Newman Out of Harry Newman, Inc.

CHICAGO, Sept. 19—Harry Newman, president of Harry Newman, Inc., Chalmers dealer in Chicago, Milwaukee and Springfield, has resigned. He is succeeded in the Chicago branch by S. E. Comstock, who has been made general manager. Joseph B. Diebler will control the Milwaukee branch and J. D. Sullivan, Springfield.

Newman secured the Chalmers agency some months ago, and since then has had a spectacular career. He contracted for a $30,000 electric sign on Michigan Avenue, the sign being one of the largest in the city. It is reported that he had theater advertising contracts extending over several years. Newman has further been reported as living lavishly, and has created more talk along automobile row, Chicago, than any other dealer. Harry Newman, Inc., was backed by S. T. Jacobs, a Chicago business man, and the business will be continued as formerly.

Fisk May Increase to $12,500,000

CHICOPEE FALLS, Sept. 19—The stock of the Fisk Rubber Co. probably will be increased to $12,500,000. Stockholders will meet Oct. 2 to act on the proposed increase. Of the new stock, $7,500,000 or less is to be first preferred convertible and the remainder of the total increase second preferred.

Locomobile Stages Fourth Exchange Car Exhibition

NEW YORK, Sept. 18—The Locomobile Co. of America, at its New York branch, is this week holding its fourth semi-annual Exchange Car Show and Sale. The first was held in April, 1915. The branch salesroom on West Sixty-first Street is devoted entirely to exchanged and rebuilt Locomobiles. Invitations are sent to a selected prospect list and good results have been secured. The show this week is of somewhat greater proportions than its predecessors in that the company now advertises that the New York branch is the exchange car clearing-house for the branches in Boston, Philadelphia, Chicago, St. Louis, Kansas City and the factory in Bridgeport. Advertising of conservative layout with good space and Locomobile atmosphere is being used in several New York papers.

Chalmers Opens Sales Contest

DETROIT, Sept. 16—A sales contest for distributers, dealers and salesmen was inaugurated on Sept. 5 by the Chalmers Motor Car Co. The contest will run until Oct. 31. Entries closed Sept. 15. There will be many prizes, ranging from an automobile down. The rating of any particular individual is based on the territory he is working in.

Closed-Car Week for Chalmers Dealers

DETROIT, Sept. 16—The week beginning Monday, Oct. 2, will be closed-car week among Chalmers dealers. Closed cars will be displayed in showrooms all over the country, and in most cases special decorations will be employed. Many dealers are planning to give small souvenirs to prospects calling during this week. A number of dealers also are sending out engraved or attractively printed invitations calling attention to the closed-car week.

Sales Promotion Plan Adopted by Chalmers

Will Study Conditions in Dealer's Territories and Help Dealer Boost Sales

DETROIT, Sept. 16—To aid Chalmers dealers in selling cars is the purpose of the new sales-promotion department which has been inaugurated, with C. H. King as manager and W. L. Agnew as assistant. The new department has nothing to do with allotments or shipments, but is designed solely to help dealers and salesmen sell cars.

One of the most important features will be a school for salesmen, but in addition aid will be given directly by this department. For example, suppose the dealer is not selling as many cars as he should. The department studies the condition and finds out why. The purpose is to distribute as many cars in each territory as the wealth of that territory will allow.

Methods and plans which have been found good by any one dealer will be passed on to the other. One dealer may work out a successful method of analyzing the buying power of his territory. Another may have made a success of handling prospect letters. A third has built up a successful business by giving remarkable service. These dealers will be ferreted out and the features of their businesses described so that other dealers may copy them.

The first session of the school opens Oct. 2. Thereafter sessions will be held three nights a week for four weeks. The fisst session will be for local students, but after that it will be conducted as a day school for dealers and salesmen throughout the country.

C. H. King was sales manager for H. L. Keates, Chalmers distributer for 7 years, and after that was general director of sales for the Coign Machine Co. W. L. Agnew was in charge of advertising and sales promotion departments of the Hudson Motor Car Co. previous to accepting this position.

DeCou Out of Jeffery

MILWAUKEE, Sept. 16—Jerry W. DeCou, factory manager of the Nash Motors Co., Kenosha, Wis., resigned Sept. 15. DeCou became associated with the late Thomas B. Jeffery in 1896, first in bicycle manufacture and later assisting Jeffery and his sons in developing the present Jeffery car.

KENOSHA, WIS., Sept. 19—John Bjorn, formerly superintendent of the Nash Motors Co., has been appointed to succeed Jerry DeCou.

Boston Overland Dealer Opens a New Building

Connell & McKone Hold Housewarming, Receive 600 Visitors and Book 25 Orders

BOSTON, Sept. 16—On Tuesday, Wednesday and Thursday of this week the Connell & McKone Co., Overland distributer, had open house in the new building just finished for them. An orchestra played from 10 in the morning until 10 at night. In response to invitations sent out, more than 1500 people visited the salesrooms during the 3 days. On the opening day there were some 600 visitors. More than twenty-five orders for new cars, twenty used cars and ten truck sales were booked. The new salesrooms differ from the ordinary motor building in that it is practically a two-story structure, but made as a one-story place, this giving a space of 28 ft. between the floor and the ceiling in the salesrooms. It is possible to place fifteen vehicles in the salesrooms for new cars without crowding, and if it were necessary to place machines in tiers, three could be placed one above the other, with plenty of space between them. In the rear, divided off by double doors, is a large room for used cars capable of holding fifteen cars. The offices are on a floor above the dividing wall between the two rooms and so arranged that one may look down from either side into the rooms.

MOTOR CAR TYPE ENGINE ULTIMATE FOR TRACTOR

(*Continued from page* 23)

the ground. It is possible to observe tractors to-day in which the radiator top swings an inch from side to side with each explosion.

Further, as regards the punch applied to the gears in the transmission by large individual explosions, this is greater than might at first be imagined, greater than it would be on any other type of vehicle, because the tractor is positively driven by the explosions. A tractor has not an eighth of an inch of "coast"; throw off the switch and it stops dead with a bump. Practically it is impossible to supply enough flywheel to do more than carry the crank from one explosion to the next.

It is therefore safe to say that the automobile type of engine is going to be the ultimate type for tractors, just as it has become the conventional type for trucks. If this be admitted, consideration of what a tractor engine ought to be can be narrowed down considerably. In brief, it needs to be a large truck motor which will withstand usage a trifle rougher and more arduous than that given the average truck power plant. There are some truck engines which are perfectly suitable for tractor work, but others which are not, so one might say that the very best of truck motors is what the average of tractor engines ought to be.

One thing cannot be stated too strongly, and this is the need for protection against dust, mud and water. The tractor engine ought to be capable of being buried in slime at the bottom of a pond for a month and then dug up and put straight to work without any overhaul.

A side issue suggested by this consideration brings up a point where the tractor should not follow automobile practice. The engine should be under a hood, of course, but the radiator should *not* be the front end of the hood. The radiator should be separate, standing out somewhere in front so that it will be exposed to all the winds that blow, and the fan can be outside with the radiator. The engine should be boxed in so that the only communications it has with the outside are the carbureter air intake and the exhaust pipe. There might just as well be no hood at all as a hood with a fan to blow dust into it.

As regards details, any engine that is running at full power 100 per cent of the time is placing a severe stress upon the valves and the ignition, particularly upon the spark plugs. Spark-plug trouble is the main difficulty against which tractor engineers are contending at present, and it is intensified by the high temperatures produced by using kerosene as fuel. The answer seems to be to use the small plug now adopted for racing engines and likely to be standardized for aeroplane use. Several tractor engines are already fitted with the small plug, and it is probable that more will follow.

Valve areas have to be fairly large, though not very large in proportion to the cylinder size, since there is no need for high speed. Since valve trouble is always due directly or indirectly to valve temperature with an "all the time full power" engine, it is manifestly important to cool the valves as thoroughly as may be, and this suggests that it may be found advisable to use four valves per cylinder rather than two large ones. For the bigger sizes, where 60 hp. or more is wanted, a T-head cylinder with a pair of valves each side seems better engineering than any form of cylinder with two very big valves. This has not yet been tried out in practice, but Diesel engines, which have the severest temperature conditions of all to combat, most commonly employ multiple valves.

Blevins Heads Merger of Blevins and Davis

To Distribute Studebakers in Ohio and Parts of Five Adjoining States

CLEVELAND, Sept. 16—The Blevins Auto Sales Co., Toledo and Cincinnati, and the A. R. Davis Motor Co., Cleveland, both Studebaker dealers, have been merged into a new $500,000 company headed by Harry W. Blevins. The company has contracted for $12,000,000 of Studebaker cars and will have the distribution of Studebakers in Ohio and portions of five adjoining States. The company starts with three of the largest and best equipped buildings in the State, in Cleveland, Cincinnati and Toledo. Associated with Blevins, who is president of the new company, are: Vice-president, A. R. Davis, Cleveland; treasurer, J. O. Hahn, and secretary, H. G. Rossiter, Toledo. Davis was at one time branch manager for the Studebaker corporation and up to this time Hahn has been Cleveland branch manager.

Jeffery Dealers Get Standard Service Policy

KENOSHA, Sept. 16—The Nash Motors Co. is sending out to its dealers a printed copy of the standard service policy recently approved by the National Automobile Chamber of Commerce. The policy is printed in 14-point and 12-point type on a sheet 18 x 11 in., with blank spaces for the name of the dealer. The Nash company is supplying four of these to dealers who ask for them with the dealer's name printed in the blank spaces. It is proposed that dealers frame the policy for salesroom display.

Firestone Opens K. C. Branch Building

KANSAS CITY, Sept. 14—The new eight-story branch building of the Firestone Tire & Rubber Co. was opened today with a dealers' convention attended by 500 dealers from various points in the branch territory. The dealers spent part of the morning inspecting the new building and the day's program included a group photograph, luncheon, motor parade and a business session in which sales and distribution problems were discussed. There was a banquet in the evening.

Packard Branch in White Plains

NEW YORK, Sept. 18—The Packard Motor Car Co. has opened a branch in White Plains.

St. Louis Car Dealers Take in Their Rivals

But Only for "Open Week" in October and to Help Make the Show a Real One

ST. LOUIS, Sept. 16—The Automobile Manufacturers and Dealers Asociation of St. Louis announces that the automobile show will be given the third week in February, place yet to be announced.

Plans for housing all of the members of the association on Locust Street for "Open Week," the first week in October, have been completed, and this week the directors and show committee will accept designs for signs to be placed over the showrooms. The signs will be uniform. A band will supply the entertainment from 7.30 to 10.30 each evening. There will be a parade of 1917 cars on Tuesday and all cars will proceed to the St. Louis Agricultural Fair Grounds and be parked together for the day.

The housing of all firms on Locust Street is accomplished by putting the non-Locust Street firms with those having showrooms on the street, non-conflicting lines being merged.

Following are the mergers for the week:

Cadillac Automobile Co. of St. Louis, 3918 Olive Street, Cadillac distributer, with Tate-Gillham Motor Car Co., Dodge Bros. distributer, Twenty-third and Locust Streets.

J. I. Case T. M. Co., 700 South Seventeenth Street, Case branch, with Trenton Motor Car Co., National and Regal distributer, 2646 Locust Street.

Ebbeler Motor Car Co., Garrison and Olive, Mitchell and Partin-Palmer distributer, with Chevrolet Motor Co. of St. Louis, Inc., Chevrolet retail branch, Locust-Lindell cut-off.

Ideal Motor Sales Co., 1312 South Grand Avenue, Pullman distributer, with Velie Automobile Co. of St. Louis, Velie distributer, 3021 Locust Street.

Johnson Automobile Co., 3667 Olive Street, Ford distributer, to provide its own space, location unannounced.

Lewis Automobile Co., Walton and Washington Avenues, Chandler distributer, with Packard Missouri Motor Co., Packard distributer, 2201 Locust Street.

Park Automobile Co., Delmar and Clarendon Avenues, Chalmers, Peerless and H. A. L. distributer, to provide its own space, location unannounced.

Stevens Motor Car Co., 4432 Olive Street, Lexington and Milburn distributer, with Weber Implement & Automobile Co., Hupmobile and Grant distributer, 1900 Locust Street.

Von Arx Automobile Co., 3916 Washington Avenue, Winton distributer, with Vesper-Buick Auto Co., Buick distributer, 3205 Locust Street.

Westcott Motor Sales Co., 3331 South Grand Avenue, Westcott distributer, with More Automobile Co., Marmon distributer, 3005 Locust Street.

Western Automobile Co., Euclid and Washington, Pierce-Arrow distributer, with Hudson-Phillips Motor Car Co., Hudson distributer, 3301 Locust Street.

Woods Electric Vehicle Co., 437 North Euclid Avenue; Woods dual-power car branch, with Mound City Buggy and Auto Co., Allen, Jackson and Halladay distributer, 2017 Locust Street.

Accessory Dealers in "Open Week"

ST. LOUIS, Sept. 18—The Motor Accessory Trade Association of St. Louis decided at the September meeting last week to participate in the "Open Week" the first week in October, as planned by the Automobile Manufacturers' and Dealers' Association. Dealers not on Locust Street will be provided with show space in the stores of the Locust Street dealers, as the car dealers are doing. All stores will be decorated, keep open until 10.30 p. m. and display uniform signs. Local managers of tire companies said that, while their companies did not enter automobile shows, they anticipated no trouble in getting permission for decorations and late hours. The Monarch Auto Repair Co., 5255 North Market Street, and W. L. Patterson, "automobile doctor," 5233 Cabanne Avenue, were elected to membership. H. H. Swenson, local manager for the Fiske Rubber Co., was made chairman of the athletic committee, and George Taylor of the Polack Tyre & Rubber Co. was added to the entertainment committee. An address on "Salesmanship" by A. R. Furnish of Brown's Business College and "Memory Training," by J. B. Dishman and W. R. Buckner, made up the serious program.

Alameda Stages "Safety First" Week

OAKLAND, CAL., Sept. 16—The Alameda County Automobile Trade Association sponsored a "Safety First" week held here Aug. 28 to Sept. 2. The first day the association distributed safety first pennants. Next day local preachers told how to practise safety first; Monday tags and puzzles were distributed to pedestrians; Tuesday was "Watch Your Step" day; Wednesday was "Hand Out" day, all motorists being instructed on how to indicate their intentions of stopping and turning; Thursday was "Courtesy, Caution and Corners" day; Friday was "Brake" day, and all motorists were urged to look to the conditions of their brakes; Saturday a great parade was held. The annual banquet of the association will be held Oct. 5.

Genesee County Organizes

FLINT, MICH., Sept. 11—The Genesee County Automobile Trade Dealers' Association has been formed and includes all of the automobile dealers in that county excepting one. The aim of the organization is to bring about a closer cooperation between the dealers relative to service, sales and other matters concerning the dealers' businesses.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Put Workers in New Places

Paul J. Barnard has been appointed sales manager of the Harvey Spring & Forging Co., Racine Junction, Wis.

R. F. Russell has resigned as production engineer of the Bessemer Motor Truck Co., Grove City, Pa., to become identified with the Air Reduction Co., New York.

W. E. Finney, St. Louis, recently manager of the Goodyear Tire & Rubber branch in that city, has been assigned to the mechanical goods department at the Goodyear factory, Akron, Ohio.

O. E. Hoerger, St. Louis, recently assistant to Wilson C. Dodd, manager of the Goodyear branch, has been promoted to operating manager of the Goodyear branch in Boston.

Clarence Albach, St. Louis, who has been selling truck tires in that territory for the Firestone and Gibney companies, has joined the White Co. force to sell trucks.

Earl B. Taylor, St. Louis, recently with the Kardell Motor Car Co. as a Reo salesman, has joined the Johnson Automobile Co. to sell Fords.

John W. Gardner, sales manager of the Kisselkar Co. of New England, Boston, for some time, has resigned to accept a position with the Oldsmobile Co. of Boston.

Joseph Porter, who has been manager of the King Car Corp., New York, has been appointed assistant sales manager by the King Motor Car Co., Detroit.

F. D. Tobin, assistant district manager of the Willard Storage Battery Co., Detroit, has resigned to become affiliated with the Cutting, Armstrong & Smith Sales Co.

Guy W. Morgan, of the Mitchell Motor Car Co., Racine, has been appointed president and general manager of the Consolidated Car Co., Detroit. He takes up his new duties Oct. 1.

Louis H. Bill, general manager of the Nash Motors Co., Kenosha, will leave that organization Oct. 1 and retire to his San Francisco home.

J. Preston Penfield has been chosen president of the Luxurious Light Car Co., 1849 Euclid Avenue, Cleveland, to succeed J. M. Smith, who has gone to the Cole Sales Co. of Indiana.

E. D. Endsley has been appointed sales manager of the Alter Motor Car Co., distributers of the Scripps-Booth and Liberty cars, Cleveland.

Kenneth Skinner has resigned as secretary of the Micro Piston Ring Co., New York, having sold his interest. He has gone into business as a manufacturers' representative under the firm name Auto Appliance Co., 1960 Broadway, where he represents the G. H. Dyer Co., Cambridge, Mass., and the Asbestos & Rubber Works of New Jersey, Camden, N. J.

Franklin G. Hubbard has resigned as chief engineer of the mechanical department of the Western Electric Co. plant at Hawthorne, Ill., to become vice-president, a stockholder and director of the H. E. Harris Engineering Co., Bridgeport, Conn.

T. V. Buckwalter has been appointed chief engineer of the Timken Roller Bearing Co., Canton, Ohio.

A. A. Woodruff has been appointed assistant sales manager of the Simplex Automobile Co., New Brunswick, N. J. His headquarters will be at 60 Broadway, New York. He will have charge of office routine and system and spare and repair parts business and will remain manager of the body department.

Kirk Taylor has been appointed sales and advertising manager of the Evapco Mfg. Co., Detroit, succeeding W. O. Seelye. Taylor was formerly assistant manager for the New Era Spring & Specialty Co. The Evapco company hereafter will sell only to jobbers.

M. D. Kidder, manager of the wholesale sales of Reo cars in New England with headquarters in Boston for the past 2 years, and before that Eastern sales manager for the factory, has gone into business for himself and will handle the Reo line in Maine, with headquarters at Portland. He took over the business from A. E. Darling a few days ago.

George M. Wetherbee, who handled the Cartercar and Metz agencies in Boston for some years until recently, has joined the Cambridge Motor Co., one of the new Ford agencies.

H. W. Spalding, St. Louis, general manager of the Packard Missouri Motor Car Co., has been elected vice-president of the company and placed in charge of the sales department. He is succeeded as general manager by Gilbert S. Loomis, who has been in charge of the Packard interests at Louisville, Ky., and previous to that assignment was connected with the Packard factory.

Wallace C. Capen, St. Louis, whose transfer from the White branch in that city to a factory position was announced recently, will instead become manager of the Chicago branch of the White company. He will take with him C. F. Feltz, manager of the service department in St. Louis.

George P. Lutz, for the past 5 years with the Blevins Auto Sales Co., Toledo, has resigned as assistant manager and disposed of his stock holdings.

W. L. Landreth, formerly with the Indianapolis branch of the Buick Motor Co., is now associated with C. G. Sanders, of the Hoosier Haynes Co., Kokomo, Howard County Haynes distributer.

Don L. Watson, for the last year sales manager of the Haynes Automobile Co., Kokomo, has been promoted to the office of assistant general manager, a newly created position.

John C. Monteith has been made general manager of the Phelps Mfg. Co., Columbus, Ohio, manufacturer of F. & H. wire wheels.

Leak-proof Men Move Up

ST. LOUIS, Sept. 18—The McQuay-Norris Mfg. Co. has made these promotions: Frank J. Stanley of the traveling force is made manager of the Cincinnati branch and Howard W. Sweeney is made manager of the Denver branch.

J. W. Ruse, Production Expert, Dies

KENOSHA, Sept. 16—John W. Ruse, production expert, died here last week of acute dilation of the heart after a brief illness. Mr. Ruse was for 8 years with the Buick Motor Co., Flint, Mich., for the last 6 years as general superintendent. Several weeks ago he came here to become associated with the Nash Motors Co. Mr. Ruse was born 43 years ago in Virginia.

Self-Charging Electric Is Coming From Boston

Will Recharge Itself Running on the Level, Weigh 1500 lbs. and Sell for $500

BOSTON, MASS., Sept. 16—Plans are now under way to build here an electric motor car that will be unusual. It will have a battery that will recharge itself when the car is running on level ground, and it will be possible to run around 2 or 3 days without having to get a boost. It will weigh less than 1500 lb. and will sell in the neighborhood of $500. Plans are under way to place the stock on the market, and the men behind it are all big enough so that their names mean something. The man who has devised the machine has a national reputation in the electrical world and he is connected with the biggest company in the country making electrical apparatus.

Overland to Erect Service Building

BROOKLYN, Sept. 18—The Willys-Overland Co. has leased a site 150 x 130 at St. Marks and Underhill Avenues, 120 ft. west of Underhill, on which it will erect a service station. The rental for a period of years is $100,000.

Stutz and Saxon Earnings

NEW YORK, Sept. 19—The Stutz Motor Car Co. during the 5 months ending May 31 earned $1,319,107.

During the same period the Saxon Motor Car Co. made a profit of $707,907. Its sales were $6,680,008.

Imperial Brass to Double Plant

CHICAGO., Sept. 18—The Imperial Brass Mfg. Co. will begin next week construction of an addition to its factory which will double its floor space. The present building contains 75,000 sq. ft.

Miller Is Found

Motor World wishes to thank the several people who promptly forwarded information as to the whereabouts of W. Miller. He is now representing the Pullman Motor Car Co. in New England. The mail from the trenches in Europe has been forwarded to him through that channel.

Bosch Adds Another Building

SPRINGFIELD, MASS., Sept. 16—The recent addition to the extensive works of the Bosch Magneto Co. is to be further augmented by a large addition providing more than 60,000 additional square feet. Ground has been broken for the building and its completion will be rushed. The addition is to be a single-story building. When this second addition has been completed there will have been more than 130,000 sq ft. of manufacturing space added to the Bosch works during 1916.

Rub-On Becomes Ellis-Smith

BUFFALO, N. Y., Sept. 16—The Ellis-Smith Mfg. Co., Inc., is the new name of the Rub-On Mfg. Co., Inc. The change became effective Sept. 1. The management and sales policy of the company remains the same.

Bound Brook Oil-less Bearing Co. Adds

BOUND BROOK, N. J., Sept. 16—The Bound Brook Oil-less Bearing Co. is erecting a reinforced concrete addition 50 x 100 to its plant No. 2, to take care of the increased business in Nigrum impregnated wood bearings.

Maxwell Doubled Earnings

DETROIT, Sept. 18—The Maxwell Motor Co. earned more than twice as much in 1916 as in 1915. The fiscal year ended July 31 and the incomes compare as follows: Net earnings, 1916, $5,531,034; 1915, $2,337,950.

Touring Hupmobile Reaches Detroit

DETROIT, Sept. 16—The Capital to Capital touring Hupmobile reached this city to-day, to pay its respects to the originator of the tour, President J. Walter Drake of the Hupp concern. The party left Lansing, the capital of Michigan, and the sixteenth visited so far by the car, early in the day, and was met just outside of Detroit by a large party of good roads enthusiasts, who formed a guard of honor, and escorted by a band, brought the touring car through the downtown streets of the automobile metropolis and out to the Hupp factory.

Detroit marks the end of the first division of the long hike. It means that the car has now traveled 3050 miles of the 20,000-mile trip it has undertaken, with the intention of visiting every State capital in the interests of good roads. The car left Washington, D. C., the starting point, on Aug. 28.

Carris to Distribute Franklins

CLEVELAND, Sept. 16—Clayton S. Carris, formerly Central West territorial representative for the Franklin Automobile Co., Syracuse, with headquarters in Chicago, has formed a new company in Cleveland to distribute Franklin cars. The company is incorporated for $40,000 and will begin construction of a salesroom early in 1917. Headquarters are at present 1831 East Thirteenth Street. Associated with Carris are R. H. Frank and J. A. Bott.

Abandon Narragansett Park Race

PROVIDENCE, Sept. 16—The race-meet which was scheduled to be held at the track here to-day has been abandoned.

8,750 Studebakers in 8 Months, New Record

his is 1710 More Than for Whole of 1915—To Build 73,125 Cars in Year

DETROIT, Sept. 16—The Studebaker orp., for the first 8 months of 1916, nding Aug. 31, has sold more cars than or the entire 1915 year. In number of ars, 48,750 Studebakers were sold from an. 1 to Aug. 31 of this year, as compared with 47,040 for the whole of last ear, a gain of 1710.

At the present rate, 1916 sales will be 5.4 per cent greater than 1915, or about 3,125 cars, meaning an aggregate gain or 1916 over the previous year of 6,085 cars, if the present rate is maintained. As a matter of fact, however, is practically certain that the balance n favor of 1916 over 1915 will be greater han the estimate just given, for the utput is being steadily increased and he factory reports sales for the last 4 onths of this year larger in proportion han for the whole 8 months of this year.

It is believed that Studebaker will sell bout 80,000 cars, and with recently auhorized factory extensions, including additional buildings and equipment, will nable the production of 100,000 cars, hat being the mark set for 1917.

Studebaker South Bend Expansion

INDIANAPOLIS, Sept. 14 — The Studebaker Corp., South Bend, Ind., will uild additions to its plant to cost 1,500,000. Contracts for constructing ew machine shops and foundries have een let. The corporation announces hat with the completion of its present lans the plant will be augmented furher by the addition of other buildings o cost approximately $1,000,000. By anuary, 1918, it is expected that the umber of men on the payroll will be inreased from about 5000 to 7000. The um of $500,000 will be spent in building dditions to the corporation's Detroit, Mich., plant during the year.

Vulcan Trucks Discontinued

SHARON, PA., Sept. 14—The line of ulcan motor trucks, made by the riggs-Seabury Ordnance Co., has been iscontinued. The Vulcan truck up until 915 was made in 2-, 3-, 5-, 6- and 7½- on capacities, and was this year offered n all except the two larger sizes.

INDIANAPOLIS, IND., Sept. 14—he manufacture of the Mais truck by he Mais Motor Truck Co. has been discontinued. The Mais plant has been purhased by the Premier Motor Corp. and s now being used for other purposes. he Mais organization has not been disosed of, however, and the Premier comany is carrying a full stock of repair arts for Mais trucks now in service.

Saxon and Stutz on 'Change

NEW YORK, Sept. 16—Stocks of the axon Motor Car Co., Detroit, and the tutz Motor Car Co., Indianapolis, have een listed on the New York stock exhange and will be traded in in a few ays or as soon as the permanent cerificates are ready. The new stock of the eneral Motors Co. is being actively traded in on the Broad Street curb "when, as and if issued." Since Monday last the stock has advanced some 35 points.

Hench & Drongold to Make Bodies

YORK, PA., Sept. 16—The Hench & Drongold Co., manufacturer of garden implements, has entered the automobile field as maker of wood work of all kinds for automobiles and trucks, including bodies and parts of both wood and metal. The company will also build special machinery and do machine and forge work.

New Gasoline Pump from Kentucky

LOUISVILLE, KY., Sept. 16—The Visible Measure Gasoline Dispenser Co. has been incorporated to manufacture, sell, install, rent and lease the visible measure gasoline dispenser. The capital stock of the company is $40,000. The incorporators are J. Henry Brady, William A. Earl and William A. Pell.

Kelly-Springfield May Move

AKRON, Sept. 18—The Kelly-Springfield Tire Co. is considering the removal of its plant from this city to Cumberland, Md. If moved, the plant will be tripled in capacity. The Akron plant will be sold for, it is expected, $750,000, and negotiations are under way for the donation by Cumberland of $750,000 and a 75-acre site. The company now employs 1500 men, but in Cumberland would have 3000. Kelly-Springfield is paying $4 a share and earning about $12.

Hydraulic Pressed Steel Expanding

CLEVELAND, Sept. 16—The Hydraulic Pressed Steel Co., this city, has issued $1,000,000 7 per cent cumulative preferred stock, which has been purchased by Borton & Borton. J. H. Foster, vice-president and general manager of the company, states that the new capital will be used in extending and developing the company's business, it being proposed to retire the present preferred issue of $200,000, which is callable at 102½. A sinking fund will be established Jan. 1, 1917, and each year thereafter $50,000 worth of the new stock will be retired. The stock will be callable at 107½.

Adler Opens New York Office

NEW YORK, Sept. 18—M. M. Adler, manufacturers' representative, with branches in Amsterdam, Holland; Birmingham, England, and Soerabaya, Java, has opened a New York office at 32 Union Square East. The concern is now representing Studebaker cars, Goodyear tires, the Automobile Supply Mfg. Co., Brooklyn, N. Y., and the Merkel motorcycle and proposes to take on a few more American accessories.

Waukesha Increases to $1,000,000

WAUKESHA, Sept. 16—The Waukesha Motor Co. has increased its capital stock from $200,000 to $1,000,000 to provide for extensions of the plant. Work on a new office building is now under way, and plans are being prepared for large extensions of the machine shop, assembly department and testing shop.

Buick Drops Trucks

FLINT, MICH., Sept. 14—The Buick Motor Co. has discontinued the manufacture of its 1500-lb. delivery vehicle.

Will Produce 50,000 Touring Cars at $450

Victor Company, Recently Organized, Starts Work—Making Cars Now 5 Years

PHILADELPHIA, Sept. 9—The Victor Motor Co., incorporated in August, has started work on a large plant at Grubb's Landing, near Wilmington, Del., which when completed will have an annual capacity of 50,000 cars. The company was recently organized by well-known men to take over the Victor Car Co. of Philadelphia, which has been making cars for 5 years without standardized plans. The capital stock is $2,000,000, with $500,000 outstanding. Offices are at 1530 Chestnut Street, this city.

The car will be made as near perfect as possible for $450. It will be five-passenger, four-cylinder, weight 1750 lb., fitted with electric starting and lighting, will have a 110-in. wheelbase and sell for $450.

The motor, invented by C. Victor Stahl, has four bloc cylinders, 3¾ x 4 in., has removable cylinder-head, overhead valve and direct fan drive. Other features are three-speed transmission, Atwater-Kent ignition, multiple-disk clutch, center control, syphon cooling radiator, floating rear axles, Hyatt roller bearings, tires 30 x 3½ in., pressed steel frame, slanting clear-vision windshield and one-man top.

The officers and directors are: Hon. Chas. P. Grandfield, president, former first assistant Postmaster General; C. Victor Stahl, vice-president; H. H. Skerrett, treasurer, president Adams Woolen Mills, Adams, Mass.; Regnault Johnson, secretary; William H. Bischoff, superintendent Bethlehem Steel Co.

To Take Over Standard Roller Bearing

PHILADELPHIA, Sept. 16—The General Bearings Corp. is being organized to take over the business of the Standard Roller Bearing Co., which has been in receivers' hands for 3 years. The new company will be capitalized at about $5,000,000. Plans for reorganizing the company will allow the present stockholders to participate by paying assessments of $7.50 and $15 on common and preferred stocks, respectively. An application has also been made to the U. S. District Court here for a renewal of the license granted by the Hess-Bright Corp., holders of the Conrad patents for ball bearings. This is for the protection of the new company.

Standard Tire Ready Soon

CLEVELAND, Sept. 15—The Standard Tire & Rubber Mfg. Co., Willoughby, Ohio, has now practically completed the first unit of its factory enlargement, consisting of a power plant sufficient for the manufacture of 1500 tires per day. Other equipment, such as machines, cores, molds, etc., has been ordered and is expected soon.

Stockbridge Is Winton Boston Manager

BOSTON, Sept. 18—The Winton Motor Car Co., Cleveland, has sent Frank W. Stockbridge to Boston to become manager of the New England branch on Commonwealth Avenue. He succeeds F. A. Hinchcliffe, who has taken the agency for the Jordan car.

Canadian Studebaker Men Gather

TORONTO, CANADA, Sept. 15—The first annual Studebaker's Good Fellowship gathering was held recently in Toronto. Of the 100 dealers of the Province of Ontario, over 70 were in attendance. It was primarily a "get-together" good-fellowship gathering of the Ontario Studebaker dealers. Among the prominent Studebaker men present were: L. J. Ollier, vice-president and director of sales; J. E. Grady, sales manager for Canada; G. Bell, assistant sales manager for Canada; A. J. Pattison, president York Motors, Ltd., Toronto; J. O. Linteau, general manager Le Gare Gadbois Co., Montreal; C. C. Hayward, general manager Launsbury Co., New Castle, New Brunswick; J. H. Fortier, vice-president and general manager P. T. Legare, Ltd., Quebec; J. R. Dixon, Dixon Motor Sales, Ottawa; G. A. Stant, Geo. A. Stant, Ltd., Hamilton, etc.

Findlay to Oust All "Leagues"

FINDLAY, OHIO, Sept. 18—Frank Taggart, State Superintendent of Insurance, has announced that he will begin at once to drive out of this State all of the motorists' leagues and organizations which sell with their membership pseudo insurance policies which provide monetary compensation in case of accidents, free legal advice, free legal defense, and many other attractive features. A court has ruled that these organizations are doing an insurance business without complying with the laws of the State.

From Everywhere

Detroit.—Maxwell earnings have increased 135 per cent over last year and 250 per cent in the last two years. The annual statement shows the surplus earned in the last year to be equivalent to 30 per cent on the common stock after allowing 7 per cent on the first preferred and 6 per cent on the second preferred. The net work assets are $11,176,783.26 and cash on hand is $3,269,552.50.

Toledo.—By the end of this year the Willys Overland Co. will have completed additions making possible the production of 300,000 cars a year.

Wilmington, Del. — The Harroun Motor Corp. has been formed by Ray Harroun with $10,000,000 capital. The company will produce a car to sell at $595; it probably will be a four with 107-inch wheelbase and a high efficiency motor of the overhead valve type. It is planned to produce 25,000 cars between May 1, 1917, and May 1, 1918. Sample cars will be shown at the National shows and production will be started March 1, 1917. John Guy Monihan is president of the organization, Ward Macey will be in charge of sales and Paul Hale Bruske of advertising. The Pronty & Glass Carriage Co. plant, Wayne, Mich., has been purchased.

Don L. Watson, sales manager of the Haynes Automobile Co., Kokomo, has been made assistant general manager.

William J. Davidson has resigned from the engineering department of the Cadillac Motor Car Co., Detroit. He will take up other activities in the industry.

W. H. Kirkpatrick, for nine years head of the sales department of the Peerless Motor Car Co., has been elected vice-president of the Wallace C. Hood Service Bureau, Detroit.

Six and Twelve Cylinder Cars

America's Best Looking Car

DO "good looks" pay? They *do* in the automobile business. The dealer with the best looking car —with the National—has the advantage over all others.

Once the National's good looks attract buyers, you have no trouble in then showing them how superior the National performs. And remember, with the National line you get both the buyers who favor the Six and those who insist upon a Twelve.

Get the facts from National about their wonderful multi-cylinder motors; about their increase of 300 per cent in sales.

NOW IS THE TIME TO BECOME A NATIONAL DEALER

Rayfield Carburetors are positive in Economy, Acceleration and Power with a Standard Adjustment.

If your carburetor is a Rayfield, you *know* these facts. If your carburetor is *not* a Rayfield, you have it adjusted either for (1) *economy,* or (2) for acceleration and power. If it is tuned up for economy, it is weak in acceleration and power.

If adjusted for standard *power* with a richer mixture, you are wasting gasoline through the entire range.

RAYFIELD CARBURETORS

automatically furnish the additional supply of gasoline when needed for acceleration and extra power—*entirely independent* of the running mixture. Let it be adjusted for economy—it will give full power and will respond instantaneously to any extraordinary demand for acceleration.

The man who buys a car today realizes the need of a reliable timepiece on an automobile. He expects it as a matter of course in the car of exceptional merit. And he is disappointed if *his* car is without it.

There is only one reliable clock for automobiles—the Waltham. The best proof of this is the fact that the Waltham is used exclusively on practically every high-grade car made in America.

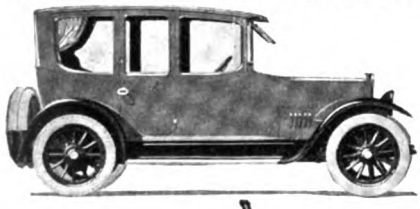
The ALL-YEAR Car



The ALL-YEAR Car—Detachable Town Car Top mounted on HUNDRED POINT SIX five-passenger Gibraltar Victoria Body and same car with Victoria Top. Price complete, $1,850.

The ALL-YEAR Car—Detachable Coupe Top mounted on HUNDRED POINT SIX four-passenger Gibraltar Roadster Body and same car with top detached. Price complete, $1,520.

The ALL-YEAR Car—Detachable Sedan Top mounted on HUNDRED POINT SIX five-passenger Gibraltar Touring Body and same car with top detached. Price complete, $1,520.

This show is enabling thousands of people to see how Kissel maintains beyond question the established superiority of the ALL-YEAR Car over other so-called convertible types.

Show

Dealers!

Here's Kissel's original idea that changed the motoring habits of a nation and revolutionized the construction of automobiles—the big innovation that has forever cut out the dead selling seasons and insures all-year business for KisselKar dealers.

Drop into the nearest KisselKar dealer's display room and inspect the new ALL-YEAR Cars. You will then see how effectively Kissel answers a host of imitators. Note the exclusive selling advantages which the ALL-YEAR Car gives to those dealers who saw the hand-writing on the wall and acted accordingly.

As we still have some territory unoccupied, we will be glad to hear from you.

The Hundred Point Six

And after inspecting the ALL-YEAR Cars, study the HUNDRED POINT SIX—Kissel's ultimatum to the automobile world. The car of a Hundred Quality Features, that created a new standard of automobile value.

Send for ALL-YEAR Car booklet just issued

Kissel Motor Car Company

HARTFORD, WISCONSIN, U. S. A.

The popular prices that are causing a stampede everywhere to the ALL-YEAR Car and the HUNDRED POINT SIX:

Hundred Point Six, Touring or Roadster	$1,095
Hundred Point Six, Gibraltar Body	1,195
ALL-YEAR Touring-Sedan	1,520
ALL-YEAR Roadster-Coupe	1,520
ALL-YEAR Victoria-Town Car	1,850
De Luxe SIX-42	1,650
ALL-YEAR De Luxe SIX-42 Touring Sedan	2,000

Motor Triumphs Made with AC Spark Plugs

60 Cars Now AC Equipped

Extract from Cadillac Advertisement Which Appeared in the June 17th Issue of the Saturday Evening Post:

"Consider, now, the almost miraculous endurance of the car, handicapped a hundred times over in the matter of road-bed, yet it traveled its distance *without so much attention to its motor as the cleaning of a spark plug.*"

WHEN Baker in a Cadillac Stock Roadster made that thrilling dash from Los Angeles to New York in May last—covering the 3371 miles in the remarkable time of 7 days, 11 hours and 52 minutes—his car was equipped, as are all stock Cadillacs, with AC Titan Spark Plugs. In the Hudson performances in the 24-hour race and in the one-mile dash, AC plugs played an important part. The Cadillac flight from coast to coast stands out as a most remarkable test of endurance and dependability for the car and for the AC Plugs, the standard Cadillac equipment.

The list of AC users is growing.

These cars name AC Spark Plugs as standard equipment—

Packard	Buick	Enger	Knox
Pierce-Arrow	Oakland	Lexington-Howard	McLaughlin (Canada)

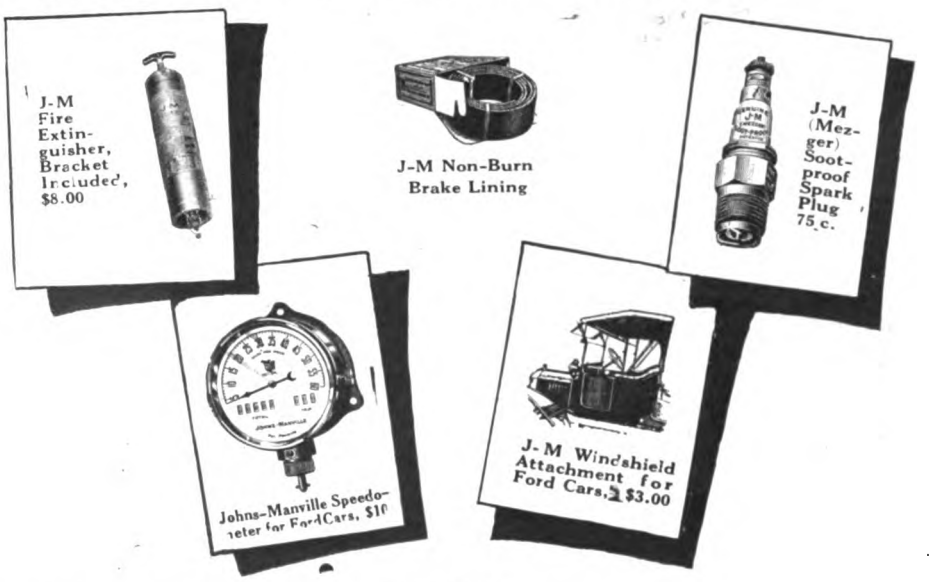
Specifications one Ox power, rawhide brake.

Even when the solid-wheeled cart bumped along the rough country road 25 years ago, Johns-Manville made Asbestos Brake Lining.



In those days, vehicle brakes were crude—home-made like the ox cart with a strip of rawhide wrapped around the axle as a brake.

Then the big problem was a brake material for cranes, derricks and hoists—where loads were heavy and danger lurked—hard service far more severe than on the modern motor car. A material was called for that could be instantly applied with a throw of the lever, relentlessly gripping, even in the presence of water, oil or grease.

The powerful resistance of J-M Asbestos Brake Lining easily met these conditions, guarding the safety of workers then, as it protects the thousands of motorists today. Its brake efficiency is not affected by extreme heat and retains its original gripping power even when worn to extreme thinness.

"J-M NON-BURN" on a strip of brake lining is an assurance of Safety, Satisfaction and Wear—a profit-getting and business-keeping asset to every dealer who knows the value of a name as firmly established in the automobile field as

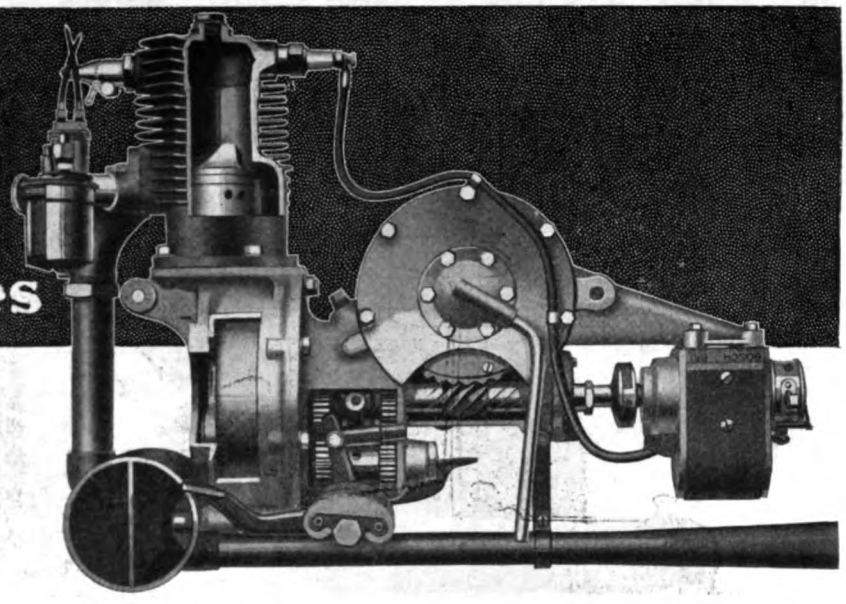
The New Idea on Motorcycles

This year saw a big change in motorcycle tendencies. Most of it was produced by the realization of a new idea in the Cleveland Motorcycle. The idea has spread around the world and is here to stay.

The motorcycle has had the same defects of immaturity as the automobile—clumsy design, overweight, excess power, the mania for speed and an astonishing ignorance of where it was going to land.

Just as the automobile became sensible, quit racing, refined itself in design, lost its surplus weight and came within the price-range of millions, so has the motorcycle.

The first one that did it successfully was the Cleveland.



Just as the automobile was a bad proposition for dealers while it was raw, but a fortune maker when it came to its senses, so with the motorcycle.

The dealer proposition on motorcycles is going to change for the better in the next few months. Prompt action, with a view into the future, will enable the right dealers to turn profits they never got before.

The Cleveland Motorcycle for Men and Women

Digitized by Google

Make it Pay on Motorcycles

Why waste time trying to sell mething that has to be forced n the market when you can sily hand over exactly what e market is asking for?

The Cleveland Motorcycle is ne coming car—for men and omen—for boys and girls, for l ages, all services, all condi-ons.

Dealers who take up the Cleve-nd will end their doubts about ne future of their business—will ave something of permanence -backbone for future growth.

Quantity is the thing. One of ur dealers sold 500 Clevelands n less than six months. We ave orders from Holland, Spain, outh America, Australia, every-vhere.

We need a few serious dealers who re sensible enough to see that the notorcycle that sells for $160.00 will ractically sell itself—by hundreds nd thousands—establishing a busi-ess that will grow from year to year -bigger and better.

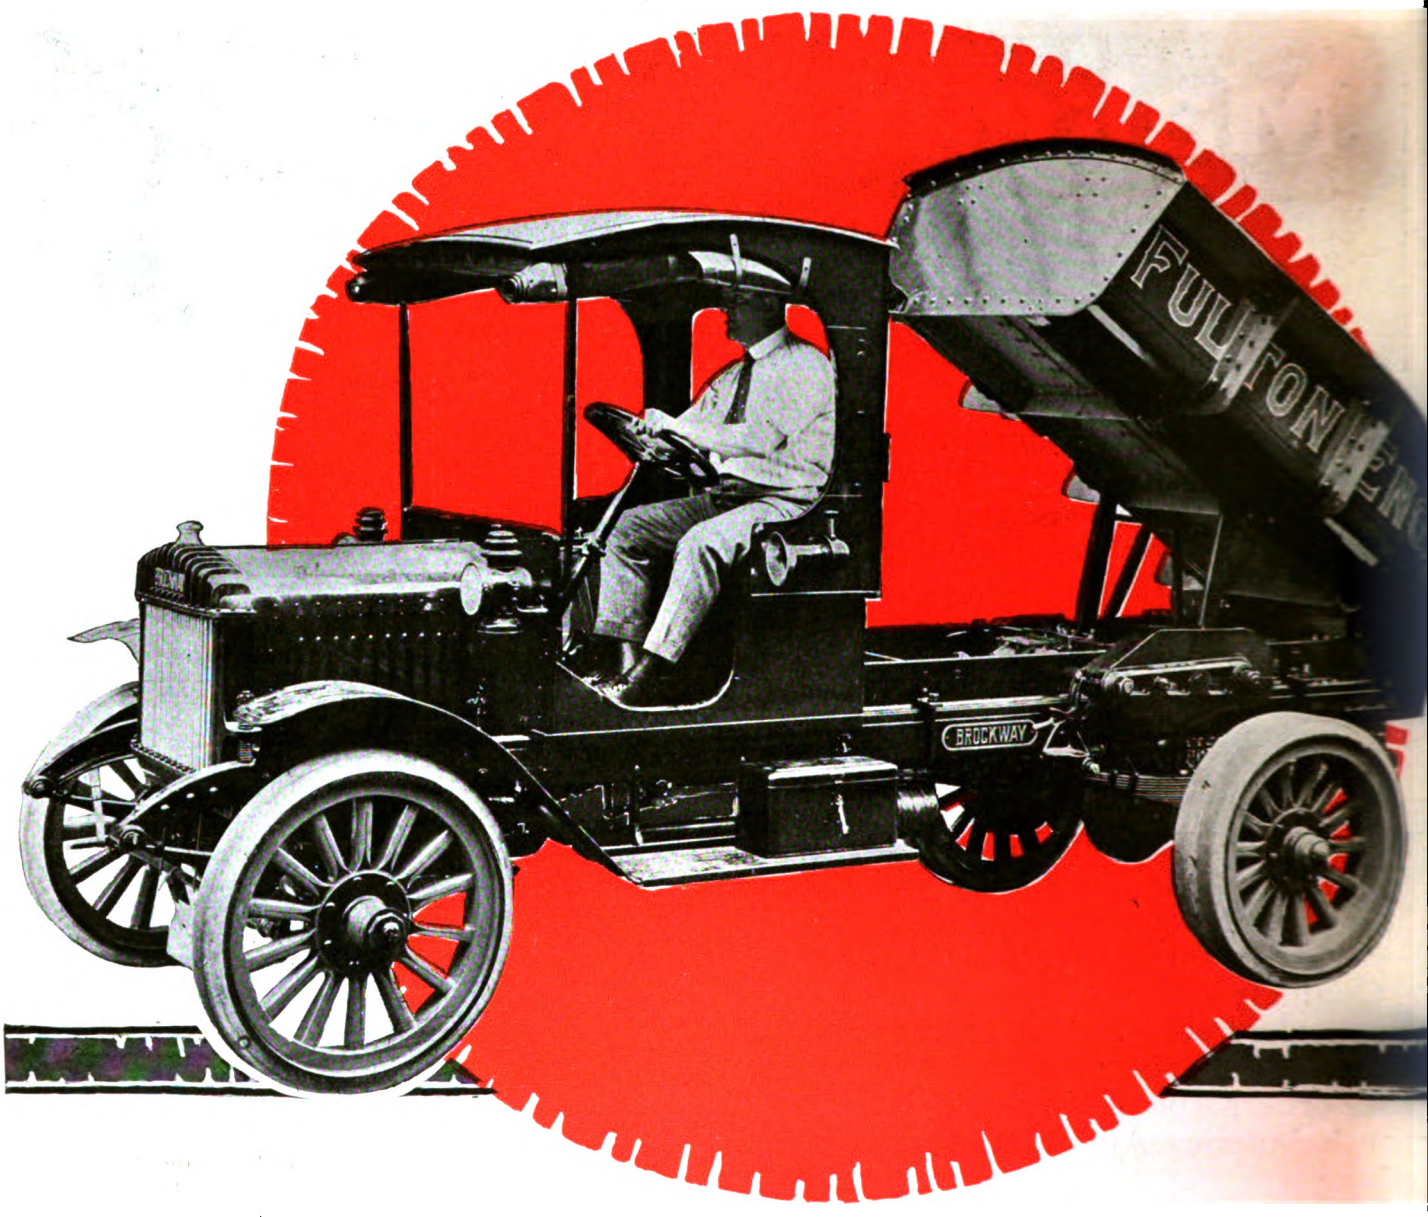
The Cleveland is the only motor-ycle that is built—in miniature—to utomobile specifications—the only ne with worm drive and every part f absolutely highest quality. Fewest umber of parts, unique design, S.K.F. ball bearings, Bosch magneto, Brown & Barlow carburetor, Fire-tone non-skid tires, drop forged rame fittings, aluminum castings, nultiple disc clutch, two-speed trans-nission—all time tried and fool proof. Runs 75 miles on a gallon of gasoline, limbs any travelled road and has all he power and speed any reasonable erson wants—35 miles per hour.

The Cleveland Demountable Power Unit

Note the absence of clumsy mechanism. The entire unit can be removed from the frame by taking off two nuts. All units interchangeable. Power stroke at every revolution. Ideal compression chamber in crank case. No valves. Absolutely precise port action. Simplest and most compact motor on the market. Weight 150 pounds.

Important

This model is here to stay—it can't be improved. The only thing we have added to the 1916 model is a kick-starter at $10.00 additional if wanted.



For available territories, more complete information about the machine and the outline of our advertising and sales helps for dealers, write at once to

Sheldon worm gear axles for motor trucks mean longer service and better service. Longer service because Sheldon worm gear units grow better and more efficient with use. Instead of wearing and becoming noisy and less efficient, a worm gear unit up to the point of absolute destruction improves in efficiency with use. And a worm gear such as is used by Sheldon will outlast any other type of final drive by thousands of miles.

So that truck makers who furnish Sheldon worm gear axles for final drive are supplying the most efficient type of final drive obtainable—a type that plays a prominent part in reducing the ton mile haulage cost.

It is because of this super-efficiency of worm drive as a type that the worm gear has risen since 1913 from a minor consideration in truck production to the dominant position both as to models and numbers. Today almost half the actual truck models produced are worm driven, and more than half the actual trucks produced are worm driven. And the percentage of users of worm gear for final drive is materially on the increase.

Sheldon worm driven rear axles combine in their construction the semi-floating principle with the taking of all driving strains through the rear springs, thus doing away with radius rods and torsion tubes. All worm strains both radial and thrust are taken by ball bearings and both brakes are located upon the axle itself, rather than having one on the propeller shaft.

Illustrated herewith are a few models of Brockway trucks which use Sheldon equipment.

- Road Grader

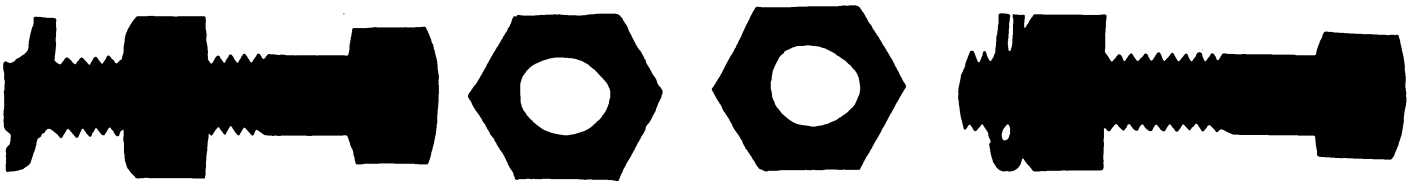
A REAL TRACTOR

Only necessary to drill two one-half-inch holes in the frame to make the attachment.

We guarantee to pull any three-horse load, in the field or on the road.

The TRACFORD can be attached in an hour's time, and it takes only an hour to change back to the Ford car again.

Exhibited at the Michigan State Fair, Detroit, September 4-13, the TRACFORD created the sensation of the fair by its performance and pulling abilities, with the result that we are sold ahead of our present production and are already in receipt of scores of applications for territory.



MR. DEALER—

Here is the cleanest-cut selling proposition ever offered wide-awake dealers. No service to render; no experts to hire; almost an unlimited market that has hardly been scratched, and that is impatiently waiting for the light, cheap, efficient and practical tractor. And the TRACFORD fills the need. Territory is going fast, and will go faster during the next month. BETTER GET YOURS WHILE YOU ARE ABLE.

Send for our booklet, "THE TRACFORD CATECHISM." It answers the questions you want to ask.

ring Nut Lock, loose, applied on bolt before being set in place to hold until taken off

Front view

Rear view

Spring Nut Lock tightened against nut. Prevents shaking off—follows nut tightening against material

Will Firmly Lock All Nuts in Place on the Cars or Parts You Manufacture

SPRING NUT LOCKS

save the *countless* losses that are constantly occurring wherever machines are run and part is fastened to part by nuts and bolts

Better Be Safe Than Sorry

Whether you manufacture or sell any part of an automobile from the radiator to the rear axle *see to it* that every nut is ***safely,*** **SECURELY, PERMANENTLY** locked in place on its bolt with a *Spring Nut Lock*

*crease the **reliability,*** **DURABILITY, STABILITY** of ur motor, tractor battery or what not by slipping on r *every* nut that engages a thread this simple, light, cheap and positively *cient* device that holds any nut permanently in place and yet may be eased at will—when lock, nut and bolt are as good as ever and can be ed over again as often as desired.

ou cannot afford to be without *Spring Nut Locks.* You nnot afford the loss of prestige, the mental worry, the k of serious losses in life, limb and pocket-book that are liable to occur *any moment* where vibration can start nuts loosening that are not properly cked in place, but are yet expected to hold vital parts. *The Spring Nut ck is your safety insurance.*

n anticipation of the great volume of advance orders nat have already begun to pour in on us as the merits f this great little device is becoming known to the mechanical world, we ave let contracts for the manufacture of *Spring Nut Locks* to The Stowell ompany of South Milwaukee, Wis., who have one of the largest plants in he country adapted to turning out this safety necessity in the enormous uantities it will be needed.

The Lock slips on the bolt like a washer and as easily —*economy of time in application.*

Its cost to the user is a mere trifle more than a washer —*the initial economy.*

It will not cut the thread of the bolt—*enduring economy.*

Its cost will be little more than that of the simple washer, cheapest of all devices.

Price lists will be issued soon. Write us for your probable needs NOW. Get in line to get *your share of this first output.* Send us your name and business and get our *first price lists* when issued.

Spring Nut Locks for Standard Threads for the following sizes are scheduled for delivery on or before October 1st: ⅜ in., ½ in., ⅝ in., ¾ in., ⅞ in. and 1 in. By November 1st we will try to supply all standard and special sizes and by January 1st we are in hopes to be able to fill all orders promptly, however large. In the meantime look out for your own needs by getting in touch with us immediately. Allotments will be made from first output in proportion to the size of the advance filled with us. Orders filled in rotation as received.

Spring Nut Locks for S. A. E. Standard Thread for automobile use have been thoroughly tested out and have aroused the enthusiasm of automobile men wherever tried. Locks for S. A. E. Standard Threads for 5/16 in., ⅜ in., 7/16 in., ½ in. and 9/16 in. are also in preparation and will be ready about the same time. Get in your orders at once.

Jobbers, Dealers, Garage Men—all Dealers—should take steps to supply the early demand of their customers for Spring Nut Locks. **Manufacturers** who take pride in their product should be prepared to adopt them. Railroads where economy and safety are first must have them. Write us your needs today and let us help you.

"$5,000 for Five Minutes With You, Mr. Merchant"

I'm Paying it Here and in other Publications to Tell You about My Big Special Offer On O-So-Ezy Cedar Oil Polish

I make O-So-Ezy.

For more than two years I made it—in a small way.

Now I am making it on a great scale of production—a scale that is growing greater every month.

My business became a big business when thirty automobile manufacturers, the builders of a million cars annually, decided that O-So-Ezy is the one polish they can consistently recommend to the buyers of their cars.

When such industrial giants as Overland, Buick, Maxwell, Chevrolet, Reo, Hupmobile, Oakland, Saxon, Chalmers, Paige, Scripps-Booth, Haynes, Briscoe, Stutz, Willys-Knight, Winton, Oldsmobile, King, Inter-State, Jeffery, Abbott, National, Detroiter, Empire, Grant, H. A. Lozier, Ross, Bour-Davis, Dixie and Detroit Electric made a can of O-So-Ezy standard equipment of every new car they ship, their stamp of approval enlisted for me immediately an army of a million new boosters a year for

O-SO-EZY

The Perfect cedar oil Polish

My Big Standard Assortment

	Each	Total	
Two 1 gallon cans	$2.50	$5.00	ALL FOR
Four ½ gallon cans	1.50	6.00	$12.00
Six quart cans	1.00	6.00	
Six pint cans	.50	3.00	
Retail Value		$20.00	f. o. b. Detroit

Mahogany Finished "Silent Salesman" FREE

These 12 Cans—$3.00 Value—Are FREE Until Nov. 1

A Total of $23.00 Worth of O-So-Ezy for $12.00

Your Profit $11.00—Nearly 100% on Your Investment

These new buyers tell their friends about O-So-Ezy. And their wives find out that a polish as supreme as O-So-Ezy for brightening motor cars is equally adaptable to their pianos, furniture and fine floors.

Your Stock Is Ready

I want you to cash in on O-So-Ezy to the absolute limit, so I have carefully selected an inexpensive but complete assortment of various sizes—your ideal polish stock.

At retail this assortment inventories $20. *My price to you is $12.*

I have mounted this stock on a handsome mahogany-finished display stand. *The stand comes free.*

A Dozen Cans *Free*

On top of this, until November 1st, I'm adding one dozen half-pint cans of O-So-Ezy—our regular twenty-five cent size. *These cans won't cost you a cent.*

Twenty-three dollars' worth of O-So-Ezy and a Silent Salesman for $12.

It's nearly 100 per cent profit on your investment!

Just Watch Them Buy!

Just stand your O-So-Ezy Silent Salesman where your trade can see it. Results will come so fast you will be amazed.

And don't forget that I'm with you all the time with a powerful advertising campaign that makes more friends for O-So-Ezy every week.

AUTOMATIC IGNITION CONNECTICUT

Identification!

FROM now on this device will appear on the ignition control button of the Connecticut Automatic Switch and identify Connecticut Automatic Ignition.

The device is well worth remembering for it marks an ignition system whose unqualified efficiency in less than three years has upset the prestige of the magneto and established a new standard of ignition efficiency.

Incidentally more cars of the 1917 production will be equipped with Connecticut Automatic Ignition than with any other make.

Look for this device on the cars you come in contact with.

FREE INTRODUCTORY OFFER ON JOHNSON'S CARBON REMOVER

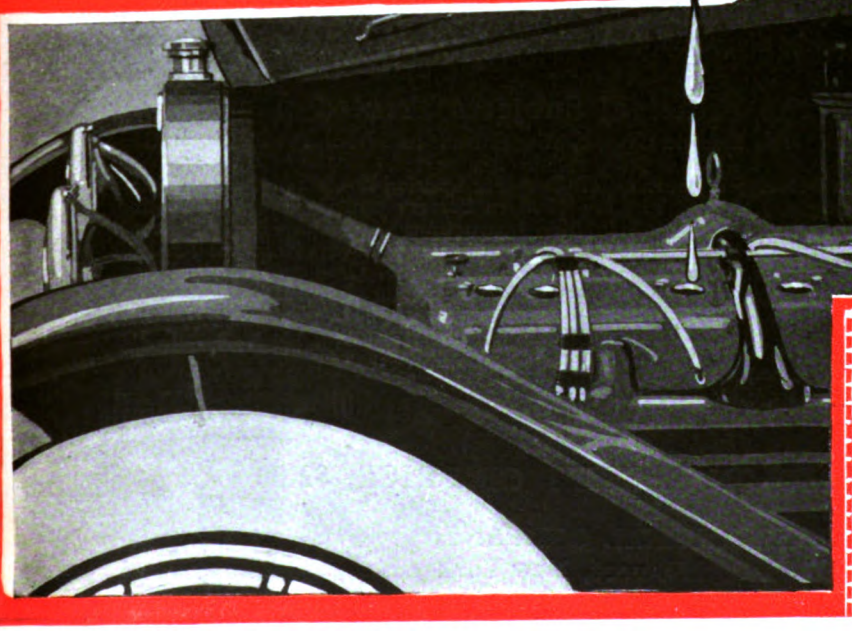
OUR new preparation — Johnson's Carbon Remover—is ready for the market. We have made exhaustive tests under all conditions and pronounce it "Perfect"—which it must be before it can go out under the name of "Johnson".

If you will sign and mail us the coupon—we will send you a **pint free by prepaid express**—this is enough for thoroughly cleaning the carbon from a six cylinder car.

UNCONDITIONALLY GUARANTEED

We guarantee the article and sale of Johnson's Carbon Remover without equivocation. It is absolutely fool-proof—no matter how much you use and how you use it—Johnson's Carbon Remover cannot injure any part of the motor. You could soak an engine in it for days without the slightest injury.

NO EQUIPMENT EXPENSE



You don't have to buy anything except Johnson's Carbon Remover to remove carbon—not even an oil pump is necessary—so why pay from $5.00 to $25.00 for carbon removing equipment.

No matter how choked up a motor may be—Johnson's Carbon Remover penetrates, and softens the carbon so that it blows out as the car is operated. It isn't necessary to lay up your customers' cars for removing the carbon—simply pour in Johnson's Carbon Remover and blow it out at your convenience—any time after 2 hours—you may leave it in all night if more convenient.

WILL BE NATIONALLY ADVERTISED

Johnson's Carbon Remover will be very extensively advertised in the leading motor papers, magazines and weeklies. There is bound to be a large demand for it. We want you to know about this wonderful new product so you can recommend it to your customers—either doing it for them or selling them the material to use themselves—either way there is money in it for you.

S. C. JOHNSON & SON, Racine, Wis. MW10

Please send me a pint of Johnson's Carbon Remover free by prepaid express. I agree to try it and report results just as I find them. If your Carbon Remover gives as good results as you claim I shall consider the matter of stocking.

Automobile Ignition Starting and Lighting

WITH QUESTIONS AND ANSWERS

By CHARLES B. HAYWARD

381 pages, 325 illustrations. Flexible leather, gold stamped

Partial List of Contents

The Electric circuit
Magnetism
Induction principles in generators and motors
Fundamental ignition principles
Sources of current
Ignition Systems: Dual, Duplex Double Spark Ignition
Ford Magnetos
Spark Timing
Modern Battery Ignition systems
Testing, adjustment and maintenance
Ignition Instructions
Electric starting and lighting systems.
Electric Horns
Electric Brake
Lighting Equipment

Practical Analysis of Following Types:

Buick-Delco type
Auburn-Delco type
Chevrolet-Auto-Lite type
Overland Auto-Lite type
Jeffery-Bijur type
Circuit breaker type

Tracing for grounds
Fuses
Auto-Lite System
Bosch-Rushmore System
Delco System
Disco System
Dyneto System
Ford Starters
Gray & Davis System
Heinze-Springfield System
Leece-Neville System
Northeast System
Remy system
Simms-Huff System
Splitdorf System
Wagner System
Westinghouse System

Instructions on Starting and Lighting Systems

Battery
Generator
Starting Motor
Wiring Systems
Protective and Operative Devices
Lighting and Indicators

A comprehensive analysis of the complete electrical equipment of the modern automobile, including many wiring diagrams and details of all the important starting-lighting systems.

Some of the Principal Subjects Treated

Elementary Electrical Principles. The Electric Circuit, Magnetism, Induction Principles in Generators and Motors.

Ignition. Fundamental Ignition Principles, Sources of Current, Ignition Systems (Dual, Duplex, Double Spark, Ford Magnets), Spark Timing, Modern Battery Ignition Systems, Testing, Adjustment and Maintenance; Summary of Ignition Instructions (Questions and Answers).

Electric Starting and Lighting Systems. General Features, Lighting Equipment, Practical Analysis of Types with Wiring Diagrams, including Auto-Lite, Bijur, Delco, Gray and Davis, Remy, U. S. L. Wagner, etc.; Summary of Instruction on Electric Starting and Lighting (Questions and Answers).

It is the most illuminating and instructive work of its kind ever published. Indispensable to the novice and the expert.

Pocket size, 5½ by 8¾—381 pages—325 wiring diagrams and illustrations. Flexible leather, gold stamped.

U. S.

BALL BEARINGS

The Supreme Unit

In the U. S. Ball Bearing plant, the Inspection Department works independently of the Production Department. By that we mean that while each workman holds his work to certain specified limits, after he has completed his labors, the part is sent to the Inspection Department where it is carefully inspected independently of any inspection previously made.

As in all good manufacturing practice, this rigid inspection is made after each and every operation, upon each and every part which goes into the completed bearing and then the completed bearing is thoroughly inspected as an assembled unit before being shipped.

It is important to note that not only is our Inspection Department complete in every detail, but being of recent date, it is thoroughly equipped with the very latest devices known to manufacturing practice.

U. S. Ball Bearings are now manufactured in a plant capable of producing 10,000 high quality bearings daily.

The Price of the Ross Eight Is Now $1550 f.o.b. Factory

The Ross Eight has always been sold on a very close margin of profit, and now, with the addition of many refinements and improvements and the general advance in price on all raw materials, it has become absolutely necessary to advance the selling price.

The latest Ross Eight exhibits many detailed refinements including such items as the use of real hand-buffed leather for the upholstering throughout; the increase in the size of the tires to 35 x 4½"; the use of still higher quality material; in fact, the addition of many seemingly slight but highly important ***quality features*** which all contribute to greater completeness and higher efficiency.

The Ross Eight is essentially a quality car.

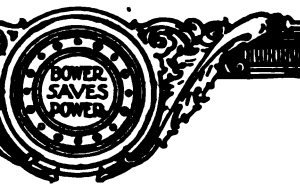
We believe that after examining it you will enthusiastically give your assent to the statement that the present Ross model is not only one of the handsomest, but one of the best built cars in America.

We are likewise confident that as you examine into every detail of its construction, inside and outside, you will agree with us, that, even at the advanced price, it is still the greatest automobile value in the world.

You will be pleased at the many fresh evidences of thoroughness and refinement, all of which mean greater beauty, longer life, greater satisfaction in use, and intensified pride of ownership, because this latest Ross Eight so plainly shows unswerving fidelity to highest ideals of automobile manufacture.

Recall that the Ross Eight Herschell-Spillman motor, developing 80 H.P., is one of the finest motors ever built.

The Wheelbase of the car is 130 inches; the weight is but 3250 lbs.



There is generous seating capacity for seven passengers.

The price is now $1550 complete, f.o.b. factory.

INSTALLATION ECONOMY

A Pointer to Manufacturers

The assembly of a motor car is greatly simplified where Bower Bearings are used. These bearings are accurately adjusted in our factory, and they slip into place so easily that the very minimum of time is consumed. The time thus saved is a considerable item in factory economy.

—And Back of this Battery Stands Prest-O-Lite Service

The Prest-O-Lite Storage Battery has a double-headed appeal to every automobile owner. There are two dominant factors that make it greatly superior and desirable. And these two factors are the very points that determine real storage battery value.

First: Because of the unlimited facilities back of its manufacturers, a better designed or more carefully built battery, size for size, cannot be produced.

Second: Because back of the battery itself stands the Prest-O-Lite Service organization filling the long-felt need for universal battery service of expert character.

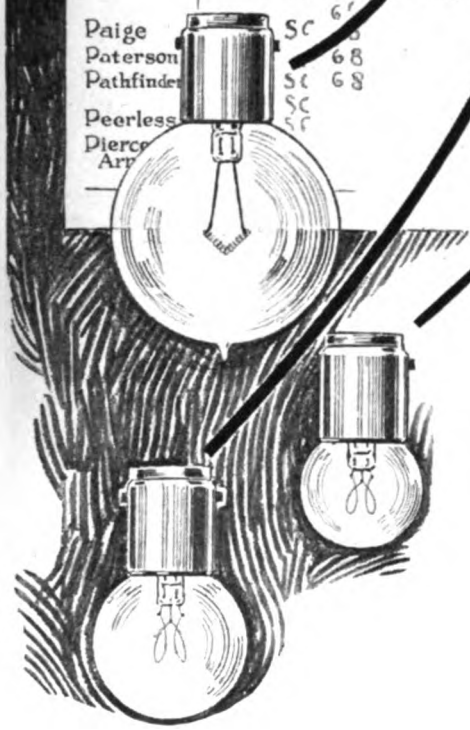
The Prest-O-Lite Co., Inc., maintains more Direct Factory Branches than all other battery makers combined. These form the nucleus for the largest amount of actual service obtainable in the storage battery field.

There is a Prest-O-Lite Battery of correct shape, size, voltage and capacity for every make and model of car, and for every starting and lighting system which is now or which has been in general use.

The Prest-O-Lite Battery offers an excellent opportunity for all automobile dealers—whether you charge and repair batteries or not, you should write for full details of this proposition.

The Prest-O-Lite Co., Inc.
902 Speedway, Indianapolis, Ind.

FACTORY BRANCHES—Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Davenport, Denver, Des Moines, Detroit, Indianapolis, Jacksonville, Kansas City, Los Angeles, Memphis, Milwaukee, Minneapolis, New York, Omaha, Philadelphia, Pittsburgh, St. Louis, St. Paul, San Antonio, San Francisco, Seattle, Syracuse.



Each of these Factory Branches is fully equipped for Battery Repairs and Service

Not only a better battery but backed by Prest-O-Lite Service

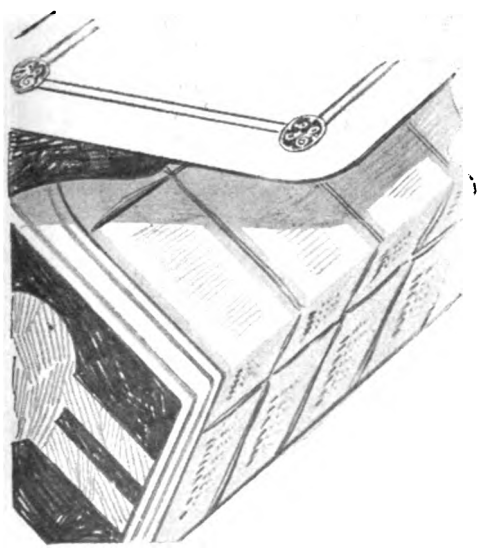
The Right Lamp in the Right Place

You simply can't make a mistake. All you need to know is the name and model of the car. Our little booklet tells exactly the lamps to use for all 1916, 1915 and 1914 models. Then you select the right lamp or lamps from our Automobile Lamp Assortment. Moreover, that little assortment stock is complete enough to supply the right lamps for practically every electrically lighted car.

EDISON MAZDA



Automobile Lamp Assortment

If you, Mr. Dealer, are making the mistake of letting someone else in your territory market these fast selling automobile lamps, begin now to get your share of the business. Write for our attractive agency proposition. The cost of a tire or two puts this complete Lamp Assortment on your counter. Renewing stock is so simple as to be almost automatic.

Our assortment stock plan makes automobile lamps one of the fastest selling accessories

Another aid to bigger sales is the Auto Lamp Chest, carrying a set of six spare lamps for any car. This chest you pack from the assortment stock—and your customer, the car owner, is insured against all delays and troubles due to burn-outs. Besides *you* sell six lamps at a time.

Write today for full particulars.

Mitchell

MID-YEAR MODEL

26 Extra Features
73 New Conceptions

7 New-Type Bodies
127-in. Wheelbase
48 Horsepower

$1325 f. o. b. Racine
For Touring Car

What Mr. Bate Has Done

Mark what John W. Bate—the efficiency engineer—has done for the Mitchell car. Then judge for yourself the place Mitchell will hold from this time on in Motordom.

He has built this factory—covering 45 acres—which stands as the model efficiency plant for building a car of this class.

He has equipped it with 2000 up-to-date machines. In these ways he cut our factory cost in two.

As a result, the Mitchell includes 26 extra features which other cars omit. And it gives at least 20 per cent greater value than any rival car.

700 Improvements

In the Mitchell car he has worked out about 700 improvements. He has given every part at least 50 per cent over-strength. He has worn out fifty cars in proving strength requirements on the road.

He has almost wiped out castings. In 440 parts he uses drop forgings or steel stampings. In all the parts which meet major strains he uses Chrome-Vanadium steel.

The result is a lifetime car. Seven of these cars have averaged 175,000 miles apiece—over 30 years of ordinary service.

Efficiency in Art

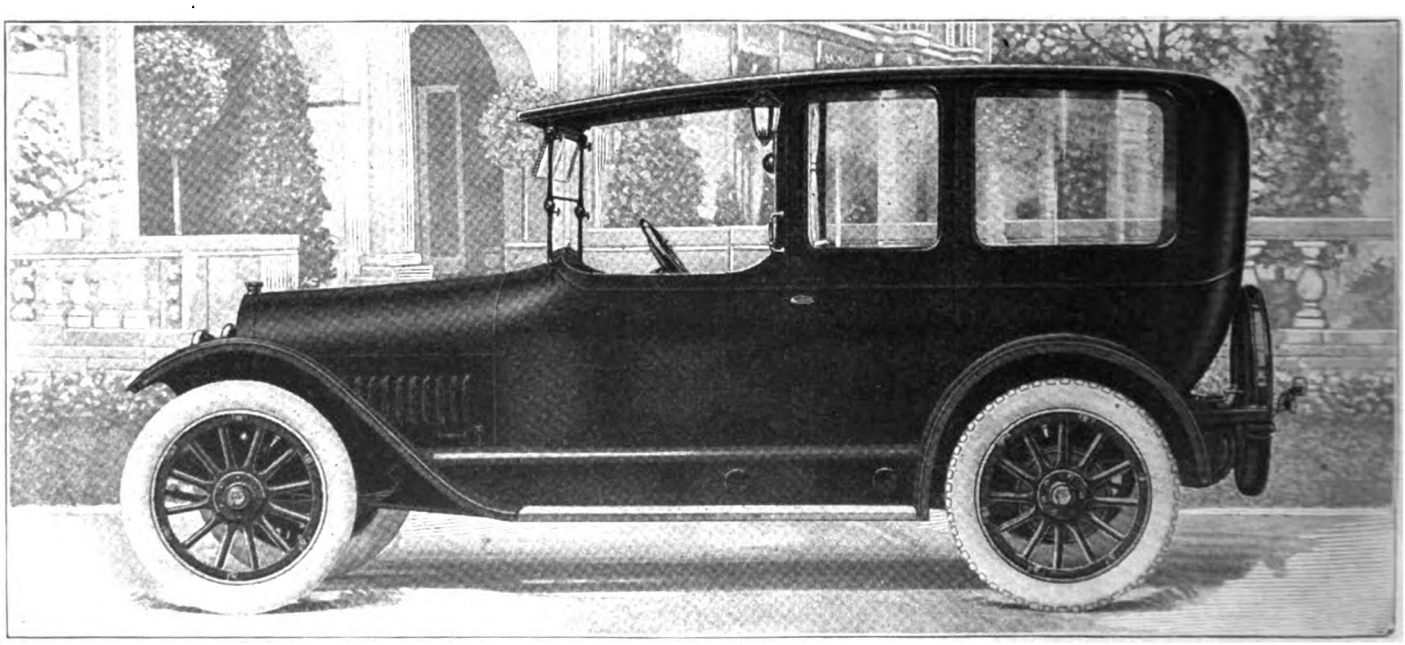
He has applied the same efficiency to Mitchell luxury bodies. This year he has brought out seven new types.

Before designing these bodies he had his experts and artists examine 257 late models. They reviewed all the finest cars in existence, European and American. So all the existing attractions are found in these new models. And each one embodies at least twenty conceptions which no other one car has.

Thousands of Mitchell cars are going out to demonstrate the facts.

Over $500,000 is spent this season in advertising, to make them better known.

Men who are interested—as dealers or buyers—should go to the bottom of this Bate-built car.



If any car can excel it—any car in its class give an equal value—then Bate efficiency is wrong. But it isn't.

Drilling Pipe Flanges, Nationa Transit Company Oil City, Pa.

Heavy Type Multiple Drill

Specialists, also, in the Production of Worm Gear Units for Motor Cars and Trucks

THE illustration herewith shows one of the latest heavy type multiple drills and an installation in the plant of the National Transit Company, of Oil City, Pa.

This particular set-up is used for drilling pipe flanges and is equipped with sixteen spindles capable of handling 1½" drills in steel at a feed equal to .01" per revolution.

The head is handled entirely by power and therefore has a quick approach, regular drilling feed and quick return.

The feeds are dropped at automatic dogs, which can be placed for any depth, or for any length of quick approach and drilling feed. The feed is accomplished by a screw which thrusts against the center of the head, thereby relieving the gibs of any strain.

The arms are of new type without lugs or projections on the inner end, which permits of their being the same diameter as the spindle nose. Each spindle is provided with a vertical adjustment controlled by a screw at the extreme outer end of the arm.

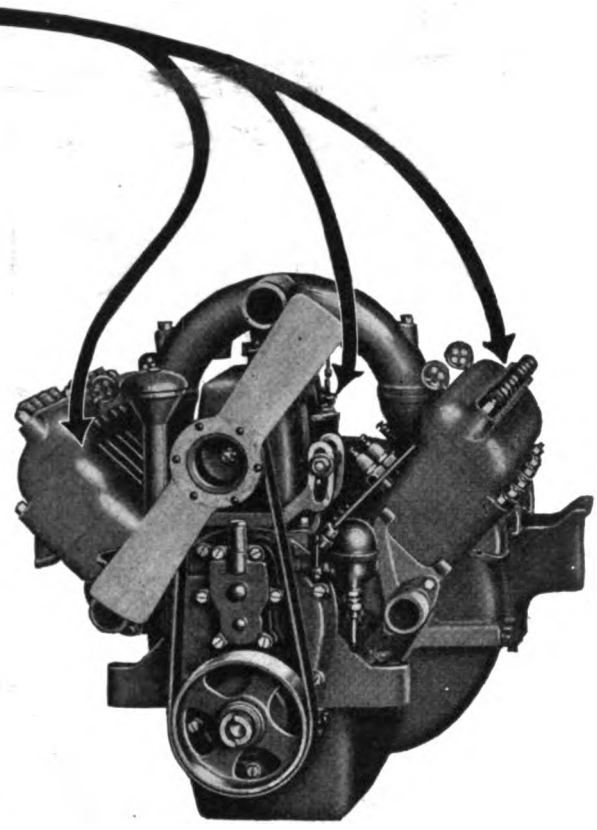
Everything Easy to Reach

It is plain from the accompanying photograph that the accessibility of Ferro V-Type Motors is not merely a claim but an actual fact.

It must be equally plain, too, to those who have had experience with other automobile engines that to call Ferro accessibility remarkable puts no strain upon the actual truth.

In Ferro V-Type Motors practically every part that ordinarily may need attention or adjustment is within quick and easy reach. The cylinder heads are detachable. Valves are located right in the head and are without cages. The valve-tappet adjustment is where it can be most conveniently manipulated—right in the top of the cylinder-head.

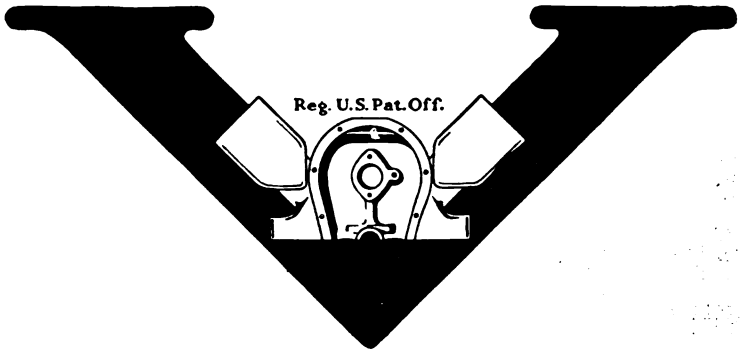
The feature of accessible valve-adjustment is one of great advantage to the car-buyer. Because of it, he is enabled to take up valve clearance himself in about 15 minutes instead of being compelled to run his car into a garage and leave it there for a day or two.



Exhaust manifolds are on the outside of the motor and out of the way, enabling the carburetor to be conveniently placed. There is not a single thing in the bottom of the "V" that ordinarily needs attention.

As with accessibility, Ferro claims for power, acceleration, flexibility and fuel-economy are all quickly demonstrated to be actual facts whenever the opportunity is given.

While the line of Ferro V-Type Motors consists of three Eights and a Twelve, we shall confine our production efforts for some time to come entirely to the 8-35 and the 8-48. The 8-35 has a bore and stroke of 2⅝ x 3¾, with h.p. per cubic inch of piston-displacement of .218. The 8-48 has 3-inch bore, 3½-inch stroke, .242 h.p. per cubic inch of piston-displacement.



Write or wire for further information.

The Ferro Machine & Foundry Company
998 Hubbard Avenue **Cleveland, Ohio**

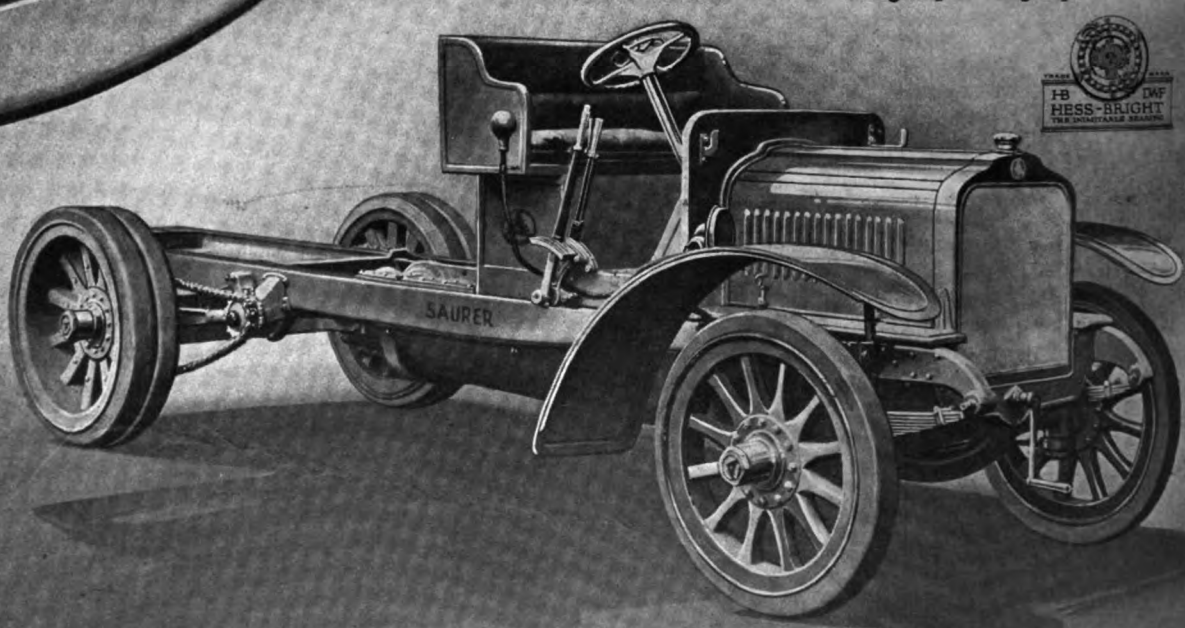
HESS-BRIGHT'S CONRAD PATENTS ARE THOROUGHLY ADJUDICATED



HESS-BRIGHT BALL BEARINGS

HAS IT EVER OCCURRED TO YOU that if the makers of a motor-truck choose HESS-BRIGHT BALL BEARINGS in preference to all other makes of bearings, it is done with the single purpose of giving the customer the best to be had, even though it increases the cost? The first cost of HESS-BRIGHTS is necessarily high.

The manufacturers of the SAURER TRUCK could easily substitute cheaper and inferior bearings, *but they won't if they can avoid it.* Their preference is HESS-BRIGHT BALL BEARINGS.

There have been instances since the beginning of the European conflict when we have not been able to supply our customers' requirements, but we are overcoming these difficulties by our rapidly increasing production.

The selection of HESS-BRIGHTS by the manufacturers of any motor vehicle is positive indication of earnest endeavor to build a purely quality product.

Every Motorist Needs a Vulcanizer to Stop Tire Troubles and Increase Mileage

Every Shaler Vulcanizer You Sell Sells Others—Increasing Sales and Profits

Every Shaler user boosts the use of a vulcanizer and makes more business for the dealer. Vulcanizing is more or less of a mystery to one who has never tried it, and when he finds that it is a success he brags about it to his friends, and many of them buy, too.

SHALER Vulcanizer

They are made in a great variety of sizes and types—Electric, Gasoline, Alcohol and Steam, for every requirement of public and private garages. Shaler Tube-Kit (for vulcanizing tubes), $2. Ford-Kit (for Ford owners), $2.75. Vul-Kit (to carry in tool box for roadside repairs to tubes and casings), $3.50. Electric equipment for private garages, $12.50. Public Garages and Repair Shops, Electric or Steam, $60.

They will repair any cut, rip, tear or hole in either casing or tube, in a few minutes, and make the repair the strongest part of the tire. The Shaler is the only vulcanizer that has Automatic Heat Control. Impossible to undercure or overcure a tire.

The Sign of Service

EACH Ahlberg re-ground bearing carries a guarantee of perfect satisfaction, expert workmanship and flawless material.

Each ball is micrometer tested for its individual bearing. Every retainer is one of our invention. All rings have been tested in actual service—thus are flaws eliminated.

This is more than you are given by manufacturers of new bearings—no matter what make.

Yet the cost to you is about one-fifth of what the new bearings would be.

The Ball Bearing Exchanges

In eleven large cities we maintain our own direct factory branches, managed by ball bearing experts. These service stations are for you. Use them to the utmost. Let us exchange instantaneously Ahlberg re-ground bearings for your worn old bearings, no matter what size, type, or make.

Call or write our nearest branch for information or assistance. It assures you quickest service.

"What do you mean by Guaranteed?"
"Hush! thirty-six inches to the yard"

A famous merchant always closed a sale with the statement, "Now remember, all these goods are guaranteed." That statement went unchallenged for many years, but once a customer "called him" by asking, "Just what do you mean by guaranteed?" "Hush," answered the merchant, "I mean 36 inches to the yard."

Kelly-Springfield
Automobile Tires—Hand Made

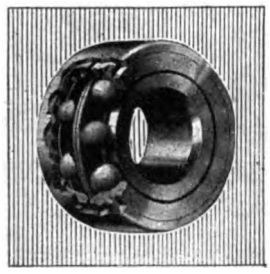
GUARANTEE makers are cautious people. They generally play safe. When a tire is guaranteed for 3,500 miles the manufacturer is not anticipating a loss.

Frankly, we do not think much of the guarantee incentive to a tire purchase.

In response to what seems to be custom or popular demand, Kelly-Springfield Tires are guaranteed too, for 5,000, 6,000 and 7,500 miles, according to type. We take no risk, and it means nothing to you, because the tires often run 8,000, 10,000 and frequently many more miles.

Our regular patrons have long since forgotten our so-called guarantee. Experience has taught them greater expectations, based on past realizations. They are buying built-in worth, built in by hand—hand-made tires. Before using Kelly-Springfield Tires they had tried out other tires, because Kellys are rarely found on new cars. Car manufacturers are accustomed to great concessions in price, on account of quantity orders. Kelly prices are not cut, and the demands on us are so great that we cannot supply quantity orders. We would not neglect our customers to do so even if we could make the price to suit.

Kelly-Springfield Tires get on a car after some other tires have worn out. Then they stay on.



That is why the capacity of our factories has been passed, why we often have to delay deliveries—why we are building a new factory.

THE MANLEY "EVERY WAY" ENGINE STAND

supports the motor perfectly, while allowing the workman to reach every portion of it with ease and accuracy.
The "Every Way" can be adjusted to every position in a circle—100 positions if desired—but the three most convenient are the Horizontal Position for working on valve mechanism and generally around the engine; the 45-degree Position (shown in cut) for cleaning carbon, grinding in valves, etc.; and the Inverted Position for taking up crank-shaft, connecting rod, bearings, etc.

In each position the engine is locked rigidly by two side braces. The "Every Way" supports the engine solidly. It will never become shaky, and should last a lifetime without repairs.

For the Factory motor assembly department no other stand has been brought out that can be compared to the "Every Way" for efficiency and convenience.

are built to stay on the job under the hardest conditions. We show here our big leader

JUMBO "MOLITE"

Price, $1.25

Guaranteed for the Life of the Car. Other types for Fords and other cars. $0.75 and $1.00. Ask your dealer.

Gibson-Hollister Mfg. Co.
3380 Washington Street,
Jamaica Plain, Mass. 69-36

SOLDER

Ready to Use

Kester Crystal-Core Solder

Kester Self-Fluxing Solder is a seamless tube of solder the core of which is a soldering flux that flows as solder is used. CRYSTAL CORE being especially adapted for AUTOMOBILE work. Tube is a series of cells, each cell is filled with the proper amount of flux. Kester Crystal-Core Solder is cheaper to use than wire or bar solder, as no time is lost in preparing or applying the acid.

Cleaner, Neater, Quicker Results

Use it in your garage for battery terminals, gasoline pipe and tank joints, electric light connections, radiator leaks, cracked fenders, speedometer flexible shaft, spark plug terminals and general garage use. Sold in coils of 1 pound, and on spools of 1, 5 or 10 pounds.

The Michigan Auto Trailer Co. 220-224 Twenty-First St., Detroit

Stop the Spring Breakage

It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING." Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging. graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

SELLING AT A RECORD-SMASHING RATE!

Dealers are selling hundreds of these wonderful little Concentrators. Thousands of owners of 1915-16 Fords are buying them. Sell on sight at $2.00. Everyone you sell, sells two or three more. Ford owners tell their friends.

VAN SICKLEN
AUTOMATIC
HEAD LIGHT CONCENTRATOR
FOR FORD CARS

It perfects the Ford lighting system by automatically short-circuiting the right headlamp and supplying *double current* to the left lamp at all speeds below 15 m.p.h. For instance, at 10 m.p.h. the left lamp is burning as brightly as it would be at 20 m.p.h.

It Perfects the 1915-16 FORD Lighting System

Price Complete Ready to Put On $2.00

Illustrating Simple Installation

5000 Miles of Service without Puncture or Blowout GUARANTEED

Here is the greatest opportunity ever offered to the automobile trade, insofar as a tire agency is concerned.

A fully guaranteed for 5,000 miles, high quality tire that is puncture-proof and blowout-proof, and which suffers no sacrifice of resiliency or riding qualities, by reason of its being puncture-proof. This Tire is guaranteed to be the equal or the superior of any tire on the market, from a standpoint of service alone, and in addition to that, is guaranteed against blowouts or punctures.

Surely the agency for such a proposition as this is a mighty valuable asset to any dealer in the industry. We want a dealer in every community, but our territory is going fast.

WOODWORTH TROUBLE-PROOF // TIRES //

Write us to-day for an option in your territory. We will give you all the details that will satisfy you as to the wonderful opportunity presented by the *WOODWORTH TROUBLE-PROOF TIRES.*

Some Extremely Desirable Territory Open for Dealers With Push

Our Dealers' Proposition Never Fails to Get Across and Bring in Interesting Profits for Dealers

Dealers
Let's Get Together for the Big Drive on

"W'RIGHT" COMPRESSION TIGHT PISTON RINGS

"W'RIGHT" ALLOY ALUMINUM PISTONS

Dealers who formerly *carried* piston rings, and seldom sold them, are now disposing of 300 to 500 W'RIGHT Compression Tight Piston Rings a month at a profit they find altogether worth while.

That's the experience we have to offer a few more good dealers who want to duplicate the profits of the hundreds of dealers we already have established in the past 6 months.

W'RIGHT Piston Rings are alone in their class. They both *outlast and under-sell* competition, and insure lasting efficiency that others cannot give.

Backed up by advertising in leading motor car publications, W'RIGHT Compression Tight Piston Rings are selling fast—making good profits for dealers. Wire or use the coupon for full details.

Pat. Applied for

Motorists everywhere, with cars from seasons gone by, are putting new life into old motors with W'RIGHT Alloy Aluminum Pistons, equipped with W'RIGHT Compression Tight Piston Rings.

The sudden demand, and the rush to fill it, have made W'RIGHT Pistons the selling sensation of the year. Dealers have sent back re-order after re-order for the pistons that insure greater power, economy, quicker pick-up and all 'round motor efficiency at a nominal cost.

Record-breaking business—with profits in proportion—is what W'RIGHT dealers report. It is what awaits more W'RIGHT Dealers in good territory, still open, where there are Ford, Overland, Maxwell, Studebaker, Chevrolet, Hupmobile and other makes of cars.

If you want to reap the advantage of W'RIGHT popularity, class and advertising, get in now for the big drive. *Use the coupon today.*

Tire Luxury—at a Popular Price

Non-Skid But Not Bumpy

This new NATIONAL REDWALL *"Speedway type"* tire sprang into popular favor almost over night because it had all the qualifications necessary to meet the overwhelming demand for a really good tire at a popular price.

It is both rich and distinctive in appearance.

It has a new type of *smooth riding* non-skid. This one feature alone is sufficient to distinguish it from all other tires selling at anywhere near the price.

There are no knobs, no depressions, no lumps nor bumps.

Consequently the tire *wears* out before the carcass *gives* out, for as you spin along the contact of the tread with the road is continuous and unbroken.

Inside fabric wear, such as develops in most non-skids, is impossible here.

Yet the big reason why *"Speedway Tires"* outstrip other tires in performance and all around satisfaction is simply this: ***"They are built well of excellent material."***

TO DEALERS

Dealers and Jobbers who are looking for a high quality tire to sell at a popular price, on an exclusive territorial basis, to be backed by a generous national advertising campaign, should investigate our proposition at once.

More complete details will be forwarded upon application.

NATIONAL RUBBER COMPANY, Pottstown, Penna.
